force which every artist ought to have if he is to produce easily and freely.'

So he wrote in 1836 and 1837. But at the same time we must emphatically contradict the suggestion that Schumann used his paper for selfish ends. His soul was too entirely noble and his ideal aims too high to have any purpose in view but the advancement of art; and it was only in so far as his own interests were inseparable from those of his whole generation, that he would ever have been capable of forwarding the fortunes of his own works. The question even whether, and in what manner, his own works should be discussed in the *Neue Zeitschrift* he always treated with the utmost tact. In one of his letters he clearly expresses his principles on the subject as follows: 'I am, to speak frankly, too proud to attempt to influence Härtel through Fink (editor of the *Allgemeine mus. Zeitung*); and I hate, at all times, any mode of instigating public opinion by the artist himself. What is strong enough works its own way.'

His efforts for the good cause indeed went beyond essay-writing and composing. Extracts from a note-book published by Wasielewski prove that he busied himself with a variety of plans for musical undertakings of general utility. Thus he wished to compile lives of Beethoven and of Bach, with a critique of all their works, and a biographical dictionary of living musicians, on the same plan. He desired that the relations of operatic composers and managers should be regulated by law. He wished to establish an agency for the publication of musical works, so that composers might derive greater benefit from their publications, and gave his mind to a plan for founding a Musical Union in Saxony, with Leipzig as its headquarters, to be the counterpart of Schilling's *Deutscher National Verein für Musik*.

In the first period of his editorship, before he had got into the way of easily mastering his day's labour, and when the regular round of work had still the charm of novelty, it was of course only now and then that he had leisure, or felt in the mood, for composing. Two great pianoforte works date from 1834 (the 'Carnaval,' op. 9, and the 'Études Symphoniques,' op. 13), but in 1835 nothing was completed. After this, however, Schumann's genius began again to assert itself, and in the years 1836 to 1839 he composed that splendid set of pianoforte works of the highest excellence, on which a considerable part of his fame rests; viz. the great Fantasia (op. 17), the F minor Sonata (op. 14), *Fantasiestücke* (op. 12), *Davidshändler-tänze*, *Novelletten*, *Kinder-scenen*, *Kreisleriana*, *Humoreske*, *Faschingsschwank*, *Romanzen*, and others. The fount of his creative genius flowed forth ever clearer and more abundantly. 'I used to rack my brains for a long time,' writes he on March 15, 1839, 'but now I scarcely ever

scratch out a note. It all comes from within, and I often feel as if I could go playing straight on without ever coming to an end.' The influence of Schumann the author on Schumann the composer may often be detected. Thus the 'Davidsbündler' come into his music, and the composition which bears their name was originally entitled 'Davidsbündler, dances for the Pianoforte, dedicated to Walther von Goethe by Florestan and Eusebius.' The title of the F# minor Sonata, op. 11, which was completed in 1835, runs thus: 'Pianoforte Sonata. Dedicated to Clara by Florestan and Eusebius.' In the 'Carnaval,' a set of separate and shorter pieces with a title to each, the names of Florestan and Eusebius occur again, as do those of Chiarina (the diminutive of Clara), and Chopin; the whole concluding with a march of the Davidsbündler against the Philistines.

The reception of Schumann's works by the critics was most favourable and encouraging, but the public was repelled by their eccentricity and originality; and it was not till after the appearance of the 'Kinderszenen' (1839) that they began to be appreciated. Opp. 1 and 2 actually had the honour of a notice in the Vienna *Musikalische Zeitung* of 1832, by no less a person than Grillparzer the poet. Fink designedly took hardly any notice of Schumann in the *Allgemeine musikalische Zeitung*. But Liszt wrote a long, discriminating, and very favourable article in the *Gazette Musicale* of 1837 upon the Impromptus (op. 5), and the Sonatas in F# minor and F minor. Moscheles wrote very sympathetically on the two sonatas in the *Neue Zeitschrift für Musik* itself (vols. 5 and 6), and some kind words of recognition of Schumann's genius were published subsequently from his diary (*Moscheles' Leben*, Leipzig, 1873, vol. ii. p. 15; English translation by A. D. Coleridge, vol. ii. pp. 19, 20). Other musicians, though not expressing their sentiments publicly, continued to hold aloof from him. Hauptmann at that time calls Schumann's pianoforte compositions 'pretty and curious little things, all wanting in proper solidity, but otherwise interesting.' (See Hauptmann's *Letters to Hauser*, Leipzig, 1871, vol. i. p. 255.)

In October 1835 the musical world of Leipzig was enriched by the arrival of Mendelssohn. It was already in a flourishing state: operas, concerts, and sacred performances alike were of great excellence, and well supported by the public. But although the soil was well prepared before Mendelssohn's arrival, it was he who raised Leipzig to the position of the most musical town of Germany. The extraordinarily vigorous life that at once grew up there under the influence of his genius, drawing to itself from far and near the most important musical talent of the country, has shown itself to be of so enduring a character that even at the present day its influences are felt. Schumann too, who

had long felt great respect for Mendelssohn, was drawn into his circle. On Oct. 4, 1835, Mendelssohn conducted his first concert in the Gewandhaus; the day before this there was a musical gathering at the Wiecks', at which both Mendelssohn and Schumann were present, and it seems to have been on this occasion that the two greatest musicians of their time first came into close personal intercourse. (*Moscheles' Leben*, vol. i. p. 301; English translation, vol. i. p. 322.) On Oct. 5, Mendelssohn, Schumann, Moscheles, Banck, and a few others, dined together. In the afternoon of the 6th there was again music at Wieck's house; Moscheles, Clara Wieck, and L. Rakemann from Bremen, played Bach's D minor Concerto for three claviars, Mendelssohn putting in the orchestral accompaniments on a fourth piano. Moscheles had come over from Hamburg, where he was staying on a visit, to give a concert in Leipzig. Schumann had already been in correspondence with him, but this was the first opportunity he had enjoyed of making the personal acquaintance of the man whose playing had so delighted him in Carlsbad when a boy of nine. Moscheles describes him as 'a retiring but interesting young man,' and the F# minor Sonata, played to him by Clara Wieck, as 'very laboured, difficult, and somewhat intricate, although interesting.'

A livelier intimacy, so far as Schumann was concerned, soon sprang up between him and Mendelssohn. When Mendelssohn had to go to Düsseldorf in May 1836, to the first performance of 'St. Paul' at the Niederrheinische Musikfest, Schumann even intended to go with him, and was ready months beforehand, though when the time arrived he was prevented from going. They used to like to dine together, and gradually an interesting little circle was formed around them, including among others Ferdinand David, whom Mendelssohn had brought to Leipzig as leader of his orchestra. In the early part of January 1837 Mendelssohn and Schumann used in this way to meet every day and interchange ideas, so far as Schumann's silent temperament would allow. Subsequently when Mendelssohn was kept more at home by his marriage, this intercourse became rarer. Schumann was by nature unsocial, and at this time there were outward circumstances which rendered solitude doubly attractive to him. Ferdinand Hiller, who spent the winter of 1839-40 in Leipzig with Mendelssohn, relates that Schumann was at that time living the life of a recluse and scarcely ever came out of his room. Mendelssohn and Schumann felt themselves drawn together by mutual appreciation. The artistic relations between the two great men were not as yet, however, thoroughly reciprocal. Schumann admired Mendelssohn to the point of enthusiasm. He declared him to be the best musician then living, said that he looked up to

him as to a high mountain-peak, and that even in his daily talk about art some thought at least would be uttered worthy of being graven in gold. And when he mentions him in his writings, it is in a tone of enthusiastic admiration, which shows in the best light Schumann's fine ideal character, so remarkable for its freedom from envy. And his opinion remained unaltered: in 1842 he dedicated his three string quartets to Mendelssohn, and in the 'Album für die Jugend' there is a little piano piece called 'Erinnerung,' dated Nov. 4, 1847, which shows with eloquent simplicity how deeply he felt the early death of his friend. It is well known how he would be moved out of his quiet stillness if he heard any disparaging expression used of Mendelssohn. Mendelssohn, on the contrary, at first only saw in Schumann the man of letters and the art-critic. Like most productive musicians, he had a dislike to such men as a class, however much he might love and value single representatives, as was really the case with regard to Schumann. From this point of view must be regarded the expressions which he makes use of now and then in letters concerning Schumann as an author. (See Mendelssohn's *Briefe*, ii. 116; Lady Wallace's translation, ii. 97;¹ and Hiller's *Felix Mendelssohn Bartholdy*, Cologne, 1878, p. 64.) If they sound somewhat disparaging, we must remember that it is not the personal Mendelssohn speaking against the personal Schumann, but rather the creative artist speaking against the critic, always in natural opposition to him. Indeed it is obviously impossible to take such remarks in a disadvantageous sense, as Schumann quite agreed with Mendelssohn on the subject of criticism. One passage in his writings is especially remarkable in this respect. He is speaking of Chopin's pianoforte concerto, and Florestan exclaims, 'What is a whole year of a musical paper compared to a concerto by Chopin? What is a magister's rage compared to the poetic frenzy? What are ten complimentary addresses to the editor compared to the Adagio in the second Concerto? And believe me, Davidites, I should not think you worth the trouble of talking to, did I not believe you capable of composing such works as those you write about, with the exception of a few like this concerto. Away with your musical journals! It should be the highest endeavour of a just critic to render himself wholly unnecessary; the best discourse on music is silence. Why write about Chopin? Why not create at first hand—play, write, and compose?' (*Gesammelte Schriften*, i. 276; Engl. trans. in *Music and Musicians*, series i. p. 205.) True, this impassioned outburst has to be moderated by Eusebius. But consider the significance of Schumann's writing thus in

his own journal about the critic's vocation! It plainly shows that he only took it up as an artist, and occasionally despised it. But with regard to Schumann's place in art, Mendelssohn did not, at that time at all events, consider it a very high one, and he was not alone in this opinion. It was shared, for example, by Spohr and Hauptmann. In Mendelssohn's published letters there is no verdict whatever on Schumann's music. The fact, however, remains that in Schumann's earlier pianoforte works he felt that the power or the desire for expression in the greater forms was wanting, and this he said in conversation. He soon had reason to change his opinion, and afterwards expressed warm interest in his friend's compositions. Whether he ever quite entered into the individualities of Schumann's music may well be doubted; their natures were too dissimilar. To a certain extent the German nation has recovered from one mistake in judgment; the tendency to elevate Schumann above Mendelssohn was for a very long time unmistakable. Latterly their verdict has become more just, and the two are now recognised as composers of equal greatness.

Schumann's constant intimacy in Wieck's house had resulted in a tender attachment to his daughter Clara, now grown up. It was in the latter part of 1835 that this first found any definite expression. His regard was reciprocated, and in September 1837 he preferred his suit formally to her father.² Wieck, however, did not favour it; possibly he entertained loftier hopes for his gifted daughter. At any rate he was of opinion that Schumann's means and prospects were too vague and uncertain to warrant his setting up a home of his own. Schumann seems to have acknowledged the justice of this hesitation, for in 1838 he made strenuous efforts to find a new and wider sphere of work. With the full consent of Clara Wieck he decided on settling in Vienna, and bringing out his musical periodical in that city. The glory of a great epoch still cast a light over the musical life of the Austrian capital—the epoch when Gluck, Haydn, Mozart, Beethoven, and Schubert were living and working there. In point of fact, all genuine music had vanished even during Beethoven's lifetime, and had given way to a trivial and superficial taste. Rossini and his followers were paramount in opera; in orchestral music there were the waltzes of Strauss and Lanner; and in vocal music the feeble sentimentalities of Proch and his fellow-composers. So far as solo-playing was concerned, the fourth decade of the century saw it at its highest pitch of executive brilliancy, and its lowest of purpose and feeling—indeed it may be comprehensively designated as the epoch of Thalberg. Thus Schumann would have found in Vienna ample opportunity for doing good

¹ Hardly recognisable, owing to *Die musikalische Zeitung* (Schumann's paper) being rendered 'The musical papers.'

² [These dates are now finally settled by Litzmann's *Clara Schumann*, vol. i. p. 123, etc.]

work, for the Viennese public was still as ever the most responsive in the world, and one to justify sanguine hopes. Schumann effected his move with the assistance of Professor Joseph Fischhof, his colleague in the paper; settling himself in October 1838 in the Schönlaterngasse, No. 679. Oswald Lorenz edited the *Zeitschrift* as Schumann's deputy, and for a time it was still to be issued in Leipzig. Schumann hoped to be able to bring it out in Vienna by January 1839, and made every effort to obtain the prompt permission of the authorities, as well as the support of influential persons for himself and his journal. But the consent of the censor's office and the police were long withheld; and he was required to secure the co-operation of an Austrian publisher, in itself a great difficulty. It is hard to believe that in the great city of Vienna no strictly musical newspaper then existed, and that a small catalogue, the *Allgemeine musikalische Anzeiger*, published weekly by Tobias Haslinger, and almost exclusively devoted to the business interests of his firm, was the only publication which could pretend to the name. But the publishers were either too indolent or too timid to attempt any new enterprise, and sought to throw impediments in Schumann's way.

His courage and hopefulness were soon much reduced. The superficially kind welcome he met everywhere could not conceal the petty strife of coteries, the party spirit and gossip of a society which might have been provincial. The public, though keenly alive to music, was devoid of all critical taste. 'He could not get on with these people,' he writes to Zuccalmaglio as early as Oct. 19, 1838; their utter insipidity was at times too much for him, and while he had hoped that on its appearance in Vienna the *Zeitschrift* would have received a fresh impulse, and become a medium of intercourse between North and South, he was forced as early as December to say: 'The paper is evidently falling off, though it must be published here; this vexes me much.' Sterndale Bennett, who was residing in Leipzig during 1837-38, and who, Schumann hoped, would settle with him in Vienna, was obliged to relinquish his intention; and in Vienna itself he sought in vain for an artist after his own heart, 'one who should not merely play tolerably well on one or two instruments, but who should be a *whole man*, and understand Shakespeare and Jean Paul.' At the same time he did not abandon the scheme of making a wide and influential circle of activity for himself; he was unwilling to return to Leipzig, and when in March 1839 he made up his mind to do so, after trying in vain to carry on the journal in Vienna, it was with the intention of remaining there but a short time. He indulged in a dream of going to England never to return! What the anticipations could have been that

led him to cherish such an idea we know not; perhaps his friendship for Bennett may have led to it; but, in point of fact, he never set foot on English ground.

As far, therefore, as making a home for himself went, his half-year's stay in Vienna was without result. But without doubt Schumann received impulses and incitements towards further progress as a musician through his acquaintance with Vienna life. A work which is to be referred directly to this influence is the 'Faschingsschwank aus Wien' (op. 26, published by Spina in 1841). In the first movement, which seems to depict various scenes of a masquerade, there springs up quite unnoticed the melody of the 'Marseillaise' (p. 7, bar 40, etc.; Pauer's edition, vol. iii. p. 596, l. 1), at that time strictly forbidden in Vienna. Schumann, who had been much worried by the government officials on account of his newspaper, took this opportunity of playing off a good-tempered joke upon them.

It was very natural that, with his enthusiastic admiration for Schubert, he should take pains to follow out the traces of that master, who had now been dead just ten years. He visited the Währing cemetery, where Schubert is buried, divided by a few intervening graves from Beethoven. On the tomb of the latter a steel pen was lying; this Schumann took possession of, and being always fond of symbolical associations and mystic connections, used on very special occasions. With it he wrote his Symphony in B \flat (op. 38), and the notice of Schubert's C major Symphony, which is found in the *Zeitschrift* for 1840.¹ And here we encounter one of the chief benefits which Schumann received from his stay in Vienna. He visited Franz Schubert's brother Ferdinand, who showed him the artistic remains of his too early lost brother, and among them the score of the C major Symphony. This he had composed in March 1828, but never lived to hear it performed entire, and no one had since cared to take any trouble about it. Schumann arranged for the score to be sent to Leipzig, and there on March 21, 1839, it was performed for the first time under Mendelssohn's direction. Its success was very striking, and was of great influence on the more thorough and widespread appreciation of Schubert's genius. Schumann retained pleasant memories of Vienna throughout his life, in spite of the little notice he attracted on this occasion, and the meagre success of a concert consisting of his own works, which he gave with his wife on a subsequent visit in the winter of 1846. In the summer of 1847 he even wished to apply for a vacant post on the board of direction at the Conservatorium, but when the year 1848 came, he was extremely glad that the plan had come to nothing.

¹ See also the *Gesammelte Schriften*, iii. 195.

At the beginning of April 1839 Schumann returned to his old life in Leipzig. He devoted himself with new zest to the interests of the journal, and delighted in once more being associated with prominent and sympathetic musicians. In the summer he paid a short visit to Berlin, which pleased and interested him from its contrast to Vienna.

Unfortunately Wieck's opinion as to the match between Schumann and his daughter remained unchanged, and his opposition to it became even stronger and more firmly rooted. Since persuasion was unavailing, Schumann was forced to call in the assistance of the law, and Wieck had to account for his refusal in court. The case dragged on for a whole year, but the final result was that Wieck's objections to the marriage were pronounced to be trivial and without foundation. A sensitive nature such as Schumann's must have been deeply pained by these difficulties, and the long-delayed decision must have kept him in disastrous suspense. His letters show signs of this. For the rest, his outward circumstances had so much improved, that he could easily afford to make a home without the necessity of such a round of work as he had attempted in Vienna. 'We are young,' he writes on Feb. 19, 1840, 'and have hands, strength, and reputation; and I have a little property that brings in 500 thalers a year. The profits of the paper amount to as much again, and I shall get well paid for my compositions. Tell me now if there can be real cause for fear.' One thing alone made him pause for a time. His bride-elect was decorated with different titles of honour from the courts at which she had played in her concert-tours. He himself had, it is true, been latterly made a member of several musical societies, but that was not enough. In the beginning of 1840 he executed a scheme which he had cherished since 1838, and applied to the university of Jena for the title of Doctor of Philosophy. Several cases in which the German universities had granted the doctor's diploma to musicians had lately come under Schumann's notice; for instance the university of Leipzig had given the honorary degree to Marschner in 1835, and to Mendelssohn in 1836, and these may have suggested the idea to him. Schumann received the desired diploma on February 24, 1840. As he had wished, the reason assigned for its bestowal is his well-known activity not only as a critical and æsthetic writer, but as a creative musician. At last, after a year of suspense, doubts, and disagreements, the marriage of Robert Schumann with Clara Wieck took place on Sept. 12, 1840, in the church of Schönefeld, near Leipzig.

The 'Davidsbündlertänze,' previously mentioned, bore on the title-page of the first edition an old verse—

In all und jeder Zeit
Verknüpft sich Lust und Leid :
Bleibt fromm in Lust, und seydt
Beim Leid mit Muth bereit ;

And when we observe that the two first bars of the first piece are borrowed from a composition by Clara Wieck (op. 6, No. 5), we understand the allusion. Schumann himself admits that his compositions for the piano written during the period of his courtship reveal much of his personal experience and feelings, and his creative work in 1840 is of a very striking character. Up to this time, with the exception of the Symphony in G minor, which has remained unknown, he had written only for the piano; now he suddenly threw himself into vocal composition, and the stream of his invention rushed at once into this new channel with such force that in that single year he wrote above one hundred songs. Nor was it in number alone, but in intrinsic value also, that in this department the work of this year was the most remarkable of all Schumann's life. It is not improbable that his stay in Vienna had some share in this sudden rush into song, and in opening Schumann's mind to the charms of pure melody. But still, when we look through the words of his songs, it is clear that here more than anywhere, love was the prompter—love that had endured so long a struggle, and at last attained the goal of its desires. This is confirmed by the 'Myrthen' (op. 25), which he dedicated to the lady of his choice, and the twelve songs from Rückert's *Liebesfrühling* (op. 37), which were written conjointly by the two lovers. 'I am now writing nothing but songs great and small,' he says to a friend on Feb. 19, 1840; 'I can hardly tell you how delightful it is to write for the voice as compared with instrumental composition, and what a stir and tumult I feel within me when I sit down to it. I have brought forth quite new things in this line.' With the close of 1840 he felt that he had worked out the vein of expression in the form of song with pianoforte accompaniment, almost to perfection. Some one expressed a hope that after such a beginning a promising future lay before him as a song-writer, but Schumann answered, 'I cannot venture to promise that I shall produce anything further in the way of songs, and I am satisfied with what I have done.' And he was right in his firm opinion as to the peculiar character of this form of music. 'In your essay on song-writing,' he says to a colleague in the *Zeitschrift*, 'it has somewhat distressed me that you should have placed me in the second rank. I do not ask to stand in the first, but I think I have some pretensions to a place of my own.'

As far as anything human can be, the marriage was perfectly happy. Besides their genius, both husband and wife had simple domestic tastes, and were strong enough to bear the admiration

of the world without becoming egotistical. They lived for one another, and for their children. He created and wrote for his wife, and in accordance with her temperament; while she looked upon it as her highest privilege to give to the world the most perfect interpretation of his works, or at least to stand as mediatrix between him and his audience, and to ward off all disturbing or injurious impressions from his sensitive soul, which day by day became more and more irritable. Now that he found perfect contentment in his domestic relations, he withdrew more than ever from intercourse with others, and devoted himself exclusively to his family and his work. The deep joy of his married life produced the direct result of a mighty advance in his artistic progress. Schumann's most beautiful works in the larger forms date almost exclusively from the years 1841 to 1845.

In 1841 he turned his attention to the Symphony, as he had done in the previous year to the Song, and composed, in this year alone, no fewer than three symphonic works. The B \flat Symphony (op. 38) was performed as early as March 31, 1841, at a concert given by Clara Schumann in the Gewandhaus at Leipzig. Mendelssohn conducted it, and performed the task with so much zeal and care as truly to delight his friend. The other two orchestral works were given at a concert on Dec. 6 of the same year, but did not meet with so much success as the former one. Schumann thought that the two together were too much at once; and they had not the advantages of Mendelssohn's able and careful direction, for he was spending that winter in Berlin. Schumann put these two works away for a time, and published the B \flat Symphony alone. The proper title of one of these was 'Symphonistische Phantasie,' but it was performed under the title of 'Second Symphony,' and, in 1851, the instrumentation having been revised and completed, was published as the 4th Symphony (D minor, op. 120). The other was brought out under an altered arrangement, which he made in 1845, with the title 'Overture, Scherzo, et Finale' (op. 52); and it is said that Schumann originally intended to call it 'Sinfonietta.' Besides these orchestral works the first movement of the Pianoforte Concerto in A minor was written in 1841. It was at first intended to form an independent piece with the title of 'Fantasie.' As appears from a letter of Schumann's to David, it was once rehearsed by the Gewandhaus orchestra in the winter of 1841-42. Schumann did not write the last two movements which complete the concerto until 1845.

The year 1842 was devoted to chamber music. The three string quartets deserve to be first mentioned, since the date of their composition can be fixed with the greatest certainty. Although Schumann was unused to this style of writing, he composed the quartets in about

a month—a certain sign that his faculties were as clear as his imagination was rich. In the autograph,¹ after most of the movements is written the date of their completion. The Adagio of the first quartet bears the date June 21, 1842; the finale was 'finished on St. John's day, June 24, 1842, in Leipzig.' In the second quartet the second movement is dated July 2, 1842, and the last July 5, 1842, Leipzig. The third is dated as follows: first movement, July 18, second July 20, third July 21, and the fourth Leipzig, July 22, all of the same year. Thus the two last movements took the composer only one day each. These quartets, which are dedicated to Mendelssohn, were at once taken up by the Leipzig musicians with great interest. The praise bestowed upon them by Ferdinand David called forth a letter from Schumann, addressed to him, which merits quotation, as showing how modest and how ideal as an artist Schumann was:—'Härtel told me how very kindly you had spoken to him about my quartets, and, coming from you, it gratified me exceedingly. But I shall have to do better yet, and I feel, with each new work, as if I ought to begin all over again from the beginning.' In the beginning of October of this year the quartets were played at David's house; Hauptmann was present, and expressed his surprise at Schumann's talent, which, judging only from the earlier pianoforte works, he had fancied not nearly so great. With each new work Schumann now made more triumphant way—at all events in Leipzig. The same year witnessed the production of that work to which he chiefly owes his fame throughout Europe—the Quintet for Pianoforte and Strings (op. 44). The first public performance took place in the Gewandhaus on Jan. 8, 1843, his wife, to whom it is dedicated, taking the pianoforte part. Berlioz, who came to Leipzig in 1843, and there made Schumann's personal acquaintance, heard the quintet performed, and carried the fame of it to Paris. Besides the quintet, Schumann wrote, in 1842, the Pianoforte Quartet (op. 47) and a Pianoforte Trio. The trio, however, remained unpublished for eight years, and then appeared as op. 88, under the title of 'Phantasiestücke für Pianoforte, Violin, and Violoncello.' The quartet too was laid aside for a time; it was first publicly performed on Dec. 8, 1844, by Madame Schumann, in the Gewandhaus, David of course taking the violin part, and Niels W. Gade, who was directing the Gewandhaus concerts that winter, playing the viola.

With the year 1843 came a total change of style. The first work to appear was op. 46, the Variations for two pianos, which are now so popular, and to which Mendelssohn may have done some service by introducing them to the public, in company with Mme. Schumann, on August 19, 1843. The principal work

¹ Now in the possession of Herr Raymund Härtel, of Leipzig.

of the year, however, was 'Paradise and the Peri,' a grand composition for solo-voices, chorus, and orchestra, to a text adapted from Moore's 'Lalla Rookh.' The enthusiasm created by this work at its first performance (Dec. 4, 1843), conducted by the composer himself, was so great that it had to be repeated a week afterwards, on Dec. 11, and on the 23rd of the same month it was performed in the Opera House at Dresden. It will be easily believed that from this time Schumann's fame was firmly established in Germany, although it took twenty years more to make his work widely and actually popular. Having been so fortunate in his first attempt in a branch of art hitherto untried by him, he felt induced to undertake another work of the same kind, and in 1844 began writing the second of his two most important choral works, namely, the music to Goethe's 'Faust.' For some time, however, the work consisted only of four numbers. His uninterrupted labours had so affected his health, that in this year he was obliged for a time to forego all exertion of the kind.

The first four years of his married life were passed in profound retirement, but very rarely interrupted. In the beginning of 1842 he accompanied his wife on a concert-tour to Hamburg, where the B \flat Symphony was performed. Madame Schumann then proceeded alone to Copenhagen, while her husband returned to his quiet retreat at Leipzig. In the summer of the same year the two artists made an excursion into Bohemia, and at Königswart were presented to Prince Metternich, who invited them to Vienna. Schumann at first took some pleasure in these tours, but soon forgot it in the peace and comfort of domestic life, and it cost his wife great trouble to induce him to make a longer journey to Russia in the beginning of 1844. Indeed she only succeeded by declaring that she would make the tour alone if he would not leave home. 'How unwilling I am to move out of my quiet round,' he wrote to a friend, 'you must not expect me to tell you. I cannot think of it without the greatest annoyance.' However, he made up his mind to it, and they started on Jan. 26. His wife gave concerts in Mitau, Riga, Petersburg, and Moscow; and the enthusiasm with which she was everywhere received attracted fresh attention to Schumann's works, the constant aim of her noble endeavours. Schumann himself, when once he had parted from home, found much to enjoy in a journey which was so decidedly and even brilliantly successful. At St. Petersburg he was received with undiminished cordiality by his old friend Henselt, who had made himself a new home there. At a soirée at Prince Oldenburg's Henselt played with Mme. Schumann her husband's Variations for two pianos. The B \flat Symphony was also performed under Schumann's direction at a soirée given by the Counts Joseph and

Michael Wielhorsky, highly esteemed musical connoisseurs; and it is evident that the dedication of Schumann's PF. Quartet (op. 47) to a Count Wielhorsky was directly connected with this visit.

In June they were once more in Leipzig, and so agreeable were the reminiscences of the journey that Schumann was ready at once with a fresh plan of the same kind—this time for a visit to England with his wife in the following year; not, indeed, as he had once intended, with a view to permanent residence, but merely that she might win fresh laurels as a player, and he make himself known as a composer. He proposed to conduct parts of 'Paradise and the Peri' in London, and anticipated a particular success for it because the work 'had, as it were, sprung from English soil, and was one of the sweetest flowers of English verse.' On June 27, 1844, he writes to Moscheles concerning the project, which had the full support of Mendelssohn; but the scheme ultimately came to nothing, chiefly because of the refusal of Buxton, the proprietor of the publishing firm of Ewer & Co., to bring out 'Paradise and the Peri' with English words. Still Schumann, even long after, kept his eye steadily fixed on England. He was delighted at being told that Queen Victoria often listened to his music, and had had the B \flat Symphony¹ played by the private band at Windsor, and he contemplated dedicating his Manfred music (op. 115) to Her Majesty, but the idea was given up.

Instead of going to England, they at length paid a visit to Vienna in the winter of 1846. Here again Schumann conducted his B \flat Symphony, and his wife played his Pianoforte Concerto. This was on Jan. 1, 1847. But the public were perfectly unsympathetic, and justified an earlier utterance of Schumann's that 'The Viennese are an ignorant people, and know little of what goes on outside their own city.' Nor were matters much more satisfactory in Berlin, whither they went from Vienna to conduct 'Paradise and the Peri'; while in Prague, where they performed on their way, they met with the warmest reception.

The year 1844 was the last of Schumann's residence in Leipzig; for in October he left the town where he had lived and worked with short intervals for fourteen years, and moved to Dresden. He had given up the editorship of the *Neue Zeitschrift* in July, and from April 3, 1843, had held a Professor's chair in the Conservatorium, founded at Leipzig by Mendelssohn's exertions, and opened on that date. [See vol. ii. p. 668; vol. iii. pp. 142, 143.] He was professor of pianoforte-playing and composition; but his reserved nature was little suited to the duties of a teacher, though his name and the example afforded by

¹ The first performance of the B \flat Symphony in England was at the Philharmonic Concert, June 5, 1854.

his work were no doubt highly advantageous to the infant institution. Schumann had no disciples, properly speaking, either in the Conservatorium or as private pupils. In a letter to David from Dresden he incidentally mentions Carl Ritter as having instruction from him, and as having previously been a pupil of Hiller's; and he writes to Hiller that he has brought young Ritter on a little. But what the style of Schumann's teaching may have been cannot be told; and a single exception only proves the rule.

The move to Dresden seems to have been chiefly on account of Schumann's suffering condition. His nervous affection rendered change of scene absolutely necessary to divert his thoughts. He had overworked himself into a kind of surfeit of music, so much so that his medical attendant forbade his continually hearing it. In the musical world of Leipzig such a prohibition could not be strictly obeyed, but at Dresden it was quite different. 'Here,' he writes to David on Nov. 25, 1844, 'one can get back the old lost longing for music, there is so little to hear! It just suits my condition, for I still suffer very much from my nerves, and everything affects and exhausts me directly.' Accordingly he at first lived in Dresden in the strictest seclusion. A friend sought him out there and found him so changed that he entertained grave fears for his life. On several occasions he tried sea-bathing, but it was long before his health can be said to have radically improved. In February 1846, after a slight improvement, he again became very unwell, as he did also in the summer of the following year. He observed that he was unable to remember the melodies that occurred to him, when composing; the effort of invention fatiguing his mind to such a degree as to impair his memory. As soon as a lasting improvement took place in his health, he again devoted himself wholly to composition. He was now attracted more powerfully than before to complicated contrapuntal forms. The 'Studies' and 'Sketches' for the pedal-piano (opp. 56 and 58), the six fugues on the name of 'Bach' (op. 60) and the four piano fugues (op. 72), owe their existence to this attraction. The greatest work of the years 1845-46, however, was the C major Symphony (op. 61), which Mendelssohn produced at the Gewandhaus in Leipzig, Nov. 5, 1846. Slight intercourse with a few congenial spirits was now gradually resumed. Among those whom he saw was the widow of C. M. v. Weber, whose fine musical feeling was highly valued by Schumann. The first year in Dresden was spent with Ferdinand Hiller, who had been living there since the winter of 1844. Their intercourse gradually grew into a lively and lasting intimacy. When Hiller was getting up subscription concerts in the autumn of 1845, Schumann took an active share in the undertaking. With Richard Wagner, too, then Capellmeister at

Dresden, he was on friendly terms. He was much interested in the opera of 'Tannhäuser' and heard it often, expressing his opinion of it in terms of great though not unqualified praise. But the natures of the two musicians differed too widely to allow of any real sympathy between them. Wagner was always lively, versatile, and talkative, while Schumann's former silence and reserve had increased since his illness, and even intimate friends, like Moscheles and Lipinski, had to lament that conversation with him was now scarcely possible.

At the end of Schumann's collected works we find a *Theaterbüchlein* (1847-50), in which are given short notes of the impressions made upon him by certain operas. From this we learn that in 1847 he went comparatively often to the theatre; the reason being that at that time he himself was composing an opera. He had long cherished the idea. So early as Sept. 1, 1842, he writes, 'Do you know what is my morning and evening prayer as an artist? *German Opera*. There is a field for work.' He concludes a critique of an opera by Heinrich Esser in the number of the *Zeitschrift* for September 1842 with these significant words—'It is high time that German composers should give the lie to the reproach that has long lain on them of having been so craven as to leave the field in possession of the Italians and French. But under this head there is a word to be said to the German poets also.' In 1844 he composed a chorus and an aria for an opera on Byron's *Corsair*. The work, however, went no farther, and the two pieces still remain unpublished. He also corresponded with his friend Zuccalmaglio as to the subject for an opera, which he wished to find ready on his return from Russia; and made notes on more than twenty different subjects of all kinds, periods, and nationalities; but none of these were found suitable, and circumstances led to the abandonment of the project. At length, in 1847, he decided on the legend of St. Geneviève. The two versions of the story contained in the tragedies of Tieck and Hebbel (principally that of Hebbel) were to serve as the basis of the text. The treatment of the words he persuaded Robert Reinick, the poet, who had been living in Dresden since 1844, to undertake. Reinick, however, failed to satisfy him, and Hebbel, who came to Dresden at the end of July 1847, could not say that he thought it a satisfactory text, though he declined to assist in remedying the deficiencies and bringing it into the desired form. This, however, was from no lack of interest in Schumann himself. On the contrary Hebbel always preserved the highest esteem for him, and subsequently dedicated to him his drama of *Michel Angelo*, accepting in return from Schumann the dedication of his 'Nachtlied' (op. 108). But it was repugnant to him to see his work mutilated in

the way which Schumann considered necessary for an opera. The composer was at last obliged to trust to his own poetic powers, and construct a text himself from those already mentioned.

By August 1848 the music for the opera was so far complete that Schumann thought he might take steps for its performance. His first thought was of the theatre at Leipzig, where he knew that he was most warmly remembered. Wirsing was at that time the director, Julius Rietz the conductor, and the opera was to have been brought out in the spring of 1849, but it came to nothing. In June, when the preparations were to have begun, Schumann was detained by domestic circumstances, and the rest of the year slipped away with constant evasions and promises on the part of the director of the theatre. Even the promise, 'on his honour,' that the opera should be performed at the end of February 1850, at latest, was not kept. And so in this, his very first attempt at dramatic work, Schumann made acquaintance with the shady side of theatrical management in a way which must have disgusted his upright and honourable spirit. In his indignation, he would have made the director's breach of faith public, by invoking the aid of the law; but his Leipzig friends were happily able to dissuade him from this course. At last, on June 25, 1850, the first representation of 'Genoveva' actually took place under Schumann's own direction. But the time was unfavourable. 'Who,' he writes to Dr. Hermann Härtel, 'goes to the theatre in May or June, and not rather into the woods?' However, the number of his admirers in Leipzig was great, and the first opera by so famous a master excited great expectations; the house was full, and the reception by the public, though not enthusiastic, was honourable to the composer. Still, artists and connoisseurs were tolerably unanimous in thinking that Schumann lacked the special genius for writing opera. His almost entire exclusion of recitative was very widely disapproved of. No one but the venerable Spohr, who had attended many of the rehearsals, gave a really favourable verdict upon the work. In his last opera, 'The Crusaders,' Spohr himself had adopted similar methods of making the music follow the plot closely without ever coming to a standstill, and he was naturally delighted to find the same in Schumann's work. After three representations (June 25, 28, 30) 'Genoveva' was laid aside for the time. Schumann, already vexed by the tedious postponements of the first performance, and disappointed by the cold reception of the work, was greatly annoyed by the discussions in the public prints, especially by a critique from Dr. E. Krüger, one of the collaborators in the *Neue Zeitschrift*. A letter from Schumann to Krüger, in stronger terms

than might have been expected from him, put an end for ever to their acquaintance.

Schumann derived far more gratification from the reception of his music to 'Faust.' In 1848 he completed the portion he had originally intended to write first, viz. the salvation of Faust, which forms the end of the second part of Goethe's poem, and the music of which is called the 'third part.' On June 25, 1848, the first performance took place among a limited circle of friends, upon whom it made a deep impression. The most cultivated portion of the audience was of opinion that the music made the meaning of the words clear for the first time, so deeply imbued was the composer with the poet's inmost spirit. As the 100th anniversary of Goethe's birthday was approaching (August 28, 1849) it was decided to give a festival concert in Dresden, at which this 'Faust' music and Mendelssohn's 'Walpurgisnacht' should form the programme. When the Leipzig people heard of this intention, they would not be behind Dresden, and also got up a performance of the same works on August 29. In Weimar too the 'Faust' music was performed for the same festivity. Schumann was exceedingly delighted that his work had been employed for so special an occasion. He writes to Dr. Härtel: 'I should like to have Faust's cloak, and be able to be everywhere at once, that I might hear it.' In Dresden the success of the work was very considerable, but it made less impression at its first performance in Leipzig. Schumann took this quite calmly. 'I hear different accounts,' says he in a letter, 'of the impression produced by my scenes from "Faust"; some seem to have been affected, while upon others it made no definite impression. This is what I expected. Perhaps an opportunity may occur in the winter for a repetition of the work, when it is possible that I may add some other scenes.' This repetition, however, did not take place in Schumann's lifetime. He fulfilled his scheme of adding several scenes; and in 1853 prefixed an overture to the whole work, which was divided into three parts. It was not published complete until two years after his death.

In the meantime, Schumann's health had again improved, as was evident from his augmented creative activity. Indeed his eager desire for work increased in a way which gave rise to great apprehensions. In the year 1849 alone he produced thirty works, most of them of considerable extent. It had never seemed so easy to him to create ideas and bring them into shape. He composed as he walked or stood, and could not be distracted, even by the most disturbing circumstances. Thus he wrote Mignon's song 'Kennst du das Land' at Kreischa, near Dresden, in the midst of a group of his noisy children. And in a restaurant near the post-office, much frequented by the artistic

society of Dresden, where he used to drink his beer in the evening, he would usually sit alone, with his back to the company and his face to the wall, whistling softly to himself, and developing his musical ideas all the time. No preference for any particular form of art can be traced in Schumann's work at this time. Piano-forte works and chamber trios, songs and vocal duets, choruses, choral works with orchestra, concertos with orchestra, compositions for horn, clarinet, oboe, violoncello, or violin, with piano-forte accompaniment, even melodramatic music—all these thronged as it were out of his imagination in wild and strange succession. Among all the beautiful and important works produced at this time, the music to Byron's *Manfred* deserves especial mention. The first stage performance of it was given by Franz Liszt in Weimar on June 13, 1852. For that occasion the drama was adapted for the stage by Schumann himself, in an arrangement which is printed as a preface to the score of the work. The first performance of the music at a concert took place at Leipzig on March 24, 1859.

Dresden was Schumann's place of residence until 1850. In the latter years of his stay there his outward life was more active than before. No journeys of note were made, it is true, with the exception of those to Vienna and Berlin already mentioned, and a longer expedition undertaken in 1850 to Bremen and Hamburg, where many concerts were given. He avoided the passing disturbance occasioned by the Dresden insurrection of 1849, by leaving the town with his family. Though no revolutionary, like Richard Wagner, scarcely even a politician, Schumann loved individual liberty and wished others to enjoy it also. But what gave a different aspect to his life as a musician in the last years of his stay in Dresden, was his occupation as a conductor. Ferdinand Hiller had conducted a choral society for men's voices; and when he left Dresden to go to Düsseldorf as municipal director of music, Schumann succeeded him in his post. He conducted the society for some time with great interest, and was glad to find that his capacity for conducting was not so small as he had generally fancied it to be. He was even induced to write a few works for male chorus. Three songs of War and Liberty (Kriegs- und Freiheitslieder, op. 62) and seven songs in canon-form, to words by Rückert (op. 65), were written in 1847, and a grand motet for double chorus of men's voices (op. 93) in 1849. But a nature like Schumann's could not thrive in the atmosphere of a German singing-club. He was in all respects too refined for the tone of vulgar comfort, and often even of low sentimentality, which pervades these assemblies, and they could not but be irksome to him. 'I felt myself,' he says, in a letter to Hiller written on April 10, 1849, after his withdrawal, 'out of my element ;

they were such nice (*hübsch*) people.' This is even noticeable in his compositions for male chorus; they are not of the right kind, and have in consequence never been much sung. Of greater artistic importance was a society of mixed voices which was constituted in January 1848, and of which Schumann was asked to take the lead. It was not very large—in 1849 it numbered only sixty or seventy members—but these were efficient, and Schumann was able 'to perform correctly any music he liked with pleasure and delight.' It was this society that gave the first performance of the third part of 'Faust' in June 1848, at a private party; Schumann was induced to write many new compositions for them, and they did much service in promoting a knowledge of his music in Dresden by two performances of 'Paradise and the Peri' on Jan. 5 and 12, 1850. They even succeeded in drawing him into social amusements. In August 1848 a general excursion was arranged, in which Schumann took what was, for him, a lively interest.

That Schumann, after so successful a beginning in the art of conducting, considered himself fitted to undertake the direction of performances on a larger scale, is evident from the following circumstance. After Mendelssohn's death the Gewandhaus concerts were conducted by Julius Rietz, who until 1847 had been at work in Düsseldorf. In the summer of 1849 a report reached Dresden that Rietz was going to succeed O. Nicolai as royal Capellmeister at Berlin. Schumann thereupon applied for the post of concert director at the Gewandhaus. Dr. Hermann Härtel was to be the medium of communication, and Schumann, with a well-founded expectation that the choice would fall upon him, gave himself up for a time with great pleasure to the idea of becoming the successor of the honoured Mendelssohn. 'It would give me great pleasure,' he wrote, 'if the thing came to pass. I long for regular duty, and though I can never forget the last few years, during which I have lived exclusively as a composer, and know that so productive and happy a time may perhaps never be mine again, yet I feel impelled towards a life of active work, and my highest endeavour would be to keep up the renown which the institution has so long enjoyed.' This wish was not realised, for Rietz remained in Leipzig. But Schumann's desire for a more extended field of work as a conductor was to be satisfied in another way in the following year.

In 1850 Hiller gave up his post in Düsseldorf to obey a call to Cologne as Capellmeister to that city. He suggested that Schumann should be his successor, and opened negotiations with him. Some efforts were made to keep him in Dresden and to obtain his appointment as Capellmeister to the King of Saxony; but the attempt was unsuccessful, and Schumann

accepted the directorship at Düsseldorf that summer, though he left his native place with deep regret, and not without some suspicions as to the condition of music in Düsseldorf, of which he had heard much that was unfavourable from Mendelssohn and Rietz. In his new post he had the direction of a vocal union and of an orchestra, and a number of concerts to conduct in the course of the winter. He arrived at Düsseldorf, Sept. 2, 1850, and the first winter concert was in some sort a formal reception of him, since it consisted of the overture to 'Genoveva,' some of his songs, and Part I. of 'Paradise and the Peri.' It was under the direction of Julius Tausch, Schumann himself appearing as conductor for the first time on Oct. 24.

He was very well satisfied with his new sphere of work. The vocal resources, as is the case with all the choirs of the Rhine towns, were admirable; Hiller had cultivated them with special zeal, and he and Rietz had left the orchestra so well drilled that Schumann, for the first time in his life, enjoyed the inestimable advantage of being able to hear everything that he wrote for the orchestra performed immediately. The concerts took up no more of his time than he was willing to give, and left him ample leisure for his own work. Chamber music was also attainable, for in J. von Wasielewski there was a good solo violinist on the spot. Schumann and his wife were at once welcomed in Düsseldorf with the greatest respect, and every attention and consideration was shown to them both. It might be said that their position here was one of special ease, and they soon formed a delightful circle of intimate acquaintances. Little as his music was then known in the Rhine-cities, Schumann's advent in person seems to have given a strong impulse to the public feeling for music in Düsseldorf. The interest in the subscription concerts during the winter of 1850 was greater than it had ever been before; and the board of directors was able, at the close of the usual series of six concerts, to undertake a second series of three or four. At Schumann's instance one of the winter concerts was entirely devoted to the works of living composers, an idea then perfectly novel, and showing that he had remained faithful to his desire—manifested long before through the *Zeitschrift*—of facilitating the advancement of young and gifted composers. At first Schumann's direction gave entire satisfaction. If some performances were not perfectly successful, they were compensated for by others of special excellence; and the execution of Beethoven's A major Symphony at the third concert even seemed to show that he was a horn conductor. But it was not so in reality; indeed he was wholly wanting in the real talent for conducting; all who ever saw him conduct or who played under his direction are agreed on this point.

Irrespective of the fact that conducting for any length of time tired him out, he had neither the collectedness and prompt presence of mind, nor the sympathetic faculty, nor the enterprising dash, without each of which *conducting* in the true sense is impossible. He even found a difficulty in starting at a given *tempo*; nay, he sometimes shrank from giving any initial beat; so that some energetic pioneer would begin without waiting for the signal, and without incurring Schumann's wrath. Besides this, any thorough practice bit by bit with his orchestra, with instructive remarks by the way as to the mode of execution, was impossible to this great artist, who in this respect was a striking contrast to Mendelssohn. He would have a piece played through, and if it did not answer to his wishes, had it repeated. If it went no better the second, or perhaps even a third time, he would be extremely angry at what he considered the clumsiness or even the ill-will of the players; but detailed remarks he never made. Any one knowing his silent nature and his instinctive dislike to contact with the outer world, might certainly have feared from the first that he would find great difficulty in asserting himself as a director of large masses. And as years went on his incapacity for conducting constantly increased, as the issue showed, with the growth of an illness, which, after seeming to have been completely overcome in Dresden, returned in Düsseldorf with increasing gravity. His genius seemed constantly to shrink from the outside world into the depths of his soul. His silence became a universally accepted fact, and to those who saw him for the first time he seemed apathetic. But in fact he was anything rather than that; he would let a visitor talk for a long time on all kinds of subjects without saying a word, and then when the caller rose to leave, 'not to disturb the master longer,' he would discover that Schumann had followed the one-sided 'conversation' with unflinching interest. When sitting for an hour, as he was accustomed of an evening, with friends or acquaintances at the restaurant, if anything was said that touched or pleased him he would give the speaker a radiant, expressive glance, but without a word; and the incessant creative labours, to which he gave himself up so long as he was able, are the best proof of the rich vitality which constantly flowed from the deepest sources of his soul. In the family circle he was a different man; there he could be gay and talkative to a degree that would have surprised a stranger. He loved his children tenderly, and was fond of occupying himself with them. The three piano sonatas (op. 118) composed for his daughters Julie, Elise, and Marie; the Album for beginners (op. 68); the Children's Ball (op. 130), and other pieces, are touching evidence of the way in which he expressed this feeling in music.

The first great work of the Düsseldorf period

was the E \flat Symphony (op. 97), marked by the composer as No. 3, although it is really the fourth of the published ones, the D minor Symphony preceding it in order of composition. If we call the Overture, Scherzo, and Finale (op. 52) a symphony too, then the E \flat Symphony must rank as the fifth. It would seem that Schumann had begun to work at it before his change of residence. As soon as he conceived the project of leaving Saxony for the Rhine, he bethought himself of the great musical festival which ever since 1818 had been held in the lower Rhine¹ districts, and was inspired by the idea of assisting at one of these in the capacity of a composer. He wrote down this great work with its five movements between Nov. 2 and Dec. 9, 1850. He has told us that it was intended to convey the impressions which he received during a visit to Cologne; so that its ordinary name of the 'Rhenish Symphony' may be accepted as correct. It was first performed at Düsseldorf on Feb. 6, 1851, and then at Cologne on Feb. 25, both times under the direction of the composer, but was coldly received on both occasions.²

Although Schumann had had no pleasant experiences in connection with the opera 'Genevieve,' he was not to be deterred from making another essay in dramatic composition. In Oct. 1850 he received from Richard Pohl, at that time a student in the Leipzig university, Schiller's 'Bride of Messina,' arranged as an opera libretto. Schumann could not make up his mind to set it to music; but in Dec. 1850 and Jan. 1851 he wrote an Overture to the 'Braut von Messina' (op. 100), which showed how much the material of the play had interested him, in spite of his refusal to set it. He inclined to a more cheerful, or even a comic subject, and Goethe's 'Hermann und Dorothea' seemed to him appropriate for an operetta. He consulted several poets concerning the arrangement, and having made out a scheme of treatment, wrote the Overture at Christmas 1851 (op. 136). The work, however, progressed no farther. He subsequently turned his attention to Auerbach's 'Dorfgeschichten,' but without finding any good material, and no second opera from his pen ever saw the light.

He completed, however, a number of vocal compositions for the concert-room, in which his taste for dramatic music had free play. A young poet from Chemnitz, Moritz Horn, had sent him a fairy poem, which greatly interested him. After many abbreviations and alterations made by Horn himself at Schumann's suggestion, 'The Pilgrimage of the Rose' (Der Rose Pilgerfahrt, op. 112) was really set to music between April and July 1851. The work, which both in form and substance resembles 'Paradise and the Peri,' except that it is treated in a manner at once more detailed and more idyllic, had at first a simple pianoforte accompaniment, but in

November Schumann arranged it for orchestra. June 1851 is also the date of the composition of Uhland's ballad 'Der Königssohn' (op. 116), in a semi-dramatic form, to which indeed he was almost driven by the poem itself. Schumann was much pleased with his treatment of this ballad, which he set for soli, chorus, and orchestra. In the course of the next two years he wrote three more works of the same kind: 'Des Sängers Fluch' (op. 139), a ballad of Uhland's; 'Vom Pagen und der Königstochter' (op. 140), a ballad by Geibel; and 'Das Glück von Edenhall' (op. 143), a ballad by Uhland.

In the last two poems he made alterations of more or less importance, to bring them into shape for musical setting, but the 'Sängers Fluch' had to be entirely remodelled—a difficult and ungrateful task, which Richard Pohl carried out after Schumann's own suggestions.

At that time this young man, a thorough art-enthusiast, kept up a lively intercourse with Schumann, both personally and by letter. They devised together the plan of a grand oratorio. Schumann wavered between a biblical and an historical subject, thinking at one time of the Virgin Mary, at another of Ziska or Luther. His final choice fell upon Luther. He pondered deeply upon the treatment of his materials. It was to be an oratorio suitable both for the church and the concert room, and in its poetical form as dramatic as possible. In point of musical treatment he intended the chorus to predominate, as in Handel's 'Israel in Egypt,' of which he had given a performance in the winter of 1850. Moreover, it was not to be complicated and contrapuntal in style, but simple and popular, so that 'peasant and citizen alike should understand it.' The more he pondered it the more was he inspired with the grandeur of the subject, although by no means blind to its difficulties. 'It inspires courage,' he says, 'and also humility.' He could not, however, coincide with his poet's opinion as to the extent of the work, the latter having formed the idea of a sort of trilogy, in oratorio form, while Schumann wished the work to be within the limit of one evening's performance, lasting about two hours and a half. In this way the few years of creative activity that were still granted to him slipped away, and the oratorio remained unwritten. The impossibility of satisfying, by the oratorio on Luther, the inclination for grave and religious music which became ever stronger with increasing years, is partly the reason of his writing in 1852 a Mass (op. 147), and a Requiem (op. 148). But to these he was also incited by outward circumstances. The inhabitants of Düsseldorf are mostly Catholics, the organ-lofts in the principal churches are too small to hold a large choir and orchestra, and the regular church-music was in a bad condition. The choral society which Schumann conducted was ac-

¹ See this Dictionary, vol. iii. pp. 377, 378.

² Its first performance in England was at a Concert of Signor Arditi's, Dec. 4, 1865.

customed, as a reward for its labours, to have several concerts of church music, or at least sacred compositions, every year; and Schumann was probably thinking of this custom in his Mass and his Requiem, but he was not destined ever to hear them performed.

In the summer of 1851 he and his family made a tour in Switzerland, which he had not visited since the time of his student-life in Heidelberg; on his return he went to Antwerp, for a competitive performance by the Belgian 'Männergesangverein,' on August 17, at which he had been asked to aid in adjudging the prizes. Two years later, towards the end of 1853, he and his wife once more visited the Netherlands, and made a concert-tour through Holland, meeting with such an enthusiastic reception that he could not help saying that his music seemed to have struck deeper root there than in Germany. In March 1852 they revisited Leipzig, where, between the 14th and the 21st, a quantity of his music was performed; the Manfred overture and the 'Pilgerfahrt der Rose' at a public matinée on the 14th; the D minor Sonata for pianoforte and violin (op. 121) in a private circle, on the 15th; the E♭ Symphony at a concert at the Gewandhaus on the 18th; the Pianoforte Trio in G minor (op. 110) at a chamber concert on the 21st. On Nov. 6, 1851, the overture to the 'Braut von Messina' was also performed at the Gewandhaus. The public had thus, during this season, ample opportunity of becoming acquainted with the latest works of this inexhaustible composer. But although he had lived in Leipzig for fourteen years, and had brought out most of his compositions there, besides having a circle of sincerely devoted friends in that city, he could not on this occasion boast of any great success; the public received him with respect and esteem, but with no enthusiasm. But in this respect Schumann had lived through a variety of experience; 'I am accustomed,' he writes to Pohl, Dec. 7, 1851, when speaking of the reception of the overture to the 'Braut von Messina,' 'to find that my compositions, particularly the best and deepest, are not understood by the public at a first hearing.' Artists, however, had come to Leipzig from some distance for the 'Schumann-week'; among them Liszt and Joachim.

In August 1852 there was held in Düsseldorf a festival of music for men's voices, in which Schumann assisted as conductor, though, owing to his health, only to a very limited extent. He took a more important part at Whitsuntide 1853, when the 31st of the Lower Rhine Festivals was celebrated in Düsseldorf on May 15, 16, and 17. He conducted the music of the first day, consisting of Handel's 'Messiah' and of his own Symphony in D minor, which was exceedingly well received. In the concerts of the two following days, which were conducted

chiefly by Hiller, two more of Schumann's larger compositions were performed; the Pianoforte Concerto in A minor, and a newly composed Festival Overture with soli and chorus on the 'Rheinweinflied' (op. 123). But although Schumann appeared in so brilliant a way as a composer, and as such was honoured and appreciated in Düsseldorf, yet there was no concealing the fact that as a conductor he was inefficient. The little talent for conducting that he showed on his arrival in Düsseldorf, had disappeared with his departing health. It was in fact necessary to procure some one to take his place. An attempt was made after the first winter concert of the year (Oct. 27, 1853) to induce him to retire for a time from the post of his own accord. But this proposal was badly received. The fact, however, remains, that from the date just mentioned all the practices and performances were conducted by Julius Tausch, who thus became Schumann's real successor. No doubt the directors of the society were really in the right; though perhaps the form in which Schumann's relation to the society was expressed might have been better chosen. The master was now taken up with the idea of leaving Düsseldorf as soon as possible, and of adopting Vienna, for which he had preserved a great affection, as his permanent residence. But fate had decided otherwise.

The dissatisfaction induced in his mind by the events of the autumn of 1853 was, however, mitigated partly by the tour in Holland already mentioned, and partly by another incident. It happened that in October a young and wholly unknown musician arrived, with a letter of introduction from Joachim. Johannes Brahms—for he it was—immediately excited Schumann's warmest interest by the genius of his playing and the originality of his compositions. In his early days he had always been the champion of the young and aspiring, and now as a matured artist he took pleasure in smoothing the path of this gifted youth. Schumann's literary pen had lain at rest for nine years; he now once more took it up, for the last time, in order to say a powerful word for Brahms to the wide world of art. An article entitled *Neue Bahnen* (New Paths) appeared on Oct. 28, 1853, in No. 18 of that year's *Zeitschrift*. In this he pointed to Brahms as the artist whose vocation it would be 'to utter the highest ideal expression of our time.' He does not speak of him as a youth or beginner, but welcomes him into the circle of Masters as a fully equipped combatant. When before or since did an artist find such words of praise for one of his fellows? It is as though, having already given so many noble proofs of sympathetic appreciation, he could not leave the world without once more, after his long silence, indelibly stamping the image of his pure, lofty, and unenvious artist-nature on the hearts of his fellow-men.

So far as Brahms was concerned, it is true that this brilliant *envoi* laid him under a heavy debt of duty, in the necessity of measuring his productions by the very highest standard; and at the time Schumann was supposed to have attributed to Brahms, as he did to the poetess Elisabeth Kulmann, gifts which he did not actually possess. Twenty-eight years have now [1881] passed and we know that Schumann's keen insight did not deceive him, and that Brahms verified all the expectations formed of him. His intercourse with the young composer (then twenty years old), in whom he took the widest and most affectionate interest, was a great pleasure to Schumann.

At that time, too, Albert Dietrich (afterwards Hofcapellmeister at Oldenburg) was staying in Düsseldorf, and Schumann proved to the utmost the truth of what he had written only a few months previously of Kirchner, that he loved to follow the progress of young men. A sonata for pianoforte and violin exists in MS. which Schumann composed during this month (October 1853), in conjunction with Brahms and Dietrich. Dietrich begins with an allegro in A minor; Schumann follows with an intermezzo in F major; Brahms—who signs himself *Johannes Kreisler junior*—adds an allegro (scherzo) in C minor; and Schumann winds up the work with a finale in A minor, ending in A major. The title of the sonata is worth noting. Joachim was coming to Düsseldorf to play at the concert of Oct. 27, so Schumann wrote on the title-page 'In anticipation of the arrival of our beloved and honoured friend Joseph Joachim, this sonata was written by Robert Schumann, Albert Dietrich, and Johannes Brahms.'¹

This interesting intimacy cannot have continued long, since in November Schumann went to Holland with his wife, and did not return till Dec. 22. But he met Brahms again in Hanover in January 1854 at a performance of 'Paradise and the Peri,' where he found also Joachim and Julius Otto Grimm. A circle of gifted and devoted young artists gathered round the master and rejoiced in having him among them, little imagining that within a few months he would be suddenly snatched from them for ever.

Schumann's appearance was that of a man with a good constitution; his figure was above the middle height, full and well-built; but his nervous system had always shown extreme excitability, and even so early as his twenty-fourth year he suffered from a nervous disorder which increased to serious disease. At a still earlier date he had shown a certain morbid hypertension of feeling, in connection with his passionate study of Jean Paul, of whom he wrote, even in his eighteenth year, that he often drove him to the verge of madness. Violent shocks of emotion,

as for instance the sudden announcement of a death, or the struggle for the hand of Clara Wieck, would bring him into a condition of mortal anguish, and the most terrible state of bewilderment and helplessness, followed by days of overwhelming melancholy. A predisposition to worry himself, an 'ingenuity in clinging to unhappy ideas,' often embittered the fairest moments of his life. Gloomy anticipations darkened his soul; 'I often feel as if I should not live much longer,' he says in a letter to Zuccalmaglio of May 18, 1837, 'and I should like to do a little more work'; and later, to Hillar—'man must work while it is yet day.' The vigour of youth for a time conquered these melancholy aberrations, and after his marriage the calm and squable happiness which he found in his wife for a long time expelled the evil spirit. It was not till 1844 that he again fell a prey to serious nervous tension. This was evidently the result of undue mental strain, and for a time he was forced to give up all work, and even the hearing of music, and to withdraw into perfect solitude at Dresden. His improvement was slow and not without relapses; but in 1849 he felt quite re-established, as we gather from his letters and from the work he accomplished; and his condition seems to have remained satisfactory till about the end of 1851. Then the symptoms of disease reappeared; he had, as usual, been again working without pause or respite, and even with increased severity; and was himself so much alarmed as to seek a remedy. Various eccentricities of conduct betrayed even to strangers the state of nervous excitability in which he was. By degrees delusions grew upon him, and he fancied that he incessantly heard one particular note, or certain harmonies, or voices whispering words of reproof or encouragement. Once in the night he fancied that the spirits of Schubert and Mendelssohn brought him a musical theme, and he got up and noted it down. He was again attacked by that 'mortal anguish of mind' of which he had had former experience, and which left him perfectly distracted. Still, all these symptoms were but temporary, and between the attacks Schumann was in full possession of his senses and self-control. He himself expressed a wish to be placed in an asylum, but meanwhile worked on in his old way. He wrote some variations for the piano on the theme revealed to him by Schubert and Mendelssohn, but they were his last work, and remained unfinished. On Feb. 27, 1854, in the afternoon, in one of his fits of agony of mind, he left the house unobserved and threw himself from the bridge into the Rhine. Some boatmen were on the watch and rescued him, and he was recognised and carried home. Unmistakable symptoms of insanity now declared themselves, but after a few days a peculiar clearness and calmness of mind returned, and with it his irrepressible love of

¹ The MS. was in Joachim's possession, and he permitted the publication of the movement by Brahms, which appeared in 1907.

work. He completed the variation on which he had been at work before the great catastrophe. These last efforts of his wearied genius remain unpublished, but Brahms has used the theme for a set of 4-hand variations which form one of his most beautiful and touching works (op. 23), and which he has dedicated to Schumann's daughter Julie.

The last two years of Schumann's life were spent in the private asylum of Dr. Richarz at Endenich near Bonn. His mental disorder developed into deep melancholy; at times—as in the spring of 1855—when for a while he seemed better, his outward demeanour was almost the same as before. He corresponded with his friends and received visits, but gradually the pinions of his soul drooped and fell, and he died in the arms of his wife, July 29, 1856, only forty-six years of age.

Soon after Schumann's death his music achieved a popularity in Germany which will bear comparison with that of the most favourite of the older masters. When once the peculiarities of his style grew familiar, it was realised that these very peculiarities had their origin in the deepest feelings of the nation. The desire of giving outward expression to the love which was felt towards him, soon asserted itself more and more strongly. Schumann was buried at Bonn, in the churchyard opposite the Sternenthor, and it was resolved to erect a monument to him there. On August 17, 18, and 19, 1873, a Schumann festival took place at Bonn, consisting entirely of the master's compositions. The conducting was undertaken by Joachim and Wasielowski, and among the performers were Madame Schumann, who played her husband's Pianoforte Concerto, and Stockhausen. The festival was one of overwhelming interest, owing to the sympathy taken in it, and the manner in which that sympathy was displayed. The proceeds of the concerts were devoted to a monument to Schumann's memory, which was executed by A. Donndorf of Stuttgart, erected over the grave, and unveiled on May 2, 1880. On this occasion also a concert took place, consisting of compositions by Schumann, and Brahms's Violin Concerto (op. 77), conducted by himself, and played by Joachim.

Schumann, with his activity both as an author and as a composer, was a new phenomenon in German music. It is true that he had had a predecessor in this respect in C. M. von Weber, who also had a distinct gift and vocation for authorship, and whose collected writings form a literary monument possessing far more than a merely personal interest. Still Weber was prevented by circumstances and by his own natural restlessness from fully developing his literary talent, while Schumann benefited by the restraint and discipline of his ten years of editorship. In 1854 he had his *Gesammelte*

Schriften über Musik und Musiker published in four volumes by Wigand in Leipzig, and it was not long in reaching its second edition, which appeared in two volumes in 1871. This collection, however, is not nearly complete, and the essays it includes have been much altered. A full and correct edition of his writings is still a desideratum.

It must not, however, be imagined that Schumann's aim as an author was to lay down the principles on which he worked as a composer; it is indeed hardly possible to contrast the critical and the productive elements in his works. His authorship and his musical compositions were two distinct phases of a creative nature, and if it was by composition that he satisfied his purely musical craving it was by writing that he gave utterance to his poetical instincts. His essays are for the most part rather rhapsodies on musical works or poetical imagery lavished on musical subjects than criticisms properly speaking; and the cases where he writes in the negative vein are very rare exceptions. A high ideal floats before his mind, and supported by the example of the greatest masters of the art, his one aim is to introduce a new and pregnant period of music in contrast to the shallowness of his own time. Again and again he speaks of this as the 'poetic phase'—and here we must guard against a misunderstanding. The term *poetic music* is often used in antithesis to *pure music*, to indicate a work based on a combination of poetry and music; as, for instance, a song, which may be conceived of either as a purely musical composition founded on the union of definite feelings and ideas, or as intended to express the preconceived emotions and ideas of the poet. But it was not anything of this kind that Schumann meant to convey; he simply regarded poetry as the antithesis to prose, just as enthusiasm is the antithesis to sober dulness, the youthful rhapsodist to the Philistine, the artist with his lofty ideal to the mechanical artisan or the superficial dilettante. His aim is to bring to birth a living art, full of purpose and feeling, and he cannot endure a mere skeleton of forms and phrases. In this key he pitches his writings on music, and their purport is always the same. He once speaks of reviewers and critics under a quaint simile—'Music excites the nightingale to love-songs, the lap-dog to bark.' Nothing could more accurately represent his own attitude in writing on music than the first of these images. From his point of view a piece of music ought to rouse in the true critic sympathetic feeling, he ought to absorb and assimilate its contents, and then echo them in words—Schumann was in fact the singing nightingale. Though we may not feel inclined to apply his other comparison to every critic who does not follow in his steps, we may at least say that the difference between Schumann's style and that of the

musical periodicals of his day was as great as that between a nightingale and a lap-dog. And how strange and new were the tones uttered by this poet-critic! A considerable resemblance to Jean Paul must be admitted, particularly in his earlier critiques: the ecstatic youthful sentiment, the humorous suggestions, the highly wrought and dazzling phraseology, are common to both; but the style is quite different. Schumann commonly writes in short and vivid sentences, going straight at his subject without digressions, and indulging in bold abbreviations. There is a certain indolence of genius about him, and yet a sure artistic instinct throughout. Nor has he a trace of Jean Paul's sentimental 'luxury of woe,' but we everywhere find, side by side with emotional rhapsody, the refreshing breeziness of youth and health.

It has already been said that Schumann connects certain definite characteristics with different feigned names (Florestan, Eusebius, Raro, etc.), a device which none but a poet could have hit on. Indeed, it would be a hindrance to the writing of calm criticism, which must have a fixed and clearly defined position as its basis. But it often introduces a varied and even dramatic liveliness into the discussion, which is very attractive, and leads to a deeper consideration of the subject. Schumann, however, could use still more artificial forms in his critiques. Thus he discusses the first concert conducted by Mendelssohn at the Gewandhaus, October 1835, in letters addressed by Eusebius to Chiara in Italy; and within this frame the details of the concert are gracefully entwined with ingenious reflections and fanciful ideas which add brilliance to the picture. On another occasion, when he was to write about a mass of dance music, Schumann has recourse to the following fiction:—the editor of a certain musical paper gives a historical fancy ball. Composers are invited, young lady amateurs and their mothers, music publishers, diplomatists, a few rich Jewesses, and—of course—the Davidsbündler; the dance-programme includes the music to be criticised, to which the couples whirl about during the whole evening. Hence arise all sorts of humorous incidents—satirical, whimsical, and sentimental outpourings, in which a criticism of the compositions is brought in unperceived. On another occasion, the Davidsbündler have met, and the new compositions are played in turns; during the playing the rest carry on a variety of amusements which culminate in a magic lantern, throwing the figures of a masked ball on the wall, which Florestan, standing on the table, explains, while 'Zilia' plays Franz Schubert's 'Deutsche Tänze.' Anything more vivid, charming, and poetical than this essay, has never been written on music (it is in the *Gesam. Schriften*, vol. ii. p. 9; and is partly translated in *Music and Musicians*, vol. i. p. 102); a little work of art in itself!

Once, in reviewing a concert given by Clara Wieck, he gives us a real poem ('Traumbild, am 9 September, 1838, Abends,' vol. ii. p. 233). In this he combines his own tender sentiments with a skilful characterisation of all that was peculiar in the performance. For sketching character-portraits Schumann shows a conspicuous talent; the articles in which he has characterised Sterndale Bennett, Gade, and Henselt are unsurpassed by anything since written concerning these artists. He seems to have penetrated with the insight of a seer to the core of their natures, and has set forth his conclusions in a delicate and picturesque manner that no one has succeeded in imitating.

The foundation of Schumann's critiques lay in kindness; his fastidious character would simply have nothing to do with anything bad enough to demand energetic reproof. The most cutting and bitter article he ever wrote was the famous one on Meyerbeer's 'Huguenots' (vol. ii. p. 220; translated in *Music and Musicians*, vol. i. p. 302). In its violence it has no doubt somewhat overshot the mark; but nowhere perhaps do the purity and nobleness of Schumann's artistic views shine forth more clearly than in this critique and in the one immediately following on Mendelssohn's 'St. Paul.' It was the great success of the 'Huguenots' which infused the acid into Schumann's antagonism; for when dealing with inoffensive writers he could wield the weapons of irony and ridicule both lightly and effectively. But he is most at his ease when giving praise and encouragement; then words flow so directly from his heart that his turns of expression have often quite a magical charm. As an example we may mention the article on Field's Seventh Concerto (*Ibid.* vol. i. p. 268; *Music and Musicians*, vol. i. p. 267). Anything more tender and full of feeling was never written under the semblance of a critique than the remarks on a sonata in C minor by Delphine Hill-Handley—formerly Delphine Schauroth (*Ibid.* i. 92). Schumann has here given us a really poetical masterpiece in its kind, full of intelligent appreciation of the purport of the work, and giving covert expression to its maidenly feeling, even in the style of his discussion; it must delight the reader even if he does not know a note of the composition. Schumann had fresh imagery always at command, and if in a generally meritorious work he found something to blame, he contrived to do it in the most delicate manner. His amiable temper, his tender heart and his conspicuous talents for literary work combined, never left him at a loss in such cases for some ingenious or whimsical turn. Sometimes, though rarely, in his eager sympathy for youthful genius in difficulty he went too far; Hermann Hirschbach, for instance, never fulfilled the hopes that Schumann formed of him; and even in his remarks on Berlioz, he at first probably said

ROBERT ALEXANDER SCHUMANN
From a daguerrotype

more than he would afterwards have maintained.

In later years Schumann's flowery and poetic vein gave way to a calm and contemplative style. His opinions and principles remained as sound as ever, but they are less keenly and brilliantly expressed than at the earlier period when he took peculiar pleasure in turning a flashing phrase (see *Ges. Schriften*, vol. i. pp. 27, 208). Still, the practical musician always predominates, and Schumann himself confesses that 'the curse of a mere musician often hits higher than all your æsthetics' (*Ibid.* ii. 246). Here and there, however, we come upon a profound æsthetic axiom, the value of which is in no degree diminished by our perception that it is the result rather of intuition than of any systematic reflection. It is universally acknowledged that by his essay 'on certain corrupt passages in classical works' (*Ibid.* iv. 59; *Music and Musicians*, i. 26), Schumann gave a real impetus to the textual criticism of music; historical clues and comparisons are frequently suggested, and though these indications are not founded on any comprehensive historical knowledge, on all important subjects they show a happy instinct for the right conclusion, and are always worthy of attention.

It may be said of Schumann's literary work in general that it was not calculated to attract attention merely for the moment, though it did in fact open up new paths, but that it took the form of writings which have a high and permanent value. They will always hold a foremost place in the literature of music, and may indeed take high rank in the literature of art. For analytical acumen they are less remarkable. Schumann cannot be called the Lessing of music, nor is it by the display of learning that he produces his effects. It is the union of poetic talent with musical genius, wide intelligence, and high culture, that stamps Schumann's writings with originality, and gives them their independent value.

Schumann's literary work was connected with another phase of the musical world of Germany, as new in its way as the twofold development of his genius—the rise of party feeling. No doubt Schumann gave the first impetus to this movement, both by his imaginary 'Davidshändler-schaft,' and by that Radical instinct which was part of his nature. Schumann's principles as an artist were the same which have been professed and followed by all the greatest German masters; what was new in him was the active attempt to propagate them as principles. So long as he conducted the *Zeitschrift* he could not of course lend himself to party feeling; the standard he had assumed was so high that all who took a serious view of art were forced to gather round him. But the spirit of agitation was inflamed, and when he retired from the paper other principles of less general application were put forward. It

was self-evident that Schumann was the only contemporary German composer who could stand side by side with Mendelssohn, and they were of course compared. It was asserted that in Mendelssohn form took the precedence of meaning, while in Schumann meaning predominated, striving after a new form of utterance. Thus they were put forward as the representatives of two antagonistic principles of art, and a Mendelssohn party and a Schumann party were formed. In point of fact there was scarcely any trace of such an antagonism of principle between the two composers; the difference was really one of idiosyncrasy; and so, being grounded more or less on personal feeling, the parties assumed something of the character of cliques. The literary Schumannites, having the command of an organ of their own, had an advantage over the partisans of Mendelssohn, who like Mendelssohn himself, would have nothing to do with the press. Leipzig was for a time the headquarters of the two parties. There, where Mendelssohn had worked for the delight and improvement of the musical world, it was the fate of his art to be first exposed to attack and detraction, which, to the discredit of the German nation, rapidly spread through wider and wider circles, and was fated too to proceed first from the blind admirers of the very master for whom Mendelssohn ever felt the deepest attachment and respect. That Schumann himself must have been painfully affected by this spirit is as clear as that it could only result in hindering the unprejudiced reception of his works; and the process thus begun with Schumann has been carried on, in a greater degree, in the case of Wagner.

As a composer Schumann started with the pianoforte, and until the year 1840 wrote scarcely anything but pianoforte music. For some time he used to compose sitting at the instrument, and continued to do so even until 1839, though he afterwards condemned the practice (in his *Musikalische Haus- und Lebensregeln*). At all events it had the advantage of making him write from the first in true pianoforte style. If ever pianoforte works took their origin from the innermost nature of the pianoforte, Schumann's did so most thoroughly. His mode of treating the instrument is entirely new. He develops upon it a kind of orchestral polyphony, and by means of the pedal, of extended intervals, of peculiar positions of chords, of contractions of the hands, and so forth, he succeeds in bringing out of it an undreamt-of wealth of effects of tone. How deeply and thoroughly Schumann had studied the character of the instrument may be seen from the detailed preface to his arrangement of Paganini's caprices (op. 3). Even in his earliest PF. works he nowhere shows any inclination to the method of any of the older masters, except in the variations, op. 1, which betray the influence

of the school of Hummel and Moscheles. But it is evident that he knew all that others had done, and the time and attention devoted in his writings to works of technical pianoforte study were no doubt deliberately given. Notwithstanding this his compositions are scarcely ever written in the *bravura* style; for he seldom cared to clothe his ideas in mere outward brilliancy. Sometimes one is constrained to wonder at his reluctance to use the higher and lower registers of the pianoforte.

As is the case with the technical treatment of the piano, so it is from the beginning with the substance and form of his compositions. Few among the great German masters show such striking originality from their very first compositions. In the whole range of Schumann's works there is scarcely a trace of any other musician. At the outset of his course as a composer he preferred to use the concise dance or song-form, making up his longer pieces from a number of these smaller forms set together as in a mosaic, instead of at once casting his thoughts in a larger mould. But the versatility with which the small forms are treated is a testimony to the magnitude of his creative faculty. The predominance of the small forms is explained by his earlier method of composing. Diligent and constant though he was in later years, in early life his way of working was fitful and inconstant. The compositions of this period seem as if forced out of him by sudden impulses of genius. As he subsequently says of his early works, 'the man and the musician in me were always trying to speak at the same time.' This must indeed be true of every artist; if the whole personality be not put into a work of art, it will be utterly worthless. But by those words Schumann means to say that as a youth he attempted to bring to light in musical form his inmost feelings with regard to his personal life-experiences. Under such circumstances it is but natural that they should contain much that was purely accidental, and inexplicable by the laws of art alone; but it is to this kind of source that they owe the magic freshness and originality with which they strike the hearer. The Variations, op. 1, are an instance of this. The theme is formed of the notes A, B(b), E, G, G. Meta Abegg was the name of a beautiful young lady in Mannheim, whose acquaintance Schumann, when a student, had made at a ball. Playful symbolism of this kind is not uncommon in him. To a certain extent it may be traced back to Sebastian Bach, who expressed his own name in a musical phrase; as Schumann afterwards did Gade's. (See 'Album für die Jugend,' op. 68, No. 41.) In the same way (*Ges. Schriften*, ii. 115) he expresses the woman's name 'Beda' in musical notes, and also in the 'Carnaval' made those letters in his own name which stand as notes—s (es), c, h, a—into a musical phrase. But the idea really came from

Jean Paul, who is very fond of tracing out such mystic connections. Schumann's op. 2 consists of a set of small pianoforte pieces in dance-form under the name of 'Papillons.' They were written partly at Heidelberg, partly in the first years of the Leipzig period which followed. No inner musical connection subsists between them. But Schumann felt the necessity of giving them a poetical connection, to satisfy his own feelings, if for nothing else, and for this purpose he adopted the last chapter but one¹ of Jean Paul's *Fliegjahre*, where a masked ball is described at which the lovers Wina and Walt are guests, as a poetic background for the series. The several pieces of music may thus be intended to represent partly the different characters in the crowd of maskers, and partly the conversation of the lovers. The finale is written designedly with reference to this scene in Jean Paul, as is plain from the indication written above the notes found near the end—'The noise of the Carnival-night dies away. The church clock strikes six.' The strokes of the bell are actually audible, being represented by the A six times repeated. Then all is hushed, and the piece seems to vanish into thin air like a vision. In the finale there are several touches of humour. It begins with an old Volkslied, familiar to every household in Germany as the Grossvateranz.²

In contrast to these two old-fashioned love-tunes is placed the soft and graceful melody of No. 1 of the 'Papillons,' which is afterwards worked contrapuntally with the 'Grossvateranz.' The name 'Papillons' is not meant to indicate a light, fluttering character in the pieces, but rather refers to musical phases which, proceeding from various experiences of life, have attained the highest musical import, as the butterfly soars upwards out of the chrysalis. The design of the title-page in the first edition points towards some such meaning as this; and the explanation we have given corresponds with his usual method of composing at that time. There exists, however, no decisive account of it by the composer himself.

In a kind of connection with the 'Papillons' is the 'Carnaval,' op. 9. Here again Schumann has depicted the merriment of a masquerade in musical pictures, and a third and somewhat similar essay of the same kind is his 'Faschingschwank' aus Wien, op. 26. The 'Carnaval' is a collection of small pieces, written one by one without any special purpose, and not provided either with collective or individual titles until later, when he arranged them in their present order. The musical connection between the pieces is, that with few exceptions they all contain some reference to the succession of notes

¹ In a letter to his friend Henriette Voigt, Schumann calls it the last chapter. This, although obviously a slip of the pen, has led several writers to wonder what grand or fanciful idea lurks behind the 'Papillons.'

² See GROSSVATERANZ, vol. ii. p. 248.

³ Fasching is a German word for the Carnival.

a, es, c, h (A, Eb, C, B) or *as, c, h* (Ab, C, B). Now Asch is the name of a small town in Bohemia, the home of a Fräulein Ernestine von Fricken, with whom Schumann was very intimate at the time of his writing this music. The same notes in another order, *s* (or *es*), *c, h, u*, are also the only letters in Schumann's own name which represent notes. This explains the title 'Sphinxes,' which is affixed to the ninth number on p. 13 of the original edition. The pieces are named, some from characters in the masked ball—Pierrot, Arlequin, Pantalón, and Colombine,—and some from real persons. In this last category we meet with the members of the Davidsbund—Florestan, Eusebius, and Chiarina; Ernestine von Fricken, under the name Estrella, Chopin, and Paganini; there is also a 'Coquette,' but it is not known for whom this is intended. Besides these, some of the pieces are named from situations and occurrences at the ball; a recognition, an avowal of love, a promenade, a pause in the dance (Reconnaissance, Aven, Promenade, Pause); between these are heard the sounds of waltzes, and in one of the pieces the letters A-S-C-H, and S-C-H-A, 'Lettres dansantes,' themselves dance boisterously and noisily, and then vanish like airy phantoms. A piece called 'Papillons' rushes by like a hasty reminiscence, and in the numbers entitled 'Florestan'—an actual passage from No. 1 of the 'Papillons' (op. 2) is inserted. The finale is called 'March of the Davidsbündler against the Philistines.' The symbol of the Philistines is the 'Grossvateranz,' here called by Schumann a tune of the 17th century. The fact of the march being in 3-4 time has perhaps a humorous and symbolic meaning.

The 'Davidsbündlertänze' (op. 6), the 'Fantasiestücke' (op. 12), 'Kinderszenen' (op. 15), 'Kreisleriana' (op. 16), 'Novelletten' (op. 21), 'Bunte Blätter' (op. 99), and 'Albumblätter' (op. 124), the contents of which all belong to Schumann's early period, and, of the later works, such pieces as the 'Waldscenen' (op. 82)—all bear the impress of having originated like the 'Papillons' and the 'Carnaval,' in the personal experiences of Schumann's life. They are *poésies d'occasion* (Gelegenheitsdichtungen), a term which, in Goethe's sense, designates the highest form that a work of art can take. As to the 'Davidsbündlertänze,' the 'Kreisleriana,' and the 'Novelletten,' Schumann himself tells us that they reflect the varying moods wrought in him by the contentions about Clara Wieck. In the 'Davidsbündlertänze' the general arrangement is that Florestan and Eusebius appear usually by turns, though sometimes also together. The expression 'dance' does not, however, mean, as is sometimes supposed, the dances that the Davidsbündler led the Philistines, but merely indicates the form of the pieces, which is, truth to say, used with scarcely less freedom than that of the march in the finale to the 'Carnaval.'

The 'Kreisleriana' have their origin in a fantastic story with the same title by E. T. A. Hoffmann, contained in his *Fantasiestücke in Callots Manier* (Bamberg, 1814, p. 47). Hoffmann was a follower of Jean Paul, who indeed wrote a preface to *Fantasiestücke*. Half musician, half poet, Schumann must have looked on him as a kindred spirit; and in the figure of the wild and eccentric yet gifted 'Kapellmeister Kreisler,' drawn by Hoffmann from incidents in his own life, there were many traits in which Schumann might easily see a reflection of himself. Of the 'Novelletten' Schumann says that they are 'long and connected romantic stories.' There are no titles to explain them, although much may be conjectured from the indications of time and expression. But the rest of the works we have just mentioned nearly always have their separate component parts, headed by names which lead the imagination of the player or hearer, in a clear and often deeply poetic manner, in a particular and definite direction. This form of piano piece was altogether a very favourite one with Schumann. He is careful to guard against the supposition that he imagined a definite object in his mind, such as a 'pleading child' (in op. 15) or a 'haunted spot in a wood' (in op. 82), and then tried to describe it in notes. His method was rather to invent the piece quite independently, and afterwards to give it a particular meaning by a superscription. His chief object was always to give the piece a value of its own, and to make it intelligible of itself. This principle is undoubtedly the right one, and, by adopting it, Schumann proved himself a genuine musician, with faith in the independent value of his art. Nevertheless, had he considered the poetical titles utterly unimportant, he would hardly have employed them as he has in so large a majority of his smaller pianoforte pieces. His doing so seems to evince a feeling that in the composition of the piece alone, he had not said everything that struggled within him for expression. Until a particular mood or feeling had been aroused in the hearer or the player, by means of the title, Schumann could not be sure that the piece would have the effect which he desired it to have. Strictly speaking, poetry and music can only be really united by means of the human voice. But in these pianoforte pieces with poetical titles, Schumann found a means of expression which hovered as it were between pure instrumental music on the one hand, and vocal music on the other, and thus received a certain indefinite and mysterious character of its own, which may most justly be called Romantic, but which is entirely apart from any connection with what is now called Programme Music.

Among the compositions consisting of small forms we must count the variations. Schumann treated the variation-form freely and fancifully, but with a profuse wealth of genius

and depth of feeling. For the Impromptu on a theme by Clara Wieck (op. 6), Beethoven's so-called 'Eroica Variations' (op. 35), apparently served as a model; they remind us of them both in general arrangement and in the employment of the bass as a theme, without being in any way wanting in originality. In the Andante and Variations for two pianofortes (op. 46), one of the most charming and popular of Schumann's pianoforte works, he treated the form with such freedom that they are not so much variations as fantasias in the style of variations. [They were at first intended to be accompanied by two violoncellos and horn, and this version is in the supplementary volume of the Breitkopf edition.] His most splendid work in this form is his op. 13 (the 'Études symphoniques'), a work of the grandest calibre, which alone would be sufficient to secure him a place in the first rank of composers for the pianoforte, so overpowering is the display of his own individual treatment of the pianoforte—frequently rising to the highest limits of the bravura style of execution—of his overflowing profusion of ideas, and his boldness in turning the variation form to his own account. In the finale the first two bars only of the theme are employed, and these only occasionally in the 'working-out section.' In other respects the proud edifice of this elaborately worked number has nothing in common with a variation. It contains, however, a delicate reference to the person to whom the whole work is dedicated, William Sterndale Bennett. The beginning of the chief subject is a fragment of the celebrated romance in Marschner's 'Templer und Jüdin' ('Du stolzes England, freue dich,' etc.). It is an ingenious way of paying a compliment to his beloved English composer.¹

Schumann had made early attempts at works of larger structure, but it cannot be denied that they were not at first successful. The F# minor Sonata (op. 11) teems with beautiful ideas, but is wanting in unity to a remarkable degree, at least in the *Allegro* movements. The F minor Sonata (op. 14) shows a decided improvement in this respect, and the Sonata in G minor (op. 22) is still better, although not entirely free from a certain clumsiness. Schumann afterwards showed himself quite aware of the faults of these sonatas in regard to form. They offer the most striking example of his irregular and rhapsodical method of working at that period. The second movement of the G minor Sonata was written in June 1830, the first and third in June 1833, the fourth in its original form in October 1835, and in its ultimate form in 1838, the whole sonata being published in 1839. The F# minor Sonata was begun in 1833, and not completed till 1835. The F minor Sonata, finished on June 5, 1836, consisted at first of

five movements, an *Allegro*, two *Scherzos*, one after the other, an *Andantino* with variations, and a *Prestissimo*. When the work was first published, under the title of 'Concerto sans Orchestre,' Schumann cut out the two *Scherzos*, apparently intending to use them for a second sonata in F minor. This, however, was not carried out, and in the second edition of the work he restored the second of the *Scherzos* to its place.² When we observe how he took up one sonata after another, we see how impossible it is that any close connection can subsist between the several parts, or that there should be any real unity in them as a whole.

The *Allegro* for pianoforte (op. 8) is somewhat disjointed in form, while the *Toccata* (op. 7), a bravura piece of the greatest brilliance and difficulty in perfect sonata-form, exhibits a great degree of connection and consequence. In the great *Fantasia* (op. 17) we are led by the title to expect no consciousness of form. The classical masters generally gave to their fantasias a very clearly defined outline, but Schumann in this case breaks through every restriction that limits the form, especially in the first movement, where he almost seems to lose himself in limitless freedom. In order to give unity to the fantastic and somewhat loosely connected movements of this work of genius, he again had recourse to poetry, and prefaced the piece with some lines of F. Schlegel's as a motto:—

Durch alle Töne tönet	Through all the tones that vibrate
Im bunten Erdentraum,	About earth's mingled dream,
Ein laiser Ton gezogen	One whispered note is sounding
Für den der heimlich lauscht.	For ears attent to hear.

The 'earth's mingled dream' is in a manner portrayed in the substance of the composition. Schumann means that 'the ear attent to hear' will perceive the untinged-tones that run through all the pictures which the imagination of the composer unrolls to his view. Schlegel's motto seems almost like an excuse offered by Schumann. The original purpose of this *Fantasia* was not, however, to illustrate these lines. About Dec. 17, 1835, an appeal having been made from Bonn for contributions to a Beethoven memorial, Schumann proposed to contribute a composition; and this was the origin of the work now called 'Fantasia,' the three movements of which were originally intended to bear the respective inscriptions of 'Ruins,' 'Triumphal Arch,' and 'The Starry Crown.' By these names the character both of the separate parts and of the whole becomes more intelligible. In order to get into the right disposition for the work Schumann's four articles on Beethoven's monument should be read (*Gesammelte Schriften*, vol. i. p. 215).

Although few of Schumann's pianoforte works of the first period are without defects of form, yet their beauties are so many that we easily forget those defects. In certain ways the com-

¹ The five variations left out in the published edition are included in the supplementary volume of Breitkopf's edition.

² The first appeared in 1866 as No. 12 of the Posthumous Works published by Bären-Reidermann, together with the discarded Finale of the Sonata in G minor as No. 13. Both are in the supplementary volume of the Breitkopf & Bärtel edition (1893).

positions of the first ten years present the most characteristic picture of Schumann's genius. In after life he proposed and attained loftier ideals in works worthy of the perfect master. But the freshness and charm of his earlier pianoforte works was never surpassed, and in his later years was but rarely reached. A dreamy imaginative nature was united in Schumann's character with a native solidity that never descended to the commonplace. From the first his music had in it a character which appealed to the people—nay, which was in a way national; and quickly as he reached his present immense popularity in Germany, it will probably be long before he has the same influence in other nations, especially in France and Italy. After Beethoven, Schumann is the only master who possesses the power of giving full and free expression to the humorous element in instrumental music. Both in his writings and compositions he allows it to have full play, and it is in his earlier PF. works that it is most prominent. One of his freshest and fullest works is the Humoreske (op. 20), the most wonderful portrayal of a humorous disposition that it is possible to imagine in music. Schumann's thorough individuality is prominent, alike in harmonies, rhythm, and colouring, and in the forms of the melodies. It is, however, characteristic of his early PF. works that broad bold melodies rarely occur in them, though there is a superabundance of melodic fragments—germs of melody, as they might be called, full of a deep expression of their own. This music is pervaded by a spring-like animation and force, a germ of future promise, which gives it a peculiar romantic character; a character strengthened by the admixture of poetic moods and feelings. Schumann was both musician and poet, and he who would thoroughly understand his music must be first imbued with the spirit of the German poets who were most prominent in Schumann's youth; above all others Jean Paul and the whole romantic school, particularly Eichendorff, Heine, and Rückert. And just as these poets were specially great in short lyrics, revealing endless depths of feeling in a few lines, so did Schumann succeed, as no one has done before or since, in saying great things and leaving unutterable things to be felt, in the small form of a short pianoforte piece.

Schumann's enthusiastic admiration and thorough appreciation of Bach have been already described. He shared this with Mendelssohn, but it is certain that he entered more thoroughly than Mendelssohn did into the old master's mysterious depth of feeling. It would therefore have been wonderful if he had not attempted to express himself in the musical forms used by Bach. His strong natural inclination towards polyphonic writing is perceptible even in his earliest pianoforte works, but it was not until 1840 that it comes prominently forward. His six fugues on the name 'Bach' (op. 60), the

four fugues (op. 72), the seven pianoforte pieces in fughetto form (op. 126), the studies in canon form for the pedal-piano (op. 56), and the other separate canons and fugues scattered up and down his pianoforte works—all form a class in modern pianoforte music just as new as do his pianoforte works in the free style. The treatment of the parts in the fugues is by no means always strictly according to rule, even when viewed from the standpoint of Bach, who allowed himself considerable freedom. In employing an accompaniment of chords in one part, he also goes far beyond what had hitherto been considered allowable. But yet, taken as a whole, these works are masterpieces; no other composer of modern times could have succeeded as he has done in welding together so completely the modern style of feeling with the old strict form, or in giving that form a new life and vigour by means of the modern spirit. In these pieces we hear the same Schumann whom we know in his other works; his ideas adapt themselves as if spontaneously to the strict requirements of the polyphonic style, and these requirements again draw from his imagination new and characteristic ideas. In short, though a great contrapuntist he was not a pedantic one, and he may be numbered among the few musicians of the last hundred years to whom polyphonic forms have been a perfectly natural means of expressing their ideas.

As a composer of Songs Schumann stands by the side of Schubert and Mendelssohn, the youngest of the trio of great writers in this class of music. Schubert shows the greatest wealth of melody, Mendelssohn the most perfect roundness of form; but Schumann is by far the most profoundly and intellectually suggestive. He displays a more finely cultivated poetic taste than Schubert, with a many-sided feeling for lyric expression far greater than Mendelssohn's. Many of his melodies are projected in bold and soaring lines such as we meet with in no other composer but Schubert; for instance, in the well-known songs 'Widmung' (op. 25, No. 1), 'Lied der Braut' (op. 25, No. 12), 'Liebesbotschaft' (op. 36, No. 6), 'Stille Thränen' (op. 35, No. 10), and others. Still more frequently he throws himself into the spirit of the German Volkslied, and avails himself of its simpler and narrower forms of melody. Indeed his songs owe their extraordinary popularity chiefly to this conspicuously national element. The reader need only be reminded of the song 'O Sonnenschein' (op. 36, No. 4), of Heine's 'Liederkreis' (op. 24), and of the Heine songs 'Hör ich das Liedchen klingen,' 'Allnächtlich im Traume,' 'Aus alten Märchen' (op. 48, Nos. 10, 14, 15), of most of the songs and ballads (op. 45, 49, 53), and above all of the 'Wanderlied' (op. 35, No. 3), which sparkles with youthful life and healthy vigour. Besides these there are many songs in which the melody is hardly worked

out, and which are—as is also frequently the case with his pianoforte works—as it were, mere sketches, or germs, of melodies. This style of treatment, which is quite peculiar to Schumann, he was fond of using when he wished to give the impression of a vague, dreamy, veiled sentiment; and by this means he penetrated more deeply into the vital essence and sources of feeling than any other song-writer. Such songs as 'Der Nussbaum' (op. 25, No. 3), or 'Im Walde' (op. 39, No. 11) are masterpieces in this kind. Besides this, Schumann always brought a true poet's instinct to bear on the subtlest touches and most covert suggestions in the poems which he chose for setting, and selected the musical expression best fitted to their purport. Schubert and Mendelssohn set verses to tunes, Schumann wrote poems to them in music. He was the first who ventured to close on the dominant seventh when his text ended with a query (as in op. 49, No. 3). With him also the vocal part often does not end on the common chord, but the true close is left to the accompaniment, so as to give an effect of vague and undefined feeling. The part filled by the pianoforte in Schumann's songs is a very important one. With Schubert and Mendelssohn we may very properly speak of the pianoforte part as an 'accompaniment,' however rich and independent it occasionally appears. But with Schumann the word is no longer appropriate, the pianoforte asserts its dignity and equality with the voice; to perform his songs satisfactorily the player must enter fully into the singer's part and the singer into the player's, and they must constantly supplement and fulfil each other. It was evidently of moment in the history of his art that Schumann should have come to the work of writing songs after ten years' experience as a composer for the pianoforte, and after instituting an entirely new style of pianoforte music. This style supplied him with an immense variety of delicate and poetic modes and shades of expression, and it is owing to this that he displays such constant novelty in his treatment of the pianoforte part. The forms of phrase which he adopts in his 'accompaniments' are infinitely various, and always correspond with perfect fitness and ingenuity to the character of the verses. In some cases the pianoforte part is an entirely independent composition, which the voice merely follows with a few declamatory phrases (op. 48, No. 9, 'Das ist ein Flöten und Geigen'); while in others, in contrast to this, the voice stands almost alone, and the pianoforte begins by throwing in a few soft chords which nevertheless have their dus characteristic effect (op. 48, No. 13, 'Ich hab' im Traum'). In Schumann's songs the proper function of the pianoforte is to reveal some deep and secret meaning which it is beyond the power of words; even of sung words, to express; and he always disliked and

avoided these repetitions of the words of which other composers have availed themselves in order to fill out in the music the feeling to which the words give rise. When he does repeat he always seems to have a special *dramatic* end in view rather than a musical one, and often makes the piano supplement the sentiment aroused by the text, while the voice is silent. He is particularly strong in his final symphonies, to which he gave a value and importance, as an integral portion of the song, which no one before him had ventured to do, often assigning to it a new and independent musical thought of its own. Sometimes he allows the general feeling of the song to reappear in it under quite a new light; sometimes the musical phrase suggests some final outcome of the words, opening to the fancy a remote perspective in which sight is lost (a beautiful example is op. 48, No. 16, 'Die alten bösen Lieder'). Or he continues the poem in music; of which a striking instance is the close of the 'Frauenliebe und Leben' (op. 42), where by repeating the music of the first song he revives in the fancy of the lonely widow the memory of her early happiness. The realm of feeling revealed to us in Schumann's songs is thoroughly youthful, an unfailing mark of the true lyric; the sentiment he principally deals with is that of love, which in his hands is especially tender and pure, almost maidenly. The set of songs called 'Frauenliebe und Leben' gives us a deep insight into the most subtle and secret emotions of a pure woman's soul, deeper indeed than could have been expected from any man, and in fact no composer but Schumann would have been capable of it.

Schumann also found musical equivalents and shades of colour for Eichendorff's mystical views of nature; his settings of Eichendorff's poems may be called absolutely classical, and he is equally at home in dealing with the bubbling freshness or the chivalrous sentiment of the poet. Many of Schumann's fresh and sparkling songs have a touch of the student's joviality, but without descending from their high distinction; never under any circumstances was he trivial. Indeed he had no sympathy with the farcical, though his talent for the humorous is amply proved by his songs. A masterpiece of the kind is the setting of Heine's poem 'Ein Jüngling liebt ein Mädchen' (op. 48, No. 11), with its strange undercurrent of tragedy. It was principally in dealing with Heine's words that he betrays this sense of humour; 'Wir saßen am Fischerhause' (op. 45, No. 3), is an example, and still more 'Es leuchtet meine Liebe' (op. 127, No. 3), where a resemblance to the scherzo of the A minor String Quartet is very obvious. A thing which may well excite astonishment as apparently quite beside the nature of Schumann's character, is that he could even find characteristic music for Heine's bitterest irony (op. 24, No. 6)

'Warte, warte, wilder Schiffsman,' and many of the 'Dichterliebe.'

Schumann's Symphonies may, without any injustice, be considered as the most important in their time since Beethoven. Though Mendelssohn excels him in regularity of form, and though Schubert's C major Symphony is quite unique in its wealth of beautiful musical ideas, yet Schumann surpasses both in greatness and force. He is the man, they the youths; he has the greatest amount of what is demanded by that greatest, most mature, and most important of all forms of instrumental music. He comes near to Beethoven, who it is quite evident was almost the only composer that he ever took as a model. No trace whatever of Haydn or Mozart is to be found in his symphonies, and of Mendelssohn just as little. A certain approximation to Schubert is indeed perceptible in the 'working out' (*Durchführung*) of his Allegro movements. But the symphonies, like the pianoforte works, the songs, and indeed all that Schumann produced, bear the strong impress of a marvellous originality, and a creative power all his own. Even the first published Symphony (in B \flat , op. 38) shows a very distinct talent for this branch of composition. We do not know that Schumann had ever previously attempted orchestral compositions, except in the case of the symphony written in the beginning of 1830, which still remains in MS. In 1839 he writes to Dorn: 'At present it is true that I have not had much practice in orchestral writing, but I hope to master it some day.' And in his next attempt he attained his object. In a few passages in the B \flat Symphony, the effects of the instruments are indeed not rightly calculated. One great error in the first movement he remedied after the first hearing. This was in the two opening bars, from which the theme of the Allegro is afterwards generated, and which were given to the horns and trumpets. It ran originally thus, in agreement with the beginning of the Allegro movement:

which, on account of the G and A being stopped notes, had an unexpected and very comic effect. Schumann himself was much amused at the mistake; when he was at Hanover in January 1854 he told the story to his friends, and it was very amusing to hear this man, usually so grave and silent, regardless of the presence of strangers (for the incident took place at a public restaurant), sing out the first five notes of the subject quite loud, the two next in a muffled voice, and the last again loud. He placed the phrase a third higher, as it stands in the printed score:

Another, but less important passage for the horns has remained unaltered. In bar 17 of the first Allegro, Schumann thought that this phrase

ought to be made more prominent than it usually was on the horns, and requested both Taubert and David, when it was in rehearsal at Berlin and Leipzig in the winter of 1842, to have it played on the trombones.

But in general we cannot but wonder at the certain mastery over his means that he shows even in the first Symphony. His orchestration is less smooth and clear than that of either Mendelssohn or Gade, and in its sterner style reminds us rather of Schubert. But this stern power is suited to the substance of his ideas, and there is no lack of captivating beauty of sound. We even meet in his orchestral works with a number of new effects of sound such as only true genius can discover or invent. Instances of these are the treatment of the three trumpets in the 'Manfred' overture, the use made of the horns in the second movement of the E \flat Symphony, the violin solo introduced into the Romanza of the D minor Symphony, etc. etc. It is hard to decide which of Schumann's four symphonies (or five, counting op. 52) is the finest. Each has individual beauties of its own. In life and freshness and the feeling of inward happiness, the B \flat Symphony stands at the head. Schumann originally intended to call it the 'Spring Symphony'; and indeed he wrote it, as we learn from a letter to Taubert, in Feb. 1841, when the first breath of spring was in the air. The first movement was to have been called 'Spring's Awakening,' and the Finale (which he always wished not to be taken too fast) 'Spring's Farewell.' Many parts of the symphony have an especial charm when we thus know the object with which they were written. The beginning of the introduction evidently represents a trumpet-summons sent pealing down from on high; then gentle zephyrs blow softly to and fro, and everywhere the dormant forces awake and make their way to the light (we are quoting from the composer's own programme). In the Allegro the Spring comes laughing in, in the full beauty of youth.¹ This explains and justifies the novel use of the triangle in the first movement—an instrument not then considered admissible in a symphony. An enchanting effect is produced by the Spring song at the close of the first movement, played as though sung with a full heart; and it is an entirely new form of coda (see p. 67 of the score). In publishing the Symphony, Schumann omitted the explanatory titles, because he believed that the attention of the public is

¹ Schumann intended the *Finis* of the Introduction to be taken distinctly faster at once, so that the time might glide imperceptibly into the *Allegro*.

distracted from the main purpose of a work by things of that kind. We may well believe, moreover, that a good part of the spring-like feeling in this symphony comes from the deep and heart-felt joy which Schumann felt at being at last united to his hard-won bride. The same influence is seen in the D minor Symphony (op. 120), written in the same year with that just described, and immediately after it. It is entirely similar to its predecessor in its fundamental feeling, but has more passion. The form too is new and very successful; the four sections follow each other consecutively without any pauses, so that the work seems to consist of only one great movement. The subjects of the Introduction re-appear in the Romanze, with different treatment, and the chief subject of the first Allegro is the foundation of that of the last. The second part of the first Allegro is in quite an unusual form, and before the last Allegro we find a slow introduction—imaginative, majestic, and most original. As has been already mentioned, Schumann intended to call the work 'Symphonic Fantasia.' Here, too, poetic pictures seem to be hovering round him on every side.

His third symphonic work of the year 1841 is also irregular, but only in form, and has as good a right as the second to the name of 'Symphony.' It appeared, however, under the name 'Overture, Scherzo, and Finale' as op. 52. Of this work, which is charming throughout, the first movement offers us the only example to be found in Schumann of the influence of Cherubini, a master for whom he had a great reverence, perhaps the most lovely movement is the highly poetic Scherzo in gigue-rhythm, which might constitute a type by itself among symphony-scherzos. His other scherzos approximate in style to those of Beethoven, whose invention and speciality this form was, and who had no successor in it but Schumann. The characteristic of the C major Symphony (op. 61) is a graver and more mature depth of feeling; its bold decisiveness of form and overpowering wealth of expression reveal distinctly the relationship in art between Schumann and Beethoven. The form, too, as far as regards the number and character of the movements, is quite that of the classical masters, while in the last Symphony (E♭, op. 97) Schumann once more appears as one of the modern school. This is divided into five separate movements, including a slow movement in sustained style, and of a devotional character, between the Andante and the Finale. Schumann originally inscribed it with the words 'In the style of an accompaniment to a solemn ceremony' (im Charakter der Begleitung einer feierlichen Cereemonie), and we know that it was suggested to him by the sight of Cologne Cathedral, and the festivities on the occasion of Archbishop von Geissel's elevation to the Cardinalate.

The other movements are powerful, and full of variety and charm, and the whole symphony is full of vivid pictures of Rhineland life. Perhaps the gem of the whole is the second movement (Scherzo), in which power and beauty are mingled with the romance which in every German heart hovers round the Rhine and its multitude of songs and legends. Although written in 1850, when Schumann's imagination was becoming exhausted, the work bears no trace of any diminution of power.

The poetical concert-overture, a form invented by Mendelssohn, and practised by Bennett and Gade, was one never cultivated by Schumann. His overtures are really 'opening pieces,' whether to opera, play, or some festivity or other. In this again he follows Beethoven. His overtures, like those of Beethoven, are most effective in the concert-room, when the drama or occasion for which they were composed is kept in mind. It is so even with the wonderful 'Genoveva' overture, which contains something of Weber's power and swing; but more than all is it true of the overture to Byron's 'Manfred,' so full of tremendous passion. None of the overtures subsequently written by Schumann reached this degree of perfection, least of all his 'Faust' overture, though that to the 'Braut von Messina' (op. 100) is not much inferior to 'Manfred.' In the last year of his productive activity Schumann was much occupied with this form, but the exhausted condition of his creative powers cannot be disguised, either in the 'Faust' overture or in those to Shakespeare's 'Julius Caesar' (op. 128) and Goethe's 'Hermann und Dorothea' (op. 136), which last he had intended to set as an opera. The festival overture on the 'Rheinweinlied' (op. 123) is cleverly worked, and a very effective *pièce d'occasion*.

It was in the spring of 1838 that Schumann made his first attempt, so far as we know, at a String Quartet. It was scarcely successful, for he was too much immersed in pianoforte music; at any rate the world has hitherto seen nothing of it. In June and July 1842 he was much more successful. The three string quartets (op. 41), written at this time, are the only ones that have become known. They cannot be said to be in the purest quartet style; but as Schumann never played any stringed instrument, this is not surprising. They still retain much of the pianoforte style; but by this very means Schumann attains many new and beautiful effects. At the time of writing the A minor quartet Schumann had become acquainted with Marschner's G minor Trio (op. 112), and speaks of it in the *Zeitschrift*. The fine scherzo of that work struck him very much, and in his own scherzo it reappears, in a modified form certainly, but yet recognisable enough. In spite of this plagiarism, however, we must allow the quartet to be in the highest degree original, and full of richness and poetry.

It contains much enchanting beauty, never surpassed even by Schumann. He seems here to have resumed his practice of mixing up poetic mysticism with his music. What other reason could there be for proposing to use the four bars of modulation from the first quartet (bars 30-34), exactly as they stand, for an introduction to the second quartet? He afterwards struck them out, as may be seen in the autograph. The other quartets also arrived at their present form only after manifold alterations. The slow introduction to the A minor Quartet was at first intended to be played *con sordini*. The third quartet began with a chord of the 6-5 on D, held out for a whole bar. The greatest alterations were made in the first Allegro of the A minor and in the variations in A♭ of the F major Quartets. Whole sections were re-written and modified in various ways. But Wasielewski is mistaken in saying (3rd ed. p. 178, note) that the *più lento* over the coda in these variations is a misprint for *più mosso*. Schumann wrote *più lento* quite plainly, and evidently meant what he wrote. He may possibly have changed his mind afterwards, for in regard to *tempo* he was often moved by the opinions of others.

Of the works for strings and pianoforte, the Quintet (op. 44) is of course the finest; it will always keep its place in the first rank of musical masterpieces. It claims the highest admiration, not only because of its brilliant originality, and its innate power—which seems to grow with every movement, and at the end of the whole leaves the hearer with a feeling of the possibility of never-ending increase—but also because of its gorgeous beauty of sound, and the beautiful and well-balanced relations between the pianoforte and the strings. Musicians are still living, like Carl Reinecke of Leipzig, who at the time of its appearance were in the most susceptible period of youth, and who tell of the indescribable impression the work made upon them. It must have seemed like a new paradise of beauty revealed to their view. The Pianoforte Quartet (op. 47) only wants animation, and a more popular character in the best sense of the word, to make it of equal merit with the Quintet. There is much in it of the spirit of Bach, as is perhaps most evident in the wonderful melody of the Andante. A high rank is taken by the Trios in D minor (op. 63) and F major (op. 80), both, as well as the quintet and quartet, written in one and the same year. In the first a passionate and sometimes 'gloomy' character predominates, while the second is more cheerful and full of warmth in the middle movements. The canonic style is employed in the Adagios of both trios with new and powerful effect. The treatment of the strings with respect to the pianoforte may here and there be considered too orchestral in style; but it must not be forgotten that it was adopted to suit the piano

style, which in Schumann is very different from that of the classical masters and of Mendelssohn. The two trios, however, are wanting in that expression of perfect health which is so prominent in both the quintet and the quartet. They show traces of the hurry and breathless haste which in his later years increases the complication of his rhythms. The third and last Trio (G minor, op. 110) is far inferior to the others. There is still the same artistic design, and in isolated passages the noble genius of the master still shines clearly out; but as a whole this trio tells of exhaustion. The same may be said of most of the other chamber works of Schumann's latest years. Among them are two sonatas for piano and violin, gloomy, impassioned compositions, which can hardly be listened to without a feeling of oppression. There are also a number of shorter pieces for different instruments, among which the 'Märchenbilder für Pianoforte und Viola' (op. 113) are prominent.

No one who bears in mind Schumann's ultimate fate can hear without emotion the last of these 'Märchenbilder,' which bears the direction 'Langsam, mit melancholischem Ausdruck.'

In the sphere of the concerto Schumann has left an imperishable trace of his genius in the Pianoforte Concerto in A minor (op. 54). It is one of his most beautiful and mature works. In addition to all his peculiar originality it has also the qualities, which no concerto should lack, of external brilliancy, and striking, powerful, well-rounded subjects. The first movement is written in a free form with happy effect; the cause being that Schumann had at first intended it to stand as an independent piece, with the title 'Fantasia.' He did not add the other two movements until two years afterwards.—The 'Introduction und Allegro appassionato,' for pianoforte and orchestra (op. 92), is a rich addition to concerto literature. In Schumann there is a deeper connection between the pianoforte and orchestra than had before been customary, though not carried to such a point as to interfere with the contrast between the two independent powers. He was far from writing symphonies with the pianoforte *obbligato*. His other works in concerto-form, written in the last years of his life, do not attain to the height of the Concerto. Among them is an unpublished violin concerto written between Sept. 21 and Oct. 3, 1853, and consisting of the following movements: (1) D minor alla breve, 'Im kräftigen, nicht zu schnellen Tempo'; (2) B♭ major, common time, 'Langsam'; (3) D major, 3-4, 'Lebhaft, doch nicht zu schnell.' The autograph was in the possession of Joachim. A Fantasia for violin and orchestra, dedicated to the same great artist, is published as op. 131. The Violoncello Concerto (op. 129) is remarkable for a very beautiful slow middle movement. There is also a Concerto for four horns and orchestra (op. 86). Schumann himself thought

very highly of this piece, partly because, as he wrote to Dr. Härtel, 'it was quite curious.' It is indeed the first attempt made in modern times to revive the form of the old *Concerto grosso* which Sebastian Bach had brought to perfection in his six so-called 'Brandenburg' concertos. As these concertos of Bach were not printed until 1850, and Schumann can scarcely have known them in manuscript, it is a remarkable and interesting coincidence that he should thus have followed Bach's lead without knowing it. The piece is particularly hard for the first horn, because of the high notes. When well rendered it has a peculiarly sonorous, often very romantic effect, to which, however, the ear soon becomes insensible from the tone of the four horns.

In his account of Marschner's 'Klänge aus Osten,' a work performed in Leipzig on Oct. 22, 1840, Schumann expresses great admiration for the form, in which it was possible to make use for concert performances of romantic stories, which had hitherto been only used on the stage. He was the first to follow this example in his 'Paradise and the Peri.' The text was taken from Moore's poem, of which Schumann shortened some parts to suit his purpose, while he lengthened others by his own insertions. It was his first work for voices and orchestra, and is one of his greatest and most important. The subject was happily chosen. The longing felt by one of those ideal beings created by the imagination from the forces of nature, to attain or regain a higher and happier existence, and using every means for the fulfilment of this longing, is of frequent occurrence in the German popular legends, and is still a favourite and sympathetic idea in Germany. It is the root of the legends of the Fair Melusina, of the Water Nixie, and of Hans Heiling. Schumann's fancy must have been stimulated by the magic of the East, no less than by Moore's poem, with its poetic pictures displayed on a background of high moral sentiment. The fact of Schumann's having retained so much of Moore's narrative is worthy of all praise; it is the descriptive portions of the poem that have the greatest charm, and the music conforms to this. True, there will always be a certain disadvantage in using a complete self-contained poem as a text for music, a great deal of which will inevitably have been written without regard to the composer. Much that we pass over lightly in reading has, when set to music, a more definite and insistent effect than was intended. In other places again, the poem, from the musician's point of view, will be deficient in opportunities for the strong contrasts so necessary for effect in music. This is very obvious in Schumann's composition. The third portion of the work, although he took much trouble to give it greater variety by additions to the poetry, suffers from a certain monotony. Not that the

separate numbers are weaker than those of the former parts, but they are wanting in strong shadows. But there is something else that prevents the work from producing a really striking effect upon large audiences, and that is, if we may say so, that there is too much music in it. Schumann brought it forth from the fulness of his heart, and threw, even into its smallest interludes, all the depth of expression of which he was capable. The beauties are crowded together, and stand in each other's light. If they had been fewer in number they would have had more effect. But, with all these allowances, 'Paradise and the Peri' is one of the most enchanting musical poems in existence. And we can now confirm his own words in a letter to a friend after the completion of the work: 'A soft voice within me kept saying while I wrote, It is not in vain that thou art writing': for this composition will go far to make him immortal. All the choruses in 'Paradise and the Peri,' perhaps with the exception of the last, are fine, original, and effective. But it must be admitted that choral composition was not really Schumann's strong point. In this respect he is far inferior to Mendelssohn. In many of his choruses he might even seem to lack the requisite mastery over the technical requirements of choral composition, so instrumental in style, so impracticable and unnecessarily difficult do they seem. But if we consider Schumann's skill in polyphonic writing, and recall pieces of such grand conception and masterly treatment as the beginning of the last chorus of the 'Faust' music, we feel convinced that the true reason of the defect lies deeper. The essential parts of a chorus are large and simple subjects, broad and flowing development, and divisions clearly marked and intelligible to all. In a good chorus there must be something to speak to the heart of the masses. Schumann took exactly the opposite view. The chorus was usually an instrument unfitted for the expression of his ideas. His genius could have mastered the technical part of choral composition as quickly and surely as that of orchestral composition. But since the case was otherwise, the chief importance of 'Paradise and the Peri' is seen to be in the solos and their accompaniments, especially in the latter, for here the orchestra stands in the same relation to the voice as the pianoforte does in Schumann's songs. A good orchestral rendering of 'Paradise and the Peri' is a task of the greatest difficulty, but one rewarded by perfect enjoyment.

In the fairy-tale of 'The Pilgrimage of the Rose' (op. 112) Schumann intended to produce a companion picture to 'Paradise and the Peri,' but in less definite outline and vaguer colours. The idea of the poem is similar to that of the former work, but Horn's execution of the idea is entirely without taste. Schumann was possibly attracted by its smooth versification

and a few really good musical situations. The music contains much that is airy and fresh, as well as a beautiful dirge. On the other hand, it is full of a feeble sentimentality utterly foreign to Schumann's general character, and ascribable only to the decay of his imagination. The insignificant and wholly idyllic subject was quite inadequate to give employment to the whole apparatus of solo, chorus, and orchestra, and Schumann's first idea of providing a piano-forte accompaniment only was the right one. With a small section of Schumann's admirers the work will always keep its place, and produce a pleasing though not very deep effect. His other works in this form consist of four ballads: — 'Der Königssohn' (op. 116), 'Des Sängers Fluch' (op. 139), 'Das Glück von Edenhall' (op. 143), all by Uhland; and 'Vom Pagen und der Königstochter' (op. 140), by Geibel. It is painfully evident that these poems were not really written for music. The way the principal events of the story are described, and the whole outward form of the verses, imply that they were intended to be recited by a single person, and that not a singer but a speaker. If necessary to be sung, the form of a strophic song should have been chosen, as is the case with 'Das Glück von Edenhall,' but this would confine the varieties of expression within too narrow a range. It is as though Schumann's pent-up desire for the dramatic form were seeking an outlet in these ballads; especially as we know that in the last years of his creative activity he was anxious to meet with a new opera-libretto. The faults of texts and subjects might, however, be overlooked, if the music made itself felt as the product of a rich and unwearied imagination. Unfortunately, however, this is seldom the case. It is just in the more dramatic parts that we detect an obvious dulness in the music, a lameness in rhythm, and a want of fresh and happy contrasts. It must be remarked, however, that isolated beauties of no mean order are to be met with; such as the whole of the third part and the beginning and end of the second, in the ballad 'Vom Pagen und der Königstochter.' These works, however, taken as a whole, will hardly live.

On the other hand, there are some works of striking beauty for voices and orchestra in a purely lyrical vein. Among these should be mentioned the 'Requiem for Mignon' from 'Wilhelm Meister' (op. 98b), and Hebbel's 'Nachtlied' (op. 108). The former of these was especially written for music, and contains the loveliest thoughts and words embodied in an unconstrained and agreeable form. Few composers were so well fitted for such a work as Schumann, with his sensitive emotional faculty and his delicate sense of poetry; and it is no wonder that he succeeded in producing this beautiful little composition. But it should never be heard in a large concert room, for which

its delicate proportions and tender colouring are utterly unfitted. The 'Nachtlied' is a long choral movement. The peculiar and fantastic feeling of the poem receives adequate treatment by a particular style in which the chorus is sometimes used only to give colour, and sometimes is combined with the orchestra in a polyphonic structure, in which all human individuality seems to be merged, and only the universal powers of nature and of life reign supreme.

Schumann's music to 'Faust' is not intended to be performed on the stage as the musical complement of Goethe's drama. It is a piece for concert performance, or rather a set of pieces, for he did not stipulate or intend that all three parts should be given together. What he did was to take out a number of scenes from both parts of Goethe's poem, and set music to them. It follows that the work is not self-contained, but requires for its full understanding an accurate knowledge of the poem. From the First Part he took the following:—(1) Part of the first scene in the garden between Gretchen and Faust; (2) Gretchen before the shrine of the *Mater dolorosa*; (3) The scene in the Cathedral. These three form the first division of his Faust music. From the Second Part of the play he adopted: (1) The first scene of the first act (the song of the spirits at dawn, the sunrise, and Faust's soliloquy); (2) The scene with the four aged women from the fifth act; (3) Faust's death in the same act (as far as the words, 'Der Zeiger fällt—Er fällt, es ist vollbracht'). These form the second division of the music. Schumann's third division consists of the last scene of the fifth act (Faust's glorification) divided into seven numbers. The experiment of constructing a work of art, without central point or connection in itself, but entirely dependent for these on another work of art, could only be successful in the case of a poem like 'Faust'; and even then, perhaps, only with the German people, with whom Faust is almost as familiar as the Bible. But it really was successful, more particularly in the third division, which consists of only one great scene, and is the most important from a musical point of view. In this scene Goethe himself desired the co-operation of music. Its mystic import and splendid expression could find no composer so well fitted as Schumann, who seemed, as it were, predestined for it. He threw himself into the spirit of the poem with such deep sympathy and understanding, that from beginning to end his music gives the impression of being a commentary on it. To Schumann is due the chief meed of praise for having popularised the second part of 'Faust.' In musical importance no other choral work of his approaches the third division of his work. In freshness, originality, and sustained power of invention it is in no way inferior to 'Paradise and the Peri.' Up to about the latter half of

the last chorus it is a chain of musical gems, a perfectly unique contribution to concert literature, in the first rank of those works of art of which the German nation may well be proud. The second division of the 'Faust' music, consisting of three other scenes from the Second Part of the poem, is also of considerable merit. It is, however, evident in many passages that Schumann has set words which Goethe never intended to be sung. This is felt still more in the scenes from the First Part, which are, moreover, very inferior in respect of the music. The overture is the least important of all; in fact the merit of the work decreases gradually as we survey it backwards from the end to the beginning; a circumstance corresponding to the method pursued in its composition, which began in Schumann's freshest, happiest, and most masterly time of creativeness, and ended close upon the time when his noble spirit was plunged in the dark gloom of insanity.

There exist only two dramatic works of Schumann's intended for the theatre: the opera of 'Genoveva' and the music to Byron's 'Manfred.' The text of the opera may justly be objected to, for it scarcely treats of the proper legend of Genoveva at all; almost all that made the story characteristic and touching being discarded, a fact which Schumann thought an advantage. This may perhaps be explained by remembering his opinion that in an opera the greatest stress should be laid on the representation of the emotions, and that this object might most easily be attained by treating the external conditions of an operatic story as simply and broadly as possible. He also probably felt that a great part of the Genoveva legend is epic rather than dramatic. He was mistaken, however, in thinking that after the reductions which he made in the plot, it would remain sufficiently interesting to the general public. He himself, as we have said, arranged his own libretto. His chief model was Hebbel's 'Genoveva,' a tragedy which had affected him in a wonderful way; though he also made use of Tieck's 'Genoveva.' Besides these he took Weber's 'Euryanthe' as a pattern. The mixture of three poems, so widely differing from one another, resulted in a confusion of motives and an uncertainty of delineation which add to the uninteresting impression produced by the libretto. The character of Golo, particularly, is very indistinctly drawn, and yet on him falls almost the chief responsibility of the drama. The details cannot but suffer by such a method of compilation as this. A great deal is taken word for word from Hebbel and Tieck, and their two utterly different styles appear side by side without any compromise whatever. Hebbel, however, predominates. Tieck's work appears in the finale of the first act, and in the duet (No. 9) in the second act, e.g. the line 'Du liebst mich, holde Braut, da ist der Tag begonnen.' Genoveva's

taunt on Golo's birth is also taken from Tieck, although he makes the reproach come first from Wolf and afterwards from Genoveva herself, but without making it a prominent motive in the drama. Beside this several Volkslieder are interspersed. This confusion of styles is surprising in a man of such fine discrimination and delicate taste as Schumann displays elsewhere. The chief defect of the opera, however, lies in the music. In the opera of 'Genoveva,' the characters all sing more or less the same kind of music; that which Schumann puts to the words is absolute music, not relative, i.e. such as would be accordant with the character of each individual. Neither in outline nor detail is his music sufficiently generated by the situations of the drama. Lastly, he lacks appreciation for that liveliness of contrast which appears forced and out of place in the concert-room, but is absolutely indispensable on the stage. 'Genoveva' has no strict recitatives, but neither is there spoken dialogue; even the ordinary quiet parts of the dialogue are sung in strict time, and usually accompanied with the full orchestra. Schumann considered the recitative a superannuated form of art, and in his other works also makes scarcely any use of it. This point is of course open to dispute; but it is not open to dispute that in an opera, some kind of calm, even neutral form of expression is wanted, which, while allowing the action to proceed quickly, may serve as a foil to the chief parts in which highly-wrought emotions are to be delineated. The want of such a foil in 'Genoveva' weakens the effect of the climaxes, and with them, that of the whole. As in the formation of the libretto Schumann took 'Euryanthe' as his model, so as a musician he intended to carry out Weber's intentions still farther, and to write, not an opera in the old-fashioned ordinary sense, but a music-drama, which should be purely national. At the time when 'Genoveva' was written, he was utterly opposed to Italian music, not in the way we should have expected him to be, but exactly as Weber was opposed to it in his time. 'Let me alone with your canary-bird music and your tunes out of the waste-paper basket,' he once said angrily to Weber's son, who was speaking to him of Cimarosa's 'Matrimonio Segreto.' But although he may not have succeeded in producing a masterpiece of German opera, we may appreciate with gratitude the many beauties of the music, the noble sentiment pervading the whole, and the constant artistic feeling, directed only to what is true and genuine. The finest part of the work is the overture, a masterpiece in its kind, and worthy to rank with the classical models.

The music to Byron's 'Manfred' (op. 115) consists of an overture, an entr'acte, melodramas, and several solos and choruses. Byron expressly desired the assistance of music for his work, though not so much of it as Schumann has given.

Schumann inserted all the instrumental pieces in the work, with the exception of the tunes on the shepherd's pipe in the first act; also the requiem heard at Manfred's death, sounding from the convent church. On the other hand, it is remarkable that he left the song of 'The captive usurper' in Act ii. Scene iv. without music. The whole work consists of sixteen numbers, including the overture; this Schumann composed first of all, and probably without intending to write music for the drama itself. Even here he does not evince any special gift for dramatic writing. In the present day Byron's drama is frequently performed upon the stage with Schumann's music, and its effectiveness can thus be tested. The music hardly ever serves to intensify the dramatic effects, and yet this is all that is necessary in a drama. It appears rather to be the outcome of the impression produced on Schumann by Byron's poem. There is one peculiarity about the 'Manfred' music. On the stage it loses a great part of its effect, just as, in my opinion, the poem loses half its fantastic and weird magic by being dressed in the clumsy and palpable illusions of a scenic representation. The overture is a piece of music of the most serious character, and much more fitted for concert performance than for assembling an audience in a theatre. This is still more true of all the other pieces, so delicate in construction and subtle in feeling, the closing requiem by no means excluded. And yet in the concert-room the music does not make its due effect; partly because the hearer is withdrawn from the influence of the action, which is indispensable to the full understanding of the whole work; and also because in the melodramas the spoken words and the music which accompanies them disturb one another more than when performed on the stage. From these remarks it might be imagined that the 'Manfred' music is an inferior work; but strange to say such is by no means the case. It is a splendid creation, and one of Schumann's most inspired productions. It hovers between the stage and the concert-room; and, paradoxical as it may seem, the deepest impression is produced by reading the score, picturing in one's mind the action and the spoken dialogue, and allowing the music to sink deep into the ears of one's mind. Perhaps the most striking parts of it all are the melodramas, and among them the deeply touching speech of Manfred to Astarte; and these all stand out with a peculiar purity and unity, when read as just described. They are in a manner improvements upon those highly poetic piano pieces of Schumann's with supercriptions; and we ought to think of the words when hearing the piece. In this music, if nowhere else, is revealed Schumann's characteristic struggle after the inward, to the disregard of the outward; and we see how diametrically opposed to his nature was the realisation of

dramatic effects where all is put into visible and tangible form. But he devoted himself to the composition of the 'Manfred' music just as if he had been fitted for it by nature. The poet and the composer seem to have been destined for one another as truly as in the case of the Faust music, but in a different way. Byron had no idea of stage representation in writing 'Manfred'; he only wished his poem to be read. Its romantic sublimity of thought, spurning all firm foothold or support on the earth, could only find its due completion in music such as this, which satisfies the requirements of neither stage nor concert-room. That a work of art, mighty and instinct with life, can be produced with a sublime disdain of all limits set by circumstance, provided only genius is at work upon it, is amply proved by Byron and Schumann in this their joint production. It has been already remarked more than once that the gloomy, melancholy, and passionate intensity of strife in Byron's 'Manfred,' heightened by contrast with the splendid descriptions of nature, corresponded to the conditions of Schumann's spirit at the time when the music was written. And indeed a deep sympathy speaks in every bar. But there was in Schumann a longing for peace and reconciliation, which is wanting in Byron. This comes out very plainly in different passages in the music, of which the most striking is the 'Requiem' at the close, which sheds over the whole work a gentle gleam of glory. If we were to go into details, we should neither know where to begin nor to end. In January 1851 Schumann wrote to a friend, 'It must always be the artist's highest aim to apply his powers to sacred music. But in youth we are firmly rooted to the earth by all our joys and sorrows; it is only with advancing age that the branches stretch higher, and so I hope that the period of my higher efforts is no longer distant.' He is here speaking emphatically of 'sacred,' not of church music. Church music he never wrote, his Mass and his Requiem notwithstanding. It should be adapted to the church-services, and calculated to produce its effect in combination with the customary ceremonial; but sacred or religious music is intended to turn the mind of the hearers, by its own unaided effect, to edifying thoughts of the eternal and divine. Of compositions of this class we possess several by Schumann; nor was it in 1851 that he first began writing them. There is an Advent hymn for solo, chorus, and orchestra (op. 71), written in 1848; a motet for men's voices with organ, subsequently arranged for orchestra (op. 93), of 1849, and a New Year's hymn for chorus and orchestra (op. 144) of the winter of the same year; all three settings of poems by Friedrich Rückert. The Mass (op. 147) and the Requiem (op. 148), on the other hand, were composed in 1852, and Schumann may have been thinking mainly of works of this kind when he wrote the letter

quoted above. As a Protestant his relations to the Mass and Requiem were perfectly unfettered; and in the composition of these works he can have had no thought of their adaptation to divine service, since even in form they exhibit peculiarities opposed to the established order of the Mass. It may, however, be assumed that it was the Catholic feeling of Düsseldorf which suggested them, and that he intended the works to be performed on certain occasions at church concerts. The words of the Mass will always have a great power of elevating and inspiring an earnest artist; but irrespective of this, the composition of a mass must have had a peculiar attraction for Schumann on other grounds. A poetical interest in the Catholic Church of the Middle Ages was at that time widely prevalent in Germany, particularly in circles which were most influenced by romantic poetry, and found in the Middle Ages the realisation of their most cherished ideals. Schumann shared in this tendency; a vein of mystical religionism, which otherwise might have lain dormant, often shows itself in his later compositions. For instance, under the name Requiem we find the setting of a hymn, ascribed to Héloïse, the beloved of Abélard (op. 90, No. 7).

*Requiescat a labore
Doloroso, et amore, etc.*

Other instances are the poems of Mary Stuart (op. 135), and the Requiem for Mignon. In the Mass he has, contrary to custom, introduced an offertorium, *Tota pulchra es, Maria, et macula non est in te*.

In judging of Schumann's sacred music, it is necessary to repeat that, though the chorus is not, strictly speaking, the musical means by which he was best able to express himself, yet both custom and the character and importance of the subject urged him to make considerable use of it in these works. Thus they contain a contradiction in themselves; they are all nobly and gravely conceived, but as choral music are only very rarely satisfactory. The Mass, no doubt, ranks highest, and contains much that is very beautiful; the 'Kyrie,' the 'Agnus,' the beginning and end of the 'Sanctus,' and part of the 'Credo,' being among Schumann's very best choral works. Unfortunately there is less to be said for the Requiem; we should have expected the mere idea of a mass for the dead to have inspired such a genius as Schumann's, even without recollecting the wonderful tones which he has found for the final requiem in 'Manfred.' But this work was undoubtedly written under great exhaustion; and the first romantic chorus alone makes a uniformly harmonious impression. It closes the list of Schumann's works, but it is not with this that we should wish to complete the picture of so great and noble a master. He once said with reference to the Requiem, 'It is a thing that one writes for oneself.' But the abundant treasure of

individual, pure, and profound art which he has bequeathed to us in his other works is a more lasting monument to his name, stupendous and imperishable.

Among the published works that treat of Schumann's life and labours, that by Wasielewski deserves the first mention (*Robert Schumann, eine Biographie*, von Josef W. von Wasielewski; Dresden, R. Kunze, 1858; ed. 3, Bonn, E. Strauss, 1880). Though in time it may yet receive additions and revision, it has still the enduring merit of giving from accurate acquaintance the broad outlines of Schumann's life. [August Reissmann's *Robert Schumann, sein Leben und seine Werke* (1865, 1871, and 1879) contains analysis of many works.] Other valuable contributions to his biography have been written by Franz Hueffer, *Die Poesie in der Musik* (Leipzig, Leuckart, 1874); by Richard Pohl, *Erinnerungen an R. Schumann, in die Deutsche Revue*, vol. iv., Berlin, 1878 (pp. 169 to 181, and 306 to 317); by Max Kalbeck, *R. Schumann in Wien*, forming the *feuilletons* of the *Wiener Allgemeine Zeitung* of Sept. 24, 29, and Oct. 5, 1880. An accurate and sympathetic essay on Schumann, *Robert Schumann's Tage und Werke*, was contributed by A. W. Ambros to the *Culturhistorische Bilder aus dem Musikleben der Gegenwart* (Leipzig, Matthes, 1860; pp. 51-96). Schumann's literary work was reviewed by H. Deiters in the *Allg. musik. Zeitung* (Leipzig, Breitkopf & Härtel, 1865, Nos. 47-49). [The *Gesammelte Schriften* reached their third edition in 1883; and were translated by Fanny Raymond Ritter; *Die Davidsbündler* by F. G. Jensen (1883) is full of interest. A collection of the master's *Jugendbriefe* edited by Clara Schumann, appeared in 1885, and was translated in 1888; F. G. Jensen's *Neue Folge* of letters (1886) appeared as *The Life of Robert Schumann told in his Letters*, translated by May Herbert (1890). Litzmann's biography of Clara Schumann contains much new information. A large selection from all the letters was published by Dr. Karl Storck in 1907, and translated by Hannah Bryant.]

Schuberth & Co. published in 1860-61 a Thematic Catalogue of Schumann's printed works, extending to op. 143 only. A complete index to all the published compositions of Schumann, with careful evidence as to the year in which each was written, published, and first performed, and their different editions and arrangements, was compiled by Alfred Dörffel as a supplement to the *Musikalisches Wochenblatt* (Leipzig, Fritzsche, 1875). It is impossible to indicate all the shorter notices of Schumann in books and periodicals. The author of this article has had the advantage of seeing a considerable number of his unpublished letters, and of obtaining much information at first hand from persons who were in intimate relations with him.

CATALOGUE OF SCHUMANN'S PUBLISHED WORKS.

[The complete edition of Breitkopf & Härtel in thirty-four volumes, edited by Clara Schumann and others, was completed in 1885 by a supplementary volume edited by Brahms.]
(All works down to op. 23, inclusive, are for pianoforte solo.)

Op.

1. Variations on the name 'Abeeg.'
2. Papillons, twelve pieces.
5. Six Studies after Faganini's Caprices.
4. Intermezzi, six pieces.
5. Impromptus (Variations) on a theme of Clara Wieck.
6. Davidbinderlänze, eighteen pieces.
7. Toccata.
8. Allegro.
9. Carnival, twenty-one pieces.
10. Six Studies after Faganini's caprices.
11. Sonata in F sharp minor.
12. Fantasiestücke, eight pieces.
13. Études en forme de variations (Études symphoniques).
14. Sonata in F minor.
15. Kinderszenen, thirteen pieces.
16. Kreisleriana, eight pieces.
17. Fantasia in C.
18. Arabeske.
19. Blumenstück.
20. Humoreske.
21. Novelletten, eight pieces.
22. Sonata in G minor.
23. Nachtstücke, four pieces.
24. Liederkreis (nine songs).
25. Myrthen, twenty-six songs.
26. Faschingsnacht aus Wien, pf. solo.
27. Lieder und Gesänge (5).
28. Three Romances for pf. solo.
29. Three Poems by Geibel (the first for two Sopranos, the second for three sopranos, and the third [Zigeunerleben—'Gipsy Life'] for small Chorus, Triangle, and Tambourines *ad lib.*).
30. Three songs to Geibel's words.
31. Three songs to Chamisso's words.
32. Scherzo, Gigue, Romanza, and Fughetta, for pf. solo.
33. Six Four-part songs for men's voices.
34. Four Duets for sopr. and tenor.
35. Twelve songs to words by Körner.
36. Six songs to words by Reinick.
37. Twelve songs from Rückert's 'Liebesfrühling.' (Three Nos. 2, 4, and 11 are by Clara Schumann.)
38. Symphony in B flat.
39. Liederkreis, twelve poems by Eichendorff.
40. Five songs.
41. Three string quartets in A minor, F, and A.
42. Frauenliebe und -Leben, songs by Chamisso.
43. Three two-part songs.
44. Quintet for pf. and strings in E flat.
45. Three Romanzen und Balladen, voice and pf.
46. Andante and variations for two pianos.
47. Quartet for pf. and strings in E flat.
48. Dichterliebe, sixteen songs by Heine.
49. Three Romanzen und Balladen, voice and pf.
50. Paradise and the Peri, cantata for solo voices, chorus, and orch.
51. Five songs.
52. Overture, Scherzo, and Finale, for orch.
53. Three Romanzen und Balladen, voice and pf.
54. Concerto for pf. and orch.
55. Five songs by Burns for mixed chorus.
56. Studies for the pedal piano, six pieces in canon.
57. Belsatzar, ballad by Heine.
58. Four sketches for pedal piano.
59. Four songs for mixed chorus.
60. Six fugues on a name Bach, for piano or organ.
61. Symphony in C, for orch.
62. Three songs for male chorus.
63. Trio for piano and strings in D minor.
64. Three Romanzen und Balladen, voice and pf.
65. Ritornellen, canons for male chorus.
66. Bilder aus Osean, for piano, four hands.
67. Five Romanzen und Balladen, for chorus.
68. Album for the young (forty pieces).
69. Six romances, for female chorus.
70. Adagio and Allegro, for piano and horn (or violoncello or violin).
71. Adventlied, for chorus and orchestra.
72. Four fugues for piano.
73. Three Fantasiestücke for pf. and clarinet (violin or violoncello).
74. Spanisches Liederspiel, for vocal quartet, with pf. acct.
75. Five Romanzen und Balladen, for chorus.
76. Four marches for pf.
77. Five songs.
78. Four duets for sopr. and tenor.
79. Lieder-Album, twenty-eight songs for the young.
80. Trio for pf. and strings in F.
81. Genoveva, opera in four acts.
82. Waldscenen, nine pieces for pf.
83. Three songs.
84. A Parting Song ('Es ist bestimmt'), chorus and orch.
85. Twelve piano duets, 'für kleine und grosse Kinder.'
86. Concertstück, for four horns and orch.
87. Der Handschuh, ballad for voice and pf.
88. Four Fantasiestücke for pf. and violin and violoncello.
89. Six songs.
90. Seven songs.
91. Six romances for female chorus.
92. Introduction and Allegro appassionato, pf. and orch.
93. Motet, 'Verzweifle nicht,' double male chorus with organ acct.
94. Three romances for oboe and pf. (or violin or violoncello).
95. Three songs from Byron's Hebrew Melodies, with acct. of harp or pf.
96. Five songs.
97. Symphony in E flat.
- 98a. Nine songs from 'Wilhelm Meister.'

Op.

- 98b. Requiem für Mignon, from the same, for chorus and orchestra.
99. Bunte Blätter for pf. (fourteen pieces).
100. Overture to 'Die Braut von Messina.'
101. Minnespiel for solo voices and pf.
102. Five Stücke im Volkston for violoncello (or violin) and pf.
103. Mädchenlieder, vocal duets.
104. Seven Songs.
105. Sonata for pf. and violin, A minor.
106. Schön Hedwig, ballad for declamation with pf. acct.
107. Six Songs.
108. Nachtlied, for chorus and orch.
109. Ballscenen, nine pieces for pf. duet.
110. Trio for pf. and strings in G minor.
111. Three Fantasiestücke for pf.
112. Der Rose Pilgerfahrt (Pilgrimage of the Rose) for soli, chorus, and orch.
113. Märchenbilder, for pf. and viola (or violin).
114. Three songs for female chorus.
115. Music to Byron's 'Manfred.'
116. Der Königsegen, ballad for soli, chorus, and orch.
117. Four Hunsenlieder, for voice and pf.
118. Three pf. sonatas for the young.
119. Three songs.
120. Symphony in D minor.
121. Sonata for pf. and violin, D minor.
122. Two ballads for declamation with pf. acct.
123. Festival Overture on the Rheisweinlied, for orch.
124. Albumblätter, twenty pf. pieces.
125. Five Songs.
126. Seven pieces in fughetta form for pf.
127. Five Songs.
128. Overture to 'Julius Caesar.'
129. Concerto for violoncello and orch.
130. Kinderball, six pieces for pf. duet.
131. Phantasie for violin and orch.
132. Märchenentwürfe, four pieces for pf., clarinet (or violin) and viola.
133. Gesänge der Frühe, five pf. pieces.
134. Concert-allegro with introduction, for pf. and orch.
135. Five Gedichte der Maria Stuart, for voice and pf.
136. Overture to 'Hermann und Dorothea.'
137. Five huchting-songs for male chorus, with acct. of four horns.
138. Spanische Liebeslieder, for soli, solos, with acct. of pf. duet.
139. Des Sängers Finck, for soli, chorus, and orch.
140. Vom Fagen und der Königstochter, four ballads for soli, chorus, and orch.
141. Four songs for double chorus.
142. Four songs.
143. Der Glück von Edenhall, for soli, chorus, and orch.
144. Neujahrslied, for chorus and orch.
145. Five Romanzen und Balladen, for chorus.
146. Five Romanzen und Balladen, for chorus.
147. Mass, for chorus and orch.
148. Requiem, for chorus and orch.

WITHOUT OPUS NUMBERS

Scenes from Goethe's 'Faust' for soli, chorus, and orch.
Der deutsche Rhein, song with chorus.
Pf. accompaniments to Bach's suites for violin alone.

The following are in the supplementary volume of the complete edition:—

1. Andante and variations for two pianofortes, two violoncelloes and horn.
2. An Anna, song.
3. Im Herbst, song.
4. Hirtenknahe, song.
5. Sommerruh, duet with pf. acct.
6. Five extra variations for op. 13.
7. Scherzo for pf. (suppl. to op. 14).
8. Presto for pf. (suppl. to op. 22).
9. Thema in E flat for pf.

P. S.

SCHUMANN-HEINK, ERNESTINE, née Roessler, was born, June 15, 1861, at Lieben, near Prague. She was taught singing by Marietta Leclair at Graz, and on Oct. 13, 1878, made her début at Dresden as Azucena, remaining there four years. In 1883 she was engaged at Hamburg, where she remained many years. In 1892, as Frl. Heink, she sang with the Hamburg Company both at Covent Garden and Drury Lane, making her début June 8 (Covent Garden) as Erda in 'Siegfried.' Later she sang as Fricka, Waltraute, and, July 8, as the Countess on the production in England at Drury Lane of Nessler's 'Trompeter von Säckingen.' She made a great impression, on account of her fine voice, combining mezzo and contralto, and of her excellent singing and acting. From 1897 to 1900 inclusive she sang again at Covent Garden, principally in Wagner parts; July 11, 1898, the music of the Prologue, on the production of Mancinelli's

'Ero e Leandro.' From 1896 to 1906 she has been in continued request at Bayreuth, having in the meantime sung with great success in America, at Berlin as Carmen, etc., and elsewhere. In 1903 she gave a vocal recital in London, and on Dec. 12 sang Mozart's 'Non più di fiori' at the Queen's Hall. She has been twice married; first in 1883 to Herr Heink, secondly, in 1893, to Herr Paul Schumann.

A. C.

SCHUNKE, LOUIS (LUDWIG), pianoforte player and composer, born of a musical family at Cassel, Dec. 21, 1810. His progress was so rapid that at ten he could play the Concertos of Mozart and Hummel with ease. In 1824 he visited Munich and Vienna, and then Paris, where he put himself under Kalkbrenner and Reicha. After some wandering to Stuttgart, Vienna (1832), Prague, and Dresden he came to Leipzig, where he made the acquaintance of Schumann, and an intimate friendship was the result. Schunke was carried off on Dec. 7, 1834, at the early age of not quite twenty-four, to the great grief of Schumann, who indulged his affection in several interesting papers (*Ges. Schrift.* i. 92, 325; ii. 56, 277) full of memorials of his friend's characteristics. Schunke was one of the four who edited the *Neue Zeitschrift für Musik* on its first appearance. His articles are signed with the figure 3. His published compositions are for the piano, and show considerable ability.

G.

SCHUPPANZIGH, IGNAZ, celebrated violinist, born 1776, in Vienna, where his father was a professor at the Realschule. He adopted music as a profession about the end of 1792, and that he early became known as a teacher we gather from an entry in Beethoven's diary for 1794, 'Schuppanzigh three times a week, Albrechtsberger three times a week.' Beethoven was studying the viola, which was at that time Schnppanzigh's instrument, but he soon after abandoned it for the violin. Before he was twenty-one he had made some name as a conductor, and in 1798 and 1799 directed the Augarten concerts. The *Allg. mus. Zeitung* of May 1799, after describing the concerts, remarks that 'the zeal shown by Herr Schuppanzigh in interpreting the compositions produced, makes these concerts models worth following by all amateur associations of the kind, and by many conductors.' Beethoven, who had also appeared at the Augarten concerts, kept up a singular kind of friendship with Schuppanzigh. They were so useful to each other that, as Thayer says, they had a great mutual liking, if it did not actually amount to affection. Schuppanzigh was good-looking, though later in life he grew very fat, and had to put up with many a joke on the subject from Beethoven. 'Mylord Falstaff' was one of his nicknames (letter to Archduke in Nohl, *Neue Briefe*, p. 75). The following piece of rough drollery, scrawled by Beethoven on a

blank page at the end of his Sonata op. 28, is here printed for the first time:—

Lob auf den Dicken.

Solt.

Schup - pan - zigh ist ein Lump, Lump, Lump, Wer
kennt ihn, war kennt ihn nicht? Den dicken Bau - ma - gen, den
auf - ge - blas - nen E - selekopf, O Lump Schup - pan - zigh, O

Chor.

E - sel Schuppanzigh, Wir stim - men al - le
Chor.
ein, Du bist der grösste E - sel! O Lump! O
E - sel! O E - sel! Hi hi ha!

Schuppanzigh was a great quartet-player, and belonged to the party which met every Friday during 1794 and 1795 at Prince Carl Lichnowsky's, where he took the first violin, the Prince himself, or a Silesian named Sina, the second, Weiss the viola, and Kraft, a thorough artist, the violoncello—occasionally changing with Beethoven's friend, Zmeskall. Towards the close of 1808 Schuppanzigh founded the Rasonmowsky quartet, to which he, Mayseder and Linke, remained attached for life. Weiss again took the viola. Beethoven's quartets were the staple of their performances. In the meantime Schuppanzigh had married a Fräulein Kilitzky, the sister of a well-known singer, who sang with little success 'Ah perfido!' at a concert of Beethoven's in 1808, instead of Anna Milder. On this occasion the great joker writes to Graf Brunswick, 'Schnppanzigh is married—they say his wife is as fat as himself—what a family??' (Nohl, *Neue Briefe*, p. 11.) When the Rasoumowsky palace was burnt down in 1815 Schuppanzigh started on a tour through Germany, Poland, and Russia, and did not return till early in 1824, when the quartets were resumed with the same band of friends (see Beethoven's letters to his nephew, 1825). One of the first

events after his return was the performance of Schubert's Octet, which is marked as finished on March 1, and was doubtless played very shortly after. [See *ante*, p. 301.] The acquaintance thus begun was cemented by Schubert's dedication of his lovely Quartet in A 'to his friend I. Schuppanzigh,' a year later. Schuppanzigh was a member of the court-chapel, and for some time director of the court-opera. He died of paralysis, March 2, 1830. Of his compositions the following were printed:—'Solo pour le violon avec quatuor' (Diabelli), 'Variationen über ein russisches Lied' (Cappi), and 'Variationen über ein Thema aus Alcina' (Mollo).

F. G.

SCHWARBROOK, THOMAS, a German, was in the employ of Renatus Harris, the organ-builder. Early in the 18th century he left London to live at Warwick, and built many noble instruments. His masterpiece was the organ of St. Michael's, Coventry, built in 1733, which cost £1400. The latest mention of him is in 1752, when he improved the organ of Worcester Cathedral. See vol. iii. p. 537*a*.

V. DE P.

SCHWARTZENDORF, J. P. A. See MARTINI IL TEDESCO, vol. iii. p. 68.

SCHWEIZERFAMILIE, DIE. Opera in three acts, words by Castelli, music by Joseph Weigl. Produced at Vienna, March 14, 1809.

SCHWEMMER, HEINRICH, was born March 28, 1621, at Gumbertshausen near Hallburg in Lower Franconia, a place which the Thirty Years' War is said to have wiped out of existence. In his younger years war and the pestilence obliged his family to seek refuge first at Weimar, then at Coburg. According to Gerber he first visited Nuremberg in 1641 as a pupil of the St. Sebald School, and received his musical instruction from the organist Johann Erasmus Kindermann. But the first documentary evidence we have of his presence at Nuremberg is in connection with a great musical festival and banquet held there in 1649, in honour of the Swedish Field-Marshal, after the Peace of Westphalia. Schwemmer appears among the singers on that occasion, though not yet holding any appointment. 1650 is the date of his first appointment at Nuremberg as one of the Assistant Masters at the St. Laurence School. In 1656 he is described as *Director Chori musici* at the Frauenkirche; but with this post, which he seems to have retained till his death, May 26, 1696, he was obliged, in accordance with the custom of the time, to combine certain duties of ordinary school instruction at the St. Sebald School. Like greater musicians after him Schwemmer appears to have found his ordinary school duties somewhat irksome, and for an occasional negligence in them came under the censure of the town authorities. In spite of this he was recognised as the best musical teacher in Nuremberg, and the most distinguished of later

Nuremberg musicians, such as Pachelbel, Johann Krieger, and Baltazar Schmidt, were his pupils. He was also the musician most sought after for such occasional compositions as wedding and funeral anthems. The *Quellen-Lexikon* enumerates twenty of such works for voices and instruments. He was also the composer of a large number of melodies for the various Nuremberg hymn-books of the time. In the *Denkmäler der Tonkunst in Bayern*, Jahrgang VI. there is printed for the first time an Easter Motet by him for voices and instruments, which is characterised by much of the Handelian simplicity and directness of choral effect. Only a few other Church works by him remain in MS. J. K. M.

SCHWENKE, or SCHWENCKE, a German musical family, whose founder, JOHANN GOTTLIEB (born August 11, 1744, at Breitenau in Saxony, died at Hamburg, Dec. 7, 1823), was a famous bassoonist and a 'Rathsmusikus.' His son, CHRISTIAN FRIEDRICH GOTTLIEB, was born at Wachenhausen in the Harz, August 30, 1767, was a proficient clavier-player, and appeared in public at Hamburg in a concerto of his father's in 1779, when eleven and a half years old. Emanuel Bach interested himself in the boy's career, and was instrumental in getting him sent to Berlin (1782), where he studied under Kirnberger. He tried for an organist's post at Hamburg in 1783, but was unsuccessful, although Emanuel Bach was a judge. In 1787 and 1788 he studied at the university of Leipzig and Halle, and after the dispute which followed on Emanuel Bach's death in 1789, Schwenke was appointed to succeed him as town-cantor, but the new conditions attached to the post were so irksome that he devoted himself mainly to mathematical problems. As a composer his main importance was in the stress he laid on good accentuation. He set Klopstock's 'Vater-unsrer' and 'Der Frohsinn' to music, and was a friend of the poet's. Various cantatas for solo and chorus with orchestra, six organ fugues, a concerto for oboe, and clavier sonatas are mentioned in the *Quellen-Lexikon*, from which most of the above information is derived. He was bold enough to re-score the 'Messiah' and Bach's B minor Mass. He died at Hamburg, Oct. 28, 1822. Two of his sons were musicians; the elder, JOHANN FRIEDRICH, born at Hamburg, April 30, 1792, was a player on the organ, violoncello, and clarinet, was appointed to the Nikolaikirche in Hamburg in 1829, and composed cantatas with organ accompaniment, arrangement, etc., of chorales, a septet for five violoncellos, double bass and drums, and orchestrated Beethoven's 'Adelaide' and 'Wachtelschlag,' among other things. The younger, KARL, born at Hamburg, March 7, 1797, was a clever pianist and an industrious composer; three sonatas for piano duet, and one for violin, appeared, as well as a symphony performed at the Paris Conservatoire in 1843, and at Hamburg. From 1870,

when he lived near Vienna, all trace of him is lost. Johann Friedrich's son and pupil, FRIEDRICH GOTTLIEB, born Dec. 15, 1823, at Hamburg, was his successor in the Nikolaikirche, had success as a pianist and organist in Paris (1855) and elsewhere. Two fantasias for organ, trumpet, trombones, and drums, are his most important compositions. He re-edited his father's collection of chorales, and wrote preludes to them. He died, June 11, 1896, at Hamburg. (Riemann's *Lexikon*, *Quellen-Lexikon*.) M.

SCHWINDL, or SCHWINDEL, FRIEDRICH, was a skilful player on the violin, flute, and clavier, in the 18th century. He was at the Hague about 1770, where Burney met him, and in Geneva and Mülhausen, where he brought out some operettas, and finally he settled at Carlsruhe, where he died August 10, 1786, holding the position of Markgräflisch badischer Concertmeister. He was one of the followers of the Mannheim school; his numerous symphonies, quartets, trios, etc. appeared at Amsterdam, Paris, and London (where his music enjoyed great popularity), from 1765 onwards. A Mass in E minor for four voices and orchestra is in MS. at Milan. (Riemann's *Lexikon*, *Quellen-Lexikon*, etc.) M.

SCHYTTE, LUDWIG THEODOR, born at Aarhus, Jutland, Denmark, April 28, 1850, was originally a chemist, and gave up that business for music in 1870, when he studied the pianoforte under Anton Rée and Edmund Neupert, and composition with Gebauer and Gade, finally going to Tanbert in Berlin, and Liszt at Weimar. He had one of the advanced piano classes in Horák's Academy in Vienna in 1887-88, and has since resided there, being distinguished as a player, composer, and teacher. A very large number of graceful and effective compositions for pianoforte testifies to his industry, and many have become widely popular, such as op. 22, 'Naturstimmungen'; op. 30, 'Pantomimen' for PF. duet; op. 53, sonata. A pianoforte concerto is op. 28, and among his many songs, a cycle, 'Die Verlassene,' deserves mention. A comic opera, 'Fahrendes Volk,' was not performed; but 'Hero,' a one-act opera, was given at Copenhagen in 1898, and an operetta 'Der Mameluk' at Vienna in 1903. (Riemann's *Lexikon*; Baker's *Biog. Dict. of Mus.*) M.

SCIOLTO, CON SCIOLTEZZA, 'freely'; an expression used in nearly the same sense as *ad libitum*, but generally applied to longer passages, or even to whole movements. It is also applied to a fugue in a free style. Thus what Beethoven, in the last movement of the Sonata in B \flat , op. 106, calls 'Fuga con alcune licenze,' might otherwise be called 'Fuga sciolta.' M.

SCONTRINO, ANTONIO, born at Trapani in Sicily, May 17, 1850. His father, a carpenter by trade, was an ardent lover of music, play-

ing the violin and guitar as well as singing, and constructing violins, guitars, violoncellos, double-basses, and even pianofortes. With his children and brothers this keen amateur formed an orchestra in which, at the age of seven years, Antonio was persuaded to take part as double-bass, playing on a violoncello adapted for the purpose, and provided with three strings only. In 1861 he took up music in earnest, and entered the Palermo Conservatorio to study the instrument which chance, rather than choice, had made his own. For harmony he was a pupil of Luigi Alfano, and for counterpoint and composition of Platania, the director of the institution. In 1870 he left the Conservatorio and toured as a virtuoso on the double-bass throughout southern Italy; in the following year he obtained the libretto of an opera from Leopoldo Marengo, but the work, 'Matelda,' was not produced until 1876. Aided by a grant from the municipality and province of Trapani, Scontrino went in 1872 to Munich, where for two years he studied German music, classical and modern. In 1874 he came to England as a member of Mapleson's orchestra, and afterwards settled in Milan as a teacher of instrumental, vocal, and theoretical music. In 1891 he was appointed professor of counterpoint and composition in the Palermo Conservatorio, and in 1892 a similar professorship was gained by him in competition, at the Reale Istituto Musicale at Florence, where he still resides. His works include five operas:—'Matelda,' 4 acts (Milan, Teatro Dal Verme, 1876); 'Il Progettista,' 1 act (Rome, 1882); 'Sortilegio,' 3 acts (Turin, 1882); 'Gringoire,' 1 act (Milan, 1890); and 'Cortigiana,' 4 acts (Milan, 1895-6). Among his more important orchestral compositions are an overture to Marengo's 'Celeste,' incidental music to D'Annunzio's 'Francesca da Rimini,' a 'Sinfonia Marinnesca' and 'Sinfonia Romantica.' Three string quartets and a prelude and fugue for the same instruments; various pieces for violin, violoncello, and double-bass with piano accompaniment, and several sets of pianoforte solos are among his instrumental works; and his songs, which number about fifty, include two cycles, 'La Vie Intérieure' to words by Sully Prud'homme, and 'Intima Vita' to words by E. Panzacchi. An 'O Salutaris' and 'Salve Regina' for two voices with organ accompaniment, a motet, 'Tota Pulcra,' for vocal quartet, and a 'Gloria,' an eight-part fugue for solo voices, are his sacred compositions. M.

SCORDATURA (mis-tuning). A term used to designate some abnormal tunings of the violin which are occasionally employed to produce particular effects. The scordatura originated in the lute and viol, which were tuned in various ways to suit the key of the music. Their six strings being commonly tuned by fourths, with one third in the middle,

the third was shifted as occasion required, and an additional third or a fifth was introduced elsewhere, so as to yield on the open strings as many harmonies as possible; in old lute music the proper tuning is indicated at the beginning of the piece. This practice survives in the guitar. The normal tuning being as at (a), very striking effects in the key of E major, for instance, may be produced by tuning the instrument as at (b). The scordatura was formerly

often employed on the violin. (1) the tuning (c) is extremely favourable to simplicity of fingering in the key of A. It is employed by Tartini in one of his solos, and by Castrucci in a well-known fugue: its effect is noisy and monotonous. It is frequently employed by Scotch reel-players, and in their hands has a singularly rousing effect. The following strain from 'Kilrack's Reel' is to be read by the player as if tuned in the ordinary way, so that the first phrase sounds in the key of A:—

The reel called 'Appin House' and the lively Strathspey called 'Anthony Murray's Reel' are played in the same tuning. (2) The tuning (d) employed by Biber (see vol. i. p. 324) is a modification of (c), a fourth being substituted for a fifth on the first string; and (3) the tuning (e), also employed by Biber, is a similar modification of the normal tuning by fifths. In these tunings the viol fingering must be used on the first strings. On Biber's use of the scordatura in the eleventh sonata of his second book (reprinted in the *Denkm. der Tonk. in Oesterreich*, xii. 2) see the *Zeitschr. of the Int. Mus. Ges.* viii. p. 471, and ix. p. 29 (both 1907). (4) The tuning (f), employed by Nardini in his Enigmatic Sonata, is the reverse of the last, being a combination of the common tuning for the first two strings with the viol tuning in the lower ones. (5) The tuning (g) is employed by Barbella in his 'Serenade' and by Campagnoli in his 'Notturmo', to imitate the Viola d'amore, from the four middle strings of which it is copied. Thick first and second strings should be used, and the mute put on. The effect is singularly pleasing: but the G and A on the second string are flat and dull. (6) The tuning (h) employed by Lolli, is the normal tuning except the fourth string, which is tuned an octave below the third. If a very

stout fourth string is used, a good bass accompaniment is thus obtainable.

Such are a few of the abnormal tunings employed by the old violinists. The scordatura is seldom used by modern players except on the fourth string, which is often tuned a tone higher, as at (i). (De Bériot, Mazas, Prume, etc.) This device may always be employed where the composition does not descend below A; the tone is much increased, and in some keys, especially D and A, execution is greatly facilitated. Paganini tuned his fourth string higher still, as at (j) and (k), with surprising effect; the B \flat tuning was a favourite one with De Bériot. Paganini's tuning in flats (l) cannot

be called scordatura, as it consists in elevating the violin generally by half a tone for the sake of brilliancy. The same device was employed by Spohr in his duets for harp and violin, the harp part being written in flats a semitone higher. The fourth string is rarely lowered: but Baillot sometimes tuned it a semitone lower, as at (m), to facilitate arpeggios in the sharp keys.

The scordatura (n) is employed by Bach in his fifth sonata for the violoncello. It corresponds to the violin tuning (e). This depression of the first string, if a thick string be used, is not unfavourable to sonority. When the scordatura is used, suitable strings should be obtained. Thicker ones are necessary where the pitch is depressed, and thinner ones where it is elevated: and the player will find it best to keep a special instrument for any tuning which he frequently employs.

E. J. P.

In engraved music of Scottish reels, etc. the scordatura was marked at the commencement of the piece by the word 'Scordatura' and the tuning in notes. In manuscript music, however, it was frequently more carelessly indicated, or even left without indication. It must be remembered that although all notes on the mistuned strings are affected, yet the notation throughout the piece always stood as if the tunings were normal, and consequently allowance for this must be made in playing on the piano, etc., and in transcripts. In scordatura of the lowest string the sound A is represented by the note G, the sound B by the note A, and so on. For a curious instance of the Scottish scordatura see SIR ROGER DE COVERLY.

F. K.

SCORE (Lat. *Partitio*, *Partitura*, *Partitura cancellata*; Ital. *Partitura*, *Partizione*, *Partitino*, *Sparta*, *Spartita*; Fr. *Partition*; Germ. *Partitur*). A series of staves on which the different parts of a piece of music are written one above another, so that the whole may be read at a

glance. The English name is derived from the practice of dividing the music by bass or lines scored through the entire series of staves. The Latin term, *Partitura cancellata* owes its origin to the compartments or *Cancelli*, into which the page is divided by the vertical scorings. The word Score, though often misapplied in the present day to what is more correctly called a 'short' score, a 'vocal' score, or a 'piano' score, should properly be reserved for the system which presents on separate staves all the parts that are to be performed simultaneously. The oldest known form of score

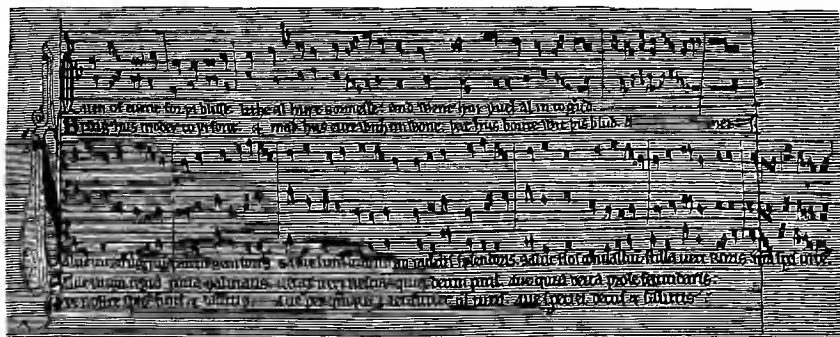

would seem to be that in the pseudo-Huchald *Musica Enchiridiadis*, a treatise of the 11th century. A specimen will be found in vol. iii. p. 397a.)

An interesting early score is in the Brit. Mus. Harl. MS. 978,—the volume which contains the famous Reading *rota* 'Sumer is icumen in.' Below the three voice-parts here shown there is a supplementary *quadruplum*, written on a separate stave, which has no concern with our present purpose. This composition shows that within about ten years of 1226 the essential feature of a score was realised in England.

In Arundel MS. No. 248, fol. 153a, 154b, 155a, and 201a, there are two-part compositions regularly scored on staves of eight and nine lines. In the last of these, now nearly illegible, two staves, each consisting of four black lines, are separated by a red line. In the other case

the staves consist of eight uniform and equidistant black lines. The following is from fol. 155a of the MS., and the lower part of the same facsimile is another hymn 'Salue uirgo uirginū,' for three voices, on a stave of twelve equidistant black lines. The MS. dates

from about the middle of the 13th century. A score of the same kind, about the same date, is referred to by Ambros as being in the Bibliothèque Nationale, Paris. v. s. r.

It will be observed that in these examples care is taken that the notes which synchronise in time are in the same vertical line. In the *rota* (see the facsimile in the article SUMER IS ICUMEN IN) in the facsimile given in vol. iii. p. 324, and in the 15th century carols edited

by J. A. Fuller Maitland and W. S. Rockstro, although the parts are superimposed, yet there is no attempt to make the page really a score.

One of the first printed scores, properly so-called, is that of Cipriano de Rore's madrigals of 1577; and one of the first printed orchestral scores, if not the very first, was that of the 'Ballet comique de la Roynie' (Paris, 1582). From the system then adopted to the complicated scores now in use, the process is one of

natural development. Down to the days of Bach and Handel, and for some time after them, the orchestral instruments were used rather as an accretion of obligato parts than as a complex whole; but from the time that music became a scientific art, some system of grouping instruments of the same class near each other has been followed. The basso continuo or thorough-bass, whether figured or not, has always occupied the lowest stave, and its inseparable companion, the violoncello part, has been placed immediately above it. In purely orchestral music the viola comes next and the two violin parts; but in vocal music, whether for solos or choruses, the voice-parts, with or without an organ part below them, occupy the position immediately above the violoncello. Sometimes in a concerto the solo instrument has this place, as in the first organ concerto of Handel; but more often, and in modern music almost universally, the solo instrument in such a composition is placed above the strings. Having arrived at the line for the first violin or violin solo part, it will be most convenient to describe the constitution of the score from the top downwards. In certain instances, such as Beethoven's C minor Symphony, Mozart's 'Jupiter' Symphony, Schumann's in E flat, etc., the drums occupy the top line; but in far the greater number of cases the piccolos or flutes head the score as the top of the group of 'wood-wind' instruments. Next come the oboes, then the clarinet, with cor anglais immediately above or below them; the bassoons generally end the group of 'wood,' unless a double-bassoon is used. Some composers write their horn-parts between the clarinet and bassoons, but a more reasonable plan seems to be to let them head the division of 'brass,' and below them to place trumpets, trombones, and tuba. Upon the staves between the last of the brass instruments and the first violin lines are placed the instruments of percussion, generally beginning with the ordinary drums, and including such things as triangles, tambourines, big drum, side drum, cymbals, etc. The staves for the harp or harps are generally placed in this division, often below the big drum line. As a rule, in carefully printed scores, assistance is given to the reader's or conductor's eye by not carrying the bar-lines through all the staves, but leaving spaces in the vertical lines between the various groups of instruments. In a well-edited score, while the whole is joined together at the beginning of each page and the groups are indicated by thicker vertical lines, the bar-divisions will be continuous from the piccolo line to that of the contrafagotto, and from the first horn line to that of the bass tuba; each instrument of percussion will have its own bar-lines to itself, and the three upper 'strings' will be joined in their bar-lines. If solo parts and a double chorus are employed, each solo part will have its separate bar-lines,

and each choir will have joined bar-lines. Lastly, the violoncello and double-bass part will be barred together. With every kind of difference in detail, this arrangement has continued in use from the classical days to our own, the change of place in the drum-line being the most important alteration. Specimens of various scores may be seen at vol. ii. pp. 474-483. In modern times, the great advance in musical education in England has had the excellent result of increasing the number of full scores published at small cost for the edification of those who listen to orchestral music. It may be presumed that a certain proportion of the many who hold these books in their hands during a performance, are able to read them, or at least to gain from them some kind of information; but there are so many who confess themselves unable to cope with the difficulties of score-reading that it may not be out of place to consider what their difficulties are. It is even whispered that in England more than one conductor has risen to eminence who has not been able to read a complicated score with the requisite fluency. The art of reading, and still more that of playing from, a full score is one of the most precious a musician can possess; those who can read the two staves of piano music should find only slight difficulty in reading simple quartets in which the viola part with its alto clef, and the occasional excursions of the violoncello into the tenor clef, are all the problems presented. Vocal music, in which the soprano, alto, and tenor clefs are persistently employed, should be attacked next, and as soon as unaccustomed clefs have lost their terror, the student may gradually attempt the parts for the transposing instruments. The clarinet notation may be conveniently studied in works for clarinet with piano or other instruments; the principles on which the horn and trumpet transpose are not hard to grasp, but it is undoubtedly difficult to become quite sure what sound is indicated by what note, especially where a horn is directed to change its crook during a few silent bars. Various suggestions have been made at different times for avoiding the difficulty of reading scores by making the players of transposing instruments read the notes that they are to sound, not those they have to play. In practice this would but remove the responsibility of correct transposition from the conductor's shoulders to those of each individual player; and although the average English orchestral player is accustomed to perform marvels of sight-reading, such a change can hardly be contemplated except by those whose interest it is to increase the number of preliminary rehearsals in the case of any new work. M.

SCORING. The art of INSTRUMENTATION. See vol. ii. p. 473 ff.

SCOTCH SNAP or **CATCH** is the name given to the reverse of the ordinary dotted note

which has a short note after it—in the snap the short note comes first and is followed by the long one. Inasmuch as it is a national peculiarity of Scottish music, it is characteristic of the slow Strathspey reel, rather than of vocal music, though as Burns and others wrote songs to some of these dance-tunes, it is not infrequently found in connection with words. 'Green grow the rushes,' 'Roy's wife,' and 'Whistle o'er the lave o't,' contain examples of the snap. It was in great favour with many of the Italian composers of the 18th century, for Burney—who seems to have invented the name—says in his account of the Italian Opera in London, in 1748, that there was at this time too much of the 'Scots catch or cutting short of the first of two notes in a melody.' He blames Cocchi, Perez, and Jommelli 'all three masters concerned in the opera "Vologeso"' for being lavish of the snap. [In the hands of Hook and the other purveyors of the pseudo-Scottish music, which was in vogue at Vauxhall and elsewhere in the 18th century, it became a senseless vulgarism, and with the exception of a few songs, such as those mentioned above, and the Strathspey reel in which it is an essential feature, its presence may generally be accepted as proof that the music in which it occurs is not genuine.] An example of it will be found in the Musette of Handel's Organ Concerto in G minor (1739); he also uses it occasionally in his vocal music.

J. M. W.

SCOTCH SYMPHONY, THE. Mendelssohn's own name for his A minor Symphony (op. 56), one of the works in which he recorded the impressions of his Scotch tour in 1829. Other results of that expedition are the 'Hebrides' overture, the PF. Fantasia in F# minor (op. 28), originally entitled by its author 'Sonate écossaise,' the PF. Fantasia in A minor, op. 16, No. 1, and the two-part song 'O wert thou in the cauld blast.'

The subject of the opening Andante of the Symphony dates from his visit to Holyrood in the evening of July 30, 1829, when it was written down. The Symphony was planned and begun during his residence in Italy in 1831, but was not finally finished till Jan. 20, 1842, the date on the finished score. It was first performed at a Gewandhaus Concert on March 3 of the same year, again at the Gewandhaus Concert next following. He then brought it to England, conducted it at the Philharmonic Concert, June 13, 1842, and obtained permission to dedicate it to Queen Victoria.

The passage for flutes, bassoons, and horns,

connecting the end of the first movement with the scherzo, was, on the authority of G. A. Macfarren, put in after the rehearsal (under Sterndale Bennett) at the Philharmonic, and added by Goodwin, the copyist, to the Leipzig MS. parts. The score and parts were published (as Symphony No. 3) by Breitkopf & Härtel in March 1851.

The work is peculiar among Mendelssohn's symphonies from the fact that it is not separated by the usual pauses. This is especially enjoined in a preface by the author prefixed to the score, in which the titles and tempi are given differently from what they are at the head of the movements themselves.

G.
SCOTT, CYRIL MEIR, born at Oxtou, Cheshire, Sept. 27, 1879, studied the pianoforte until he was seventeen years old, when he went to the Hoch Conservatorium at Frankfort, and studied composition, etc. under Prof. Iwan Knorr. Finding himself hampered by the limitations of musical conventions, he threw himself into the ultra-modern school of composition, and all his works show a remarkable homogeneity of style. He shares (with a good many other people in the present day) the conviction that melody should be continuous, rather than cut up into separate strains, that tonality is an unnecessary limitation, and that the chromatic scale is as satisfactory a basis for composition as the diatonic. His works aim at the portrayal of 'atmosphere,' rather than definite beauty; and they occasionally reach their object. Mr. Scott may best be described as the English counterpart to Debussy, whose vagueness of melody and far-fetched harmonies are reproduced in the works of the younger man. An 'aubade' for small orchestra, a symphony, two rhapsodies, an 'arabesque,' a 'Christmas overture'; overtures to 'Aglavaine et Selysette,' 'Princesse Maleine,' and 'Pelléas et Mélisande,' are among his orchestral works; a setting of 'La Belle Dame Sans Merci' is for soprano, baritone, and orchestra, and 'Helen of Kirkconnel' is for baritone and orchestra. A sextet for piano and strings, op. 26, and a string quartet, op. 28, are among his earlier pieces of chamber music, and op. 57, one of his latest, is a quintet for piano and strings. It is beyond question that the later works show more consideration for the hearer's pleasure than do some of the earlier. His setting of the old English lyrics, 'Lovely kind and kindly loving' and 'Why so pale and wan,' making up his op. 55, are among the most pleasing and original of his songs, though 'My Captain,' to Whitman's words, and 'A Reflection' are very striking. 'Afterday,' and the three songs which make up op. 52, are interesting, and in some ways effective. There are a good many pianoforte pieces, which in name and style fulfil the Debussy ideal of landscape-painting in music.

M.

SCOTT, JOHN, nephew of John Sale, jun., was born about 1776. He was a chorister of St. George's Chapel, Windsor, and Eton College; afterwards studied the organ under William Sexton, organist of St. George's, Windsor, and became deputy for Dr. Arnold at Westminster Abbey. He was also chorist-master and pianist at Sadler's Wells. On the erection of the first organ in Spanish Town, Jamaica, he went out as organist, and died there in 1815. He was composer of a well-known anthem, 'Praise the Lord, O Jerusalem,' as well as of a famous comic song, 'Abraham Newland,'¹ the words of which were also sung to the 'Rogue's March'; [the composition here referred to was more commonly ascribed to Tipton, a Vauxhall writer, and was written about the end of the 18th century. F. K.].

W. H. H.

SCOTT, LADY JOHN DOUGLAS, an amateur composer of Scottish songs. Born Alicia Ann Spottiswoode, in 1810, she was the eldest daughter of Mr. John Spottiswoode, of Spottiswoode in Berwickshire. On March 16, 1836, she married Lord John Montague-Douglas Scott (son of the fourth Duke of Buccleuch), who died in 1860. In 1870, under the will of her father, she resumed her maiden name.

Her best claim to remembrance, musically, is her composition of the song 'Annie Laurie,' which was first published without composer's name in the third volume of Paterson and Roy's 'Vocal Melodies of Scotland' in 1838. So popular was the song during the Crimean war, that a letter from the composer herself, in her last years, by mistake refers to it as being composed about that period. It may be added that the words are altered from a song first published in *A Ballad Book* collected by Charles Kirkpatrick Sharpe, and privately issued in 1824. A few other of her songs gained but scant favour, although she is sometimes credited with being the composer or adapter of 'The Banks of Loch Lomond,' a Scottish song still much sung.

Throughout her life she upheld the ancient Scottish customs in a manner verging on eccentricity. She died on her estate at Spottiswoode, March 12, 1900, aged ninety.

F. K.

SCOTTISH MUSIC. As national music, that of Scotland has long been held in high esteem. Early notices of it may be meagre, but are always laudatory. Unfortunately, there are no means of proving what it was in remote times, for the art of conveying a knowledge of sounds by comprehensible written signs was a late invention, and music handed down by mere tradition was most untrustworthy. Even after the invention of musical writing, the learned men who possessed the art employed it almost entirely in the perpetuation of scholastic music, having apparently an equal contempt for melody

in general, and for the tunes prized by the uneducated vulgar. The earliest Scottish music was probably constructed on the Pentatonic Scale, which is not, however, peculiar to Scotland, for airs of a similar cast have been found in countries as wide apart as China and the West Coast of Africa. Many conjectures have been made as to the sources of British music in general, but in the absence of any real evidence, they must be held to be more or less fruitless.

[In 1780, William Tytler of Woodhouselee contributed *A Dissertation on the Scottish Music* to Arnot's *History of Edinburgh*. He attempted to date various well-known Scottish airs, and though not very trustworthy or scientific has been taken as authoritative by many later writers. F. K.]

It is a remarkable fact that the first to write a history of Scottish music based on research was an Englishman, Joseph Ritson, a celebrated antiquary and critic, who wrote towards the end of the 18th century. He seems to have been a man of irascible temperament, but love of truth lay at the root of his onslaughts upon Johnson, Warton, Percy, Pinkerton, and others. Any assertion made without sufficient evidence he treated as falsehood, and attacked in the most uncompromising manner. His *Historical Essay on Scottish Song* has so smoothed the way for all later writers on the subject that it would be ungenerous not to acknowledge the storehouse from which his successors have drawn their information—in many cases without citing their authority. The early portion of the *Essay* treats of the poetry of the songs, beginning with mere rhymes on the subject of the death of Alexander III. (1285), the siege of Berwick (1296), Bannockburn (1314), and so on to the times of James I. (1393-1437), whose thorough English education led to his being both a poet and a musician. His 'truly excellent composition At Beltayne or Peblis to the play is still held in high esteem,' but of his music there are no remains. This is the more to be regretted as a well-worn quotation from Tassoni states that James 'not only wrote sacred compositions for the voice, but found out of himself a new style of music, plaintive and mournful, differing from every other.' That James improved Scottish music need not be doubted, but it is altogether absurd to suppose that he invented a style that must have been in existence long before his era. The quotation, however, serves to show that in Italy James and not Rizzio—most gratuitously supposed to have aided the development of Scottish music—was believed to have originated or amended this style. As Tassoni flourished soon after Rizzio's time, he had an opportunity of knowing somewhat more of the question than writers who came a century and a half later. George Farquhar Graham has at some length controverted the Rizzio myth. Graham was a very competent judge of such

¹ Abraham Newland was the Chief Cashier of the Bank of England.

matters, and believed that some of our airs might be of the 15th century; though the earliest to which a date can now be affixed is the 'Lament for Flodden,' 1513, of which further mention will be made.

As so little is known of the popular music of the 15th century, a few extracts from the accounts of the Lords High Treasurers of Scotland may be found interesting. They show the value placed on the services of musicians who at various times visited the Courts of James III. and James IV. Scottish money being usually reckoned as worth only one-twelfth of English money, the payments seem very small; but are not so in reality. For on consulting a table of prices of provisions supplied for a banquet given by James IV. to the French ambassador, it is found that a gratuity such as that to John Broun would buy seven oxen; and that the 'twa fithelaris' (fiddlers) who sang 'Graysteil' to the King received the value of three sheep. The sums seem odd, but an examination of the items will show that the payments were made in gold. The unicorn (a Scottish coin that weighed from 57 to 60 grains of gold) is valued in the accounts at eighteen shillings; and another coin, the equivalent of the French crown, at fourteen shillings—

1474. Item, gevin at the kingis command iijc Septembris, to John Broun, lutare, at his passage our sey to leug (? lere, i.e. learn) his craft. . . . v. li.
 1489. July 1.—Item, to Wilzean, sangster of Lithgow for a sang bwke he brocht to the king be a precept, . . . x. li.
 1490. April 19.—To Martin Clareschaw and ye toder erache clareschaw at ye kingis command, xvij. s. May.—Till ane ersche harper, at ye kingis command, xvij. s.

Mr. Gunn, in his *Enquiry on the Harp in the Highlands*, quotes thus from a work of 1597—'The strings of their *Clairschoes* (small Gaelic harp) are made of brasse wyar, and the strings of the Harp of sinews, which strings they stryke either with their nayles growing long or else with an instrument appointed for that use.' The correct word is *Clàrsach*; and the harper *Clarsair*.

1491. Aug. 21.—Item to iij Inglis pyparis viij unicorns, vij. li. iij. s.
 1497. April 10.—Item to John Hert for bering a pare of moniecordis of the kingis fra Abirdene to Strivelin ix. s.
 April 16.—Item, to the tua fithelaris that sang Graysteil to ze king ix. s.
 1500. March 1.—Item, to Jacob lutar, to lowse his lute that lay in wed . . . xxxij. s.

(Which means that the thriftless Jacob received the value of eleven sheep to redeem his lute that lay in pawn.)

1503. Aug. 13.—Item, to viij Inglish menstres be the kingis command xl frenche crownis, xxvij. li.
 Sept. 10.—Item to the four Italian menstres to fe thaim hors to Linlithgow and to red thaim of the town, lvj. s.

(Riotous fellows, no doubt, who got a French crown each to clear their 'score' in Edinburgh and hire horses to Linlithgow.)

Information regarding the state of popular music during the 16th century is almost equally meagre. James V. is believed to have written two songs on the subject of certain adventures which befell him while wandering through the country in disguise; these are 'The gaberlunzie man' and 'The beggar's mealpokes' (mealbaggie). The airs are said to be of the same date, but of this there is really no certainty; though Ritson, with all his scepticism, admits them into his list of early tunes; the second is much too modern in style to have been of James V.'s date. Of Mary's time there are two curious works in which musical matters are mentioned. *The Complaynte of Scotland* (1549), and *The Gude and Godly Ballates* (1578), both of which furnish the names of a number of tunes almost all now unknown. Mr. J. A. H. Murray, in his excellent reprint of the former of these, says 'The Complaynte of Scotland consists of two principal parts, viz. the author's *Discourse* concerning the affliction and miery of his country, and his *Dream of Dame Scotia* and her complaint against her three sons. These are, with other obvious art, connected together by what the author terms his *Monologue Recreative*.'

This Monologue—which, from its being printed on unpagged leaves, Mr. Murray has discovered to be an afterthought—is now the most interesting part of the work. In it the author introduces a number of shepherds and their wives. After 'disjune' (*déjeuner*) the chief shepherd delivers a most learned address, and then they proceed to relate stories from ancient mythology, and also from the Middle Ages. Short extracts to give an idea of the style may not be objected to.

Quhen the scheipheird hed endit his prolixit orison to the laif of the scheipheirdis, i mervellit nocht litil quhen i herd ane rustic pastour of bestialitie, distitut of vrbante, and of speculacione of natural philosophe, indoctryne his nychtbours as he hed studeit ptholome, aurois, aristotel, gallien, ypocrites or Cicero, quhilke var expert practicionis in methamatic art. . . . Quhen thir scheipheirdis hed tald al thyr pleyсанд storeis, than thay and ther vyvis began to sing suet melodius sangis of natural music of the antiquite. the foure marmadyns that sang quhen thetis vas mareit on month pillion, thai sang nocht sa suet as did thir scheipheirdis. . . .

Then follows a list of songs, including—

Pastance witht gude companie, Stil vndir the leywis grene, Cou thou me the raschis grene, . . . brume brume on bil, . . . bille vil thou cum by a lute and belt the in Sanct Francis cord, The frog cam to the myl dur, rycht soirly musing in my mynde, god sen the duc hed byddin in France, and delanbaute hed neyur cum hame, . . . o lusty maye witht flora quene, . . . the battel of the hayrlan, the huntis of cheuet, . . . My lufe is lyand seik, send hym ioy, send hym ioy, . . . The persee and the mongumrye met, That day, that day, that gentil day.

With the exception of the ballads, these seem to be chiefly part-songs, some of them English.

Than eftir this suet celest armonye, tha began to dance in ane ring. euyrie aid scheipheird led his vyfe be the hand, and euyrie song scheipheird led hyr quhome he lufft best. Ther vas viij scheipheirdis, and ilk ane of them hed ane syndry instrument to play to the laif. the

fyrst hed ane drone bag pipe, the nyxt hed ane pipe maid of ane bleddir and of ane reid, the third playit on ane trump, the feyrd on ane corne pipe, the fyft playit on ane pipe maid of ane gait horne, the sext playit on ane recorder, the seuint plait on ane fiddil, and the last plait on ane quhissil.

The second instrument seems to have been a bagpipe without the drone; the third, a jew's-harp, and the last a shepherd's-pipe or *flûte à bec*. Sir J. Graham Dalyell says: 'Neither the form nor the use of the whistle (quhissil) is explicit. It is nowhere specially defined. In 1498 xiiij s. is paid for a whussel to the King. . . . Corn-pipe, Lilt-pipe, and others are alike obscure.'

In the other little book already mentioned, known as the *Gude and Godly Ballates* (1578) there are a number of songs 'converted from profane into religious poetry.' Dr. David Laing, who published a reprint of it in 1868, informs us that the authorship of the work is usually assigned to two brothers, John and Robert Wedderburn of Dundee, who flourished about the year 1540. It is divided into three portions; the first is doctrinal; the second contains metrical versions of Psalms, with some hymns chiefly from the German; the third, which gives its peculiar character to the collection, may be described as sacred parodies of secular songs. They were to be sung to well-known melodies of the time, which were indicated usually by the first line or the chorus; but as Dr. Laing points out that not one of the secular songs of which these parodies were imitations has come down to us, a few only of the tunes can be ascertained. Three of them are certainly English, 'John cum kiss me now,' 'Under the greenwood tree,' and 'The huntis up.' A fourth is 'Hey now the day dawes,' which Sibbald and Stenhouse have attempted to identify with 'Hey tuti taiti'

The day dawis.

(From the Straloch MS. A.D. 1627.)

(Scots wha hae). This is not only improbable, but is disproved by a tune of the same name being found in the Straloch MS. (1627). It has no Scottish characteristics, and may have been picked up from some of the English or foreign musicians who were frequent visitors at the Scottish Court. It is an excellent lively tune, and may have been that played by the town pipers of Edinburgh in the time of James IV.; if so, the note marked with an asterisk must have been altered to C to suit the

scale of the instrument. Dunbar thought it so hackneyed that he complains

Your common menstrallis has no tene
But 'Now the day dawis' and 'Into Joun'
Think ye nocht shame.

Of the other songs, 'Ah my love, leif me not' may be 'I'll never leave thee,' and 'Ane sang on the birth of Christ, to be sung with the tune of Bawllulalu,' may probably be 'Baloo my boy lie still and sleep,' for in both songs the measure and also the subject—sacred for secular—are the same. The words, being in Bishop Percy's ancient MS., are thought to be English, but Dr. Rimbault considered the tune to be Scottish. Sibbald's identifications of a few other tunes are altogether fanciful: 'The wind blaws cauld, furious and bauld,' with 'Up in the morning early'; 'My luve murnis for me,' with 'He's low down in the broom,' and so on. Altogether not more than a third of the whole can now be even guessed at.

The religious troubles of this and the following reigns would no doubt completely unsettle whatever musical tuition might be carried on by the Romish Church, but the introduction of 'sang schuils' and of Genevan Psalmody would probably soon compensate for any loss thence arising. [SONG SCHOOLS.] It does not come within the scope of this paper to consider such changes; but the allegation already alluded to, that Rizzio composed some of the finest Scottish melodies, is deserving of a more careful inquiry.

Goldsmith, at the instigation apparently of Geminiani, chose to write an essay on a subject of which he evidently knew very little. He asserts that Rizzio was brought over from Italy by James V., lived twenty years in Scotland, and thus had sufficient time to get a knowledge of the style, and ample opportunities for improving it. It is well known, on the contrary, that Rizzio came over in the suite of the Piedmontese Ambassador in 1561, nineteen years after the death of James V., and was little more than five years in Scotland. That he ever composed anything in any style has yet to be shown. Tassoni, who was born in 1565, and who speaks of Scottish music—as has already been noticed—entirely ignores him. In truth the myth seems to have been got up in London early in the 18th century, probably among his own countrymen. It is first heard of in the 'Orpheus Caledonius' of 1725, where the editor ascribes seven tunes to him. Two at least of these are shown by their style to be very recent compositions; but the absurdity of the statement must have been quite apparent, as all mention of Rizzio's name was withdrawn in the next edition of the work, 1733.

Oswald helped to keep up the falsehood. Notwithstanding the disclaimers of most of those who have made any research into the question, the belief still exists, and is from time to time propounded (see *ante*, p. 111a). For 160 years

after his death Rizzio is not mentioned as having composed music of any kind. Had he done so, it would have been in the style of France or of Italy, and it may be doubted whether Queen Mary herself would have appreciated any other. It must not be forgotten that she quitted Scotland when little more than five years of age, and returned Queen-Dowager of France, a widow of nineteen, with all her tastes formed and every association and recollection connected with a more civilised country than her own.

Mr. Dauney, in his *Dissertation* prefixed to the Skene MS. gives some interesting information regarding the Chapel Royal in Stirling. It was founded by James III., of whom Lindsay of Pitcottie says that 'he delighted more in musick and in policies of Bigging (building) than he did in the governance of his realm. . . . He delighted more in singing and playing on instruments, than he did in the Defence of the Borders. . . . He took great pleasour to dwell thair (in Stirling) and foundet ane collige within the said Castle callit the Chappell Royal; also he bigget the great hall of Stirling; also he maid in the said Chappell Royal all kynd of office men, to wit, the bishop of Galloway archdean, the treasurer and sub-dean, the chantor and sub-chantor, with all other officieris pertaining to a College; and also he doubled thaim, to that effect, that, they schould ever be readie; the one half to pass with him wherever he pleased, that they might sing and play to him and hold him merrie; and the other half should remain at home to sing and pray for him and his succession' (ed. 1728). All this was afterwards abolished; but in 1612 its restoration was ordered by James VI., its place of residence to be at 'Halyrudhous'—'the palace of the samyn, and the Chappell not to be called the Chappell royall of Striveling as heretofore but his majesties Chappell Royall of Scotland, and the members to attend his majesty in whatever part of Scotland he may happen to be.' In 1629 Charles I. granted an annual pension of £2000 to the musicians of the Chapel, and preparations were made for the celebration of religious services according to the forms of the Church of England. The nature of these arrangements is very fully given in an *Information to the King* by E. Kellie (1631); among other things he was appointed 'to see that none but properly qualified persons should have a place there, and that they should all be kept at daily practise, and for that effect your Majestie appointed mee ane chambre within your pallace of Halyrudhous wherein I have provided and sett up, ane organe, two flutes, two pandores, with violls and other instruments, with all sorts of English, French, Dutch, Spaynish, Latine, Italian, and OLD SCOTCH music, vocall and instrumentall.' The capitals are Mr. Dauney's, who says, 'There can be no doubt that this last expression referred to the popular

national music of Scotland. That sacred music was here not meant is sufficiently obvious; the metrical psalmody of the Reformed Church was not old, and the music of the Church in Scotland before the Reformation was identical with that of Rome, and therefore not Scottish.' Here Mr. Dauney surely applies to the music what can only be said of the words of the service; the latter were the same throughout all Roman Catholic countries, whils the music, on the contrary, varied in every locality, being frequently the composition of the chapel-master or of the organist of the church where it was performed. Without insisting on the fact already stated, that James I. of Scotland wrote sacred music—'cose sacre compose in canto'—reference may be made to the Scottish composers mentioned by Dr. David Laing as having written music for the church before the Reformation. Among these are Andrew Blackhall, a canon of Holyrood; David Peblis, one of the canons of St. Andrews, who in 1530 set the canticle 'Si quis diligit me' in five parts; and Sir John Futhy (the 'Sir' denotes he was a priest), who wrote a moral song, 'O God abufe,' in four parts, 'baith letter and not,' that is, both words and music—as well as others whose names it is unnecessary to mention. Besides, there need not be a doubt that their predecessors were occasional composers from the time when James I. in 1424 set up organs in churches. That this is the music called Old Scottish in Kellie's *Information* seems to be the only reasonable explanation of these words. For though the members of Kellie's choir in fitting time and place might sing to the king 'to hold him merrie,' this would not be the music which they were called upon to practise twice a week in preparation for the next service.

It is to the reign of Charles I. that we owe the first certain glimpse of early Scottish folk-music. All that was known of it had come down by tradition, till the discovery—only in the 19th century—of two MSS. of this date, which establish the existence of a number of tunes whose age and form were previously entirely conjectural. These are the Straloch and Skene MSS. The first was written by Robert Gordon of Straloch, Aberdeenshire, in 1627-29. (See STRALOCH MS.)

The second is a much more important MS. It was formed by or for John Skene of Hall-yards, Midlothian, and has no date; but its seven parts, now bound together, seem from internal evidence to have been written at various times up to about 1635. In general it is much more correct than the last, its versions are occasionally excellent; its Scottish airs, after rejecting dances and everything else not of home growth, are not fewer than forty. Above all, it contains the ancient original melody of 'The Flowers of the Forest'; whose simple pathos forbids our believing it to be the expression

of any but a true sorrow, the wail of a mourner for those who would never return—and which no doubt is nearly coeval with Flodden. The MS. was published in 1838 by Mr. Wm. Dauney, with a *Dissertation*, excellent in many respects, on the subject of Scottish music. He was greatly assisted by G. Farquhar Graham, who not only translated the MS. from Lute Tablature, but contributed much musical and other information. (See SKENE MANUSCRIPT.)

From some anecdotes told of Charles II. he seems to have had a great liking for Scottish music, and certainly from the Restoration it became popular in England. This is shown by the almost innumerable imitations of the style that are to be found in the various publications of John Playford. They are usually simply called 'Scotch tunes,' but sometimes the name of the composer is given, showing that no idea of strict nationality attached to them. In general they are worthless; but occasionally excellent melodies appear among them, such as 'She rose and let me in,' 'Over the hills and far away,' 'De'il take the wars,' 'Sawney was tall' (Corn rigs), 'In January last' (Jock of Hazeldean), all of which, with many others of less note, have been incorporated in Scottish Collections, at first from ignorance, afterwards from custom, and without further inquiry. There are however many tunes, not to be confounded with these, which two or even three centuries ago were common to the northern counties of England and the adjoining counties of Scotland, the exact birthplace of which will never be satisfactorily determined; for of course the first record in print does not necessarily decide the parentage of a tune.

Among these—though rather on account of the words than the music—may be classed the famous song 'Tak your auld cloak about ye,' which having been found in Bishop Percy's ancient MS. has been claimed as entirely English. The Rev. J. W. Ebsworth, a very high authority, believes it to be the common property of the Border counties of both nations. Probably it is so; yet it seems strange that so excellent a ballad, if ever popularly known in England, should have so utterly disappeared from that country as not to be even mentioned in any English work, or by any English author with the exception of Shakespeare, who has quoted one stanza of it in *Othello*. Not a line of it is to be found in the numerous 'Drolleries' of the Restoration, in the publications of Playford and D'Urfey, or in the 'Merry Musicians' and other song-books of the reign of Queen Anne. Even the printers whose presses sent forth the thousands of blackletter ballads that fill the Roxburgh, Pepys, Bagford and other collections, ignore it entirely. Allan Ramsay, in 1728, was the first to print it, nearly forty years before Bishop Percy gave his version to the world, confessing to have corrected his own

by copies received from Scotland. The question naturally arises, where did Allan Ramsay get his copy of the ballad, if not from the singing of the people? Certainly not from England, for there it was then unknown.

The half century after the Revolution was a busy one both with Jacobite poetry and music; in regard to the music, little, if any of it, was new, for the writers of the words had the wisdom to adapt their verses to melodies that every one knew and could sing. Thus many old favourite tunes got new names, while others equally old have perhaps been saved to us by their Jacobite words, their early names being entirely lost. The story of the battle of Killiecrankie (1689) is one of the earliest of these songs, and enjoys the distinction of having a Latin translation, beginning

Grahamius notabilis coegerat Montanos
Qui clypeis et gladiis fugarunt Anglicanos,
Fugerant Vallicolae atque Puritani
Cacavere Batavi et Cameroniani.

It is sung to a Gaelic tune of its own name, so quickly and so widely spread as to be found in a Northumbrian MS. of 1694, as the *Irish Gillicrankie*. It is a stirring bagpipe tune, no doubt older than the words.

A still more celebrated air, now known as 'Scots wha hae,' received its name of 'Hey tuti taiti' from a stanza of a song of 1716 (?), 'Here's to the king, sir; Ye ken wha I mean, sir.' The stanza is worth quoting, and would be yet more so could it tell us the still earlier name of the tune, a subject which has caused much discussion.

When you hear the trumpet soun'
Tuti taiti to the drum,
Up sword, and down gun,
And to the loons again.

The words 'Tuti taiti' are evidently only an attempted imitation of the trumpet notes, and not the name of the air. To suppose that the tune itself was played on the trumpet as a battle-call is too absurd for consideration. As the air has a good deal in common with 'My dearie, an thou dee,' there seems considerable probability that it was another version of the same, or that the one gave rise to the other, a thing likely enough to happen in days when there being no books to refer to, one singer took his tune as he best could from his neighbour.

'When the king comes owre the water'—otherwise 'Boyne water'—is a good example of change of name; the air was discovered in a MS. of 1694, where it is called 'Playing among the rashes,' a line of an old Scottish song recovered by Allan Ramsay, and printed in his *Tea-Table Miscellany*, 1724—a fact which seems somewhat to invalidate the Irish claim to the tune. The Jacobite words are said to have been written by Lady Keith Marischall, mother of the celebrated Marshal Keith, a favourite general of Frederick the Great.

When the king comes ower the water.

(Playing among the rushes.)

FROM W. GRAHAM'S Flute Book (MS. 1694).

The old air, already mentioned, 'My dearie, an thou dee,' may be pointed out as the tune of an excellent Jacobite song 'Awa, Whigs, awa,' and of another—the name of which is all that has come down to us—'We're a' Mar's men,' evidently alluding to the Earl of Mar, generalissimo of James's forces in Scotland in 1715.

Another of the songs of 1715, 'The piper o' Dundee,' gives the names of a number of tunes supposed to be played by the piper—Carnegie of Finhaven—to stir up the chiefs and their clans to join the Earl of Mar.

He play'd the 'Welcome o'er the main,'
And 'Ye'se be fon and I'se be fain,'
And 'Auld Stuar's back again,'
Wi' meikle mirth and glee.
He play'd 'The Kirk,' he play'd 'The Quier,' [choir]
'The Mullin dhu' and 'Chevalier,'
And 'Lang away but welcome here,'
Sae sweet, sae bonnilie.

Notwithstanding the diligence of collectors and annotators some of these songs and tunes have eluded recognition, chiefly because of a habit of those times to name a tune by any line of a song—not necessarily the first—or by some casual phrase or allusion that occurred in it.

Other noted songs of this date are 'Carle an the King come'; 'To dauntin me'; 'Little wat ye wha's comin,' the muster-roll of the clans; 'Will ye go to Sheriffmuir'; and 'Kennure's on and awa.'

A striking phase of Jacobite song was unsparing abuse of the House of Hanover; good specimens of it are 'The wee wee German lairdie,' 'The sow's tail to Geordie,' and, above

all, 'Cumberland's descent into hell,' which is so ludicrous and yet so horrible that the rising laugh is checked by a shudder. This, however, belongs to the '45, the second rising of the clans. Of the same date is 'Johnie Cope,' perhaps the best known of all the songs on the subject. It is said to have been written immediately after the battle of Prestonpans, by Adam Skirving, the father of a Scottish artist of some reputation. No song perhaps has so many versions; Hogg says it was the boast of some rustic singer that he knew and could sing all its nineteen variations. Whether it was really Skirving's or not, he certainly did write a rhyming account of the battle, in fifteen double stanzas relating the incidents of the fight—who fled and who stayed—winding up with his own experiences.

That afternoon when a' was done
I gæd to see the fray, man;
But had I wist what after past,
I'd better staid away, man;
On Seton sands, wi' nimble hands,
They pick'd my pockets bare, man;
But I wish ne'er to die sic fear,
For a' the sun and mair, man.

Few of these old songs are now generally known; the so-called Jacobite songs, the favourites of our time, being almost entirely modern. Lady Nairne, James Hogg, Allan Cunningham, Sir Walter Scott, may be named as the authors of the greater portion of them. In most cases the tunes also are modern. 'Bonnie Prince Charlie' and 'The lament of Flora Macdonald' are both compositions of Niel Gow, the grandson of old Niel the famous reel-player—'He's ower the hills that I loe weel,' 'Come o'er the stream, Charlie,' 'The bonnets of bonnie Dundee' (Claverhouse), are all of recent origin; even 'Charlie is my darling'—words and music—is a modern *rifacimento* of the old song. One exception to this ought to be noted; the tune now known as 'Wae's me for Prince Charlie' is really ancient. In the Skene MS. (1635) it is called 'Lady Cassilis' Lilt' (see article LOCHABER NO MORE); it is also known as 'Johnny Faa' and 'The Gypsy Laddie,' all three names connected with what is believed to be a malicious ballad written against an exemplary wife in order to

Charlie is my darling. The Old Air.

The Modern Air.

annoy her Covenanting husband, the Earl of Cassillis, who was unpopular. [It is especially interesting to trace the course of the story of Lady Cassillis' flight with a gipsy as it appears in the English ballad, 'The Wraggle-Taggle Gipsies oh!' and elsewhere. The story may have suggested Browning's *Flight of the Duchess*.]

Those who wish to know more of these relics of an enthusiastic time will find in the volumes of James Hogg and Dr. Charles Mackay all that is worthy of being remembered of this episode of Scottish song.

OF THE SCOTTISH SCALES.

The existence of Scottish airs constructed on the series 1, 2, 3, 5, 6 of a major diatonic scale is well known and has been already alluded to. Whether this pentatonic series was acquired through the use of a defective instrument, or from the melodic taste of singer or player, must remain mere matter of conjecture. The style itself may be accepted as undoubtedly ancient, whatever uncertainty there may be as to the exact age of the airs constructed on it. These are not by any means numerous, though their characteristic leap between the third and fifth, and sixth and eighth of the scale, is so common in Scottish melody, that many persons not only believe the greater part of our airs to be pentatonic, but do not admit any others to be Scottish. However, the taste for this style may have arisen, the series of notes was a very convenient one; for an instrument possessing the major diatonic scale in one key only, could play these airs correctly in the three positions of the scale where major thirds are found, that is, on the first, fourth, and fifth degrees. In the key of C, these are as shown below, adding the octave to the lowest note of the series in each case.

Pentatonic scale in three positions, without change of signature.

If, reversing the order of the notes given above, we begin with the sixth, and passing downwards add the octave below, the feeling of a minor key is established, and keys of A, D, and E minor seem to be produced. Besides tunes in these six keys, a few others will be found, which begin and end in G minor (signature two flats), though also played with natural notes; for B and E being avoided in the melody neither of the flats is required.

A curious peculiarity of tunes written in this series is, that from the proximity of the second and third positions phrases move up and down from one into the other, thus appearing to be alternately in the adjoining keys a full tone apart, moving for example from G into F and *vice versa*. The following are good examples of the style:—

(1) *Gala Water.*

(2) *Were na my heart licht I wad die.*

(3) *The bridegroom grat.*

The first, 'Gala Water,' is one of the most beautiful of our melodies. The modern version of it contains the seventh of the scale more than once, but Oswald has preserved the old pentatonic version in his *Caledonian Pocket Companion* (1759-65). That version is here given in the large type, the small type showing the modern alterations. The air may be played correctly beginning on E, on A, or on B, representing the third of the keys of C, F, and G; but neither flat nor sharp is required in any of the positions, the notes being all natural throughout.

The second is the melody to which Lady Grizel Baillie wrote (1692) her beautiful ballad, 'Were na my heart licht, I wad die.' It is a very simple, unpretending tune, and is given chiefly on account of its close; indeed, both of these tunes are peculiar, and worth more detailed discussion than can be given them here.

The third is the old tune which was so great a favourite with Lady Anne Lyndsay that she wrote for it her celebrated ballad 'Auld Robin Gray.' Although it has been superseded by a very beautiful modern English air, it ought not to be entirely forgotten.

Another exceedingly beautiful pentatonic melody is that to which Burns wrote 'O meikle thinks my love o' my beauty.' It will be found in E minor in the 'Select Songs of Scotland,' by Sir G. A. Macfarren; but it may also be played in D minor and A minor, in each case without

either flat or sharp being required in the melody.

The use of the imperfect pentatonic scale in our early music must gradually have ceased, through acquaintance with the music of the church service, which had its singularly complete diatonic system of modes. The complete diatonic scale, which we find in the simple Shepherd's Pipe or Recorder, is really that on which our older melodies are formed. The pitch note might be D or G, or any other, but the scale would be the ordinary major diatonic with the semitones between the 3rd and 4th and 7th and 8th degrees. The key of C is that adopted in the following remarks. With scarcely an exception the old tunes keep steadily to this scale without the use of any accidental. It will also be seen that the pathos produced by means of the 4th of the key, is a clever adaptation of a necessity of the scale. 'The Flowers of the Forest'—fortunately preserved in the Skene MS.—is a fine example of the skill with which the unskilled composer used the meagre means at his disposal. The first strain of the air is in G major, as will be seen if it be harmonised, though no F sharp was possible on the instrument; in the second strain, no more affecting wail for the disaster of Flodden could have been produced than that effected by the use of the F \sharp , the 4th of the scale of the instrument, the minor 7th of the original key. With his simple pipe the composer has thus given the effect of two keys.

The Flowers of the Forest. Ancient Version.

It may be objected that the voice was not tied down to the notes of an imperfect instrument, and could take semitones wherever it felt them to be wanted; [but in the process of transmission the untutored singers, happily ignorant of musical science, adhere rigidly to the original forms of the scales in which they sing.]

The same effect of playing in two keys occurs in 'O waly waly! love is bonnie, a little while when it is new,' but in most modern versions of the melody both the F \sharp and F \natural are found; this was not possible on the primitive instrument, though easy on the lute or violin.

O waly waly.

Any air which has the natural as well as the altered note may be set down as either modern, or as having been tampered with in modern times. The major seventh in a minor key is also a fairly good sign of modern writing or modern meddling. In a tune written otherwise in the old tonality, the occurrence of the major seventh sounds weak and effeminate when compared with the robust grandeur of the full tone below.

A few more examples may be given to show the mingling of the pentatonic with the completed scale. 'Adieu Dundee'—also found in the Skene MS.—is an example of a tune written as if in the natural key, and yet really in the Dorian mode.

Adieu Dundee.

Another example is 'The wauking of the fauld,' which, played in the same key, has the same peculiarity in the 13th bar; this, however, is the case only in modern versions of the air, for that given by Allan Ramsay in the *Gentle Shepherd* (1736) is without the E.

OF THE GAELIC MUSIC.

If the difficulty of estimating the age of the music of the Lowlands is great, it is as nothing compared to what is met with in considering that of the Highlands.

The Celts certainly had music even in the most remote ages, but as their airs had been handed down for so many generations solely by tradition, it may be doubted whether this music bore any striking resemblance to the airs collected between 1760 and 1780 by the Rev. Patrick Macdonald and his brother. The specimens given of the most ancient music are interesting mainly in so far as they show the kind of recitative to which ancient poems were chanted, for they have little claim to notice as melodies. The example here given is said to be 'Ossian's soliloquy on the death of all his contemporary heroes.'

There are, however, many beautiful airs in the collection; they are simple, wild, and

irregular ; but their beauty has not a very wide appeal on a first hearing. Of the style of performance the editor says :—

These airs are sung by the natives in a wild, artless and irregular manner. Chiefly occupied with the sentiment and expression of the music, they dwell upon the long and pathetic notes, while they hurry over the inferior and connecting notes, in such a manner as to render it exceedingly difficult for a hearer to trace the measure of them. They themselves while singing then seem to have little or no impression of measure.

This is more particularly the case with the very old melodies, which wander about without any attempt at rhythm, or making one part answer to another. The following air is an excellent example of the style :—

Wet is the night and cold.

In contrast to these are the LUNIG and JORRAM (see these articles), the former sung by the women at their work, the latter boat-songs.

Patrick Macdonald says 'the very simplicity of the music is a pledge of its originality and antiquity.' Judged by this criticism his versions of the airs seem much more authentic than those of his successors. Captain Fraser of Knockie, who published a very large and important collection of Highland airs in 1816, took much pains, in conjunction with a musical friend, to form what he terms a 'standard.' As he had no taste for the old tonality, he introduces the major seventh in minor keys, and his versions generally abound in semitones. He professed a liking for simplicity, and is not sparing of his abuse of MacGibbon and Oswald for their departures from it ; yet his own turns and shakes and florid passages prove that he did not carry his theory into practice. As, however, a large portion of his volume is occupied with tunes composed during the latter part of the 18th and the beginning of the 19th century, in these it would be affectation to expect any other than the modern tonality. A specimen of what he calls an ancient Ossianic air is given as a contrast to that selected from Patrick Macdonald. In style it evidently belongs to a date nearer to the times of MacPherson than to those of Ossian. (Compare last example, p. 398*b*, with the first on next column.)

It cannot be denied that though by his alterations of the forms of Gaelic melody Fraser may have rendered them more acceptable to modern ears, he has undoubtedly shorn the received versions of much of their claim to antiquity. The volume published by the Gaelic Society of

An air to which Ossian is recited.

London in 1876, though not faultless in regard to modern changes, has restored some of the old readings ; one example ought to be quoted, for the air 'Mairi bhan og' is very beautiful, and the F# in the fourth bar gives us back the simplicity and force of ancient times.

Mairi bhan og. (Mary fair and young.)

Captain Fraser stigmatises the previous collections of Patrick Macdonald and Alexander Campbell (*Albyn's Anthology*) as very incorrect. But Fraser's own versions have in many cases been much altered in the second edition (1876), while more recent works differ most remarkably from earlier copies. The airs are evidently still in a plastic state, every glen, almost every family seems to have its own version.

There has been a good deal of controversy in former times about Highland and Lowland, Irish and Gaelic claims to certain melodies ; most of the former seem pretty well settled, but both Irish and Scot still hold to LOCHABER, and to EILEEN AROON or ROBIN ADAIR (see those articles).

It is evident from the examples given by Patrick Macdonald that in the most ancient times Gaelic music was devoid of rhythm. The Ossianic chants are short and wild. They are succeeded by longer musical phrases, well suited it may be to heighten the effect of the Gaelic verse, but, apart from that, formless to a modern ear. From these emerge airs still wild and irregular, but with a certain sublimity arising from their very vagueness. Even when they become more rhythmic, the airs do not at once settle down into phrases of twos and fours, but retain an easy indifference to regularity ; two alternating with three, four with five bars, and this in so charming a way that the ease and

singularity are alone apparent. The air 'Morag' may be quoted; other examples may be found in *Albyn's Anthology*, 1816-18, and in 'Orain na h-Albain,' an excellent collection of Gaelic airs made by Miss Bell and edited by Finlay Dun.

J. M. W.

George Thomson employed Playel, Kozelnich, Haydn, Beethoven, Weber, and Hummel to harmonise and supply symphonies to the Scottish songs which comprised his published collections. The choice in all these instances was not very good. Beethoven appears to have been under the impression that the 'Scotch snap' was characteristic of all Scottish music, whereas, really, it only naturally belongs to the strathspey, the reel, and the Highland fling. Haydn, who seems truly to have had a liking for, and some knowledge of, Scottish vocal music, was certainly better fitted for the task; he also arranged the two volumes of Scottish songs issued by Whyte in 1806-7.

Sir G. A. Macfarren's collection has already been spoken of, and an excellent set of twelve Scottish songs arranged by Max Bruch was published by Leuckart of Breslau. 'Songs of the North,' with the music arranged by Malcolm Lawson, had a great popularity, but many of the airs suffered a good deal in transmission, and several of them are to be found in a purer form in Macleod's 'Songs of a Highland Home.'

The virulent attack made by the late Mr. William Chappell on the claims advanced for the Scottish origin of certain airs cannot in every case be considered justifiable. There is much truth in what he advances, *i.e.* that a number of Anglo-Scottish Songs of the 17th and 18th centuries have been too readily claimed as Scottish folk-songs, in spite of the fact that they have been sufficiently well ascertained to be the composition of well-known English musicians. See Chappell's *Popular Music*, old edition, pp. 609-616, etc.

It is, however, quite evident that Chappell's irritation has, on some points, led him astray; for some of his statements can be proved to be wrong; those for instance regarding 'Jenny's Bawbee,' 'Gin a body,' and 'Ye Banks and Braes' (*q.v.*), and some others. That STENHOUSE, up to Chappell's time the chief writer on the history of Scottish Song, makes many lamentably incorrect assertions in his commentary on Johnson's *Scots Musical Museum*, cannot be denied, but that he did so wilfully is quite unlikely. It must be remembered that Stenhouse was handicapped by being four hundred miles from the British Museum Library, a storehouse which supplied Chappell so well, and besides, Stenhouse's work was a pioneer, for his notes were begun in 1817. The late Mr. John Glen in his *Early Scottish Melodies* has much to say regarding Chappell's attack.

The question as to the antiquity of much of Scotland's national music is still undecided.

The dates of manuscripts and of printed books, wherein such music first appears, are not a very trustworthy guide, for it is quite obvious that tradition has carried much of it over a considerable stretch of time, and also that music was built upon the modes, which remained in popular use for a long period after their abandonment in cultivated music. The existing manuscripts, none of which are prior to the 17th century, show that music-lovers of the day were well acquainted with English and Continental work; and although there cannot be the slightest doubt that the common people played and sang purely national music, yet this was never written down until late times. Of the country songs mentioned in 'The Complaint of Scotland' and other early works only few are to be recognised and identified with existing copies.

Another class of music which now constitutes part of the national music of Scotland was the compositions of professional or semi-professional musicians. As the fiddle is the national instrument of Scotland, so the reel and the strathspey reel are the national dances. A great number of country musicians, particularly in the northern part of Scotland, composed and played these dance tunes for local requirements. These they named either after some patron or gave them a fanciful title. In many instances, by the aid of subscription, the musician was enabled to publish one, or a series of his compositions, and so favourite dance tunes from these works were frequently reprinted and rearranged by other musicians.

Isaac Cooper of Banff, Daniel Dow, William Marshall, and many other lesser-known composers, along with the Gow family, have thus enriched Scottish music. We must also remember that where one of this type of musicians has succeeded in getting his compositions into print, there may be many whose tunes have passed into local tradition namelessly, so far as composer is concerned. While there are a great many beautiful and purely vocal airs, yet these instrumental melodies have largely been used by song-writers in spite of their great compass; this is one of the factors which makes Scottish song so difficult of execution to the average singer. 'Miss Admiral Gordon's Strathspey,' 'Miss Forbes' Farewell to Banff,' 'Earl Moira's welcome to Scotland,' with others, are well-known examples, and have been selected by Burns and other song-writers for their verses. Another notable one is 'Caller Herring,' which, composed by Nathaniel Gow as a harpsichord piece (one of a series) intended to illustrate a popular Edinburgh Cry, had its words fitted twenty years afterwards by Lady Nairne.

In the 'twenties' and the 'thirties' many now well-known songs in the Scottish vernacular had their birth, possibly owing to the Waverley Novels. Allan Ramsay was the first to collect the Scots Songs into book form from tradition,

and from printed ballad sheets and garlands. His first volume of *The Tea-Table Miscellany* was issued in 1724, three others following later. It is rather unfortunate, from an antiquarian point of view, that Ramsay and his friends were not content to leave them as collected, but imparted to many a then fashionable artificial flavour, while boasting in his dedication of the charming simplicity of the Scotch ditties.

In 1769 and 1776 David Herd rendered a more trustworthy account of traditional Scots Song in the two volumes he published; while Johnson's *Scots Musical Museum* of six hundred songs with the music, was the principal collection of the 18th century.

The following list comprises all the important collections of Scotch National music, including some early manuscripts which contain Scottish airs.

BIBLIOGRAPHY

MANUSCRIPTS

- c. 1612-28. *The Rowallan MS.* In lute tablature on a six-line staff, 50 pp. It belonged to, and was probably written by, Sir William Mure of Rowallan, between the dates 1612 and 1628. It contains several Scottish airs, and is in the library of the Edinburgh University.
- c. 1627-29. *The Strachan MS.* In lute tablature on a six-line staff. Contains Scottish and other airs. The original manuscript is now lost, but a copy of a portion of it was made by C. F. Graham, and is in the Advocates' Library, Edinburgh (see STRACHAN MS.).
- 16—? *The Skene MS.* In tablature on a four-line staff. In the Advocates' Library (see SKENE MS.).
- c. 1675-80. *The Guthrie MS.* In tablature, contains a number of Scottish airs or rather, as the late Mr. Glen pointed out, accompaniments for them. In the Edinburgh University.
- 1683-92. *The Blaikie MSS.* These two, in tablature for the viol da gamba, belonged to Andrew Blaikie of Paisley, a music-engraver, early in the 18th century. They bore dates as in the margin, but both manuscripts are now lost. Transcripts of portions of them are in the Wighton Library, Dundee.
- 16—? *The Leyden MS.* In tablature for the Lyra Viol. It belonged to Dr. John Leyden and is now lost. A transcript made by G. F. Graham is in the Advocates' Library. The contents are much the same as one of the Blaikie MSS. and is apparently of the same date. Another Leyden MS. is in the Advocates' Library, dated 1693, but this does not appear to contain Scottish airs.
1704. *Agnes Hume's MS.* dated 1704. In the Advocates' Library, ordinary notation.
1709. *Mrs. Crockett's MS.* Referred to by Stenhouse who once possessed it; it is said to have been dated 1709, but it is now lost.
1710. *Margaret Sinkler's MS.* An oblong quarto volume of about a hundred airs, which formerly belonged to the late Mr. John Glen. It bears the date 1710, and is in ordinary notation.
- 1723-24. *Cumming MS.* A small volume of airs for the violin, dated 1723 on first leaf, and 1724 on last, with the name of its original compiler, 'Patrick Cumming, Edinburgh.' It contains a number of Scotch airs, up to its date unpublished. In the possession of the present writer.

PRINTED AND ENGRAVED COLLECTIONS

- Many Scots and Anglo-Scottish airs appear in Playford's 'Dancing Master' 1650-1728, and other of Playford's publications, also in D'Urfey's 'Pills to purge Melancholy,' 1698-1730. At later dates a great number are also to be found in the London country-dance books of various publishers.
- 1662, 1668, 1682. *Forbes.* 'Cantus: Songs and Fancies to three, four, or five parts, both apt for voices and viols.' John Forbes, Aberdeen, 1662; 2nd ed. 1666; 3rd, 1682. The first book of secular music printed in Scotland. Contains several Scottish Songs. A reprint of the 1682 ed. was issued by Gardner of Paisley in 1873.
- 1700-J. H. Playford. 'A Collection of Original Scotch Tunes (full of the Highland Humours) for the Violin.' London, H. Playford, 1700. Ob. 4to.
- (A second edition with four more tunes issued with date of 1701. This is the first collection of Scottish airs named as such. There appears to be only one copy of each in existence. Mr. Inglis of Edinburgh holds the 1700 edition, and the British Museum Library the second edition. The work is printed from movable type.)
- c. 1700-5. 'A Collection of Original Scotch Tunes for the Violin, the whole pleasant and comical, being full of the Highland Humour.' London, John Young.
- (This, and another, with the same title published by John Hare, London, are obviously imitations of Playford's work. The one published by Young is in the library of an Edinburgh gentleman, and the other by Hare is men-

- tioned and its contents noted in *Notes and Queries*, 5th series, vol. v. p. 503.)
1725. 'Orpheus Caledonius or a Collection of the best Scotch Songs set to music by W. Thomson.' London, for the author. Folio, n.d.
- (Entered at Stationers' Hall, Jan. 5, 1725. The first collection of Scotch Songs with their airs. The book contains fifty Songs. See separate article, vol. III. p. 563.)
- c. 1726. 'Musick for Allan Ramsay's Collections of Scots Songs set by Alexander Stuart.' Edinburgh. Sm. ob. n.d.
- (This was intended to provide the airs for the songs in the *Tea-Table Miscellany*. It is questionable whether a complete copy exists.)
1730. Craig. 'A Collection of the choicest Scots Tunes adapted for the Harpsichord or Spinnet . . . by Adam Craig.' Edinburgh, 1730. Ob. folio.
1733. 'Orpheus Caledonius.' Second edition, Edinburgh, 1733. 2 vols. 8vo. [100 songs.]
- (The first volume is practically identical with the first edition. The second volume is additional matter, being fifty more songs with the music.)
- 1740, etc. Oswald, James. 'A Curious Collection of Scots Tunes for a Violin, Bass viol, or German flute . . . by James Oswald, musician in Edinbr.' Ob. folio, c. 1740.
- (This is, in all probability, the first of the many volumes of Scots music issued by Oswald. When he arrived in London this work was re-engraved, and with another volume published by John Simpson.)
- c. 1742. 'A Collection of Curious Scots Tunes for a Violin, German flute, or Harpsichord.' By Mr. James Oswald. London, J. Simpson.
- 'A Second Collection of Curious Scots Tunes for a Violin, etc.' (see above; both were advertised in 1742.)
- c. 1742-60. Oswald, James. 'The Caledonian Pocket Companion.' London. 12 books, 8vo.
- (This important publication of Scottish airs was commenced about 1742-43, and ultimately reached to twelve books about 1760. The first numbers were published by J. Simpson, others by the author, and the whole was reprinted by Straight and Skillern.)
- 17—? Oswald. 'A Collection of 43 Scots Tunes with Variations . . . by James Oswald.' London, Bland and Weller. (Originally issued at a much earlier date than these publishers.)
- c. 1761-62. Oswald. 'A Collection of the best old Scotch and English Songs set for the voice . . . by James Oswald, chamber composer to His Majesty.' London, n.d.
- [1742.] Barsanti. 'A Collection of old Scots Tunes, with a bass for Violoncello or Harpsichord . . . by Francis Barsanti.' Edinburgh, n.d. 4to.
- 1742, 1746. Wm. 'Gibbon.' 'A Collection of Scots Tunes. Some with variations for a Violin, Hautboy, or German Flute . . . by Wm. 'Gibbon.' Edinburgh. Ob. folio, 1742. Second edition, 1746. Third, 1755.
- (Afterwards reprinted by N. Stewart, Bremner, and Rutherford.)
- c. 1745. 'Twelve Scotch and Twelve Irish Airs with variations . . . by Mr. Burk Thumoth.' London, J. Simpson. 8vo.
- [1767.] Bremner, Robert. 'Thirty Scots Songs for a voice and harpsichord . . . the words by Allan Ramsay.' Edinburgh, R. Bremner. Folio, n.d.
- 'A Second set of Scots Songs.' Bremner, c. 1759.
- (These two, originally published at Edinburgh, were afterwards reprinted with Bremner's London imprint, and again reprinted by Stewart of Edinburgh with a 3rd vol. added.)
- [1758.] Bremner, R. 'A Collection of Scots Reels and Country Dances.' Ob. 4to, n.d.
- (Issued in numbers 1759 to 1761.)
- [1759.] Bremner, R. 'A Curious Collection of Scots Tunes.' Edinburgh, R. Bremner. Ob. folio, n.d.
- (Afterwards reprinted by Ding of Edinburgh.)
- [1762.] Peacock. 'Fifty favorite Scotch Airs for a Violin . . . with a Thoroughbass for the Harpsichord.' Francis Peacock, Aberdeen. Folio, n.d.
- [1761-62.] Stewart, Neil. 'A Collection of the newest and best Reels and Country Dances.' Edinburgh, Neil Stewart. Ob. 4to, n.d.
- c. 1762. 'A New Collection of Scots and English Tunes, adapted to the Outitar.' Edinburgh, N. Stewart. Ob. 4to.
- 'A Collection of Scots Songs adapted for a Voice and Harpsichord.' Edinburgh, N. Stewart. Folio, n.d.
1772. M'Lean. 'A Collection of favourite Scots Tunes with Variations for the Violin . . . by Chs. M'Lean and other eminent masters.' Edinburgh, Stewart. Ob. folio.
- c. 1775. 'A Collection of Ancient Scots Music for the Violin, Harpsichord, German Flute, never before printed.' Daniel Dow, Edinburgh. Ob. folio.
- (Dow published about this time two other collections of his own compositions, 'Thirty-Seven Reels' and 'Twenty Minneta'.)
1780. Cumming, Angus. 'A Collection of Strathpey or Old Highland Reels by Angus Cumming.' Edinburgh. Ob. folio, 1780.
- (A later edition is dated 1782.)
- [1780.] M'Glashan. 'A Collection of Strathpey Reels,' by Alexander M'Glashan. Ob. folio.
- [1781.] ———. 'A Collection of Scots Measures.' Alexander M'Glashan. Ob. folio.
- [1785.] ———. 'A Collection of Reels.' Alex. M'Glashan. Ob. folio.
- [1782.] Aird, James. 'A Selection of Scotch English, Irish, and Foreign airs adapted to the fife, violin, or German flute.' Glasgow, Jas. Aird. 6 books, small oblong.
- (This series of books are important in the matter of Scottish and Irish music. The first two were issued in 1782, the 3rd 1788, 4th 1794, 5th 1797, and the 6th early in the 19th century.)
- 1787-1803. Johnson, James. 'The Scots Musical Museum.' Edinburgh, James Johnson. 6 vols. 8vo.

(This important work consists mainly of Scots Songs collected by Johnson and his friends from printed and other sources. Burns interested himself in the publication, and some of his songs were here first issued with music. The first vol. was published in 1787, 2nd 1788, 3rd 1789, 4th 1792, 5th 1797, 6th 1803.)

Gow. (The publications of the Gow family have a strong bearing on the subject of Scottish music. Niel Gow the father and Nathaniel the son, composed, arranged, and adapted a great deal of what now constitutes Scottish National music. Their sheet publications are innumerable, and their collections of Strathspey reels and vocal melodies are named in vol. ii, at p. 212b of the present work.)

Later collections of Scottish Songs with music were those issued by Wm. Napier, 3 vols., 1790-92; Corri, 2 vols., c. 1790; Urban, 6 vols., c. 1792, 1794, 1799, 1800, 1805; Dales, 'Sixty Favourite Scottish Songs,' 3 vols. (180 songs), c. 1784-95; George Thomson's collections, 1793, etc. (see separate articles); Whyte, 2 vols., 1806-7; J. Elouin, 2 vols., 1806-7; R. A. Smith, 'Scottish Minstrel,' 6 vols., 1820-4, 5vo; Paterson and Roy, 'Vocal Melodies of Scotland,' 4 vols., 1827-38. Among annotated collections of Scottish music, the following are noteworthy: 'Scottish Songs in two Volumes' (Joseph Ritson), 1794, 8vo (reprinted in 1859); 'Wood's Songs of Scotland,' edited by G. F. Graham, 3 vols., 1843, etc., 8vo; 'The Lyric Gems of Scotland,' Cameron, Glasgow, 2 vols., sm. 4to, 1858; 'The Select Songs of Scotland,' Hamilton, Glasgow, folio, 1857; 'The Songs of Scotland, prior to Burns,' Chambers, 1862, 8vo; 'The Minstrelsy of Scotland,' Alfred Moffat, Glasgow, 1865; 'Early Scottish Melodies,' John Glen, 1900, 8vo; 'The Glen Collection of Scottish dance music,' 1891-95; John Glen, 2 vols., folio. Jacobite Songs are best represented in Hogg's 'Jacobite Relics,' 1819-21, 2 vols., 8vo (reprinted in 1874); Gaelic music is found scattered through Gow's publications, and other collections of Scottish dance music, and elsewhere, but the best known gathering into volume form is Peter MacDonald's 'Highland Airs,' folio [1783]; Simon Fraser's 'Airs and Melodies, peculiar to the Highlands and Islands of Scotland,' 1816, folio (reprinted 1878); Alexander Campbell's 'Albany's Anthology,' 1816-18, 2 vols., folio; 'Orsin na b-Albain,' collected by Miss G. A. Bell, Edinburgh, c. 1840; 'A Treatise on the Language, Poetry, and Music of the Highland Clans,' Donald Campbell, Edinburgh, 1857, 8vo; 'Ancient Orkney Melodies,' collected by Col. Balfour, 1885; 'The Minstrelsy of the Scottish Highlands,' Alfred Moffat, Bayley and Ferguson, Glasgow, 1907, and other works.

The above bibliography represents but a tithe of what might justly be included in it. Although there is much traditional Scottish music found among the quantity of dance collections issued by individual Scottish musicians it is difficult to classify it. Besides the Scottish publications enumerated above, the London country-dance books, from the early part of the 18th century onward, contain much interesting matter in connection with both Scottish and Irish music. Walsh and others issued collections of Scottish Songs and Airs, but they were mainly taken from Thomson's 'Orpheus Caledonius.' His 'Caledonian country dances,' and those published by John Johnson are, however, of much antiquarian interest.

The attention recently paid to folk-song has brought forth enough evidence to show that the published Scottish national music is but a small proportion of what, even now, exists in a traditional form. Mr. Gavin Greig, Miss Lucy Broadwood, and other workers, have, without much search, brought to light a wealth of Gaelic music of a purely traditional kind. In the Lowlands of Scotland folk-song exists as it does in England, and much of this lowland Scottish folk-song is either almost identical with that found in different parts of England, or consists of variants of it. There is, of course, a certain proportion which may be classed as purely confined to Scotland. One of the first of the modern attempts to tap this stream of traditional music was made by Dean Christie, who published his two volumes of *Traditional Ballad Airs* in 1876 and 1881. This collection of between three and four hundred tunes, noted down with the words in the north of

Scotland, would have been much more valuable if the Dean had been content to present them exactly as noted. Another valuable contribution to the publication of Scottish folk-song is Robert Ford's *Vagabond Songs of Scotland*, first and second series, 1899 and 1900. In both these works folk-song as known in England is largely present. The New Spalding Club of Aberdeen in 1903 made an initial movement towards the rescue of traditional Scottish song. Mr. Gavin Greig (who is also a grantee under the Carnegie Trust given to the Universities of Scotland for research work) was commissioned to collect systematically in the north-east of Scotland. Mr. Greig's able paper, *Folk-Song in Buchan*, being part of the *Transactions of the Buchan Field Club*, gives some of the results of his labours. The Scottish National Song Society, recently founded, is also turning its attention to folk-song research. F. K.

SCOTTISH ORCHESTRA, THE. The Scottish Orchestra Company, Limited, was formed in 1891 with the object of fostering the study and love of orchestral music in Scotland, and for the purpose of organising and maintaining an efficient orchestra available for concerts throughout Scotland. To this end a fully equipped band of eighty performers, named 'The Scottish Orchestra,' was recruited in 1893 under the leadership of Mr. Maurice Sons, and conducted by Mr. George Henschel. Its headquarters are in Glasgow; and during the autumn and winter season concerts are given not only in Glasgow, but also in Edinburgh (in the latter city at the series of concerts under the management of Messrs. Paterson & Sons), and less frequently at Aberdeen, Dundee, Dunfermline, Paisley, Greenock, and in many other towns, by this fine combination of players.

Apart from the presentation of purely orchestral compositions the Scottish orchestra has frequently been associated with the principal Scottish choral societies in the production of important choral works. In 1895 Mr. Henschel resigned the post of conductor, and was succeeded first by Herr Wilhelm Kes (1895 to 1898), and later by Herr Wilhelm Bruch (1898 to 1900). Since 1900 the band has been conducted by Dr. Frederic Cowen. In 1903 Mr. Henri Verbrugghen replaced Mr. Sons as leader.

In the absence of the regular conductor, the Scottish Orchestra has played under the direction of many famous conductors, including Richard Strauss, Fritz Steinbach, Edouard Colonne, Hans Richter, Henry J. Wood, and others, and though, in accordance with the purpose for which it was founded, the appearances of this band are appropriately confined mainly to the country north of the Tweed, it has played in London, Leeds, Newcastle, Huddersfield, and elsewhere.

R. F. McE.

SCRIABIN, ALEXANDER NICHOLAEVICH, composer and pianist, born in Moscow, Jan. 10,

1872 (Dec. 29, 1871 O.S). He received his early education in the Cadet Corps, but afterwards, abandoning the military career for music, he entered the Moscow Conservatorium, where he studied the piano under Safonov and gained a gold medal in 1892. Having completed his course at the Conservatorium he went abroad, and won considerable reputation both as pianist and composer in Paris, Brussels, Amsterdam, and other cities. From 1898 to 1903 he was professor of pianoforte at the Moscow Conservatorium, but since that time he has devoted himself almost exclusively to composition. Scriabin is regarded as one of the most gifted of the younger Russian composers. He has a distinctive style and seems, like Chopin, by whom he has evidently been influenced, to be attracted to the smaller musical forms. His pianoforte works are delicate and poetical; in his larger compositions it is the orchestration of Wagner rather than of Glinka that he follows with considerable effect. Scriabin's output is not large, but his orchestral works include: two symphonies, E major, op. 26 (with choral finale), and C minor, op. 29; 'Rêverie,' op. 24; Pianoforte Concerto in F sharp minor, op. 20. For pianoforte: three sonatas (opp. 6, 19, 28); Allegro appassionato, op. 4; Concert allegro, op. 18; Fantasia, op. 28; Studies, op. 8; Improptus, opp. 7, 10, 12, 14; Mazurkae, opp. 3, 25; Preludes, opp. 11, 13, 15, 16, 17, 22, 27; besides nocturnes, a valse, and other small pieces.

R. N.

SCRIBE, EUGÈNE, the most prolific of French dramatists, and the best librettist of his day, born in Paris, Dec. 25, 1791. He lost his parents early, and the well-known advocate Bonnet urged him to take to the Bar; but he was irresistibly drawn to the stage, and from his début at twenty at the Théâtre du Vaudeville till his death, he produced for the different theatres of Paris a rapid succession of pieces which have served as models to a host of imitators. He originated the *comédie-vaudeville*, and attained to high comedy in 'Une Chaine'; but it is in opéra-comique and lyric tragedy that he has given the most striking proofs of his imagination and knowledge of the stage. For half a century he produced on an average ten pieces a year, many, it is true, written conjointly with various authors, but in these 'mariages d'esprit' Scribe was always the head of the firm.

Meyerbeer's 'Huguenots,' 'Robert,' 'Prophète,' 'L'Étoile du Nord,' and 'L'Africaine'; Auber's 'Fra Diavolo,' 'Gustave III,' 'Cheval de Bronze,' 'Domino Noir,' 'Diamans de la Couronne,' and Verdi's 'Vêpres Siciliennes' are the most famous of his librettos.

Scribe died suddenly in Paris, Feb. 21, 1861. He had been a member of the French Academy since 1836, and had acquired a large fortune. His complete works have not been published, but there are several editions of his stage-pieces.

That of 1855 comprises 2 vols. of operas, and 3 of opéras-comiques; and that of Calmann Lévy (1874 to 1881), 6 vols. 12mo of ballets and operas, and 20 of opéras-comiques. A perusal of these gives a high idea of his fertility and resource.

G. C.

SCRIPTORES. There are several great collections of ancient writers on musical theory, both Greek and Latin. In 1652 Meibomius printed a valuable collection of Greek writers which long held the field. It is now, however, superseded by the following:—

Musici Scriptores Graeci, ed. C. Janus (Teubner, 1895), contains, with elaborate prolegomena, the following authors:

1. Aristotle. 'Loci de Musica.'
2. Pseudo-Aristotle. 'De rebus musicis problemata.'
3. Euclides. 'Sectio Canonis.'
4. Cleonides. *Εισαγωγή ἀρμονική.*
5. Nicomachus Gerasenus. *Ἀρμονικὸν ἐγγχειρίδιον & Excerpta.*
6. Bacchius. *Εισαγωγή τέχνης μουσικῆς.*
7. Gaudentius. *Ἀρμονική εισαγωγή.*
8. Alypius. *Εισαγωγή μουσική.*
9. 'Excerpta Neapolitana.'
10. 'Carminum Oracorum Reliquiae.'

The *De Musica* of Aristides Quintilian is not included above, because it had been edited separately by A. Jahn (Berlin, 1882). The *Harmonic Elements* of Aristoxenus are best studied in Macran's edition (Oxford, 1902).

The later Greek writers are to be found as published by Wallis, either separately or in his *Opera Mathematica* (Oxford, 1699), of which vol. iii. contains Ptolemy, *Harmonica*; Porphyry, *Commentary on Ptolemy*; and Bryennius, *Harmonica*. To these may be added a less important anonymous work, *De Musica*, ed. Bellermann (Bérlin, 1841).

For Latin authors reference must first be made to the great collection of Martin Gerbert, *Scriptores Ecclesiastici de Musica*, 3 vols., 1784 (and reproduced in facsimile 1905). It contains the following:—

VOL. I.

1. S. Pambo. 'Geronticon' (in Greek and Latin).
2. 'Monacho qua mente sit Psallendum.'
3. 'Instituta Patrum de modo Psallendi' († Cistercian).
4. S. Nicetius of Treves. 'De bono Psalmodiae.'
5. Cassiodorus. 'Institutiones musicae.'
6. S. Isidore. 'Sententiae de Musica.'
7. Alcinus. 'Musica.'
8. Aurelian. 'Musica disciplina.'
9. Remigius. 'Musica.'
10. Notker. 'De Musica.'
11. Ruohald. 'De Musica.'
12. (Pseudo-Ruohald). 'Musica Enchiridion, Commemoratio Brevis de tonis et psalmis modulandis.'
13. Regino. 'De harmonica institutione.'
14. Odo. 'Tonarius.' 'Dialogus de Musica.'
15. Adelbold. 'Musica.'
16. Bernelin. 'Divisio monochordi.'
17. Various anonymous pieces.

VOL. II.

1. Guido of Arezzo. 'De disciplina artis musicae,' 'Regulae musicae rhythmicae,' 'De ignoto cantu,' 'Tractatus correctoris multorum errorum,' 'De tropis sive tonis.'
2. Berno of Reichenau. 'De variis Psalmorum atque cantuum modulatione,' 'De consona tonorum diversitate,' 'Tonarius.'
3. Hermann Contractus. 'Musica,' 'Explicatio signorum,' 'Versus ad discernendum cantum.'
4. William of Hirschan. 'Musica.'
5. Theoger of Metz. 'Musica.'
6. Arbo Scholasticus. 'Musica.'
7. John Cotton. 'De musica.'
8. G. Bernard. 'Tonal.'
9. Gerhaudus. 'De musica.'
10. Eberhard of Freisingen. 'De mensura fistularum.'
11. Anonymous. 'De mensura fistularum.'
12. Engelbert of Admont. 'De musica.'
13. Joh. Ägidius. 'Ars musica.'

VOL. III.

1. Franco. 'Ars cantus mensurabilis.'
2. Elias Salmon. 'Scientia artis musicae.'
3. Marchetti of Padua. 'Liber de musicae planae,' 'Pomerium musicae mensuratae.'
4. Jean de Murie. 'Summa musicae,' 'Musica speculativa,' 'De numeris,' 'Musica practica,' 'Questiones super partes musicae,' 'De discantu,' 'De tonis,' 'De proportionibus.'
5. Arnulph. 'De differentiis cantorum.'
6. John Keck. 'Introductorium musicae.'
7. Adam of Fulda. 'Musica mensurabilis.'
8. 'Constitutiones capituli Pontificiae' (1545).
9. Τεκμή ψαλτικῇ sen Ars Psallendi aut cantandi Graecorum.

A continuation of Gerbert was gathered by Coussemaker under the title *Scriptores de Musica mediæ ævi* (1864-76). It contains the following works:—

VOL. I.

1. Fra Jerome of Moravia. 'De musica.' With extracts from 'Positio vulgaris,' John de Garlandia, 'De musica mensurabili,' Franco of Cologne, 'Ars cantus mensurabilis,' Peter Picard, 'Musica mensurabilis.'
2. Franco. 'Compendium discantus.'
3. John de Garlandia. 'Introductio musicae.'
4. " 'De musica mensurabili.'
5. Walter de Odington. 'De speculatione musicae.'
6. Aristofila. 'De musica' (12th or 13th century).
7. Petrus de Cruca. 'De tole.'
8. John Ballos. 'Abreviatio Francoica.'
9. Anonymus. 'De consonantibus musicalibus.'
10. " 'De discantu.'
11. " 'Cantus mensurabilis.'
12. " 'De mensuris et discantu.'
13. " 'De discantu.'
14. " 'De figuris sive de notis.'
15. " 'De musica.'
16. Robert Handlo. 'Regulae.'
17. John Hanboys. 'Summa super musicam.'

VOL. II.

1. Ragino of Prüm. 'Tonarius.'
2. Euchad. 'Musica encheriades' (a bit unpublished by Gerbert).
3. Guido of Arezzo. 'De modernis formulis.'
4. " 'De sex modis vocum.'
5. Odo. 'Intonarum.'
6. Guido in Caroli-loci Abbae. 'Opusculum.'
7. Jean de Murie. 'Speculum musicae' (books vi. and vii.).
8. A Carthusian. 'De musica plana.'
9. Anonyma. 'De musica.'

VOL. III.

1. 'Marchetti of Padua. 'Brevis compilatio' (see Gerbert).
2. John de Garlandia. 'Introductio de contrapuncto.'
3. Philip of Vitry. 'Ars nova.'
4. " 'Ars contrapuncti.'
5. " 'Ars perfecta.'
6. " 'Liber musicalium.'
7. Jean de Murie. 'Liber de cantu mensurabilis.'
8. " 'Ars contrapuncti.'
9. " 'Ars discantus.'
10. Henry of Zealand. 'De contrapuncto et imperfecto.'
11. Philopottus Andreas. 'De contrapuncto.'
12. Philip of Caserta. 'De diversis figuris.'
13. Giles de Murino. 'Cantus mensurabilis.'
14. Johannes Verulus de Anagnia. 'De musica.'
15. Theodore de Campo. 'Musica mensurabilis.'
16. Frodozinus de Seidemands. 'De contrapuncto.'
17. " " 'Tractatus practice cantus mensurabilis.'
18. " " 'Do, ad modum Italianum.'
19. " " 'Liber de monochordi.'
20. " " 'Summa proportionum.'
21. Nicardus Weyt. Carmelite. 'Regule musicae.'
22. Christian Saxe of Flandera. 'Tractatus.'
23. Guilelmus Monachus. 'De preceptis artis musicae.'
24. Antonio de Leno. 'Regule de contraponto.'
25. John de Hothby. 'Regule super proportionem.'
26. " 'De cantu figurato.'
27. " 'Regule supra contrapunctum.'

Anonymus works, 28-40 (pp. 334-498).

VOL. IV.

1. John Tinctoris. (1) 'Expositio mensuris'; (2) 'De natura et proprietate sonorum'; (3) 'De notis et pausis'; (4) 'De regulari valore notarum'; (5) 'Liber imperfectorum'; (6) 'Tractatus alteriorum'; (7) 'Super punctis musicalibus'; (8) 'De arte contrapuncti'; (9) 'Proportionalia musicae'; (10) 'Diffinitorium musicae.'
2. Simon Tunetede. 'Quatuor principalia musicae.'
3. Johannes Gallicus. 'Ritus canendi'; 'Introductio.'
4. Antonius de Luca. 'Ars cantus figurati.'
5. Anonymus. 'De musica figurata.'

For Boethius's *De Institutione musica* recourse may be had to his works in Migne's *Patrologia Latina* or in Teubner's *Bibliotheca* (ed. Friedlein). Note also *Ein anonymes Musiktractat* (ed. J. Wolf), Leipzig, 1893, and a valuable little

early tract printed by Wagner in *Rassegna Gregoriana*, iv. 482 (1904). W. H. F.

SCUDO, PIETRO, born June 6, 1806, at Venice, was brought up in Germany. Some circumstance led him to Paris, and in 1816 he entered Choron's school, and studied singing there at the same time with Duprez. He never became a good singer, and after taking a secondary part in Rossini's 'Il Viaggio a Reims' left the boards, returned to Choron's school, and there picked up a slender knowledge of music. After the revolution of 1830 he played second clarinet in a military band. Returning to Paris he made his way into society, set up as a teacher of singing, and a composer of romances. His knowledge of harmony and the elementary laws of musical accent was but slight, as he himself admits in spite of his vanity. Continuing his career as a professor of singing, he took to writing, and published *Physiologie du rire* and *Les Partis politiques en province* (1838). He gradually restricted himself to musical criticism, but as long as he wrote only for the *Revue de Paris*, the *Réforme*, and the *Revue indépendante*, he was unknown outside certain cliques in Paris. As musical critic to the *Revue des Deux Mondes*, he became a man of mark, though he was never more than a laborious writer, who made good use of German and Italian books, and managed by means of certain dogmatic formulæ and fine writing to conceal his want of knowledge and ideas. Scudo's articles are worth reading as specimens of French musical criticism before Berlioz was known, and while Fétis occupied a field without a rival. They have been mostly republished under the following titles:—*Critique et littérature musicale* (1850, 8vo; 1852, 12mo), 2nd series (1859, 12mo); *La Musique ancienne et moderne* (1854, 12mo); *L'Année musicale*, 3 vols. (Hachette, 1860, 1861, and 1862); *La Musique en 1862* (Hetzl, 1863); and *Le Chevalier Sarti* (1857, 12mo), a musical novel taken from Italian and German sources, of which a continuation, *Frédérique*, appeared in the *Revue des Deux Mondes*, but was not republished. All his works were printed in Paris. Scudo finally became insane, and died Oct. 14, 1864, in an asylum at Blois.

G. C.

SEASONS, THE — Die Jahreszeiten — Haydn's last oratorio. The book was compiled in German from Thomson's 'Seasons' by Van Swieten, who induced Haydn to undertake its composition immediately after the success of the 'Creation'; and the music was written between April 1798 and April 24, 1801, on which day the first performance took place at the Schwarzenberg palace, Vienna. Haydn always averred that the strain of writing it had hastened his death. [See vol. ii. p. 362a.]

It is in four parts. The score was published in 1802-3 (without date) at Vienna; a barbarous English version accompanied the German text.

In 1818 Clementi published a vocal score with a better version. The Rev. John Webb followed with a further improvement, and more recently, in 1840 or 1841, Professor E. Taylor made a fourth. It was in the repertory of the Cecilian Society; and the Sacred Harmonic Society performed it on Dec. 5, 1851, and four times more down to 1877. G.

SEBASTIANI, JOHANN, was born at Weimar, Sept. 30, 1622. The known facts of his life are few. He is said to have studied music in Italy, but no hint is given as to who his teachers were. He is next heard of as settled at Königsberg in Prussia about 1650, where also in 1661 he was appointed Cantor to the Domkirche in the Kneiphof quarter of the town, and in 1663 became Capellmeister to the Electoral Schlosskirche. Heretofore on a pension in 1679, and died 1683. He is chiefly known as the composer of a Passion music, which occupies an important place in the development of the form. The full title of the work is 'Das Leyden und Sterben unsers Herrn und Heylandes J. Chr. nach dem heiligen Matthæo. In eine recitirende Harmoni von 5 singenden und 6 spielenden Stimmen nebst dem Basso continuo gesetzt. Worinnen zu erweckung mehrer Devotion unterschiedliche Verse aus denen gewöhnlichen Kirchenliedern mit eingeführet. . . . Königsberg, 1672.' The work is dedicated to Frederick William, Elector of Brandenburg. As the title indicates, it is a Passion with instrumental accompaniment *a 6*, and Chorus *a 5*. The instrumental parts are for first and second violins, three for Viola da Gamba or da Braccio, and one for Viola Bassa. But the full accompaniment is only reserved for the dramatic choruses in the work. Elsewhere the distinction is made that while the violas alone accompany the words of the Evangelist and other single characters sung by solo voices, the first and second violins alone with basso continuo accompany the utterances of our Lord. There are also short symphonic interludes for violas alone, and the chorale verses are intended to be sung by a solo voice with the accompaniment of violas. The conclusion consists of a hymn of thanksgiving, the first four verses of which are sung solo, and only the last verse tutti. The whole interesting work has now been reprinted in Bd. xvii. of the 'Denkmäler Deutscher Tonkunst,' Erste Folge. Other works of Sebastiani, enumerated in the *Quellen-Lexikon*, are two collections of geistliche und weltliche Lieder bearing the title Parnass-blumen, published at Hamburg 1672 and 1675, also a large number of occasional compositions for weddings and funerals. A few sacred compositions in the concerted style for voices and instruments remain in MS. J. R. M.

SECHTER, SIMON. One of the most important of modern contrapuntists. Born at Friedberg, in Bohemia, on Oct. 11, 1788. In 1804,

after a moderate musical education, he went to Vienna, where he applied himself with ardour to theoretical studies. In 1809, while Vienna was in the hands of the French, he made the acquaintance of Dragonetti—then living in concealment under the curious apprehension that Napoleon would oblige him to go to Paris—for whom he wrote the pianoforte accompaniments to his concertos for the double bass. In 1810 Sechter became teacher of the piano and singing to the Blind Institute, for which he wrote many songs and two masses. During the whole of this time he pushed forward his studies, working more especially at Bach and Mozart. He found a good friend in Abbé Städlér, through whose means three of Sechter's masses were performed at the court chapel. A requiem of his and a chorus from Schiller's 'Bride of Messina' were also executed at the Concert Spirituel with success. In 1824 he became court-organist, first as subordinate, and in 1825, on the death of Worzischeck, as chief, an office which he retained till his death. His fame as a theoretical teacher attracted numerous scholars, amongst others the great Schubert, who was on the point of taking lessons from him when attacked by his last illness. (See SCHUBERT, *ante*, p. 316*a*.) The Emperor Ferdinand conferred upon him the large gold medal for a grand mass dedicated to his Majesty, which was shortly followed by the order of St. Louis from the Duke of Lucca. In 1850 he became Professor of Composition in the Conservatorium at Vienna. His Aphorisms, etc., which he communicated to the Vienna *Allg. musik. Zeitung*, show him to have been a profound thinker, and give many instructive hints both to teachers and scholars. His most intimate friends were Staudigl, Lutz, and Hölzel, for whom he wrote a quantity of humorous Volkslieder in contrapuntal style, as well as many comic operettas, ballads, etc. His diligence in study was astonishing. No day passed in which he did not write a fugue. A few years before his death he had the misfortune, through his own good nature, to lose almost everything, and died on Sept. 12, 1867, nearly eighty years old, in poverty and privation. Sechter was much esteemed and beloved for his simplicity and goodness, and it may be truly said that he had no enemies. His system, though severe, was simple, clear, and logical. His scholars were almost innumerable: amongst them may be mentioned, Preyer, Nottelbohm, the Princess Czartorjska, Sucher, Bibl, Rosa Kastner (Escudier), Ruffinatscha, Bruckner, Otto Bach, Döhler, Schachner, Filtsch, S. Bagge, Benoni, Vieuxtemps, Pauer, C. F. Pohl, and Thalberg. Notwithstanding the multitude of his lessons he found time to compose a great deal of music. His unpublished works in the Imperial Library and the Musikverein at Vienna contain four oratorios, operas and large cantatas, music for voice, organ, and pianoforte, including 104

variations on an original theme of 104 bars; also a complete theoretical treatise ready for publication, in two portions, first on acoustics, second on canon. Among his published works are an edition of Marpurg *On Fugue*, with many additions; *Grundsätze der musik. Composition* (3 vols. B. & H.); twelve masses; *Practical Examples of Accompaniment from Figured Bass*, op. 59; *Practical School of Thorough Bass*, opp. 49, 98; preludes for the organ, in four books; fugues, hymns, choral preludes; four fugues for PF., op. 5, dedicated to Beethoven; fugue in C minor, to the memory of Schubert, op. 43; etc. Sechter completed the grand fugue for orchestra in D major, left unfinished by Mozart. C. F. P.

SECOND. The smallest interval in the scale used for musical purposes. It is described by notes which are next to each other on the stave or by letters which lie next each other in the alphabet, as A B, B C, C D#, Eb F#.

Three kinds can be practically distinguished. The minor second, which is equal to a semitone, as at (b) in the example; the major second, which is equal to a tone (but of which there are two kinds, grave and acute—see below), as at (a); and the augmented second, which is equal to three semitones, as at (c). They are all discords, but are characterised by different degrees of roughness. The minor second is extremely harsh, the major decidedly so, though not so extremely, and the augmented second but slightly. In ordinary musical usage the last is actually the same interval as a minor third, which is not looked upon as a dissonance at all; nevertheless the ear, distinguishing relations instinctively, classifies the combinations according to their context as having a dissonant or consonant significance. Thus when the context suggests the interval Ab Bb, the mind will not accept it as final, but as a dissonance requiring resolution; whereas if the same interval could be expressed as Ab Cb, it might be recognised as a characteristic portion of the minor chord of Ab, and could be accepted as final without desire for further motion.—The numerical ratios of the several intervals in just intonation are given as follows:—the minor second, 16:15; the grave major second, 10:9; the acute major second, 9:8; and the augmented second, 75:64. [See SEMITONE.] C. H. H. P.

SECONDO. The second player in a duet. [See PRIMO.]

SEDIE, DELLE, ENRICO, baritone singer, son of a merchant of Leghorn, was born June 17, 1824. In the year 1848 he volunteered in the army of Charles Albert of Piedmont, and fought against the Austrians in the war for Italian independence. He was taken prisoner

at the battle of Curtatone but afterwards released, and at the close of the campaign of the following year retired from the army with the rank of lieutenant. Under the direction of his fellow-citizen, Orazio Galeffi, he then devoted himself to the study of singing, and in 1851 made his début at Pistoia in Nabucco.

From 1854, when he made a great success as Rigoletto in Florence, his position was secure. He appeared with unvarying success at Rome, Milan, Vienna, Paris, and London, and though possessed of so little voice as to gain the sobriquet of *Il baritono senza voce*, he made up by dramatic accent and purity of style for the shortcomings of nature. In 1867, at the earnest request of Auber, he accepted a professorship at the Conservatoire of Paris on the most advantageous terms hitherto offered. Under him a commission was appointed for the entire remodelling of that institution, but the death of Auber and the outbreak of the Franco-Prussian War compelled the government to abandon their intention. In 1874 he published a large work upon the art of singing and musical declamation, under the title of *L'Art Lyrique*. Translations of this and other vocal treatises are published in New York as *A Complete Method of Singing*.

Signor Delle Sedie was Cavaliere of the Order of the Crown of Italy, for his military services in the campaigns of 1848, 1849; Cavaliere of the Order of SS. Maurizio and Lazzaro; and member of many societies and academies both of Italy and France. For some time he lived in Paris, and devoted himself entirely to the teaching of his art. He died there Nov. 28, 1907. J. C. G.

SEEGR (SEEGER, SEGER, SAGER, SEGERT, ZECKERT), JOSEPH FERDINAND NORBERT, eminent organist and composer, born at Repin near Melnik, Bohemia, March 21, 1716. Educated at Prague, where he graduated Master of Philosophy. He was alto singer at St. James's Church in that city, and, later, organist at St. Martin's. In 1735 he was first violinist at the Tein Church, but was appointed organist in 1741, which position he retained until his death on April 22, 1782. In addition he held the appointment of organist at the Kreuzherrenkirche in the Old Town for thirty-seven years (1745 to 1782). In this church Joseph II. heard Seegr play, and was so delighted with the masterly performance that he at once determined to give him a Court appointment at Vienna; but, sad to say, when the official document containing this preferment arrived, Seegr was no more. Amongst his pupils were the principal Bohemian musicians of that time, viz.: Kozeluch, Maschek, Mysliwceck, Gelinek, Bixi, Kucharz, etc. That Seegr was well known to Bach is testified by the fact that the latter advised Count Millesimo to place Mathias Sofka under Master Seegr, remarking that he could not entrust him to a

better teacher. Burney (*Present State of Music, Germany*, vol. ii. pp. 13-14) mentions him as being a fine organ-player, a good linguist, and an excellent musician. The unanimous testimony of his contemporaries proclaims Seegr as one of the finest organists of his time. At his death his compositions were acquired by Ernst, concert-master of Gotha. Daniel Gottlob Türk, music director of Halle, was employed to edit the first posthumous instalment of these compositions—'Eight Toccatas and Fugues' for the organ (published by Breitkopf in 1793), which are up to the present his best known works. The toccatas are in reality preludes—with the exception of No. 5, the style of which is more in accordance with its title. His other compositions consisted of many masses, psalms, litanies, etc., printed copies of which do not exist. After the lapse of nearly a century and a quarter, Messrs. Breitkopf are about to reissue the 'Eight Toccatas and Fugues,' edited by Dom Samuel Gregory Ould, and adapted to the requirements of the modern organ. W. W. S.

SEELING, HANS, was born at Prague in 1828, and towards the end of his life returned to his native city, where he died on May 26, 1862. Failing health obliged him to go to Italy in 1852, and in 1856 he toured in the East, returning to Italy in 1857. After settling in Paris, 1859, he made his home in Germany. An excellent pianist, he met with unflinching success on his tours. Seeling composed a number of brilliant pieces and studies for the piano, of which the best known are the 'Barcarolle,' the 'Lorelei' (op. 2), the 'Concert Studies' (op. 10), and the 'Memories of an Artist' (op. 13). These compositions are highly effective, and their character partakes of Henselt on the one hand and Bendel on the other. D. H.

SEGNO, *i.e.* the sign ♯. [See DAL SEGNO.]

SEGUE, 'follows'—as *Segue l'aria*, 'the aria follows'; a direction frequently found at the end of recitatives. It is thus equivalent to the more modern word *attacca*. It is also found occasionally at the foot of a page where a space is left after one movement in order that the next may begin at the top, to avoid turning over in the middle. It then indicates that no stop is to be made between the two movements. M.

SEGUIDILLA (sometimes written SIGUIDILLA), a popular national dance of Spain. The origin of both name and dance are uncertain; it existed in La Mancha in the time of Cervantes (see *Don Quixote*, part ii. chap. 38), but there is no evidence to show whether it is indigenous, or introduced into Spain by the Moors. It is, however, certain that from La Mancha it spread all over Spain, and it is still danced in both town and country. Seguidillas are divided into three kinds—Seguidillas Manchegas, the original form of the dance, in which it assumes a gay and lively character; Seguidillas

Boleras,¹ more measured and stately; and Seguidillas Gitanas, danced very slowly and sentimentally. To these some writers add a fourth kind, the Seguidillas Taleadas, said to be a combination of the original Seguidilla with the Cachucha. The music is written in 3-4 or 3-8 time, usually in a minor key, and is performed on the guitar with occasionally a flute, violin, or castanet accompaniment. The *coplas*, or words sung by the musicians, are written in couplets of four short lines followed by an *estrevillo* or refrain of three lines, but some coplas want this latter feature. Both music and words often partake of the character of an improvisation, the former remarkable for strange and sudden modulations, and the latter treating of both serious and comic subjects. A collection of coplas was published at the end of the 18th century by N. Zamacola, writing under the pseudonym of Don Preciso. From the introduction to this book the following quaint description of the Seguidilla is translated: 'So soon as two young people of the opposite sexes present themselves standing face to face at a distance of about two varas² in the middle of the room, the "ritornelo" or prelude of the music begins; then the seguidilla is insinuated by the voice—if it be a manchega, by singing the first line of the copla; if it be a bolera, by singing two lines, which must only take up four bars. The guitar follows, playing a pasacalle;³ and at the fourth bar the seguidilla begins to be sung. Then the dance breaks out with castanets or crotolas,⁴ running on for a space of nine bars, with which the first part concludes. The guitar continues playing the pasacalle, during which the dancers change to opposite positions by means of a very deliberate and simple promenade ("paseo"). While singing again, at the beginning of the fourth bar, each goes on for nine bars more, making the variations and differences of their respective schools, which forms the second part. Again they change places, and upon each dancer returning to the spot where they began to dance, the third part goes on in the same way as the second, and on arriving at the ninth bar, the voice, the instrument, and the castanets cease all at once, and as if impromptu, the room remaining in silence, and the dancers standing immovable in various beautiful attitudes, which is what we call "well stopped" (Bien parado). Space will not allow us to give an example of the music which accompanies this beautiful dance. In Book IV. of Luigi Borghi's 'Opera Dances' (London, 1783) is a seguidilla modified for theatrical representation, and in the first act of 'Carmen' there is a Spanish air which Bizet has entitled 'Seguidille.' Better examples than these will be found in Mendel's *Lexikon* (sub voce Seguidilla),

¹ Not to be confounded with the Bolero, said to have been invented in 1780 by Dion Sebastian Zerezo.

² 1 vara=34 inches.

³ Literally 'street-pass'; any popular street-song. [See PASACALLE, vol. iii. p. 645.]

⁴ A kind of castanet.

and in the Appendix to Part I. of Marino Soriano Fuertes's *Historia de la Musica Española* (Madrid, 1855-59), in which specimens are given of the varieties of the dance. With regard to the words, the following copla (from Don Preciso's *Collección de Coplas*, Madrid, 1799) may serve as an example :

El Lunes me enamoro,
 Mártes lo digo,
 Miércoles me declaro,
 Jueves consigo :
 Viérnes doy zelos
 Y Sabado y Domingo
 Busco Amor nuevo.¹

W. B. S.

SEGUIN, ARTHUR EDWARD SHELDEN, commonly known as EDWARD, was born in London (of Irish descent), April 7, 1809. He received his musical education at the Royal Academy of Music, and first appeared in public in 1828 at concerts and performances of Italian operas given by its pupils. His voice was a deep bass, of very extensive compass, and he met with a very favourable reception. In 1829 he sang at the Exeter Festival. In 1831 he appeared at the theatre in Tottenham Street as Polyphemus in 'Acis and Galatea.' In 1832 he sang at the Concert of Antient Music. In 1833 and 1834 he was engaged at Covent Garden, and in the latter year appeared at the King's Theatre as Il Conte Robinson in Cimarosa's 'Matrimonio Segreto,' and also sang at the Festival in Westminster Abbey. From 1835 to 1837 he was engaged at Drury Lane. In August 1838 he appeared at the English Opera House in Macfarren's 'Devil's Opera,' and soon afterwards quitted England for America, made his first appearance at the National Theatre, New York, as the Count in Rooke's 'Amilie' on Oct. 15, 1838, and was extremely well received. He afterwards formed an opera company named 'The Seguin Troupe,' who performed at various places in the United States and Canada. Amongst other distinctions he was elected a chief by one of the Indian tribes, and received an Indian name, signifying 'The man with the deep mellow voice'; an honour which had never before been conferred on any Englishman, except Edmund Kean, the tragedian. He died at New York, Dec. 9, 1852.

His wife, ANN CHILDE, born in London 1814, was also a pupil of the Royal Academy of Music, and appeared in public as a soprano singer in 1828 in the same performances as her future husband, and with equal success. In 1832 she sang at the Concert of Antient Music, and in 1834 at the Westminster Abbey Festival. After performing for two or three seasons at the King's Theatre as 'seconda donna,' she appeared on the English stage at Drury Lane, Nov. 3, 1837, as Donna Anna in the English

¹ Translation :— 'On Monday I fall in love, on Tuesday I say so, Wednesday I declare myself, Thursday I succeed : Friday I cause jealousy, and Saturday and Sunday I seek a fresh love.'

version of Mozart's 'Don Giovanni.' She accompanied her husband to America and performed in opera until his death, when she retired from the stage and taught music in New York, where she died in August 1888.

Seguin's younger brother, WILLIAM HENRY SEGUIN, born in London 1814, also a pupil of the Royal Academy of Music, possessed a light bass voice and was a concert singer and member of the choir of the Temple Church. He died Dec. 28, 1850. He married Miss GOOCH, soprano singer, a fellow pupil at the Academy, who survived him a few years only. His sister ELIZABETH, born in London 1815, was also a singer, and was the mother of Mme. Parepa-Rosa ; she died in London, 1870. W. H. H.

SEIDL, ANTON, born May 7, 1850, at Pesth, was entered as a pupil at the Leipzig Conservatorium in October 1870. Early in 1872 he went to Bayreuth, and was there employed by Wagner to make the first copy of the score of the Nibelungen trilogy. He also assisted at the festival in August 1876. In 1879, through Wagner's recommendation, he obtained the post of conductor at the Leipzig Opera-House, and remained there until 1882, when he went upon a long tour through Germany, Holland, England, Italy, etc., in the capacity of conductor of Angelo Neumann's 'Nibelungen' opera troupe. The performances were not altogether faultless : it is true that the vocalists were good, but the great music drama was reproduced in a sadly mutilated condition. Yet Seidl proved himself to be an energetic conductor, and was personally successful. In 1883 he became conductor at the Bremen Opera-House. Early in 1885 he married the well-known soprano singer Frä. Kraus, and in September of that year accepted the post of conductor at the New York German Opera-House, which post he filled with great distinction until the temporary eclipse of German opera in favour of Italian. In 1895-97 he again conducted German opera in New York, and in 1897 he conducted at Covent Garden. On Nov. 28, 1898, he died in New York. C. A.

SEIFFERT, MAX, born at Beeskow on the Spree, Feb. 9, 1868, was educated at his native place and at the Joachimsthal Gymnasium at Berlin, studied musical science and literature under Philipp Spitta, wrote a treatise on Ssweelinck for the doctor's degree in 1891 (printed in the *Vierteljahrsschrift* of that year). Besides many contributions to that periodical, to the *Allg. Deutsche Biographie*, the *Tijdschrift* of the Dutch Vereeniging, etc., he wrote a *Geschiede der Klaviermusik* in 1899, and was editor of the complete works of Ssweelinck issued in twelve volumes, and of several volumes of the various series of 'Denkmäler der Tonkunst.' Since April 1904 he has been editor-in-chief of the Internationals Musikgesellschaft. (Riemann's *Lexikon*, etc.) M.

ANTON SEIDL

SEISS, ISIDOR WILHELM, born at Dresden, Dec. 23, 1840, was at first a pupil of F. Wieck for piano and of Julius Otto for theory. In 1858-1860 he studied at Leipzig under Hauptmann. He had a success as a pianist in the following year, and issued several compositions. In 1871 he was appointed a piano-teacher at the Celegne Conservatorium, and in 1878 received the title of professor. He has had a long and successful career there, where he devotes much time to conducting the Musikalische Gesellschaft. His compositions, chiefly educational works for the piano, are tasteful and of high aim; his clever arrangement of Beethoven's 'Contredances' and 'Dances allemandes' are among his most famous productions, as well as a revised version of Weber's E flat concerto. A 'Feierliche Szene und Marsch' is for orchestra. (Riemann's *Lexikon*.) M.

SELBY, BERTRAM LUARD-, born at Igham, Kent, Feb. 12, 1853, received his musical education at the Leipzig Conservatorium under Reinecke and Jadassohn. Became organist of St. Barnabas, Marylebone, and Highgate School in 1876, and gave chamber concerts in London before his appointment to the post of organist of Salisbury Cathedral in 1881, a post he retained for two years. He was next organist at St. John's, Torquay, in 1884, and of St. Barnabas, Pimlico, in 1886. He was appointed organist of Rochester Cathedral in succession to Dr. John Hopkins, in 1900. His most important works are incidental music to 'Helena in Troas,' performed in London, May 1886, and 'Weather or No,' a musical duologue, produced at the Savoy Theatre in August 1896. An orchestral 'Idyll' was played at one of Henschel's London Symphony Concerts on March 11, 1897. This, two quintets for piano and strings, a suite for violin and piano, many piano pieces, and an opera 'The Ring' (1886), remain unpublished. The list of printed works includes 'The Waits of Bremen,' 'The Dying Swan,' 'Summer by the Sea,' short cantatas, part-songs, 'The Hag,' 'It was a Lover and his Lass,' tries, etc., for female voices, a violin sonata in B minor, some sixteen anthems, ten services, and very numerous organ pieces and some songs, all of which show great taste and refinement of treatment. M.

SELLINGER'S ROUND, a 16th-century tune and round dance, of unknown authorship, which had immense popularity during the 16th and 17th centuries. The original form of the title was doubtless 'St. Leger's Round.' The delightful vigour and unusual character of the air are felt to-day, when played before a modern audience, as fully as in its own period. It is frequently referred to in 16th- and 17th-century literature, including *Bacchus Bountie*, 1593; *Morley's Plaine and Easie Introduction*, 1597, and elsewhere. In some cases the sub-title 'or the Beginning of the World' is found added to it, and this is partly explained in a comedy

named 'Lingua,' 1607. An excellent version of the tune, arranged with variations by William Byrd, is found in 'The Fitzwilliam Virginal Book,' and other copies of the air are in Lady Neville's Virginal Book and William Ballet's Lute-book.

Printed copies, which differ considerably, and are not so good as those referred to, appear in some of the Playford publications, including early editions of 'The Dancing Master,' 'Musick's Handmaid,' and 'Musick's delight on the Cithren.' The original dance has probably been a May-pole one, and this is borne out by a rude wood-cut on the title-page of a 17th-century 'Garland,' where figures are depicted dancing round a may-pole, and 'Hey for Sellinger's Round' inscribed above them.

The following is the air, without the variations and harmony, in the Fitzwilliam Book.

Sellenger's Round.

From *The Fitzwilliam Virginal Book*.

F. K.

SELNECCER, or SELENECCER, NIKOLAUS, born Dec. 6, 1528, at Hersbruck near Nuremberg, was organist of the Burghkapelle in that city, at the age of twelve, and studied at Wittenberg from 1549. From 1557 to 1561 he was court preacher and tutor in Dresden, and subsequently held professional posts in Jena (1561-68), Leipzig (1568-70), Wolfenbüttel (1570-74), Leipzig again (1574-88). In the latter year he was deprived of his offices and became Superintendent at Hildesheim, until at the death of the Elector Christian of Saxony he was reinstated. He was an eminent theologian, and wrote the words and music of many hymns; his great work in this direction was published at Leipzig in 1587, under the title 'Christliche Psalmen, Lieder, vnd Kirchengesenge,' set for four voices, Selneccer's own compositions being marked with his initials. Specimens of his music are given in several of the hymn-books of the 17th century. (*Quellen-Lexikon*.) M.

SEMBRICH, MARZELLA (original name Praxede Marcelline Kochanska), born Feb. 15, 1858, at Wisniewczyk, Galicia, the daughter of a musician, Kasimir Kochanski, Sembrich being her mother's maiden name. She was taught music by her father, and played in public both piano and violin at the age of

twelve; she afterwards received further instruction on these instruments from Stengel (to whom she was afterwards married), and Brustermann, both professors at Lemberg. She then went to Vienna, for completion of her studies under Liszt, but discovering herself to be the possessor of a fine voice, determined to attempt a vocal career, and for that purpose studied singing at Vienna, under Rokitanaky, and later at Milan under Lamperti the younger. On June 3, 1877, she made her début at Athens as Elvira in 'I Puritani,' and was highly successful there for two months in that, and as Lucia and Dinorah. She returned to Vienna, studied the German répertoire under Professor Richard Lewy the horn-player, and in October 1878 made a highly successful début at Dresden as Lucia. She remained there until the spring of 1880, becoming famous in coloratura parts. After singing at the Lower Rhine Musical Festival of 1880 she made her first appearance in England on June 12 of the same year at the Royal Italian Opera as Lucia, and was greatly successful in that, Amina, and Margaret of Valois. She returned there for the seasons 1881-84, playing Dinorah, and Constance in the revival of Mozart's 'Entführung.' Dinorah and Astrifammante were among her best parts. At Benedict's 'Jubilee' Concert at the Albert Hall, June 7, 1884, she sang and played the violin with great success. After singing with much success in Paris, Russia, Spain, the United States, etc., she appeared at L. E. Bach's concert at St. James's Hall, June 25, 1889, and was to have sung in opera at Her Majesty's Theatre, but for the premature closing of the season there. She reappeared as Susanna at Covent Garden in 1895. Of late her career, both in opera and concerts, has been divided between Austria and the United States. Madame Sembrich's voice is about two and a half octaves in compass, viz. from the lower C to F in alt, and is very brilliant in the upper register; she also possesses great powers of execution.

A. C.

SEMELE, a secular oratorio by Handel, was composed in 1743, between June 3 and July 4. The libretto is slightly altered from an opera-book of Congreve's, written in 1707. 'Semele' is termed by Arnold 'A Dramatic Performance,' by Mainwaring 'An English opera but called an Oratorio,' while it was announced at different times in the *General Advertiser* as 'Semele, after the manner of an Opera,' and 'Semele, after the manner of an Oratorio.' The first performance took place on Feb. 10, 1744, at Covent Garden Theatre, where it was repeated three times in the same year. In the following December it was performed twice, with additions and alterations, at the King's Theatre, Haymarket, and was revived by Smith and Stanley in 1762. The Cambridge University Musical Society revived it on Nov. 27, 1878.

The original MS. is in Buckingham Palace, and there are some interesting sketches (principally of Act iii.) in the Fitzwilliam Museum at Cambridge.

W. B. S.

SEMET, THÉOPHILE, born at Lille, Sept. 6, 1824. The prizes he gained at the local Conservatoire procured him a grant from the municipality to study in Paris, and he entered Halévy's class for composition. His first work was merely a few songs and some charming orchestral music for 'La petite Fadette,' vau-deville in two acts (Variétés, Dec. 28, 1850), but he at length procured a better opportunity, and his 'Nuits d'Espagne,' two acts (May 26), and 'La Demoiselle d'honneur,' three acts (Dec. 30), were both produced in 1857 with success at the Théâtre Lyrique; 'Gil Blas' (March 26, 1860), an opéra-comique in five acts, and 'Ondine,' three acts (Jan. 7, 1863), followed at the same theatre, and his next work, 'La petite Fadette' (Sept. 11, 1869), was produced at the Opéra-Comique.

Besides his operas he composed songs for a piece called 'Constantinople' (1854); songs; a cantata (performed at the Opéra, August 15, 1862); airs de ballet for 'Les Pirates de la Savane' (1867), and many part-songs, some of which, especially 'La Danse des Sylphes,' are remarkable. He was drummer at the Opéra for many years; he died at Corbeil, near Paris, April 15, 1888.

G. C.

SEMIBREVE (Lat. *Semibrevis*; Ital. *Semibreve*; Fr. *Ronde*; Germ. *Taktnote*, *Ganze Note*, whence the American term 'whole note'). Franco of Cologne, the earliest-known writer on measured music (*Cantus mensuralis*) who furnishes the types from which the forms of our modern notation are evidently derived, describes the semibreve as the shortest note in use, though no very long time elapsed before the minim was added to the list. The forms of these notes are generally supposed to have been suggested by those of the Neumes of an earlier period, the Breve and Semibreve being derived from the Punctum. Don Nicola Vicentino, however, in his *L'antica Musica ridotta alla moderna Pratica*, printed at Rome in 1555, refers the forms of all these notes to a different origin; deriving the Large, the Long, and the Breve from the *B quadratum*, or square B (■); and the Semibreve from the *B rotundum* (●); the transformation being effected, in each case, by depriving the figure of one or both of its tails. But Vicentino has fallen into so many palpable errors that we cannot trust him; and, in the present instance, his theory certainly does not accord with that early form of the Semibreve which is produced by cutting the Breve (■) in half, diagonally, thus, (∟). This form soon gave way to the Lozenge (♦ or ◇), which was retained in use until late in the 17th century, when it was replaced in measured music by the round note of our present system (○), though

Copyright by A. Dupont

MARZELLA SEMBRICH

in the Gregorian system of notation the lozenge remains in use to the present day.

Until the beginning of the 17th century, the Semibreve represented one-third of a Perfect Breve, and the half of an Imperfect one. In the Greater Prolation it was equal to three Minims; in the Lesser to two. In either case it was accepted as the norm of all other notes, and was held to constitute a complete measure or stroke. In the Greater Prolation—or, as we should now call it, triple time—this stroke was indicated by a single down-beat of the hand, representing what we write as a dotted Semibreve. In the Lesser Prolation—the common time of the modern system—it was indicated by a down and an up beat, called respectively the *Thesis* and the *Arsis* of the measure. It will be understood that these two beats represented two minims; and, happily for us, we are not left altogether in doubt as to the average pace at which these two Minims were sung, in the great polyphonic compositions of the 15th and 16th centuries: for, apart from the traditions of the Sistine Chapel, early writers have left a very definite rule for our guidance. The Thesis and Arsis of the Lesser Prolation, they say, represent the beats of the human pulse. Now, the rapidity of the human pulse, taking into calculation the variations exhibited at all ages, and in both sexes, ranges between 66·7 and 140 per minute: allowing, therefore, for roughness of calculation, we may say that the compositions of Josquin des Prés, and Palestrina, may be safely interpreted between $\text{♩} = 60$, and $\text{♩} = 140$ —a sufficiently extended range for any conductor.

In modern music the Semibreve retains more than one of the characteristics that distinguished it in the 15th and 16th centuries. It is now, indeed, the longest instead of the shortest note in common use, for the employment of the Breve is altogether exceptional: but it is none the less the norm from which all other notes are derived. We may say that, of all the notes now in use, the Semibreve is the one which unites us most closely to the system of those who invented the germ of the method we ourselves follow; and it furnishes the safest guide we know of to the right understanding of their works.

W. S. R.

SEMICHORUS, *i.e.* Half-chorus; a word used to denote a kind of antiphonal effect produced by employing half the number of voices at certain points, and contrasting this smaller body of sound with the full chorus.

M.

SEMICROMA (Lat. *Semichroma*; Eng. *Quaver*, or *Semiquaver*). The Italian name for the Semiquaver. Old writers, however, sometimes apply the term Croma to the crotchet, and Semicroma to the quaver; and, so vague was once the distinction between the two, that even Baretto, writing as late as 1824, makes

the word 'Croma' signify 'a crotchet or quaver.' The etymology of the word Croma is derived from the very early custom of using red notes intermixed with black ones. The red notes being sung more quickly than the black ones, the duration of a red minim was a little longer than that of a black Semiminim (or crotchet); and the note was called *Chroma* on account of its colour. [See NOTATION, QUAVER.]

W. S. R.

SEMIFUSA. The Latin name for the Semiquaver; but sometimes applied to the Quaver also. The etymology of the term is not very clear. The most probable theory is that which traces it to a fancied resemblance between the early form of the Quaver, and that of a spindle (*fusus*). [See NOTATION, QUAVER.]

W. S. R.

SEMIMINIMA MAJOR and MINOR (Eng. *Greater*, and *Lesser Half-Minim* = Crotchet, and Quaver; Ital. *Croma e Semicroma*; Germ. *Viertel und Achtel*; French *Noire et Croche*). Though the Minim was so called, because, at the time of its invention, it was the smallest (*i.e.* the shortest) of all notes, composers soon found it convenient to divide it in half, and even into four parts. Franchinus Gafurius, quoting from Prosdocimus de Beldemandis, describes and figures these divisions in his *Practica Musicae*, printed in 1496. The Greater Semiminima, the equivalent of the modern crotchet, was a black lozenge-headed note,

with a tail, ♩ ; the Lesser Semiminima, now called the quaver, was a similar note, with a

single hook, ♩ . Sometimes the head of the greater Semiminim was 'void'—that is to say, open or white—in which case, this note also had a hook, to distinguish it from the minim,

♩ ; and, when this hooked form was used, the figure which we have described above as proper to the Greater Semiminim was used for the Lesser one. When black and red notes were used together the red minim served as the diminutive of the black one; and the Semiminim was called *Chroma*, on account of its colour. This name was afterwards applied both to the Greater and the Lesser Semiminim; and hence it came to pass that, in later times, the term *Chroma* was applied indiscriminately to the crotchet and the quaver. [See NOTATION.]

W. S. R.

SEMIQUAVER (Lat. *Semifusa*; Ital. *Semicroma*, *Biscroma*, *Semifusa*; Germ. *Sechzehntel*, whence the American term, *Sixteenth Note*; Fr. *Double croche*). The sixteenth part of a semibreve.

The earliest mention of the Semiquaver occurs in the *Practica Musicae* of Franchinus Gafurius, printed at Milan in 1496. It may be found—though very rarely—in the printed polyphonic music of the 16th century, in the form of a black lozenge-headed note, with a double hook, ♩ or ♩ ; and it is manifestly

from this early type that our present figure is derived. In the 16th century both Semiquavers and Quavers were always printed with separate hooks. The custom of joining Quavers together by a single line, and Semiquavers by a double one, dates from the 17th century; and the credit of the invention is generally accorded to John Heptinstall, about 1690. [See NOTATION.]

W. S. R.

SEMIRAMIDE (*i.e.* Semiramis, Empress of Nineveh). A favourite subject with Italian writers of operas. Librettos upon it were written by Moniglia, Apostolo Zeno, and Silvani; and Clément's *Dictionnaire Lyrique* contains a list of twenty-one operas composed to one or other of these by the masters of the 18th century. Voltaire's play on the same subject was adapted to music and set by Graun (Berlin, 1754), and Catel (1802). Rossini's well-known *chef-d'œuvre* was written to a libretto by Rossi, and produced at Venice, Feb. 3, 1823; and in London, at the King's Theatre, July 15, 1824. In French, as 'Semiramis,' it appeared in Paris, July 9, 1860. —**SEMIRAMIDE RICONOSCIUTA**, words by Metastasio, was set by Vinci, Porpora, Cocchi, Sarti, Traetta, Meyerbeer, and Gluck—the last of these at Vienna in 1748.

G.

SEMITONE (from the Greek *ἡμιτόνιον*). Half a tone; the smallest interval in the ordinary musical scales. The semitone may be of different kinds, each of which has a different theoretical magnitude.

Since the invention of the diatonic scale the natural interval of the fourth has been subdivided artificially into two tones and a semitone. In the ancient Greek time the two tones were both what are now called *major* tones, and the hemitone had a magnitude determined by the difference between their sum and the fourth; but when harmony began to prevail, one of the tones was diminished to a *minor* tone, and this gave the modern semitone a little greater value. The semitone, so formed, as belonging to the diatonic scale (from B to C, or from E to F for example) is called a *diatonic* semitone.

The introduction of chromatic notes gave rise to a third kind of semitone, as from C to C♯ or from G to G♭; this is called a *chromatic* semitone and has a less magnitude than the diatonic one.

Finally came the great simplification of music by dividing the octave into twelve equal intervals, each of which was called a *mean* semitone; thus abolishing practically the difference between the diatonic and the chromatic values. A semitone may now be considered, in practical use, as simply the interval between the sounds given by any two adjoining keys on a well-tuned piano.

The relations between the theoretical magnitudes of the different kinds of semitones are about as follows: If we represent the magnitude of a mean semitone by 25, the true magnitude of a diatonic semitone will be about 28; of a chro-

matic semitone about 18; and of the ancient Greek hemitone about 23.

W. P.

SEMPLICE, 'simple'; a direction denoting that the passage so marked is to be performed without any adornment or deviation from the time, used particularly in passages of which the character might possibly be misunderstood. The Arietta which forms the subject of the variations in Beethoven's last PF. Sonata, op. 111, is marked 'Adagio molto semplice cantabile.'

M.

SEMPRE, 'always,' a word used in conjunction with some other mark of time or expression, to signify that such mark is to remain in force until a new direction appears. Its purpose is to remind the performer of the directions which might otherwise be forgotten—as in the scherzo of the Eroica Symphony, where the direction *Sempre pp. e staccato* is repeated again and again throughout the movement.

M.

SENAILLÉ, JEAN BAPTISTE, a violinist of eminence, at one time member of the band of Louis XV., born in Paris in the parish of Saint Germain l'Auxerrois on Nov. 23, 1687. He inherited his musical gifts from his father, who played the *hautbois* at the Opéra. He received his earliest violin instruction from Queversin, a member of the famous 'Vingt-quatre violons,' and during his period of study with this master assisted a *maître à danser* named Bonnefons. His next teacher was Corelli's excellent pupil Jean Baptiste Auet, generally known as Baptiste, whose teaching imbued him with such a longing to visit Italy that he travelled to Modena, where he became a pupil of Antonio Vitali. According to the account of Senaillé given by Jacques Lacombe in his *Dictionnaire Portatif des Beaux-arts* (Paris, 1752), Auet's teaching enabled his pupil to surpass the Italian violinist; for on his arrival at Modena, during the time of the annual fair held in the month of May, the composer of the opera then being performed, begged him to play in his orchestra, and on gaining his consent installed him with ceremony in a place prepared for him above the other members of the band. After the performance, he was presented to the Duke and Duchess of Modena: played several of his own sonatas before them and their guests with unqualified success, eventually receiving an appointment in the music of the court. In 1719 he seems to have returned to Paris, where the special recommendation of the Duchess of Modena, daughter of the Duke d'Orléans—at that time Regent of France—procured him a position in the Court band. A similar appointment was accorded him in the private band of Louis XV., and he held this until his death, when he was succeeded by Joseph Francœur.

Senaillé ranked as one of the best performers of his time in France. His importation of the Italian methods of playing influenced the French school—at that time in its first state of development—almost as much as did

Leclair. Through his two best pupils Guignon and Guillemain, his traditions were transmitted and preserved. His compositions show the influence of Corelli; they comprised five books of Sonatas for violin alone, and were published in books of ten sonatas in the following years: 1710, 1712, 1716, 1721, 1727. An Aria of his for Pf. and V. is included in G. Jensen's 'Classische Violin Musik,' Heft iii. A Sarabande and Allemanda (Sonate à violon seul) is arranged by Alfred Moffat. A Sonata in G edited by Alfred Moffat is in Simrock's 'Meister-Schule für Violine mit Begleitung des Pianoforte.' Alard includes Senaillé's Ninth Sonata in his 'Maîtres Classiques de Violon' (1862), and G. Jensen has arranged the same Sonata for piano and violin which is published in 'Classische Violin Musik,' 1890. A composition of Senaillé's is also to be found in E. M. E. Deldevez's 'Pièces diverses choisies' (Paris, Richault, 1858).—A. Vidal, *Les Instruments à Archet*; G. Hart, *The Violin and its Music*; Choron et Fayolle, *Dict. Hist. des Mus.*; Félix Huët, *Études sur les différentes Écoles de Violon*; Fétis, *Biog. des Mus.*; J. Lacombe, *Dictionnaire des Beaux-Arts*; Clarke, *Dict. of Fiddlers*. E. H. A.

SENESINO, FRANCESCO BERNARDI DETTO, one of the most famous of the sopranists who flourished in the 18th century. He was born about 1680, at Siena (whence he derived his name), and received his musical education from Bernacchi, at Bologna. In 1719 he was singing at the Court theatre of Saxony, and when Handel came to Dresden in quest of singers, was engaged by him for London. His first appearance in this country (Nov. 1720) was in Buononcini's opera 'Astarto,' which at once established him in public favour. He sang next in a revival of Handel's 'Floridante,' and in the celebrated 'Muzio Scevola'; afterwards in Handel's 'Ottone,' 'Flavio,' and 'Giulio Cesare' (1723), 'Tamerlano' (1724), 'Rodelinda' (1725), 'Scipio' and 'Alessandro' (1726), and in various operas and pasticcios by other composers. In 'Giulio Cesare' his declamation of the famous accompanied recitative 'Alma del gran Pompeo' created a special sensation. A writer in the *London Magazine* (Feb. 1733) relates an amusing anecdote of Senesino in this opera: 'When I was last at the opera of "Julius Cæsar," a piece of the machinery tumbled down from the roof of the theatre upon the stage, just as Senesino had chanted forth these words "Cesare non seppe mai che sia timore" (Cæsar never knew fear). The poor hero was so frightened that he trembled, lost his voice, and fell crying. Every tyrant or tyrannical minister is just such a Cæsar as Senesino.' 'Alessandro' had a run of two months, and its last performance, advertised for June 7, was prevented by the sudden illness of Senesino, who, as soon as he was able to travel, set off

for Italy, for the recovery of his health, promising to return the next winter. This promise, however, was not kept in time to enable the Opera-house to open till after Christmas.

Senesino reappeared in Handel's 'Admeto,' early in 1727. This was followed in the same year by 'Riccardo Imo,' and in 1728 by 'Siroe' and 'Tolomeo,' in which a great effect was made by the echo song, 'Dite che fa,' sung by Cuzzoni, with many of the passages repeated behind the scenes by Senesino. But now, after several unprosperous seasons, the society called the Royal Academy was dissolved. Hawkins attributes to this time the quarrel which ended in a final rupture between Senesino and the great composer. But this is disproved by the fact that Senesino returned to sing for Handel in 1730. That there was, however, much discord in the company before it separated is true enough.

He rejoined the Haymarket company, under Handel's management, at a salary of 1400 guineas, and appeared on Feb. 2, 1731, in 'Porc,' then considered a great success. In the same year were revived 'Rodelinda' and 'Rinaldo.' 'Ezio' and 'Sosarme' were produced in 1732. Besides singing in all these, Senesino took part (May 2, 1732) in 'Esther,' Handel's first oratorio, described as 'a new species of exhibition at the Opera-house,' and on June 10, in a curious performance, under the composer's own direction, of 'Acis and Galatea.' Several airs and three choruses were interpolated on this occasion, from Handel's early Neapolitan Serenata on the same subject, and the piece was sung partly in English and partly in Italian.

The last of Handel's operas in which Senesino appeared, was 'Orlando' (Jan. 1733), but he took part later in the same season in 'Deborah,' described then as an opera, and performed (as was 'Esther') on opera nights. The long impending quarrel now came to a crisis. 'All these wealthy adversaries of Handel naturally espoused the cause of Senesino from the outset . . . and ended by demanding that Senesino should be retained . . . Handel replied that Senesino should never reappear in his theatre.' (Schœlcher.) Accordingly, says Burney, 'the nobility and gentry opened a subscription for Italian operas at Lincoln's Inn Fields, inviting Porpora thither to compose and conduct, and engaging Senesino, Cuzzoni, Montagnana, Segatti, Bertolli, and afterwards Farinelli, to perform there.' There Senesino remained till 1735, when he returned to Siena, with a fortune of £15,000, and built himself a house.

Senesino's voice was a mezzo-soprano, or, according to some, a contralto. Although limited in compass it was considered by many good judges to be superior in quality even to that of Farinelli. It was clear, penetrating, and flexible, his intonation faultless, his shake

perfect. Purity, simplicity, and expressiveness were the characteristics of his style, while for the delivery of recitative 'he had not his fellow in Europe.'

In 1739 Senesino was living at Florence, and sang a duet with the Archduchess Maria Theresa there. He died about 1750. F. A. M.

SENFF, BARTHOLF, an eminent German music-publisher, was born at Friedrichshall, Coburg, Sept. 2, 1815. He founded the house which bears his name, in Leipzig, in 1850, and his catalogue contains original editions of Mendelssohn, Schumann, Brahms (opp. 5, 6, Gavotte by Gluck, 5 Studien für PF.), Gade, Hiller, Reinecke, Reitz, Rubinstein, and other masters, as well as the excellent educational works of Louis Köhler.

Senff was founder, editor, and proprietor of the well-known musical periodical *Signale für die musikalische Welt*. [See PERIODICALS, MUSICAL, vol. iii. p. 686a.] He died at Badenweiler, June 25, 1900. G.

SENFEL, or SENFEL, LUDWIG, born at Zurich towards the end of the 15th century. A volume of MS. songs in the Vienna library contains some verses, written and set to music by Senfl himself, describing his early enthusiasm for music, his education under Heinrich Isaac, and his gratitude to that master. At an early age he entered the Court chapel of Maximilian I., ultimately succeeded Isaac as chapel-master, and held that office till the emperor's death (Jan. 1519), on which occasion he wrote music to the words 'Quis dabit oculis nostris fontem lacrimarum.' In 1520 he was at Augsburg, received a present of fifty gulden from Charles V. on Feb. 19, and in the following November personally edited the 'Liber selectarum Canticorum,' one of the first music books printed in Germany. Thence he went to Munich, though in what capacity is uncertain. On one title-page (1526) he is called 'Musicus intonator,' on another (1534) 'Musicus primarius,' of the Duke of Bavaria, while in his own letters he subscribes himself simply 'Componist zu München.' The date of his death is unknown. In Förster's collection of Liedlein (preface dated Jan. 31, 1556) he is spoken of as 'L. S. seliger' (i.e. dead); and if the title 'musicus primarius' stands for 'chapel-master' he must have died or retired some years before, since Ludwig Daser had held that office for some years when Lassus went to Munich in 1557.

The well-known letter from Luther to Senfl¹ is no evidence that the composer had worked specially for the Reformed Church, though the existence of the correspondence has given rise to that idea. Indeed his connection with the strictly Catholic court of Munich would, as Fétis points out, render it most improbable.² Four letters written by Senfl to the Margrave

Albrecht of Brandenburg and to Georg Schultheis are printed in the *Allgemeine Musik. Zeitung*, for August 12, 1863.

A portrait engraved on a medal by Hagenauer of Augsburg, with the inscription 'Ludovvici Senfl,' and on the reverse 'Psallam deo meo quamdiu fuero 1529,' is in the collection of coins and medals at Vienna.

The royal library at Munich contains the manuscript church service books begun by Isaac and completed by Senfl, as well as manuscript masses by the latter. His most important published works are (1) 'Quinque salutationes D. N. Hiesu Christi,' etc. (Norimbergae, 1526); (2) 'Varia carminum genera, quibus tum Horatius, tum alii egregii poetae . . . harmoniis composita' (*Id.* 1534); (3) '121 neue Lieder' (*Id.* 1534), with 81 nos. by L. S.; (4) 'Magnificat octo tonorum,' a 4, 5 (*Id.* 1537); (5) '115 guter neuer Liedlein' (*Id.* 1544), with 64 nos. by L. S. Besides these Eitner³ names above 100 separate pieces printed in various collections of the 16th century. (See the *Quellen-Lexikon*.) In modern notation nine sacred pieces (a 4) are given by Winterfeld in *Der evangelische Kirchengesang* (Leipzig, 1843), and five Lieder by Liliencron in *Die historischen Volkslieder der Deutschen* (Leipzig, 1865-69). J. R. S.-B.

SENNET—also written SENET, SENNATE, SYNNET, CYNET, SIGNET or SIGNATE—a word which occurs in stage-directions in the plays of the Elizabethan dramatists, and is used to denote that a particular fanfare is to be played. The name is probably derived from Seven, and may indicate a flourish of seven notes, as suggested in Stainer and Barrett's *Dictionary of Musical Terms*. It is a technical term, and what particular notes were played is now unknown. A Sennet was distinguished from a Flourish, as is proved by a stage-direction in Dekker's *Satiromastix*, 'Trumpets sound a flourish, and then a sennate.' (Nares's *Glossary*.) W. B. S.

SENZA, 'without'—as *Senza organo*, 'without organ'; a direction of frequent occurrence throughout Handel's organ concertos; *Senza ripetizione*, 'without repeat' [see REPEAT]; *Senza tempo*, 'without time,' which occurs in Schumann's Humoreske, op. 20, in the movement marked Precipitoso. The right hand is marked *Come senza tempo* ('Wie ausser tempo,' in German), while the left remains *in tempo*. The same direction is employed at the end of Chopin's Nocturne, op. 9, No. 3. In the 'Sanctus' of Verdi's Requiem both the terms *senza misura* and *senza tempo* occur. M.

SEPTAVE. The compass of seven diatonic notes reckoned upward from the tonic or key-note. The term is occasionally employed by organ-builders. T. E.

SEPTET (Fr. *Septuor*; Ital. *Septetto*). A composition for seven instruments or voices, with or without accompaniment.

¹ Dated Coburg, Oct. 4, 1530. The letter is printed in *Dr. M. Luther's Gedanken über die Musik*, F. A. Beck (Berlin, 1828), p. 65.

² *Biographie des Musiciens*, vi. 44.

³ *Bibliographie* (Berlin, 1877).

Beethoven's famous Septet for strings and wind naturally heads the list, and Hummel's for piano, strings, and wind is the next best known, though it is far inferior to Spohr's difficult and brilliant work for a similar combination (op. 147). A striking, though too seldom heard composition, is Saint-Saëns's Septet for piano, strings, and trumpet, op. 65.

Operatic situations have seldom given rise to, or opportunity for, vocal septets, but the magnificent specimen in the last act of Goetz's 'Taming of the Shrew' deserves foremost mention.

F. C.

SEQUENCE is generally taken to mean the repetition of a definite group of notes or chords in different positions of the scale, like regular steps ascending or descending, as in the following outlines :—

The device has been a favourite one with composers, from Corelli, Bach, and Handel, to Schumann, Brahms, and Wagner. The reason is partly that it is so thoroughly intelligible without being commonplace. The mind is easily led from point to point by recognising each successive step after the first group of chords has been given, and is sufficiently interested by the slight amount of diversity which prevails at each repetition. It thus supplies a vital element of form in a manner which in some cases has certain advantages over simple exact repetition, especially when short phrases are repeated in juxtaposition. It was consequently made much use of by early composers of sonatas, and instrumental works of like nature, such as Corelli and his immediate successors; and in many cases examples make their appearance at analogous points in different movements, indicating the recognition of formal principles in their introduction. This occurs, for instance, near the beginning of the second half in the following movements from Corelli's Opera Quarta: Corrente and Allemanda of Sonata 1, Allemanda and Corrente of Sonata 2, Corrente of Sonata 3, Corrente and Giga of Sonata 4, Gavotte of Sonata 5, Allemanda and Giga of Sonata 6, and so forth. A large proportion of both ancient and modern sequences are diatonic; that is, the groups are repeated analogously in the same key series, without consideration of the real difference of quality in the intervals; so that major sevenths occasionally answer minor sevenths, and diminished fifths perfect fifths, and so forth; and it has long been considered allowable to in-

troduce intervals and combinations, in those circumstances, which would otherwise have been held inadmissible. Thus a triad on the leading note would in ordinary circumstances be considered as a discord, and would be limited in progression accordingly; but if it occurred in a sequence, its limitations were freely obviated by the preponderant influence of the established form of motion. Such diatonic sequences, called also sometimes diatonic successions, are extremely familiar in Handel's works. A typical instance is a Capriccio in G major, published in Pauer's 'Alte Meister,' which contains at least fifteen sequences, some of them unusually long ones, in four pages of Allegro. The subject itself is a characteristic example of a sequence in a single part; it is as follows :—

A kind of sequence which was early developed but which is more characteristic of later music, is the modulatory sequence, sometimes also called chromatic. In this form accidentals are introduced, sometimes by following exactly the quality of the intervals where the diatonic series would not admit of them, and sometimes by purposely altering them to gain the step of modulation. This will be easily intelligible from the following example :—

The usefulness of the device in such circumstances is, if anything, even more marked than it is in a single key, because of the greater breadth of range which it allows, and the closeness and cogency of the successive transitions which it renders possible. A compact and significant example to the point is the following from a fugue by Cherubini in C major :—

Beethoven made very remarkable use of this device, especially in the great Sonata in B♭, op. 106, from which an example is quoted in the article MODULATION [vol. iii. p. 239]. The 'working out' portion of the first movement of the same sonata is an almost unbroken series of sequences of both orders; and the introduction to the final fugue is even more remarkable, both for the length of the sequence, and the originality of its treatment. The first-mentioned,

which is from the slow movement, is further remarkable as an example of a peculiar manipulation of the device by which modern composers have obtained very impressive results. This is the change of emphasis in the successive steps of which it is composed. For instance, if the characteristic group consists of three chords of equal length, and the time in which it occurs is a square one, it is clear that the chord which is emphatic in the first step will be weakest in the next, and *vice versa*. This form will be most easily understood from an outline example:—

A passage at the beginning of the Presto at the end of Beethoven's *Leonora Overture*, No. 3, is a good example of a sequence of this kind in a single part. It begins in the following quotation at*

The extension of the characteristic group of a sequence is almost unlimited, but it will be obvious at once that in harmonic sequences the shorter and simpler they are the more immediately they will be understood. In long-limbed sequences the hearer may soon perceive that there is a principle of order underlying what he hears, though its exact nature may always elude his apprehension, and in respect of the larger branches of form this is a decided advantage. Among short-limbed emphatic sequences in modern music, the one of eight steps which occurs towards the end of the first full portion of the overture to 'Die Meistersinger' is conspicuous, and it has the advantage of being slightly irregular. The long-limbed sequences are sometimes elaborately concealed, so that the underlying source of order in the progression can only with difficulty be unravelled. A remarkable example of a very complicated sequence of this kind is a passage in Schumann's *Fantasia* in C major (op. 17), in the movement in E \flat , marked 'Moderato con energia,' beginning at the 58th bar. The passage is too long to quote, but the clue to the mystery may be extracted somewhat after this manner:—

In order to see how this has been manipulated reference must be made to the original.

A species of sequence which is familiar in

modern music is that in which a figure or melody is repeated a tone higher; this has been termed a *Rosalia*. [See *ante*, p. 141.] Another, which is equally characteristic, is a repetition of a figure or passage a semitone higher; an example from the *Eroica Symphony* is quoted in vol. iii. p. 235 of this Dictionary.

The device has never been bound to rigid exactness, because it is easy to follow, and slight deviations seasonably introduced are often happy in effect. In fact its virtue does not consist so much in the exactness of transposition as in the intelligibility of analogous repetitions. If the musical idea is sufficiently interesting to carry the attention with it, the sequence will perform its function adequately even if it be slightly irregular both in its harmonic steps and in its melodic features; and this happens to be the case both in the example from the slow movement of Beethoven's *Sonata* in B \flat , and in the passage quoted from Schumann's *Fantasia*. It is not so, however, with the crude harmonic successions which are more commonly met with; for they are like diagrams, and if they are not exact they are good for nothing.

C. H. H. P.

SEQUENTIA (*Prosa*; Eng. *Sequence*, or *Prose*). A hymn of peculiar structure, which owes its name to its position in the Mass; it appears there as the continuation or sequence of the Gradual and Alleluia. It originally was a long jubilee or melody without words, attached to the *a* of the Alleluia. (See *TROPE*.) In the 9th century in France words were adapted to the notes, and these were called a 'Prose,' because they followed the lines of the music and not any scheme of metre. When these compositions had thus won a place for themselves, fresh ones came to be written in regular metre, and the old name *Prose* being unsuitable gave way to the new name *Sequence*. From the 12th century to the 15th century such compositions were most popular; and many of the most beautiful specimens we possess were written by the great Hymnologists who flourished during these productive periods. Mediæval Office-Books contain innumerable sequences of striking originality; but at the last revision of the Roman liturgy, by direction of the Council of Trent, the greater number of these were expunged. Five, however, have been retained in the current missal; and these five occupy a very prominent position in the services in which they are incorporated, as well as in the history of ecclesiastical music.

1. The sequence appointed for Easter Sunday is 'Victimæ paschali,' the oldest now in use, and in reality a *Prose*, written by Wipo in the first half of the 11th century.

2. The sequence for Whitsunday, 'Veni Sancte Spiritus,' in rhymed triplets of Trochaic Dimeter Catalectic, was written probably by Innocent III. at the end of the 12th century;

it is called by mediæval writers, 'The Golden Sequence.'

3. For the festival of Corpus Christi, S. Thomas Aquinas wrote the celebrated sequence, 'Lauda Sion,' which is generally believed to date from about the year 1261.

4. To Innocent III. is also attributed the 'Stabat Mater,' sung since 1727 on the 'Feasts of the Seven Dolours of Our Lady' (the Friday in Passion Week, and the third Sunday in September). The authorship, however, has not been certainly ascertained; and many are inclined to attribute it to Jacobus de Benedictis (Jacopone). (See STABAT MATER.)

5. Even more celebrated than any of these is the 'Dies iræ' written, during the latter half of the 12th century or beginning of the 13th century, by Thomas of Celano, and sung in the 'Requiem,' or Mass for the Dead. In the triple stanzas of this wonderful poem the rhymed Latin of the Middle Ages attained its highest perfection; and, though the 'Stabat Mater' is frequently said to be second only to it in beauty, the distance between the two is very great.

The plain-chant melodies of sequences differ from hymn melodies in their structure. The ancient jubilus was divided into sections, each of which was sung twice, and consequently a sequence melody properly consists of a series of phrases each of which is repeated. Similarly a sequence is a series of verses each dual in structure and consisting of strophe and antistrophe. They may be represented by the formula *aa' : bb' : cc'*, etc. In the early rhythmical proses *a, b, c*, etc., are usually unlike one another; in the later metrical proses for the most part the same scheme runs throughout the words though the music varies. The 'Dies iræ' is irregular and does not conform to the usual type, because it was not originally a sequence at all. All of these, and other sequences besides, are found in use in whole or in part in Anglican services. For 'Dies iræ' see *Hymns Ancient and Modern* (new edition), 302, *English Hymnal*, 351; 'Lauda Sion,' *E. H.* 317; 'Stabat Mater,' *H. A. and M.*, 132, *E. H.* 115, in part; 'Veni sancti Spiritus,' *H. A. and M.* 184, *E. H.* 155; 'Victimæ paschali,' *E. H.* 130. Compare an early French rhythmical prose 'Salus Aeterna,' *E. H.* 10; and contrast it with a late metrical sequence such as 'Sponsa Christi,' *H. A. and M.* 245, *E. H.* 253, both as regards text and melody.

In addition to these plain-song melodies, we possess innumerable settings of all the sequences now in use, by the great masters of the Polyphonic School; and many by the classical composers of the 18th and 19th centuries. For these see *DIES IRAE*; *LAUDA SION*; *STABAT MATER*; *VENI SANCTE SPIRITUS*; and *VICTIMÆ PASCHALI*. W. S. R.; revised by W. H. F.

SERAGLIO, THE. (i.) The English title of an adaptation (produced 1827) of Mozart's *ENTFÜHRUNG AUS DEM SERAIL*. See vol. i. p. 784.

(ii.) An opera by Charles Dibdin under this title was produced at Covent Garden, Nov. 14, 1776. Dibdin being then in France, Dr. Arnold, composer to the theatre, had some share in the musical part of it, but it contains Dibdin's fine song 'Blow high, blow low' sung in the opera by Reinhold, and afterwards introduced by Bannister into Arne's opera 'Thomas and Sally.' The opera had very little success, but both libretto and the music were published. Harris the Covent Garden manager had altered the piece considerably for acting purposes. F. K.

SERAPHIN, SANCTUS (or SANTO SERAFIN) and GIORGIO (uncle and nephew), two celebrated violin-makers of Venice. The uncle, as his label informs us ('Sanctus Seraphin Utinensis fecit Venetiis'), was originally of Udine, a town in the Venetian territory towards the mountains of Carinthia, and probably of Jewish extraction. His violins date from about 1710 to 1740. The nephew, if we may judge from the style of his instruments, worked with the uncle many years, and appears to have succeeded him in the business. The instruments of Sanctus Seraphin occupy a middle place between the Italian and the Tyrolese school. As far as external appearance goes, the maker seems to vacillate between the model of Stainer and that of Nicholas Amati. But in the essential particulars of the art, in the selection of wood of the finest and most sonorous quality, in the proper calculation of the proportions, and the solidity and finish of the parts, he worked on the principles of the Cremona makers. Few equalled him as a workman. Those who wish to see how far mechanical perfection can be carried should examine Seraphin's purfling with a magnifying glass. In Seraphin's earlier years the Stainer character predominates in his instruments; in his later years he leaned to the Amati model. His instruments are famous for their perfect finish (reminding forcibly of the style of Stradivarius), their remarkably lustrous deep red varnish, and fine mellow tone.

[The period of Sanctus Seraphin's activity extends from about 1678 to 1735. He worked in Udine for nearly twenty years, and during that time he employed an engraved label of large dimensions which runs: 'Sanctus Seraphinus Nicolai Amati Cremonensis Alumnus faciebat: Udine A. 16': It is worthy of note that the dates on Seraphin's labels are in accordance with the rest of his work, neatly written in, and not bungled, as is frequently the case with his contemporaries. The Venetian label quoted at the beginning of this article is larger than any label to be found in a Cremona instrument. The legend on Seraphin's ticket is framed by a design composed on three sides

of graceful carving strokes, while the upper side is formed of two fern leaves and elegant curves. On either side there are respectively some rolls of music and a violin. Representations of this ticket are given by M. Laurent Grillet in his *Ancêtres du Violon* and also in Herr von Lutgendorff's *Die Geigen und Lautenmacher*. One of the finest known examples of this maker's work was a violoncello lent to the South Kensington Special Loan Exhibition by its owner Mr. H. B. Heath in 1872.]

George Seraphin followed his uncle's later model with such precision that it is difficult to find any point of difference. Like his uncle, he finished his instruments to a degree of perfection which amounts to a fault, depriving them, as it does, of character and individuality. Like his uncle, he used a large copper-plate label (nearly all the Italian makers used letterpress labels) bearing the inscription 'Georgius Seraphin Sancti nepos fecit Venetiis (1743).' Both makers branded their instruments at the tail-pin. Their works are not common in England, and specimens in good preservation realise from £50 upwards.

[A superb violin of Sanctus Seraphin which belonged to Messrs Barré and Bayly's collection realised £280, at a sale by auction in 1894, while a violoncello by the same maker, the property of James Goding, Esq., was sold in a like manner for £56:14s. in 1857. According to Von Lutgendorff, George Seraphin was not Sanctus Seraphin's nephew but his grandson.—Von Lutgendorff, *Die Geigen und Lautenmacher*; Charles Reade, *A Lost Art Revived*; Alberto Bachmann, *Le Violon*; J. M. Fleming, *Old Violins*; Laurent Grillet, *Les Ancêtres du Violon*; G. Hart, *The Violin*; A. Vidal, *Les Instruments à Archet*.] E. J. P.; with additions in square brackets, by E. H.-A.

SERAPHINE. In vol. ii. p. 303a reference is made to the seraphine as a precursor of Debain's **HARMONIUM**. It was an English free-reed instrument resembling the German Physharmonica, which latter was brought to England by the Schulz family in 1826. In 1828 a similar instrument, but named Aeol-harmonica, was played by young Schulz at a Philharmonic Concert (Concertante for Aeol-harmonica and two guitars, April 28). In 1833, John Green, who had been Clementi's traveller, and had a shop in Soho Square, brought out the Seraphine. Green engaged Samuel Wesley to give weekly performances upon the seraphine at his shop, and managed for some time to dispose of his instruments at 40 guineas each. But the seraphine was harsh and raspy in tone, and never found favour with sensitive musicians. The wind apparatus, similar to the organ, was a dead-weighted bellows giving a uniform pressure, and a swell was produced by opening a shutter of a box placed over the reeds.

In the year 1841, Mr. W. E. Evans invented

the 'Organo Harmonica,' the improvements on the seraphine consisting of thin steel reeds artistically voiced, and coiled springs in the reservoir to enable the player to produce a rapid articulation with a small wind pressure, and to increase the power of tone as the reservoir filled. Eminent musicians publicly pronounced Mr. Evans's instrument more valuable than the seraphine as a substitute for the organ, but neither the one nor the other was capable of what is now known as 'dead expression.'

Patents for various improvements of the seraphine were taken out by Myers and Storer in 1839, by Storer alone in 1846, and by Mott in the same year. There is further reference to it in patents of Pape 1850, and Blackwell 1852. About the last-named date it was entirely superseded by the harmonium.

A. J. H.

SERENADE (Ital. *Serenata*; Fr. *Sérénade*; Germ. *Ständchen*). Evening song, from the Italian *sera*. Hence the word has been applied, indiscriminately, to many different kinds of music intended to be sung or played at night in the open air; and so generally has this connection of ideas been accepted that, by common consent, the term 'Serenade' has identified itself in many languages with the song sung by a lover standing beneath his mistress's window, or the concert of instrumental music substituted for it by an admirer with 'no voice for singing.'

To be true to nature, a serenade of this kind should be simple, melodious, sensuous in expression, and accompanied by some kind of instrument which the lover might carry in his hand. All these conditions are fulfilled in the most perfect example of the style that ever has been, or is ever likely to be written—'Deh vieni alla finestra,' in 'Don Giovanni.' The melody of this is as artless as a folk-song, yet capable of breathing the very soul of voluptuous passion.

[If Mozart created the perfect type of vocal serenade in the song just mentioned, such things as his 'Hafner Serenade' have served as the model of the instrumental serenade, which, like the *divertimento*, is generally in a large number of short movements. The two Serenade trios of Beethoven (opp. 8 and 25) are illustrious specimens of the forms in which each section is of the most concise structure and built upon melodic themes that are easily recognisable by the untutored ear. Two serenades by Brahms are among his earlier works; the first, op. 11, is for full orchestra, in D; and the second, op. 16 in A, has no violins. It does not appear that the German equivalent, *Ständchen*, has found much favour with the composer of instrumental Serenades.]

W. S. R.

SERENATA (Ital. *Serenata*; Fr. *Sérénade*; Germ. *Serenade*). Though the terms *Serenata* and *Serenade* are generally regarded as interchangeable—so nearly synonymous, that we have no choice but to give the one as the trans-

lated equivalent of the other—they mean, in musical language, two very different things.

The vocal Serenata may be considered as a form of Cantata, which may be either dramatic or imaginative, or even a simple Ode on any subject not actually sacred. Handel applied the term to his Italian Pastoral, 'Aci, Galatea, e Polifemo,' written at Naples in 1709; to the Ode composed for the Birthday of Anne of Denmark in 1712; and to the English Pastoral 'Acis and Galatea,'¹ written at Cannons in 1720.

We must not omit mention of a Serenata by Stradella in which two lovers, each with his orchestra *in a coach*, serenade a lady, a work which is famous because Handel appropriated a great deal of it in 'Israel.' It was republished as No. 3 of Chrysander's *Supplemente* to the edition of Handel. [See vol. i. p. 535, vol. ii. p. 514.]

The form of the Instrumental Serenata is much more clearly defined, and comprised within much narrower limits. It was very popular during the latter half of the 18th century; and, for some considerable time, occupied a position midway between those of the Orchestral Suite which preceded, and the Symphony which followed it. From the former it borrowed the multiplicity, and from the latter the colouring, of the long series of lightly developed movements of which it usually consisted. Neither the sequence nor the structure of these movements was subject to any very rigid law. Two forms, however, were considered so necessary that they may almost be described as indispensable—the March and the Minuet. With the former almost every Serenata of any consequence began or ended. The latter was almost always interposed between two Allegros, or an Allegro and an Andante, or, indeed, between any two movements of any other kind; and used so freely that it frequently made its appearance several times in the course of a composition of importance. The Gavotte and Bourrée so freely used in the elder Suite were completely banished from the Serenata. When wind instruments alone were employed, the composition was often called 'Harmoniemusik'; and this term was so generally received that music for wind instruments is popularly called 'Harmonie' in Germany to the present day. The term Cassation was also frequently applied to works of this kind, whether written for the full orchestra or for wind instruments alone; and many pieces, not differing very much from these, were called Divertimenti. Sometimes the number of Instruments employed was very small, for the Serenata was almost always intended for private performance, and it was a matter of necessity that it should accommodate itself to the resources of the particular establishment for which it was intended. W. S. R.

SERES, WILLIAM, an early music-printer

¹ Called also, in early copies, 'Opera,' 'Mask,' and 'Pastoral.'

associated with John Day and others, had a privilege for printing psalters, etc. He was working in 1548, and was one of the early members of the Stationers' Company, filling the offices of Warden and Master. His shop was 'at the signe of the Hedge Hogg.' One of his noteworthy works is Francis Seagar's 'Certayne Psalms select out of the Psalter of David, drawn into English metre with notes to every Psalm in iiij parts to Synge,' 1553. F. K.

SERGEANT TRUMPETER. See TRUMPETER.

SERMISY, CLAUDE DE, one of the group of French musicians connected with the Chapelle du Roy early in the 16th century, was born about 1490. The following information is based on the researches of the learned M. Michel Brenet (*Sammelbände* of the Int. Mns. Gesell. 1904). Sermisy is first heard of in 1508, when he was appointed 'clerc musicien' in the Sainte-Chapelle du Palais at Paris, his name appears in the Sainte-Chapelle registers as Claude de Cermisy. He was there for a short period, as before 1515 he became a 'chanteur' in the Chapelle de musique du Roy, at that time Louis XII. This post was equivalent to the English 'Gentleman of the Chapel Royal,' and as a chanteur his name occurs in a list of the musicians who were present at the funeral of Louis XII. He eventually succeeded Antoine de Longueval as sous-maître of the Chapelle. In the accounts of payments to the various members of the chapelle in 1533, recently published by M. Brenet, there are some entries concerning Claude de Sermisy. As sous-maître he received the sum of 400 livres tournois (= 2400 francs), his wages for the said year, and a sum of 1080 livres tournois (= 6480 francs) for the feeding and maintenance of the Children of the Chapelle royale for the year, and another sum of 240 l. t. (= 1440 francs) for care of the books belonging to the Chapelle and for the procuring of singing boys, 'pour envoyer quérir des chantres.' This shows his position as sous-maître to have been similar to that of the English 'master of the Children of the Chapel Royal,' who also received like payments, and fees for journeys made to 'press' children for the service of the Chapel.

On Sept. 20, 1533, Sermisy was made a Canon of La Sainte-Chapelle, which gave him a residence and a large salary, and only imposed the obligation of officiating at certain ceremonies; he retained therefore his post of sous-maître, although he and Louis Hérault are mentioned as joint possessors of the office in 1547, when François I. died. They continued to hold it under Henri II. As a member of the Chapelle du Roi, Sermisy was present on three historical occasions, first at the meeting of François I. with Pope Leo X. at Bologna in 1515, when the French singers vied with the Papal Choir; then in 1520 when François I. and Henry VIII. met at the Field of the Cloth of Gold, and again

in 1532 when they met at Boulogne; on both occasions the English and the French musicians delighted their hearers with their performances.

A work published in 1554, the *Rudiments de Musique* by Maximilien Guillaud, was dedicated to the 'excellent musicien Monsieur Maistre Claude de Sermisy, maistre de la Chapelle du Roy, et chanoins de la Sainte-Chapelle du Palais Royal à Paris; 15 Septembre, 1552.' Sermisy probably resigned the post of sous-maître soon after this date, but retained his connection with La Sainte-Chapelle until August 16, 1561, his name then appearing for the last time on the rolls of the Chapter meetings. He died in 1562.

Four part-books containing twenty-eight motets composed by Sermisy were published in 1542: 'Nova et prima motetorum editio 6, 5, 4, 3, et 2 vocum, Lib. 1, 2, 3, Paris.' Pierre Attaignant.

Claude de Sermisy, or Claudin as he is almost invariably called in music-books, shows an extraordinarily wide range as a composer; love songs, masses, motets were published in rapid succession, and retained their popularity for many years after his death, if one may judge by the number of reprints of his works.

Upwards of 200 of his chansons were included in the various collections of the period.

The set of song-books published by Pierre Attaignant in Paris, commencing in January 1529, with the 'Trente et huyt chansons musicales à quatre parties,' which were continued until 1535, contained ninety-two chansons by Claudin. The same publishers commenced a new series in 1538, 'Premier livre contenant xxv chansons nouvelles à quatre parties'; in this set, up to the 'vingtseptiesme livre' in 1548, there were thirty-five chansons by Claudin. About the same time Jacques Moderne in Lyons was publishing the various volumes of 'Le Parangon des Chansons,' and in the 2nd, 3rd, 4th, 7th, 9th, and 10th volumes (1538-43), which were often reprinted, Claudin was represented by about twelve different songs. In Venice the 'Primo libro de le Canzoni francese,' published by Scotto in 1535, included 'Faict ou failly,' for four voices, by Claudin. While at Anvers, Tylman Susato printed, in 1544, Claudin's 'O combien est malheureux,' in the 'Quatriesme livre des chansons à quatre parties.' In Paris, Attaignant's song-books were being replaced by Nicolas Du Chemin's publications, the Premier, Second, and the 'Quart livre du recueil contenant . . . chansons à quatre parties' in 1551, contained altogether fifteen of Claudin's chansons. Shortly before his death, Adrian Le Roy and Robert Ballard of Paris, the widely known 'imprimeurs du roy,' who published much of the music of the 16th century, produced the 'Livre de meslanges, contenant six vingtz chansons des plus rares . . . soit des auteurs antiques, soit des plus memorables de

notre temps,' 1560, which contained Claudin's 'Peins et travail me faut' for six voices.

Claudin's claim to be a pupil of the great Josquin rests on a phrase in the preface to this volume: 'Josquin des Prez, hennuyer de nation, et ses disciples, Mouton, Claudin, Jaquet,' etc. The same publishers also issued in 1571 the 'Second recueil . . . de chansons à quatre parties,' in which were eight chansons by Claudin. There is one song in Granjon's 'Trophées, livre 2.' there are four in 'Il primo libro di madrigali d'Archadelt a tre voci' (Venetia, Gardano, 1559); another, 'On en dire ce qu'on,' in the 'Troisième livre delle muse a tre voci' (Venice, Scotto, 1562), and three more in the 'Primo libro de canzon francesca a due voci' (Venice, Antonio Gardano, 1564).

In 1532 Attaignant issued seven volumes of Masses by various composers, these included the following by Claudin for four voices:

- Liber I. Secunda est 'Philomena prævia.'
 .. II. Secunda est 'Missa IX lectionum.'
 .. III. Prima est 'Missa plurimum motetorum.'
 .. IV. Secunda est 'Missa pro defunctis.'
 .. VII. Prima est 'Domini est terra.'

In 1534 Attaignant published:

Missarum musicalium ad quatuor voces, pares. Liber II. 'Tota pulchra,' Claudin; 'Missa ad plautum,' Claudin; etc.
 Liber III. 'Missa Dominus quis habitabit,' Claudin. Paris, 1540.

In 1556 Nicolas Du Chemin published in Paris a great collection of Masses, among them:—

Missa cum quatuor vocibus. Ad imitationem moduli: 'Ab initio' condita. . . auctore D. Claudio de Sermisy Begio Symphoniarum ordini præfecto et in regali parisiensi palatii sacello canonico.
 Missa cum quatuor vocibus. Ad imitationem cantionis: 'Voulant l'honneur' condita, etc.
 Missa cum quatuor vocibus paribus. Ad imitationem moduli: 'Tota pulchra' est condita, etc.
 Missa cum quinque vocibus. Ad imitationem moduli: 'Quare fremuerunt gentes' condita, etc.

Three of the masses printed in 1532 were reissued:—

Missæ tres Claudio de Sermisy Regii Sacelli magistro, præstantissimo musico auctore . . . cum quatuor vocibus . . . 'Novem lectionum' fol. 2; 'Philomena prævia' fol. 13; 'Domini est terra' fol. 23.
 Lutetiae 1558 apud Adrianum Le Roy et Robt. Ballard, folio.

There was another edition in 1583. The same publishers in the 'Missæ tres a Claudio de Sermisy, Joannes Maillard, Claudio Goudimel, cum quatuor vocibus conditæ,' 1558, included Claudin's 'Missa plurimum modulorum.' His motets were published in such collections as the 'Fior de motetti' (? 1526), the 'Motetti del fiore' (1532). Rhaw's 'Tricinia' (1542), and Oehsenkuhn's 'Tabulatur Buch' (1558).

MS. copies of Claudin's music are to be found in different foreign libraries, in Rome, Berlin, Cambrai, Bologna, in the Dresden Royal Library, MS. 1270, No. 5, a 'Laudate Dominum' for six voices by Claudin; in the Munich Royal Library, MSS. 69, 92, and 132 contain motets and MSS. 202, 204, 205, and 207 various chansons, all were published in the 16th century.

Of modern reprints, M. Henri Expert's publication 'Les maîtres musiciens' includes Attaignant's 'Trente et un chansons' (1529), of which

eleven were composed by Clandin. Three chansons are in vol. 23, of the 'Publikation älterer prakt. und theoret. Musikwerke,' Leipzig, 1899. Commer ('Coll. op. mus.' vol. xii.) reprints three, the melodies of which were used for Psalms lxxii., ciii., and cxviii., in the 'Souter Liedekens,' Antwerp, 1540. Otto Kade in his book *Die ältere Passionskomposition*, Gütersloh, 1893, treats very fully of Clandin's Passion music, published by Attaignant in 1534. c. s.

SEROV, ALEXANDER NICHOLAEVICH, composer and critic, born Jan. 23, 1820, in St. Petersburg, died in the same city, Feb. 1, (Jan. 20, O.S.), 1871. The son of a government official, he was educated at the School of Jurisprudence, where he only made one intimate friend, Vladimir Stassov, destined afterwards to be his stoutest opponent in matters of art. In his *Reminiscences of the School of Jurisprudence* Stassov has given an interesting account of Serov's student days. He left the institution with a decided hankering after an artistic career, but accepted a clerkship in a government office in obedience to his father's wish. He found, however, some leisure for musical pursuits, studied the violoncello and was busy with the project of composing an opera. From his correspondence with Stassov we gather that he cherished vague, ambitious plans which were hindered by lack of technical training, and by the unsympathetic attitude of his father. In 1848 he was transferred from the capital to the dull provincial town of Simferopol, which proved fatal to his musical schemes. Nevertheless his determination to acquire further technical knowledge was unshaken. Through Stassov he obtained an introduction to the famous theorist Hunke, then living in Petersburg, who undertook to instruct him in counterpoint by correspondence. The method was not very successful, and Serov's progress was slow. It is evident that he was often tempted to throw up his official position for art's sake, but his father sternly discountenanced such a proceeding. Nevertheless, his feeling for music continued to assert itself, and as his ideas assumed more definite shape, he turned to criticism, which at that time was at a low ebb in Russia. His first articles in the Russian *Contemporary* in 1851 created something like a sensation, because he brought to bear upon his æsthetic criticism a highly cultivated intelligence, a distinctive style, and an effective, if ponderous, irony. His early articles dealt with Mozart, Beethoven, Donizetti, Rossini, Meyerbeer, and Spontini, and in discussing the last-named he explained and defended the historical ideal of the music-drama. Considering that at this time Serov was practically ignorant of Wagner's works, the conclusions which he draws do credit to his reflection and foresight. His writings have now lost much of their value because of their polemical character. With

one hand Serov pointed to the great musical movement in Western Europe; with the other he sought to blind the eyes of Russian society to the awakening which was taking place within. It was not until after his visit to Germany in 1858, from which—in his own words—he returned 'Wagnermad,' that he took up a distinctly hostile attitude to the New Russian School which was striving to express in music the spirit of the race. Then followed that long polemic between Serov and Stassov which was only a side episode in that greater conflict between Western and Slavophil, the echo of which has hardly yet died away. In spite of great popular authority, Serov's position in 1860 was in many respects an isolated and unenviable one. There was neither place nor need for an ardent Wagnerian propaganda in Russia. Between his ungenerous depreciation of the new school and his lukewarm attitude towards Rubinstein, Serov's influence began to wane. Serov had passed his fortieth year before he set to work upon his first opera 'Judith.' With extraordinary energy and determination he surmounted all technical difficulties, and completed the opera in the spring of 1862. In March 1863 Wagner visited St. Petersburg, and Serov submitted to him the score of 'Judith.' Wagner more particularly praised the orchestration, in which he cannot have failed to see the reflection of his own influence. 'Judith' was produced in the course of the season 1863-64, on a scale of magnificence hitherto unknown in the production of national opera, and immediately took the public by storm. The subject was well adapted to Serov's opulent and sensational manner. In general style the work recalls the early Wagnerian operas with some curious reminiscences of Meyerbeer. As regards picturesque effect, 'Judith' is admirable, although the dramatic colour is occasionally coarse and flashy. The many technical defects were easily overlooked by the public in an opera which made so direct an appeal to their sensuous enjoyment. Serov's long apprenticeship to musical criticism taught him what was attractive and practicable for the stage, just as he had acquired from the study of Wagner a considerable power of effective orchestration. 'Judith' fascinated not only the uncritical public, but many of the young musical generation, including Tchaikovsky, who refers to it as one of his 'first loves' in music. It still holds its own in the repertory of Russian opera.

Serov lost no time in following up his first success, and 'Rogneda' was completed and performed in the autumn of 1865. Its success was unprecedented. In 'Rogneda' Serov almost discards the Wagnerian influence for that of Meyerbeer. We look in vain in this work for the higher purpose, the effort at psychological delineation and comparative solidity of execution which are occasional

features of 'Judith.' 'Serov knew how to catch the crowd,' writes Tchaikovsky, 'and if this opera suffers from poverty of melodic inspiration, want of organic sequence, weak recitative and declamation, and from harmony and instrumentation that are purely decorative—yet what sensational effects the composer succeeds in piling up! . . . The whole thing literally crackles with them. Serov had only a mediocre gift, united to great experience, remarkable intellect, and extensive erudition; therefore it is not astonishing to find in "Rogneda" numbers—rare oases in a desert—in which the music is excellent.' Tchaikovsky stood somewhat apart from the heated conflict with national tendencies in which Serov was constantly involved, therefore his judgment may be accepted as less biased than that of the majority of his contemporaries. After the triumph of 'Rogneda' Serov rested awhile upon his laurels. The balm of success seems to have done something to soften his hostility to the national school, for the lectures on Glinka and Dargomijsky which he delivered before the Russian Musical Society in 1866 are valuable not only for clearness of exposition, but for fairness of judgment.

For the subject of his third opera Serov turned to contemporary national life as depicted in Ostrovsky's strong, but somewhat sordid, play 'The Power of Evil.' His correspondence reveals his intentions with regard to this work. 'Ten years ago,' he says, 'I wrote much about Wagner. Now it is time to act. To embody the Wagnerian theories in a music-drama written in Russian on a Russian subject. . . . In this work, besides observing as far as possible the principles of dramatic truth, I aim at keeping more closely than has yet been done to the forms of Russian popular music as preserved in our folk-songs.' He is seeking in fact to fuse the methods of Glinka with those of Wagner, and produce a Russian music-drama. Serov was a connoisseur of Russian folk-songs, but he had not the genius of Glinka; moreover, with all his knowledge of the popular music he was never penetrated by the national spirit as was his great predecessor. In creating this Russo-Wagnerian work Serov created something purely artificial: a hybrid which could bring forth nothing in its turn. The subject of 'The Power of Evil' is exceedingly gloomy and not particularly well adapted to musical treatment, and the work never attained the popularity of 'Judith' and 'Rogneda.'

Serov died of heart disease in January 1871. The orchestration of 'The Power of Evil' was completed by one of his most talented pupils, Soloviev. At the time of his death he was busy with a fourth opera based upon Gogol's 'Christmas Eve Revels,' but this work did not progress beyond a first sketch, from which his widow afterwards arranged an orchestral suite,

published in 1877. Other compositions, all belonging to his later years, are: 'Stabat Mater,' 'Ave Maria,' incidental music to 'Nero' (1869), 'A Christmas Song' and two or three orchestral works, including a 'Gopak' and 'Dance of the Zaporogne Cossacks.' Serov married Valentina Semenovna Bergman, a talented pupil of the St. Petersburg Conservatoire, and the composer of several operas, one of which, 'Uriel Acosta' (Moscow, 1885), brought her some success. She was also a constant contributor to the reviews, and in recent years has devoted her energies to the popularising of music among the masses.

R. N.

SERPENT (Eng. and Fr.; Germ. *Schlangehorn*; Ital. *Serpentone*). A now obsolete instrument forming the natural bass of the ancient cornet family, played with a cupped mouthpiece

similar to that of the bass trombone. It consists of a wooden tube about 8 feet long, increasing conically from $\frac{4}{8}$ of an inch in diameter at the mouthpiece to 4 inches at the open end. The name is obviously derived from the curved form into which the tube is contorted, presenting three U-shaped turns followed by a large circular convolution. The bell end is, moreover, turned forward from the player, and the mouthpiece

makes a right-angled backward turn to reach his lips. There are six holes on the front of the instrument, to be stopped by the three middle fingers of either hand; those for the left hand on the third descending branch; those for the right on the fourth ascending branch towards the bell. The holes are set in groups of three, within reach of the outstretched fingers. The hands are passed through the convolutions to the front of the tube, away from the performer; the weight of the whole is supported on the upper edges of the two forefingers, and grasped by the two thumbs, which are kept at the back of the instrument.

The serpent is considered to consist of three parts, (1) the mouthpiece, (2) the crook, or curved brass tube leading into (3) the wooden body, which is built up of several pieces held together by a leathern covering. [The whole of the instrument was, however, sometimes made of brass or copper.] It is usually said to have been invented by a canon of Auxerre, named Edmé Guillaume, in 1590. The story bears a somewhat suspicious resemblance to that of the

discovery of the bassoon by a canon of Ferrara in the first half of the same century. But there can be no doubt that about this period clerical musicians employed bass reed and brass instruments for the accompaniment of ecclesiastical plain-song. Indeed Mersenne, who gives a remarkably good and complete account of the Serpent, notices that 'even when played by a boy it is sufficient to support the voices of twenty robust monks.' The *Serpent d'Eglise* is still a recognised functionary in French churches, [and for many years was an indispensable member of the primitive orchestras which accompanied the singing in rural churches in England.]

The scale of the Serpent is in the highest degree capricious, and indeed fortuitous. In this respect it resembles the bassoon. Mersenne gives it a compass of seventeen diatonic notes from 8-foot D upwards, and intimates that the intervening chromatics can be obtained by half-stopping. He does not name the device of cross-fingering so largely employed on the bassoon. Berlioz, who speaks slightly of it, states that it is in B \flat , and that parts for it 'must be written a whole tone above the real sound.' The old parts, however, from which the writer played [in the 'sixties'] at the Sacred Harmonic Society were all, without exception, in C.

It is obvious that the Serpent, like every other instrument with a cupped mouthpiece, can produce the usual harmonic series of notes. These in Mersenne's work seem limited to the fundamental, its octave, and twelfth. There would be no difficulty in obtaining a far larger compass. Lichtenhal¹ who, as an Italian, highly values the Serpent, gives its compass as no less than four full octaves from the *Do* *bassissimo*, which 'does not exist on the piano-forte' (1826), but on the pedal of the organ of 16 feet, 'up to the *Do* of the violin on the third space. He states, moreover, that the lowest sound of *Do* can only be used from time to time, 'avendo bisogno di una particolare buona imboccatura'—requiring a specially good lip. [As the fundamental note, pedal, or lowest proper tone of the Serpent was the 8-foot C, just as it is on the trombone, euphonium, or ophicleide in C, the statement of Lichtenhal can only be explained by admitting that certain players, by a peculiarly loose embouchure, could produce notes of a forced or constrained pitch one octave lower than due to the length of tube. The compass given in the scales and tutors is three octaves from C to *c'*, with a possible extension downwards, by slackening the lips, to B, and B \flat .]

It will be seen from the woodcut that one hand being applied to an ascending, and the other to a descending branch, the usual sequence of fingering is inverted in the two hands; the scale proceeding downwards in the left and

upwards in the right. The Serpent is probably the only instrument in existence exhibiting so quaint and unscientific a device. This fact, and the different lengths of sounding-tube intervening between the holes—the distance between the mouthpiece and the first finger-hole being 44 inches; between the next three only about 4 inches in all; between these and the next three for the right hand, 13 inches; and from the last hole to the bell, 31 inches; making 96 inches, or 8 feet—indicate the great imperfection of the instrument mechanically considered, and point to the conclusion that a good player must have relied more on his dexterity and on the strength of his embouchure, as mentioned above, than on the resources of the instrument itself. Later makers, however, added a multiplicity of keys, both above and below, which only complicated without facilitating performance. It is well known that the notes D, A, and some others, the holes for which were the most approximately correct in position, had far greater force and correctness than others less accurately planted on the resonant tube. On the other hand, owing to the material of the Serpent and to its bore, its tone was certainly more tender and less obtrusive than that of the blatant brass valve-instruments which have replaced it in the modern orchestra. It is practically disused except in some few foreign churches, and forgotten by all but musical antiquaries. A part for it is however found in the score of Mendelssohn's overtures 'The Calm Sea and Prosperous Voyage' and 'St. Paul,' in the overtures to 'Masaniello,' 'The Siege of Corinth' (between the second and third trombones), and 'Rienzi.' It is also found in the score of 'I Vespri Siciliani.' It is usually replaced in performance by the ophicleide. A Yorkshireman of Richmond, named Hurworth, who played in the private band of George III., could execute elaborate flute variations with perfect accuracy on this unwieldy instrument.

There is a *Method for the Serpent*, containing studies and duets, published by Cocks. The only concerted music set down to it seems to have been originally intended for the bassoon.

A 'Contra Serpent' was shown in the Exhibition of 1851, made by Jordan of Liverpool. It was in E \flat of the 16-foot octave. It was however too unwieldy to be carried by the player, and required independent support. Another modification of this instrument was invented by Beacham and played on by Prospère in Jullien's orchestra. It was named the Serpenteleide, and was essentially an ophicleide with a body of wood instead of brass. [w. H. s.; with additions in square brackets by D. J. B.]

SERPETTE, HENRI CHARLES ANTOINE GASTON, French composer, born at Nantes Nov. 4, 1846, began life as an advocate, but gave up the bar for music. He was a pupil of

¹ *Dizionario della Musica*, tom. i. p. 198.

Ambroise Thomas at the Conservatoire, and took the 'Grand prix' in 1871 for a cantata ('Jeanne d'Arc') of great promise. On his return from Italy, despairing of acceptance at the Opéra-Comique, he closed with the Bouffes Parisiens, and produced 'La Branche cassée' (three acts, Jan. 23, 1874), with a success which induced him to go on composing works of the same slight character. 'Le Manoir du Pic Tordu' (May 28, 1875), 'Le Moulin du Vert galant' (April 12, 1876), and 'La Petite Muette' (Oct. 3, 1877), all in three acts, followed in Paris, and 'La Nuit de St. Germain' (March 1880) in Brussels. ['Cendrillonette' came out in 1890, 'La dot de Brigitte' in 1895, and 'Le Carillon' in 1896. He died in Paris, Nov. 3, 1904.] G. C.

SERRANO, EMILIO, born 1850 at Vitoria (Spain), court pianist to the Infanta Isabel (Countess of Girgenti), is Director of the Royal Opera and Professor of the Conservatoire of Madrid. Has composed much music, including grand operas, of which 'Irene de Otranto' (1891) and 'Gonzalo de Córdoba' (1898) were produced with great success in Madrid. H. V. H.

SERVA PADRONA, LA—the maid turned mistress. An Italian intermezzo, or piece in two acts, containing three characters, one of whom is a mute. Words by Nelli, music by Pergolesi. Written and produced at Naples August 23, 1733, and in Paris first on Oct. 4, 1746, at the Hôtel de Bourgogne, and was revived by the 'Bouffons Italiens' on August 1, 1752. This was followed by an obstinate contest between the reformers, headed by Rousseau, and the conservative musicians—'Guerre des Lullistes et des Bouffonistes.' In 1754 a translation, 'La servante maîtresse,' was brought out, and had a run of 150 consecutive nights. It was revived, August 13, 1862, at the Opéra-Comique, for the début of Mme. Galli-Marié, and was given in London, at the Royalty, March 7, 1873.—An imitation of Nelli's libretto, with the same title, was composed by Paisiello during his stay at St. Petersburg. G.

SERVAIS, ADRIEN FRANÇOIS, a great violoncellist, was born at Hal, near Brussels, June 6, 1807. His study of music began early, but it was not till he heard a solo by Platel on the violoncello, that he fixed on the instrument on which he became so famous. He became a pupil of Platel's in the Brussels Conservatoire, where he rapidly rose to the first rank. On the advice of Fétis he went to Paris, where his success was great. In 1835 he visited England, and on May 25 played a concerto of his own at the Philharmonic Concert, where he was announced as 'principal violoncello to the King of the Belgians.' He then returned home, and wisely resolved to study for a year, and it was during this period that he formed the style by which he was afterwards known. In 1836 he reappeared in Paris, and the next

dozen years were occupied in a series of long tours through Germany, Holland, Austria, Norway, Russia, and even Siberia. In 1842 he married in St. Petersburg. In 1848 he settled at Brussels as Professor in the Conservatoire, and formed many distinguished pupils. He died at his native village Nov. 26, 1866, of an illness contracted during his third visit to St. Petersburg. His works comprise three Concertos, and sixteen Fantasies, for violoncello and orchestra; six Études for violoncello and PF.—with Grégoir; fourteen Duos for ditto; three Duets for violin and violoncello—with Léonard; one Duet for ditto—with Vieuxtemps. Servais' tastes were very simple, and his great delight was to slip on a blouse and (like Mozart) play skittles. At the close of his life he became very stout, and the peg now used to support the violoncello is said to have been invented by him as a relief. A biography of Servais was published at Hal by Vanderbroeck Desmeth, 1866. [Interesting reminiscences of him are published in the *Guide Musical* of June 2, 1907, apropos of the centenary of his birth.] His eldest son JOSEPH, born at Hal, Nov. 28, 1850, succeeded his father in June 1872 as professor of the violoncello at the Brussels Conservatoire. He appeared first at Warsaw with his father, and the pair excited the greatest enthusiasm. In 1868 he was appointed solo violoncellist at Weimar and remained two years. In 1875 he played for the first time in Paris at one of Pasdeloup's Popular Concerts, when some of the journals spoke in terms of extravagant praise of his performance. The instrument used by both father and son is a fine Stradivarius presented by the Princess Yousouppoff. [Joseph Servais died at Hal, August 29, 1885.] A second son, FRANTZ, a successful pianist and composer, was a pupil in the same Conservatoire. T. P. P.

SERVICE. In matters relating to the Church this word is used in two totally different senses; first, as a rough translation of *Officium*, *Ordo*, *Ritus*, as when we say Communion-service, Ordination-service, and so on: next as a purely musical term, as when we say 'Wesley's Service in E,' etc. It is with this latter application of the word only that we have here to deal.

A Service may be defined as a collection of musical settings of the canticles and other portions of the liturgy which are by usage allowed to be set to free composition. The term, therefore, excludes all versicles or responses, or other portions founded on plain-song; all chants, whether Gregorian or Anglican; and all anthems, as their words are not necessarily embodied in the liturgy, but selected at will. On the other hand, it includes the Nicene Creed, *Gloria in excelsis*, and other portions of the liturgy which have from the most ancient times received a more or less free musical treatment.

The origin of the acceptance of the term in this limited musical sense is somewhat obscure. The gradual disuse of distinctive names of offices—such, for instance, as Matins, Vespers, Mass, etc.—after the Reformation, helped to bring the generic word 'service' into very general use; and it has therefore been supposed that musicians called their compositions 'services' because they were set to certain unvarying portions of the church 'services.' But this explanation is far from satisfactory, for obvious reasons; it gives too much latitude to the term, and offers no reason why it should ever have become limited to its present meaning.

The fullest form of a set or service would include free musical compositions for (1) The Venite, (2) Te Deum, (3) Benedicite, (4) Benedictus, (5) Jubilate, (6) Kyrie eleison, (7) Nicene Creed, (8) Sanctus, (9) Gloria in excelsis; (10) Magnificat, (11) Cantate Domino, (12) Nunc Dimittis, (13) Deus Misereatur.

It will be necessary to say a few words about some of these movements separately before making any remarks on our services generally. The *Venite* has long since disappeared from the list of free compositions, and is now universally treated as one of the psalms, and sung to a chant instead of being rendered as a motet. In the form in which the *Venite* was printed in the Breviary may perhaps be traced the reason why many of our earliest church-composers after the Reformation, such as Tallis, Bevin, Byrd, Gibbons, and others, left settings of the *Venite* in motet-form. But this treatment of the psalm was probably found to lengthen unduly the time occupied by Matins; and it may also have been felt that an elaborate choral setting of these particular words seriously injured their force as an invitation to join in public worship. On the whole it is not a matter for regret that the *Venite* now takes its place merely as an introductory psalm.

The free setting of the *Benedicite omnia opera* did not long maintain its ground, owing probably to its excessive length. Purcell set this canticle, and it is even now occasionally sung to his music; Blow also wrote an elaborate *Benedicite* in his Service in E minor. But the canticle itself fell for a long time into neglect, and when revived, it was sung either to a chant in triple measure, or to a 'single' chant, or to a Gregorian tone having a 'short ending.' Hayes contributed one of the earliest triple-measure chants [and there are numerous modern specimens in which waltz-themes, more or less ingeniously disguised, are in use.]

The *Gloria in excelsis*, though set to music by Tallis, fell almost entirely out of the 'service' owing to the loss of choral celebrations of the Holy Communion. On their resumption the *Gloria* was once more included in the set, after a long period of virtual disuse. The *Kyrie eleison* and *Sanctus* maintained their place in the set;

the former because it was always sung at the so-called 'table prayers' (that is, a Communion-office brought to a conclusion at the end of the Creed, Sermon, or Prayer for the Church Militant); the latter lived on as an introit, a duty it fulfilled at one time universally in our cathedrals.

The *Jubilate* completely ousted the *Benedictus* for a long period. The earliest writers of our Reformed Church—Tallis, Byrd, Gibbons, Bevin, Farrant, and others—set the *Benedictus* to music, but it was afterwards practically lost, until, within recent times, a better feeling has restored it to the place which it should hold according to the spirit of the rubric, if not according to its letter.

The *Cantate Domino* and *Deus misereatur* may be said to have been in fashion from time to time. Both Blow and Purcell set these alternative canticles, and later Aldrich also; but they reached their highest popularity at the end of the 18th and the early part of the 19th century. At the present time they have again fallen somewhat into the background.

To the contents of a service as above enumerated, the most modern composers add musical settings of the Offertory sentences, also of the Doxologies before and after the Gospel, and sometimes also of the *Sursum Corda*, *Agnus Dei*, and *Benedictus*. The Offertory sentences may perhaps be looked upon as a legitimate addition to the set, but the Gospel-doxologies and *Sursum Corda* have both their own ancient plain-song, and the *Agnus Dei* and *Benedictus* are not ordered by our rubric to be sung in the office of Holy Communion.

Having made these few remarks about the contents of a service, we must now discuss the musical character of our English services, assuming that a *Te Deum*, *Benedictus* (or *Jubilate*), *Magnificat*, and *Nunc Dimittis* may be taken as the main framework of an ordinary service. It can hardly be doubted that Tallis, the chief of the early post-Reformation composers, was influenced, when setting his celebrated *Te Deum* in D minor, by the character of the then well-known Ambrosian *Te Deum* which Marbeck published in the 1550 Prayer-book. There can be traced an evident wish to form a melody, if not actually in a Church mode, in a tonality closely resembling one of them. Tallis also avoided contrapuntal devices (in which he was a distinguished expert), and limited within strict bounds the *ambitus* of his melody and the number of his harmonic combinations. Anybody who will take the trouble to compare his graceful and melodious anthems 'Hear the voice and prayer' and 'If ye love Me' with his Service, must perceive that he wrote his setting of the canticles under an evident self-imposed restraint. The whole of the Service was made to follow absolutely the style of the *Te Deum*, and the result is, that music of a dignified and ecclesiastical type has

been produced—pure, perhaps, but certainly uninteresting. Led in this direction by so great and famous a composer as Tallis, many of his contemporaries and immediate successors followed in his footsteps, and English cathedrals possess a considerable store of plain contrapuntal services in minor keys.

Closely following the class of services just described comes the strict contrapuntal school, of which ‘Gibbons in F’ forms such a noble example. It must not be thought that Gibbons was the first to write the ‘pure contrapuntal’ service; a *Magnificat* and *Nunc Dimittis* by Dr. Tye (who was organist to Edward VI.) show that he transferred his motet-style without any change to his settings of these canticles, which consist almost entirely of short ‘points’ or phrases of four-part imitation. This is just what Gibbons did, but he threw more melodic freedom and greater breadth into his work, and therefore it has lived, while Tye’s *Magnificat* is only known to antiquaries.

Half a century after the death of Gibbons the settings of the canticles had become merely meaningless collections of short ‘points’; and, instead of running on with dignified continuity, the music came to be broken up into a number of small sections, for voices *solis*, alternately with, or in frequent contrast to, short choruses. The influence of the French school, which had the most disastrous effects on English anthems, affected the services also, though to a lesser degree. The services of Purcell and Blow may be considered typical of both the virtues and vices of this school,—melodious, but restless and purposeless.

Seven years before the death of Blow a man was born, who, without possessing any special musical gifts, was destined to bring about a vast change in the character of services; that man was the very second-rate Charles King. The only possible way of accounting for the enormous popularity of his services is to view them as a protest against contrapuntal devices, and as a restoration of simplicity, even if the simplicity is closely allied to weakness. To the influence of King we probably owe two short but beautiful settings from the pen of Dr. Boyce (who died about thirty years after him); one is in the key of C, the other in A.

The next development of the form and character of services was the forerunner of the ‘dramatic’ school. Attwood deserves an important place in any sketch of the history of services for his bold attempt to attach to the words music which should vary as their character. This had of course been done to some extent before his time, but nearly always with a polite leaning to the conventionalities of the past; Attwood struck out a fresh path. This fact should be borne in mind by those who are disposed to criticise severely the weak points in his services. Attwood died in 1838, and we soon find ourselves

face to face with S. S. Wesley, whose Service in E has been, and is, a model for many living writers; and he has been followed by a large group of living composers, all of whom are striving to produce services in which the natural emotions called up by the character of the words shall be reflected in unartificial music.

Those who desire to study the literature of services will find ample materials in Barnard’s Collection; Boyce’s Collection of Cathedral Music, 3 vols.; Arnold’s Collection, 3 vols.; Rimbault’s Collection of Services, 1 vol.; Ouseley’s Collection of Services, 1 vol.; various manuscripts in our cathedrals. Full information as to Barnard’s Collection will be found under the head BARNARD. [Of late years efforts have been made to restore the fine old Cathedral Services to general use, from which they were for many years kept by the crowd of ‘easy’ services purveyed by the least skilful organists and writers of the day. The Church Music Society has already done much good in this direction.] J. S.

SESQUI. A Latin word signifying, literally, the whole *plus* its half.

In musical terminology, the prefix *Sesqui* is used in combination with certain numeral adjectives, to express the proportion, either of harmonic intervals or of rhythmic combinations. [See PROPORTION.] Thus, *Sesquialtera* expresses the proportion of two to three, and therefore represents the perfect fifth, which is produced by sounding two-thirds of a given string. *Sesquitertia*, indicating (not very correctly) the proportion of three to four, represents the perfect fourth, sounded by three-fourths of the string. *Sesquiquarta*, or four-fifths, represents the major third. *Sesquiquinta* represents the minor third, given by five-sixths of the resonant string. *Sesquisexta*, six-sevenths, and *Sesquiseptima*, seven-eighths, correspond with no intervals in the accepted canon of the scale: but, *Sesquioctava*, or eight-ninths, represents the peculiar form of the major second known to theorists as the Greater Tone; and *Sesquinona*, nine-tenths, gives the Lesser Tone—an interval, which, though conventionally called a major second, and treated, in practice, as identical with that just described, is less, by one Comma, than the Tone represented by *Sesquioctava*.¹

In rhythmic combinations, *Sesquialtera* is used as the general symbol of triple time. The term *Sesquialtera* is also applied to passages of three notes sung against two; *Sesquitertia*, to three notes sung against four; and *Sesquiquarta*, to four notes sung or played against five. [See HEMIOLIA.] W. S. R.

SESQUIALTERA. A compound organ stop consisting of several ranks of pipes, sometimes as many as five. Various combinations of intervals are used, but they only represent different

¹ The Greater and Lesser Tones are, by some theorists, called the *Acute* and the *Grave* major second.

positions of the third, fifth, and eighth of the ground-tone in the third or fourth octave above. The sesquialtera thus gives brilliance to the tone by reinforcing these upper partials.

The origin of the term Sesquialtera, as applied to an organ stop, is rather obscure. In the list of ratios given by Boethius, at the close of the 5th or beginning of the 6th century, which were exactly reproduced by almost every writer on music up to the 16th century, the term *proportio sesquialtera* signifies numbers having the ratio 2 : 3; the term therefore is really applicable to all stops having pipes at an interval of a fifth (or its octaves) from the groundtone, such as the Quint, Twelfth, Larigot (nineteenth), etc. As stated above, the Sesquialtera organ stop does actually contain pipes having this relation, only, and also contains pipes having the ratio 5 : 4—the tierce—which Boethius called a *proportio sesquiquarta*. On the whole it may be safely said that the word Sesquialtera was originally used for the purpose of showing that the stop contained pipes having ratios other than 2 : 1, or other than an octave-series. J. S.

SESTET, or SEXTET (Fr. *Sextuor*; Ital. *Sestetto*). A composition for six instruments, or six voices, with or without accompaniment.

Instrumental sestets are of two kinds: those for strings only, which belong to the same class as string quartets and quintets, being monochromes in six real parts, and those for various combinations of strings, wind and pianoforte, which belong to the class of pianoforte quartets, etc., and may be regarded as miniature symphonies. The first of these two classes, naturally, but rarely met with, six-part harmony not being easy to write; but the few examples we have are striking ones. We may pass over Haydn's solitary specimen, called an 'Echo,' for four violins and two violoncellos, and mention only that of Spohr, in C (op. 140), a charming work; the two immortal compositions of Brahms (B♭, op. 18; G, op. 36), which stand at the head of modern chamber-music; the Sextet of Raff, op. 178, in G minor; and that of Dvořák, op. 48.

All the above are for two violins, two violas, and two violoncellos. Turning now to the second and more comprehensive class, we find a few more in point of number but none of much artistic value. The prolific Boccherini wrote sixteen, Haydn one, Mozart only the 'Musical Joke.' Beethoven's Sestet for Strings and two obbligato Horns (op. 81b) is interesting, but unfortunately impracticable for modern players.¹ His Sestet for Wind Instruments, op. 71 (for two clarinets, two horns, and two bassoons, in E♭) is an early work and little known. Beethoven himself mentions it in a letter of August

8, 1809, as 'one of my earlier things, and not only that, but written in a single night; perhaps the only thing in its favour is that it is the work of an author who has at least brought forward better works—though for many such works are the best.' (Nohl's *Neue Briefe*, No. 53.) Sterndale Bennett's Sestet for piano and strings, a very early work (op. 8), is an elegant pianoforte piece with an unimportant though often picturesque accompaniment for strings, in which the piano has an undue share of work. Onslow left two sestets—opp. 30 and 77 bis.

It should be noticed that the sestets and quintets of Reicha and other composers, when written for wind instruments only, are practically quartets, one or more of the instruments taking a rest in turn. [Vocal sestets occur in operas whenever the dramatic exigencies of the piece require them; there are two in 'Don Giovanni,' of which only one, 'Sola, sola,' is performed on the ordinary stage, as the splendid finale is usually left out in the present day. The sestet in 'Lucia' was long famous, and there is a very fine specimen in Berlioz's 'Troyens à Carthage.' F. C.]

ŠEVČIK, OTTAKAR, violinist and pedagogue, was born on March 22, 1852, at Horazdowitz in Bohemia, and is of Czech nationality. His father, a teacher of the violin, after giving him elementary lessons, sent him in 1866 to the Conservatorium in Prague, where he studied under Anton Bennewitz until 1870, and then accepted an appointment as Concertmeister of the Mozarteum in Salzburg. This engagement, varied by the organising of self-supporting concerts at Prague, lasted until 1873, in which year he made his début as a soloist at Vienna, becoming eventually Concertmeister of the Komische Oper in that city. At the closing of the opera-house he gave concerts in Moscow, and in 1875 was appointed Professor at the Imperial Music School in Kiev, remaining there till 1892, when he accepted an invitation from Anton Bennewitz, then director of the Prague Conservatorium, to return to Bohemia and fill the post of principal professor of the violin at that institution. From that day to this, although he has occasionally played in public (for the last time in 1898), he has mainly devoted himself to teaching. His appointment happened to synchronise with the entry, as a pupil, of Jan Kubelik, then twelve years of age, and possessed of a marvellous gift for technique. Ševčík taught him for six years, moulding him in accordance with his own special theories of teaching, to which Kubelik's phenomenal success first drew the world's attention. This success was thought, however, to be very largely due to the young violinist's own natural ability, and it was not until, first, Kocian, and then, in a still greater degree, Marie Hall, confirmed, by the brilliance of their performances, the effectiveness of his system of training, that

¹ A 1st Horn part is in existence, on which Beethoven has written '6th of mine. God knows where the other parts are.' The slow movement has been adapted to voices as 'The Vesper Hymn,' and had a wide popularity in 'Orpheus.'

his reputation became established abroad. Pupils offered themselves in such great numbers, mainly from England and America, that only a small proportion of them could be accepted. Among them were the sons of Wilhelmj and Hugo Heermann, the daughter of Wieniawski, Zacharewitsch, Michel de Sicard, Walter Schulze, Vivien Chartres, Leon Sametini, and many others more locally known, who, after studying under Ševčík, received teaching appointments at various music schools. The number of students working under him varies from 75 to 100 during the winter months, some taking two or three lessons monthly, and others, who also learn from his assistants, one lesson only a month; whilst during the summer recess many follow him to his country residence at Graz, and continue to get the benefit of his advice in holiday time. Thanks to him, Prague adds to its distinctions that of being a sort of university town of the violin, where students learn and draw inspiration from each other as well as from the Professor. But the latter's personal magnetism is the chief factor in his success in bringing forward so many technically accomplished pupils. He prides himself on 'teaching them how to learn,' and has the gift of stimulating them to an almost superhuman exercise of patience. For as many hours daily as their strength will allow, they play small sections of passages backwards and forwards hundreds, even thousands of times, in every possible fingering and variety of bowing. No other teacher of the violin has the knowledge which Ševčík possesses of the anatomical structure of the hand and arm. The position of the hand holding the violin he regulates according to the physique of the pupil, whose muscles (those controlling the fingers) are systematically trained by his exercises to respond quickly, so that in the end remarkable facility in shifting position is gained. The fingers of the left hand are kept down more rigidly than in the Joachim school, and the management of the bow is taught with extraordinary minuteness of detail. He divides it not only into the usual three sections, but also into subdivisions, and of course the pupil has to apportion each accurately in accordance with the nature of the phrase, thus acquiring great command of tone and accent. In short, under the Ševčík system, nothing is left undone that methodical training of ear or muscles can accomplish. In regard to interpretation, the professor (seated at the pianoforte) teaches all the great concertos on sound technical lines, but the development of the psychological side of the student's nature, the bringing to bear upon him of subtle influences which tend to make him a great interpretative artist, must come from without. In the case of some of his pupils, these influences appear to have been absent, but that is no fault of Ševčík, whose life-

work lies in the domain of pure technique, which he teaches not only to his pupils, but to the world, with a passion which is akin to genius; to the world by means of his *Method*, which is a monument of patient toil that will secure him fame after his pupils are forgotten. It consists of four books. Book I. is a Violin Method for Beginners (in seven parts, op. 6). In this he has adopted for the early stages of practice what he calls his 'Semitone System.' Whereas in the ordinary diatonic scales the stoppings are unequal, the semitones which occur being produced on almost every string with the aid of different fingers, in this book scales are placed before the beginner, in which all the stoppings are the same on each string. This helps him to acquire quickly pure intonation, and enables him to devote his entire attention to the holding of the violin and the handling of the bow. Book II. contains Studies preparatory to the shake and for developing the touch (in two parts, op. 7). Changes of position and preparatory scale studies, op. 8. and Preparatory Studies in double stopping, op. 9. Book III. is a School of Violin Technique (in four parts, op. 1), for more advanced pupils, and is Ševčík's magnum opus. Book IV. is a School of Bowing Technique (in six parts, op. 2), in which appear some 4000 varieties of bowing in progressive order, with metronomic marks, and exhaustive directions tending to the development of the bow arm.

Such is the Ševčík method, for the creating of which he has drawn from the technical storehouse of the past, taken from all schools their characteristics and traditions, arranged them in order, blended them, filtered them through his own originality, and by adding many new features carried them a step farther. His publications include a series of 'Bohemian dances' for violin solo. In 1886 the Czar Alexander II. conferred upon him the Order of St. Stanislaus for pedagogic services. w. w. c.

SEVEN LAST WORDS, THE—i.e. the seven last utterances of the crucified Saviour. A composition of Haydn's dating about 1785. It was then the custom in the principal church of Cadiz to have a kind of oratorio during Passion week. The church was hung with black, and a single lamp only was lighted. At noon the doors were shut. An orchestral prelude was played; then the Bishop mounted the pulpit, read one of our Lord's last 'words,' and made an exhortation upon it. He then came down, and threw himself on his knees before the altar. During this there was again orchestral music. He then mounted the pulpit a second time, and pronounced the second 'word,' and a second discourse, and so on till the last. In 1785 Haydn received a request from Cadiz to compose orchestral pieces for this purpose, each piece to be an adagio of about ten minutes long. This he did, sub-

stituting however (as the original parts show) for the Bishop's voice a long recitative for a bass in the case of each of the seven 'words.' In this form the work was performed at Vienna, March 26, 1787, and was published in parts by Artaria in the same year—as '7 sonate, con un Introdunzione, ed al fine un terremoto'—for orchestra, op. 47; for strings, op. 48; for piano solo, op. 49. It quickly spread to other countries, was sold to Forster of London in the summer of the same year for five guineas, Haydn protesting, and endeavouring to obtain another five, but with doubtful success;¹ and was announced by Longman & Broderip in the *Times* of Jan. 1, 1788, as 'A set of Quartetts . . . expressive of the Passion of Our Saviour, op. 48, 8s.' Haydn himself conducted them (whether with the recitatives or not does not appear) as the middle part of a concert at the King's Theatre, Haymarket, May 30, 1791, and repeated the performance at the benefit of little Clement the violin-player.

The work is now known as a cantata, with words to each movement. When or by whom the words were added is not quite clear; for the various statements the reader must be referred to Pohl's *Joseph Haydn* (ii. 217, 218).² Pohl's conclusion appears to be that Haydn adapted to his music—perhaps with Van Swieten's assistance—words which he met with at Passau on his way to England in 1794, except those to the Earthquake, which are from Rammner's 'Tod Jesu.' At the same time he arranged each of the 'words' in plain harmony, and added a movement for wind instruments only between movements 4 and 5. The 'Seven Words' were for long a favourite in Vienna both in church and concert-room. One of the last performances was at the Alt-Lerchenfeld church, when Franz Schubert's brother Anton ('Father Hermann') delivered the discourses.³

SEVENTH. The intervals which contain seven notes comprise some of the most important chords in music, and such as have been peculiarly conspicuous in musical history. They are divided mainly into three classes—major sevenths, minor sevenths, and diminished sevenths; as

1. The major sevenths, as CB, FE, GF#, are very harsh—in fact the sharpest combination used in modern music except the minor second, such as BC. They are only endurable either when prepared and duly resolved, or when they result from the use of an appoggiatura or grace-note, or passing note. They occur most commonly as suspensions, resolving either up

or down, while the rest of the chord is stationary, as at (a) or (b),

or with the condensed forms of resolution, when the rest of the chord moves simultaneously with the motion of the discordant note, as at (c).

Of these major sevenths there are several forms, but as they all have the same general principles of formation and treatment they do not require detailed consideration.

2. The minor sevenths are more individually characteristic. Of these the most important is the Dominant seventh, as at (c), for the key of C. The discordance of this combination is very slight. By itself it is but little more harsh than

some combinations which are universally accepted as concords, such as the minor sixth; but its harshness is increased by the addition of the other notes which fill up the harmony, as at (d), since the indispensable major third in the chord makes a diminished fifth with the seventh. Nevertheless its mildness has long been recognised, and it was used as early as the beginning of the 17th century with greater freedom than any other discord, by being relieved of the condition of being prepared. [See HARMONY, vol. ii. p. 310.] But the laws of its resolution continued, and still continue, more or less restricted. It naturally resolves into the tonic chord; because its third is the leading note of the key and tends to the tonic; its seventh naturally tends to the third of the tonic chord, which is in the major divided from it only by the small interval of a semitone; and its root or bass note already supplies the fifth of that chord, which naturally acts as the connecting link between the two harmonies of dominant and tonic; so that all the vital notes of the tonic chord are, as it were, predicted by its sounding, and consequently it is the most natural and forcible penultimate in cadences, in which it occurs with extreme frequency. [See CADENCE II.; HARMONY.] It is hardly necessary to point out that it can be resolved otherwise, since it so often plays a part in interrupted cadences; as for instance where the tonic chord is supplanted by the chord of the submediant (c); but it is in consequence of the very predisposition which it creates to expect the tonic chord that interrupted cadences have such marked effect. [See CADENCE III.] There is no other minor seventh in the key which can be accompanied by a diatonic major third; but there are two at least that can be obtained with one chromatic note in them, and these are so frequently used as if they belonged to

¹ Pohl, *Haydn in London*, p. 92.

² The *Biographie Universelle* states categorically that the adaptation was by Michael Haydn.

³ See Pohl's *Joseph Haydn*, ii. 214, 341, etc.

the key that some theorists have agreed to affiliate them. These are the minor seventh on the supertonic with a chromatic major third, and the minor seventh on the tonic, in which the seventh itself is chromatic, as (*f*) and (*g*), in relation to the key of C. These are respectively the dominant sevenths of the Dominant and Subdominant keys, so that in any sense they lie very close to the principal key, and can resolve into it with the greatest ease; and they are often taken without preparation as distinct ingredients of its harmonic material without other reference to the keys to which they diatonically belong.

The minor seventh on the supertonic, with a diatonic minor third, is a chord which has much exercised theorists. It comprises the same notes as the chord which has been generally known formerly and even partially now as the Added sixth; and it is more often met with in the form from which that name was derived. But in whatever position, it has long been peculiar among discords for the variability of its resolution, since the note which would be the seventh if the supertonic were at the bottom of the chord, stands still in resolution almost as often as it moves downwards to the conveniently contiguous leading note of the key. For the various views entertained concerning this chord, see HARMONY and ROOR.

3. The chord of the Diminished seventh is a familiar combination both to theorists and musicians. It is in its complete form composed of a set of minor thirds, and this as much as anything gives it its notoriously ambiguous character, since any of its elements can be treated as the discordant note, with the result of leading to a different key in each several case. It is now commonly held to be the inversion of a minor ninth with the root note omitted. [See DIMINISHED INTERVALS, vol. i. p. 702.] C. H. H. P.

SEVERN, THOMAS HENRY—brother of Joseph Severn the painter, the intimate friend of Keats, Leigh Hunt, etc.—was born in London, Nov. 5, 1801, and after many difficulties became manager of Farn's music-business at 72 Lombard Street. He was the first conductor of the City of London Classical Harmonists, started in 1831. [See vol. i. p. 526.] He was virtually self-taught, and his knowledge of music was derived from study of the scores of the great masters, and from practice. He died at Wandsworth, April 15, 1881. Severn was the author of an opera, and of various songs which were very popular in their time; a Cantata, 'The Spirit of the Shell'; two Te Deums (Novello & Co.), etc., etc. G.

SEXT (Lat. *Officium (vel Oratio) ad Horam Sextam; Ad Sextam*). The last but one of the 'Lesser Hours' in the Roman Breviary.

The Office begins, as usual, with the Versicle and Response, 'Deus in adiutorium.' These

are followed by a Hymn—'Rector potens, verax Deux'—which never changes; Verses 81-129 of the Psalm, 'Beati immaculati,' sung in three divisions, but under a single antiphon; the 'Capitulum' and 'Responsorium breve' for the Season; and the Prayer (or Collect) for the day.

In Collegiate Churches the Offices of Terce and Sext are usually sung immediately before and after High Mass. The Plain-song Music for Sext will be found in the Antiphonal. W. S. R.

SEXTET. See SESTET.

SEXTOLET (Fr. *Sextolet*; Ger. *Sextole*; Ital. *Sestina*). A group of six notes of equal length, played in the time of four ordinary notes of the same species. To distinguish them from regular notes of like form the number 6 is placed above or below the group. The true sextolet is formed from a triplet, by dividing each note into two, thus giving six notes, the first of which alone is accented; but there is also a similar group of six notes, far more frequently used than the real sextolet, in which a slight accent is given to the fourth note as well as the first. This group, which really consists of two triplets, is properly known as the Double Triplet, and should be marked with the figure 3 over the second and fifth notes, though it is frequently marked with 6, and called a sextolet. The difference is well shown in the following two extracts from the Largo of Beethoven's Concerto in C, op. 15. [See also TRIPLET.]

Double Triplets.

F. T.

SEXTUS (*Pars sexta, Sextuplum*; Eng. *The Sixth Voice, or Part*). In the Part-books of the 15th and 16th centuries four voices only were, as a general rule, mentioned by name, the Cantus, Altus, Tenore, and Bassus. When a fifth voice was needed, it was called Quintus, or Pars Quinta, and corresponded exactly in compass with one of the first four. When yet another voice was added, it was called Sextus, or Pars Sexta, and corresponded in compass with another original voice-part. The extra part, therefore, represented sometimes an additional treble, sometimes an alto, sometimes a tenor, and sometimes a bass; and always corresponded in compass with some other part of equal importance with itself. W. S. R.

SEYFRIED, IGNAZ XAVER, RITTER VON, born August 15, 1776, in Vienna, was originally intended for the law, but his talent for music was so decided, that, encouraged by Peter

Winter, he determined to become a professional musician. In this, his intimacy with Mozart and subsequent acquaintance with Beethoven were of much use. His teachers were Kozeluch for the PF. and organ, and Haydn for theory. In 1797 he became joint conductor of Schikaneder's theatre with Henneberg, a post he retained in the new Theatre 'an der Wien' from its opening in 1801 till 1826. The first work he produced there was a setting of Schikaneder's comic opera 'Der Löwenbrunnen' (1797), and the second, a grand opera 'Der Wundermann am Rheinfall' (1799), on which Haydn wrote him a very complimentary letter. These were succeeded by innumerable operas great and small, operettas, singspiele, music for melodramas, plays (including some by Schiller and Grillparzer), ballets, and pantomimes. Specially successful were his biblical dramas, 'Saul, König von Israel' (1810), 'Abraham' (1817), 'Die Maccabäer,' and 'Die Israeliten in der Wüste.' The music to 'Ahasverus' (1823) he arranged from piano pieces of Mozart's, and the favourite singspiel, 'Die Ochsenmenette' (1823) (an adaptation of Hofmann's vaudeville 'Le menuet du boeuf') was similarly a pasticcio from Haydn's works. His church music, widely known and partly printed, included many masses and requiems, motets, offertoires, graduales, a 'Libera' for men's voices composed for Beethoven's funeral, etc. [See *Quellen-Lexikon.*] Seyfried also contributed articles to Schilling's *Universal Lexikon der Tonkunst*, Schumann's *Neue Zeitschrift für Musik*, the *Leipziger Allg. Zeitung*, and *Cäcilia*, besides editing Albrechtsberger's complete works — the *Generalbass-Schule*, *Compositionslehre*, and a Supplement in three vols. on playing from score (Haslinger) — and Beethoven's *Studies in Counterpoint* (1832). Nottebohm's critical investigations reduced this last work to its proper value. [See vol. i. p. 230, and iii. p. 408.]

Seyfried was elected an honorary or a corresponding member of innumerable musical societies, at home and abroad. His pupils included Louis Schlösser, Karl Krebs, Heinrich Ernst, Skiwa, Baron Joseph Pasqualati, Carl Lewy, Heissler, Kessler, J. Fischhof, Sulzer, Carl Haslinger, Parish-Alvars, R. Mulder, S. Kuhe, Walther von Goethe, Baron Hermann Löwenskiöld, F. von Suppé, Köhler, and Basadona.

His closing years were saddened by misfortune, and his death took place August 26, 1841. He rests in the Währinger cemetery (Ortsfriedhof), near Beethoven and Schuhert. C. F. P.

SFOGATO (open, airy), a word used in rare instances by Chopin (as in the 'Barcarole') in certain of those little cadenzas and ornaments that he is so fond of using, to indicate what may be called his own peculiar touch, a delicate and, as it were, ethereal tone, which can only be produced upon the pianoforte, and then only

by skilful performers. 'Exhalation' is the only word that conveys an idea of this tone when it is produced. A 'Soprano sfogato' is a thin, acute, voice. M.

SFORZANDO, SFORZATO, 'forced'; a direction usually found in its abbreviated form *sf.* or *sfz.* referring to single notes or groups of notes which are to be especially emphasised. It is nearly equivalent to the accent >, but is less apt to be overlooked in performance, and is therefore used in all important passages. Good instances occur in Beethoven's Sonata for violin and piano in C minor, op. 30, No. 2, in the trio of the Scherzo; in Schumann's *Études Symphoniques*, Variation 3, etc. M.

SGAMBATI, GIOVANNI, a remarkable pianist and composer, born in Rome, May 28, 1843. His mother, an Englishwoman, was the daughter of Joseph Gott the sculptor, a native of London, who had for many years practised his art in Rome. Giovanni was intended for his father's profession, that of an advocate, and he would have been educated with that view but for his strong turn for music. [He took his first lessons in pianoforte-playing at the age of five from Amerigo Barberi, author of a treatise on harmony, who used to pride himself on the fact that his own teacher had been a pupil of Clementi.] After the death of his father in 1849 young Sgambati's mother migrated with her two children to Trevi in Umbria, where she married again. Here Giovanni's lessons, supplemented by a course of harmony, were continued under Natalucci, a former pupil of Zingarelli, at the Conservatorio of Naples. From the age of six the boy often played in public, sang contralto in church, conducted small orchestras, and was known as the author of several sacred pieces. In 1860 he settled in Rome and soon became famous for his playing, and for the classical character of his programmes. His favourite composers were Beethoven, Chopin, and Schumann, and he was an excellent interpreter of the fugues of Bach and Handel. Shortly after this he was on the point of going to Germany to study when the arrival of Liszt in Rome saved him from that necessity. With him Sgambati studied long and diligently. [He soon began to give orchestral concerts in the 'Galleria Dantesca,' which, as the 'Sala Dante,' was for many years the only concert-hall in Rome. Here, under Sgambati's direction, the symphonies and concerts of the German masters, until then unknown in the papal city, at length found a hearing. Beethoven's 'Eroica' was introduced to the Roman public and the 'Emperor' concerto was played to them by Sgambati for the first time, just as later they learned at his hands to know and appreciate Brahms, Saint-Saëns, and later writers.]

At the same time Sgambati was busy with his compositions. In 1864 he wrote a string quartet; in 1866, a pianoforte quintet (F minor,

op. 4), an overture for full orchestra to Cossa's 'Cola di Rienzi,' together with other works, and in the same year he conducted Liszt's 'Dante' symphony (Feb. 26) with great success and credit to himself.

In company with Liszt, he visited Germany in 1869, and at Munich heard Wagner's music for the first time. Sgambati's talent naturally attracted the notice of Herr von Kendl, the well-known amateur and German ambassador in Rome. At the orchestral concerts which he conducted at the embassy many of his works were first heard. Here also, in 1876, he made the acquaintance of Wagner [in whose honour the ambassador one evening gave a concert consisting entirely of Sgambati's compositions, including two pianoforte quintets and several songs. Wagner, much surprised to find in Rome a composer who made music of this kind, expressed a wish to hear it again, and on the following evening the programme was privately repeated for the delectation of the master, who immediately wrote to the publishing-house of Schott, advising them to purchase and print Sgambati's works without delay. The firm then published the two quintets, as well as a prelude and fugue for pianoforte.]

Encouraged by this well-merited recognition Sgambati wrote a Festival-overture and a concerto for pianoforte and orchestra. His Symphony in D, produced at a concert in the 'Sala Dante' early in 1881 and repeated on March 28 of that year at the Quirinal, being the first work of the kind ever given at the Italian Court, in the presence of King Humbert and his Consort, Queen Margherita, to whom it was dedicated. In 1882 Sgambati paid his first visit to England and played his pianoforte concerto at the Philharmonic concert of May 11. His symphony was given at the Crystal Palace on June 10 under the composer's direction. Both works were well received, but the symphony made much the greater impression of the two. Though original in its ideas and character it adheres to established forms; it is at once thoughtfully worked out and gracefully expressed, with a great deal of effect, and no lack of counterpoint.

His quartet for strings in D flat, printed about this time, is one of the works by which Sgambati is best known. First played in London by the Kneisel quartet of Boston, it was afterwards included by Joachim and Piatti, along with his second pianoforte quintet, in the repertory of the famous Popular Concerts, and eventually attained wide popularity throughout Europe. Two years later (1884) Sgambati conducted the symphony in Paris, where he had been invited as representative of Italy at the International Concerts given in the Trocadéro. In 1886 he was named one of the five corresponding members of the French Institute to fill the place vacated by Liszt. In 1887 he

was invited to conduct his second symphony, in E flat (written in 1883 and still unpublished), and to execute his first quintet at the great musical festival of the Tonkünstler-Versammlung in Cologne.

[In the same year he wrote, in honour of the wedding of the Duke of Aosta, an 'Epitalamio Sinfonico,' which takes the form of a suite, though considerably more developed than is usually the case in compositions so described. After its production at Turin the author conducted performances of the work in Milan and Rome, and brought it to London on the occasion of his second visit in 1891, when it was given at a Philharmonic concert. During the same season he gave a concert of his own compositions at Princes' Hall, and was commanded to Windsor where he played before Queen Victoria. One of the most memorable journeys made by Sgambati to foreign countries included a visit to Russia in the autumn of 1903. Received with enthusiasm, he gave concerts, consisting chiefly of his own works, at St. Petersburg, Moscow, and other places in Northern Europe, with such conspicuous success that they would have welcomed him gladly another year.

To commemorate the death of King Humbert he wrote a 'Messa da Requiem' for chorus, baritone solo, and orchestra, which was produced at the Pantheon, Jan. 17, 1896, and several times repeated. It was also given in Germany, at Cologne in November 1906, in the composer's presence, and at Mayence in March 1907. Its reception on both occasions bore testimony to German appreciation of Sgambati, whose work was highly praised. The Requiem is a fine piece of religious writing, in strict conformity with the spirit of the sacred text, modern without extravagance of any kind, and its themes well developed, though not so diffusely as to render it unsuitable for performance on liturgical occasions. It is, perhaps, Sgambati's most ambitious work, and the author's success as a choral writer occasions regret that more of his time had not been given to compositions of the kind.

He preferred, instead, to devote the energies of his best years to teaching; and, as a result, must be considered the founder, with his colleague Penelli, of the Liceo Musicale in connection with the Accademia di S. Cecilia in Rome (see *ROME*). Beginning with a free class for the pianoforte in 1869 he has persevered to the present day (1907) in giving instruction of the soundest description. Under him the study of the instrument in Rome has reached an exceptional degree of development, and it cannot be doubted that had Sgambati chosen, as the field of his labours, a city of central Europe, he would have attained a far wider celebrity as a master.

His success as a writer for the pianoforte is due to his rare knowledge of its resources, to his facility in producing required effects with

the simplest means, to his complete command of harmonic combinations of the subtlest kind, and to the exquisite finish given to even the least of his inspirations. With Sgambati device is rarely evident. His figures of accompaniment are as spontaneous as the melodies they sustain. Certain of his minor compositions, such as the beautiful intermezzo in op. 21 and certain numbers in his 'Pièces Lyriques' (op. 23) and in his 'Mélodies poétiques' (op. 36) may be cited as exemplifying a level of artistic perfection which in little descriptive pieces of the kind has never, perhaps, been surpassed. His more important pianoforte pieces, his chamber-music, and his orchestral writings, taken together, place him at the head of those Italian musicians of the latter part of the 19th century, who, not writing for the stage, have moulded their work on classic models. Sgambati, in appropriating received forms, has invested them with southern feeling, deep but restrained, rich and even glowing, but utterly free from the meretricious sentiment which served to win immediate popularity for Italian composers of lesser claims. His writings, in a word, possess the qualities which endure.

His native city owes him a lasting debt as its apostle of classical music, as teacher, performer, and director. His efforts have not gone unrecognised in high places. His influence has been felt and appreciated at the Italian court, where he was appointed pianist and director of Queen Margherita's quintet, and named, by *motu proprio* of King Victor Emmanuel III. in 1903, Commendatore of the Order of SS. Maurice and Lazarus. But by his countrymen at large it cannot be said that Sgambati's talent has as yet been estimated at its proper value. This, in a nation so quick to recognise and even exaggerate any indication of artistic eminence, is little short of astounding. The omission may be explained in part by a certain indifference in the musician himself, though not sufficiently to account for the slow awakening of Rome and Italy to the merits of a man who was honoured as a *confrère* by Liszt and Wagner. Yet it is certain, as M. Eugène d'Harcourt wrote in 1906, after he had been commissioned by the French government to report on the state of music in Italy, that 'quand la musique symphonique italienne aura une histoire et qu'on l'écrira, il faudra lui reconnaître, pour véritable fondateur, le Romain Giovanni Sgambati.'

Some of the works mentioned above are still unprinted; his published works include the following:—

- Op.
1. Album of five songs.
2. Album of ten songs.
3. Notturmo for pf.
4. Quintet, pt. and strings, F minor.
5. Quintet, pt. and strings, B flat.
6. Prelude and fugue for pf. in E flat minor.
7. Two Études for pf., D flat and F sharp minor, written for the Method of Lebert and Stark, Stuttgart.

- Op.
12. Fogli volanti for pt., 8 pieces.
14. Gavotte for pf. Easy edition arranged by author.
15. Concerto, pf. and orchestra, in G minor.
16. Symphony in D.
17. Quartet in D flat for strings.
18. Quattro pezzi for pf. Preludio, Vecchio minuetto, Nenia, Toccata.
19. Four Italian songs.
20. Tre Notturmi for pf.
21. Suite for pt. (Prelude, Valse, Air, Intermezzo, Étude mélodique).
22. Passions, voice and pf.
23. Pièces Lyriques (6) for pf.
24. Due Pezzi for violin and piano.
25. Te Deum laudamus, andante solenne, for strings and organ.
26. The same for full orchestra.
29. Gondoliers for violin and piano.
30. Benedizione ouziana for organ.
31. Fifth Nocturne for pf.
32. Melodie Liriche, four songs.
33. Sixth Nocturne for pf.
34. 'Verses en luctum cythara mea,' Motet for baritone, organ, and strings (included in opus 38).
35. Quattro melodie per una voce e pf.
36. Mélodies poétiques (12) for pf.
37. 'Tout has,' Melodia for canto.
38. Messa da Requiem per coro, baritone solo, orchestra ed organo (ad lib.).

[The following are without opus number.]

- Serenata, per canto e pianoforte.
Ballata, per tenore.
Stornello toscano, per una voce e pianoforte.
Romanza senza parole, pf.
'Il faut aimer,' Gavotte chantée.
La mia stella, Melodia.
Melodie Liriche (five, and a duet).
Two songs:—
1. Fior di siepe.
2. Fuori di porta.

TRANSCRIPTIONS.

- Liszt. Die Ideale, pt. four hands.
Chopin. Canzone lituana, pf. solo.
Gluck. Melodia dell' Orfeo, pf. solo.
'Separazione,' old Italian folk-song (edited and provided with accompaniment by G. Sgambati).

G.; with additions in square brackets, by H. A. W.

SHAKE or TRILL (Fr. *Trille*, formerly *Tremblement*, *Cadence*; Ger. *Triller*; Ital. *Trillo*). The shake, one of the earliest in use among the ancient graces, is also the chief and most frequent ornament of modern music, both vocal and instrumental. It consists of the regular and rapid alternation of a given note with the note above, such alternation continuing for the full duration of the written note. [On other instruments and on the voice, this definition of the shake holds good; text-books and methods will give examples of how the shake should be performed, but it is originally one of the ornaments designed for the keyboard, and most effective there.]

The shake is the head of a family of ornaments, all founded on the alternation of a principal note with a subsidiary note one degree either above or below it, and comprising the **MORDENT** and **PRALLTRILLER** still in use, and the **RI-BATTUTA** (Ger. *Zurückschlag*) and *Batte-ment*¹ (Ex. 1), both of which are now obsolete. (See **AGRÈMENS**.)

1. Battement.

Ribattuta.

¹ Rousseau (*Dict. de Musique*) describes the *Batte-ment* as a trill which differed from the ordinary trill or *cadence* only in beginning with the principal instead of the subsidiary note. In this he is certainly mistaken, since the *batte-ment* is described by all other writers as an alternation of the principal note with the note below.

The sign of the shake is in modern music *tr.* (generally followed by a waved line ~~~~~ if over a long note), and in older music *tr.* *n*, *m*, and occasionally +, placed over or under the note; and it is rendered in two different ways, beginning with either the principal or the upper note, as in example 2:—

2. *Written.* *Performed.* *Or thus.*

These two modes of performance differ considerably in effect, because the accent, which is always perceptible, however slight it may be, is given in the one case to the principal and in the other to the subsidiary note, and it is therefore important to ascertain which of the two methods should be adopted in any given case. The question has been discussed with much fervour by various writers, and the conclusions arrived at have usually taken the form of a fixed adherence to one or other of the two modes, even in apparently unsuitable cases. Most of the earlier masters, including Emanuel Bach, Marpurg, Türk, etc., held that all trills should begin with the upper note, while Hummel, Czerny, Moscheles, and modern teachers generally (with some exceptions) have preferred to begin on the principal note. This diversity of opinion indicates two different views of the very nature and meaning of the shake; according to the latter, it is a trembling or pulsation—the reiteration of the principal note, though subject to continual momentary interruptions from the subsidiary note, gives a certain undulating effect not unlike that of the tremulant of the organ; according to the former, the shake is derived from the still older *appoggiatura*, and consists of a series of *appoggiaturas* with their resolutions—is in fact a kind of elaborated *appoggiatura*,—and as such requires the accent to fall upon the upper or subsidiary note. This view is enforced by most of the earlier authorities; thus Marpurg says, ‘the trill derives its origin from an *appoggiatura* (*Vorschlag von oben*) and is in fact a series of descending *appoggiaturas* executed with the greatest rapidity.’ And Emanuel Bach, speaking of the employment of the shake in ancient (German) music, says ‘formerly the trill was usually only introduced after an *appoggiatura*,’ and he gives the following example:—

Nevertheless, the theory which derives the shake from a trembling or pulsation, and therefore places the accent on the principal note, in which manner most shakes in modern music are executed, has the advantage of considerable, if not the highest antiquity.¹ For Caccini, in

¹ The exact date of the introduction of the trill is not known, but

his *Singing School* (published 1601), describes the *trillo* as taught by him to his pupils, and says that it consists of the rapid repetition of a *single* note, and that in learning to execute it the singer must begin with a crotchet and strike each note afresh upon the vowel *a* (*ribattere ciascuna nota con la gola, sopra la vocale a*). Curiously enough he also mentions another grace which he calls *Gruppo*, which closely resembles the modern shake.

4. *Trillo.*

Gruppo.

And Playford, in his *Introduction to the Skill of Musick* (1655) quotes an anonymous treatise on ‘the Italian manner of singing,’ in which precisely the same two graces are described.² Commenting on the shake Playford says, ‘I have heard of some that have attained it after this manner, in singing a plain-song of six notes up and six down; they have in the midst of every note beat or shaken with their finger upon their throat, which by often practice came to do the same notes exactly without.’ It seems then clear that the original intention of a shake was to produce a trembling effect, and so the modern custom of beginning with the principal note may be held justified.

In performing the works of the great masters from the time of Bach to Beethoven then, it should be understood that, according to the rule laid down by contemporary teachers, the shake begins with the upper or subsidiary note, but it would not be safe to conclude that this rule is to be invariably followed. In some cases we find the opposite effect definitely indicated by a small note placed before the principal note of the shake, and on the same line or space, thus—

5. MOZART (ascribed to), ‘Une fièvre,’ Var. 3.

and even when there is no small note it is no doubt correct to perform all shakes which are situated like those of the above example in the same manner, that is, beginning with the principal note. So therefore a shake at the commencement of a phrase or after a rest (Ex. 6), or after a downward leap (Ex. 7), or when preceded by a note one degree below it (Ex. 8) should begin on the principal note.

It is also customary to begin with the principal

² Consorti, a celebrated singer (1590), is said to have been the first who could sing a trill (Schilling, *Lexikon der Tonkunst*).

The author of this treatise is said by Playford to have been a pupil of the celebrated Scipione della Palla, who was also Caccini's master.

6. BACH, Prelude No. 16, Book I.

MOZART, Concerto in B \flat .

7. BACH, Art of Fugue, No. 8.

8. BACH, Sonata for PF. and Flute, No. 6.

note when the note bearing the shake is preceded by a note one degree above it (Ex. 9), especially if the tempo be quick (Ex. 10), in which case the trill resembles the *Pralltriller* or inverted mordent, the only difference being that the three notes of which it is composed are of equal length, instead of the last being the longest (see vol. iii. p. 808).

9. BACH, Organ Fugue in F.

10. MOZART, Sonata in F.

If, however, the note preceding the shake is slurred to it (Ex. 11a), or if the trill note is preceded by an *appoggiatura* (Ex. 11b), the trill begins with the upper note; and this upper note is *tried* to the preceding note, thus delaying the entrance of the shake in a manner precisely similar to the 'bound *Pralltriller*' (see vol. iii. p. 260, Ex. 13). A trill so situated is called in German *der gebundene Triller* (the bound trill).

11. (a) BACH, Concerto for two Pianos.

(b) HAYDN, Trio in E minor.

When the note carrying a shake is preceded by a short note of the same name (Ex. 12), the upper note always begins, unless the anticipating note is marked *staccato* (Ex. 13), in which case the shake begins with the principal note.

12. BACH, Chromatic Fantasia.

13. MOZART, Sonata in C minor.

In modern music, when a trill beginning with the subsidiary note is required, it is usually indicated by a small grace-note, written immediately before the trill-note (Ex. 14). This grace-note is occasionally met with in older music (see Clementi, Sonata in B minor), but its employment is objected to by Türk, Marpurg, and others, as liable to be confused with the real *appoggiatura* of the bound trill, as in Ex. 11. This objection does not hold in modern music, since the bound trill is no longer used.

14. BEETHOVEN, Sonata, Op. 53, Finale.

Immediately before the final note of a shake a new subsidiary note is generally introduced, situated one degree *below* the principal note. This and the concluding principal note together form what is called the *turn* of the shake, though the name is not strictly appropriate, since it properly belongs to a separate species of ornament of which the turn of a shake forms in fact the second half only.¹ [See TURN.] The turn is variously indicated, sometimes by two small grace-notes (Ex. 15), sometimes by notes of ordinary size (Ex. 16), and in old music by the signs *tr*, *my*, or *mo*.

15. CLEMENTI, Sonata in C.

16. HANDEL, Gigue (Suite 14).

Sometimes the turn is not indicated at all, but it has nevertheless to be introduced if the shake is followed by an accented note (Ex. 17). If, however, the next following note is unaccented, no turn is required, but an extra

¹ The turn of a trill is better described by its German name *Nachschlag*, or after-beat.

principal note is added to the last couple of notes, that the trill may end as well as begin with the principal note (Ex. 18). When the trill is followed by a rest, a turn is generally made, though it is perhaps not necessary unless specially indicated (Ex. 19).

17. MOZART, 'Lison dortait,' Var. 8.

18. CLEMENTI, Sonata in G.

19. BEETHOVEN, Trio, Op. 97.

When a note ornamented by a shake is followed by another note of the same pitch, the lower subsidiary note only is added to the end of the shake, and the succeeding written note serves to complete the turn. Even when the trill-note is tied to the next following, this extra lower note is required, provided the second written note is short, and occurs on an accented beat (Ex. 20). If the second note is long, the two tied notes are considered as forming one long note, and the shake is therefore continued throughout the whole value.

20. BACH, Fugue No. 15, Vol. II.

Very similar is the rendering of a shake on a dotted note:—the turn ends on the dot, which thus takes the place of the second of the two notes of the same pitch. Thus the effect of the two modes of writing shown in Ex. 21 *a* and *b*, would be the same. If, however, the dotted note is followed by a note a degree lower, no turn is required (Ex. 22).

21. HANDEL, Suite 10. Allemande.

Rendering of both.

22. HANDEL, Suite 10. Allegro.

Trills on very short notes require no turn, but consist merely of a triplet—thus,

23. MOZART, 'Ein Weib,' Var. 6.

Besides the several modes of ending a shake, the commencement can also be varied by the addition of what is called the upper or lower prefix. The upper prefix is not met with in modern music, but occurs frequently in the works of Bach and Handel. Its sign is a tail turned upwards from the beginning of the ordinary trill mark, and its rendering is as follows—

24. BACH, Partita No. 1, Sarabande.

The lower prefix consists of a single lower subsidiary note prefixed to the first note of a shake which begins with the principal note, or of two notes, lower and principal, prefixed to the first note of a shake beginning with the upper note. It is indicated in various ways, by a single small grace-note (Ex. 25), by two (Ex. 26), or three grace-notes (Ex. 27), and in old music by a tail turned downwards from the commencement of the trill mark (Ex. 28), the rendering in all cases being that shown in Ex. 29.

From a composer's habit of writing the lower prefix with one, two, or three notes, his intentions respecting the commencement of the ordinary shake *without* prefix, as to whether it should begin with the principal or the subsidiary note, may generally be inferred. For since it would be incorrect to render Ex. 26 or 27 in the manner shown in Ex. 30, which involves the repetition of a note, and a consequent break of legato—it follows that a composer who chooses the form Ex. 26 to express the prefix intends the shake to begin with the upper note, while the use of Ex. 27 shows that a shake beginning with the principal note is generally intended.

That the form Ex. 25 always implies the shake beginning with the principal note is not so clear (although there is no doubt that it usually does so), for a prefix is possible which

leaps from the lower to the upper subsidiary note. This exceptional form is frequently employed by Mozart, and is marked as in Ex. 31. It bears a close resemblance to the Double Appoggiatura. [See that word, vol. i. p. 99.]

31. MOZART, Sonata in F. Adagio.

Among modern composers, Chopin and Weber almost invariably write the prefix with two notes (Ex. 26); Beethoven uses two notes in his earlier works (see op. 2, No. 2, Largo, bar 10), but afterwards generally one (see op. 57).

The upper note of a shake is always the next degree of the scale above the principal note, and may therefore be either a tone or a semitone distant from it, according to its position in the scale. In the case of modulation, the shake must be made to agree with the new key, independently of the signature. Thus in the second bar of Ex. 32, the shake must be made with B \sharp instead of B \flat , the key having changed from C minor to C major. Sometimes such modulations are indicated by a small accidental placed close to, or above the sign of the trill (Ex. 33).

32. CHOPIN, Ballade, Op. 67.

33. BEETHOVEN, Choral Fantasia.

The lower subsidiary note, whether employed in the turn or as prefix, is usually a semitone distant from the principal note (Ex. 34), unless the next following written note is a whole tone below the principal note of the shake (Ex. 35). In this respect the shake follows the rules which govern the ordinary turn. [See TURN.]

34. BEETHOVEN, Sonata, Op. 10, No. 2.

35. MOZART, Rondo in D.

A series of shakes ascending or descending either diatonically or chromatically is called a Chain of Shakes (Ital. *Catena di Trille*; Ger. *Trillerkette*). Unless specially indicated, the last shake of the series is the only one which requires a turn. Where the chain ascends diatonically, as in the first bar of Ex. 36, each shake must be completed by an additional principal note at the end, but when it ascends by the chromatic alteration of a note, as from G \sharp to G \sharp , or from A to A \sharp , in bar 2 of the example, the same subsidiary note serves for both principal notes, and the first of such a pair of shakes requires no extra principal note to complete it.

36. BEETHOVEN, Concerto in E \flat .

In pianoforte music, a shake is frequently made to serve as accompaniment to a melody played by the same hand. When the melody lies near to the trill-note there need be no interruption to the trill, and either the principal or the subsidiary note (Hummel prescribes the former, Czerny the latter) is struck together with each note of the melody (Ex. 37). But when the melody lies out of reach, as is often the case, a single note of the shake is omitted each time a melody-note is struck (Ex. 38). In this case the accent of the shake must be upon the upper note, that the note omitted may be a subsidiary and not a principal note.

37. CRAMER, Study, No. 11.¹

38. BEETHOVEN, Sonata, Op. 109.

¹ Von Bülow, in his edition of Cramer's studies, interprets this passage in a precisely opposite sense to that given above, directing the shake to be performed as in Example 33.

The above arrangement constitutes what is called a false trill, the effect of a complete trill being produced in spite of the occasional omission of one of the notes. There are also other kinds of false trills, intended to produce the effect of real ones, when the latter would be too difficult. Thus Ex. 39 represents a shake in thirds, Ex. 40 a shake in octaves, and Ex. 41 a three-part shake in sixths.

39. MENDELSSOHN, Concerto in D minor.

40. LISZT, Transcription of Mendelssohn's 'Wedding March.'

41. MÜLLER, Caprice, Op. 29, No. 2.

The above method of producing a shake in three parts is generally resorted to when great force is required, otherwise the ordinary method is quite practicable, and both double and triple shakes are frequently met with in modern brilliant music (Ex. 42, 43).

42. CHOPIN, Polonaise, Op. 25.

43. BEETHOVEN, Polonaise, Op. 89.

The speed of a shake cannot be exactly defined in notes, since it is usually better, except in the case of very short trills (as in Ex. 23), that the notes of the shake should bear no definite proportion to the value of the written note. Generally, the shake should be as rapid as is consistent with distinctness. When a proportional shake is required it is usually written out in full, as at the end of the Adagio of Beethoven's Sonata in E \flat , op. 72, No. 1. F. T.

SHAKESPEARE, WILLIAM, composer, vocalist, pianist, born at Croydon, June 16, 1849. At the age of thirteen he was appointed organist at the church where formerly he had attracted attention in the choir. In 1862 he commenced a three years' course of study of harmony and counterpoint under Molique; but after that master's death, having in 1866 gained the King's Scholarship at the Royal Academy of Music, continued his studies there for five years under Sir W. Sterndale Bennett. Whilst at the Royal Academy he produced and performed at the students' concerts a pianoforte sonata, a pianoforte trio, a capriccio for pianoforte and orchestra, and a pianoforte concerto; and attracted some notice as a solo-player.

He was elected Mendelssohn Scholar in 1871, for composition and pianoforte-playing, and in accordance with the wish of the Committee entered the Conservatorium at Leipzig. There, whilst under the instruction of the director, Carl Reinecke, he produced and conducted in the Gewandhaus a symphony in C minor. Having discovered himself to be the possessor of a tenor voice he was sent by the Mendelssohn Scholarship Committee to study singing with Lamperti at Milan, and there remained for two and a half years. But though singing was his chief pursuit he did not neglect composition, and while in Italy wrote two overtures, two string quartets, and other works.

In 1875 he returned to England, and entered upon the career of a concert and oratorio singer. He was appointed in 1878 Professor of Singing, and in 1880 conductor of the concerts, at the Royal Academy of Music. [This latter office he resigned in 1886. Shakespeare was conductor of the Strolling Players' Orchestral Society in 1901-5.]

His voice, though both sweet and sympathetic in quality, is somewhat deficient in power; and his success as a singer must therefore be attributed to the purity of his vocal production and to his complete mastery of all styles of music.

His compositions, which are marked by considerable charm and elegance, show the influence of Schumann and Bennett; and in his overture, performed at the Crystal Palace in 1874, and his Pianoforte Concerto, at the Brighton Festival of 1879, he proves himself an adept at musical form.

J. C. G.

SHALIAPIN, FEDOR IVANOVICH, celebrated opera-singer, born Feb. 11, 1873, at Kazan. His father was a peasant, and unable to give his son any educational advantages, musical or otherwise. At seventeen the young man joined a provincial opera-company, and was soon entrusted with leading parts. In 1892, after a tour in the region of the Caspian Sea and the Caucasus, he found himself in Tiflis, where he studied for a year with Oussatov. Two years later he began to sing in St. Petersburg, at the Summer Theatre, the Aquarium and

the Maryinsky Theatre, but it was not until 1896, when he was engaged at the Private Opera in Moscow, that Shaliapin's name became famous. This enterprise, supported by a rich lawyer of the name of Mamontov, made a special feature of national opera, and gave the young singer an opportunity of displaying his exceptional powers. Shaliapin has impersonated, with striking power and originality, most of the chief bass parts in Russian opera: Ivan the Terrible in Rimsky-Korsakov's 'Maid of Pskov,' the title rôle in Moussorgsky's 'Boris Godounov,' Melnik in Dargomij'sky's 'Roussalka,' Yeremka in Serov's 'Power of Evil,' etc. He is an admirable Mephistopheles in 'Faust,' but his predilection for national opera is perhaps the reason for his being so little known out of Russia. He sang in Milan in 1901 (ten performances of Boito's 'Mefistofele'), and again in 1904. R. N.

SHAMUS O'BRIEN. Romantic comic opera in two acts; text by G. H. Jessop (after J. Sheridan Le Fanu), music by C. V. Stanford, op. 61. Produced at the Opera-Comique Theatre, London, March 2, 1896.

SHARP (*Diësis*, from Lat. *Divisio*; Fr. *Dièse*). The term which expresses the raising of a note by a less quantity than a whole tone. F sharp is half a tone higher than F natural: a singer 'sang sharp'—that is, sang slightly higher than the accompaniment; 'the pitch was sharpened'—that is, was slightly raised.

The sign for a sharp in practical music is ♯, and is derived from the same source as the natural, viz., the *b quadratum* of the ancients, written as *h* and contrasted with the *b mollis* or *b*, the origin of our flat sign. In French the same signs are used, but the raised note is entitled *dièse*—Fa dièse, Re dièse, etc.; in German Fis, Dis, etc., just as Eb, Gb, are designated Es, Ges, and so on.

In the printed music of the 17th century, however, the sign is usually ✕, and the single cross x was also used to indicate the sharp sign, though now it is the sign for the double-sharp.

In Germany the sign was used to express the major mode, C♯ meaning C major, A♯, A major, and so forth. Thus Beethoven has inscribed the overture to 'Leonora' known as 'No. 1' (which is in the key of C) with the words 'Ouverture in C♯, Charakteristische Ouverture.' The Eroica Symphony, in Eb, was even announced in the programme of Clement's Concert, April 7, 1805, as 'Eine neue grosse Sinfonie in Dis' (i.e. D♯). Instances of the practice are frequent in the Index to the *Allgemeine musikalische Zeitung*. G.

SHARP (or ACUTE) MIXTURE. An organ stop consisting chiefly of pipes representing the higher partial tones, overtones, or harmonics.

According to Dr. E. J. Hopkins, a sharp mixture is one of four Ranks giving a sharp clear tone, consisting of the following intervals

in relation to the unison: 19th, 22nd, 26th, 29th, or *g'*, *c''*, *g''*, *c'''*, in relation to CC or 8 ft. C. T. E.

SHARPE, ETHEL, born in Dublin, Nov. 28, 1872, was a pupil of the Royal Irish Academy of Music, and subsequently of the Royal College of Music, where, under the tuition of Mr. Franklin Taylor, she became a pianist of remarkable accomplishment. She gave her first concert in Princes Hall, in Nov. 1891, and received the silver medal of the Musicians' Company in the same year. Her début at the Crystal Palace took place on March 26, 1892, and for the next two years she gained experience and pursued her studies on the continent, making a great success at a recital in Vienna in 1894. During her stay at Vienna she enjoyed the friendship of Brahms and other notable musicians. She reappeared in London in 1895, playing again at the Crystal Palace. In that year she married Mr. Alfred Hohday, a distinguished viola-player (*Brit. Mus. Biog.* etc.). M.

SHARPE, HERBERT FRANCIS, born at Halifax, March 1, 1861, won a pianoforte scholarship at the opening of the National Training School, where he afterwards succeeded Eugène d'Albert as Queen's Scholar. He appeared as a finished pianist in 1882, and gave many concerts in the provinces as well as in London, where he organised several series of very interesting trio concerts in 1899-1902. He was appointed a professor at the Royal College of Music in 1884, and in 1890 became an examiner for the Associated Board. He has written a comic opera in three acts (still in MS.), a concert overture for orchestra, pieces for one and two pianos, for flute or piano, for violin and piano, etc., besides part-songs, vocal trios, and songs. An excellent 'Pianoforte School' is his op. 60 (*Brit. Mus. Biog.*) M.

SHAW, MARY (MRS. ALFRED SHAW), daughter of John Postans, messman at the Guard Room, St. James's Palace, was born in 1814. She was a student at the Royal Academy of Music from Sept. 1828 to June 1831, and afterwards a pupil of Sir George Smart. Miss Postans appeared in public as a contralto singer in 1834, and at the Amateur Musical Festival in Exeter Hall in November of that year attracted great attention by the beauty of her voice and the excellence of her style. In 1835 she was engaged at the Concert of Ancient Music and the York Festival, and about the end of the year became the wife of Alfred Shaw, an artist of some repute. In 1836 she appeared at the Norwich and Liverpool Festivals, at the latter of which she sang the contralto part in 'St. Paul,' on its first performance in England. In 1837 she was engaged at the Philharmonic and Sacred Harmonic Societies and Birmingham Festival. In 1838, after fulfilling an engagement at the Gloucester Festival, she left England

and appeared at the Gewandhaus concerts, under Mendelssohn. A letter from him to the Directors of the Philharmonic Society, dated Jan. 19, 1839, speaks of Clara Novello and Mrs. Shaw as 'the best concert-singers we have had in this country for a long time.' From Germany she proceeded to Italy, and appeared at La Scala, Milan, Nov. 17, 1839, in Verdi's 'Othello.' She returned to England in 1842, and appeared at Covent Garden with Adelaide Kemble; in 1843 at the Sacred Harmonic Society with Clara Novello; and afterwards at the Birmingham Festival. Her brilliant career was suddenly arrested by a heavy visitation. Her husband became deranged, and the calamity so seriously shocked her whole system that the vocal organs became affected, and she was unable to sing in tune. She resorted to teaching, for three or four years appearing in public at an annual benefit concert. After her husband's death in 1847 she married J. F. Robinson, a country solicitor, and retired from the profession. She died at Hadleigh Hall, Suffolk, Sept. 9, 1876.

W. H. H.

SHAWM, a wind instrument of the oboe type, with a double reed but a larger conical bore and a wide bell. The name is generally said to be a corruption of the French *Chalumeau*, but it would be more correct to say that both words have been derived from the same source, the Lat. *Calamus*, 'a reed,' through the diminutive *Calamellus*. In mediæval times the word appears as *Calamel*, *Chalamelle*, or *Chalemie* in France; *Caramillo* and *Charamella* in Spain and Italy; *Schalmei* or *Schalmeijn* in Germany; and *Shalmele*, *Shalm*, or *Shawm* in England. It is not until the 16th century that the form *Chalumeau* occurs, and in the next century it was used to denote a distinct instrument with cylindrical bore and single reed, the precursor of the modern clarinet. As shown by an ancient fresco in the British Museum, an instrument similar to the Shawm was known to the Romans, but its popularity in Europe is traceable to the Arabic and Saracenic influences of the 12th and 13th centuries (see PIPES, EVOLUTION OF). In the 16th century Shawms were made of various sizes from high treble to contra-bass, the larger forms being generally known on the Continent under the names Pommer and Bombardt. In England the title Shawm included all sizes; hence Drayton (*Polyolbion*, vol. iv.) speaks of the 'shrillest Shawm,' and an old proverb of the time of Henry VII. formerly inscribed on the walls of Leckington Manor House, Yorkshire states that:—

A shawme makethe a swete sounde for he tuncythe [the] basse :

It mountithe not to hy but kepthe rule and space :
Yet yf it be blowne withe to a vehement wynde,
It makithe it to mygoverne oute of his kynde.

(MS. copy Brit. Mus. Bib. Reg. 18 D. ii.)

In the Privy Purse Expenses of Henry VIII. is the following entry:—

1530. For ij sagbuttes ij Tenor Shalmes and two trebull
Shalmesse x li. x s.

Illustrations of the various kinds of Shawms are given by Virdung (*Musica Getutscht*, 1511), Praetorius (*Sciagraphia*, 1620), and Mersenne (*Harmonie universelle*, 1635); also of existing instruments in Day's *Musical Instruments in the Military Exhibition* (1891), Kappey's *Military Music*, and in *Musical Times*, August 1906.

The high treble Shawm is still used on the continent with the hagpipe (cornemuse) by itinerant musicians; in Brittany it is called Bombardt and in Italy Cionnamella or Cennamella (see PIFFERO). The word Shawm disappeared from general use in England during the early part of the 17th century, in favour of the title Hoboy, though this name appears as early as 1561 in the opera 'Ferrex and Porrex.' In 1607 the Edinburgh town musicians consisted of players on 'chalmis and howbois,' from which it may be inferred that by that time the two instruments had become distinct.

For the term 'wayghte' as applied to the Shawm see WAITS, and for the subsequent history of the instrument see OBOE. R. W. G.

SHE STOOPS TO CONQUER. A English opera, in three acts; adapted by E. Fitzball from Goldsmith's comedy; music by G. A. Macfarren. Produced at Drury Lane Theatre (Pyne & Harrison), Feb. 11, 1864. G.

SHEDLOCK, JOHN SOUTH, born at Reading, Sept. 29, 1843, was a pupil of Lübeck for the piano and of Edouard Lalo for composition. Before going to Paris for his musical studies he had taken the degree of B.A. at the London University in 1864. From the time of his return to England he was active as a teacher, and occasionally played in public. In 1879 he was appointed critic of *The Academy*, in succession to Professor Prout, and has since been engaged almost exclusively in musical literature. He was appointed critic of *The Athenæum* in 1901. Besides journalistic work, he has done much of an archaeological kind. A series of articles on Beethoven's sketch-books, in the *Musical Times*, 1892, led to his discovery of a copy of Cramer's studies annotated by Beethoven, at Berlin. This was published as 'The Beethoven-Cramer Studies' in 1893. In 1895 he edited two of Kuhnau's 'Biblischen Sonaten,' and a selection of harpsichord pieces by Pasquini and others. In the same year appeared his most important work, a treatise on *The Piano-forte Sonata*, which was translated two years afterwards into German by Olga Stieglitz. His chief composition is a quartet for pianoforte and strings, written in 1886. M.

SHEFFIELD FESTIVAL. See FESTIVALS, vol. ii. p. 29.

SHEPHERD, SHEPHEARD, SHEPPARD, or SHEPPERD, JOHN, horn in the early part of the 16th century, was a chorister of St. Paul's under Thomas Mulliner. In 1542 he

was appointed Instructor of the choristers and organist of Magdalen College, Oxford, which office he resigned in 1543, was reappointed to it in 1545, and held it until 1547. He was a Fellow of the College from 1549 to 1551. On April 21, 1554, having then been a student in music for 20 years, he supplicated for the degree of Mus.D., but it does not appear whether he actually took the degree. John Day's 'Morning and Evening Prayer,' etc., 1560, contains two Anthems, *a* 4, by him—'I give you a new commandment,' and 'Submit yourselves.' The former is reprinted in the 'Parish Choir.' Another book of Day's, the 'Whole Psalms in four parts,' 1563, has a 'Prayer' by him, 'O Lord of hostes.' Barnard prints a four-part anthem, 'Haste thee.' Hawkins prints a motet in three parts by him, 'Steven first after Christ for Gods worde his blood spent,' and a melodious little 'Poynte'—a fugal piece for four voices of seven bars length. Burney (ii. 565) complains that the motet is not a good specimen, and prints another, 'Esurientes,' for five voices from the Christ Church MSS., on which he pronounces Shepherd to have been superior to any composer of the reign of Henry VIII. [In the Durham part-books, the anthem 'O Lord the maker of all thing' usually assigned to Henry VIII., is accredited to Shepherd. It is more probably by William Mundy.] Much of his church music is preserved in the Music School, Oxford; the MSS. at Christ Church contain five complete portions of the 'Magnificat' and some motets, also complete. The great majority of Shepherd's motets in the library are incomplete, as the tenor part-book is wanting. [A 'Deus misereatur' and 'Gloria' in short score, written on two six-lines staves and barred with twelve minims to the bar, is in a MS. organ-book, (6).] In the British Museum (Add. MSS. 15,166, 29,289, 30,480) are treble parts of many of his English compositions, amongst them 2 M. and E. Services with Creed; 2 Te Deums and Magnificats, 2 Creeds, and 7 Anthems. Add. MSS. 4900, 29,246, contain four pieces with lute accompaniment, and Add. MSS. 17,802-5 has no fewer than four Masses—'The western wynde,' 'The French Masse,' 'Be not afraide,' and 'Playn song Mass for a Mene'; four Alleluias, and ten Latin Motets, all for four voices complete. The library of the Royal College of Music possesses four Latin motets, and a 'First Service' by him. Morley in his *Introduction* includes him amongst 'famous Englishmen.' The date of his death is unknown.

Another John Shepherd, possibly a son of the above, was sworn a Gentleman of the Chapel Royal, Dec. 1, 1606. (Rimbault's *Old Cheque-book*, p. 43.) Perhaps it was he who added a Kyrie to Johnson's service in G, in the Cathedral Library, Ely. (See Dickson's *Catalogue*, 32, 37.) Perhaps, also, he is the 'Thos. Shepherd' of Tudway (iv. 72).

W. H. H.

SHEPHERD, WILLIAM, an Edinburgh composer, violinist, and music-publisher. About 1793 he issued a 'Collection of Strathspey Reels' dedicated to Miss Abercromby, and a similar one about 1802-3. In 1796 he entered into partnership with Nathaniel Gow, in a music-publishing business, at 41 North Bridge, Edinburgh, removing before 1804 to 16 Princes Street.

Gow and Shepherd were unfortunate in their speculations, and Shepherd appears to have been deeply involved at his death, which occurred on Jan. 19, 1812.

F. K.

SHEPHERD'S PIPE. A name given to the pastoral oboe or musette. It was an instrument with a double reed like that of the bagpipe chanter; and seems occasionally to have been combined with a windbag as in the latter instrument. It was made in several sizes, constituting a family or 'consort' similar to the viols, recorders, and other instruments. Its origin in the simple reed is well given in Chappell's *History of Music*, vol. i. p. 259.

An excellent drawing of its various forms, with the method of holding it, is to be found in a *Traité de la Musette*, by Jean Girin of Lyons, 1572, where it is distinguished from the 'Cromorne' and 'Hautbois.' The bagpipe form with drones and windbag is also engraved, and interesting details are given as to celebrated makers; many of whom, like the 'luthiers' of Cremona, seem to have handed down their reputation to their descendants. It appears to have had six holes, and the rudimentary scale and compass of the oboe; though, of course when played from a bag, and not with the lips, the upper harmonic register must have been deficient.

W. H. S.

SHEREMETIEV, ALEXANDER DMITRIEVICH, Count, born 1859. His ancestor, Peter Borisov, had been one of the first noblemen to establish a private choir in the 17th century, while his father's church choral choir had become widely famous under the bâton of Lomakin. Count Alexander Sheremetiev started his choir in 1884, under the conductorship of Archangelsky. In 1882 he had already organised a symphony orchestra. In 1898 he began to give national concerts in St. Petersburg, which have gradually acquired the character of symphony concerts at popular prices, and are now very highly rated from the artistic point of view. In 1902 Count Sheremetiev became Intendant of the Imperial Court Chapels.

R. N.

SHERRINGTON, MME. LEMMENS. (See vol. ii. p. 674.)

SHERWOOD, PERCY, born at Dresden, May 23, 1866, was a pupil of the Conservatorium of his native place, studying the pianoforte and composition under Draeseke, W. Roth, etc. in 1885-88. In 1889 he won the Mendelssohn prize with a requiem for voices and orchestra. He was appointed a professor in the Dresden Conservatorium in 1893. He has won con-

siderable success both as a pianist and composer in Germany. His works include a piano concerto, a symphony, an overture, a sonata for violoncello, music for piano, organ, etc. as well as songs. In February 1907 he gave a concert of unpublished compositions of his own, in the Palmengarten, Dresden, the programme of which consisted of a sonata for two pianos, a suite for clarinet and piano, and a quintet for piano and strings. (*Brit. Mus. Biog.*; Riemann's *Lexikon*, etc.)

M.

SHIELD, WILLIAM, son of a singing-master, was born March 5, 1748, at Whickham, Durham. He received his first musical instruction when six years old, from his father, but losing his parent three years later, he was apprenticed to a boat-builder at North Shields. His master, however, permitted him to pursue his musical studies, and he obtained some lessons in thorough-bass from Charles Avison, and occasionally played the violin at music meetings in the neighbourhood. On the expiration of his apprenticeship, having acquired sufficient knowledge to lead the subscription concerts at Newcastle, he determined upon making music his profession, and removed to Scarborough, where he became leader at the theatre and concerts. Whilst there he produced his first composition, an anthem for the opening of a new church at Sunderland. Having been heard by Fischer and Borghi, they recommended him to Giardini, by whom he was engaged in 1772 as a second violin in the Opera band. In 1773 he was promoted to the post of principal viola—the favourite instrument of composers—which he held for eighteen years, and which he also filled at all the principal concerts. In 1778 he produced, at the Haymarket, his first dramatic piece, the comic opera 'The Flitch of Bacon.' This led to his being engaged as composer to Covent Garden Theatre, a post which he occupied until his resignation, 1791. During his engagement he composed many operas and other pieces. In 1791 he made the acquaintance of Haydn, and was wont to say that in four days, during which he accompanied Haydn from London to Taplow and back, he gained more knowledge than he had done by study in any four years of his life. In the same year he visited France and Italy. In 1792 he was re-engaged as composer at Covent Garden, in which capacity he acted until 1797. In 1807 he gave up all connection with the theatre. He was appointed Master of the King's Musick in 1817.

He published at various times, 'A Collection of Favourite Songs, To which is added a Duet for two Violins'; 'A Collection of Canzonets and an Elegy'; and 'A Cento, consisting of Ballads, Rounds, Glees, etc.'; likewise 'Six Trios for two Violins and Bass,' and 'Six Duos for two Violins.' He was also author of *An Introduction to Harmony*, 1800; and *Rudi-*

ments of Thorough Bass, about 1815. His dramatic compositions, consisting of operas, musical farces, and pantomimes, were as follow:

'The Flitch of Bacon,' 1778; 'Lord Mayor's Day,' 1782; 'The Poor Soldier,' 'Rosina,' 'Harlequin Friar Bacon,' 1783; 'Robin Hood,' 'The Noble Pessant,' 'Fontainebleau,' 'The Magic Cavern,' 1784; 'Love in a Camp,' 'The Nunery,' 'The Choleric Fathers,' 'Omni,' 1785; 'Richard Cœur de Lion,' 'The Enchanted Castle,' 1786; 'The Highland Reel,' 'Marian,' 'The Prophet,' 'Alduin,' 1788; 'The Crusade,' 'The Picture of Paris,' 1790; 'The Woodman,' 1798; 'Oscar and Malvina' (with Reeve), 1791; 'Hartford Bridge,' 1792; 'Harlequin's Museum,' 'The Deaf Lover,' 'The Midnight Wanderers,' 'Sprigs of Laurel,' 1793; 'Arrived at Portsmouth,' 'The Travellers in Switzerland,' 'Netley Abbey,' 1794; 'The Mysteries of the Castle,' 1796; 'Abroad and at Home,' 'Lock and Key,' 1798; 'The Italian Villagers,' 'The Village Fête,' 'Wicklow Gold Mines,' 1797; 'The Farmer,' 1798; 'Two Faces under a Hood,' 1807.

In many of his pieces he introduced songs, etc., selected from the works of other composers, English and foreign; and was thereby the means of making the general public acquainted with many beautiful melodies, of which they would otherwise have remained ignorant.

Shield's melodies charm by their simple, natural beauty; at once vigorous, chaste, and refined, they appeal directly to the hearts of Englishmen. But he also wrote songs of agility, to display the powers of Mrs. Billington and others. Among his most popular songs are 'The Thorn,' 'The Wolf,' 'The heaving of the lead,' 'Old Towler,' 'The Ploughboy,' and 'The Post Captain'; but these are but some of the most prominent. Shield died at his residence in Berners Street, Jan. 25, 1829, and was buried on Feb. 4 in the south cloister of Westminster Abbey. With the exception of his fine tenor, reputed a Stainer, which he bequeathed to George IV. (who accepted the gift, but directed that its utmost value should be paid to the testator's presumed widow), he left his whole estate to his 'beloved partner, Ann [Stokes], Mrs. Shield upwards of forty years.' His valuable musical library was sold in July 1829. [On Oct. 19, 1891, a memorial cross was erected to his memory in Whickham Churchyard, Durham.]

W. H. H.

SHIFT. In playing the violin, or any of the instruments belonging to that family, an executant effects a 'shift' when the left hand passes from one established position to another. Thus, when the hand moves up or down the finger-board the player was said to be 'on the shift.' The term was also used to denote the positions themselves, the second position being known as the 'half-shift,' the third position as the 'whole-shift,' and the fourth position as the 'double-shift.' This technical acquirement, which is now an exact and indispensable means of reaching every note within the compass of the violin, evidently originated in Italy. There is a certain amount of ambiguity surrounding its use by viol-players previous to its introduction among violinists; but it is quite certain that before the 17th century there are no indications of any such custom. During the 17th century, however, there is little doubt that it was employed by the best viol-players of the day. Christopher Simpson clearly

demonstrates its use in *The Division Viol* (second edition, London, 1667), wherein he states, under '*The ordering of the fingers in gradual notes*,' that 'In any point of Division which reaches to the lower Frets or beyond them; the highest note thereof is always stopt either with the third or fourth finger.' The first tentative advances towards the adoption of the 'shift' took the form of an extension of the little finger in the first position, and the feat of touching the first C on the *chanterelle* of the violin by this means was looked upon as a daring undertaking. As a natural consequence, the executant's ability rested almost entirely upon his manner of playing *l'ut*, and so sensational was the effect of its advent upon the listeners that an involuntary murmur of 'Gare l'ut,' was wont, it is said, to escape from the lips of his listeners. Beyond a doubt, many professional violinists could shift in the first three positions by the year 1655, for Mersenne (*Harmonie Universelle*) speaks with admiration of those players who could mount up to the octave of each string. Then in 1658 Anthony Wood in his *Life* describes the wonderful playing of Thomas Baltzar—the Paganini of his day—whom he saw 'run up his fingers to the end of the finger-board of the violin and run them back insensibly and all with alacrity and in very good tune, which I am sure,' says he, 'any in England never saw the like before.' To Signor Mattaei—who came to England in 1672—is accorded the invention of that *bête noire* of violinists, the 'half shift,' or second position. But although the 'shift' was favoured by professional players of exceptional ability at this period, its adoption was far from general, owing to the confused methods of holding the violin which continued well into the next century. Lully, who was himself a wonderful violinist, gives an idea of the capacity of the ordinary orchestral technique, by choosing a test piece for those desiring to gain the 'dignus est intrare' of his band, in which no C on the *chanterelle* occurred. For thirty years the entr'acte from his opera of 'Atys' served this purpose. Even in Leopold Mozart's time the question of holding the violin was far from settled, for, in his *Violin School* (1756), he mentions that there are two ways of holding the violin, the first being 'against the breast'—which position he regards as an obstacle to 'shifting,'—and the second is to place the violin under the chin and rest it on the shoulder. The best professional players adopted the latter method, and their example finding favour with lesser artists was the means of abolishing the 'breast position' and bringing the 'shift' into general use.

The 'shift' on the violoncello was doubtless derived from the violin, and is governed by the same rules. The 'thumb movement,' or 'shifting of the thumb' which was the means of facilitating the use of the high positions on the

violoncello, was first employed—and it is said invented—by the French artist Berteau in the first half of the 18th century.

Huet, Felix, *Étude sur les différentes Écoles de Violon*, Châlons-sur-Marne, 1880; Mengy, A., *Quelques Observations sur l'art du Violon*, Paris, 1888; Koeckert, G., *Les Principes Rationnels de la Technique du Violon*, Leipzig, 1904; Anon., *The Violin, How to master it*, Edinburgh, 1889; Courvoisier, Carl, *Technics of Violin-Playing*, London, 1899. o. r.

SHIFT, in trombone playing, signifies an alteration in position of the movable slide, by means of which the fundamental length of the instrument is increased. The home position of the slide is known as the No. 1 'position,' and the successive shifts, lowering the pitch by successive semitones, give respectively the second, third, fourth, fifth, sixth, and seventh 'positions,' the number of the 'position' being thus always one higher than the number of semitones by which the pitch is lowered (see TROMBONE). D. J. B.

SHINNER, EMILY, born at Cheltenham, July 7, 1862, began the study of the violin at the age of seven. In 1874 she went to Berlin, and for two years studied under H. Jacobsen, a pupil of Joachim's, female violinists not being at that time admissible to the Hochschule. In 1876 this restriction was taken away, and Miss Shinner was among the first admitted. In October 1877 she became a pupil of Joachim's, and remained with him for three years. In Feb. 1881, she came to London, and after being heard at several private concerts (among others at one given by the Bach Choir), made her début at a concert given by Mr. H. R. Bird in the Kensington Town Hall, in Brahms's Sonata in G, etc. At the London Musical Society's concert of June 29, 1882, she played David's concerto in E minor with great success, and from that time held a high position among English artists, her style being pure and refined, and her power of interpreting works of a high intellectual order being very remarkable. She appeared at the Popular Concert on Feb. 9, and at the Crystal Palace on March 8, 1884; in 1887 she organised a successful quartet-party of ladies. In January 1889 she married Capt. A. F. Liddell. She died July 17, 1901. m.

SHIRREFF, JANE, born 1811, soprano singer, pupil of Thomas Welsh, appeared at Covent Garden, Dec. 1, 1831, as Mandane in Arne's 'Artaxerxes,' with great success. In 1832 she sang at the Concert of Ancient Music, the Philharmonic Concert, and Gloucester Festival, and in 1834 at the Westminster Abbey Festival. Her engagement at Covent Garden continued from 1831 to 1834-35. In 1835 she commenced an engagement at Drury Lane, but in 1837 returned to Covent Garden. In 1838 she went to America, in company with Wilson, E. Seguin, and Mrs. E. Seguin, where she became a universal

favourite. On her return to England she married Mr. J. Walcott, and retired into private life. Her voice was full-toned, and powerful in the higher, but somewhat weak in the lower notes; her intonation was perfect, and she was a much better actress than the generality of singers. Shedd at Kensington, Dec. 23, 1883. W. H. H.

SHIRREFFS, ANDREW, an Aberdeen musician and poet of the 18th century, born 1762. He wrote a once popular pastoral musical comedy 'Jamie and Bess, or the Laird in disguise' in five acts, modelled upon Allan Ramsay's *Gentle Shepherd*. This was published in 1787; and the musical part of it advertised as for sale in 1788. He was composer of 'Forty Pieces of Original Music,' published by Stewart & Co., Edinburgh. Shirreffs was a M.A. of Marischal College, Aberdeen (1783), and edited the *Aberdeen Chronicle* and the *Caledonian Magazine*. He came to London in 1798, and died about 1807. He was originally a bookbinder, was lame, and his portrait is prefixed to his volume of poems, 1790. Burns mentions having met him, and refers to him as 'a little decreped body, with some abilities.' F. K.

SHOPHAR, or SHOFAR. The Jewish ram's-horn trumpet, used in the synagogue worship. The natural horn is flattened in section, and a cup mouthpiece is formed at the small end. The instrument, or an imitation of its effect, is introduced into the scores of Macfarren's 'John the Baptist' and Elgar's 'Apostles.' D. J. B.

SHORE, MATHIAS, who in 1665 was one of the trumpeters in ordinary to James II. was, a few years afterwards, promoted to the post of Sergeant Trumpeter, in which he distinguished himself by the rigorous exaction of his fees of office. [See TRUMPETER.] He died in 1700, leaving three children:—

1. WILLIAM, also one of the King's trumpeters in ordinary, succeeded his father as Sergeant Trumpeter, died in December 1707, and was buried at St. Martin's-in-the-Fields. He followed his father's example in the severe exaction of fees.

2. CATHERINE, born about 1668, who was a pupil of Henry Purcell for singing and the harpsichord. In 1693 she became the wife of Colley Cibber, without consent of her father, whose resentment was not, however, of very long duration, as when he made his will, March 5, 1695-96, he bequeathed to her one-third of the residue of his property. Shortly after her marriage Mrs. Cibber appeared on the stage as a singer, and, among other songs, sang the second part of Purcell's air 'Genius of England' ('Don Quixote,' Part II.), to her brother John's trumpet accompaniment. She is said to have died about 1730.

3. JOHN, the most celebrated trumpeter of his time, in 1707 succeeded his brother William as Sergeant Trumpeter. Purcell composed for him obligato parts to many songs, which may be seen in the 'Orpheus Britannicus,' and

which fully attest his skill. His playing is highly commended in the *Gentleman's Journal* for January 1691-92, where in an account of the celebration on St. Cecilia's day in the preceding November, we read 'Whilst the company is at table the hautboys and trumpets play successively. Mr. Showers hath taught the latter of late years to sound with all the softness imaginable; they plaid us some flat tunes made by Mr. Finger with a general applause, it being a thing formerly thought impossible upon an instrument designed for a sharp key.' His name appears in 1711 as one of the twenty-four musicians to Queen Anne, and also as luteist to the Chapel Royal.¹ He is said to have been the inventor of the tuning-fork, and also to have split his lip in sounding the trumpet, thereby incapacitating himself for performing. He died Nov. 20, 1752, at the alleged age of ninety, but it is very probable that his age was overstated, and did not exceed eighty. W. H. H.

SHORT, PETER, an early London music-printer and publisher, who printed a number of madrigal books and some early musical treatises. He worked 'at the signe of the Starre' on Bread Street Hill, from about 1584, and his issues include Morley's *Plaine and Easie Introduction to practical Musick*, 1597; Holborne's *Ciththarn Schoole*, 1597; 'Senen Sobs of a Sorrowfull Soule for Sin,' 1597; Dowland's 'First Booke of Songes,' 1597; Morley's 'Canzonets,' 1597; Farnaby's 'Canzonets,' 1598; Cavendish's 'Ayres,' 1599, and some other works. He was succeeded in business, at the same address, between 1603 and 1608, by Humfrey Lowndes, who reissued Morley's *Introduction*. F. K.

SHORT OCTAVE. In the early days of harmony, and indeed until the whole circle of keys was made available in practical music, the chromatic notes in the lowest octave of the keyboard were not wanted, since they were not required as basses. The evidence of pictorial representations shows that as early as the 14th century the expedient was adopted of omitting some of the strings or organ pipes belonging to such keys, and letting their places be taken by strings and pipes tuned to notes below the apparent notes. Various systems of these effecting a saving of space in the organ will be found explained under ORGAN, vol. iii. p. 528*b*. For similar expedients in the SPINET see below, pp. 634-36. The Fitzwilliam Virginal Book contains indirect evidence that 'short octaves' were in general use early in the 17th century; in one piece, the player's left hand is required to strike this chord , which is of course impossible

on a full keyboard; on one with a short octave in which the low G sharp key is attached to the string tuned to the low E, the chord does

¹ In the *Cheque Book of the Chapel Royal* he is said to have been appointed luteist in 1715, but the entry was evidently not made until some time later, and probably from memory only.

not exceed the limit of the ordinary player's hand.

M.
SHRUBSOLE, WILLIAM, organist and hymn composer. He was born at Canterbury in January 1760, and was for seven years chorister at the Cathedral there. He studied the organ during this time, and was in 1782 appointed organist to Bangor Cathedral. While here he gave great offence to the Dean and Chapter by his association with dissenters, and by 'frequenting conventicles'; this led to his dismissal in 1783. He came to London, and immediately got a post as organist at Lady Huntingdon's Chapel, Spafelds, Clerkenwell, which he held to his death. This occurred Jan. 18, 1806. He was buried in Bunhill Fields, and his monument was restored in 1892, mainly by the exertions of Mr. F. G. Edwards.

Shrubsole is best remembered by the composition of the fine hymn tune 'Miles Lane,' which appeared in the *Gospel Magazine* as early as 1779.

F. K.

SHUDI, famous harpsichord-maker, and founder of the house of Broadwood. Burkat Shudi, as he inscribed his name upon his instruments, was properly BURKHARDT TSCHUDI, and was a cadet of a noble family belonging to Glarus in Switzerland.¹ He was born March 13, 1702, and came to England in 1718, as a simple journeyman joiner.² When he turned to harpsichord-making is not known, but we are told by Burney, who knew Shudi and old Kirkman well, that they were both employed in London by Tabel,³ a Fleming, and Burney calls them Tabel's foremen, perhaps meaning his principal workmen. The anecdote given by Burney, in Rees's *Cyclopædia*, of Kirkman's hasty wedding with his master's widow, and acquisition with her of Tabel's stock-in-trade, gives no information about Shudi, who, according to the *Daily Advertiser*, Oct. 5, 1742, 'removed from Meard's Street in Dean Street, Soho, to Great Pulteney Street, Golden Square' (the house occupied by his descendants, the Broadwoods, until 1904). Shudi was then styled 'Harpsichord Maker to H. R. H. the Prince of Wales.' [See BROADWOOD; KIRKMAN.]

Kirkman had the King's Arms for the sign of his business in Broad Street, Carnaby Market; Shudi, the Plume of Feathers at the house now 33 Great Pulteney Street. We may trace the choice of signs of these old colleagues and now rival makers to the divided patronage of the King (George II.) and Prince of Wales, who were notoriously unfriendly. No doubt Handel's friendship was of great value to Shudi; few harpsichords were then made, as owing to the

relatively high price, and the great expense and trouble of keeping them in order, they were only for the rich. But the tuning and repairing alone would keep a business going; harpsichords lasted long, and were submitted to restoration and alteration that would surprise the amateur of the present day.⁴

The Shudi harpsichord, formerly Queen Charlotte's, now in Windsor Castle, is dated 1740. It has a 'Lute' stop, a pleasing variation of *timbre*, and, like the pedal, of English invention in the previous century.

James Shudi Broadwood (MS. Notes, 1838) accredits his grandfather Shudi with the gift of a harpsichord to Frederick the Great, Shudi being a staunch Protestant, and regarding Frederick as the leader and champion of the Protestant cause. Mr. Broadwood, moreover, believed that a portrait of Shudi, which remained until a few years since in one of the rooms in Great Pulteney Street, represented him as engaged in tuning the identical harpsichord thus bestowed. Shudi's wife and two sons are also in the picture, a reproduction of which serves as the frontispiece to Rimbault's *History of the Pianoforte*. The elder boy, apparently nine years old, was born in 1736. This synchronises the picture with Frederick's victory and the peace concluded the following year (1745). But the writer could not find this instrument either in Potsdam or Berlin in 1881. The tradition about it is, however, strengthened by the fact that in 1766 Frederick obtained from Shudi two special double harpsichords for his New Palace at Potsdam, where they still remain. Instead of the anglicised 'Shudi,' they are accurately inscribed 'Tschudi.' One has silver legs, etc.; the other rests upon a partially gilded stand. Following Burney, who however only describes the first one, they appear to have been placed in the apartments of the Princess Amelia, and the Prince of Prussia. These instruments, like all Shudi's which still exist, are of the soundest possible workmanship, discrediting Burney's assertion of the want of durability of his harpsichords,⁵ a reproach, however, which Burney goes on to say could not be alleged against Shudi's son-in-law and successor Broadwood. He however praises Shudi's tone as refined and delicate. The Potsdam harpsichords were made with Shudi's Venetian Swell, for which the pedals still exist, but it was probably not to the German taste of the time, and was therefore removed. Hopkins, in his comprehensive work upon the Organ, says the original organ swell was the 'nagshead,' a mere shutter, invented by Abraham Jordan in 1712. But to imitate its effect in the harpsichord we know

¹ Of the Schwanden branch. Heinrich, born 1674, died 1749, made Pedary of Glarus by the Lady Gnta, Abbess of Seckingen, was the first to adopt the surname Schudi (*seid*). The family tree goes back to Johann, Mayor of Glarus, born about 870.

² See *Schweizerische Lexikon*, Zurich, 1795, art. 'Tschudi.'

³ Messrs. Broadwood's books of 1777 mention a secondhand harpsichord by Tabel (written Tabel). A harpsichord by Tabel with two manuals, and very like a Kirkman, is in the possession of Helena, Countess of Radnor.

⁴ While pianofortes are now kept in tune by yearly contracts, the researches of Mr. William Dale in Messrs. Broadwood's old books, show that harpsichords in the 18th century were tuned by quarterly contracts!

⁵ Burney gives as his authority Snetzler the organ-builder, who attached organs to some of Shudi's harpsichords, and was, moreover, Shudi's intimate friend and executor. Shudi left him his ring, containing a portrait of Frederick the Great.

that Plenus about 1750, and also in London, by a pedal movement, gradually raised and lowered a portion of the top or cover. This coming into general use, Shudi improved upon it by his important invention of the 'Venetian Swell' on the principle of a Venetian blind, which he patented Dec. 18, 1769. He probably delayed taking out the patent until it became necessary by his partnership with John Broadwood, who had also become his son-in-law,¹ earlier in the same year. This invention was subsequently transferred to the organ. [See vol. ii. p. 331, and the article SWELL.]

A harpsichord exists inscribed with the joint names of Shudi and Broadwood, dated 1770, although Shudi made harpsichords for himself after that date and independent of the partnership, as we know by existing instruments and by his will. About 1772 he retired to a house

in Charlotte Street, leaving the business premises to his son-in-law, John Broadwood, and died August 19, 1773. The next day a harpsichord was shipped to 'the Empress,' ordered by Joseph II. for Maria Theresa. The harpsichord that was Haydn's, acquired for the Museum at Vienna, at a cost of £110 sterling, was also a 'Shudi and Broadwood,' but this was the younger Burkāt Shudi, who was in partnership with John Broadwood from 1773 to about 1782, and died in 1803.

A list of the existing harpsichords by Shudi and Shudi & Broadwood, as far as is known (1907),² is here appended: all but one are Double harpsichords. The price of a Single harpsichord, about 1770, was 35 guineas; with Octava (*i.e.* Octave string), 40 guineas; with Octava and Swell, 50 guineas. A Double harpsichord with Swell, was 80 guineas.³

No.	Date.	Signature.	Present Owner.	Remarks.
94	1740	Burkat Shudi.	H.M. the King, Windsor Castle.	Removed from Kew Palace in 1875.
229	1749	"	Mr. Warre.	Its wreck. Double. 5½ C-F, 5 stops, no machine or pedals.
293	1751	"	F. Fairley, Esq., Newcastle-on-Tyne.	A single keyboard. 5 oct., F-F, with lowest F sharp omitted. 3 stops.
407	1780	"	W. Dale, Esq.	Double. 5 oct. with F♯ usual stops, added swell on a chest of drawers.
511	1786	Burkat Tschudi.	Emperor of Germany, Potsdam.	Made for Frederick the Great. (Both of 5½ oct., C-F.)
512	1785	"	"	Made for Frederick the Great. (Both of 5½ oct., C-F.)
625	1770	Burkat Shudi et Johannes Broadwood.	W. Dale, Esq.	Was in David Hartley's family. 6 stops, 2 pedals, as have nearly all these instruments.
639	1771	Burkat Shudi.	John Broadwood & Sons.	Played upon by Moscheles and by Ernst Pauer in their historical performances.
688	1773	Burkat Shudi et Johannes Broadwood.	Ditto. Lent to the Rev. Sir F. A. G. Ouseley, Bart., Tenbury.	Bought of Mr. T. W. Taphouse, 1851.
951	1773	"	M. Victor Mahillon, Brussels.	Sent to 'the Empress' (Maria Theresa) Aug. 20, 1773. Obtained by M. Victor Mahillon from Vienna.
750	1775	"	Messrs. Price & Sons, Yeovil.	Made for Lady Stoverdale, Redlinch, Bruton.
762	1775	"	Musikverein, Vienna.	Was Joseph Haydn's, and subsequently Herbeck's.
899	1781	"	The late T. W. Taphouse, Oxford.	5 oct., F-F, 7 stops, 2 pedals. Came from Mrs. Anson's, Sudbury Rectory, Derby.
902	1781	"	C. Harford Lloyd, Esq., Gloucester.	5 oct., F-F. Restored by Mr. Taphouse.
919	1782	"	Stephen Stratton, Esq., Birmingham.	Belonged to the Wrottesley family.
1137	1790	"	"	Instrument mentioned in Mr. Hipkins's notes in the appendix to the first edition of the Dictionary.

A. J. H.

SHUDI, JOSHUA, harpsichord maker and pupil of Burkāt Shudi, appears from his advertisement in the *Gazetteer* of Jan. 12, 1767, to have set up for himself about that time at the Golden Guitar, Silver Street, Golden Square, London. An advertisement of his widow, Mary Shudi, then of Berwick Street, St. James's, in the *Public Advertiser* of Jan. 16, 1775, announces his death and her continuance of the business, and as there is a fine harpsichord still existing, said to have a romantic history, and bearing the name and date of Joshua Shudi, 1779, it is evident that she continued to use her late husband's name, or dated instruments of his make when she sold them.

A. J. H.

SHUTTLEWORTH, OBADIAH, son of Thos. Shuttleworth of Spitalfields, who had acquired some money by vending MS. copies of Corelli's works before they were published in England. He was an excellent violinist, and was principal violin at the Swan Tavern concerts, Cornhill, from their commencement in 1728 until his

death. He was also a skilful organist, and in 1724 succeeded Philip Hart as organist of St. Michael's, Cornhill, and a few years afterwards was appointed one of the organists of the Temple Church. He composed twelve concertos and some sonatas for the violin, which he kept in MS., his only printed compositions being two concertos adapted from the first and eleventh concertos of Corelli. [These were published by Joseph Hare, at the Viol and Flute in Cornhill, and were engraved by T. Cross: the date is about 1726. F. X.] He died about 1735.

W. H. H.

SI. The syllable used, in the musical terminology of Italy and France, to designate the note B, and adapted, in systems of Solmisation which advocate the employment of a movable starting-point, to the seventh degree of the scale.

The method invented by Guido d'Arezzo, in the earlier half of the 11th century, recognised the use of six syllables only—*ut, re, mi, fa, sol, la*—suggested by the initial and post-cæsural

¹ Additions to the original list are here made from the MS. notes left by Mr. Hipkins.

² The altered value of money should be borne in mind in comparing these prices with those of modern pianofortes.

³ By his marriage with Barbara Shudi, baptised March 12, 1748; married to John Broadwood, Jan. 2, 1769; died July 8, 1776. The first wife of John Broadwood, she was the mother of James Shudi Broadwood who was born Dec. 20, 1772; died Aug. 6, 1851; and grandmother of Henry Fowler Broadwood and Walter Stewart Broadwood.

syllables of the hymn, 'Ut queant laxis'; the completion of the octave being provided for by the introduction of certain changes in the position of the root-syllable, *ut*.¹ Until the mediæval theory of the scale was revolutionised by the discovery of the functions of the leading-note this method answered its purpose perfectly; but when the ecclesiastical modes were abandoned in favour of our modern form of tonality, it became absolutely necessary to add another syllable to the series. This syllable is said to have been first used, about 1590, by Erycius Puteanus, of Dordrecht, the author of a treatise on music, entitled *Musæthema*; and tradition asserts that it was formed from the initial syllable of the fourth verse—'Sancte Joannes'—of the hymn already alluded to, by the substitution of *i* for *a*. This account, however, has not been universally received. Mersennus² attributes the invention to a French musician, named Le Maire, who laboured for thirty years to bring it into practice, but in vain, though it was generally adopted after his death. Brossard³ gives substantially the same account. Bourdelot⁴ attributes the discovery to a certain nameless Cordelier, of the Convent of Ave Maria, in France, about the year 1675; but tells us that the Abbé de la Louette, Maître de Chapelle at Notre Dame de Paris, accorded the honour to a singing-master, named Metru, who flourished in Paris about the year 1676. In confirmation of these traditions Bourdelot assures us that he once knew a lutenist, named Le Moine, who remembered both Metru and the Cordelier, as having practised the new system towards the close of the 17th century—whence it has been conjectured that one of these bold innovators may possibly have invented, and the other adopted it, if indeed both did not avail themselves of an earlier discovery.

Mersennus tells us that some French professors of his time used the syllable *za* to express B♭, reserving *si* for B♮. Loulié, writing some sixty years later, rejected *za*, but retained the use of *si*.⁵ The Spanish musician, Andrea Lorente, of Alcalá, used *bé* to denote B♭; ⁶ while in the latter half of the 17th century, our own countryman, Dr. Wallis, thought it extraordinary that the verse, 'Sancte Johannes,' did not suggest to Guido himself the use of the syllable *sa*—and this, notwithstanding the patent fact that the addition of a seventh syllable would have struck at the very root of the Guidonian system.

W. S. R.

SI CONTRA FA. [See MI CONTRA FA.]

SIBELIUS, JEAN, born on Dec. 8, 1865, at Tavastehus in Finland. Like so many other musicians he was at first made a law student,

but, happily for the honour of the music of Finland, he presently found that his real talent lay in the direction of Art, and his real power of speech could only display itself in the language of music. Accordingly, he placed himself under Wegelius at the Helsingfors Conservatorium; and afterwards studied under Becker at Berlin and Goldmark at Vienna. After his return to Finland he accepted the post of Principal of the Conservatorium (which he still holds), and was the fortunate recipient of a handsome annuity from the Senate, which enables him to give the greater part of his time to composition. For so young a man he has written much, his latest opus number being 53. In all his compositions he displays marked ability, a strong individuality, and a decided bias in favour of the Folk-music of his country. Sibelius is a composer who must be taken on his own merits; it would be difficult to compare him to any one else, the whole atmosphere of his work is so strange, and so permeated with lights and shadows that are unfamiliar, and colours that are almost from another world. To understand him it is necessary to understand both the racial descent of the Finns, and their strange, deeply influencing mythology; their racial character is derived partly from the East, and partly from the West, as they are a mixture of Mongolian and Western stock; deriving from the West, vigour and self-reliance, and from the East, languor and mysticism. Even more important is the influence of their mythology. It is hardly too much to say that Sibelius's music seldom gets away from the atmosphere of legend and rune. In idea, rhythm, turn of melody (diction), colour of thought and of orchestration, he keeps within touch of the magic halo which surrounds the 'Kalevala,' which is the great collection of Runes and Folklore made by Dr. Lönnrot in 1835 (the year in which the university of Helsingfors was founded). The 'Kalevala' is a poem which sets forth the mythical history of the Finnish people, just as the 'Nibelungenlied' sets forth the mythical history of the Teutonic nations.

The Finnish music, like the Finnish character, is the outcome of a fearful struggle against unfavourable environment,—a struggle which has literally been for life or death, but which has resulted in a triumphant life. Without some understanding of the Finnish history, religion, and temperament, Sibelius's music is more or less unintelligible; for it does not belong to any family or nation except the Finnish. He has nothing in common with the Russian or German; and even the Swede and the Dane are foreign to him. The Finnish Folk-Song is also a thing by itself; the chief features being the prevalence of 5-4 rhythms, and the repetition of the same note many times (see SONG). Sibelius makes free use of the latter characteristic in most of his compositions, although he

¹ See SOLMISATION. ² *Harmonie Universelle* (Paris, 1636), p. 183.

³ *Dictionnaire de Musique* (Amsterdam, 1703).

⁴ *Historie de la Musique*, compiled from the MSS. of the Abbé Bourdelot, and those of his nephew, Bonnet Bourdelot, and subsequently published by Bonnet, Paymaster to the Lords of the Parliament of Paris (Paris, 1708 and 1715; Amsterdam, 1725, 1743).

⁵ *Éléments ou Principes de Musique* (Amsterdam, 1698).

⁶ *Porque de la Musica* (1672).

himself says that he does not use Folk-Song. Still, it is obvious that he does not altogether break away from the people's song, and that his mind is in unison with his national trend of thought. His chief works are the two Symphonies in E and D, 'The Swan of Tuonela,' the Overture and Suite 'Karelia,' 'En Saga,' 'Finlandia,' 'Lemminkäinen,' Incidental music to 'Kuolema,' and the Violin Concerto. With the exception of the two first named, and the last, the works are entirely founded on the National Legends of Suomi (Finland), in which Tuonela (Hades) and Kuolema (Death) play a large and gloomy part; so that there is naturally a considerable preponderance of the weird in the music—for example in 'The Swan' it is the strange wild song of the bird swimming on the black still waters which separate man from Hades that inspires awe and almost terror. There is nothing human, but a kind of dark dream of mysticism. Again, in the music to Yárnfeldt's drama 'Kuolema,' the ideas are those of tragedy, darkness, and horror. The mother is dying, and in her delirium thinks she is in the ball-room. Her son cannot detain her, and she rises and dances with imaginary men. At the height of her frenzy some one knocks; the vision dies; the music is silent; the mother shrieks, for the visitor is Death. It must not be thought that Sibelius is morbid or unmanly from these examples,—on the contrary his main characteristic is enormous power. He seems at times to be almost beating himself to pieces in the struggle to lash out with his emotions, and gain expression for the feelings that are bursting within him, while every now and then he gives touches of indescribably sad and sweet yearning. He is the lawful successor of Kollan, Schartz, Faltin, and Kajanus; but to his inheritance he brings a character, colour, and style, which are entirely his own. Whether composing for the orchestra, the chorus, or solo voices, Sibelius has much to say; much that is new, and much that no one else could either imagine or express. No notice of his work would be complete without an express mention of his songs, which are truly remarkable in every way, and, like all his work, completely foreign to conventional Western thought and manner. The following is a complete list of Sibelius's compositions; many of the opus numbers omitted refer to arrangements of works, and are therefore not given here.

- Op.
5. 6 Impromptus, FF.
9. *En Saga*. Tone-poem for orchestra.
10. Overture *Karelia*.
11. Suite *Karelia*.
12. Sonata, FF. Solo.
13. 7 Songs.
15. *Skogsrädet*.
16. *Frühlingssiedel*, for Orchestra.
17. 7 Songs.
16. Part-songs for Male voices.
21. Hymn for Male voices, 'Natus in curas.'
22. Legends from the epic 'Kalevala' (Der Schwann von Tuonela und Lemminkäinen zieht heimwärts).
23. Songs for the 'Promotions performances,' 1897 (mixed voices).
24. Piano pieces.
26. *Finlandia* (No. 7). Tone-poem for orchestra.

- Op.
27. Incidental Music to *King Christian II.*
31. *Atbenian Songs*, for boys' voice, solo. Male chorus. Horn septet, triangle, cymbals, and large drum.
33. *Der Fährmanns Bräute*. Scene for Baritone.
36. 6 Songs.
37. 5 Songs.
38. 5 Songs.
39. Symphony No. 1 in E minor.
41. *Kylhiki* (Lyrical pieces).
43. Symphony No. 2 in D major.
44. *Valse triste* from *Kuolema*.
45. *Tanz Intermezzo*, for orchestra, and for FF. solo.
46. *Felices et Melancolicæ*. Orch. Suite.
47. Violin Concerto in D minor.
49. *Pohjolas Daughter*. Symphonic Fantasia.
51. *Balsazars Gastral*. Symphonic Fantasia.
53. *Pan and Echo*.

D. H.

SIBONI, GIUSEPPE, born at Forlì, Jan. 27, 1780, made his début as a tenor singer at Florence in 1797, and after singing in Genoa, Milan, and Prague, appeared at the King's Theatre, London, in 1806, and sang for the following three seasons. In 1810, 1811, 1812, 1813, and 1814, he was in Vienna, where he sang at the first performances of Beethoven's 'Wellington's Sieg' and 'Tremate empi.' In 1813 he sang at Prague, and after engagements at Naples and St. Petersburg (1818) settled at Copenhagen in October 1819, where he lived for the rest of his life, occupying the post of director of the Royal Opera and of the Conservatorium. He was married three times, his second wife being a sister of Schubert's friend, von Schober, and died at Copenhagen, March 29, 1839. Many of Paër's tenor parts were written for him. His son,

ERIK ANTON WALDEMAR, born at Copenhagen, August 26, 1828, learnt the pianoforte from Courländer and Goetze, composition from F. Vogel, and harmony from Prof. J. P. E. Hartmann. In Sept. 1847 he went to Leipzig, and studied under Moscheles and Hauptmann, but on the outbreak of the Schleswig Holstein insurrection he enlisted as a volunteer in the Danish army, and took part in the campaign of 1848. In 1851 he went to Vienna, and studied counterpoint under Sechter until 1853, when he returned to Copenhagen, visiting Paris on his way. Among his pupils at this time were our own Queen Alexandra, her sister, the Empress of Russia, and the Landgrave Frederick William of Hesse Cassel. In 1864 Herr Siboni was appointed organist and professor of music at the Royal Academy of Music of Sorø, in Seeland, a post he resigned on account of health in 1883; he returned to Copenhagen and died there Feb. 22, 1892. The following are his chief compositions:—

1. PUBLISHED.

Three Impromptus for FF. for 4 hands (op. 1); Organ Preludes; Quartet for FF. and Strings (op. 10); Tragic Overture in C minor (op. 14); Songs and FF. pieces.

2. UNPUBLISHED.

Two Danish operas—'Loreley,' in 1 act; 'Carl den Andens Flugt,' in 3 acts (Libretto on subject from English History by Professor Thomsen Overskou), successfully performed at the Royal Theatre of Copenhagen in 1861; Psalm cxi. for Bass Solo, Chorus, and Orchestra; 'Stabat Mater,' for Soli, Chorus, Orchestra, and Organ; Cantata, 'The Battle of Murten,' for Soli, Male Chorus, and Orchestra; 'The Assault of Copenhagen,' Cantata for Soli, Chorus, and Orchestra; 2 Symphonies; Concert Overture; FF. Concerto; String Quartet; FF. Trio; Duet for 2 FFs., Sonatas for FF. and Violin, and FF. and Violoncello, etc., many of them performed at concerts in Copenhagen.

1 Paër gives his birthplace as Bologna, and the date as 1782, but the above details are from autobiographical notes supplied by his son.

SICILIANA, SICILIANO, SICILIENNE, a dance rhythm closely allied to the Pastorale. The name is derived from a dance-song popular in Sicily, analogous to the Tuscan Rispetti.¹ Walther (*Lexicon*, 1732) classes these compositions as canzonettas, dividing them into Neapolitan and Sicilian, the latter being like jigs, written in rondo form, in 12-8 or 6-8 time. The Siciliana was sometimes used for the slow movement of Suites and Sonatas (as in Bach's Violin Sonata in G minor), but is of more frequent occurrence in vocal music, in which Handel, following the great Italian masters, made great use of it. Amongst later composers, Meyerbeer has applied the name to the movement 'O fortune, à ton caprice' in the finale to Act I. of 'Robert le Diable,' although it has little in common with the older examples. The Siciliana is generally written in 6-8, but sometimes in 12-8 time, and is usually in a minor key. In the bar of six quavers, the first note is usually a dotted quaver, and the fourth a crotchet, followed by two semiquavers. The Siciliana is sometimes in one movement, but usually ends with a repetition of the first part. It should be played rather quickly, but not so fast as the Pastorale, care being taken not to drag the time and to avoid all strong accentuation, smoothness being an important characteristic of this species of composition. W. B. S.

SICILIAN BRIDE, THE. A grand opera in four acts; words translated by Bunn from St. Georges, music by Balfe. Produced at Drury Lane Theatre, March 6, 1852. G.

SICILIAN MARINER'S HYMN. A hymn-tune at one time very much in vogue, chiefly in Nonconformist chapels. It appears to have been first published in England about 1794. Mr. James T. Lightwood, in *Hymn Tunes and their Stories*, mentions that it occurs in Rev. W. Tattersall's edition of Merrick's 'Psalms,' published in that year. Another copy of it, as 'The Prayer of the Sicilian Mariner,' is found in the fourth volume of Corri's 'Select Collection of the most admired Songs, Duets, etc.,' circa 1794-95. Later ones are printed in Hyde's 'Collection,' 1798, and in Dr. Miller's 'Dr. Watt's Psalms and Hymns,' 1800. Most of the early copies are in three parts, set to a verse beginning—

O Sanctissima, O Purissima.

It appears to have at once become much in fashion in England and to have been soon seized upon for publication in hymnals, having words specially written to it to replace the original ones. F. K.

SIDE-DRUM (*Caisse roulante*). See DRUM 3; MILITARY SOUNDS AND SIGNALS; ROLL.

SIÈGE DE CORINTHE, LE. Lyric tragedy in three acts; words by Soumet and Balocchi, music by Rossini. Produced at the Académie,

Oct. 9, 1826. It was an adaptation and extension of 'Maometto Secondo,' produced in 1820. The Andante of the overture, entitled 'Marche lugubre grecque,' is framed on a motif of eight bars, taken note for note from Marcello's 21st Psalm, but with a treatment by the side-drum (*Caisse roulante*), and other instruments, of which Marcello can never have dreamt. G.

SIEGE OF ROCHELLE, THE. A grand original opera, in three acts; words by Fitzball, music by Balfe. Produced at Drury Lane Theatre, Oct. 29, 1835. G.

SIEGFRIED. The third drama of Wagner's Nibelungen tetralogy. See RING DES NIBELUNGEN.

SIFACE, GIOVANNI FRANCESCO GROSSI, DETTO. Too few details are known about the life of this artist, though all the accounts of him agree in representing him as one of the very greatest singers of his time. He was born at Pescia in Tuscany, about the middle of the 17th century, and is said to have been a pupil of Redi. If so, this must have been Tommaso Redi, who became chapel-master at Loretto towards the end of the 17th century, although, as he was Siface's contemporary, it seems improbable that he should have been his instructor. Siface was admitted into the Pope's chapel in April 1675. This disproves the date (1666) given by Fétis and others for his birth, as no boys sang then in the Sistine choir. He would seem at that time to have been already known by the *sobriquet* which has always distinguished him, and which he owed to his famous impersonation of Siface or Syphax in some opera, commonly said to be the 'Mitridate' of Scarlatti; an unlikely supposition, for besides that Scarlatti's two operas of that name were not written till some forty years later, it is not easy to see what Syphax can have to do in a work on the subject of Mitridates. (See Dent's *Scarlatti*, p. 37.)

Siface's voice, an artificial soprano, was full and beautiful; his style of singing broad, noble, and very expressive. Mancini extols his choir-singing as being remarkable for its excellence. In 1679 he was at Venice for the Carnival, acting with great success in the performances of Pallavicini's 'Nerone,' of which a description may be found in the *Mercurie galant* of the same year. After this he came to England, and Hawkins mentions him as pre-eminent among all the foreign singers of that period. He was for a time attached to James II.'s chapel,² but soon returned to Italy. In the second part of Playford's collection, 'Musick's Handmaid' (1689), there is an air by Purcell, entitled 'Sefanchi's farewell,' which refers to Siface's departure from this country.

This great singer was robbed and murdered by his postilion, while travelling, some say from Genoa to Turin, others, from Bologna to Ferrara.

¹ For an account of these Sicilian songs see G. Pittè, *Sui Canti Popolari Siciliani*, Palermo, 1868.

² Evelyn heard him there, Jan. 30, 1687, and on April 19 following at Peppy's house. He speaks of him in highly commendatory terms.

According to Hawkins this happened about the year 1699. He is referred to in Dufey's 'Fool's Preferment' (1688), Act I. Sc. i. F. A. M.

SIGNA. Opera in two acts, libretto (founded on Ouida's story) by G. à Beckett, H. Rudall, and F. E. Weatherley; Italian version by G. Mazzucato. Music by Frederic H. Cowen. Produced in the Italian version at the Teatro dal Verme, Milan, Nov. 12, 1893, in four acts, reduced to three, and ultimately to two. At Covent Garden, June 30, 1894. M.

SIGNALS. The drum and bugle calls or 'sounds' of the army. [See vol. iii. p. 204 ff.] G.

SIGNATURE. 1. **KEY-SIGNATURE** (Fr. *Signes accidentales*; Ger. *Vorzeichnung*, properly *reguläre Vorzeichnung*). The signs of chromatic alteration, sharps or flats, which are placed at the commencement of a composition, immediately after the clef, and which affect all notes of the same names as the degrees upon which they stand, unless their influence is in any case counteracted by a contrary sign.

The necessity for a signature arises from the fact that in modern music every major scale is an exact copy of the scale of C, and every minor scale a copy of A minor, so far as regards the intervals—tones and semitones—by which the degrees of the scale are separated. This uniformity can only be obtained, in the case of a major scale beginning on any other note than C, by the use of certain sharps or flats; and instead of marking these sharps or flats, which are constantly required, on each recurrence of the notes which require them, after the manner of ACCIDENTALS, they are indicated once for all at the beginning of the composition (or, as is customary, at the beginning of every line), for greater convenience of reading. The signature thus shows the key in which the piece is written, for since all those notes which have no sign in the signature are understood to be naturals (naturals not being used in the signature), the whole scale may readily be inferred from the sharps or flats which are present, while if there is no signature the scale is that of C, which consists of naturals only. [See KEY.] The following is a table of the signatures of major scales.

1. Sharp Signatures.

Flat Signatures.

The order in which the signs are placed in the signature is always that in which they have been successively introduced in the regular formation of scales with more sharps or flats out of those with fewer or none. This will be seen

in the above table, where F#, which was the only sharp required to form the scale of G, remains the first sharp in all the signatures, C# being the second throughout, and so on, and the same rule is followed with the flats. The last sharp or flat of any signature is therefore the one which distinguishes it from all scales with fewer signs, and on this account it is known as the *essential note* of the scale. If a sharp, it is on the seventh degree of the scale; if a flat, on the fourth. In the present day the place of the signature is marked only once on the staff; but in the 18th century it was usual to mark it as often as it appeared, so that the keys of B flat and E flat were written thus:—

The signature of the minor scale is the same as that of its relative major, but the sharp seventh—which, though sometimes subject to alteration for reasons due to the construction of melody, is an essential note of the scale—is not included in the signature, but is marked as an accidental when required. The reason of this is that if it were placed there it would interfere with the regular order of sharps or flats, and the appearance of the signature would become so anomalous as to give rise to possible misunderstanding, as will be seen from the following example, where the signature of A minor (a) might easily be mistaken for that of G major misprinted, and that of F minor (b) for E♭ major. [E. J. Loder tried the odd-looking experiment of indicating the flat sixth and the sharp seventh in the key signature, as at (c) in his 'Moonlight on the Lake.']

In former times many composers were accustomed to dispense with the last sharp or flat of the signature, both in major and minor keys, and to mark it as an accidental (like the sharp seventh of the minor scale) wherever required, possibly in order to call attention to its importance as an essential note of the scale, or more probably on account of the influence of the ecclesiastical modes. Thus Handel rarely wrote F minor with more than three flats, the D♭ being marked as an accidental as well as the E♭ (see 'And with His stripes' from 'Messiah'); and a duet 'Joys in gentle train appearing' ('Athalie'), which is in reality in E major, has but three sharps. Similar instances may be found in the works of Corelli, Geminiani, and others.

When in the course of a composition the key changes for any considerable period of time, it is frequently convenient to change the signature, in order to avoid the use of many accidentals. In affecting this change, such sharps or flats as

are no longer required are cancelled by naturals, and this is the only case in which naturals are employed in the signature. (See AUFLÖSUNG-ZEICHEN.)

In such a case the modulation must be into a sufficiently distant key; modulations into nearly related keys, as, for instance, into the dominant, in the case of the second subject of a sonata, never require a change of signature, however long the new key may continue. Otherwise, there is no limit to the frequency or extent of such changes, provided the reading is facilitated thereby.

F. T.

II. TIME-SIGNATURE (Lat. *Signum Modi, vel Temporis, vel Prolationis*; Germ. *Taktzeichen*). A sign placed after the clef and the sharps or flats which determine the signature of the key, in order to give notice of the rhythm in which a composition is written.

Our present Time-Signatures are directly descended from forms invented in the Middle Ages. Mediæval composers used the Circle to denote Perfect (or, as we should now say, Triple) Rhythm; and the Semicircle for Imperfect or Duple forms. The signatures used to distinguish the Greater and Lesser Moods¹ Perfect or Imperfect—*Signa Modi*, Modal Signs—were usually preceded by a group of rests,² showing the number of Longs to which a Large was equal in the Greater Mood, and the number of Breves which equalled the Long in the Lesser one—that is to say, three for the Perfect forms, and two for the Imperfect. Sometimes these rests were figured once only; sometimes they were twice repeated. The following forms were most commonly used:—

Greater Mood Perfect.

Greater Mood Imperfect.

Lesser Mood Perfect.

Lesser Mood Imperfect.

Combinations of the Greater and Lesser Moods, when both were Perfect, were indicated by a Point of Perfection, placed in the centre of the Circle, as at (a) in the following example. When the Greater Mood was Perfect, and the Lesser Imperfect, the Point was omitted, as at (b). When both Moods were Imperfect, or the Greater Imperfect, and the Lesser Perfect, the difference was indicated by the groups of Rests, as at (c) and (d).

¹ See Moop.

² The reader must be careful to observe the position of these Rests; because it is only when they precede the Circle or Semicircle that they are used as signs. When they follow it, they must be counted as marks of silence.

(a) Both Moods Perfect.

(b) Greater Mood Perfect, and Lesser Imperfect.

(c) Both Moods Imperfect.

(d) Greater Mood Imperfect, and Lesser Perfect.

The Circle and the Semicircle were also used either alone or in combination with the figures 3 or 2, as signatures of time, in the limited sense in which that term was used in the Middle Ages; i.e. as applied to the proportions existing between the Breve and the Semibreve only—three to one Imperfect, and two to one in Imperfect forms.

Perfect Time.

Imperfect Time.

The same signs were used to indicate the proportion between the Semibreve and the Minim, in the Greater and Lesser Prolation;³ but generally with a bar drawn perpendicularly through the Circle or Semicircle, to indicate that the beats were to be represented by minims; and sometimes, in the case of the Greater Prolation, with the addition of a Point of Perfection.

The Greater Prolation.

The Lesser Prolation.

Combinations of Mood, Time, and Prolation sometimes give rise to very complicated forms, which varied so much at different epochs, that even Ornithoparcus, writing in 1517, complains of the difficulty of understanding them.⁴ Some writers used two Circles or Semicircles, one within the other, with or without a Point of Perfection in the centre of the smaller one. The inversion of the Semicircle (C) always denoted a diminution in the value of the beats, to the extent of one-half; but it was only at a comparatively late period that the doubled figure (CC) indicated an analogous change in the opposite direction. Again, the barred Circle or Semicircle always indicated minim beats; but the unbarred forms, while indicating semibreves in Mood and Time, were used by the Madrigal writers to indicate crotchet beats in Prolation.

The application of these principles to modern time-signatures is exceedingly simple, and may be explained in a very few words. At present we use the unbarred Semicircle to indicate four crotchet beats in a bar; the barred Semicircle to indicate four minim beats, in the Time

³ See vol. iii. p. 823.⁴ See vol. iii. p. 826.

called *Alla breve*, and two minim beats in *Alla Cappella*. Some German writers once used the doubled Semicircle, barred (C) for *Alla breve*—which they called the *Grosse Allabrevetakt*, and the ordinary single form, barred, for *Alla Cappella*—*Kleine Allabrevetakt*; but this distinction has long since fallen into disuse.

The Circle is no longer used; all other forms of rhythm than those already mentioned being distinguished by fractions, the denominators of which refer to the aliquot parts of a semi-breve, and the numerators, to the number of

them contained in a bar, as $\frac{2}{4}$ ($=\frac{2}{4}$), $\frac{3}{2}$ ($=\frac{3}{2}$), etc. And even in this we only follow the mediæval custom, which used the fraction $\frac{3}{2}$ to denote Triple Time, with three minims in a bar, exactly as we denote it at the present day.

A complete list of all the fractions now used as time-signatures will be found in the article TIME, together with a detailed explanation of the peculiarities of each. w. s. E.

SIGURD. Opera in five acts; text by Dulocle and A. Blau, music by Ernest Reyer. Produced at Brussels, Jan. 7, 1884; at Covent Garden, July 15 of the same year, and at the Grand Opéra, Paris, June 12, 1885.

SILAS, ÉDOUARD, pianist and composer, was born at Amsterdam, August 22, 1827. His first teacher was Neher, one of the Court orchestra at Mannheim. He first appeared in public at Amsterdam in 1837; he studied the piano in 1839 with Lacombe, and in 1842 he was placed under Kalkbrenner at Paris, and soon afterwards entered the Conservatoire under Benoist for the organ and Halévy for composition, and in 1849 obtained the first prize for the former. In 1850 he came to England; played first at Liverpool, and made his first appearance in London at the Musical Union, May 21. From that date Mr. Silas was established in London as teacher, and as organist of the Catholic Chapel at Kingston-on-Thames. His oratorio 'Joash' (words compiled by G. Linley) was produced at the Norwich Festival of 1863. A Symphony in A (op. 19) was produced by the Musical Society of London, April 22, 1863; repeated at the Crystal Palace, Feb. 20, 1864; and afterwards published. A Concerto for PF. and orchestra in D minor is also published. A Fantasia and an Élégie, both for PF. and orchestra, were given at the Crystal Palace in 1865 and 1873. Three Mythological Pieces for orchestra were played at a Philharmonic Concert in 1888. In 1866 he received the prize of the Belgian competition for sacred music for his Mass for four voices and organ.

Mr. Silas is the author of a Treatise on Musical Notation, and an Essay on a new method of Harmony—both unpublished. He has still

in MS. an English opera, 'Nitocria'; overture and incidental music to 'Fanchette'; a musical comédietta, 'Love's Dilemma'; a Cantata; an 'Ave Verum'; two 'O Salutaris'; a Symphony in C major; and other compositions. The list of his published instrumental works is very large, and includes many PF. pieces, among which the best known are Gavotte in E minor, Bourrée in G minor, 'Malvina' (romance), Suite in A minor, op. 103, Six Duets, etc. etc.

Mr. Silas was for many years a teacher of harmony at the Guildhall School of Music and the London Academy of Music. G.

SILBERMANN. A family of organ-builders, clavichord and pianoforte makers, of Saxon origin, of whom the most renowned were Andreas, who built the Strasburg Cathedral organ, and Gottfried, who built the organs of Freiberg and Dresden, and was the first to construct the pianoforte in Germany. Authorities differ as to whether Andreas and Gottfried were brothers, or uncle and nephew. Following Gerber's *Lexicon* they were sons of Michael Silbermann, a carpenter at Kleinbobritzsch, near Frauenstein in Saxony, where ANDREAS was born May 16, 1678. He was brought up to his father's craft, and travelled, according to the custom of the country, in 1700. He learnt organ-building, and in 1703 we find him settled in that vocation at Strasburg. According to Hopkins and Rimbault¹ he built the Strasburg organ—his greatest work of 29 recorded by them—in 1714-16. He had nine sons, of whom three were organ-builders, and after the father's death, March 16, 1734, carried on the business in common. Of the three, Johann Andreas, the eldest (born June 26, 1712, died Feb. 11, 1783), built the Predigerkirche organ at Strasburg and that of the Abbey of St. Blaise in the Black Forest. In all he built fifty-four organs, in addition to writing a history of the city of Strasburg, published 1775. His son, Johann Josias (died June 3, 1786), was a musical instrument maker. The next son of Andreas, Johann Daniel, born March 31, 1717, died May 6, 1766, in Leipzig, was employed by his uncle Gottfried, and was intrusted after his uncle's death with the completion of the famous organ (in the Hofkirche) in Dresden. Mooser,² however, who claims to follow good authorities, attributes the completion of this instrument to Zacharias Hildebrand. Be this as it may, Johann Daniel remained at Dresden, a keyed-instrument maker, and constructor of ingenious barrel-organs. A composition of his is preserved in Marburg's 'Raccolta' (1757). Johann Heinrich, the youngest son of Andreas, born Sept. 24, 1727, died at Strasburg, Jan. 15, 1799. His pianofortes were well known in Paris; he made them with organ pedals, and constructed a harpsichord of which the longest strings were of

¹ *The Organ, its History and Construction*, London, 1870.

² *Gottfried Silbermann*. Langensalza, 1897.

what may be called the natural length, 16 feet ! [The above dates are from Riemann's *Lexikon*.]

But the greatest of the Silbermann family was GOTTFRIED, who was born in the little village of Kleinboblitzsch, near Frauenstein, in 1683 (according to Mooser on Jan. 14). He was at first placed with a bookbinder, but soon quitted him and went to Andreas at Strasburg. Having got into trouble by the attempted abduction of a nun, he had to quit that city in 1707 and go back to Frauenstein, where he built his first organ (afterwards destroyed by fire, the fate of several of his instruments). He appears to have settled at Freiberg in 1709, and remained there for some years. [He built the cathedral organ there in 1714.] He built, in all, forty-seven organs in Saxony.¹ He never married, and was overtaken by death August 4, 1753, while engaged upon his finest work, the Dresden Court organ. Although receiving what we should call very low prices for his organs, by living a frugal life he became comparatively rich, and his talent and exceptional force of character enabled him to achieve an eminent position. His clavichords were as celebrated as his organs. Emanuel Bach had one of them for nearly half a century, and the instrument, many years after it was made, when heard under the hands of that gifted and sympathetic player, excited the admiration of Burney. It cannot be doubted that he was the first German who made a pianoforte. He was already settled in Dresden in 1726, when König translated into German Scipione Maffei's account of the invention of the pianoforte at Florence by Cristofori. This fact has been already mentioned [PIANOFORTE, vol. iii. pp. 719-20,] and we now add some further particulars gained by personal search and inspection at Potsdam in 1881. We know from Agricola, one of J. S. Bach's pupils, that in 1736 Gottfried Silbermann submitted two pianofortes of his make to that great master. Bach finding much fault with them, Gottfried was annoyed, and for some time desisted from further experiments in that direction. It is possible that the intercourse between Dresden and Northern Italy enabled him, either then or later, to see a Florentine pianoforte. It is certain that three grand pianofortes made by him and acquired by Frederick the Great² for Potsdam—where they still remain in the music-rooms of the Stadtschloss, Sans Souci, and Neues Palais,³ inhabited by that monarch—are, with unimportant differences, repetitions of the Cristofori pianofortes existing at Florence.

¹ Five of 3 manuals, Freiberg, Zittan, and Frauenstein; the Frauenkirche and Katholische Hofkirche at Dresden; twenty-four of 2 manuals; fifteen of 1 manual with pedals, and three of 1 manual without pedals. (Mooser, p. 125.)

² Probably in 1746. The peace of Dresden was signed by Frederick, Christmas Day, 1745; he would have time after that event to inspect Silbermann's pianofortes.

³ The Silbermann piano Burney mentions was that of the Neues Palais. He must have heard the one at Sans Souci, although he does not say so. In all probability the piano J. S. Bach played upon specially, on the occasion of his visit to Frederick the Great, was the one still in the Stadtschloss, the town palace of Potsdam.

Frederick is said to have acquired more than three, but no others are now to be found. Burney's depreciation of the work of Germans in their own country finds no support in the admirable work of Gottfried Silbermann in these pianofortes. If its durability needed other testimony, we might refer to one of his pianofortes which Zelter met with at Weimar in 1804, and praised to Goethe; and to another spoken of by Mooser in 1857 as having been up to a then recent date used at the meetings of the Freemasons' Lodge at Freiberg. Gottfried Silbermann invented the CEMBAL D' AMORE, a kind of double clavichord. [It is described in Mr. Hipkins's *History of the Piano*, p. 65.] A. J. H.

SILCHER, FRIEDRICH, well-known composer of *Lieder*, born June 27, 1789, at Schnaitth, near Schorndorf in Württemberg, was taught music by his father, and by Auberlen, organist at Fellbach near Stuttgart. He was educated for a schoolmaster, and his first post was at Ludwigsburg, where he began to compose. In 1815 he took a conductorship at Stuttgart, and composed a cantata, which procured him, in 1817, the post of conductor to the University of Tübingen. This he held till 1860, when he retired, and died shortly after (August 26) at Tübingen. The honorary degree of Doctor had been conferred upon him by the University in 1852. His most important publications are—'Sechs vierstimmige Hymnen' (Lanpp), 'Dreistimmiges würtemb. Choralbuch' (*Ibid.*), and 'Swabian, Thuringian, and Franconian Volkslieder' (12 parts), many of which are his own compositions. Several of Silcher's melodies published in his 'Sammlung deutscher Volkslieder,' etc., have become true songs of the people, such as 'Aennchen von Tharau,' 'Morgen muss ich fort von hier,' 'Ich weiss nicht was soll es bedeuten,' 'Zu Strassburg auf der Schanz,' etc. The *Lieder* were published simultaneously for one and two voices, with PF. and for four men's voices. He edited a method for harmony and composition in 1851. A biographical sketch of Silcher by Köstlin appeared in 1877. F. G.

SILOTI, ALEXANDER, born Oct. 10, 1863, on his father's estate near Charkow in Southern Russia, a remarkable pianist, and one of the most eminent of Liszt's pupils. He studied at the Moscow Conservatorium from 1875 to 1881 under Swerew, Nicolas Rubinstein, Tchaikovsky, and Hubert, and from 1883 to 1886 with Liszt. Since 1883, when he appeared at Leipzig at a Concert of the Tonkünstlerversammlung, he has been regarded as one of the leading Russian pianists, but he had already appeared with success in Moscow in 1880. From that year till 1890 he was Professor at the Moscow Conservatorium; then he sojourned for several years out of his own country in such places as Frankfurt-on-the-Main, Antwerp, and Leipzig, conducted the Moscow Philharmonic concerts in 1901-2, and since 1903 has figured largely as a conductor

in St. Petersburg, and other great Russian cities.

H. V. H.

SILVA, ANDREAS DE, was a singer in the Papal Chapel, 1519, and the first to be described as Papal composer (Haberl, *Bausteine*, iii. p. 69). In 1522 he appears to have been in the chapel of the Duke of Mantua. It is natural to identify him with Andreas Sylvanus, from whom Glarean quotes the Kyrie and Osanna of a very peculiar mass for three voices, 'Malheur me bat,' also with the Andreas Silvanus, to whom Sebastian Virdung refers as the intimate friend for whom he wrote his *Musica Getuschelt*, 1511. But Eitner, in the *Quellen-Lexikon* and *Monatshefte*, xxvi. p. 47, refuses to accept this identification, because he thinks Virdung's friend must have been a German; and if de Silva had been a German it is unlikely that his works would have found their way into French collections like those of Attaingnant, or Italian collections like those of Gardane and Petrucci. This reasoning, however, is not very convincing, all the less that Eitner himself assumes that the Sylvanus who is the author of the mass 'Malheur me bat' is identical with the Silvanus the friend of Virdung. In any case the Sylvanus of the mass 'Malheur me bat' is more likely to have been a Netherlander than a German, and to be identical with de Silva than with the Silvanus of Virdung. That de Silva was known in Germany appears from the reception of an Italian madrigal by him, 'Che sentisti Madonna,' in Ott's 'Liederbuch,' 1544, attributed to him in all the four part-books. This madrigal has a surprising degree of expressiveness for the time at which it must be supposed to have been written. Besides the works of Silva in the collections of the time, there are two masses and seven motets by him in the Archives of the Papal Chapel. One of the motets, 'Illumina oculos meos, a 6,' deserves notice, as being that on which Palestrina based one of his more important masses a 6, bearing the same title. Among other MS. motets of Silva enumerated in the *Quellen-Lexikon*, there are two mentioned together, 'Virtute magna' and 'O Regem coeli,' both a 4. Possibly the theme of the two four-part masses of Palestrina in his first book, 1554, may be taken from these motets.

J. R. M.

SILVANA: also called 'Silvana das Waldmädchen,' or 'das stumme Waldmädchen'—the dumb Wood-maiden. A romantic opera in three acts; words by F. K. Hiemer, music by Weber; his sixth dramatic work, completed Feb. 23, 1810; produced at Frankfort, Sept. 16, 1810. It is probably founded to some extent on his early opera 'Das Waldmädchen' (1800), which was afterwards burnt; and was to a small extent employed in 'Abu Hassan' and 'Freischütz.' The overture was used by Weber as the prelude to his music for the wedding of Prince John of Saxony; and he wrote seven variations for clarinet and PF., for H. Bärmann, on an air

from it, 'Warum musst' ich.' It was produced in English (as 'Sylvana') at the Surrey Theatre, under Elliston's management, Sept. 2, 1828. It was again revived, with a revised libretto by Herr Pasqué, and with 'musical amplifications,' at Hamburg and Lübeck in the spring of 1885. G.

SILVANI, GROSEFFO ANTONIO, born at Bologna late in the 17th century, was maestro di cappella at S. Stefano from 1702 to 1725. He inherited the publishing business of Marino Silvani, who may have been his father, and who issued several important collections of motets, etc. Gioseffo died before 1727. His published works are as follows:—

Op.

1. Litanie concertate a 4 voci. 1702.
2. Inni Sacri per tutto l'anno a voce sola. 1702.
3. Sacri Responsori per . . . la settimana santa, a 4 voci. 1704.
4. Inni sacri per tutto l'anno a 4 voci. 1705.
5. Cantate morali e spirituali a 1, 2, 3 voci. 1707.
6. Stabat mater, Benedictus, Miserere, etc., a 8 voci. 1708.
7. Messe brevi concertate, a 4 voci. 1711.
8. Motetti a 3 voci. 1711.
9. Motetti con le quattro Antifone a voce sola. 1713.
10. Motetti a 2 e 3 voci. 1718.
11. Messe brevi a 4 voci. 1720.
12. Versi della turba, etc., a 4 voci. 1724.
13. Sacre Lamentazioni a voce sola. 1725.
14. Litanie della B. V. a 4 voci concertate. 1725.

All these have accompaniments (some *ad libitum*) for strings or organ. (*Quellen-Lexikon*.)

M.

SIMAO. [See PORTUGAL, vol. iii. p. 797a.]
SIMILI, 'like'; a word commonly used in a series of passages or figures of similar form, to be performed in exactly the same way. After the first few bars of such passages or figures the word *simili* is used to save trouble of copying the marks of expression and force at every recurrence of the figure. 'Simili marks' occur

generally in MS. or old printed music, and signify that the contents of the previous bar are to be repeated in every consecutive succeeding bar in which the marks occur.

M.

SIMON, ANTON YULIEVICH, composer, born in France in 1851, received his musical education at the Paris Conservatoire and migrated to Moscow in 1871, where he became conductor to the Théâtre Bouffe. He was appointed professor of the pianoforte to the school of the Philharmonic Society, in 1891, and a year or two later was made superintendent of the orchestras of the Imperial Theatres in Moscow, and musical director of the Alexandrovsky Institute. Simon is a voluminous composer, the list of his works being as follows.

A. OPERATIC.

'Rolls' (op. 40, Moscow, 1892); 'The Song of Love Triumphant' (op. 46, libretto from Tourgeniev by N. Wilde, Moscow, 1898); 'The Fishers' (op. 51, libretto from Victor Hugo by N. Wilde, Moscow, 1900); 'The Stars' (ballet in 5 acts, Moscow, 1902); 'Living Flowers' (op. 68, ballet in 1 act); 'Esmeralda' (mimo-drama in 4 acts, Moscow, 1902).

B. ORCHESTRAL.

Overture (op. 13); Suite (op. 29); 'Danse Bayadère' (op. 34); Overture-Fantasia on Malo-Russian themes (op. 55); Symphonic poems: 'The Midnight Review' and 'La Pêcheur' (opp. 36 and 44); Triumphant Overture on 3 Russian themes, composed for the unveiling of the monument to Alexander II., Moscow (op. 54).

C. INSTRUMENTAL AND CHAMBER MUSIC.

Pianoforte concerto (op. 19); clarinet concerto (op. 30); fantasia for violoncello (op. 42); two pianoforte trios (op. 18 and 26); string quartet (op. 24); quartet for 2 cornets-a-piston and alto and tenor trombones (op. 23); 22 ensemble pieces for wind instruments (op. 26); 4 septets; 4 sextets, 6 quintets; 8 quartets.
A considerable number of pieces for one and two pianos; pieces for violin and pianoforte, including the popular 'Berceuse' (op. 28); a Mass (op. 22); three female choruses (op. 33) and upwards of 80 songs.

R. N.

SIMONE BOCCANEGRA. An opera in three acts, with prologue; libretto by Piave, music by Verdi. Produced at the Fenice Theatre, Venice, March 12, 1857; remodelled and rescored, with a fresh libretto by Boito, and reproduced at La Scala, Milan, March 24, 1881.

G.

SIMONETTI, ACHILLE, violinist and composer, was born at Turin, June 12, 1859. In early youth he studied the violin under Signor Gamba, and composition under Maestro Pedrotti, late Principal of Rossini's Conservatorio in Pesaro. Later, proceeding to Genoa, he placed himself into the hands of Camillo Sivori, who took great interest in him, and whose clear-cut style and Italian temperament are reflected in his playing. After some successful appearances in Marseilles and Lyons he went to Paris to receive further tuition from Charles Dancla (violin), and Massenet (counterpoint), passed four winters at Nice, and then visited England to fulfil an engagement to tour with the Marie Roze Company and B. Schönberger the pianist. His present headquarters are in London, where he is frequently heard as soloist and member of the so-called 'London Trio' (Simonetti, Amina Goodwin, and W. E. Whitehouse), whilst he occasionally visits Vienna and other continental cities. Besides a series of graceful solos for the violin, which have achieved considerable popularity, he has written two sonatas for violin and pianoforte and two string quartets. He plays on a Carlo Bergonzi violin.

W. W. C.

SIMOUTRE, NICOLAS EUGÈNE, a French violin-maker, the patentee of certain inventions by which he claims to improve the tone of violins and instruments of that class—either of defective or feeble *timbre*. The son of a *luthier*, he was born at Mirecourt, April 19, 1839, and was first the pupil of his father, then of Darche in Paris, and lastly of Roth in Strasburg. He began work as an independent maker at Basle in 1859, and there published in 1883 his *brochure* entitled *Aux Amateurs du Violon*. In 1886 a second *brochure*—*Un Progrès en Lutherie* appeared, a German edition being published at the same time entitled *Ein Fortschritt in der Geigenbaukunst* (Rixheim, 1886, 2nd edition, 1887). In 1889 he brought out a small 'Supplément' to the above pamphlets. The two last-named works deal mainly with his inventions. The principal of these, called 'Le Support Harmonique,' was based upon Savart's scientific discovery that the belly of a violin vibrates unequally. Testing the nodal lines formed by sand distributed upon the belly of

a violin when in vibration, Mons. Simoutre observed that the fibres of the wood vibrated in alternate sections, *i.e.* one and three vibrated in unison, likewise two and four, and that the vibrations of one and two were as much in opposition to one another, as were three and four. Starting from this point, he applied himself to the discovery of a system which should stop the vibrations of alternate fibre sections so as to allow the rest to vibrate in unison, and this he claims to do with his patent 'Support Harmonique.' Briefly, this invention consists in gluing two small sections of wood—variable in form and dimensions according to the effect required—upon the centre of the belly and back of the violin transversely. This method, he considered, concentrated the vibrations near the sound-post—where they are most numerous—and by so doing, increased the sonority of the instrument so furnished, and at the same time prevented the belly from sinking under the pressure of the bridge. Various experiments for ascertaining the best thickness and forms of the 'Support Harmonique' resulted in the discovery that an innovation in the form of the bass bar was necessary where the new system was employed. A semi-detached bar slightly scooped out at the centre, and glued only at each end to the belly of the violin, was patented by Mons. Simoutre, that form proving most efficacious where the violin was free from cracks, etc. A third patent applies to the setting of the sound-post in one of the two small circular grooves made for it in the lower 'Support Harmonique.' In 1890 this maker settled in Paris at 38 Rue de l'Ecliquier, where he worked for many years in partnership with his son.—Von Lutgendorff, *Die Geigen und Lautenmacher*, and Mons. Simoutre's works already mentioned.

E. H. A.

SIMPLIFICATION SYSTEM (Organ). This refers to a method formerly in use of planting all the pipes of an organ in semitonal or chromatic order, to simplify the mechanism, but now discontinued for various reasons. (See VOGLER.)

T. E.

SIMPSON, CHRISTOPHER, a distinguished 17th century viola-da-gamba player, famous in his day both as an executant and a theoretic musician. Very little is known of his life, and the exact date of his birth remains problematical, but the few facts that have come to light reveal him to have been the son of a Yorkshire yeoman—a descendant of some Nottinghamshire Simpsons, who spelt their name with a *y* (*vide* Harl. MS. 5800)—a man commended by his fellows for his upright habits, and a staunch upholder of the Cavalier Party against the Parliament. He joined the Royalist army under the command of William Cavendish, Duke of Newcastle, in 1643. He alludes in a passing phrase to the hardships and poverty he endured at this period in his

'Introduction' to the second edition of his *Division Viol*, 1667, when he thanks his patron—Sir Robert Bolles—for the 'Cheerful Maintenance' he had afforded him. This Sir Robert Bolles and his family were all fervent Royalists and ardent patrons of music, and at the end of the civil war Christopher Simpson enjoyed their hospitality at their residence, Scampton, Lincolnshire. To him was assigned the musical tuition of Sir Robert's son and heir, John Bolles and a certain Sir John Barber, and in this congenial musical atmosphere Simpson began to write his valuable book of instructions for the gamba, which he called *The Division Viol*. The excellence of this work is confirmed by Sir Roger L'Estrange, himself a distinguished gamba-player, who remarks in the preface to the second Edition that 'it is not only the *Best* but the *only Treatise* I find extant upon this argument.' Simpson's pupil, John Bolles, attained a high degree of perfection as a viol-da-gamba player, and a laudatory 'Ode' addressed to him while in Rome is inserted by Simpson, with pardonable pride, in the second edition of his *Division Viol*. On assuming the title at the death of his father John Bolles showed his regard for his old master by continuing the patronage which had previously been extended him by Sir Robert. This was fortunate; as was also the fact that Simpson's publications brought him in a good income, for Sir R. Bolles, whose will he witnessed, left him only the sum of £5. Before that event came to pass the eminent gambist had purchased a house and farm—'Hunt-house'—near Pickering, in Yorkshire, and settled this property, by deed, upon his nephew Christopher, the son of Stephen Simpson. According to evidence gained from Simpson's will, he died in the year 1669, between the 5th May and the 29th July. Apparently his demise took place at one of Sir John Bolles's residences, for although Hawkins (*Hist. Mus.*) states that he died at Turnstile, Holborn, where he had lived for many years, his contemporary Anthony à Wood records 'Anno 1669, Mr. Christopher Sympton, a famous musitian, died at Sir John Bolles house, whether in Lyncolnshire or London I know not.' Although nothing is definitely known as to whether Simpson married or not, it may be assumed, from his leaving all his property to his nephew, and all his 'musick-books or whatsoever is of that concernment,' to Sir John Bolles, that he was not.

Simpson's skill was greatly respected by his contemporaries, and musicians such as Lock, Salmon, Mace, and Sir Roger L'Estrange have shown their esteem by their various complimentary allusions to him. He lived in an age when the gamba was much cultivated, both by professionals and amateurs; but besides being the best authority on that instrument he was a composer of talent, and Mace (*Musick's Monu-*

ment, 1676) ranks him with William Lawes and John Jenkins as a composer of 'Fancies.' The Oxford Music School possesses a portrait of Simpson.

LIST OF PUBLISHED WORKS.

1. Annotations on Dr. Campion's *Art of Discant*, 1655. These remarks were introduced into the second edition of Playford's *Brief Introduction*, 1660, and in the other editions until 1684.
2. The *Division Violist* or an Introduction to the playing upon a ground: Divided into two parts. The first Directing the Hand with other Preparative Instructions. The second, Laying open the Manner and Method of playing Ext-tempro, or Composing division to a ground. To which are Added some Divisions made upon Grounds for the Practice of Learners, London, 1659. W. Godbid, for J. Playford. Fol. (with portrait). Dedicated to Sir Robert Bolles. Second Edition with title and text in Latin and English thus:—*Chelys mairidocum arificio exornata: sive Minutiones ad Basia, etiam Extremopore Modulandi Ratio. In tres partes distributa. The Division Viol or the Art of Playing Extremopore upon a Ground. Divided into Three Parts. London, 1665. Fol. with portrait. A further copy of this second Edition was published by W. Godbid for Henry Brome at the Gun in Ivy Lane in 1667. Fol. with portrait by Faithorne engraved from a painting by G. Carwarden. Dedicated to Sir John Bolles.*
- Third edition published by Pearson, with portrait of Simpson engraved by Faithorne, appeared in 1712. With two Sonatas for the gamba.
3. The Principles of Practicall Musick. . . . either in singing or playing upon an instrument, London, 1665. Dedicated to Sir John Bache—A compendium of Practicall Musick in five parts teaching by a new and easie method. 1. The rudiments of Song. 2. The principles of composition. 3. The use of discards. 4. The form of Figurate Discant. 5. The contrivance of Canon. W. Godbid for H. Brome, 1667. Dedicated to William Cavendish, Duke of Newcastle. The first part of this, the *Rudiments of Song*, was reprinted in a revised form.
- Third Edition. London, W. Godbid for Henry Brome, 1678.
- Fourth Edition. W. Pearson for T. Cullen, 1708.
- Fifth Edition. London, 1714.
- Sixth Edition. London, 1722.
- Seventh Edition. 1727.
- Eighth Edition. 1732. W. Pearson.
- Ninth Edition, with portrait.
10. Playford's 'Catch that Catch can,' 1672-73, there is a composition of Simpson's, and Hawkins (*Hist. of Music*) mentions a 'Division on the Ground' for viola da gamba by Simpson of the year 1665.
- In Thomas Campion's *Art of Setting or Composing of Music* there is a composition by Simpson for the viola da gamba.

MS. COMPOSITIONS.

- A Series of Suites in Three parts (British Museum Add. MSS. 18,940, 18,944).
- Mouthie and Seasons, namely Fancies, Aires, Galliards for two Basses and a Treble (*ib.* 31,436).
- Consorts of Parts for two Basses and two Trebles with figured Bass, (Heidelberg, MS. 3193).
- Rules of Theory (British Museum, MS. 142).
- Fancies for a viola da gamba (Christ Church, Oxford).
- Fancies and Divisions (British Museum MS. 31,436 and Bodleian Library, Oxford).
- Musgrave, in his *Obituary*, mentions a MS. (music) under the date 1666, by Christopher Simpson.

Hawkins, *Hist. Music*; Burney, *Hist. Music*; Mace, *Musick's Monument*; Lock, *Observations*; Hart, *The Violin and its Music*; Wasielewski, *Die Violoncell*; *Quellen-Lexikon*; Fétis, *Biog. des Mus.*; Simpson, *The Division Viol*; Anthony à Wood, *Life*. E. H. A.

SIMPSON, JOHN, a London music-publisher and instrument-seller of some note. As may be gathered from one of his early engraved labels, he had been employed by Mrs. Hare of Cornhill, the widow of Joseph Hare (see vol. ii. p. 295), but about 1734 he began business on his own account at the 'Viol and Flute' in Sweeting's Alley, a street running out of Cornhill, at the back part of the Royal Exchange. In Simpson's early business career this was named 'Swithen's Alley,' but in 1741 references to Simpson give this address, indifferently, with 'Sweeting's Alley.' He first published sheet songs, which he afterwards gathered into the two volumes as *Thesaurus Musicus* (circa 1745-47), and had probably bought the stock and plates of both Mrs. Hare and B. Cooke. He was in business connection with the proprietors of the 'Printing-

house in Bow Church yard,' who were successors to Cluer (*g.v.*).

So far as can be ascertained he died about 1747.

Simpson's most notable publications are: 'Thesaurus Musicus,' in which 'God Save the King' probably first appeared; Carey's 'Musical Century,' 1740; 'Calliope,' 1746; and much other music now of considerable antiquarian interest. He was succeeded by John Cox, who reissued from Simpson's plates.

At Cox's death, or retirement, Robert Bremner, Thorowgood, and the Thompson family became possessed of many of Simpson's plates, and republished some of his works. In 1770, and thirty years later, Simpson's premises were occupied by John and James Simpsin, apparently descendants, who were flute-makers, and, in a small way, music-publishers. Later than this (*circa* 1825) a John Simpson was manufacturer and teacher of the flute and flageolet at 266 Regent Street.

F. K.

SIMPSON, THOMAS, an English musician, who settled in Germany, and in 1610 was violaplayer in the Elector Palatine's band; in 1617-21 he was in the band of the Prince of Holstein Schaumburg. He was subsequently in the royal band at Copenhagen. He published the following works: 'Opusculum neuer Pananen, Galliarden, Couranten vnd Volten,' Frankfort, 1610; 'Pananen, Volten und Galliarden,' Frankfort, 1611; 'Opus Newer Padnanen, Galliarden, Intraden, . . . mit 5 Stim.,' Hamburg, 1617, and 'Taffel Consort allerhand lustige Lieder von 4 Instrumenten und General-bass,' Hamburg, 1621, containing, besides pieces by Simpson himself, some by Peter Phillips, John Dowland, Robert and Edward Johnson, and others. W. H. H.

SIMROCK. A very famous German music-publishing house, founded in 1790 at Bonn by Nikolaus Simrock (1752-1834), second waldhorn player in the Elector's band, to which Beethoven and his father belonged. The first of Beethoven's works on which Simrock's name appears as original publisher is the Krentzer Sonata, op. 47, issued in 1805. But he published for Beethoven an 'Edition très correcte' of the two Sonatas in G and D minor (op. 31, Nos. 1 and 2), which Nägeli had printed so shamefully; and there is evidence in the letters that Simrock was concerned in others of Beethoven's early works. The next was the Sextet for strings and two horns, op. 81b (1810); then the two Sonatas for PF. and violoncello, op. 102 (1817); the ten themes with variations for PF. and violin or flute, op. 107 (1820). He was succeeded in 1834 by PETER JOSEPH SIMROCK, who died in 1868, and about 1870 his successor, FRIEDRICH SIMROCK, founded the Berlin house, and there published the principal works of Brahms. (*Quellen-Lexikon.*) G.

SINCLAIR, GEORGE ROBERTSON, Mus.D., son of Robert Sharpe Sinclair, LL.D., Director

of Public Instruction in India, was born at Croydon, Oct. 28, 1863, and was educated at St. Michael's College, Tenbury, and at the Royal Irish Academy of Music. He studied successively under Sir Frederick Gore Ouseley, Sir Robert Stewart, and Dr. C. H. Lloyd. In 1879 he became assistant organist of Gloucester Cathedral, and organist and choirmaster of St. Mary de Crypt, Gloucester; in 1880, at the age of seventeen, he was appointed organist and choirmaster of Truro Cathedral. Since 1889 he has filled the post of organist of Hereford Cathedral with distinction, and his conducting of the Hereford (Three Choirs) Festivals from 1891 to 1906 brought him into contact with the most eminent English musicians of the time, and ripened his experience as a conductor, a capacity in which he has exhibited very remarkable powers, being in sympathy with every school of excellence, and being able to impress his own reading of the classical and other works upon all under his command. He is conductor of various Hereford and Herefordshire societies, both choral and orchestral, and as an organist he played at six successive Gloucester Festivals. In 1895 he was made an honorary member of the Royal Academy, having been L.R.A.M. since 1887; in 1899 he was appointed conductor of the Birmingham Festival Choral Society, and received the degree of Mus.D. from the Archbishop of Canterbury. In 1904 he was made an honorary fellow of the Royal College of Organists. (*See Musical Times*, 1906, pp. 168, ff.) He is also an ardent Freemason, a Past Grand Organist of England, a Past Master of the Palladian Lodge, No. 120, and Master of the 'Vaga' Lodge, No. 3146. His impetuous character, his skilful pedal-playing, the barking of his dog, and other things, are immortalised in the eleventh variation of Elgar's 'Enigma' set for orchestra. M.

SINCLAIR, JOHN, born near Edinburgh, Dec. 9, 1791, was instructed in music from childhood, and while still young joined the band of a Scotch regiment as a clarinet player. He also taught singing in Aberdeen, and acquired sufficient means to purchase his discharge from the regiment. Possessed of a fine tenor voice, he was desirous of trying his fortune upon the stage, came to London and appeared anonymously as Capt. Cheerly in Shield's 'Lock and Key' at the Haymarket, Sept. 7, 1810. His success led to his becoming a pupil of Thomas Welsh. He was engaged at Covent Garden, where he appeared Sept. 30, 1811, as Don Carlos in Sheridan and Linley's 'Duenna.' He remained there for seven seasons, during which he had many original parts. He was the first singer of the long popular recitative and air 'The Pilgrim of Love' in Bishop's 'Noble Outlaw,' produced April 7, 1815. He also sang originally in Bishop's 'Guy Mannering' and 'The Slave,' and Davy's 'Rob Roy,' and acquired

great popularity by his performance of Apollo in 'Midas.' In April 1819 he visited Paris and studied under Pellegrini, and thence proceeded to Milan and placed himself under Banderali. In May 1821 he went to Naples, where he received advice and instruction from Rossini. In 1822 he sang, mostly in Rossini's operas, at Pisa and Bologna. In 1823 he was engaged at Venice, where Rossini wrote for him the part of Idreno in 'Semiramide.' After singing at Genoa he returned to England, and reappeared at Covent Garden, Nov. 19, 1823, as Prince Orlando in 'The Cabinet,' his voice and style having greatly improved. He continued at the theatre for a season or two; in 1828 and 1829 was engaged at the Adelphi, and in 1829-30 at Drury Lane. He then visited America; on his return retired from public life, and died at Margate, Sept. 23, 1857. W. H. H.

SINDING, CHRISTIAN, born Jan. 11, 1856, at Kongberg in Norway; became a student at Leipzig, and at Munich, and at Berlin. A very talented pianist, he has written much for his own instrument as well as for stringed instruments. His highest opus number is now (1907) 51. His principal works are the Rondo infinito for Orchestra, op. 42; Violin Concerto in A, op. 45; Piano Concerto in D flat, op. 6; Quintet in E minor, op. 5; Trio in D major, op. 23; Variations for two pianos, op. 2; Suite, op. 3; Studies, op. 7; Sonatas for Violin and Piano; Suite for Violin and Piano, op. 14; Caprices, op. 44; Burlesques, op. 48; Six pieces, op. 49; besides many songs, and many arrangements of Folk-songs. Sinding's music is characterised by great facility in construction, tunefulness, variety, and elegance. He is always intelligent, and even if not deep is a very pleasing writer, who secures the interest of his auditor. D. H.

SINFONIA. See SYMPHONY.

SINFONIA SACRA (SACRED SYMPHONY).

A term used to describe certain short cantatas, in which an unusual closeness of musical connection is to be suggested, such as Parry's 'The love that casteth out fear,' and 'The Soul's Ransom,' Walford Davies's 'Lift up your Hearts,' and Stanford's 'Stabat Mater.' M.

SINFONIE-CANTATE. The title of Mendelssohn's Lobgesang or Hymn of Praise (op. 52). The term—properly 'Symphonie-Cantate'—is due to Klingemann, according to Mendelssohn's own statement in his published letter of Nov. 18, 1840. Mendelssohn was so much in love with it as to propose to bestow it also on the 'Walpurgisnight' (see the same letter and that to his mother of Nov. 28, 1842). That intention was not, however, carried out. G.

SINGAKADEMIE, THE, BERLIN, one of the most important art-institutions in Germany. Its founder was Carl Friedrich Christian Fasch, born 1736 and appointed in 1756 cembalist to Frederick the Great of Prussia, after whose death

he led a quiet and retired life in Berlin as music-teacher and composer. The Singakademie originated with some attempts made by Fasch and a few of his pupils and musical friends to perform his own sacred compositions for mixed voices. The actual Akademie was founded on Thursday, May 24, 1791, and up to the present time the weekly practices are still held on a Thursday. The original members were twenty-seven, thus distributed:—seven sopranis, five alti, seven tenors, and eight basses. The Society was at first entirely private, the meetings taking place at the house of Frau Voitus (Unter den Linden, No. 59, afterwards Charlottenstrasse No. 61). This character it retained after the practices were held in a room at the Royal Academy of Arts, whence the name of the Society was suggested, and the use of which was granted to the Singakademie, Nov. 5, 1793. The first of the regular public performances took place at Easter, 1801. The proceeds were at first devoted to charitable objects, but after the Akademie had, in 1827, erected its own buildings, where the meetings are still held, and which contain a fine concert-room, it became necessary to have performances for the benefit of the institution, and these are still carried on. The object of the founder was to promote the practice of sacred music both accompanied and unaccompanied, but especially the latter. The Society at first confined itself to Fasch's compositions, singing, amongst others, his 16-part Mass a cappella, but in a short time pieces by Durante, Graun, Leo, Lotti, etc., were added. The first oratorio of Handel's put in rehearsal was 'Judas Maccabæus' (1795). The first performance of Bach's Matthew-Passion in 1829 is well known, and indeed marks an epoch, but the chief credit is due, not to the Singakademie, but to the conductor of the performance, Mendelssohn.

The Berlin Singakademie has served as a model for most of the vocal unions of Germany. Its structure is exceedingly simple, the governing body consisting of a director, who has charge of all musical matters, and a committee of members (ladies as well as gentlemen) who manage the business. All of these are elected at general meetings. Since 1815 the director has had a fixed salary out of the funds of the Society. New members are admitted by the director and the committee. There is a special practice on Wednesdays for less advanced members, who must attain a certain amount of proficiency at this, before being allowed to join the main body. The numbers rose in 1788 to 114, in 1813 to 301, in 1827 to 436, and in 1841 to 618.

Fasch died in 1800, and was succeeded in the directorship by his pupil Carl Friedrich Zelter. An attempt to bring in Mendelssohn having failed, Zelter was succeeded by Carl Friedrich Rungenhagen (1832 to 1851) and he by Eduard

August Grell, who relinquished the directorship in 1876, on account of his advanced age, but retained a seat and vote in the committee, with the title of honorary director. Martin Blumner, the next conductor, was born in 1827, and appointed in 1876; [he wrote a history of the Society, which was published in 1891, and shortly before his death in 1901 the present conductor, Georg Schumann, was appointed.] P. S.

SINGING is the musical expression of the voice. It is part of our natural condition to possess organs for the production of sound, and perceptions to make them musical, and being thus equipped, it is but natural that the art of music should be intimately associated with human life.

Like many of the other animals, we express our pain, sorrow, joy, pleasure, hunger, rage, satisfaction, and love, in sounds which have their vital and instinctive meaning like any of the actions or gestures associated with the elemental functions of human nature. We have no more necessity than they have, however imitative we may be, to look to external phenomena for the origin of this wonderful possession. It is natural to the infant to cry when it is cold or hungry, and to crow when it is pleased. So, with the growth of sensibility and perception, a little child knows how to plead with its voice, in tones quite different from those of mere asking, without any vocal training whatever. The same instinct which has enabled the child to appeal to its parents and fellow-creatures, has taught man to approach his God with praise and supplication. But the most remarkable indication of the instinctiveness of song is the characteristic growth of the voice organs at the outset of manhood and womanhood. It is as if the full development of the body were crowned with the completion of the instruments of sound, which express with such particular eloquence the passions and emotions attendant upon the great mystery of sex.

Through the growth and refinement of our perceptions, the art of singing becomes the musical expression of every emotion suggested by thought and imagination.

It not infrequently happens that individuals are born to attain by the light of nature to a high degree of perfection in this art; and even when this is not so, the inherent sincerity of imperfect singing can sometimes appeal more powerfully to our feelings than the most efficient training could make it do. While the whole of humanity is probably in some measure acquainted with the feeling of a desire to sing, and the form and condition of the vocal instruments appear to be as a rule normally fitted for the production of musical sound, the wonder is that everybody cannot do it. But there is no doubt that the fault lies more often in defective musical perception than in the condition of the organs of voice.

Music demands a high development of a particular sense, the foundation of which is inborn, though its perfection requires cultivation; and therefore there are individuals who have all the materials for singing, but are still without the faculty of using them for that purpose. Another important obstacle to the acquirement of the power of singing is that, with the intellectual development of the race has arisen a demand for perfection in speech and diction, which often interferes with the process of vocal training.

It should be remembered that language is a purely artificial acquisition of mankind. We all have to spend years in acquiring habits of speech so that we may understand and explain the ordinary circumstances of life. So local is this, that we grow up speaking the language which prevails around us, by the simple process of imitation, without thinking whether its sounds are musical or not, and this introduces a series of common difficulties which are more linguistic than vocal, and which will be considered more fully later on.

It thus becomes apparent that the art of singing has within it a great deal that is quite outside the province of music. For although the musical expression of the voice is of prime importance, the whole foundations of the instruments involved belong strictly to the province of Physiology, like any of the other natural functions of the body, and by far the greater share of its educational side belongs to the study of the speech organs.

The science of Phonology (*i.e.* the science of vocal sound) has been specialised from its parent science of Physiology, so that it may occupy itself solely with the study of all the problems involved in this important subject, and, by an obligatory knowledge of music and languages, carry out its conclusions in the service of the art.

The first step towards understanding singing is to acquire a knowledge of the forces and instruments which it employs, and their phonological outline should, therefore, be made clear before the fuller details are filled in.

The voice is built upon the same physical principles as a reed-pipe of a church organ. There is (1) a wind-chest in which the air is compressed; (2) a 'reed' which vibrates and produces the sound; and (3) a resonator, which gives it certain qualities.

(1) By the act of breathing out, we compress the air which has been taken into the chest. This force in being liberated causes (2) the Vocal 'reed' to vibrate when we bring it into position and the sound thus produced is then modified by (3) the Resonator, formed by the hollows in the neck, mouth, and nose, which give quality to the sound, and impress upon it the characteristics of language.

Under these headings the components of the

voice can be studied separately, and their more complex combined performances are then more easily understood.

The Breath.—The ordinary breathing of everyday life brings oxygen into contact with the blood in the lungs and carries carbonic acid away from it. Elevation of the ribs expands the chest and increases its circumference, and the contraction of the diaphragm lowers its floor and enlarges its capacity in a downward direction. The two actions go on together and draw a sufficient volume of fresh air (30 cubic inches) into the lungs with a slow, easy movement. The used air is more quickly emitted, principally by the elastic recoil of the lungs and chest, and after that there is a slight pause. This occurs about fifteen times a minute.

Breathing for singing is very different. Its whole object is to maintain a long and well-regulated air-pressure for the production of sound. A full breath must often be taken very rapidly, and then kept in a state of controlled compression for as much as 20 seconds. Thus the number of respirations possible in a minute may be reduced to a minimum. This necessitates a much larger volume of breath than is ordinarily needed, not only for the length of time the sound may have to continue, but also for the supply of oxygen to the blood. The first point is, therefore, to secure the power of taking in a large volume of air as quickly as possible. The second point is to give it out with carefully regulated force, for upon this the controlled production of sound entirely depends.

Breathing in.—The largest amount of air can be inhaled by the properly combined action of raising the ribs (costal breathing) and of contracting the diaphragm (diaphragmatic breathing). The latter has also been called "abdominal" breathing, from the fact that the

diaphragm is hidden and the evidence of its contraction is the protrusion of the abdominal wall caused by lowering the roof of that cavity. Men make more use of the diaphragm than women, whose upper ribs are more movable, but singers of both sexes have to make good use of both diaphragm and ribs.

There are reasons, especially in women, against the extreme use of the diaphragm on account of the pressure it exerts upon the abdominal organs, besides the difficulty of controlling the breath when so taken. This has caused a great deal of misunderstanding between doctors and singing-masters, and has produced extreme views on either side, neither of which can be supported by phonology.

When the ribs are fully raised, and especially the lower ones (6th-10th) which are the most elastic and movable, and correspond to the thickest part of the lungs, not only is the circumference of the chest increased and its floor widened, but the roof and upper part of the abdomen is also enlarged. Under these circumstances a considerable contraction of the diaphragm will cause no more than a protrusion of the upper part of the abdomen, that is, above the waist and between the margins of the ribs in front, without causing any harmful pressure upon the abdominal organs. The more the lower ribs expand, the more the diaphragm may descend with impunity, and a large in-take of breath can be obtained without danger. It has been called 'Central' breathing, because the principal expansion takes place in the centre at the level of the space between the 6th and 7th ribs, and is designed to promote a good proportion of both actions, and to avoid the disproportionate or exclusive use of either the too high costal and clavicular breathing, or the too low purely abdominal breathing, both of which are sometimes advocated by extremists.

Breathing out.—In order to secure an even and continuous air-pressure three forces have to be considered :—

1. The elastic recoil of the inflated lungs and expanded chest ;
2. The contraction of abdominal muscles that assist the relaxed diaphragm to return to its place ; and
3. The contraction of muscles that pull down the ribs.

The elastic recoil does most of the work in ordinary breathing out, and is most useful in producing sound, only it is a force that begins with a maximum and rapidly diminishes.

To make the force continuous, it must be augmented by one of the others. These may act together or separately. If they act together they must maintain their proper proportion throughout. If they act separately the diaphragm must be replaced by abdominal contraction first, that is, before the ribs are allowed to descend, for, as has already been stated, the

subsidence of the expanded chest while the diaphragm is contracted, causes too much abdominal distension.

Those who have developed a good expansion of the lower ribs will be able to maintain that expansion while the diaphragm is supported by the abdominal muscles, and the upper part of the abdomen becomes concave before the ribs are allowed to descend. In this manner very great delicacy in breath-control can be exercised. When the capacity is large enough the ribs can be kept expanded while the diaphragm moves to and fro, opposed by the abdominal muscles, and thus the breathing both in and out becomes entirely diaphragmatic or abdominal. This is the only form in which this is permissible, namely, when the ribs are fully expanded all the time and the movement of the abdominal wall is confined to the region above the waist.

Towards the end of a very long phrase, however, the ribs will have to come down. It is better then, that only the lower ribs should be relaxed while the upper ribs remain raised as part of a permanent position.

The permanent expansion of the ribs is partly secured by straightening the upper part of the spine in standing or sitting up straight, and the larger amount of residual air retained in the lungs is of great value in maintaining continuity of air-pressure and tone.

It will be noted that the form of breathing here explained and advocated is practically invisible. It is also designed to add to volume, the continuity and control of air-pressure necessary to good phrasing. The permanent expansion of the ribs also assists resonation in the neck, an advantage which will be dealt with later.

The vocal reed is formed by two elastic membranes or cords which can be drawn together from their position of rest, so that they meet like curtains, and completely close the air-passage at the upper end of the windpipe, where the larynx begins. Their front ends are fixed close together to the shield cartilage, and behind they are attached to two small triangular cartilages which move very freely upon the thick ring-shaped cartilage supporting them. During breathing in they are wide apart, and during breathing out they approach one another. In the act of whispering, they are definitely drawn, so as to reduce the opening between their edges considerably.

As soon as air-pressure acts upon the elas-

ticity of the edges of the membrane they vibrate, in accordance with the physical laws which govern the action of 'reeds' in general.

This may happen before the whole passage is occluded, and a soft 'breathy' note is produced, but the reed acts most strongly and perfectly when the two cartilages are brought into close contact, so that the whole air-pressure acts upon the vibrating edges of the membranes, and is converted into sound.

Singing is practically confined to the last position. The tremor of the elastic membranes rapidly opens and closes the fine slit between their edges and releases the air-pressure in a quick succession of minute puffs. One group of muscles regulates the movements of the small triangular cartilages, by the action of which the membranes are brought together and drawn aside. Another group is concerned with tightening and loosening the membranes, and thereby regulates the tension upon which the rapidity of their vibration depends.

Every vocal reed may be expected to have a compass of two octaves which can be controlled by this function of tension and relaxation, and it must not be forgotten that this tension is an unconscious act guided solely by sound perception or 'ear,' and cannot be appreciated by any muscular sense as in the case of a voluntary movement.

The general pitch of every voice is determined by the size of the membranes. In men they are both wider and thicker than in women, and their length is generally estimated at about $\frac{1}{2}$ ths of an inch and $\frac{1}{4}$ ths of an inch in women.

Roughly speaking, the male voice is about an octave lower than the female, but in either sex all degrees of general pitch exist between certain limits. For convenience three types are usually considered—high, low, and middle. The majority of voices are near the middle type in both sexes, while exceptional instances of abnormally high or low are sometimes met with.

The male Alto voice has an intermediate position between the two groups, but being an unnatural product it cannot be considered with the others.

Thus every voice has its middle note whence it may be expected to range to the extent of an octave upwards and downwards by performing the same muscular action. In the figure the middle note of each voice is indicated by a double vertical line.

Besides the tension of the membranes there is another physical condition which undergoes variation with every change of pitch, and that is the air-pressure exerted by the breath.

From experiments (M'Kendrick, *Schäfer's Physiology*) it is found that the air-pressure varies in about the same ratio as the tension.

Therefore, in a general plan of the vocal compass the middle note may be regarded as the product of both mean tension and mean air-pressure. The tension is well known to vary in the ratio of the square of the vibrations, and thus both the tension and air-pressure may be represented by the numbers 1, 4, 9, 16, 25, while the vibrations are as 1, 2, 3, 4, 5, in the diagram appended.

Pressure and Tension.	Vibrations.	Compass.	Working Capacity.
Extreme=25	5	3rd + 5ve	
High =16	4	↑ Centre	
= 9	3		
Mean = 4	2		
Low = 1	1	5ve + 3rd	
Extreme			

The working capacity of the voice is here represented by a triangle whose apex is opposite the centre of the compass, which signifies that the middle can do the most work when the whole compass is evenly balanced throughout. Then by a common control of tension and pressure the vibrations are varied so that the notes of a two-octave compass can be used at will. With training an extension upwards and downwards of a third more may still be possible, but it is always desirable that the extremes of the voice should be kept for exceptional use only. Composers are accustomed to fix the voices for which they write by the extreme limits only, which is not phonological. It is more important to adapt the principal share of the work to the centre of the voice.

A more or less exact method of estimating the amount of work demanded by a vocal composition has been made use of in the 'song diagram,' of which two examples are here given. Without considering accidentals, the values of the notes are added together and arranged according to pitch. Starting from a vertical line upon which the pitch is indicated, the total values are expressed in horizontal black lines. The diagram so obtained shows upon what notes the principal work lies, and the application to that of the centre of the 'working capacity' reveals at once the type of voice to which the composition is suited.

The example from 'Tristan and Isolde' shows

that Wagner demands for the part of Isolde a high soprano voice of exceptional development, with its centre on *b'*, and a full compass of over two octaves. Mozart's 'Il mio tesoro' only

once touches the upper limit of the ordinary tenor compass, and yet it lies so much in the upper part of the voice that it is best suited to a high tenor with a centre above *a*.

The examination of a great number of these diagrams, which are easily made upon paper ruled in squares, will explain a great deal that is interesting to the practical musician, but they do not supply more than a part of what is called the 'tessitura' of vocal music, which includes the length and distribution of phrases and pauses, as well as the declamatory consideration of the question of vocality.

Many voices have been ruined by composers' neglect of vocal considerations, and it is not uncommon to find soprano singers who have lost the middle of the voice entirely. It is not difficult to calculate the great relief to the forces of tension and breath-pressure which even slight transposition will give; and, conversely, the amount of strain which has to be borne by the voice, if the work is pitched too high, cannot fail to wear out and distort the instrument prematurely.

These considerations might with advantage be taken into account by those who are responsible for modern musical pitch. It is to be hoped that a wider phonological knowledge may tend to remove some of the bitter struggles that are too often witnessed in the performance of modern music.

The question of the attack of a note has been much debated among masters. Manuel Garcia, and others who followed him, have insisted upon what he himself described as a 'very

slight cough' before a note in order to secure a distinct attack upon it.

Above the vocal membranes and parallel with them are two muscular folds called the false vocal cords, or ventricular bands. In conjunction with the muscles that bring the membranes together, they form a strong constrictor of the air-passage, to close it firmly when required. This occurs always in swallowing, when the chest has to be held inflated to support a strong muscular action, and also in coughing. The elastic vocal membranes are themselves unable to restrain any air-pressure in the chest, so it was thought necessary to accumulate a little force by constriction with these ventricular bands, and by suddenly relaxing them to allow the force to impinge upon the membranes which were supposed to be held in readiness for the sudden shock. There is no doubt that a crisp attack can be effected in this way, but the sound of the note is always preceded by an explosive noise however lightly it may be done.

The first phonological objection to this 'shock of the glottis' (*coup de glotte*) is that it is quite unnecessary. When the breath is under control and intimately associated as it ought to be with the production of sound, the simultaneous onset of breath force and the proper approximation of the membranes produces a perfectly clear and clean attack, straight upon the note by the ordinary natural action performed with decision.

The introduction of any constriction above the reed cannot be regarded as a natural part of the action of attack. Moreover, the quasi-spasmodic act of constriction produces often an unduly hard attack which is not good for the vocal reed, and its constant repetition produces congestion of the parts around the cartilages, and a troublesome desire to clear the throat.

Phonology insists that the production of sound is always the result of an expiratory act, and that every sound effect, whether it be strong or soft, quick or gradual, must be the outcome of a similar intention in the breath control. Such control leaves the throat free to its unconscious action, which would be destroyed by any muscular constriction in the larynx.

The 'shock of the glottis' is part of a time-worn tradition in the teaching of singing, and is often heard in voices that are beautiful as well as in those that are hard and throaty; it is sometimes regarded as essential to the proper pronunciation of German and some other languages of a guttural nature, but artificial fashions of speech cannot be tolerated if they are opposed to the natural uses of the voice organs.

The cessation of a note is brought about by the withdrawal of the membranes. As a rule the membranes spring back elastically to their open position, and some breath pressure escapes in a puff after the note. The amount of this escape, and consequently the sound it makes,

is a matter of breath-control. A high note is naturally followed by a strong burst, because the pressure is higher than that of a low note. The free release, as this is called, is not objected to in operatic singing, and there is nothing to say against it on phonological grounds. Moreover, it is useful in getting rid of carbonic acid, and in facilitating the quick taking of another breath. It may, therefore, be left to discretion, to make the sound of the release inaudible by breath-control.

Under no circumstances should the note be stopped by constriction of any part of the throat, which is frequently associated with the equally detrimental attack by 'shock' just referred to. Many singers deceive themselves in the belief that their throats remain open when their notes cease.

One of the difficulties in showing the natural behaviour of the vocal membranes with the laryngoscope is that the power of tolerating a mirror in the back of the throat itself requires a long course of training without which the organs under observation cannot act naturally.

The second vocal instrument, the *Resonator*, belongs, as such, to a later date in the evolution of the voice as we now hear it. The particular function of the Resonator, which warrants its being treated as a separate instrument, is its power of modifying sound by assuming different shapes, which is made use of in the formation of language.

Every hollow space enclosed within walls but communicating with the outer air, is capable of allowing only certain sound vibrations or waves to continue within it. This is called its Resonant note, and its pitch corresponds with the size, and its character with the shape, of the resonant cavity or Resonator. The pitch is also affected by the size of its opening. Partly closing it not only changes the character of the note, but also lowers its pitch.

In the case of the voice, in which the reed is strong and the Resonator comparatively weak, much of the fulness of the sound must depend upon keeping the openings free. At the same time the cavities should be made as large as possible in order to keep their resonant pitches low, and thereby impart a richer tone to the voice.

The size of the Resonator varies a little among men; in women it is about 20 per cent smaller, and in children, smaller still. But all, by the same physiological action, can bring it into similar positions, and thus it is the shape of the Resonator that gives characteristic qualities to speech, and language is as intelligible in the mouth of a child as in that of a giant.

The sounds of language are divided into two groups.

1. Vowel sounds, due to open and expanded positions of the Resonator suitable for continuous sounds of the best possible quality.

2. Consonants, due to more or less closed positions, and movements of the Resonator which give certain characters to the approach to and departure from the vowel positions.

The position of the Resonator in forming the vowel sounds is a most important question in the art of singing.

So much latitude is permitted in ordinary speaking that pronunciation in singing has been looked upon as something quite different from it. But when the sound of the voice is at its best, the Resonator is in the position most favourable to sound. This principle applies as strongly to speaking as it does to singing, and when singers do not sing as they would speak, it is either because they do not speak properly, or they do not use the Resonator naturally.

It cannot be too strongly insisted upon that if the principles of good resonance are carefully adhered to from the first, speech, being solely a matter of education, can always be made beautiful.

This is generally neglected in our schools, where children learn their habits of speech, but it is absolutely essential to singing, and not infrequently it happens that a great part of vocal training is spent upon teaching a singer to use the Resonator properly, for the first time.

Vowel Sounds.—In studying the sounds belonging to the five signs U, O, A, E, I, the Italian pronunciation is here adopted—

	U	O	A	E	I
English Equivalent	(oo)	(or)	(ah)	(eh)	(ee)

The position A is that in which the whole passage is open and expanded to the fullest extent convenient (natural habits never go to extremes), and from it the others are differentiated by two principal actions.

1. Closure of the opening by the lips, and
2. Raising and advancing the body of the tongue.

Since A is taken as the basis of our Resonator, its position must be closely defined.

The jaw is open at least an inch between the front teeth.

The lips are at rest upon the teeth, and not retracted at the sides.

The tongue lies flat upon the floor of the mouth with its tip and margins touching the backs of the lower teeth.

The base of the tongue is flat enough to make the back of the throat visible from the front.

The palate is held up just enough to prevent

breath passing into the nose, but without any conscious effort.

The neck is fully expanded by the combined actions of holding the head erect, the ribs raised, and drawing down the larynx, more by the action of the sterno-thyroid muscles which act upon the larynx from below, than by the sterno-hyoid muscles which bring down the base of the tongue. This position has the form of a double Resonator, with two principal resonance chambers uniting in the middle at right angles, where they are joined by a third accessory chamber, the nose.

The back chamber in the neck is shaped like a bag, wide below, where the vocal reed is placed, and narrow above, where it opens into the back of the mouth by an oval opening. The front chamber, in the mouth, is shaped like an irregular hemisphere, with a flat floor and an arched roof and a large round opening in front.

Although the whole Resonator acts as one, the back chamber may be said to have most to do with the full resonance of vocal sound; while to the more variable cavity of the mouth is given the office of forming all the characteristics of language. The accessory cavity of the nose adds to the sound the nasal resonance when required, through the opening controlled by the soft palate. The resonant properties of cavities are demonstrated by blowing a stream of air through or across them, so that their resonant notes can be heard by themselves. This occurs in the whispering voice. The partly closed glottis allows the breath to rush through it without producing any vocal note, and the rushing sound awakens the resonant notes of the air-chambers so distinctly that not only are all the qualities of language distinguishable, but with a little practice the pitch of the resonant notes of the various vowel sounds can be detected. These notes are most distinct, and deeply pitched in the whispering here employed, which requires a fully expanded and open Resonator and a reef out-breath with no constriction of the throat whatever.

Following these rules the pitch of the vowel A is commonly found to be c'' or $c''g$ among men—and about a minor third higher $e''b$ or e'' among women.

The double nature of the Resonator can be shown by introducing a tuning-fork of the right pitch, into the throat. A strong reinforcement occurs in that position indicating a 'node' at the junction of the two chambers, as would be expected. The resonant note may, therefore, be said to belong to both the mouth and the neck cavity acting in unison. This is an important acoustical point, which receives further confirmation in the formation of the other vowels.

The first group of vowels derived from A, by closing the opening with the lips, are three varieties of O, and U which is the most closed.

By various degrees of this action, but keeping the jaw still open to the extent of an inch between the front teeth, the positions are obtained for :—

	A	O ³	O ²	O ¹	U
English Equivalent	ah	not	or	oh	oo.

By every successive degree of closing, the pitch of the resonant note is lowered, and thus are indicated the several positions which produce the notes of a scale as a simple way of fixing them.

By rounding the lips enough to lower the pitch of A a whole fifth, a good resonant position is found for U (oo), and the deep, middle, and shallow forms of O find their proper places upon the three notes intervening.

It will be noticed in practice, as well as in physiological works, that with the closure of the lips there is at the same time a lowering of the larynx and a slight raising of the base of the tongue. Both these actions tend to enlarge and close in the chamber in the neck, and by thus lowering its pitch, they maintain the unison of the two chambers, as may be further shown by tapping the cheek and the neck, when both are found to possess the same note.

Whispered Resonances.

The second group of vowel sounds owe their character to the position of the tongue. The jaw remains open about an inch as before, then the tongue, with its tip against the back of the front teeth, advances and rises. The lips remain still, the larynx is drawn upwards by the movement of the tongue, but this is restrained to some extent by maintaining the expansion of the neck as in the position of A. This action raises the resonant pitch of the mouth because it becomes gradually encroached upon by the body of the tongue, but while it makes the mouth cavity smaller, it makes the neck cavity larger. When the tongue is so far forward as to touch with its margin the upper molar teeth, the pitch of the mouth resonance may be raised a sixth and the neck resonance lowered a third.

This is the position allotted to the vowel E (eh). A still further advance of the tongue to its extreme position, when it has raised the mouth resonance an octave, and lowered the

Whispered Resonances.

neck resonance a fifth, will give a suitable resonance to the vowel I (ee).

The perfect concords of an octave (1 to 2) and a twelfth (1 to 3) established for the relation of the chambers in these two vowel sounds is not a mere accident. It is more probable that the selection of these sounds as pure vowel sounds in all languages, has been due to their particular resonant advantages, for the resonance of a double resonator can only go on perfectly when the component chambers are either in unison or simply related. A further point in the formation of the vowel sounds E and I, is that the orifice between the two chambers is made smaller by the approach of the tongue to the hard palate. This lowers the pitch of both, so that the division of the chambers does not take place in linear measurement as upon a monochord.

Intermediate between A and E there are several positions which belong to some of the English vowel sounds in common use. The first movement of the tongue is principally forward, and enlarges the opening of the throat, raising the resonant pitch of both chambers while they remain in unison. This position belongs to the sounds of the unaccented *a* in 'alone,' the *u* in 'up,' and the *o* in 'love.' But after this the unison can no longer be maintained owing to the disparity of the chambers, and we find their pitches a third apart, which is not very good for the resonance of the sound *er* as in 'earth.' The shallow *ā* as in 'hat' has resonance chambers a fifth apart, and in the short *ē* as in 'get' they differ by a sixth. Hence all these indefinitely resonated sounds are those which are more frequently varied in pronunciation than any others, and are the most difficult to fix in singing. Between E and I is the short *ī* as in 'hit,' in which the chambers are a tenth apart.

The full *Resonator Scale* is therefore constructed as follows. The several positions are marked by Roman numbers to indicate them for all voices in relation to the pitch of A, which governs that of the others in each individual case. To these must be added in English

Resonator Scale of Whispered Vowel Sounds.

the more open 'oo' sound in 'good,' 'would,' etc., which is on I^Δ between U (oo) and O¹ (oh).

Besides these thirteen simple sounds in English there are several compounds which require a movement from one position to another while the breath continues.

Whispered Resonances.

The use of the resonator scale is of similar service in fixing the vowel pronunciation of other languages, and French and German sounds have all their places in relation to the sound of A, slight differences only having to be made to suit national peculiarities.

The same relations will be found to exist, whatever the resonant pitch of A may be. The pitch of U, a fifth lower, and of I (ee) an octave higher, will always be the limits of the scale of twelve notes, although in languages with fewer vowels some of the notes will not be occupied.

It must be remembered that all these sounds have to do solely with *whispered* speech, and are in no way connected with the notes of the vocal reed.

With a little practice the notes of the Resonator Scale can be heard without difficulty. By tapping with the finger upon the neck, the resonant notes of the back chamber will be heard to rise with the others, up to No. VI., and then fall again as shown in the scale. They can also be heard by the subject himself when the ears are completely stopped.

The consonants are important to the art of speaking and therefore also to singing, for they all represent different methods of opening and closing the vowel positions. They are conveniently classified as follows:—

It will be noticed that the jaw is only closed when the teeth are obliged to be together to form S.S.H., and their sounding companions Z.J (soft), otherwise it must always be kept as wide open as the consonant will allow, in order to have less to do in reaching the vowel positions, which are all open.

What is generally known as 'forward diction' depends upon this condition, and the free use of the tip of the tongue, the lips, and the teeth.

The base of the tongue in K and G is brought forward to the hard palate, and not allowed to close up the throat at the back.

This action is easier before A, O, and U, when the tongue is either flat or its base somewhat raised; but before E and I, in which the front of the tongue is high and forward in the

mouth, the consonants K and G have been softened by all races who have come under Latin influence (French, Spanish, Italian, and part of English) into an aspirated or partly explosive sound better suited to the position of the tongue.

The importation of language into the art of song has thus involved the careful cultivation of those positions and movements of the Resonator which are best calculated to liberate the sound of the vocal reed, and at the same time express with particular distinctness all the various qualities of speech. But the sound of the voice includes yet another quality, namely that of 'tone' or 'tone colour,' which depends upon whether the maximum of Resonance is used or not. This is the especial function of the chamber in the neck.

The formative actions of the front of the mouth may or may not be accompanied by the full expansion of the back chamber of the Resonator, and thus the total sound will be full and rich or shallow and light, as the singer thinks fit.

After these considerations it is not difficult to perceive that the question of Registers has

been confused by the assumption that the different tones of voice were produced by different actions of the vocal reed. The terms 'head register' and 'chest register' have, no doubt, been intended to mean conditions in which the singer has felt the sound in the head and in the chest. The former signifies the absence, and the latter the presence, of expansion in the neck.

The chest itself is occupied with the air-pressure and cannot be regarded as a resonator, since it is practically closed, except for the minute slit through which the pressure issues. The 'head register' has been further confounded with the compression of the membranes which also occurs in the upper notes of many voices.

Certain descriptions of the vocal membranes in explanation of the different 'registers' have been given, and named 'lower thick,' 'upper thick,' 'middle,' 'lower thin,' 'upper thin,' etc. (Lennox Browne), but they have not been confirmed by further observation.

As at present known the membranes behave in the same way throughout the entire compass, and their compression in the high notes must be regarded as a departure from the natural process.

The true high note requires a development of breath power and control, and it would be better for their instrument if singers would refrain from singing by compression, and be satisfied with the compass that their breath power can give them. High notes might become rarer, but their sound would be of better quality.

Other forms of 'register' due to alternative resonance are used as the singer wishes to express different tone-colour. But by insisting upon the maintenance of the double character of the Resonator with all articulation in the front of the mouth, and resonant control in the neck, there are no sudden changes which could produce an obligatory 'register.'

Variety of colour due to control of the resonance of the neck may occur in all parts of the voice. When, however, the base of the tongue is pressed down so as to produce a heavy resonance in the mouth, at the expense of that in the neck, as well as to the detriment of good diction which requires the tongue to be free, it may readily occur that a sudden change has to be made near the middle of the voice, on passing from one note to the next.

Phonology is as much opposed to fictitious tone as to fictitious notes, and prefers to sacrifice the heavy tone of a voice if it is not natural to it, that is, if it is not obtained by the natural actions which are known to govern the sounds of the voice, in this case by expansion of the neck. Therefore the so-called 'Registers' cannot be accepted as natural. That they are often acquired is beyond doubt, but it is astonishing how they disappear when singers are relieved of the necessity of thinking about them.

Phonology does not acknowledge some of the common methods of singing teachers, but it is able to support, on rational grounds, some of the best traditions of the great masters, which are the foundation of the following picture of the use of the singing voice.

The singer stands erect with a broadly expanded chest. He takes a deep breath by expanding both chest and abdomen at the level of the 6th-7th rib. He opens his mouth and throat to the position suitable for the pronunciation of A (ah), and at the same time he thinks of the note he is about to sing. Without allowing the ribs to yield he strikes the note by breathing out with decision, by a contraction at the upper part of the abdomen and a simultaneous approximation of the vocal membranes. If the note is in the middle of his compass, he will sing a succession of notes up to an octave higher and down to an octave lower, and back again, without any movement of his mouth or ribs; being conscious only of the breath force, which produces the notes he hears in his mind. The notes are lifted up and let down upon the breath pressure, controlled by the muscular action felt in the region of the lower ribs.

By changing the position of the Resonator other vowel qualities can be given to the whole process, but under all circumstances the production of the notes remains the same. By movements of the resonator before and after the open vowel positions the effects of consonants can be introduced for the formation of words. By expanding the neck from below, a full resonant tone can be given, or withheld according to the 'colour' required. The throat is always free, that is, relaxed, open, and unconscious.

This is a brief picture of what singing is in the individual, illustrating the action of the two instruments which combine to produce the sound of the voice. The one instrument expresses in music the emotions of the soul, while the other expresses in words the poetic thoughts of the mind. It is the office of the musical composer to bring these two together into the form of song.

Just as it is essential to the writer of vocal music to understand thoroughly the 'technique' of the living instrument for which he writes, so is it also a necessary part of singing to be acquainted with the manner in which the dual expression is conceived in the song. Phonology has supplied the singer with an absolutely material estimate of work to be done by the voice, in the 'song diagrams' already referred to, but in order to show how the vocal instruments are to be used in the service of Art its analysis of song must be carried farther.

As presented upon the page, a song consists of a line of music written upon a staff, and a line of words below it, in ordinary character. It is evident therefore from the first that the vocal reed or instrument of music has to

perform a musical composition ; while the resonator or instrument of speech has to perform a composition in verse. All that can be said about the performance of music by an instrument, or about the recitation of verse, is applicable to the vocal reed and the resonator, each by itself. The vocal reed, however, has two offices to perform. It is either behaving as a true instrument of music, giving utterance to feelings in the direct manner belonging to its nature, or it is lending itself as an instrument of sound to assist, by emphasis and inflexion, the sense of words. In the former case its action is melodic, in the latter, declamatory.

The line of music may be intended by the composer to be interpreted in either of these senses, or it may happen that the feeling suggested by the words is so perfectly treated in the application to it of a form of melody, that both are satisfied, and the song is both melodic and declamatory. Examples of this are rare, and it more often happens that either one or the other element predominates. Not infrequently, however, it occurs that they clash, so that neither is satisfactory.

The rhythm of music, with its division into time measures, and the rhythm of words, with their arrangement into metrical verse, only indicate motion, and when these are applied to one another only the rhythm in which they may move together is emphasised, and nothing more. This cannot be regarded as song composition.

It is the sense of words and not the sound that stimulates the musical sense. The music thus evolved may have no melodic form of its own, in which case it is declamatory, or it may add to the words the power of its own form of expression and become melodic.

Periodicity in poetic expression is as necessary to verse as it is to music, and the study of the works of Heine gives a striking illustration of its force. The period of two lines, in which he usually expressed his thoughts, presented to the musician the simplest foundation for melodic form, and how that appealed to the melodic genius of Schubert is seen distinctly in such a masterpiece as 'Am Meer.' If other poets could speak with such measured simplicity and directness, the art of song would be richer than it is.

The suiting of music to words may appear to be a subject belonging to the art of composition, but it is necessary to consider it from the point of view of singing, since it forms the foundation of the singer's attitude of mind. The singer must know how to direct his technical ability, and must have some distinct mental intention in singing, or the performance will be nothing more than the mechanical recitation of words and notes.

The sense of the words is always to be considered first, since that is generally the most

obvious. With a little analysis the poet's scheme of conveying a succession of ideas may next be detected. It will not then be difficult to see at once whether the composer has adapted these ideas to a corresponding scheme of melodic form, or whether he has been content to use his music as a means of supporting the words only ; and the value of the music as depicting the poetic intention can be readily estimated.

It is not within the scope of this article to carry such analysis into the extensive field of existing examples of song-writing. Modern music is full of examples of declamatory song distorted and exaggerated by the musical exigencies of the pianoforte and orchestral accompaniment.

The melodic form is regarded as a survival of the past which does not really belong to present methods of musical expression. In fact, the sound as well as the sense of the voice has been almost swamped by the wealth of instrumentation which is considered necessary for modern ears. How far this can be carried it is impossible to say, but it is quite possible that singing will soon be regarded as a separate form of art, and composers will either write for the voice, or for the orchestra, but not for both together.

In estimating the general character of modern and ancient music the singer can thus realise what part it is that his voice has to take. Throughout the works of the old Italian, English, and German masters, up to the end of the 18th century, he will find abundant opportunity for the full exercise of the natural instrument of song. A more highly cultured and intellectually restrained form was the outcome of the literary period which we owe to the German lyric poets, and perfection of diction, with a refined use of musical expression, characterises the 'Lied,' and those songs of other nations which are conceived upon that model.

Of the vocal necessities of modern music no more need be said than that the singer must be able to realise the situation. The voice is a living thing, and can be ruined by the strain of singing too loud and too high, as only too many modern singers have discovered, but its powers of endurance, if properly treated, are remarkable, and every singer who understands his work ought to know where to stop.

Besides an excellent technique and an intelligent sense for music and poetry, the singer only requires the sincerity which brings to his art the charm of his own personality. If any technique could possibly be learned in order to obtain that inestimable quality, phonology would certainly point to the exercise of the most truly vital of all human functions, and recommend the free and unhindered service of the breath.

W. A. A.

SINGSPIEL. This term has been in use in Germany for the last 300 years to denote a

dramatic representation with music; not any one particular kind—singing being capable of being employed in such various ways—but any entertainment in which spoken dialogue and singing alternate. In time speech gave way at intervals not only to singing, but to singing by several voices at once. Later, when the spoken dialogue had been brought into entire subjection to music, as was the case in Italy after the revolution effected in the whole nature of dramatic representation by the rise of opera, not only concerted vocal pieces were introduced into the German Singspiel, but instrumental music and its protégé monody as well. We find the earliest traces of the Singspiel in the German miracle-plays, which were gradually developed outside the churches from the Passions given inside them. The Passions were sung throughout, while in the miracle-plays spoken words in German were introduced, the singing still being in Latin, as for example in the 'Ludus paschalis de passione Domini' MS. of the 13th century. In course of time the Latin text and consequently the music were thrust into the background. In a 14th-century MS. called 'Marienklage,' preserved in the convent of Lichtenenthal near Baden, Mary sings in German. Indeed we already find the typical German miracle-play in the 'Spiel von den zehn Jungfrauen' performed at Eisenach in 1322, in which all the words sung are German. These plays were generally performed on the eves of the great festivals, such as Whitsunday, Epiphany, etc. Gradually the ecclesiastical element disappeared, leaving only the secular, and thus originated the Shrove Tuesday plays, in which the characteristics of whole classes of society, priests, doctors, travelling scholars, etc., were held up to ridicule. Nuremberg and Augsburg were specially celebrated for these plays, written for the most part by Hans Rosenblut (about 1405), Hans Folz of Worms (about 1480), both living in Nuremberg, and Nicolaus Mercator. They gradually, however, degenerated into obscene pieces, until in the 16th century Hans Sachs and Jakob Ayer (both of whom introduced music into their plays) started the movement which ended in the reformation of the German stage. By Ayer we still have a 'Schöns neues singets Spiel,' 'Der Münch im Kesskorb,' sung in 1618 by five persons 'entirely on the melody of the English Roland.' This melody is repeated fifty-four times, and one cannot help suspecting that the English stage was to some extent Ayer's model. A reaction from these 'people's plays' (as they might be called) was caused by the 'school plays' in Latin, annually performed by the pupils of the Jesuits. Between the acts German interludes with music were introduced, and these were virtually Singspiele in the modern sense. The first Singspiel in imitation of the Italian opera without any spoken dialogue was the lost 'Dafne,' written by Martin Opitz and composed

by Heinrich Schütz in 1627. The earliest instance of an independent German Singspiel with singing and spoken dialogue was 'Seelewig,' a sacred Waldgedicht or Freudenspiel. In a spoken play of Harsdörffer's (1644) were introduced Arias after the Italian manner, composed (see the *Monatshefte für Musikgeschichte*, 1881, Nos. 4, 5, 6) by Siegmund Gottlieb STADEN. The piece is intended for private performance, and written for three trebles, two altos, two tenors, one bass, three violins, three flutes, three reeds, and one large horn, the bass being taken throughout by a theorbo. No two voices ever sing at the same time, and the instruments have short symphonies to themselves. The only regular stage at that time was the Italian opera-house of each capital (that of Vienna being built in 1651, and that of Dresden in 1667) and of Nuremberg and other Imperial cities. The German Singspiel found a home in Hamburg in the theatre built in 1678, but soon encountered a formidable rival in German opera, founded by Reinhard Keiser. After this, half a century went by before the Singspiel was heard of again. In 1743 the Döbbelin company in Berlin produced without success a German Liederspiel, 'Der Tenfel ist los,' founded on the English piece 'The Devil to pay,' followed by Schürer's 'Doris' (1747) and Scheibe's 'Thusnelda' (1749), both very successful. Thus encouraged, Koch's company began to play Singspiele in Leipzig, Weimar, and Berlin, their first piece being 'Die verwandelten Weiber,' another version of 'The Devil to pay,' written by C. F. Weisse, composed by J. A. Hiller, and produced at Leipzig in 1764 with great success. The same authors produced a succession of similar pieces, 'Der lustige Schuster' (1765), 'Lottchen am Hofe,' and 'Die Liebe auf dem Lande' (1767), 'Die Jagd' (1771), 'Aerndtekrantz' and 'Der Dorfbarbier' (1772). Neefe, Reichardt, Stegemann, Schweitzer, and others, brought to perfection this new species, now called Operetta.

Independently of all this going on in North Germany, the German Singspiel had sprung up in Vienna, starting, curiously enough, with 'Die doppelte Verwandlung' (1767), an adaptation from the French 'Le Diable à quatre,' Sedaine's version of 'The Devil to pay.' Werner, Haydn's predecessor at Eisenstadt, had already produced at the Court German theatre a Tafelstück (i.e. piece intended for private performance) called 'Der Wienerische Tändelmarkt' (1760). The marionette plays, of which Haydn was so fond, were Singspiele, and he supplied the court of Esterházy with 'Philemon und Baucis' (1773), 'Genoveva' (1777), 'Dido,' a parody on a grand opera (1778), and 'Die erfüllte Rache' (1780). 'Der krumme Teufel,' to words by Kurz, was a real Singspiel. Dittersdorf's 'Doctor und Apotheker,' 'Liebe im Narrenhause,' 'Hieronymus Knicker,' 'Rothe Käppchen,' etc., produced at the Imperial

Nationaltheater, were brilliant successes. Kauer (1751-1831) composed no fewer than 200 Singspiele, and Schenk was almost equally prolific. The classic Singspiel was founded by Mozart with his 'Entführung' (July 12, 1782), which, according to Goethe, threw everything else of the kind into the shade. The 'Zauberflöte' (1791), too, was styled a Singspiel on the title-page of the PF. score. From this point the Singspiel proper becomes continually rarer, though Wenzel Müller's 'Schwester von Prag,' 'Das neue Sonntagskind,' and a few more deserve mention. Lortzing's works are a mixture of opera and Singspiel, certain numbers in the 'Czaar und Zimmermann,' 'Waffenschmied,' and 'Undine' being quite in the Lied-style, and the music consequently of secondary importance, while in others the music undoubtedly assists in developing the characters, and raises these portions to the dignity of opera. We are here brought face to face with the main distinction between Opera and Singspiel; the latter by no means excludes occasional recitative in place of the spoken dialogue, but the moment the music helps to develop the dramatic dénouement we have to do with Opera and not with Singspiel. F. G.

SINIGAGLIA, LEONE, born at Turin, August 14, 1868, was a pupil of the Conservatorio of his native city, and subsequently studied with Mandyczewski in Vienna, where he enjoyed the friendship and advice of Dvořák, Goldmark, and other musicians. His early works include a number of violin and violoncello pieces, songs, female choruses, etc., and one of these, op. 5, a 'concert étude' for string quartet, was often played by the Bohemian Quartet. His op. 19 is a set of variations on Schubert's 'Haidenröslein' for oboe and piano; op. 20 is a brilliant and very successful violin concerto in A; op. 22 is a set of variations on a theme by Brahms, for quartet; op. 26 is a 'Rapsodia piemontese' for violin and orchestra; and op. 27 is a string quartet in D, which has won great favour from many of the continental organisations. Two pieces for horn and piano, op. 28, and a romance in A for violin and orchestra, are among his more recent works; and two 'Danze piemontese' for orchestra, op. 31, are arrangements of genuine popular themes. These have been arranged in a variety of ways, and are very successful. M.

SINK-A-PACE—also written CINQUE-PACE, CINQUA-PACE, CINQUE PASS, CINQUE PAS, SINQUA-PACE, SINQUE-PACE, ZINCK-PASS and SINOPAS—a name by which the original Galliard was known. Praetorius (*Syntagma Mus.* vol. iii. chap. ii. p. 24) says that a Galliard has five steps and is therefore called a Cinque Pas. These five steps, or rather combinations of steps, are well described in Arbeau's *Orchésographie* (Langres, 1588). In later times the Galliard became so altered by the addition of

new steps, that the original form of the dance seems to have been distinguished by the name Cinq Pas. It is frequently mentioned by the Elizabethan writers, well-known examples being the allusions in Shakespeare's 'Much Ado about Nothing' (Act ii. Sc. 1), 'Twelfth Night' (Act i. Sc. 3), Marston's 'Satiromastix' (Act i.), and Sir John Davies's 'Orchestra' (stanza 67). The following less-known quotation is from the 'Histriomastix' (Part I) of Prynne (who was especially bitter against this dance): 'Alas there are but few who finde that narrow way . . . and those few what are they? Not dancers, but mourners: not laughers, but weepers; whose tune is Lachrymae, whose musicke, sighes for sinne; who know no other Cinqua-pace but this to Heaven, to goe mourning all the day long for their iniquities; to mourne in secret like Doves, to chatter like Cranes for their owne and others sinnes.' The following example of a Cinque-pace is given by Wolfgang Caspar Printz, in his *Phrynis Mithlenaeus, oder Satyrischer Componist* (Dresden, 1696), as a specimen of 'Trichonum Iambicum.' A longer example will be found in Dauney's edition of the 17th-century Skene MS. (Edinburgh, 1838).

W. B. S.

SIR ROGER DE COVERLY,¹ the only one of the numerous old English dances which has retained its popularity until the present day, is probably a tune of north-country origin. Mr. Chappell (*Popular Music*, vol. ii.) says that he possesses a MS. version of it called 'Old Roger of Coverley for evermore, a Lancashire Hornpipe,' and in 'The First and Second Division Violin' (in the British Museum Catalogue attributed to John Eccles, and dated 1705) another version of it is entitled 'Roger of Coverly the true Cheisere way.' Moreover, the Calverley family, from one of whose ancestors the tune is said to derive its name,² have been from time immemorial inhabitants of the Yorkshire village which bears their name. The editor of the Skene MS., on the strength of a MS. version dated 1706, claims the tune as Scotch, and says that it is well known north of the Tweed as 'The Maltman comes on Monday.' According to Dr. Rimbault (*Notes and Queries*, i. No. 8), the earliest printed version of it occurs in Playford's 'Division Violin' (1685). In 'The Dancing Master' it is first found at page 167

¹ Or more correctly 'Roger of Coverly.' The prefix 'Sir' is not found until after Steele and Addison had used the name in the *Spectator*.

² See *Notes and Queries*, vol. i. No. 23, p. 368.

of the 9th edition, published in 1695, where the tune and directions for the dance are given exactly as follows :—

Roger of Coverly.

Longways for as many as will.

The 1. man go below the 2. wo. then round, and so below the 2. man into his own place; then the 1. wo. go below the 2. man, then round him, and so below the 2. wo. into her own place. The 1. cu. [first couple] cross over below the 2. cu. and take hands and turn round twice, then lead up through and cast off into the 2. cu. place.

W. B. S.

The Scots song, 'The Maltman comes on Monday,' is not, as erroneously asserted by Chappell, by Allan Ramsay, although it is inserted in the first volume of his *Tea-Table Miscellany*, 1724. The English title is not so easily disposed of.

The *Spectator*, 2nd number, 1711, speaks of Sir Roger de Coverley as a gentleman of Worcestershire, and that 'His great grandfather was the inventor of the famous country dance which is called after him.'

Fanciful as this is, it shows that the dance, at that time, was considered an old one. Another origin for the name of the tune is based on a MS. in the writer's possession, inscribed 'For the violin, Patrick Cumming, his Book: Edinburgh, 1723.' At the end the name is repeated, and the date 1724 given. The

Scot. *The Maltman, or Roger the Cavalier.*
datura (not given in the MS.).

tune stands as follows, although the Scottish *scordatura* is likely to puzzle the casual reader, since the first notes which appear as G, A, B, C sound A, B, C, D. (See SCORDATURA.)

It is well known that the name 'Roger' was bestowed upon the Royalists during the Civil War, and it is suggested that 'Coverly' is really a corruption of 'Cavalier.'

As the dance, later, was almost invariably used at the conclusion of a ball, it was frequently called 'The Finishing Dance.' See Wilson's *Companion to the Ball-Room*, circa 1816, and Chappell's *Popular Music* for the modern figure. According to an early correspondent of *Notes and Queries*, the tune was known in Virginia, U.S.A., as 'My Aunt Margery.' F. K.

SIREN. This, though not strictly a musical instrument, has rendered such good service to acoustical science that it deserves brief notice; for fuller details the works referred to below must be consulted. Lord Rayleigh¹ describes it as 'a stiff disc, capable of revolving about its centre, and pierced with one or more sets of holes arranged at equal intervals round the circumference of circles concentric with the disc. A windpipe in connection with bellows is presented perpendicularly to the disc, its open end being opposite to one of the circles, which contains a set of holes. When the bellows are worked, the stream of air escapes freely if a hole is opposite to the end of the pipe; but otherwise it is obstructed. As the disc turns, puffs of air in succession escape through it, until when the velocity is sufficient, these blend into a note the pitch of which rises continually with the rapid sequence of the puffs. One of the most important facts in the whole science of Acoustics is exemplified by the siren—namely that the pitch of a note depends upon the period of its vibration. The size and shape of the holes, the force of the wind, and other elements of the problem may be varied; but if the number of puffs in a given time, such as one second, remains unchanged, so does the pitch. We may even dispense with wind altogether, and produce a note by allowing a card to tap against the edges of the holes as they revolve; the pitch will still be the same.'

The Siren may be defined as a wind instrument, in which the successive air-waves are produced not at random or by consonance, but by circular rotatory motion, which is susceptible of accurate adjustment as well as measurement. It was originally invented by Cagniard de la Tour, who made it needlessly complicated by using the force of the wind to drive the rotating disc as well as to produce the required note. For this purpose the speaking holes in the top of the small wind-chest were pierced in an oblique direction; those in the disc sloping in an opposite diagonal. There was also a counting apparatus attached to the upper part of the

¹ *Theory of Sound*, vol. i, p. 5.

main axis, with two dials for registering the number of rotations in a given time. This form has been faithfully reproduced in every manual of Physics up to now.¹ The name is said to have been somewhat fancifully, and indeed incorrectly, given it from Homer's Sirens, on account of its property of singing under water. It is true that if water be forced through it after the fashion of the Turbine, a buzzing or humming sound is produced. Seebeck and others effected material improvements, but the only two which need special notice are the instruments constructed by Helmholtz and Rudolph Kœnig respectively. The former is figured and described in that author's *Tonempfindungen*,² and consists essentially of two sirens united on a single axis, each disc of which possesses four rows of holes susceptible of being separately opened, thus giving means for producing a large variety of intervals.

The upper wind-chest, which looks downwards, can be rotated on its feeding-tube so as to bring about varying changes of phase between the two discs. With this instrument Helmholtz succeeded in producing excellent results, using a small electromotor for driving it at a uniform rate.

The Siren of M. Rudolph Kœnig of Paris is a far more imposing instrument. It was made for W. Spottiswoode, Esq., P.R.S., was exhibited by the writer at the British Association meeting at York in 1881, and is now in the physical laboratory of the College of Science at Bristol. It is furnished with more than a dozen rotating discs of different kinds, which fit on to a vertical spindle, above a wind-chest of large size fitted with a keyboard of eight notes. A strong clockwork actuated by heavy weights forms the motive power, and an ingenious counting apparatus is made not only to record the number of rotations, but also to set going automatically a watch movement, and thus obtain by one motion of the observer's hand the speed of the disc, and the time of the observation. By properly computing the rings of perforations, the harmonic series is given by one disc, and the enharmonic scale by another. Indeed there is hardly any law of musical acoustics which it cannot be made to illustrate.³ For purposes of demonstration the siren is excellent, and also for the illustration of perfect musical intervals; but for the accurate determination of absolute pitch it is far inferior to Lissajous's optical method; and still more so to the tuning-fork method, described under SCHEIBLER, and to Prof. M'Leod's Cycloscope. V. H. S.

SIRÈNE, LA. Opéra-comique in three acts; words by Scribe, music by Auber. Produced at the Opéra-Comique, March 26, 1844. In

English as 'The Syren,' at Princess's Theatre, Oct. 14, 1844. G.

SIRMEN, or SYRMEN, MADDALENA LOMBARDINI, a distinguished 18th-century violinist and composer for her instrument, who later, for some unknown reason, discarded her first profession for that of singer. The date of her birth, which it is believed took place at Venice in 1735, is uncertain, and the date of death is unknown. According to Dr. Burney, Maddalena Lombardini received her musical education at the Venetian 'Conservatorio dei Mendicanti,' and ten or more years before Tartini's death in 1770, she was profiting by his tuition. At this time she probably lived in Padua, so as to be near her master, but in 1760 she had apparently returned to Venice, where she received several letters from him, testifying to the keen interest he took in her career. The carefully written instructions as to bowing and fingering which he sent her in a letter dated Padua, March 5, 1760, constitute a valuable treatise on the art of violin-playing. This letter—the autograph of which is preserved at Venice—has been translated into German by J. A. Hiller, and inserted in his *Lebensbeschreibungen berühmter Musik-gelehrten*. Dr. Burney's excellent English version appeared in 1779, with the original text and the translation on opposite pages. It was printed in London 'for R. Bremner, opposite Somerset House in the Strand; by George Bigg, successor to Mr. Dryden Leach.' Although a copy of this work is rarely met with now, the substance of the pamphlet has been frequently quoted and reprinted in full in modern works on the violin. Between 1760 and 1768 Maddalena Lombardini toured in Italy, where she is said to have proved a worthy rival of Tartini's greatest pupil, Nardini. During her travels the young *virtuosa* met Ludovico Sirmen, violinist and conductor at St. Maria Maddalena in Bergamo. The acquaintance eventually ended in marriage, and a visit to Paris, where the couple were heard at a Concert Spirituel on Monday August 15, 1768. The *Mercure de France* speaks in glowing terms of M. and Madame Sirmen's execution of a double violin concerto of their own composition. In 1771, Signora Sirmen came to London, where her début took place at the King's Theatre, on Thursday, Jan. 9. Bach's oratorio, 'Gias Rè di Giuda' was the *pièce de résistance* of the evening. Dupont (cadet) played a violoncello solo after the first Act, and in the Second Act, after the Duetto, there was a 'Concerto on the Violin by the celebrated Mrs. Lombardini Sirmen.' Her success in the Metropolis was apparently instantaneous, and was repeated on the 10th, 16th, 17th, 23rd, and 24th of the same month. During the following February she played frequently at the highest class concerts in London. On Feb. 15 she performed a violin concerto between the first and second parts of Handel's

² Helmholtz, *Sensations of Tone*, Ellis's transl. p. 243 et seq.

³ A description of this instrument is to be found in Foggendorf's *Annalen*, and in the *Philosophical Magazine* for 1876.

'Judas Maccabæus' at Covent Garden, and on the 20th between the first and second parts of the 'Messiah.' Her 'Benefit Concert,' under the direction of Messrs. Bach and Abel, took place at Almack's on April 15, Gnadagni, Wendling, Fischer, and other celebrated artists of the day assisted her; but Madame Sirmen, either for a whim, or by request, abandoned for this occasion the instrument on which she excelled, and, according to the advertisement in the *Public Advertiser* of that date, played 'A Concerto on the Harpsichord.' In the month of May her services as violinist were in constant requisition. She repeated her triumphs at the King's Theatre, and, besides playing her violin concertos, contributed some violin *obbligati* to the songs of the principal vocalists. The *Public Advertiser* of May 28, 1771, announces 'The celebrated Signora Sirmen on the violin, being her last performance this Season.' The following year the gifted lady returned to London, and took up her abode in Half Moon Street, Piccadilly. The high reputation she had established for herself ensured her a welcome on her second arrival, and her services were more than ever sought after. She appeared at nearly all the Lenten Oratorio Concerts at Covent Garden, playing violin concertos between the parts. On March 26, 1772, she had another benefit concert, and on April 1 she introduced a new violin concerto by the eminent violoncellist Signor Cirri, after the second part of Handel's 'Messiah' at Covent Garden. Her final 'appearance in England is so announced in the *Public Advertiser* of April 10, at the newly organised 'Concert Spirituel' held in the same building. Apparently this was not only Signora Sirmen's last performance in England, but it was the end of her brilliant career as a violinist. Whether she was unable to sustain the high reputation she had achieved, or whether she was drawn away from her original bent by the dazzling example of Miss Schmeling (afterwards Madame Mara), can only be surmised. In any case she came to London again in 1774, and according to Dr. Burney¹ her last visit to the metropolis was in the capacity of a singer, in which her success was questionable. 'In "Sofonisba" and "The Cid"'—runs the note—'Madame Symmen, the scholar of Tartini who was justly admired for her polished and expressive manner of playing the violin, appeared as a singer in the second woman, but having been first woman so long upon her instrument, she degraded herself by assuming a character in which, though not destitute of voice and taste, she laid no claim to superiority.' After this unfortunate attempt the erstwhile distinguished violinist drifted to the Continent again, and in 1782 she was singing secondary parts at the Court Theatre in Dresden. In May 1785 she made her last recorded appearance as a violinist at a Concert Spirituel in

Paris, but without success, by reason, according to the *Mercur de France*, of the old-fashioned and worn-out music that she played. The fulfilment of the brilliant promise of Signora Sirmen's early career appears to have been arrested after her two brief seasons in London, and for this reason she is chiefly remembered, not so much as a violinist, but as the recipient of Tartini's notable letter.

Her compositions comprise :—

1. Six trios à deux Violons et Violoncelle obligé. Œuvre Premier (Welcker and Genard, Schol.). 2. Six Quartettes à deux Violons, Alto et Basse (written in conjunction with her husband). Beraut, Paris (1769), also Longman & Broderip, London. 3. Six duets for two violins (dedicated to the Duke of Gloucester). William Napier, London. 4. Six concertos for violin with an accompaniment for two violins, Alto, Bass, Hautboy, and two horns. Hummel, Amsterdam. 5. Six Sonates à deux Violons. Hummel, Amsterdam. In the Berlin Bibliothek a copy of these Sonatas is embellished with a picture of Maddalena Sirmen. 6. Six Concertos adapted for the Harpsichord by Signor Giordani. London, 1789, Longman & Broderip, Chesapeake, and No. 3 Haymarket. J. A. Hiller mentions a Concerto which was published in Venice.

R. and E. H.-A. SISTINE CHOIR (Ital. *Il Collegio dei Cappellani Cantori della Cappella Pontificia*). A Collegiate Body, consisting of thirty-two Choral Chaplains, domiciled—though not in any special buildings of their own—at Rome, where, for many centuries, they have enjoyed the exclusive privilege of singing at all those solemn services and ecclesiastical functions in which the Pope officiates in person.

The genealogy of the Papal Choir may be traced back to a period of very remote antiquity. It is said—and the tradition is worthy of credit—that a school for the education of choristers was founded in Rome early in the 4th century by S. Sylvester, whose Pontificate lasted from the year 314 to 335. That S. Hilarius (461-468) established one, not much more than a century later, is certain. These institutions, after the lapse of another hundred years, were supplemented by new ones on a larger scale. On the destruction of the monastery of Monte Cassino, by the Lombards, in the year 580, the Benedictine Fathers fled to Rome; and, under the protection of Pope Pelagius II. (577-590), established themselves in a new home, near the Lateran Basilica, where they opened schools for the preparation of candidates for holy orders. S. Gregory the Great (590-604) took advantage of this circumstance while working out his system of reform, and turned the seminaries to account as schools of singing. Under his care they prospered exceedingly, and in process of time attained proportions which enabled them to supply the various Basilicas with singers, who assembled on the greater festivals, and attended the Pope wherever he officiated. And thus arose the practice to which the Church was eventually indebted for the magnificent services of the Sistine Chapel.

¹ *Hist. Mus.* vol. III. p. 500.

These early Scholas Cantorum—sometimes called Orphanotrophia, in allusion to the number of fatherless children which they sheltered—were governed by an ecclesiastic, of high rank, called the Primicerius, who, assisted by a Secundicerius destined afterwards to succeed him in his office, exercised absolute control over the youths and children committed to his care. Boys were admitted into the preparatory school (*Parvitorium*) at a very early age; and, if of gentle birth, became, at the same time, members of the papal household, holding a status like that of the pages at a secular court. After passing through the necessary preparation, the choristers were permitted to take part in the most solemn services of the Church: and when their voices changed, were either prepared for the priesthood or provided for as Cubicularii. The older members of the Scholae were called Subdeacons; but the title was only an honorary one. By their help Rome was so liberally supplied with singers that, on more than one occasion, the Pope was able to send out skilled instructors for the purpose of encouraging the purest style of ecclesiastical singing in other countries;¹ and, as we hear of no important modification of the system before the beginning of the 14th century, we are justified in believing that it fulfilled its purpose perfectly.

A great change, however, took place during the Pontificate of Clement V. (1305-14), who in the year 1305 transferred the Chair of S. Peter to Avignon, leaving his Primicerius and Schola Cantorum behind him in Rome. Too much oppressed by political and ecclesiastical troubles to devote his time to the regulation of details, Pope Clement naturally left the management of his chapel to underlings, who suffered the music to degenerate to a very unsatisfactory level. His successor, John XXII. (1316-34), issued in 1323 the well-known Bull, 'Docta sanctorum,' for the purpose of restraining his singers from corrupting the simplicity of plain-song, either by subjecting it to the laws of measured music, or by overloading it with ornamentation. It is doubtful whether the provisions of this Bull were fully carried out after the decease of its author, whose immediate successor, Benedict XII. (1334-42), was too fond of splendid ceremonial to raise any strong objection to the music sung by the twelve Choral Chaplains who officiated in his private chapel, on the score of its elaborateness. Indeed, the management of the choir employed by Benedict and his successors at Avignon differed altogether from that of the Roman Schola, which was still carried on under the Primicerius. In Rome, the choristers were

taught on the old traditional system, almost from their infancy. At Avignon, the most welcome recruits were French and Flemish singers, who had already earned a brilliant reputation. Now, in those days the best singers were, for the most part, the best composers also; and in the Low Countries the art of composition was rapidly advancing towards a state of perfection elsewhere unknown. It followed, therefore, that the choir at Avignon contained some of the greatest musicians in Europe, and was indebted to them for Faux-Bourbons and other polyphonic music, scarcely ever heard at that period except in the Netherlands.

In 1377 Pope Gregory XI. (1370-78) returned to Rome, and carried his choir with him. The contrast between the rival schools now became more apparent than ever; yet by some means they amalgamated completely. The probability is that Gregory himself united them, forming the two choirs into one body, which was no longer called the Schola Cantorum, nor governed by a Primicerius, but was henceforth known as the Collegio dei Cappellani Cantori, and placed under the command of an ecclesiastic who held the appointment for life, and bore the title of Maestro della Cappella Pontificia. The precise year in which this change took place cannot be ascertained; though it is certain that the new title was borne by Angelo, Abbot of S. Maria de Rivaldis, in 1397—twenty years after the return from Avignon. After this, we hear of no other Maestro till 1464, when the appointment was conferred upon Niccolò Fabri, Governor of Rome, who held it for two years. From 1469 onwards the list includes the names of fourteen ecclesiastics, of whom all, except the last, were Bishops. The most celebrated of them was Elziazio GENET; of Carpentras, 'Vescovo in partibus' (1515-26?), and the last of the series was Monsignor Antonio Boccapadule (1574-86), whose relations with the reigning Pope, Sixtus V. (1585-90), were disturbed by a misunderstanding, particulars of which will be found in vol. iii. p. 605. That the Pope was highly incensed at the spirit of insubordination shown by his Cantori Cappellani on this occasion is well known; and it was probably on this account that, instead of appointing a successor to Monsignore Boccapadule, whom he somewhat unceremoniously deposed, he issued, Sept. 1, 1586, a Bull ('In suprema'), by virtue of which he conferred upon the college the right of electing, from among their own body, an officer, to whom was committed the duty of governing the choir, for three, six, or twelve months, or in perpetuity, according to the pleasure of the Electors.² It was clear that the Maestri so elected must necessarily be deprived of many of the privileges enjoyed by the ecclesiastical dignitaries who had preceded them; but, by

¹ For this purpose, John the Precentor was sent to England, during the Primacy of Theodore, Archbishop of Canterbury (669-690). At the request of King Pepin (750-768), Simeon, the Secundicerius of the Roman Schola, was sent, in like manner, to France, but recalled by Pope Paul I. in 768, that he might succeed to the office of the then lately deceased Primicerius, Georgius; while towards the close of the same century, two celebrated singers, Theodorus and Benedictus, were sent by Hadrian I. (772-795) to Charlemagne

² Baini, i. p. 272, Note 375.

way of compensation, they were invested with all which were not inseparable from the status of a Bishop; and these were still further increased, by Pope Clement XIII., in the Bull 'Cum retinendi,' August 31, 1762. It was ultimately arranged that the election should take place annually, and this custom has ever since been strictly observed. The first Maestro so chosen was Giovanni Antonio Merlo, who served during the year 1587. Since his time, the election has always been fixed for Dec. 28; and for very many years it has been the invariable custom to elect the principal bass.

The Flemish singers, having once obtained a recognised position in the choir, soon began to exercise an irresistible influence over it, and, through it, over every other choir in Christendom. Among the first of whom we have any certain account, was Guglielmo Dufay, the founder of the older Flemish school, whose name is mentioned in the archives of the Chapel as early as 1380, three years only after the formal settlement of the college in Rome; whence it has been conjectured that he first sang at Avignon, and afterwards accompanied Pope Gregory XI. to Italy. Dufay died in 1432, leaving many talented pupils.

The number of singers, which at Avignon had been limited to twelve, was in the 16th century increased to twenty-four, and not very long afterwards raised to thirty-two, which figure still represents the normal strength of the Choir, though the assistance of additional *ripieni* is sometimes permitted on extraordinary occasions. After the formal admission of the Netherlands the compositions sung in the Papal Chapel were almost entirely supplied by the Cappellani Cantori themselves. The custom was, when any member of the college had produced a mass or other great work, to have it roughly written out, and rehearsed by the entire body of singers, who afterwards decided whether or not it was worthy of their acceptance. If the votes were in its favour, the original autograph was placed in the hands of the *Scrittori*—of whom four were usually kept in full employment—and by them copied, in stencilled notes large enough to be read by the entire choir at once, into huge part-books,¹ formed of entire sheets of parchment, of which a large collection, richly illuminated and magnificently bound, is still preserved among the Archives of the Sistine Chapel, though a vast number were destroyed in the conflagration which ensued on the invasion of Rome by Charles V. in 1527.

In the year 1565 Pope Pius IV. conferred upon Palestrina the title of Composer to the Pontifical Chapel, with an honorarium of three scudi and thirty baiocchi per month. The office was renewed, after Palestrina's death, in favour of Felice Anerio, but was never conferred on

any other member of the college. The most famous musicians who sang in the choir, after the expulsion of Palestrina in 1555, were Giov. Maria Nanini, admitted in 1577, Luca Marenzio (1594), Ruggiero Giovanelli (1599), and Gregorio Allegri (1629-52). Adami also mentions Vittoria, whose name, however, is not to be found in any official register. Among more modern Maestri the three most notable were, Tommaso Bai, who held the office of Maestro in 1714; the Cavaliere Giuseppe Santarelli—Dr. Burney's friend—who entered the choir as an artificial soprano singer in 1749, and died in 1790; and the Abbate Baini, who was received into the college in 1795, became Maestro in 1817, and died in 1844. By special favour of Pope Gregory XVI., Baini retained his office for life—an honour to which, as the greatest ecclesiastical musician of the 19th century, he was most justly entitled; but no later Maestro has enjoyed the same privilege.

The two settings of the 'Miserere' by Bai and Baini, which for many years past have been used alternately with that of Allegri, are the only works added to the repertory of the chapel since the death of the last-named Maestro. Indeed, neither the constitution nor the habits of the college have, since Palestrina, undergone any important change—except, perhaps, in one particular, to be mentioned presently; and hence it is that its performances are so infinitely valuable, as traditional indices of the style of singing cultivated at the period which produced the 'Missa Papæ Marcelli,' the 'Impropria,' and the 'Lamentations.' Except for these traditions, the works of Palestrina would be to us a dead letter; under their safe guidance we feel no more doubt as to the tempi of the 'Missa brevis' than we do concerning those of the 'Sinfonia Eroica.'

The one point in which a change has taken place is, the selection of voices; and it is necessary to remark, that, as the change did not take place until seven years after Palestrina's death, the idea that we cannot sing his music, in England, as he intended it to be sung, for lack of the necessary voices, is altogether untenable. In early times, as we have already seen, the chapel was supplied with Soprani, and in all probability with Contralti also, by means of the Orphanotopia or Scholæ Cantorum, exactly as English cathedrals are now supplied by means of the Choristers' Schools. That this plan was continued until quite late in the 16th century is sufficiently proved by the fact that, between 1561 and 1571, Palestrina held the joint offices of Maestro di Cappella and Maestro dei Fanciulli di Coro at the Church of St. Maria Maggiore, while, between 1539 and 1553 the post of Maestro de' Putti, at the Cappella Giulia, was successively filled by Arcadelt, Rubino, Basso, Ferrabosco, and Roselli. During the latter half of the 16th century, however, these youthful

¹ Mendelssohn, in one of his letters, gives an amusing description of one of these enormous books, which he saw carried in front of Baini, as he walked, in procession, up the nave of St. Peter's.

treble voices were gradually supplanted by a new kind of adult male Soprano, called the Soprano falsetto, imported, in the first instance, from Spain, in which country it was extensively cultivated by means of some peculiar system of training, the secret of which has never publicly transpired.¹ At the close of the 16th century, Spanish Sopranos were in very great request; and were, indeed, preferred to all others, until the year 1601, when a far more momentous change was introduced.

During nearly the whole of the 17th and the greater part of the 18th centuries the theatres of Europe were supplied with adult male Soprano and Contralto voices, preserved by a process so barbarous, that at one time it was forbidden in Italy on pain of death. Yet, notwithstanding this penalty the system prospered, and enriched the stage with many of its most accomplished ornaments, such as Nicolini Grimaldi, Senesino, Carestini, Pacchierotti, Farinelli, and others. It has been said that Farinelli's wonderful voice was accidentally preserved, and the story is probably true; for it is certain that very fine voices are sometimes preserved by accident, and quite reasonable to suppose that such accidents may very frequently happen, though should the sufferers possess no musical talent one is not likely to hear of them. In these purely accidental cases no singer, with a good voice, has ever been refused admission into the Pontifical Choir; but the transgression of the law, which was formerly punishable with death, now renders the offender *de facto* excommunicate, and therefore effectually prevents his reception into the Collegio. One of the most learned and accomplished musicians in Rome, in command of one of its most celebrated choirs, remembered the admission of three artificial voices, accidentally produced, while he was studying under Baini. Two of them proved too weak to be used, except as *ripianti*; but the third developed into a magnificent Soprano. The trained Soprano falsetto, which needs no accident to produce it, is not yet extinct.²

Italian choirmasters draw a careful distinction between the different voices they employ. The *Voce bianca* or *naturale* is by no means uncommon, but produces only Contralto singers. The true adult Soprano, *arte fatta* (made by method³), is an excessively rare voice, produced 'rather in the head than in the chest or throat,' and lasting, generally, to extreme old age, to the astonishment of the uninitiated hearer, who cannot understand its co-existence with a long white beard.⁴ The occurrence of such phenomena

¹ Nevertheless, this secret does not seem to be altogether lost. A lady traveller in Spain and Portugal, amusingly expressed her surprise, on discovering that certain high flute-like notes, which she believed to have been produced by some beautiful young girl, really emanated from the throat of a burly individual with a huge black beard and whiskers!

² These statements are founded on information supplied to us by gentlemen resident in Rome, whose high position and long experience render their evidence more than ordinarily trustworthy.

³ *i.e.* not by operation.

⁴ In Adami de Bolsena's *Osservazioni* (Rome, 1711) will be found

is, however, so exceptional, that Pope Pius IX. founded the Scuola di S. Salvatore, near St. Peter's, for the express purpose of supplying the choirs of Rome with boys, subject, as in England, to be discharged on the breaking of their voices.

It remains only to say a few words concerning the style of singing practised by this matchless choir, and the lessons to be learned from it.

For the last three centuries at least there have been preserved certain traditional ornaments and forms of expression which are profound mysteries to the uninitiated. For instance, the Second and Third Lamentations, on the three last days in Holy Week, are sung, as is generally supposed, by a high voice; but, when that voice is too weak for the task, it is assisted by another, which, even in the most difficult *Abbellimenti* keeps so exactly with it, that the two voices are invariably mistaken for one. Again, there has long been a traditional way of making crescendi and diminuendi, which has astonished even the most experienced choirmasters. The secret of this wonderful effect is, that, not only the amount of tone produced by each individual voice, but the actual number of voices employed, is gradually increased in the one case and diminished in the other. The marvellous effects produced by the 'Misereere' have already been described at vol. iii. p. 216; and those associated with the 'Impropria,' at vol. ii. p. 462. Such effects would no doubt be condemned by English choirmasters as 'tricks'—but they are not tricks. No means can be so condemned, with justice, provided the effect they produce be artistic and legitimate. [A catalogue of the singers of the Cappella Pontificia is given in the *Riv. Mus. Ital.* for 1907.] W. S. R.

SIVORI, ERNESTO CAMILLO, a great violinist, born at Genoa, Oct. 25, 1815. He began the violin at five, under Restano, and continued it under Costa, until about the year 1823, when Paganini met with him, and was so much struck with his talent, as not only to give him lessons, but to compose six sonatas and a concertino for violin, guitar, tenor, and violoncello, which they were accustomed to play together, Paganini taking the guitar. This was sufficient to launch the lad into Paganini's style. [After a stay of six months in his native city, Paganini left for a tour in Germany in 1824, but before his departure he demonstrated the interest he took in young Sivori by desiring that he should accompany him on his travels. Owing to the child's tender years, however, his parents refused to abandon him to the care of the great violinist. This being the case, Paganini recommended the elder Sivori to place his son with his own former master, Giacomo Costa, and for three years this teacher guided the child's studies so adroitly that when Paganini returned to Genoa in 1827, he found him well equipped as a

numerous portraits of Soprano and Contralto, with long beards—many of them priests.

classical player. Though perfectly satisfied with the progress of his *protégé*, he at the same time considered him lacking in virtuosity, and therefore suggested a change from Costa's scholastic method, to the more volatile system of his intimate friend Dellepiane. Again the boy's progress was astonishing, and at length his father, conquering his objections to a musical career for his son, became desirous that he should make some public appearances outside his own country. Accordingly, accompanied by his master Dellepiane, Camillo Sivori travelled first to Turin, where he played at a concert on May 3, 1827. He next appeared at Susa on the 5th, Saint Michel 6th, Chambéry 7th, Lyons 16th, Paris 18th, and made his début in London on the 25th. Two days later he was again in Paris, where the Duchesse de Noailles, the Duc de Berri and most of the *dilettanti* of the town interested themselves in him, as did likewise Rossini, Cherubini, Baillet, and other eminent musicians of the day. He gave a very successful concert in Paris on Dec. 4. In 1828, Sivori repeated his first triumphs in Paris and London. The autumn of the same year was spent by him in touring in the French provinces. After an absence of eighteen months he at length returned to Genoa in January 1829, and devoted himself earnestly to studying composition with Giovanni Serra, a profound theorist of the classical school, then occupying the post of musical director at the Teatro Carlo Felice in Genoa. During the year 1829 Sivori did little else but study, only acting at intervals as Dellepiane's substitute at the Teatro Carlo Felice, and also at the Conservatorio when the latter was taken ill. He generously gave the entire benefit of these services to his old master, and after Dellepiane's death extended the same charity to his impoverished widow and child for the space of a year. February 1834 found Sivori again in England making his début as a quartet-player in the Queen's Square 'Select Society' meetings at Mr. Alsager's house, and on March 28 he played in the first performance of Cherubini's Requiem.] He next traversed Italy, beginning with Florence, in 1839; then in 1841 and 1842 visited Prague, Vienna, Leipzig, Berlin, Frankfort, Brussels, St. Petersburg, and Moscow. On Jan. 29, 1843, he made his *rentrée* to Paris with a movement from a concerto of his own, his performance of which carried away his audience and procured him a special medal. He also made a vast impression in chamber-music. [The brilliantly successful appearance of Jan. 29,—when he played his own Concerto in E flat, Paganini's Concerto in B minor, and the same composer's 'Moise,' for the G string—took place at the Conservatoire, and that institution presented him with its gold medal of honour.] From Paris he went to London, where he made his first appearance at the Phil-

harmonic in May, playing his Concerto in A at the same concerts on June 5, 1843, and repeating it on the 19th (Spohr was in London at the same time); returned in 1844, when Mendelssohn, Joachim, Hallé, Piatti, and Ernst were here also, and in 1845, when he assisted in the famous performances of Beethoven's Quartets at Mr. Alsager's house (see vol. i. p. 72), played at the Musical Union on June 24, etc. etc. [Tours in Great Britain and Ireland, and in Holland followed, and in the ensuing year he gave a concert at Brussels (on March 12), returning from thence to Paris and playing *en route* at Liège, Antwerp, Ghent, etc. The season of 1844 was again successfully occupied in London with his own concert at Her Majesty's Theatre, an appearance at a Philharmonic concert under Mendelssohn: a farewell concert at Hanover Square Rooms, where he played the 'Kreutzer Sonata' with Julius Benedict—a performance which was repeated at the Melodists' Club—and numerous private engagements. In August, Sivori in company with Dohler, Piatti, Henry Russell, and Lablache, jun., made a tour of Great Britain. After playing at Hamburg, he came to London again during the season of 1845.] In 1846 he was again here; on June 27, played Mendelssohn's Concerto at a Philharmonic Concert, and was solo violin at Jullien's 'Concerts d'Été.' He then left for America, in which he remained till 1850, travelling from the Northern States, by Mexico and Panama, to Valparaiso, Rio, Buenos Ayres, and Montevideo, and narrowly escaping death by yellow fever. In 1850 he returned to Genoa, and shortly after lost nearly all the money he had made in the new world by an imprudent speculation. In 1851 he was again in Great Britain, touring throughout the whole country. [In London he played at Professor Ella's Musical Union concert with Golinelli (pianist) and Piatti. In 1852 he played in Beethoven's Triple concerto in C—with Piatti as violoncellist—at the New Philharmonic Society at Exeter Hall under Berlioz's bâton. A tour in Scotland in 1853 was followed by a tour in Switzerland, where he broke his wrist in an unfortunate carriage accident at Geneva. On Dec. 15, Sivori played at the Pergola, Florence, returning to Genoa in time for the opening of the Teatro Apollonio. 1854 brought a tour in France, and the following year, his marriage to the actress Ortensia Damain, after which he toured in Spain, where the Queen made him Knight of the Order of Carlos III. From Spain he went to Portugal, where the King made him Knight of the Order of Christ the King, and in the spring of 1856 he made appearances in Belgium, Holland, and Germany. In 1857 Sivori toured in England with Piatti, and the fourteen-year-old pianist, Arthur Napoleon.] In 1862 he scored one more success in Paris in the B minor Concerto of Paganini. In 1864 he revisited

London, and appeared at the Musical Union and elsewhere. [In 1869 Sivori appeared at some of the Monday Popular Concerts in London, and in 1870 toured in France, after which he returned to Genoa and there led a quiet life until he passed away at his house in the Via Giulia, on Feb. 19, 1894.]

As a man he was always liked—'little, good-tempered, warm-hearted, intelligent Camillo Sivori' is the description of him by an English journalist. He was the only direct pupil of Paganini, and his playing was that of a virtuoso of the Paganini school, with a prodigious command of difficulties, especially of double-stopping, second only to his master. His tone was silvery and clear, but rather thin. His style—judged by a classical standard—was cold and affected, and had little real feeling.

[His compositions include two Concertos for Violin in E flat and A; Capriccio, La Gênoise; op. 12, Tarantelle Napolitaine, Violin and orchestra, or piano; Deux duos concertants for Piano-forte and Violin; Duet for Violin and Double Bass, written with Bottesini; Fantaisie Caprice in E; Fantaisie Etude, op. 10; Fantaisie, Fleure de Naples; Souvenir de Norma; Carnaval de Chili; Carnaval de Cuba; Carnaval Américain; Tempest Music (Milan, 1880); Folies Espagnoles: Variations on 'Nel cor non più mi sento' and 'Le Pirate'; Three Fantaisies upon airs from 'La Sonnambula', 'I Puritani', 'Zapateado'; Fantasia on airs from 'Un Ballo in Maschera', 'Il Trovatore', 'Lucia di Lammermoor'; Andante Spianato; 'Trois Romances sans paroles,' with pianoforte accompaniment.]

H. A.

SIXTH. The interval which embraces six degrees of the scale. There are three forms—the major, the minor, and the augmented. (1) The major sixth, as CA, contains 9 mean semitones, and the ratio of its limiting sounds in the true scale is 5 : 3. It is a concord, and in harmony is regarded as the first inversion of the minor common chord. (2) The minor sixth, as CA♭ or EC, contains 8 semitones, and the ratio of its limiting sounds is 8 : 5. It is also a concord, and in harmony regarded as the first inversion of the major common chord. (3) The augmented sixth, which is arrived at by flattening the lower or sharpening the upper extreme sound of a major sixth, as D♭ B, or A♭ F♯, contains 10 semitones, and the ratio of the limiting sounds is 125 : 72. The augmented sixth is a discord, and is usually resolved by moving each note a semitone outwards to the octave, the sharpening or flattening of one of the extreme sounds already implying a straining in that

direction. [See HARMONY.] Three forms of the augmented sixth are distinguished by special names: when it is accompanied by the major third it is called 'Italian' (see a); when to this is added the augmented fourth, it is called 'French' (see b); and when the major third and fifth are present (c) it is called 'German.'

The Neapolitan Sixth is the name by which a chord consisting of a minor sixth and minor third on the subdominant has long been known; as (d) in the key of C minor.

Theorists, starting from different radical assumptions, suggest different derivations for this chord. Some, taking the major and minor scales to comprise all the notes which can be used for essential harmonies, except in the cases where important root notes in those scales bear fundamental harmonies on such principles as they accept, derive the chord from a combination of two roots; so that the dominant is the root of the two lower notes which are respectively its seventh and minor ninth, and the tonic of the upper, which is its minor ninth. Others, accepting the unquestionably frequent use of some chromatic harmonies in relation to an established Tonic, by many great masters, indicate the major concord on the minor or flat supertonic (as the major common chord of D♭ in relation to the Tonic C) as one of them, and hold the 'Neapolitan sixth' to be its first inversion. Others, again, hold this sixth to be found in the minor scale of the subdominant; and others, yet further, that it is merely produced by the artificial lowering of the sixth for artistic purposes, similar to the artificial sharpening of the fifth which is commonly met with; and that its object may either be to bring the supertonic melodically nearer the Tonic in downward progression, or to soften the harshness which results from the augmented fourth in the chord of the sixth and minor third on the subdominant of the usual minor scale. In the theory which explains some chromatic combinations as reflections of the old ecclesiastical modes, this chord would spring from the use of the ecclesiastical Phrygian, which was the same as the Greek Doric mode. C. H. H. P.

[Concerning one chord of the sixth, that on the supertonic of the key, a good deal of doubtfully authoritative teaching has been made public, in regard to its use mainly in contrapuntal work. There is no doubt that the motion of all three parts is unimpeded; though the B may usually proceed to C, the keynote, the F moves quite as often up to G as down to E. Yet a certain school of theorists still maintain that the chord is the second inversion of the dominant seventh with the root left out. (See Prout, *Harmony*,

20th impression, 1903, p. 106.) No explanation is offered concerning the freedom of motion which is admittedly allowed. The fact is that the chord was used commonly by the polyphonic masters long before the dominant seventh was considered as an essential part of the key. The circumstance that each of the upper parts makes a concord with the lowest was held to excuse the discord between the two upper parts, and the same liberty of movement was given as in the case of an undoubted concord. Its occurrence, with this obvious freedom of motion, in compositions of the madrigalian era, is too common to need citation.]

SJÖGREN, EMIL, born June 6, 1853, at Stockholm; studied first at the Conservatoire there, and afterwards at Berlin under Kiel for composition and Haupt for the organ. In 1884-85 he made tours through Europe, visiting Vienna, Munich, Venice, and Paris. During a stay at Meran, he was for six months under the influence of Lange Müller, which affected his work very deeply. Since 1891 Sjögren has been organist at the Yohannes-kyrka at Stockholm, where he has been employed in teaching, and in composition of all kinds; chiefly for piano solo, violin and piano, and songs. He is a composer whose works do not display the almost exclusively Scandinavian character of Grieg; but who shows an infusion of German ideas. Among his best-known works are 'Der Contrabandista,' op. 9, for bass-voice; 'Erotikon,' op. 10, for piano; Novelettes, op. 14, for piano; the three Sonatas, op. 19, op. 24, op. 32, in G minor, E minor, and G minor, for violin and piano; the two sonatas, op. 35 and op. 44, in E minor and A major for piano. Besides these Sjögren has written a great number of melodies, and detached pieces for the piano, but up to the present time (1907) he has not produced any compositions in the symphonic style. He has also written much for the voice, as well as many pieces for the organ. His music shows a certain amount of Scandinavian style, coupled with a warm emotionalism which is derived from more southern countries. D. H.

SKENE MANUSCRIPT. A collection of airs, chiefly Scottish, though with a considerable admixture of foreign dance tunes and English vocal melodies, supposed to have been written at various dates between 1615 and 1635. In 1818 the MS. came into the possession of the Faculty of Advocates, Edinburgh, along with a charter chest of documents, by bequest from Miss Elizabeth Skene of Curriehill and Hallyards in Midlothian. She was the last representative in line of the family, and great-granddaughter of John Skene of Hallyards, who died in 1644, and was the original possessor and probably also the writer of some parts of the MS. It consisted originally of seven distinct parts, but these have since been bound together, and now form one tiny oblong volume $6\frac{1}{2}$ inches by $4\frac{1}{2}$. It is written in tablature

for a lute with five strings. As amateur scribes however were rarely correct, either in their barring or in marking the lengths of the notes, a translator into modern notation requires much patience, as well as knowledge and ingenuity, to decipher and correct the uncertainties of these MSS. In the present instance the work of translation was undertaken by George Farquhar Graham, whose fitness for the task is sufficiently shown by the article 'Music' which he wrote for the 7th edition of the *Encyclopædia Britannica*. In 1838 Mr. William Daune, F.S.A.Scot., urged by his friends and encouraged by the members of the Bannatyne and Maitland Clubs, published the translation in 4to with a very learned preliminary dissertation on the music of Scotland, and an appendix by Finlay Dun containing an analysis of the structure of Scottish music. [See DAUNE, vol. i. p. 664b.]

The MS. contains 115 airs; of these 85 were published, 11 were found to be duplicates, and the rest were rejected as being either unintelligible or uninteresting. The airs of Scottish origin appear to be about 45, of which 25 were previously unknown. Many of the latter are no doubt sufficiently commonplace in style, but a few are really fine melodies, worthy of a place in our present collections, and worthy of the attention of rising poets. In some instances the airs are in a simple unadorned vocal state, a few being even pentatonic; of which 'Lady Rothiemay's Lilt,' 'Lady Landian's Lilt,' and the first part of 'Kilt your coat, Maggie,' may be named as examples. In most cases the first half strain of the air is simple, the repetition more florid; this is frequently followed by variations—or divisions as they were then called—consisting of scale and other passages well fitted to show the dexterity of the player. Like many other Scots tunes, a considerable number of the airs are either pentatonic or modal as regards their scale.

The fact of so many duplicates being found in the MS. has caused the remark to be made that the seven parts must have belonged to different individuals. Nothing can be inferred as to the date of either part. Part III., however, differs from the others in certain respects, and not improbably belonged to some other member of the family. It is written for a lute tuned CFADG, all the others being for a lute tuned ADADA. The only air that is said to bring the MS. down to a later date than has been claimed for it (1635) occurs in Part VI. and is named 'Peggie is ower the sie with the souldier.' This is the tune of an English ballad included in the catalogue issued by Thackeray in 1689. There is a copy of the ballad, printed about 1655, in the Euing collection of Glasgow University, and a still earlier copy in the Roxburghe Ballads; and we learn from Chappell's list of the publishers of black-letter ballads

that its date is from 1620 to 1629, both prior to the date claimed for the MS. The simple Skene versions of some of our old melodies, two of which have already been given in this work [see SCOTTISH MUSIC], show how little we really know of the early forms of our airs. The discovery in this MS. of these and of some other tunes, otherwise unknown until the middle of the following century, proves that first appearance in print is no guide whatever to actual age. The appearance also in it of so many as 25 previously unknown airs leads to the belief that the loss of ancient melodies may have been as great even as that of songs, in regard to which Ritson, in a letter to George Paton, after enumerating about 120, adds that he believes he has the names of as many more, none of which he had ever been able to recover. Several of the parts of the Skene MS. contain airs which date themselves; such as Ostend (taken 1604); Prince Henry's masque (1610); Lady Elizabeth's masque (1613).

*List of the 115 tunes contained in the
seven parts of the Skene MS.*

The first row of figures shows the order in which they appear in the original; the second is that of Mr. Daune's volume. The asterisks point out the duplicates, and the figures after the names show their place in the MS. The omitted tunes are marked by daggers. The double dagger in the first line of figures between 29 and 30 shows the place of a tune omitted in Mr. Daune's list.

PART I. (24 leaves.)

1. 38. Male Sinne.
2. 40. Doun in yow banke.
3. 78. O Sillie soule alas.
4. 10. Long ere onie old man.
5. 63. The Spanishe Ladie.
6. 8. My dearest sweetie is fardest fra me.
7. 41. I long for your virginite. *49.
8. † Hutcheson's Galziard.
9. 59. Pitt in an inche and mair of it
10. † A French voit.
11. 69. Lady Elizabeth's Maske.
12. 47. Kettle Baidie.
13. 85. Trumpeters Currand. *50.
14. 50. Joy to the persone.
15. 68. Comedians maske.
16. 42. Adernies Lilt.
17. 78. Sommeretta Maske.
18. 39. John Devezannes pint of wine.
19. † Horreis Galziard. *45.
20. 64. Froggie Galziard.
21. 22. I cannot live and want thee.
22. 20. I mett her in the meadow.
23. 8. Frettie weill begunn man.
24. 67. Prince Henreis Maske. Finis quod Skene.

PART II. (8 leaves.)

25. † Lady wilt thou love me. (Fragment.)
26. 37. The lass o Glasgowe.
27. 25. Shoe looks as shoe wold lett me.
28. 1. Alice yat I came ower the moor and left my love behind me. *42.
29. 34. Bone Jeane makis mekill of me.
30. † 27. Let never cruelte dishonour hewtie.
31. 17. My love she wins not her away.
32. 18. Jennet drinks no water.

PART III. (12 leaves.)

32. 64. A Frenche.
33. * Scerdustis. 68.
34. * My Ladie Rothemayes Lilt. 96.
35. 21. Rhine breiks.
36. † Aberdeins Currand.
37. * Scullione. 83.
38. 15. My Ladie Laudians Lilt. *84.
39. 35. Lesleis Lilt.
40. 29. The Keiking Glasce.

41. 3. To dance about the Balzeis dubh.
42. * I left my love behind me. 22.
43. 12. Alace this night yet we could slinder.
44. 58. Pitt on your shirt (mail) on Monday. *65.
45. † Horreis Galziard. *19 (both omitted).
46. 23. I dowe not quune (when) coid.
47. 33. My mistres blush is bonie.
48. * I long for her virginite. 7.
49. † A Saraband.
50. * Trumpeters Currant (anonymous). 13.

PART IV. (12 leaves.)

51. 70. What if a day.
52. 77. Floodie of teare.
53. 65. Nightingale.
54. 74. The willow trie.
55. 55. Marie me marie me quoth the bonie lass.
56. † My Lord Haye's Currand.
57. † Jeane is best of oule.
58. 72. What high offences hes my fair love taken.
59. † Alman Nicholas.
60. 54. Currand Royal (Sir John Hopes Currand).
61. 48. Hunter's Carrier.
62. 8. Blue ribben at the bound rod.
63. 49. I searce a worthie ladie.

PART V. (22 leaves.)

64. 80. Canaries.
65. * Pitt on your shirt (mail) on Monday. 44.
66. 71. Scerdustis. *33.
67. 50. She movv'd it coming ower the lie.
68. 24. Aew Dundie.
69. 31. Thrie sheeps skins.
70. 66. Chrichtons gud night.
71. 26. Alace I lie my slon I am lik to die awid.
72. * I love for love again. 98.
73. 73. Sincope (Clique-pace).
74. 58. Almame Delorie.
75. 51. Who learned you to dance and a towdle?
76. 18. Remember me at eveninge.
77. † Love is a labour ie vaine.
78. 20. I dare not vowe I love thee.
79. † My Lord Dingwalls Currand.
80. 83. Brangill of Poetsu.
81. 53. Pantalone.
82. 87. Ane Almame Moreias.
83. 61. Scullione. *37.
84. * My Ladie Laudians Lilt. 38.
85. † Queins Currand.

PART VI. (10 leaves.)

86. 61. Then wilt thou goe and leave me her.
87. 48. I will not goe to my bed till I suld die.
88. 13. The Flowers of the Forest.
89. 62. The fourth measur of the Buffins.
90. 38. Shackie of Hay.
91. 62. Com love lett us walk into the Springs.
92. 45. Sa merrie as we have bein.
93. 11. Kilt thy coat Magge, cilt thy coat ti.
94. 75. Shipherd saw thou not.
95. 2. Peggie is ouer ye a wile ye souldier.
96. 4. Ladye Rothemayes Lilt. *34.
97. 52. Omnia vincit amor.
98. 5. I love my love for love again. *72.
99. 14. Ostend.
100. † Sir John Moresons Currant.
101. † Preludium.

PART VII. (14 leaves.)

102. † Exercises.
103. 44. Gilleichs Lilt.
104. 43. Biew cappe.
105. 30. Lady Cassells Lilt.
106. * Biew Breika. 35.
107. 32. Post Ballangowne.
108. 7. John Andersonne my Jo.
109. 16. Good night and God be with you.
110. † A Sarabande.
111. † Lik as the dunsur of Soleequium.
112. † Come sweet love lett sorrow cease.
113. 79. Veze Setta.
114. † A Sarabande.

J. M. W.

SKETCH (Ital. *Schizzo*; Germ. *Skizze*; Fr. *Esquisse*). 1. This name is strictly applied to the preliminary jotting down of a musical idea, or to memoranda of special points of development or orchestration, used by composers in the process of bringing their works to perfection. To analyse the various books of extant sketches by great masters would lie outside the scope of this Dictionary; we may point out that various sketch-books of Beethoven have been published, which are essential to a knowledge of his methods of working.

II. A short movement, usually written for the pianoforte, and deriving its name, in some cases, from its descriptive character, in others.

from the slightness of its construction. Mendelssohn's three little Capriccios, written in Wales for the cousins of Professor Taylor, and now known as op. 16, have also been published under the title of Sketches, and may fairly lay claim to it, though it was not given to them by the composer himself. Schumann's four 'Skizzen' for the pedal-pianoforte (op. 58), are of an altogether different class, and derive their name from the composer's modest appreciation of their calibre; and Sterndale Bennett's three sketches (op. 10), 'The Lake,' 'The Mill-stream,' and 'The Fountain,' are among his best and most popular works. W. S. R.

SLIDE. I. (Ger. *Schleifer*; Fr. *Coulé*). An ornament frequently met with in both vocal and instrumental music, although its English name has fallen into disuse. It consists of a rapid diatonic progression of three notes, either ascending or descending, of which the principal note, or note to be ornamented, is the third, and the other two are grace-notes, and are either written of small size (Ex. 1), or, in old music, indicated by an oblique line drawn towards the principal note from the note preceding (Ex. 2).

1. BEETHOVEN, Bagatelle, Op. 119, No. 5.

CHOPIN, Andante Spianato, Op. 22.

Occasionally, as in the Fitzwilliam Virginal Book, the slide is indicated by a line crossing the stem of the note diagonally:—

Another method of indicating it is by means of a *direct* (w) placed upon the degree of the stave on which the slide is to commence, and having its right extremity prolonged so as to extend to the position of the principal note (Ex. 3). The short notes of the slide are always executed within the value of the principal note, and not before it, and any note which may accompany it must fall together with the first

note, as in Ex. 3. The accent is on the principal note.

3. BACH, Suite Française, No. 3.

When a note followed by another, one degree above or below it, is ornamented by a NACHSCHLAG of two notes [vol. iii. p. 346, Ex. 8], the small notes present exactly the appearance of a slide to the second large note, and thus a misapprehension as to the proper rendering might arise. For according to the invariable rule of all grace-notes, the small notes of the Nachschlag would be executed during the latter portion of the value of the first large note (Ex. 4), but those of the slide not until the commencement of the second (Ex. 5). Properly, a slur should be introduced to connect the grace-notes with their own principal note, as in the examples; this prevents the possibility of mistake, but in the absence of the slur—and it is frequently omitted—the performer must be guided by his own judgment.

4. Nachschlag.

5. Slide.

Sometimes the first note of a slide is sustained for the duration of the whole. In old music this was indicated by writing the extreme notes of the slide on a single stem, and drawing an oblique line between them, either upwards or downwards, according to the direction of the slide (Ex. 6). In modern music the same thing is expressed (though not very accurately) by means of a tie (Ex. 7).

6. Written.

Played.

7. SCHUBERT, 'Moments Musicaux,' No. 3.

Slides of greater extent than three notes are not infrequent; groups of three notes leading to a principal note are often met with (Ex. 8), and slides of four and even more notes occasionally (Ex. 9). This extended slide is sometimes

called *Tirade* or *Tirata* (from *tirare* to draw, 'or to shoot'). E. W. Wolf, in his *Musikalische Unterriht* (Dresden, 1788), calls such passages 'sky-rockets.'

8. MEYERBEER, 'Roberto.'

9. HUMMEL, 'Pianoforte-School.'

Besides the above, a more complicated kind of slide is mentioned by Emanuel Bach and others, called the dotted slide, in which the first grace-note received the addition of a dot. Its execution, however, varies so considerably—as is proved by the two examples by Emanuel Bach, selected from a variety of others (Ex. 10)—that the sign has never met with general acceptance, although the ornament itself, written out in notes of ordinary size, is of constant occurrence in the works of the great masters (Ex. 11).

10. Written. Played.

11. HAYDN, 'Sonata in G.'

BEETHOVEN, 'Sonata Pathétique.'

F. T.

II. (Fr. *Glissade* or *Porte de Voix*; Ital. *Portamento*.) To violinists the 'slide' is one of the principal vehicles of expression, at the same time affording a means of passing from one note to another at a distance. The rules governing the 'slide' are not restricted, as its use and

effect entirely depend upon the judgment of the player, but the following directions are generally observed:—(1) A 'slide' is effected by allowing the finger already upon the string to move up or down to within a fourth or third of the new note. Care should be taken to keep the fingers strictly within the range of each new position. Another kind of 'slide' is made by moving the finger over two or more adjoining semitones, without interruption.

In imitation of the matchless *legato* which the human voice alone can attain, violinists frequently employ a 'slide' limited to adjoining notes. A third 'slide' is entirely of a brilliant type, and belongs to the *virtuoso*, *par excellence*, having originated with Paganini. It consists in executing chromatic passages, singly or in thirds, octaves, or other combinations, entirely with the same fingers. Paganini's music abounds in this species of 'slide,' as also do the compositions of the masters of the Belgian and French school, who adopted his methods. This 'slide' did not come into general use until the end of the 18th century or beginning of the 19th. Yet its sister acquirements, the tremolo, and shift, were known to violinists a century earlier. Mersenne (*Harm. Universelle*, 1636) speaks with delight of such professional violinists as 'les Sieurs Bocan, Lazarin,' and others, who employed a certain 'tremblement qui ravissant l'esprit,' and the same author mentions the violinists who could mount to the octave on every string. Notwithstanding the lack of any direct mention of the 'slide' previous to the 18th century, the following remark by Jean Rousseau in his *Traité de la Viole* (1630), might indicate that the eminent viola da gamba player, Hottman, was acquainted with it. . . . 'It was he' (Hottman), says Rousseau, 'who in France first composed melodies (*pièces d'harmonie*) regulated for the viol, so as to make the effect of beautiful singing (*beaux chants*) in imitation of the voice.' Corelli in the first half of the 17th century founded the correct position and independence of the left hand, but it is doubtful whether he, or his immediate successors, knew the use of the 'slide.' Even at the beginning of the 18th century the generality of violinists relied mostly upon every species of turn and flourish to give expression to their playing. To the 'Beat,' 'Back Fall,' 'Double Backfall,' 'Springer,' etc., writers of violin methods devoted elaborate attention, and, curiously enough, as though foreshadowing the coming of the 'slide,' these very turns were in France called by the name now employed in that country for its English equivalent, i.e. *Porte de Voix*. Neither Leopold Mozart nor Geminani in the middle of the 18th century mentions the 'slide,' but like their predecessors consider good taste entirely dependent on the judicious employment of turns. But with Viotti's advent, and his establishment of the French School, the old methods began to give

way to a truer mode of expression which found its medium in the change of position on the same string. Viotti's most gifted pupil, Rode, was particularly devoted to this method of playing tender phrases, and no violinist cultivated it more carefully than Rode's imitator and admirer Spohr. The compositions of the latter are full of examples of the 'slide' in its most classical form, and his *Violin School* contains some of the best instructions and examples of the art to be found.

Huet, Felix, *Études sur les Différentes Écoles de Violon*; Geminani, F., *The Art of Playing the Violin*; Bailliot, P., *L'Art du Violon*; Cartier, J. O. R.

III. A contrivance fitted in some form or other to nearly all wind instruments for the purpose of adjusting the pitch by altering the length of the vibrating air-column. It is also applied in a special form to trombones and to some trumpets for the purpose of filling up those notes of the chromatic scale which lie between the various harmonics or 'open' notes. For this particular use of the slide principle see **TROMBONE** and **TRUMPET**.

For the attainment of the first object the slide may be simple, as on the flute, or U-shaped, as is usual on brass instruments. As the slide is used only for the general adjustment of pitch, it should not move too freely, in case the setting should be accidentally altered. In instruments such as the flute and clarinet, the speaking length of which varies with the opening of the different side-holes, any permissible alteration of pitch by means of the tuning-slide, or its equivalent in the form of socketed joints, is necessarily small. The reason for this is that the length added by the extension of the slide cannot bear a uniform proportion to the virtually different lengths of the instrument as determined by the different side-holes; therefore, no considerable alteration of pitch can be obtained on such an instrument without throwing it out of tune within itself. This apparently trifling matter is practically important, and the want of apprehension of it has led many to underestimate the difficulty and cost of carrying out such a change of pitch as was determined on by the Philharmonic Society of London in 1896, when the present (low) pitch was introduced. The slow progress of the change is largely due to the limitation of the efficiency of the slide, and the consequent need of new instruments constructed to the required pitch.

Attempts have been made to adapt the shifting slide as used on the trombone, to the French horn, but the particular proportions of

this instrument and others of the horn type do not admit of a successful application of the slide in this way.

D. J. B.

SLIVINSKI, JOSEPH VON, born at Warsaw, Dec. 15, 1865, studied at Warsaw Conservatorium under Strobl; at Vienna with Leschetizky for four years; and finally with Rubinstein at St. Petersburg. His first appearance in public was in 1890, and he was not long in finding his way to England, where he first appeared at a recital of his own in St. James's Hall, May 17, 1892. In January 1893 he played at one of Henschel's London Symphony Concerts; at the Crystal Palace, March 4; and at the Philharmonic, March 9 of the same year. In the following November he made his first appearance in New York. His playing is remarkable for poetical feeling, as well as for surprising brilliance of touch. (Baker's *Biog. Dict. of Mus.* etc.) M.

SLOW MOVEMENT. A generic term for all pieces in slow time, whether separate or forming part of a larger work. It is specially applied to such pieces when they occur in a work in sonata-form. The right of any movement to this title must depend rather on its character than its time indication, for many movements marked *Allegretto* are strictly slow movements.

M.

SLUR. This word, taken in its original and widest sense, signifies an effect of phrasing which is more commonly expressed by the Italian term *legato*, i.e. connected. The sign of the slur is a curved line (Ger. *Schleifbogen*; Fr. *Liaison*) drawn over or under a group of notes, and the notes included within its limits are said to be *slurred*, and are performed with smoothness, if on a stringed instrument, by a single stroke of the bow, or in singing, on a single syllable. [See **LEGATO**, vol. ii. p. 665.] But although this was originally the meaning of the word, it is now used in a more restricted sense, to denote a special phrasing effect, in which the last of the notes comprised within the curved line is shortened, and a considerable stress laid on the first. This effect has already been fully described in the article **PHRASING** [vol. iii. p. 713]. In vocal music the slur is employed to indicate the use of **PORTAMENTO**, and it is also very generally placed over two or more notes which are sung to a single syllable. In this case, however, the sign is superfluous, since if the passage consists of quavers or shorter notes, the connection can be shown by writing them in groups instead of separate, while even if the notes are crotchets, the fact of there being but a single syllable sufficiently indicates the *legato*. Moreover, an effect analogous to the slur in instrumental music, whereby the second of two notes is curtailed and weakened, is perfectly possible in singing, and may very probably have been intended by the earlier composers where the sign of the slur is employed. This view is insisted upon by Mendelssohn, who

in a letter to G. A. Macfarren¹ strongly objects to the engravers of his edition of 'Israel in Egypt' placing the slur over two quavers or semiquavers which are to be sung to one word.

When the slur is used in combination with a series of dots, thus , it indicates the effect called *mezzo staccato*, in which the notes are made of longer duration than if marked with the staccato-sign only, being sustained for nearly their full value, and separated by a very brief interval of silence. [See also STACCATO.] F. T.

SMALL OCTAVE. See C, vol. i. p. 433.

SMART, GEORGE, a London music-publisher who had some skill as a performer on the double bass. He was one of a musical family, and his son, Sir George Smart, and other relatives attained distinction. Before entering business, he was an assistant to Robert BREMNER, and had been possibly also employed by William NAPIER. He began in the music trade about 1770, his shop being at the corner of Argyll Street, and numbered 331 Oxford Street. He issued many minor publications, such as country dances and sheet music, and remained at 331 Oxford Street until one of the earliest years of the 19th century, the period of his death. George Smart was one of the founders of a benevolent society for musicians. F. K.

SMART, SIR GEORGE THOMAS, Knight, born May 10, 1776, son of the above George Smart, received his early musical education as a chorister of the Chapel Royal under Dr. Ayrton. He learned organ-playing from Dr. Dupuis and composition from Dr. Arnold. On quitting the choir in 1791 he obtained the appointment of organist of St. James's Chapel, Hampstead Road, and was also engaged as a violinist at Salomon's concerts. At a rehearsal of a symphony of Haydn's for one of those concerts the drummer was absent, and Haydn, who was at the harpsichord, inquired if any one present could play the drums. Young Smart volunteered, but from inexperience was not very successful, whereupon the great composer, ascending the orchestra, gave him a practical lesson in the art of drumming. About the same time he commenced practice as a teacher of the harpsichord and singing. He soon showed an aptitude for conducting musical performances. In 1811, having successfully conducted some concerts in Dublin, he was knighted by the Lord Lieutenant. In 1813 he was chosen one of the original members of the Philharmonic Society, and between that date and 1844 conducted forty-nine of its concerts. From 1813 to 1825 he conducted the Lenten oratorios at one or other of the patent theatres, at one of which in 1814 he introduced Beethoven's 'Mount of Olives' to the English public. In 1818 he directed the City concerts established by Baron Heath. On April 1, 1822, he was appointed

one of the organists of the Chapel Royal in the room of Charles Knyvett, deceased. In 1825 he accompanied Charles Kemble to Germany to engage Weber to compose an opera for Covent Garden, and when Weber came to England in 1826 to bring out his 'Oberon' he was the guest of Sir George Smart, in whose house he died on June 5. [See *Musical Times*, 1902, p. 533.] It was mainly by the exertions of Sir George Smart and Sir Julius Benedict that the statue of Weber at Dresden was erected, the greater part of the subscriptions having been collected in England. In 1836 Sir George introduced Mendelssohn's 'St. Paul' to England at the Liverpool Festival. [On his duties in connection with the coronation of Queen Victoria, see the *Musical Times*, 1902, p. 18.] On the death of Attwood in 1838 he was appointed one of the composers to the Chapel Royal. To careful musicianship he added an administrative ability which eminently qualified him for the conductorship of musical festivals and other performances on a large scale, and his services were for many years in request on such occasions all over the country. He conducted festivals at Liverpool in 1823, 1827, 1830, 1833, and 1836; Norwich, 1824, 1827, 1830, and 1833; Bath, 1824; Newcastle-upon-Tyne, 1824 and 1842; Edinburgh, 1824; Bury St. Edmund's, 1828; Dublin and Derby, 1831; Cambridge, 1833 and 1835; Westminster Abbey, 1834; Hull, 1834 and 1840; and Exeter Hall and Manchester, 1836. He was long resorted to by singers desirous of acquiring the traditional manner of singing Handel's songs, which he had been taught by his father, who had seen Handel conduct his oratorios: among the many he so instructed were Sontag and Jenny Lind. He gave lessons in singing until he was past eighty. He edited Orlando Gibbons's Madrigals for the Musical Antiquarian Society, and the 'Dettingen Te Deum' for the Handel Society. He took an active part in procuring the foundation of the Mendelssohn Scholarship. His compositions consist of anthems, chants, Kyries, psalm tunes, and glees. In 1863 he published a collection of his anthems and another of his glees and canons. Two of his glees, 'The Squirrel' and 'The Butterfly's Ball,' were very popular. He died at his house in Bedford Square, Feb. 23, 1867. [A volume entitled *Leaves from the Journal of Sir George Smart*, by H. B. Cox and C. L. E. Cox, was published in 1907.] A younger son of George Smart, senior, was CHARLES FREDERICK, who was a chorister of the Chapel Royal, and afterwards a double-bass player in the principal orchestras. Older than Charles, but younger than George, was another brother,

HENRY, born in London in 1778 [was for a time in his father's business, and subsequently (about 1803) in that of a brewer. This latter trade being unsuccessful, he returned to the

¹ Goethe and Mendelssohn, 2nd ed. p. 77.

musical profession]. He had begun his musical education at an early age, and studied the violin under Wilhelm Cramer, in which he made such progress that when only fourteen he was engaged at the Opera, the Concert of Antient Music, and the Academy of Ancient Music. He was engaged as leader of the band at the Lyceum on its being opened as an English Opera-House in 1809, and continued so for several seasons. He was leader at the present Drury Lane Theatre from its opening in 1812 until 1821. On June 12, 1819, the band presented him with a silver cup as a token of their regard. He was leader of the Lenten oratorios from the time they came under the management of his brother, Sir George, in 1813, and a member of the Philharmonic Society's orchestra, which he occasionally led. In 1820 he established a manufactory of pianofortes, of a peculiar construction, and on July 22, 1823, obtained a patent for improvements in the construction of pianofortes. He went to Dublin to superintend the début of his pupil, Miss Goward (afterwards Mrs. Keeley), where he was attacked by typhus fever, and died, Nov. 27, 1823. His son,

HENRY THOMAS (known as Henry Smart), a prominent member of the modern English School, was born in London, Oct. 26, 1813, and after declining a commission in the Indian army, was articulated a solicitor, but quitted law for music, for which he had extraordinary natural faculties, and which he studied principally under W. H. Kearns, though he was to a great extent self-taught. In 1831 he became organist of the parish church of Blackburn, Lancashire, which he resigned in 1836. While at Blackburn he composed his first important work, an anthem for the tercentenary of the Reformation, in 1835. In 1836 he settled in London as organist to St. Philip's Church, Regent Street. In March 1844 he was appointed to the organ of St. Luke's, Old Street, where he remained until 1864, when he was chosen organist of St. Pancras. He was an excellent organ-player, specially happy as an accompanist in the service, a splendid extemporer, and a voluminous and admirable composer for the instrument. But his compositions were by no means confined to the organ. On May 26, 1855, an opera from his pen, 'Berta, or, The Gnome of the Hartzberg,' was successfully produced at the Haymarket. In 1864 he composed his cantata, 'The Bride of Dunkerron' (his best work), expressly for the Birmingham Festival. He produced two cantatas, 'King René's Daughter,' 1871, and 'The Fishermans,' both for female voices. An opera on the subject of 'The Surrender of Calais,' the libretto by Planché, originally intended for Mendelssohn, was put into his hands by Messrs. Chappell, about 1852, but though considerable progress was made with it, it was never completed. A sacred cantata, 'Jacob,' was written for the Glasgow Festival, produced Nov. 10, 1873, and

two large anthems for solos, chorus, and organ were written for the Festivals of the London Choral Choists Association at St. Paul's in 1876 and 1878—'Sing to the Lord,' and 'Lord, thou hast been our refuge.' For many years past his sight had been failing, and soon after 1864 he became too blind to write. All his compositions after that date therefore were committed to paper—like those of another distinguished English composer, Sir G. A. Macfarren—through the truly disheartening process of dictation.

It is as a composer of part-songs and a writer for the organ that Henry Smart will be known in the future. His earlier part-songs, 'The Shepherd's Farewell,' 'The Waves' Reproof,' and 'Ave Maria,' are lovely, and will long be sung; and his organ pieces are full of charming melody and effective combinations. He edited Handel's thirteen Italian duets and two trios for the Handel Society.

His health had for several years been very bad, and cancer on the liver gave him excruciating agony. In June 1879 the Government granted him a pension of £100 a year in acknowledgment of his services in the cause of music, but he did not live to enjoy it, for he died July 6, 1879. He was buried in Hampstead Cemetery. His last composition was a Postlude in E_b for the organ, finished very shortly before the end. His life was written by his friend Dr. Spark (Reeves, 1881), and the book will always be interesting, though it might perhaps have been more usefully arranged and more accurately printed. [See the *Musical Times* for May 1902.] W. H. H.

SMART, THOMAS, probably brother to the elder George Smart, was an organist at St. Clement's Danes in 1783. He composed many songs and pieces for the pianoforte and harpsichord. He set to music the well-known song on the death of General Wolfe by Tom Paine, beginning 'In a mouldering cave where the wretched retreat.' Dates of birth and death not ascertained. F. K.

SMEGERGILL, WILLIAM. See CÆSAR, vol. i. p. 443.

SMETANA, FRIEDRICH, born March 2, 1824, at Leitomischl in Bohemia, was a pupil of Prosch at Prague, and subsequently for a short time studied with Liszt. He became a highly skilled pianist, and opened a music school of his own at Prague, where he married the pianist Katharina Kolár. In 1856 he accepted the directorship of the Philharmonic Society of Gothenburg in Sweden, and his wife died there in 1860. In 1861 he made a tour in Sweden, and on the foundation of the National Theatre in Prague, betook himself again to his native country, and eventually became chief conductor of the new institution in 1866, the year of production of his most famous work, 'Die verkaufte Braut.' He produced three other Bohemian operas, 'Die Brandenburgerin Böhmen' (1866), 'Dalibor' (1868), and 'Zwei Witwen'

(1874), before he was compelled, by increasing deafness, to resign his post. Subsequently to his retirement the following were produced: 'Der Kuss' (1876), 'Das Geheimniss' (1878), 'Libussa' (1881), and 'Die Teufelswand' (1882). During his tenure of the conductorship his keen interest in the career of a member of his orchestra, Antonin Dvořák, had a great influence on the younger man's work. Smetana's other works are of great importance though they are not very numerous. The symphonic poem 'Mein Vaterland' is cast in six sections, 'Vysehrad' (Visegrad), 'Vltava' (Moldau), 'Sarka,' 'Aus Böhmens Hain und Flur,' 'Tabor,' and 'Blaník.' It is a work of remarkable power, and very picturesque in treatment. There are besides three other symphonic poems, 'Wallenstein's Lager,' 'Richard III.,' and 'Hakon Jarl'; a 'Triumphsymphonie' dated 1853, and 'Prager Karneval' for orchestra. Two string quartets exist, in E minor and C major; the first, entitled 'Aus meinem Leben,' is a remarkable piece of chamber music, in which the classical form, somewhat modified, is used to describe the main event of the composer's career, and in which a persistent high note in the finale is understood to be a deliberate statement concerning a note, similarly persistent to his own ear, which was the effect of his deafness. There are also a trio for piano and strings, part-songs, a festival march for the Shakespeare tercentenary, and much piano music. He became insane at the end of his life, and died in an asylum at Prague, May 12, 1884.

Smetana is the first (and, as some think, the greatest) Bohemian composer who deliberately took his stand as an exponent of the art of his native country. But he is a great deal more than this, for, though his music has been long in making its way outside Bohemia, yet it has now obtained so strong a hold that it is most unlikely to be forgotten. If he may not have succeeded in obtaining for his national polka-measure the entry into classical structure that Dvořák won for the *furiant* and *dumka*, yet his attempt to do so marks a point in the history of the development of form. Though his symphonic poems are not realistic, yet there can be no doubt that they carried on the tradition of that form from the hands of Liszt, and increased its power of pictorial expression. The famous opera 'Die verkaufte Braut' ('Prodana Nevěsta'—'The Bartered Bride')—is the original Bohemian—is one of the most beautiful of modern comic operas, and on a small stage, presented by performers who understand the true comic traditions, it must always impress itself on the audience. Hitherto, though twice brought out in London, it has not achieved a great success with the general public, for Covent Garden and a company accustomed to interpreting the later works of Wagner are not the ideal conditions of its presentment. It was first given by

the Ducal company of Saxa-Coburg and Gotha at Drury Lane on June 26, 1895, and at Covent Garden on Jan. 24, 1907. There is plenty of *vis comica* in it, and lovely music from beginning to end, quite original and characteristic; but so far nothing has made quite such a success as its overture, which, under the name of 'Lustspiel' or 'Comedy' overture, was widely known and dearly loved long before the opera was produced in England. Monographs on the composer were written by B. Wallek in 1895 and Hostinský in 1901, the latter being in Czech (Riemann's *Lexikon*, etc.).

SMETHERGELL, WILLIAM, a pianist in London, was author of *A Treatise on Thorough Bass*, 1794, and *Rules for Thorough Bass*, with three sonatas for harpsichord and violin (1795); [he composed also six concertos for harpsichord or pianoforte with two violins and violoncello (1785), six duets for two violins, op. 17 (1800), six easy solos for violin (1790), six lessons for harpsichord, six overtures in eight parts, and a second set, op. 8. He also adapted compositions from Jommelli and other composers, and wrote songs. *Brit. Mus. Biog.*]. He was organist of St. Margaret on the Hill, Southwark, and Allhallows Barking.

W. H. H.

SMITH, ALICE MARY (MRS. MEADOWS WHITE), a distinguished English composer, was born May 19, 1839. She was a pupil of Sir W. Sterndale Bennett and Sir G. A. Macfarren; married Frederick Meadows White, Esq., Q.C. (afterwards a Judge for the County of Middlesex), Jan. 2, 1867, was elected Female Professional Associate of the Philharmonic Society in November 1867, Hon. Member of the Royal Academy of Music in 1884, and died Dec. 4, 1884. She was a prolific composer of works of all dimensions. The list embraces two Symphonies, in C minor (1863), and G; Overtures to 'Endymion' (1864, rewritten 1871), 'Lalla Rookh' (1865), 'Masque of Pandora,' with two Intermezzi (1878), and 'Jason' (1879); a Concerto for clarinet and orchestra (1872); an Introduction and Allegro for PF. and orchestra (1865); four PF. quartets, in B \flat (1861), D (1864), E, and G minor; a PF. trio in G (1862); three String quartets, in D (1862), A (1870), and G; also five Cantatas for soli, chorus, and orchestral accompaniment—'Rüdesheim or Gisela' (Cambridge, 1865), Kingsley's 'Ods to the North-East Wind' (Hackney Choral Association, 1880), Collins's 'Ode to the Passions' (Hereford Festival, 1882), Kingsley's 'Song of the Little Baltung' (1883), Kingsley's 'Red King' (1884); Part Song, 'The Dream' (1863); Duet (S.T.) 'Maying'; many solo-songs, duets, etc. 'Her music,' says the *Athenæum* of Dec. 13, 1884, 'is marked by elegance and grace rather than by any great individuality . . . that she was not deficient in power and energy is proved by portions of the "Ode to the North-East Wind," and "The Passions." Her forms were

FRIEDRICH SMETANA

always clear and her ideas free from eccentricity; her sympathies were evidently with the classic rather than with the romantic school.' G.

SMITH, CHARLES, born in London in 1786, was in 1796 admitted a chorister of the Chapel Royal under Dr. Ayrton, but was withdrawn from the choir in 1798 and became a pupil of John Ashley. In 1800 he sang at the Oratorios, Ranelagh, etc. Upon the breaking of his voice in 1803 he acted as deputy organist for Knyvett and Stafford Smith at the Chapel Royal, and soon afterwards became organist of Croydon Church. In 1807 he was appointed organist of Welbeck Chapel. He composed the music for the following dramatic pieces: 'Yes or No,' 1809; 'The Tourist Friend,' and 'Hit or Miss,' 1810; 'Anything New,' 1811; 'How to die for Love'; 'Knapschou, or the Forest Fiend,' Lyceum, 1830. In 1815 he appeared, with success, at the Oratorios as a baritone singer. In the next year he settled in Liverpool, where he resided for many years. He composed many songs and ballads, the best of which is 'The Battle of Hohenlinden.' He published in 1844 a work called 'Ancient Psalmody,' consisting of adaptations from music of Ravenscroft, Morley, etc. He ultimately retired to Crediton, Devon, where he died Nov. 22, 1856. W. H. H.

SMITH, EDWARD SYDNEY, born at Dorchester, July 14, 1839, received his first musical instruction from his parents, and at the age of sixteen went to Leipzig, where he studied the piano under Moscheles and Plaidy; the violoncello under Grützmacher; harmony and counterpoint under Hauptmann, Richter, and Papperitz; and composition under Rietz. He returned to England in 1858, and in the following year he settled in London, where he long enjoyed considerable reputation as a teacher. His compositions, which are confined to PF. pieces, were extremely popular with the numerous class of performers whose tastes are satisfied by a maximum of brilliance combined with a minimum of difficulty. The most successful of his many pieces were 'La Harpe Éolienne,' 'Le Jet d'Eau,' 'The Spinning Wheel,' and a 'Tarantella' in E minor, which (like most of his compositions) have been published, and met with the same popularity on the Continent as in England. He died in London, March 3, 1889, and was buried in Kensal Green Cemetery. W. B. S.

SMITH, FATHER, the usual appellation of BERNARD SCHMIDT, a celebrated organ-builder, born in Germany about 1630, who came to England in 1660 with two nephews, Gerard and Bernard, his assistants. To distinguish him from these and express the reverence due to his abilities, he was called Father Smith. His first organ in this country was that of the Royal Chapel at Whitehall, which Pepys mentions in his Diary as having heard on July 8, 1660. Subsequently he built one for Westminster Abbey, one for St. Giles's-in-the-Fields (1671),

and one for St. Margaret's, Westminster (1675), of which in the following year he was elected organist at a salary of £20 a year. He was now rapidly acquiring fame and was appointed Organ-maker in ordinary to the King, apartments in Whitehall being allotted to him, called in the old plan 'The Organ-builder's Work-house.'

In 1682 the treasurers of the societies of the Temple had some conversation with Smith respecting the erection of an organ in their church. Subsequently Renatus Harris, who had warm supporters amongst the Benchers of the Inner Temple, was introduced to their notice. It was ultimately agreed that each artist should set up an organ in the church, and in 1684 both instruments were ready for competition. In 1685 the Benchers of the Middle Temple made choice of Smith's organ [which was played by Henry Purcell]; but those of the Inner Temple dissented, and it was not until 1688 that Smith received payment for his instrument, namely, £1000.

In 1683 he contracted for the organ of Durham Cathedral. In consequence of the reputation he had acquired by these instruments, he was made choice of to build an organ for St. Paul's Cathedral, then in course of erection. This instrument was opened on Dec. 2, 1697. Smith became Court organ-builder to Queen Anne, and died 1708. [His portrait is in the Musio School Collection at Oxford.]

According to Hawkins and Burney the two nephews of Schmidt, as above mentioned, were named Bernard and Gerard. But Horace Walpole alters Bernard's name to Christian. These two are very little known, although they built several fine instruments.

In 1755 a Mr. Gerard Smith was organ-repairer to Chelsea Hospital. This was probably a grand-nephew of Father Smith, since from the date he could hardly have been his nephew. V. DE P.

SMITH, GEORGE TOWNSHEND, son of Edward Woodley Smith (born May 23, 1775, chorister of St. Paul's Cathedral, afterwards lay vicar of St. George's Chapel, Windsor, from 1795 until his death, June 17, 1849), was born in the Horseshoe Cloisters, Windsor, Nov. 14, 1813. He received his early musical education as a chorister of St. George's, Windsor. On quitting the choir he became a pupil of Highmore Skeats, the Chapel organist, and afterwards came to London and studied under Samuel Wesley. He next obtained an appointment as organist at Eastbourne, whence he removed to King's Lynn on being chosen organist there. On Jan. 5, 1843, he was appointed organist of Hereford Cathedral. As such he became, *ex officio*, conductor of the Meeting of the Three Choirs at Hereford, besides discharging the duties of which office he voluntarily undertook the laborious office of honorary secretary to the festival, and by his untiring and energetic exertions, in the

course of the twelve triennial festivals which he directed, raised it musically, from a low to a very high condition, and financially, from a heavy loss to a gain. He composed an 8-voice anthem and a Jubilate for the festivals, and other church music, as well as piano pieces of a popular kind. He died, very suddenly, August 3, 1877, universally beloved and respected.

His brother ALFRED MONTEM, born at Windsor, May 13, 1828, was also educated in the choir of St. George's. On quitting it he became a tenor singer, and after belonging to the choir of St. Andrew's, Wells Street, succeeded J. W. Hobbs as lay vicar of Westminster Abbey; he was also a gentleman of the Chapel Royal (1858). He was distinguished as a ballad singer, and for his skill in recitative. He was a professor of singing at the Royal Academy of Music and the Guildhall School. He died in London, May 2, 1891.

Another brother, SAMUEL, was born in Eton, August 29, 1821. In 1831 he was admitted as one of the children of the Chapel Royal under William Hawes. Shortly after leaving the choir he obtained the appointment of organist at Hayes Church, Middlesex, and was subsequently organist at Eton and Egham. In 1857 he became organist at Trinity Church, Windsor, and in 1861 organist of the Parish Church. He issued some compilations of tunes and chants. W. H. H.

SMITH, JOHN, Mus.D., was born at Cambridge in 1797. On Nov. 23, 1815, he was admitted to a situation in the choir of Christ Church Cathedral, Dublin, but failed to secure the appointment of vicar choral owing to his having quarrelled and gone to law with the Dean in 1824. On Feb. 5, 1819, he was appointed a vicar choral of St. Patrick's Cathedral. On July 7, 1827, the degree of Mus.D. was conferred upon him by the University of Dublin. He afterwards obtained the appointments of Chief Composer of the State Music, Master of the King's Band of State Musicians in Ireland, and Composer to the Chapel Royal, Dublin; and in 1847 was chosen Professor of Music in Dublin University. He composed 'The Revelation,' an oratorio, some church music, and several prize glees and other compositions. In 1837 he published a volume of Cathedral Music containing services and chants, and a 'Veni, Creator.' He died Nov. 12, 1861. W. H. H.

SMITH, JOHN (organ-builder). See VOWLES.

SMITH, JOHN CHRISTOPHER, born in 1712, was son of John Christopher Schmidt, of Anspach, who, a few years later, came to England and became Handel's treasurer. [He was agent for the sale of Handel's music. While John Cluer engraved the several works published by Handel on his own behalf, Meares sold them in St. Paul's Churchyard, and Smith at the sign of 'The Hand and Musick-Book' in Coventry Street.] The younger Smith showing a fondness for

music, Handel began teaching him when he was thirteen years old. He afterwards studied composition under Dr. Pepusch and Thomas Roseingrave, and in 1732 produced his English opera, 'Teraminta,' and in 1733 another opera, 'Ulysses.' In 1738 he composed an oratorio, 'David's Lamentation over Saul and Jonathan.' About 1745 he travelled on the Continent, remaining absent about three years. In 1754 he was appointed the first organist of the Foundling Hospital Chapel. (See *Musical Times*, 1902, p. 377.) When Handel became blind Smith was employed as his amanuensis, and Handel's latest compositions were dictated to him. He also played the organ at Handel's oratorio performances. In 1754 he composed the opera of 'The Fairies,' altered from Shakespeare's 'Midsummer Night's Dream,' which met with great success, and in 1756 the opera of 'The Tempest,' adapted from Shakespeare's play, two songs in which, 'Full fathom five,' and 'The owl is abroad,' long continued favourites; and in 1760 'The Enchanter,' a musical entertainment. Handel bequeathed to him all his original MS. scores, his harpsichord, his bust by Ronbilliac, and his portrait by Denner. After Handel's death Smith carried on the oratorios, in conjunction with Stanley, until 1774, when he retired and went to reside at Bath. Besides the before-mentioned works he composed 'Paradise Lost,' 'Rebecca,' 'Judith,' 'Jehoshaphat,' and 'Redemption,' oratorios (besides compiling two oratorios from Handel's works, 'Nabal,' and 'Gideon'); 'Dario,' 'Issipile,' and 'Il Ciro riconosciuto,' Italian operas; a Burial Service; and several miscellaneous vocal and instrumental pieces. (See *Anecdotes of G. F. Handel and J. C. Smith*.) George III. having continued to Smith a pension which had been granted by his mother, the Princess Dowager of Wales, Smith evinced his gratitude by presenting to the King all Handel's MS. scores—now at Buckingham Palace—the harpsichord, and the bust by Ronbilliac, retaining only the portrait by Denner. He died Oct. 3, 1795. Three large collections of Handel's works exist in Smith's MS.: one belonged to H. B. Lennard, Esq., Hampstead, and is now in the Fitzwilliam Museum, Cambridge; another to Dr. Chrysander; and a third to the Granville family of Wellesbourne Hall, Warwickshire. W. H. H.

SMITH, JOHN STAFFORD, son of Martin Smith, organist of Gloucester Cathedral from 1743 to 1782, was born at Gloucester in 1750. He obtained his earliest musical instruction from his father, and was soon afterwards sent to London to study under Dr. Boyce, and also became a chorister of the Chapel Royal under James Nares. On quitting the choir he sedulously pursued his studies, and became an able organist, an efficient tenor singer, an excellent composer, and an accomplished musical anti-

quary. In 1773 he was awarded two prizes by the Catch Club, one for a catch, 'Here flat,' and the other for a canon, 'O remember not the sins.' In the next four years he gained prizes for the following compositions: 'Let happy lovers fly,' glee, 1774; 'Since Phillis has bubbled,' catch, and 'Blest pair of syrens,' glee (five voices), 1775; 'While fools their time,' glee, 1776; and 'Return, blest days,' glee, 1777. He rendered great assistance to Sir John Hawkins in the production of his *History*, not only by reducing ancient compositions into modern notation, but also by the loan of some valuable early MSS. from his extensive and curious library, from which Sir John culled several pieces to enrich his Appendix. In 1779 he published 'A Collection of English Songs, in score, for three and four voices, composed about the year 1500. Taken from MSS. of the same age'; among which is the Agincourt song, 'Our king went forth to Normandy.' (See 'English Carols of the Fifteenth Century.') In 1780 he won another prize from the Catch Club by his ode, 'When to the Muses' haunted hill.' He published at various times five collections of glees, containing compositions which place him in the foremost rank of English glee composers. Besides his prize glees they include 'As on a summer's day,' 'What shall he have that killed the deer?' 'Hark, the hollow woods resounding,' and the madrigal 'Flora now calleth forth each flower.' Fourteen glees, fourteen catches, four canons, two rounds, an ode, a madrigal, and a motet by him are given in Warren's collections. He also published a collection of songs (1785), and 'Twelve Chants composed for the use of the Choirs of the Church of England.' On Dec. 16, 1784, after having for many years officiated as a deputy, he was appointed a gentleman of the Chapel Royal, and on Feb. 22, 1785, a lay vicar of Westminster Abbey, being installed, after his year of probation, April 18, 1786. In 1790 he was engaged as organist at Gloucester Festival. In 1793 he published a volume of 'Anthems, composed for the Choir Service of the Church of England.' In 1802, upon the death of Dr. Arnold, he was appointed one of the organists of the Chapel Royal, and on May 14, 1805, upon the resignation of Dr. Ayrton, succeeded him as Master of the Children. In 1812 he produced his interesting work '*Musica Antiqua*.' [See vol. iii. pp. 328-9.] In June 1817 he resigned the Mastership of the Children of the Chapel Royal. Besides the before-named compositions he produced 'An Ode on the First of April,' for voices and instruments, which was never published. A MS. *Introduction to the Art of composing Music*, by him, is in the library of the Sacred Harmonic Society, which also contains his Musical commonplace Book. He died in London, Sept. 21, 1836. By his will, dated Jan. 21, 1834, he bequeathed all his property to his only surviving daughter, Gertrude Stafford

Smith and appointed her sole executrix. A few years afterwards she became insane, and in 1844 the Commissioner in Lunacy ordered that her property should be realised and the proceeds invested for her benefit. Through ignorance or carelessness the contents of her house (which included her father's valuable library, remarkably rich in ancient English musical manuscripts) were entrusted for sale to an incompetent auctioneer. The library was sold April 24, 1844, such books as were described at all being catalogued from the backs and heaped together in lots, each containing a dozen or more works; 2191 volumes were thrown into lots described as 'Fifty books, various,' etc. The printed music was similarly dealt with; the MSS. were not even described as such, but were lumped in lots of twenties and fifties, and called so many 'volumes of music.' 578 volumes were so disposed of, and there were besides five lots each containing 'a quantity of music.' The sale took place in Gray's Inn Road; Smith's name did not appear on the catalogue; nothing was done to attract the attention of the musical world, and two dealers, who had obtained information of the sale, purchased many of the lots at very low prices. These after a time were brought into the market, but it is feared the greater part of the MSS. is altogether lost. W. H. H.

SMITH, MONTEM. See under SMITH, GEORGE TOWNSHEND.

SMITH, ROBERT ARCHIBALD, born at Reading, Nov. 16, 1780. His father, a Paisley silk-weaver, finding his trade declining in Reading, removed back to Paisley in 1800. Robert soon showed a great aptitude for music, and at ten could play the violin. In 1807 he was appointed precentor at the Abbey Church, Paisley, a situation which he filled for many years. While there he made the acquaintance of Robert Tannahill the poet, many of whose fine lyrics he set to music. One of these, 'Jessie, the Flow'r o' Dunblane,' published in 1808, at once made its mark, and was universally admired.

Smith possessed a fine vein of melody, and in vocal composition had at that time perhaps no equal in Scotland. In 1820 he began to publish [edited by Lady Nairne and other ladies] 'The Scottish Minstrel' (6 vols. 8vo, 1820-24), containing several hundreds of the best Scottish songs, not a few of them his own, frequently without indication. It is still considered a good compilation. In August 1823 he obtained the leadership of the psalmody at St. George's Church, Edinburgh. Besides anthems and other pieces (published in 1810 and 1819, most of the former written for the boys of George Heriot's Hospital), Smith now found time to publish his 'Irish Minstrel,' [which was suppressed owing to an infringement of Moore's copyright,] followed in 1826 by an 'Introduction to Singing,' and in 1827 by 'Select Melodies of all Nations,' in one volume, one of his best works.

In 1828 he brought out his 'Sacred Harmony of the Church of Scotland,' by which he is now best known. His health was at no time robust, and he suffered from dyspepsia, under which he finally sank, Jan. 3, 1829. He was buried in St. Cuthbert's churchyard.

'Smith,' says the late George Hogarth, 'was a musician of sterling talent. . . . His compositions are tender, and tinged with melancholy; simple and unpretending, and always graceful and unaffectedly elegant. . . . He had the admirable good sense to know how far he could safely penetrate into the depths of counterpoint and modulation without losing his way; and accordingly his music is entirely free from scientific pedantry.' His most popular pieces are the songs, 'Jessie, the Flow'r o' Dunblane,' and 'Bonnie Mary Hay'; the duet, 'Row weel, my boatie'; the trio 'Ave Sanctissima'; and the anthems, 'Sing unto God,' and 'How beautiful upon the mountains'; although many more might be named which are yet frequently sung. Owing to the modern alterations in congregational singing, the introduction of German chorales and ancient ecclesiastical melodies, and the change from florid to syllabic tunes, Smith's 'Sacred Harmony' is to a great extent superseded. But it still has its value, even at a distance of eighty years from its publication. [An excellent memoir of Smith is attached to an edition of Tannahill's poems edited by Philip Ramsay, Edinburgh, 1851.] D. B.; additions in square brackets by F. K.

SMITH, SAMUEL. See under SMITH, GEORGE TOWNSEND.

SMOLENSKY, STEPHEN VASSILIEVICH, a leading authority on Russian church music, born at Kazan, 1848. Having had unusual opportunities of gaining an insight into the customs and peculiarities of the sect known as 'Old Believers,' who have preserved the church music in its primitive forms, Smolensky was led to make a special study of the old manuscripts of the Solovetsky library, preserved in the Clerical Academy at Kazan. In 1889 he became director of the Synodal School and Choir in Moscow, and in the same year was appointed successor to the ecclesiastic Razoumovsky, as professor of the history of church music at the Moscow Conservatorium. While working at the Synodal School, Smolensky has formed a unique collection of manuscripts from the 15th to the 19th century, including many rare chants and other examples of sacred music. In 1901-3 he directed the Imperial Court Chapels. Among his numerous contributions to the abstruse and complicated subject on which he is an authority the principal are: *A Course of Church-Chant Singing* (Moscow, 1900, 5th edition); *Old Choral Manuscripts in the Synodal School, Moscow* (St. Petersburg, 1899); *Ancient Notation of the Russian Church-Chants* (1901).

R. N.

SMORZANDO (Ital., 'fading away'). A term with the same meaning as *Morendo*, but used indiscriminately in the course of a piece. [See *MORENDO*.]

SMYTH, ETHEL MARY, born in London, April 23, 1858. Daughter of General J. H. Smyth, late of the Royal Artillery. For a short time in 1877 she studied at the Leipzig Conservatorium, and under Heinrich von Herzogenberg after leaving that institution. At Leipzig a quintet for strings was performed with success in 1884, and a sonata for piano and violin in 1887. This latter is numbered op. 7, opp. 3 and 4 being books of songs. After her student days, she does not appear to have used opus-numbers. A serenade for orchestra in four movements, in D, was given at the Crystal Palace, April 26, 1890; and an overture, 'Antony and Cleopatra,' on Oct. 18 of the same year, the latter being repeated at one of Henschel's London Symphony Concerts in 1892. A far more important work, a Solemn Mass, in D, was performed at the Albert Hall, under Barnby's direction, Jan. 18, 1893. This work definitely placed the composer among the most eminent composers of her time, and easily at the head of all those of her own sex. The most striking thing about it was the entire absence of the qualities that are usually associated with feminine productions; throughout it was virile, masterly in construction and workmanship, and particularly remarkable for the excellence and rich colouring of the orchestration. Miss Smyth did not, however, come into her own until she was recognised as an operatic writer. Her 'Fantasio' (libretto founded by herself on De Musset) was produced at Weimar in 1898 in unfortunate conditions, and it was not until its revival at Carlsruhe in February 1901 that it could be properly judged. The one-act 'Der Wald' was given at Dresden in September 1901; it was produced at Covent Garden, July 18, 1902, with very great success, given again at the Metropolitan Opera-House, New York, in March 1903, and again at Covent Garden on June 26, 1903. The distinction of its being revived in the year after its first production is significant of its success, to all who know the singular methods followed by English operatic managers. It was evident that here was a work of highly romantic character (the treatment of the spirits of the wood as the primary agents in the drama is full of suggestive beauty), by one who had mastered not only all the secrets of stage effect, but who understood how to make her climaxes impressive, and how to differentiate her characters. The German libretto of this, like that of her former work, was written by the composer herself. Her crowning achievement so far, is the three-act opera, 'Les Naufrageurs' ('The Wreckers'), produced at Leipzig as 'Strandrecht' on Nov. 11, 1906. The libretto, by

H. B. Leforestier, bears some slight traces of being originally intended to suit the conventions of the Paris Opéra-Comique rather than the German stage; but in any language the wonderful power of the conception, musical and dramatic, must make itself felt. In spite of a performance which was so far from ideal that the composer refused to allow it to be repeated at the same theatre, the work created a profound impression. It was given with far more care and success at Prague on Dec. 22 of the same year, and is accepted for performance at Vienna (1908). While the style is so far modern as that set pieces are dispensed with and Wagner's artistic ideals are fulfilled, there is no attempt to curry favour with the lovers of ugly music, or to write what sounds bizarre for the sake of making a sensation. The fine treatment of the choruses in the first act, the orchestral introduction to the second act, and, in the same section, the great love-duet which rises in intensity of emotion with the rising of the beacon-flame lit by the lovers to warn ships from the dangers of the coast; and, in the third act, the whole treatment of the final situation, in which the lovers are left by the people to be drowned by the advancing tide, all these points are among the most remarkable things in modern opera, and it is difficult to point to a work of any nationality since Wagner that has a more direct appeal to the emotions, or that is more skilfully planned and carried out. Some charming and delicately written French poems, for mezzo-soprano and very small orchestra, were sung at the Queen's Hall, Nov. 12, 1907. M.

SNARES. A group of four or five pieces of catgut rather loosely stretched across the lower end of the side-drum, which jarring against the parchment when the drum is struck at the other end produces a peculiar rattle characteristic of the instrument. F. K.

SNETZLER, JOHN, was born at Passau in Germany about 1710. This truly eminent organ-builder, after acquiring some fame in his own country, was induced to settle in England [in 1740; he built the organ for Chesterfield Church in 1741 and opened a factory in London in 1755. W. H. C. F.]. He built the noble instrument at Lynn Regis (1754); a very fine one at St. Martin's, Leicester (1774); that of the German Lutheran Chapel in the Savoy, which was the first in this country provided with a pedal clavier; and many others, including chamber organs of high quality. Two stories are current of his imperfect way of speaking English and his quaint expressions. At the competition for the place of organist to his new organ at Halifax (1766), he was so annoyed by the rapid playing of Dr. Robert Wainwright, that he paced the church, exclaiming, 'He do run over de keys like one cat, and do not give my pipes time to shpeak.' And at Lynn he told the church-

wardens, upon their asking him what their old organ would be worth if repaired, 'If they would lay out £100 upon it, perhaps it would be worth fifty.'

Snetzler lived to an advanced age, and died at the end of the 18th or the commencement of the 19th century. Having saved sufficient money, he returned to his native country; but after being so long accustomed to London porter and English fare, he found in his old age that he could not do without them, so he returned to London, where he died. His successor was Ohrmann. [See HILL, W., & SON.] V. DE P.

SNODHAM, THOMAS. An early London music printer. He was the son-in-law of Thomas ESTE, and succeeded to the latter's business in 1609.

He published a great number of the madrigal books of his period, as Byrd's 'Psalms, Songs, and Sonnets,' 1611; Maynard's 'The XII. Wonders of the World set and composed for the Viol de Gamba,' 1611; Robert Tailour's 'Sacred Hymns,' 1615; a second edition of 'Pammelia,' and other works. By reason of some of his imprints reading 'Thomas Este alias Snodham,' it has been considered that Este changed his name. This, however, is a mistake, the fact being that Snodham (who had married into the family and obtained Este's business), merely desired to be associated with the better-known name of Este, Thomas Este having just then died. F. K.

SNOW, VALENTINE, was possibly son of Moses Snow, gentleman of the Chapel Royal from 1689 until his death, Dec. 20, 1702, and also lay-vicar of Westminster Abbey (Mus. B. Cambridge, 1606), and a minor composer. Valentine Snow became the finest performer upon the trumpet of his day; was a member of Handel's oratorio orchestra; and it was for him that the great composer wrote the difficult obbligato trumpet parts in 'Messiah,' 'Samson,' 'Dettingen Te Deum,' 'Judas Maccabæus,' etc. No better evidence of his ability can be required. In January 1753 he was appointed (in succession to John Shore, deceased) Sergeant Trumpeter to the King, which office he held until his death in December 1770. W. H. H.

SNUFFBOX, MUSICAL. See vol. i. p. 136. SOCIEDADE DE QUARTETOS DO PORTO (Quartet Society of Oporto). This Society originated in private musical gatherings at the house of a banker of Oporto (Sr. João Miranda Guimarães). In 1875 the violoncellist J. Casella settled in Oporto, and it was resolved to give public concerts. The first subscription was for twelve concerts, and resulted in a net profit of about £32. Encouraged by these results, the same little body of musicians has continued to give two series of chamber concerts yearly, twelve in the autumn, and six in the spring. They take place on Sunday afternoons in a small concert-room at the S. João Theatre.

The programmes are entirely instrumental, and consist of movements from the chamber-music of the great masters, as well as from the works of Grieg, Dvořák, Saint-Saëns, Liszt, Grädener, Svendsen, Tchaikovsky, and Miguel Angelo. Short analytical remarks are written by Sr. B. V. Moreira de Sá, to whose energy and enthusiasm the Society owes much of its success. W. B. S.

SOCIETA ARMONICA. Founded about 1827 for the purpose of giving subscription concerts in which symphonies, overtures, and occasionally instrumental chamber works were intermingled with vocal numbers usually drawn from the Italian operas. Mr. H. Forbee was the conductor, and Tolbecque and the younger Mori were the leaders of the band. Beethoven's Overture in C major, Berlioz's Overture to 'Les Francs Juges,' Reissiger's Overture in F minor, and the Overture to 'Les Huguenots,' were among the works which gained a first hearing in England at the Society's concerts; and Weber's Mass in G was also produced. Among the vocalists who assisted in the concerts were Mmes. Grisi, Persiani, Albertazzi, Bishop, Alfred Shaw, Miss Clara Novello, and Miss Birch, Messrs. Phillips, Rubini, Tamburini and Lablache, Mario and Ivanoff. The band included Spagnoletti, A. Griesbach, Willy, Wagstaff, Dando, Patey, Jay, Alsepte, Lindley, Hatton, Brookes, Dragonetti, Howell, Card, Ribas, Barrett, Harper, etc. Henri Herz, the pianist and composer, and Hausmann the violinist, made their first appearance in this country at the Societa Armonica. The concerts were successively held at the Crown and Anchor Tavern in the Strand, Freemasons' Tavern, and the Opera Concert room in the Haymarket. They terminated in or about the year 1850. C. M.

SOCIÉTÉ DE MUSIQUE DE CHAMBRE, POUR INSTRUMENTS À VENT. This is a Society for the performance of chamber-music for wind instruments in Paris. It was founded by Mons. Paul Taffanel, the distinguished flute-player, and the first concert took place on Feb. 6, 1879. Six concerts were given in the February, March, and April of each year at 4 P.M. on alternate Thursdays, at the Salle Pleyel; subscription, 20 francs per season. The executants were all artists from the Conservatoire concerts, or those of Pásdeloup—such as flute, Taffanel; oboe, Gillet and Boullard; clarinet, Grisez and Turban; bassoon, Espaignet and Bourdeau; horn, Garigue and Brémond; piano, Louis Diémer. A Society modelled on this, the 'Wind Instrument Chamber Music Society,' did good work in London in the years 1889-93. G.

SOCIÉTÉ DES CONCERTS DU CONSERVATOIRE. See vol. i. pp. 574, 575.

SOCIETY OF BRITISH AND FOREIGN MUSICIANS. A benevolent society, established in 1822 to provide a fund for the relief of its

members during sickness; to assist in the support of those who, by old age or unavoidable calamity may become unable to follow their profession; and to allow a certain sum at the death of a member or a member's wife. The office is at 28 Gerrard Street, and the Secretary is Mr. F. Orchardson. C. M.

SOCIETY OF BRITISH COMPOSERS. This Society was founded in 1905 with the primary object of promoting the publication of works by British composers. As a proof of the need of something of the kind, it may be pointed out that in two years after the Society's formation the number of members (composers) and associates (others interested in the movement) was 254, while there had been published forty-four works of various kinds, principally chamber-music and songs. The Society issues a Year-Book, which is a useful volume, being a complete list of its members' compositions, published or in MS. The publication of music is undertaken by the Society, either by defraying the whole or part of the cost, subject to the approval of an elected council, or at the sole expense of the composer concerned; the engraving and printing is done at cost price and the terms as to royalties, etc., are of an exceedingly favourable nature. The publications are issued by the publishing company, Charles Avison, Ltd., on behalf of the Society, and the trade agents are Messrs. Breitkopf & Härtel. N. G.

SOCIETY OF BRITISH MUSICIANS, THE, was founded in 1834 with the object of advancing native talent in composition and performance. In the original prospectus of the Society attention was called to the contrast between the encouragement offered to British painting, sculpture, and the tributary arts at the Royal Academy, and the comparative neglect of English music and English musicians, the overwhelming preponderance of foreign compositions in all musical performances being cited as 'calculated to impress the public with the idea that musical genius is an alien to this country,' and as tending also 'to repress those energies and to extinguish that emulation in the breast of the youthful aspirant, which alone can lead to pre-eminence.' One of the rules adopted was to exclude all foreign music from the programmes of the Society's concerts and to admit none but natives of Great Britain among its members; but this was set aside in 1841, when the Committee reported in favour of 'introducing a limited proportion of music by composers not members of the Society either British or foreign,' and the suggestion was adopted, though not without strong opposition, in which the editor of the *Musical World* joined (*Musical World* of Oct. 14, 1841). In its earlier days the Society achieved a complete success, numbering in 1836 as many as 350 members, while its finances were also in a prosperous state. It not only gave concerts of works of established merit, but

adopted a system of trial performances at which many new compositions were heard. The programmes included the names of all the leading English writers of the day, who as a rule conducted their own works, among them Cipriani Potter, G. A. Macfarren, W. H. Holmes, W. L. Phillips, Sterndale Bennett, J. Hullah, J. H. Griesbach, T. German Reed, W. M. Rooke, H. Westrop, Joseph Barnett, H. C. Litolf, C. Lucas, T. M. Mudie, James Calkin, and John Goss. The music included orchestral and chamber compositions, varied by vocal solos and part-music, to which nearly all the above-named composers contributed original works, and the members in turn directed the performances. After 1837 the Society began to decline, and even when the introduction of music by foreign composers was resolved upon, in the hope of creating more general interest in the concerts, it failed to restore the Society to prosperity, and after another period of far from successful management a special appeal for support was put forth at the close of 1854. At that date the members included Messrs. H. C. Banister, W. S. Bennett, H. Blagrove, J. B. Calkin, C. Coote, J. T. Cooper, W. H. Holmes, C. E. Horsley, H. Lazarus, E. J. Loder, Kate Loder (Lady Thompson), C. Neate, W. S. Rockstro, C. Severn, C. Steggall, C. E. Stephens, J. W. Thirlwall, H. J. Trust, F. Westlake, H. Westrop, J. Zerbini, and Sir George Smart. This effort was ridiculed in the *Musical World* of Dec. 16, 1854, on the ground that the Society had no true claim to its title, as many composers and artists of note held aloof from it. The movement served, however, to draw some new friends to the ranks, and as a means of fulfilling its objects prizes were offered for chamber compositions, which were gained in 1861 by Ebenezer Prout and Edward Perry for string quintets; in 1863 by J. Lea Summers and W. Gibbons, also for string quintets; and in 1864 by Ebenezer Prout and J. Lea Summers, for quartets for piano and strings. The umpires on these occasions included Joachim, Molière, Piatti, Cipriani Potter, G. A. Macfarren, A. Mellon, T. M. Mudie and H. Leslie. In 1865 the Society was dissolved, its library was sold by Messrs. Puttick & Simpson, and Mr. C. E. Stephens was appointed custodian of the minute-books, etc. The secretaries of the Society were Messrs. J. R. Tutton (its founder), 1834-35; G. J. Baker, 1835 until his death in 1851; J. Rackham, 1851-54; W. W. Grice, 1854-55. The honorary treasurers were the three brothers Erat, in succession to each other, in 1834-58; and Cipriani Potter held the post in 1858-65. The Society and its library were housed gratuitously at 23 Berners Street, by Messrs. Erat, from 1834 until 1858, when they gave up the premises; 1858-59 in Wornum's Music Hall, Store Street; 1860 in St. Martin's Hall until its destruction by fire on August 26, 1860

(when the Society's property was saved); 1860-1862 at 44 Charlotte Street, Fitzroy Square, by permission of Mr. H. Webb; and 1862-65 at Messrs. Collard's, Grosvenor Street, free of all expense. For the first five years the concerts were given at the Hanover Square Rooms, and the trials of orchestral and chamber works were subsequently held at those rooms or at the above-named buildings. On July 20, 1843, the Society gave a complimentary concert to Spohr at Erat's, and on June 15, 1844, at the same place, a complimentary concert to Mendelssohn. C. M.

SÖDERMAN, AUGUST JOHAN, one of the greatest Swedish composers of modern times, was born in Stockholm, July 17, 1832—his father being director of the orchestra at a minor theatre—and at an early age displayed traces of musical genius. When eighteen years of age he was selected by Stjernström, the director of the orchestra at the Royal theatre in Stockholm, as instructor to a company of musicians, then on a tour to Finland. On his return Söderman wrote his first operetta, with the fantastic title, 'The Devil's first Rudiments of Learning,' which was performed at the Mindre theatre at Stockholm, Sept. 14, 1856. During the following two years he stayed in Leipzig, studying under Richter and Hauptmann; in the year 1860 he was appointed chorus-master at the Royal Opera in Stockholm; and from that date until his election as a member of the Swedish Academy of Music, his life was occupied in such minor offices in the musical world as are too often the lot of great composers when cast in a small community. But however poor the offices he held, Söderman filled them with a sincerity and zeal which many a man of inferior talents might have envied. [About 1865 the generosity of Jenny Lind enabled him to continue his studies in Germany.]

His works are about sixty in number—operettas, songs, ballads, part-songs, funeral marches, and cantatas; of which, however, only half have been printed, and these at the expense of the Swedish Government after his death. Of the printed works we can only mention a few, besides the above-mentioned, namely, two operettas, 'The Wedding at Ulfasa,' and 'Regina von Emmeritz'; overture and incidental music to 'The Maid of Orleans'; songs; Trios for male voices, containing the Finnish national air 'Suomi säng'; a quartet for female voices, 'Bröllop,' very popular in Germany, a Circassian dance, and a concert-overture, also 'Sacred songs for organ,' containing a number of hymns of great beauty and purity, of which the best known are a Benedictus and an Agnus Dei. Though a Protestant, his *chef-d'œuvre* is a Mass for solos, chorus, and orchestra, which has only been rarely performed in Stockholm, but is considered by his countrymen as equal to any by the great composers, and

which is animated by such sincere devotion, and stamped by such a high degree of originality and masterly finish, as to rank among the choicest gems of Swedish music.

Another of his works worth mention is his music to the poetry of Bellman. This poet, whose genius is akin to that of Marlowe, has written a number of rhapsodies, depicting the gay, jovial, and careless nature of the Swede, with a force of animal spirit and genuine originality which few other poets have equalled; and to these productions, which every Swede knows by heart, Söderman set music.

The foreign composers who seem to have influenced his more elaborate productions are Beethoven, Schubert, and, in particular, Schumann. His compositions, though thoroughly Swedish, are not national; they bear the impress of the vigorous and energetic nature of the Northerner, which makes Scandinavian compositions so charming. Söderman died Feb. 10, 1876, at the early age of forty-four, and a national subscription was at once raised in Sweden for the benefit of his widow and children. It was a token of the gratitude and respect of a musical nation for a great composer. c. ss.

SOGGETTO (Ital. *Subject* or *Theme*). The true subject of an orthodox Fugue as opposed to the Andamento, which is a subject of abnormal length; and the Attacco, which is a mere Point of Imitation.

In its most regular form, the Soggetto consists of a single homogeneous section; as in No. 1 of 'Das Wohltemperirte Clavier.' Occasionally, however, its division into two sections is very clearly marked; as in No. 7 of the same. Subjects of this last-named class frequently make a very near approach to the Andamento, from which they sometimes differ only in their less extended dimensions. [See **ANDAMENTO** and **ATTACCO**, and **FUGUE**, vol. ii. p. 116a.] w. s. r.

SOKALSKY, PETER, PETROVICH, born at Kharkov, Sept. 26, 1832; died at Odessa in March 1887. He was educated at the University of Kharkov, and while acting as under-master in one of the public schools in the town began to collect the folk-songs of the district. Later in life (1857-60) he was Secretary to the Russian Consulate in New York, and on his return to Russia became editor of the *Odessa News*. Sokalsky composed several operas: 'Maria' ('Mazeppa'), 'A Night in May,' and 'The Siege of Doubno' (from Gogol's *Tarass Boulba*). His article upon *The Chinese Scale in Russian National Music*, and *Russian National Music* (Kharkov, 1888), are valuable to students of this subject.

VLADIMIR IVANOVICH, his nephew, born at Heidelberg, May 6, 1863, studied law at the university of Kharkov. His unpublished compositions include a symphony in G minor (Kharkov, 1894), a dramatic Fantasia, an

Eastern March, and an Andante Elegiac for violoncello and orchestra. His pianoforte pieces, 'Impressions Musicales' op. 1, the pianoforte suite 'In the Meadows,' and some songs, have been published. R. N.

SOKOLOV, NICHOLAS ALEXANDROVICH, composer, born in St. Petersburg, 1859. Here he studied at the Conservatorium from 1877 to 1885 and was a pupil of Rimsky-Korsakov. His chief compositions are: 'Elegy' (op. 4), and incidental music to Shakespeare's 'Winter's Tale,' for orchestra; three string quartets, opp. 7, 14, and 20; eight pieces for violin and pianoforte; six for violoncello and pianoforte; seven choruses a *cappella*; four choruses for female voices; about eighty songs, and a ballet entitled 'The Wild Swans.' R. N.

SOL. The fifth note of the natural scale according to the nomenclature of France and Italy; in English and German G. In the old hymn from which Guido is supposed to have formed the scale it occurs as follows:—

*Ut queant laxis resonare fibris,
Mira gestorum famuli tuorum,
Solve pollutis labia reatis,
Sancte Johannes.*

G.

SOLDAT, MARIE (Madame Soldat-Röger), violinist, was born at Graz on March 25, 1864. In her fifth year she studied the pianoforte under her father, a professional organist. Two years later she began to learn the organ, and was soon able occasionally to act as substitute for her father. Then in her eighth year she took up the violin, under Pleiner, and appeared in public when ten years of age, performing the 'Fantaisie-Caprice' of Viextemps, a type of music with which she has not since been identified. Coming under the influence of Joachim and Brahms she resumed study in the Berlin Hochschule in 1879, remaining there till 1882 and gaining the Mendelssohn prize. She subsequently took private lessons from Joachim, whose repertoire both of solo and chamber music she adopted, making a special study of the Brahms concerto, which she introduced for the first time to a Viennese audience under Richter. In 1889 she was married to Herr Röger, a lawyer by profession, but has since continued her public career. She has travelled a great deal as a soloist, visiting England occasionally (playing for the first time at a concert of the Bach Choir, March 1, 1888), and has a following among those who admire solid before brilliant acquirements. w. w. c.

SOLESMES. A village near Le Mans, whose Benedictine monastery has become famous through the labours of its monks in the restoration of liturgical music, for which they established a printing press, with special type.

The order of the 'Congregation of France,' better known in England as the 'Benedictines of Solesmes,' was founded in 1833 by Dom Prosper Guéranger, who became the first Abbot.

Under Guéranger and his successors, Solesmes became a centre for the study and execution of plain-song, and was visited by many students from all parts of Europe. In 1901, however, owing to their non-compliance with the new Law of Associations, the monks were expelled from Solesmes, and moved in a body to Appuldurcombe, in the Isle of Wight, where they still are; but in 1908 they propose to settle at Quarr Abbey, near Ryde. Their printing-press having been confiscated by the French Government, the publication of their works is now carried out by the firm of Desclée et Cie, Tournai, Belgium. Their choir in the Isle of Wight is the practical exponent of their method, and they hold a 'Summer School,' in July and August, for the benefit of those who wish to study and hear plain-song.

The work of reform began under Dom Guéranger, who, wishing to restore Gregorian music to its earliest known form,¹ engaged his colleagues Dom Pothier and Dom Jausious (d. 1870) to examine and compare manuscripts, laying down as a principle that 'where the manuscripts of different periods and different countries agree in their version of a melody, it may be affirmed that the true Gregorian text has been discovered.'

But it was of little use to discover the true text unless the proper method of its performance could also be found. At that time Gregorian music, following the traditions of Zarlino and others, was sung in a slow, heavy, unaccented, and unrhymical style, and accompanied on the organ by a separate chord to each note. This style was afterwards alluded to by the Solesmes monks as the 'hammered,' '*martelé*,' style. Guéranger and Pothier, on studying the theoretical works of the 9th and 10th centuries, found that plain-song had anciently a rhythm peculiar to itself, differing in important particulars from that of measured music. The first result of this discovery was that Dom Guéranger 'was able to give the singing at Solesmes a rhythm that no one had yet dreamed of,'² and from henceforth the chief aim of the musicians of Solesmes was to perfect the rhythmical theory as well as the musical readings.

In 1881 the first edition appeared of '*Les Mélodies grégoriennes, d'après la tradition*,' by Dom Pothier, treating the whole theory of plain-song from an entirely new point of view. This important work has formed the basis of all subsequent studies.

The investigations now went on more earnestly than ever. Photography was called in to aid, monks were sent to the principal libraries of Europe to photograph codices, and the year 1883 saw the publication by Dom Pothier of the '*Liber Gradualis a Gregorio Magno olim ordinatus, cum notis musicis . . . restitutis in usum Congregationis Benedictinæ Galliarum*.'

¹ For the reason why the earliest form is preferable to that of the time of Palestrina, see PLAIN-SONG, vol. iii. p. 761.

² *Plain-Chant and Solesmes*. Cagin and Mocquereau.

This was followed in 1891 by the '*Liber Antiphonarius pro Vesperis et Completorio*,' also by Pothier, and in 1896 by the '*Liber Usualis Missæ et Officii*,' by Mocquereau.

But others besides the monks of Solesmes were now in the field, endeavouring to reform the liturgical music. Chief among them was Frederic Pustet of Ratisbon, who obtained from Pius IX. a decree under which he was given, by the Congregation of Sacred Rites, the sole right for thirty years of republishing the celebrated 'Medicean' edition, authorised by Paul V. in 1614. The same authority recognised Pustet's publication as the official version of plain-song, and recommended it for use in the whole of the Roman Church. The privileges thus given were confirmed by the next Pope, Leo XIII.

This version (known as the 'Ratisbon' edition), which also claims to be the true music of Gregory, is founded on an entirely different principle from that of Solesmes. It is explained thus in the *Magister Choralis* of Haberl (Ratisbon, 1893): 'Since the 13th century a principle has existed of improving the melodies by cutting down their enormous length, which arose, partly through a bad method of execution, and partly through the *manieren* of singers. . . . The revision undertaken by the Congregation of Sacred Rites by order of Pius IX. put the foundation of the Roman Chant on the system followed since the Council of Trent.'

The Solesmes view is that at the time the Medicean edition was authorised, plain-song had reached, not its highest development, but its most decadent stage: that in the time of Palestrina, who is supposed to have had a hand in preparing the edition, the traditions of its proper performance had been forgotten for centuries; and that its real apogee was immediately after the time of Gregory the Great, when it was collected and written down, and its method of performance described by the theoretical writers.

To support the truth of these views Dom André Mocquereau (now Prior of the Abbey), who brought exceptional musical training to bear on the work, commenced in 1889 a quarterly publication, entitled *Paléographie musicale*, consisting of photographic facsimiles of Gregorian, Ambrosian, Mozarabic, and Gallican manuscripts, together with exhaustive discussions of the various questions involved. The melodies obtained through the comparative study of many manuscripts on the principle laid down by Guéranger, when sung by the Solesmes choir according to the method explained in the *Paléographie*, proved to be of greater artistic and æsthetic excellence than any other form of plain-song.

Owing to the support given to the Ratisbon edition, the monks did not at first obtain recognition beyond their monastery and a few similar establishments. Their labours were,

however, rewarded when in 1904 the new Pope, Pius X., who is well versed in music, established a Papal Commission to prepare a new Official Edition, and at the same time wrote to Dom Paul Delatte, the present Abbot, appointing the monks of Solesmes to be the editors. This edition, known as the 'Vatican edition,' has, up to the present date (1907), embraced the Kyrie, or ordinary of the mass, and the Commune Sanctorum. It is primarily based on the 'Liber gradualis'; but in the preparation of that work the learned editor had not the abundant means of research at his disposal which have since been available;¹ hence certain deficiencies became apparent when the book came into use. These are removed in the Vatican edition, while the monks are issuing for their own use a special Vatican edition containing the marks of expression as performed by them.

The practical application of the laws of Rhythm to the chant is described in the various 'Methods of Plain-Chant' that have issued from the Solesmes and other presses. The theory underlying what is known to modern students of plain-song as 'Free Rhythm' may be briefly described as follows. Free Rhythm arose from the setting of the words of Scripture to music at a time when the idea that melody could have a rhythm of its own, to which the words sung must conform in respect of time-duration, had not yet been thought of. Free Rhythm practically obeys all the laws of modern musical rhythm except that of definitely fixed time-relationship. Writing in the 11th century, when its laws were still understood, and when what we call 'Free' was called by musicians 'Prose Rhythm,' Aribo says: 'Good Prose Rhythm requires that there should be a rough balance in the groups of syllables, and, naturally, also in the groups of accents, and in the members of sentences: but they are not to be subjected to the rigorous laws of metre.'

In 'Syllabic Plain-song,' in which each syllable has a single note (or at most two or three notes very occasionally), the accentuation of the melody is ruled by that of the words. For rhythmical purposes, as well as for the understanding of the ideas to be expressed by them, words are divided into accented and unaccented syllables, and are also grouped into sentences and 'members of sentences.' This is a law of all language, and Syllabic Plain-song is simply prose language uttered in melody instead of being spoken. The technical plain-song names for sentences and members of sentences are *Distinctiones major* and *minor*, and the *distinctiones* are separated by *cæsuras*. At each *cæsura* there is a *Mora ultimæ vocis* (*ritardando*) which obeys certain rules.

In 'Melismatic Plain-song,' of which the short passage quoted below is an example, the same laws of 'distinctions,' *cæsuras*, and 'moræ' are applied, the syllables and words of prose being represented in the melody by the groups of neumes, which may not only occur in connection with the single verbal syllables, but may form long 'Melismata,' apart from the words. The technical name for the melisma is 'Pneuma,' i.e. 'Breathing,' which must not be confounded with 'Neuma,' a note, or group of notes. The intimate relation as to rhythm between the neume in melody and the syllable in words is shown by the fact that groups of notes are often called 'Syllabæ' by the ancient writers. The chant is now executed more rapidly than in the days of the 'hammered' style; and the notes have no relative time-value, but take their duration from the syllables in Syllabic, and from certain rules in Melismatic melody.

The opening phrase of the Gradual 'Justus ut palma,' as found in the Ratisbon and Solesmes books respectively, will serve to show the difference between the two versions. The difference in method of performance can only be observed by a visit to one of the many churches in which Solesmes Plain-song is now cultivated. Below it is appended the Solesmes example in modern

RATISBON.

SOLESMES.

(When using modern notation the Solesmes editors place dots over accented notes: the dots are not to be read as staccato signs.)

¹ Two monks are now engaged in visiting all the chief libraries of Italy, armed with letters of commendation from the Pope and the Prime Minister. It is said that photographs are arriving at Appuldurcombe at the rate of 1000 a week, and the library possesses some 500 complete codices in facsimile.

notation, as nearly as its rhythm can be expressed, free rhythm not admitting the exact relation implied by crotchets and quavers.

The following is a list of the more important works connected with plain-song published by the monks of Solesmes. The dates are those of the latest editions.

1881. *Les Mélodies grégoriennes d'après la Tradition*. Pothier.
 1883. *Liber Gradualis*. Pothier.
 1889. The *Paléographie musicale* was commenced by Dom Mocquereau, who has acted as editor and chief contributor. Up to the present it has published:—
 Vol. I. *Antiphonale missarum Sancti Gregorii*. 10th century. St. Oall Library, Codex 338.
 Vol. II. and III. *The Gradual 'Justus ut palma,'* reproduced from over 200 MSS.
 Vol. IV. *Antiphonale missarum Sancti Gregorii*. 10th-11th century. Library of Einsiedeln, Codex 121.
 Vol. V. and VI. The earliest known Ambrosian Antiphonary. 12th century. British Museum, Codex Add. MSS. 34, 208.
 Vol. VII. and VIII. *Antiphonarium Tonalis Missarum*. 11th century. Library of the School of Medicine, Montpellier, Codex H. 159. This MS. has alphabetical notation above the neumes.
 Vol. IX. *Monastic Antiphonary*. 12th century. Capitular Library of Lucca, Codex 601. (In progress.)
 In addition to the above, there is a second series of the *Paléographie musicale*, not published at definite intervals. The only volume that has appeared as yet contains the *Monastic Antiphonary of Hartker*. 10th century.
 1889. *Origine et développement de la Notation neumatique*. Mocquereau.
 1893. *Questions Grégoriennes*. Mocquereau.
 1897. *Liber Antiphonarum pro Vesperis et Completorio*. Pothier.
Liber Antiphonarum pro diurnis horis. Pothier.
 1900. *Chants des Offices*. Mocquereau.
 1902. *Manual de la Messe*. French and Latin. Mocquereau.
 1903. *Liber Usualis Missae et Officii*. Mocquereau.
 1906. *Liber Usualis Missae et Officii*. Mocquereau.
 1907. *Kyrie, seu Ordinarium missae cum cantu gregorio, ad exemplar editionis Vaticanae, concinnatum et rhythmicis signis a Solmensibus monachis diligenter ornatum*.
 1907. In the Press. *Méthode complète de Chant grégorien*. Mocquereau. C. F. A. W.

SOL-FA. 'To sol-fa' is to sing a passage or a piece of vocal music, giving to the notes, not the words, but the syllables, Do (C), Re (D), Mi (E), Fa (F), Sol (G), La (A), Si (B), Do (C). Why the two syllables Sol and Fa should have been chosen to designate this process in preference to Do Re, or Re Mi, does not appear. For the Tonic Sol-fa system, see **TONIC SOL-FA**.

In a hymn written by Arrigo Boito and composed by Mancinelli, for the opening of the monument of Guido d'Arezzo at Rome, the seven syllables (see **SOL**) are thus employed:—

*Util di Guido regola superna
 Misuratrice facile de' suoni
 Solenne or tu laude a te stessa intuoni,
 Sillaba eterna.*

The roll or stick with which the conductors of church choirs in Italy heat the time is called the *Sólla*. G.

SOLFEGGIO, E GORGHEGGIO. Solfeggio is a musical exercise for the voice upon the syllables Ut (or Do), Re, Mi, Fa, Sol, La, forming the Guidonian Hexachord, to which was added later the syllable Si upon the seventh or leading-note, the whole corresponding to the notes C, D, E, F, G, A, B of the modern Diatonic scale. These names may be considered the result of an accident ingeniously turned to account, the first six being the first syllables of half lines in the first verse of a hymn for the festival of St. John Baptist, occurring upon the successive notes of the rising scale, with a seventh syllable perhaps formed of the initial

letters of Sancte Johannes. [See **SOL**, **SOLMISATION**.]

The first use of these syllables is ascribed to Guido d'Arezzo as an artificial aid to pupils 'of slow comprehension in learning to read music,' and not as possessing any special virtue in the matter of voice-cultivation; but it is by no means clear that he was the first to use them. At any rate they came into use somewhere about his time. It is probable that even in Guido's day (if voice-cultivation was carried to any grade of perfection—which is hardly likely in an age when nearly all the music was choral, and the capacities of the voice for individual expression were scarcely recognised), as soon as the notes had been learned, the use of syllables was, as it has been later, superseded by vocalisation, or singing upon a vowel. The syllables may be considered, therefore, only in their capacity as names of notes. Dr. Crotch, in his treatise on Harmony, uses them for this purpose in the major key, on the basis of the movable *Do*, underlining them thus, *Do*, etc., for the notes of the relative minor scales, and gives them as alternative with the theoretical names—Tonic, or *Do*; Mediant, or *Mi*; Dominant, or *Sol*, etc. The continued use of the syllables, if the *Do* were fixed, would accustom the student to a certain vowel on a certain note only, and would not tend to facilitate pronunciation throughout the scale. If the *Do* were movable, though different vowels would be used on different parts of the voice, there would still be the mechanical succession through the transposed scale; and true reading—which Hullah aptly calls 'seeing with the ear and hearing with the eye,' that is to say, the mental identification of a certain sound with a certain sign—would not be taught thereby. Those who possess a natural musical disposition do not require the help of the syllables; and as pronunciation would not be effectually taught by them, especially after one of the most difficult and unsatisfactory vowels had been removed, by the change of Ut to Do, and as they do not contain all the consonants, and as, moreover, voice-cultivation is much more readily carried out by perfecting vowels before using consonants at all,—it was but natural that vocalisation should have been adopted as the best means of removing inequalities in the voice and difficulties in its management. Crescentini, one of the last male sopranis, and a singing-master of great celebrity, says, in the preface to his vocal exercises, 'Gli esercizi sono stati da me immaginati per l'uso del vocalizzo, cosa la più necessaria per perfezionarsi nel canto dopo lo studio fatto de' solfeggi, o sia, nomenclatura delle note'—'I have intended these exercises for vocalisation, which is the most necessary exercise for attaining perfection in singing, after going through the study of the sol-fa, or nomenclature of the notes.' Sometimes a kind

of compromise has been adopted in exercises of agility, that syllable being used which comes upon the principal or accented note of a group or division, e.g.

The word 'Solfeggio' is a good deal misused, and confounded with 'Vocalizzo' in spite of the etymology of the two words. The preface to the fourth edition of the 'Solfèges d'Italie' says 'La plupart des Solfèges nouveaux exigent qu'ils soient *Solfiés sans nommer les notes.*' Here is an absurd contradiction, and a confusion of the two distinct operations of Solfeggiare and Vocalizzare. We have no precise equivalent in English for Solfeggio and Solfeggiare. The French have Solfège and Solfier. We say, to Sol-fa, and Sol-faing. As a question of voice-production, the wisdom of vocalisation, chiefly upon the vowel *a* (Italian), and certainly before other vowels are practised, and most decidedly before using consonants, has been abundantly proved. The use of the words in question is not therefore a matter of much importance. This appears to be in direct opposition to the advice of a very fine singer and an eminent master, Pier Francesco Tosi, whose book upon singing was published at Bologna in 1723, the English translation by Galliard appearing in 1742. He says, 'Let the master never be tired in making the scholar sol-fa as long as he finds it necessary; for if he should let him sing upon the vowels too soon, he knows not how to instruct.' 'As long as he finds it necessary,' however, is a considerable qualification. The world lives and learns, and Crescentini's verdict may safely be accepted. The vowel *a*, *rightly pronounced*, gives a position of the resonance-chambers most free from impediment, in which the entire volume of air vibrates without after-neutralisation, and consequently communicates its vibrations in their integrity to the outer air; this, therefore, is the best preparation, the best starting-point for the formation of other vowels. After this vowel is thoroughly mastered the others are comparatively easy, whereas if *i* or *u* (Italian) are attempted at first, they are usually accompanied by that action of the throat and tongue which prevails to such a disagreeable extent in this country. When the vowels have been conquered, the consonants have a much better chance of proper treatment, and of good behaviour on their own part, than if attacked at the outset of study. Vocalisation upon all the vowels throughout the whole compass of the voice should be practised after the vowel *a* is perfected; then should come the practice of syllables of all kinds upon all parts of the voice; and then the critical study and practice (much neglected) of recitative.

The words GORGHEGGIO and GORGHEGGIARE, from *Gorga*, an obsolete word for 'throat,' are applied to the singing of birds, and by analogy to the execution of passages requiring a very quick and distinct movement or change of note, such as trills and the different kinds of turn, also reiterated notes and quick florid passages in general. The English verb 'to warble' is given as the equivalent of *gorgheggiare*, but warbling is usually accepted to mean a gentle wavering or quavering of the voice, whereas agility and brilliancy are associated with the Italian word. A closer translation, 'throat-singing,' would give a rendering both inadequate and pernicious—inadequate, as throat-singing may be either quick or slow, and pernicious as suggesting unnecessary movement of the larynx, and helping to bring about that defective execution so often heard, in which there is more breath and jar than music, closely resembling unnecessary movement of the hand when using the fingers upon an instrument. The fact is, that execution, however rapid, should be perfect vocalisation in its technical sense, and perfect vocalisation has for its foundation the *Portamento*. The Portamento (or carrying of the voice—the gradual gliding from one note to another) removes inequalities in the voice, and facilitates the blending of registers. Increased in speed by degrees, the voice learns to shoot from note to note with lightning-like rapidity, and without the above-named convulsion of the larynx which produces a partial or total cessation of sound, or at any rate a deterioration of sound during the instantaneous passage from note to note. It is this perfect passage from note to note, without lifting off or interrupting the voice, that fills space with a flood of sound, of which Jenny Lind's shake and vocalised passages were a bright example. But this kind of vocalisation is the result of years of conscientious practice and the exercise of a strong will. With such books as those of Garcia, Panzeron, Madame Sainton, Randegger, etc. etc., and of course some special passages for individual requirements, to say nothing of those of Rossini, and the numberless vocalizzi of Bordogni, Nava, etc. etc., the 'Solfèges d'Italie,' and the 'Solfèges du Conservatoire,' there is work enough if students will avail themselves of it. Tosi, in speaking of the difficulties in teaching and learning the shake, says, 'The impatience of the master joins with the despair of the learner, so that they decline further trouble about it.'

The first of the two great works just named is entitled 'Solfèges d'Italie, avec la Basse chiffrée, composés par Durante, Scarlatti, Hasse, Porpora, Mazzoni, Caffaro, David Perez, etc. Dédiés à Messieurs les premiers Gentilshommes de la chambre du Roi [Louis XV.], et recueillis par les Srs. Levesque et Bêche, ordinaires de la Musique de sa Majesté.' The work

is therefore obviously a collection of Italian Solfeggi made in France by Frenchmen. Levesque was a baritone in the King's Chapel from 1759 to 1781, and in 1763 became master of the boys. Bèche was an alto. The first edition of the work appeared in 1768; the fourth, published by Cousineau, at Paris in 1786. It forms one large oblong volume, and is in four Divisions: I. The 'indispensable principles' of singing—names of notes, etc., and 62 easy (anonymous) Solfeggi in the G clef with figured bass. II. Solfeggi 63 to 152 for single voices in various clefs—including G clef on second line and F clef on third line—in common, triple, and compound time, all with figured basses. III. Solfeggi 153–241, with changing clefs, and increasing difficulties of modulation and execution—ending with the *Exclamations* quoted in the text; all with figured basses. Divisions II. and III. are by the masters named in the title; each Solfeggio bearing the composer's name. IV. 12 Solfeggi for two voices and figured bass by David Perez, each in three or four movements. The forms of fugue and canon are used throughout the work, and some of the exercises would bear to be sung with words.

A later and very complete collection of exercises and studies is that published in Paris by Hengel under the title of 'Solfèges du Conservatoire, par Cherubini,¹ Catel, Méhul, Gossec, et Langlé,' edited by Edouard Batiste, Professeur de Solfège, etc. It is in eight volumes 8vo, including a hundred preparatory exercises by Batiste himself. The first exercise in the main collection is a short theme with 57 variations. The studies increase in difficulty, and the later ones require great powers of vocalisation. Those by Gossec abound in reiterated notes and in passages of extended compass. There are duets and trios, some of which are very elaborate. A curious one by Cherubini is in free fugal imitation, with the respective entries of the second and third voices taking place at an interval of 24 bars. Canons and fugues are in abundance, amongst them a fugue in 5–4 by Catel. One exercise by Cherubini is without bars, and another by the same composer is headed 'Contrepoint rigoureux à cinq voix sur le Plain Chant.' If these two collections of vocalizzi are *studied* and *conquered*, an amount of theoretical and practical knowledge, as well as control over the voice, will have been gained that will fulfil every possible requirement preparatory to acquaintance with the great operatic and oratorical works. Mention must not be omitted of Concone's useful Exercises, of more modest calibre, which have gained a large popularity throughout musical Europe; nor of those of Madame Marchesi-Granmann, which give a

great deal of excellent work, and were highly approved by Rossini.

H. C. D.

SOLIÉ, JEAN PIERRE (real name SOLUËR), born at Nîmes, 1755, died in Paris, August 6, 1812, was one of the good singers and composers at the Opéra-Comique in its early days. The son of a violoncellist he learnt that instrument, and had a good musical education at the Nîmes *maîtrise*, after which he played in the orchestra and taught singing till his début as a tenor in 1778. His success in the provinces tempted him to go to Paris, but he failed at first, in 1782, and remained away till after three years' success in the largest theatre of Lyons. He was engaged in 1787 for the Opéra-Comique, where he remained, gradually making his way upwards to the first place in the company, especially after relinquishing the part of *tenor de goût* for that of baritone. The baritone was then a novelty, and Méhul wrote for Solié several parts which have since become identified with his name. He next tried his hand at composition, and with equal success, for his opéras-comiques number 33 in all, 'Jean et Geneviève' (1792) being the first, and 'Les Ménestrels,' three acts (1811) the last. 'Le Jockey' (Jan. 6), 'Le Secret' (April 20, 1796), 'Le Chapitre Second' (June 17, 1799) in one act; and 'Le Diable à quatre' (Nov. 30, 1809), and 'Mademoiselle de Guise' in three (March 17, 1808), were published. Though this music is now entirely out of date, many of its pretty airs became favourites with the vaudeville writers, and were set to a variety of words. Several may be found in the 'Clé du Caveau.'

Solié had several sons; the eldest drowned himself in 1802; but Émile (born in Paris, 1801) published in 1847 two pamphlets on the Opéra-Comique and Opéra, also some short biographies of French musicians. He left a son, Charles, a conductor, who produced at Nice, in 1879, an opéra-comique, 'Scheïnn Baba, ou l'intrigue du Harem,' three acts. G. C.

SOLMISATION (Lat. *Solmisatio*). The art of illustrating the construction of the musical scale by means of certain syllables, so associated with the sounds of which it is composed as to exemplify both their relative proportions, and the functions they discharge as individual members of a system based upon fixed mathematical principles.

The laws of Solmisation are of scarcely less venerable antiquity than those which govern the accepted proportions of the scale itself. They first appear among the Greeks, and after making the necessary allowance for differences of tonality, the guiding principle in those earlier times was precisely the principle by which we are guided now. Its essence consisted in the adaptation to the Tetrachord of such syllables as should ensure the recognition of the Hemitone, wherever it occurred. Now, the Hemitone of the Greeks, though not absolutely identical

¹ Cherubini's Autograph Catalogue [see vol. i. p. 509b] contains an immense number of Solfeggi written between the years 1822 and 1842, in his capacity of Director of the Conservatoire, for the examinations of the pupils of that institution.

with our Diatonic Semitone, was its undoubted homologue;¹ and throughout their system this Hemitone occurred between the first and second sounds of every Tetrachord; just as, in our major scale, the semitones occur between the third and fourth degrees of the two disjunct Tetrachords by which the complete octave is represented. Therefore, they ordained that the four sounds of the Tetrachord should be represented by the four syllables, *ta, te, ti, to*; and that, in passing from one Tetrachord to another, the position of these syllables should be so modified, as in every case to place the Hemitone between *ta* and *te*, and the two following Tones between *te* and *ti*, and *ti* and *to*, respectively.²

When, early in the 11th century, Guido d'Arezzo substituted his Hexachords for the Tetrachords of the Greek system, he was so fully alive to the value of this principle that he adapted it to another set of syllables, sufficiently extended to embrace six sounds instead of four. In the choice of these he was guided by a singular coincidence. Observing that the melody of a hymn, written about the year 770 by Paulus Diaconus, for the festival of St. John the Baptist, was so constructed, that its successive phrases began with the six sounds of the Hexachord, taken in their regular order, he adopted the syllables sung to these notes as the basis of his new system of Solmisation, changing them from Hexachord to Hexachord, on principles to be hereafter described, exactly as the Greeks had formerly changed their four syllables from Tetrachord to Tetrachord.

The image shows a musical staff with notes and syllables. Above the staff are three hexachord labels: C sol-fa-ut, D la-sol-re, and E la-mi. Below the staff are three more labels: F fa-ut, G sol-re-ut, and A la-mi-re. The syllables are: UT que-ant lax-le, RE-ao-na-re fi-hris, MI-ra ges-to-rum, FA-mu-li tu-o-rum, SOL-ve pol-lu-ti, LA-bi-li re-a-tum, sanc-te Io-an-nes.

It will be seen from this example that the syllables, *Ut, Re, Mi, Fa, Sol, La*,³ were originally sung to the notes C, D, E, F, G, A; that is to say, to the six sounds of the Natural Hexachord; and that the semitone fell between the third and fourth syllables, *Mi* and *Fa*, and these

¹ The Diatonic Semitone is represented by the fraction $\frac{1}{2}$; the Greek Hemitone by $\frac{1}{4}$; that is to say, by a Perfect Fourth, minus two Greater Tones.

² Though the true pronunciation of the Greek vowels is lost, we are not left without the means of forming an approximate idea of it, since Homer uses the syllable $\beta\eta$ to imitate the bleating of the sheep.

³ Gerard Vossius, in his tract *De quatuor Artibus popularibus* (Amsterdam, 1650), mentions the following Dialect as having been written, shortly after the time of Guido, for the purpose of impressing the six syllables upon the learner's memory.

*Cur adhibes tristi numeros cantumque labori?
UT RElevet (MIserum FATum SOLItosque LABores.)

only. [See HEXACHORD.] But, when applied to the Hard Hexachord, these same six syllables represented the notes G, A, B, C, D, E; while, in the Soft Hexachord, they were sung to F, G, A, B \flat , C, D. The note C therefore was sometimes represented by *Ut*, sometimes by *Fa*, and sometimes by *Sol*, according to the Hexachord in which it occurred; and was consequently called, in general terms, C *sol-fa-ut*. In like manner A was represented either by *La*, *Mi*, or *Re*; and was hence called A *la-mi-re*, as indicated in our example by the syllables printed above the stave. But under no possible circumstances could the semitone occur between any other syllables than *Mi* and *Fa*; and herein, as we shall presently see, lay the true value of the system.

So long as the compass of the melody under treatment did not exceed that of a single Hexachord, the application of this principle was simple enough; but, for the Solmisation of melodies embracing a more extended range, it was found necessary to introduce certain changes, called Mutations, based upon a system corresponding exactly with the practice of the Greeks. [See MUTATION.] Whenever a given melody extended (or modulated) from one Hexachord into another, the syllables pertaining to the new series were substituted for those belonging to the old one, at some convenient point, and continued in regular succession until it became convenient to change them back again; by which means the compass of the scale could be enlarged to any required extent.

For instance, in the following example the passage begins at (a), in the Natural Hexachord of C, but extends upwards three notes beyond its compass, and borrows a B \flat from the Soft Hexachord of F. As it is not considered desirable to defer the change until the extreme limits of the first Hexachord have been reached, it may here be most conveniently made at the note G. Now, in the Natural Hexachord, G is represented by the syllable *Sol*; in the Soft Hexachord, by *Re*. In this case, therefore, we have only to substitute *Re* for *Sol* at this point; and to continue the Solmisation proper to the Soft Hexachord to the end of the passage, taking no notice of the syllable printed in italics.

The image shows two musical staves. The top staff is labeled (a) Soft Hexachord. It has notes G, A, B, C, D, E with syllables Ut, Re, Mi, Fa, Sol, La. The bottom staff is labeled Natural Hexachord. It has notes C, D, E, F, G, A with syllables Ut, Re, Mi, Fa, Sol, La.

At (b), on the other hand, the passage extends

The image shows two musical staves. The top staff is labeled (b) Hard Hexachord. It has notes G, A, B, C, D, E with syllables La, Sol, Fa, Mi, Re, Ut. The bottom staff is labeled Natural Hexachord. It has notes C, D, E, F, G, A with syllables La, Sol, Fa, Mi, Re, Ut.

downwards, from the Hexachord of G, into that of C. Here, the change may be most conveniently effected by substituting the *La* of the last-named Hexachord for the *Re* of the first, at the note A.

The first of these Mutations is called *Sol-re*, in allusion to its peculiar interchange of syllables; the second is called *Re-la*. As a general rule, *Re* is found to be the most convenient syllable for ascending Mutations, and *La* for those which extend downwards, in accordance with the recommendation contained in the following Distich.

Vocibus ntaris solum mutando duabus
Per re quidem sursum mutatur, per la deorsum.

This rule, however, does not exclude the occasional use of the forms contained in the subjoined Table, though the direct change from the Hard to the Soft Hexachord, and *vice versa*, is not recommended.

Descending Mutations.

1. *Fa-sol*. From the Hard to the Soft Hexachord, changing on C.
2. *Mi-la*. Nat. to Hard Hex. changing on E. Soft to Nat. Hex. changing on A.
3. *Re-la*. Hard to Nat. Hex. changing on A. Nat. to Soft Hex. changing on D.
4. *Re-mi*. Hard to Soft Hex. changing on A.
5. *Re-sol*. Nat. to Hard Hex. changing on D. Soft to Nat. Hex. changing on G.
6. *Sol-la*. Hard to soft Hex. changing on D.
7. *Ut-fa*. Nat. to Hard Hex. changing on C. Soft to Nat. Hex. changing on F.
8. *Ut-re*. Hard to Soft Hex. changing on G.

Ascending Mutations.

9. *Fa-ut*. Hard to Nat. Hexachord, changing on C. Nat. to Soft Hex. changing on F.
10. *La-mi*. Hard to Nat. Hex. changing on E.
11. *La-re*. Nat. to Hard Hex. changing on A. Soft to Nat. Hex. changing on D.
12. *La-sol*. Soft to Hard Hex. changing on D.
13. *Mi-re*. Do. Do. A.
14. *Re-ut*. Do. Do. G.
15. *Sol-fa*. Do. Do. C.
16. *Sol-re*. Hard to Nat. Hex. changing on D. Nat. to Soft Hex. changing on G.
17. *Sol-ut*. Nat. to Hard Hex. changing on G. Soft to Nat. Hex. changing on C.

The principle upon which this ancient system was based is that of 'the Movable Ut'—or, as we should now call it, 'the Movable Do'; an arrangement which assists the learner very materially, by the recognition of a governing syllable, which, changing with the key, regulates the position of every other syllable in the series, calls attention to the relative proportions existing between the root of the scale and its attendant sounds, and, in pointing out the peculiar characteristics of each subordinate member of the system, lays emphatic stress upon its connection with its fellow degrees, and thus teaches the ear, as well as the understanding. We shall presently have occasion to consider the actual value of these manifold advantages; but must first trace their historical connection with the Solmisation of a later age.

So long as the ecclesiastical modes continued in use Guido's system answered its purpose so thoroughly, that any attempt to improve upon

it would certainly have ended in failure. But when the functions of the leading-note were brought more prominently into notice, the demand for a change became daily more and more urgent. The completion of the octave rendered it not only desirable, but imperatively necessary that the sounds should no longer be arranged in Hexachords, but in Heptachords or Septenaries, for which purpose an extended syllabic arrangement was needed. We have been unable to trace back the definite use of a seventh syllable to an earlier date than the year 1599, when the subject was broached by Erich van der Putten (Erycius Puteanus) of Dordrecht, who, at pages 54, 55 of his *Pallas modulata*,¹ proposed the use of *BI*, deriving the idea from the second syllable of *labii*. No long time, however, elapsed before an overwhelming majority of theorists decided upon the adoption of *SI*, the two letters of which were suggested by the initials of 'Sancte Ioannes'—the Adonic verse which follows the three Sapphics in the Hymn already quoted.² The use of this syllable was strongly advocated by Sethus Calvisius, in his *Exercitatio musicæ tertia*, printed in 1611. Since then, various attempts have been made to supplant it, in favour of *Sa*, *Za*, *Ci*, *Be*, *Te*, and other open syllables;³ but the suggested changes have rarely survived their originators, though another one, of little less importance—the substitution of *Do* for *Ut* on account of its greater resonance—has, for more than two hundred years, been almost universally accepted. [See *Do*.] Lorenzo Penna,⁴ writing in 1672, speaks of *Do* as then in general use in Italy; and Gerolamo Cantone⁵ alludes to it, in nearly similar terms, in 1678, since which period the use of *Ut* has been discontinued, not only in Italy, but in every country in Europe except France.

In Germany and the Netherlands far more sweeping changes than these have been proposed from time to time, and even temporarily accepted. Huberto Waelrant (1517-1595) introduced, at Antwerp, a system called 'Bocedisation' or 'Bobisation,' founded on seven syllables—*Bo*, *Ce*, *Di*, *Ga*, *Lo*, *Ma*, *Ni*—which have since been called the 'Voces Belgicæ.' At Stuttgart Daniel Hitzler (1576-1635) based a system of 'Bebisation' upon *La*, *Be*, *Ce*, *De*, *Me*, *Fe*, *Ge*. A century later Graun (1701-59) invented a method of 'Damenisation,' founded upon the particles, *Da*, *Me*, *Ni*, *Po*, *Tu*, *La*, *Be*. But none of these methods have survived.

In England, the use of the syllables *Ut* and *Re* died out completely before the middle of the 17th century; and recurring changes of *Mi*, *Fa*, *Sol*, *La*, were used, alone, for the Solmisation of all kinds of Melodies. Butler mentions this

¹ *Pallas modulata, sive Septem discrimina vocum* (Milan, 1599), afterwards reprinted, under the title of *Musæthena* (Hanover, 1602).

² It has been said, that, in certain versions of the Melody, the first syllable of the Adonic verse is actually sung to the note B; but we have never met with such a version, and do not believe in the possibility of its existence.

³ *Albion musicæ* (Bologna, 1672).

⁴ *Armonia Gregoriana* (Turin, 1678).

⁵ See *Si*, ante, p. 448.

method as being in general use, in 1636;¹ and Playford calls attention to the same fact in 1655.²

In France the original syllables, with the added *Si*, took firmer root than ever in Italy; for it had long been the custom, in the Neapolitan schools, to use the series beginning with *Do* for those keys only in which the third is Major. For Minor keys, the Neapolitans begin with *Re*; using *Fa* for an accidental flat, and *Mi* for a sharp. Durante, however, when his pupils were puzzled with a difficult Mutation, used to cry out, 'Only sing the syllables in tune, and you may name them after devils, if you like.'

The truth is, that, as long as the syllables are open, their selection is a matter of very slight importance. They were never intended to be used for the formation of the voice, which may be much better trained upon the sound of the vowel, *A*, as pronounced in Italian, than upon any other syllable whatever. Their use is, to familiarise the student with the powers and special peculiarities of the sounds which form the scale; and here it is that the arguments of those who insist upon the use of a 'fixed,' or a 'movable *Do*,' demand our most careful consideration. The fact that in Italy and France the syllables *Ut* (*Do*), *Re*, *Mi*, *Fa*, *Sol*, *La*, *Si*, are always applied to the same series of notes, C, D, E, F, G, A, B, and used as we ourselves use the letters, exercises no effect whatever upon the question at issue. It is quite possible for an Italian, or a Frenchman, to apply the 'fixed *Do* system' to his method of nomenclature, and to use the 'movable *Do*' for purposes of Solmisation. The writer himself, when a child, was taught both systems simultaneously, by his first instructor, John Purkis, who maintained, with perfect truth, that each had its own merits, and each its own faults. In matters relating to absolute pitch, the fixed *Do* is all that can be desired. The 'movable *Do*' ignores the question of pitch entirely; but it calls the student's attention to the peculiar functions attached to the several Degrees of the Scale so clearly, that, in a very short time, he learns to distinguish the Dominant, the Sub-Mediant, the Leading-Note, or any other interval of any given key, without the possibility of mistake, and that, by simply sol-fa'ing the passage in the usual manner. It is this quality which is the strongest point in the Tonic Sol-fa system.

One of the strongest objections to the system of the fixed *Do* is that it makes no provision for the indication of flats or sharps. In a tract published at Venice in 1746³ an anonymous member of the Roman Academy called 'Arcadia,' proposed to remove the difficulty, by adding to the seven recognised syllables five others, designed to represent the sharps and flats most frequently used; viz. *Pa* (C#), *Bb*, *Bo* (D#), *Eb*,

Tu (F#), *Gb*, *De* (G#), *Ab*, *No* (A#), *Bb*). This method was adopted by Hasse, and highly approved by Giambattista Mancini; but in 1768 a certain Signor Serra endeavoured to supersede it by a still more numerous collection of syllables; using *Ca*, *Da*, *Ae*, *Fa*, *Ga*, *A*, *Ba*, to represent the seven natural notes, A, B, C, D, E, F, G; *Ce*, *De*, *E*, *Fe*, *Ge*, *Do*, *Be*, to represent the same notes, raised by a series of sharps; and *Ci*, *Di*, *Oe*, *Fi*, *Gi*, *Au*, *Bi*, to represent them, when lowered by flats.

[See the *Sammelbände* of the Int. Mus. Ges. i. 535.] W. S. R.

SOLO (*Ital.* 'alone'). A piece or passage executed by one voice or performer. *Airs* are solos; a pianoforte piece for two hands is a pianoforte solo. A violin solo, strictly speaking, is a piece for the violin alone, like Bach's unaccompanied sonatas; but the term is often used loosely for a concerto or other piece in which the solo instrument is accompanied by the band, the pianoforte, etc.

In an orchestral piece where one instrument has a passage which is intended to sound out prominently, it is marked 'Solo,' as in the second subject of the *Adagio* in Beethoven's Symphony No. 4, which is for the 1st clarinet, and marked *Solo*; in the flute solo near the end of the working-out in the *Leonora Overture* (where, however, the bassoon, equally solo, is merely marked '1'); and in a thousand other instances. In arrangements of pianoforte concertos for two hands, the entry of the solo instrument is marked *Solo*, to distinguish it from the compressed accompaniment. G.

SOLO ORGAN, a manual or clavier of an organ having stops associated with it which for the most part are intended for use *solo*, that is, in single notes as opposed to chords. The solo organ is generally a fourth manual placed above that of the swell; but it occasionally supersedes the choir organ, and is then placed below the 'Great' manual. The stops in a solo organ are most frequently (1) Flutes of 8 ft. and 4 ft.; (2) A stop of *clarinet*-tone; (3) a stop of *oboe*-tone (orchestral oboe); (4) Reeds of 8 ft. and 4 ft. of *trumpet*-tone (tromba, tuba, etc.). Larger solo organs contain also stops imitative of the violin, horn, piccolo, and other instruments; perhaps also an open diapason, and, in a few cases, a *carillon* or *glockenspiel*. The solo trumpet-stops are most frequently on a heavy pressure of wind, and in order to obtain special brilliance are sometimes 'harmonic,' as are also the flutes; that is, they have tubes of twice the ordinary length, pierced with a small hole at their half length. Some of the stops of a solo organ are often used in chords, such for instance as flutes and reeds. This is most commonly done by means of a coupler 'Solo to Great,' by which the diapason or flute tones of the solo organ can be used as a valuable reinforcement of the foundation stops of the Great manual; and the tone

¹ *Principles of Music*, by C. Butler (London, 1636).

² *Introduction to the Skill of Music* (London, 1655).

³ *Riflessioni sopra alla maggior facilità che trovati nel apprendere il canto*, etc. etc. (Venezia, 1746.)

of the full Great organ can be similarly enriched by coupling the solo reeds. In instruments which contain a *Vox humana*, that stop is perhaps more often found associated with the Swell-manual than with the Solo-manual; but when placed on the solo organ its pipes are generally shut up in a separate box with Venetian shutters worked by a second swell-pedal. When composition-pedals are made to act upon the Swell, Great, and Choir organs, it is evidently wise to make the combinations they produce proceed as gradually as possible from *piano* to *fortissimo*. But this simple principle is not applicable to the combinations or rather selections of solo-stops which are made by means of composition-pedals or pistons. The difficulty seems, however, to be overcome by a method suggested some years ago by the writer of this article: namely, to arrange them in the order in which the instruments are found in a modern full-score. Thus, six combination-pedals would act on the solo-stops in the following system:—

- (1) Stops of Flute-tone.
- (2) Stops of Oboe-tone.
- (3) Stops of Clarinet and Bassoon tones.
- (4) Stops of Horn-tone.
- (5) Stops of Trumpet and Trombone tones.
- (6) Stops of Violin and Viola tones.

This method, which is at once simple and exhaustive, might be indefinitely extended; thus, for example, a carillon, drum, or triangle, would be produced by a composition-pedal or piston lying between the trumpet-stops and violin-stops; and a *vox humana* would naturally follow after stops of the violin-tone. Smaller solo organs would probably be easily brought under control by combination-pedals or pistons acting on

- (1) Flute.
- (2) Oboe.
- (3) Clarinet.
- (4) Trumpet.

The Solo organ is an introduction of modern times, and followed naturally upon the invention of pipes closely imitating the tones of orchestral instruments. J. S.

SOLO STOP. (1) A stop or register of a solo organ or fourth manual. (2) Any stop which can be used as a *solo*—that is, in single notes, e.g. a clarinet on the choir organ; a corneopean, hautboy, or other reed on the swell organ; a clarabella or flute on either of the three manuals great, swell, or choir. The name Solo stop does not necessarily imply that full chords may not be used upon it. [See SOLO ORGAN.] J. S.

SOLOMON. I. A serenata by William Boyce, to words by Edward Moore, produced 1743. The song 'Softly rise, O southern breeze' was popular for many years.

II. An oratorio of Handel's; composed between 'Alexander Balus' and 'Theodora.' It was begun on May 5, 1748, and the memorandum at the end of the work is 'G. F. Handel;

Jun 13, 1748, ætatis 63. Völlig geendiget.' The words of the oratorio are supposed to be by Dr. Morell; but this is not certain. It was produced at Covent Garden Theatre, March 17, 1749, 'with a Concerto,' and was revived by Sir G. Smart at Exeter Hall, April 14, 1836. The Sacred Harmonic Society followed, Dec. 3, 1838; and with Costa's additional accompaniments, April 8, 1870. G.

SOLOVIEV, NICHOLAS THEOPEMPTOVICH, born May 9 (April 27, O.S.), 1846, at Petrazavodsk. He was intended for the medical profession, but entered the St. Petersburg Conservatorium in 1868, eventually passing into Zarembo's class for composition. In 1871, Serov, being then upon his deathbed, entrusted the orchestration of his music-drama, 'The Power of Evil,' to Soloviev. About this time his symphonic picture, 'Russians and Mongols,' was given at one of the concerts of the Russian Musical Society. In 1874, Soloviev became a professor at the St. Petersburg Conservatorium. Of his three operas 'Cordelia' is the best known, having been widely performed in Russia, and also at Prague in 1890. Other compositions comprise a Cantata for the bi-centenary of the birth of Peter the Great; an Orchestral Fantasia on a folk-song; and a number of songs and pieces for pianoforte. As a critic, Soloviev has written for the *Novoe Vremya*, *Novosti*, *Rossia*, etc. He is also well known as a collector of folk-songs. R. N.

SOMBRÉE. *Voix sombrée* is the French term for the veiled voice or *voce velata*, in contradistinction to the *voix claire*. [See VEILED VOICE.] G.

SOMERVELL, ARTHUR, born at Windermere, June 5, 1863, was educated at Uppingham School from 1877, and Cambridge (King's College), where he took the degree of B.A. in 1883. During his residence at the university he studied with Stanford, and on taking his degree he went to Berlin to study at the Hochschule, where his masters were Kiel and Bargiel. Returning to England in 1885 he entered the Royal College of Music, and after two years there became a private pupil of Parry in 1887. His charmingly graceful songs obtained a wide popularity, but his first ambitious introduction to the world of serious music was in his Mass in C minor, performed by the Bach Choir in 1891. In March 1893 the Philharmonic Society performed his orchestral ballad, 'Helen of Kirkconnell,' and with his first important work for an important festival, 'The Forsaken Merman' (Leeds Festival, 1895), he took a position among the most accomplished composers of the day. In 1901 he was appointed Inspector of Music for England, Wales, and Scotland, in succession to Stainer. He took the degree of Mus.D. at Cambridge in 1903. Besides the works already mentioned, his list of compositions includes choral works, 'A Song of Praise' (Kendal, 1891);

'The Power of Sound' (Do. 1895); 'Elegy' (Robert Bridges, Hovingham, 1896); 'Charge of the Light Brigade' (1896); 'Ode to the Sea' (with soprano solo), Birmingham Festival, 1897; 'Intimations of Immortality' (Wordsworth), Leeds Festival, 1907. 'In Arcady,' a suite for small orchestra, was given at Brighton in 1897; but Somervell's purely orchestral works are very few. Of sacred works the most important is his setting of the Seven Last Words from the Cross. A quintet for clarinet and strings, and a symphony, are still in MS. Two sets of variations for two pianos, and a number of small pianoforte pieces, including some excellent concert-studies, are among his instrumental compositions; and a special success rewarded his song-cycle from Tennyson's 'Maud,' while other songs in series include 'A Shropshire Lad,' and 'James Lee's Wife' (the last with orchestra). His 'Songs of the Four Nations,' and other books of arrangements, are an important addition to the subject of folk-song; and his many songs show remarkable skill in writing for the voice, as well as possessing the charm that makes for popularity while avoiding all that could be thought meretricious. M.

SOMIS, GIOVANNI BATTISTA, violinist, was born in Piedmont in 1676. He studied first under Corelli at Rome, and afterwards under Vivaldi at Venice. After his return to Turin he was appointed solo violinist to the King, and leader of the royal band, a position he retained until his death, which occurred on August 14, 1763. After having once settled at Turin he appears scarcely ever to have left it; and so few of his compositions were published that there is little opportunity of directly forming an estimate of him as a player; but judging from the style of his numerous and well-known pupils, Somis did not merely hand on the traditions of the great Italian masters, but formed a style of his own, more brilliant and more emotional, marking technically, and also, in a sense, musically, a decided forward step in the art of playing the violin. As the head and founder of the Piedmontese School, and the teacher of Leclair, Giardini, Chiabran, and Pugnani—the latter again the teacher of Viotti—he occupies a prominent place in the history of violin-playing, and forms the connecting link between the classical schools of Italy and France. Fétis names as his only published work 'Opera prima di sonate a violino e violoncello o cembalo. Roma 1722' [but a set of sonatas, op. 4, was published in Paris in 1726, and twelve sonatas, op. 6, in 1734. Besides these, an edition of some of his works appeared at Amsterdam, and a concerto is in MS. in the royal collection at Dresden. *Quellen-Lexikon.*] P. D.

SOMMER, HANS (actual name, HANS FRIEDRICH AUGUST ZINCKEN, the last name occasionally transformed into 'NECKNIZ'), born at Brunswick, July 20, 1837, was educated at

Göttingen, where he became Professor of Physics; subsequently he was appointed Director of the technical High School of his native place, a post he gave up in 1884. In 1885 settled in Berlin, in 1888 in Weimar, and in 1898 returned to Brunswick. He has won success on the operatic stage with his later dramatic works in a fantastic form: 'Der Nachtwächter' and 'Loreley' were both given in Brunswick—the first in 1865, the second in 1891; in 1894, a one-act piece, 'Saint Foix,' was given at Munich; two other one-act operas deserve mention, 'Der Meermann,' at Weimar in 1896, and 'Augustin'; 'Münchhausen,' in three acts, and 'Rübezahl,' were given in Brunswick in 1904; and 'Riquet à la Houppie' at the same theatre on April 14, 1907. It is by his songs that Sommer's name is best known in England: his op. 3, 'Mädchenlieder,' from Julius Wolff's *Wilde Jäger*; his op. 4, three sets of songs from the same poet's *Hunold Singuf*; his op. 5, a set from Wolff's *Tannhäuser*; his op. 6, to words from Carmen Sylva's *Sappho*, and his songs to words of different authors, opp. 8, 9, 10, 11, 12, and 16, contain many things that are effective for the voice, well expressed, original, and full of a sort of ingenuity that delights all cultivated amateurs. In particular, his 'Stelldichein' from op. 4, a vocal obbligato to a brilliant pianoforte waltz, and 'Am Waldteiche,' in which the alternate Latin and German words of the poem are cleverly set to music in different styles, are in their way little triumphs of art. Here and there the composer drifts into rather commonplace ways of expressing himself, but his best songs are things that no educated singer can afford to neglect. He has made several contributions to musical literature, such as his *Ueber die Wertschätzung der Musik* (1898). M.

SOMMEROPHONE. An instrument of the saxhorn or bombardon class, named after its inventor. It was largely played in the Exhibition of 1851. 'The Euphonic horn of Herr Sommer' is honourably mentioned in the Reports of the Juries (pp. 331, 335) as 'an instrument of great power as well as sweetness of tone.' It possessed no very special peculiarities, and is now seldom, if ever, used. W. H. S.

SON AND STRANGER. See HEIMKEHR AUS DER FREUDE.

SONATA. The history of the Sonata is the history of an attempt to cope with one of the most singular problems ever presented to the mind of man, and its solution is one of the most successful achievements of his artistic instincts. A sonata is, as its name implies, a sound-piece, and a sound-piece alone; in its purest and most perfect examples, it is unexplained by title or text, and unassisted by voices; it is nothing but an unlimited concatenation of musical notes. Such notes have individually no significance; and even the simplest principles of their relative definition and juxtaposition, such as are necessary

to make the most elementary music, had to be drawn from the inner self and the consciousness of things which belong to man's nature only, without the possibility of finding guidance or more than the crudest suggestion from the observation of things external. Yet the structural principles by which such unpromising materials become intelligible have been so ordered and developed by the unaided musical instinct of many successive generations of composers, as to render possible long works which not only penetrate and stir us in detail, but are in their entire mass direct, consistent, and convincing. Such works, in their completest and most severely abstract forms, are sonatas.

The name seems to have been first adopted purely as the antithesis to Cantata, the musical piece that was sung. It begins to come into notice about the same time as that form of composition, soon after the era of the most marked revolution in music, which began at the end of the 16th century; when a band of enthusiasts, led by visionary ideals, unconsciously sowed the seed of true modern music in an attempt to wrest the monopoly of the art in its highest forms from the predominant influence of the Church, and to make it serve for the expression of human feelings of more comprehensive range. At this time the possibilities of polyphony in its ecclesiastical forms may well have seemed almost exhausted, and men turned about to find new fields which should give scope for a greater number of workers. The nature of their speculations and the associations of the old order of things alike conspired to direct their attention first to Opera and Cantata, and here they had something to guide them; but for abstract instrumental music of the Sonata kind they had for a long time no clue. The first suggestion was clearly accidental. It appears probable that the excessive elaboration of the Madrigal led to the practice of accompanying the voice parts with viols; and from this the step is but short to leaving the viols by themselves and making a vague kind of chamber music without the voices. This appears to have been the source of the instrumental Canzonas which were written in tolerable numbers till some way into the 18th century. It does not appear that any distinct rules for their construction were recognised, but the examination of a large number, written at different periods from Frescobaldi to J. S. Bach, proves the uniform object of the composers to have been a lax kind of fugue, such as might have served in its main outlines for the vocal madrigals. Burney says the earliest examples of 'Sonatas' he had been able to discover in his devoted inquiries were by Turini, published at Venice in 1624. His description of those he examined answers perfectly to the character of the canzonas, for, he says, they consist of one movement, in fugue and imitation throughout.

Sonatas did not, however, rest long at this point of simplicity, but were destined very early to absorb material from other sources; and though the canzona kind of movement maintained its distinct position through many changes in its environment, and is still found in the Violin Sonatas of J. S. Bach, Handel, and Porpora, the madrigal, which was its source, soon ceased to have direct influence upon three parts of the more complete structure. The suggestion for these came from the dance, and the newly invented opera or dramatic cantata. The former had existed and made the chief staple of instrumental music for generations, but it requires to be well understood that its direct connection with dancing puts it out of the category of abstract music of the kind which was now obscurely germinating. The dances were understood through their relation with one order of dance motions. There would be the order of rhythmic motions which, taken together, was called a Braille, another that was called a Pavan, another a Gigue; and each dance-tune maintained the distinctive rhythm and style throughout. On the other hand, the radical principle of the Sonata, developed in the course of generations, is the compounding of a limitless variety of rhythms; and though isolated passages may be justly interpreted as representing gestures of an ideal dance kind, like that of the ancients, it is not through this association that the group of movements taken as a whole is understood, but by the disposition of such elements and others in relation to one another. This conception took time to develop, though it is curious how early composers began to perceive the radical difference between the Suite and the Sonata. Occasionally a doubt seems to be implied by confusing the names together or by actually calling a collection of dance-tunes a Sonata; but it can hardly be questioned that from almost the earliest times, as is proved by a strong majority of cases, there was a sort of undefined presentiment that their developments lay along totally different paths. In the first attempts to form an aggregate of distinct movements, the composers had to take their forms where they could find them; and among these were the familiar dance-tunes, which for a long while held a prominent position in the heterogeneous group of movements, and were only in late times transmuted into the Scherzo which supplanted the Minuet and Trio in one case, and the Finale or Rondo, which ultimately took the place of the Gigue, or Chaconne, or other similar dance-forms as the last member of the group.

The third source, as above mentioned, was the drama, and from this two general ideas were derivable: one from the short passages of instrumental prelude or interlude, and the other from the vocal portions. Of these, the first was intelligible in the drama through its relation to some point in the story, but it also

early attained to a crude condition of form which was equally available apart from the drama. The other produced at first the vaguest and most rhapsodical of all the movements, as the type taken was the irregular declamatory recitative which appears to have abounded in the early operas.

It is hardly likely that it will ever be ascertained who first experimented in sonatas of several distinct movements. Many composers are mentioned in different places as having contributed works of the kind, such as Farina, Cesti, Graziani, among Italians, Rosenmüller among Germans, and John Jenkins among Englishmen. Burney also mentions a Michael Angelo Rossi, whose date is given as from about 1620 to 1660. An Andantino and Allegro by him, given in Pauer's 'Alte Meister,' require notice parenthetically as presenting a curious puzzle, if the dates are correct and the authorship rightly attributed. [These pieces are now known to be spurious (see p. 149a), but genuine specimens of Rossi's works are in Torchi's 'Arte Musicale in Italia,' vol. iii. See also Oskar Bie's *The Pianoforte*, Engl. transl. p. 82.] Though belonging to a period considerably before Corelli, they show a state of form which certainly was not commonly realised till more than a hundred years later. The distribution of subject-matter and key, and the clearness with which they are distinguished, are like the works of the middle of the 18th rather than the 17th century, and they belong absolutely to the Sonata order, and the conscious style of the later period. The actual structure of large numbers of sonatas composed in different parts of Europe soon after this time, proves a tolerably clear consent as to the arrangement and quality of the movements. A fine vigorous example is a Sonata in C minor for violin and figured bass, by H. J. F. Biber, a German, said to have been first published in 1681. This consists of five movements in alternate slow and quick time. The first is an introductory Largo of contrapuntal character, with clear and consistent treatment in the fugally imitative manner; the second is a Passacaglia, which answers roughly to a continuous string of variations on a short well-marked period; the third is a rhapsodical movement consisting of interspersed portions of Poco lento, Presto, and Adagio, leading into a Gavotte; and the last is a further rhapsodical movement alternating Adagio and Allegro. In this group the influence of the madrigal or canzona happens to be absent; the derivation of the movements being—in the first, the contrapuntalism of the music of the Church, in the second and fourth, dances, and in the third and fifth, probably operatic or dramatic declamation. The work is essentially a violin sonata with accompaniment, and the violin-part points to the extraordinarily rapid advance to mastery which was made in the few years after its being

accepted as an instrument fit for high-class music. The writing for the instrument is decidedly elaborate and difficult, especially in the double stops and contrapuntal passages which were much in vogue with almost all composers from this time till J. S. Bach. In the structure of the movements the fugal influences are most apparent, and there are very few signs of the systematic repetition of subjects in connection with well-marked distribution of keys, which in later times became indispensable.

Similar features and qualities are shown in the curious set of seven Sonatas for Clavier by Johann Kuhnau, called 'Frische Clavier Früchte,' etc., of a little later date; but there are also in some parts indications of an awakening sense of the relation and balance of keys. The grouping of the movements is similar to those of Biber, though not identical; thus the first three have five movements or divisions, and the remainder four. There are examples of the same kind of rhapsodical slow movements, as may be seen in the Sonata (No. 2 of the set) which is given in Pauer's 'Alte Meister'; there are several fugal movements, some of them clearly and musically written; and there are some good illustrations of dance types, as in the last movement of No. 3, and the Ciaccona of No. 6. But more important for the thread of continuous development are the peculiar attempts to balance tolerably defined and distinct subjects, and to distribute key and subject in large expanses, of which there are at least two clear examples. In a considerable proportion of the movements the most noticeable method of treatment is to alternate two characteristic groups of figures or subjects almost throughout, in different positions of the scale and at irregular intervals of time. This is illustrated in the first movement of the Sonata No. 2, in the first movement of No. 1, and in the third movement of No. 5. The subjects in the last of these are as follows:—

The point most worth notice is that the device lies half-way between fugue and true sonata-form. The alternation is like the recurrence of subject and counter-subject in the former, wandering hazily in and out, and forwards and backwards, between nearly allied keys, as would be the case in a fugue. But the subjects are not presented in single parts or fugally answered. They enter and re-enter for the most part as concrete lumps of harmony, the harmonic accompaniment of the melody

being taken as part of the idea ; and this is essentially a quality of sonata-form. So the movements appear to hang midway between the two radically distinct domains of form ; and while deriving most of their disposition from the older manners, they look forward, though obscurely, in the direction of modern practices. How obscure the ideas of the time on the subject must have been, appears from the other point which has been mentioned above ; which is, that in a few cases Kuhnán has hit upon clear outlines of tonal form. In the second Sonata, for instance, there are two Arias, as they are called. They do not correspond in the least with modern notions of an aria any more than do the rare examples in Bach's and Handel's Suites. The first is a little complete piece of sixteen bars, divided exactly into halves by a double bar, with repeats after the familiar manner. The first half begins in F and ends in C, the second half goes as far as D minor and back, to conclude in F again. The subject-matter is irregularly distributed in the parts, and does not make any pretence of coinciding with the tonal divisions. The second Aria is on a different plan, and is one of the extremely rare examples in this early period of clear coincidence between subject and key. It is in the form which is often perversely misnamed 'lied-form,' which will in this place be called 'primary form' to avoid circumlocution and waste of space. It consists of twenty bars in D minor representing one distinct idea, complete with close : then sixteen bars devoted to a different subject, beginning in B \flat and passing back ultimately to D minor, recapitulating the whole of the first twenty bars in that key, and emphasising the close by repeating the last four bars. Such decisiveness, when compared with the unregulated and unbalanced wandering of longer movements, either points to the conclusion that composers did not realise the desirableness of balance in coincident ranges of subject and key on a large scale ; or that they were only capable of feeling it in short and easily grasped movements. It seems highly probable that their minds, being projected towards the kind of distribution of subject which obtained in fugal movements, were not on the look-out for effects of the sonata order which to moderns appear so obvious. So that, even if they had been capable of realising them more systematically, they would not yet have thought it worth while to apply their knowledge. In following the development of the Sonata, it ought never to be forgotten that composers had no idea whither they were tending, and had to use what they did know as stepping-stones to the unknown. In art, each step that is gained opens a fresh vista ; but often, till the new position is mastered, what lies beyond is completely hidden and undreamed of. In fact, each step is not so much a conquest of new

land, as the creation of a new mental or emotional position in the human organism. The achievements of art are the unravellings of hidden possibilities of abstract law, through the constant and cumulative extension of instincts. They do not actually exist till man has made them ; they are the counterpart of his internal conditions, and change and develop with the changes of his mental powers and sensitive qualities, and apart from him have no validity. There is no such thing as leaping across a chasm on to a new continent, neither is there any gulf fixed anywhere, but continuity and inevitable antecedents to every consequent ; the roots of the greatest masterpieces of modern times lie obscurely hidden in the wild dances and barbarous howlings of the remotest ancestors of the race, who began to take pleasure in rhythm and sound, and every step was into the unknown, or it may be better said not only unknown but non-existent till made by mental effort. The period from about 1600 to about 1725 contains the very difficult steps which led from the style appropriate to a high order of vocal music—of which the manner of speech is polyphonic, and the ideal type of form, the fugue—to the style appropriate to abstract instrumental music, of which the best manner is contrapuntally-expressed harmony, and the ideal type of form, the Sonata. These works of Kuhnán's happen to illustrate very curiously the transition in which a true though crude idea of abstract music seems to have been present in the composer's mind, at the same time that his distribution of subjects and keys was almost invariably governed by fugal habits of thinking, even where the statement of subjects is in a harmonic manner. In some of these respects he is nearer to, and in some further back from, the true solution of the problem than his famous contemporary Corelli ; but his labours do not extend over so much space, nor had they so much direct and widespread influence. In manner and distribution of movements they are nearer to his predecessor and compatriot Biber ; and for that reason, and also to maintain the continuity of the historic development after Corelli, the consideration of his works has been taken a little before their actual place in point of time.

The works of Corelli form one of the most familiar landmarks in the history of music, and as they are exclusively instrumental it is clear that careful consideration ought to elicit a great deal of interesting matter, such as must throw valuable light on the state of thought of his time. He published no less than sixty sonatas of different kinds, which are divisible into distinct groups in accordance with purpose or construction. The first main division is that suggested by their titles. There are twenty-four 'Sonate da Chiesa' for strings, lute, and organ, twenty-four 'Sonate da Camera' for the same instruments, and twelve Solos or Sonatas

for violin and violoncello, or cembalo. In these the first and simplest matter for observation is the distribution of the movements. The average, in Church and Chamber Sonatas alike, is strongly in favour of four, beginning with a slow movement, and alternating the rest. There is also an attempt at balance in the alternation of character between the movements. The first is commonly in 4-time, of dignified and solid character, and generally aiming less at musical expression than the later movements. The second movement in the Church Sonata is freely fugal, in fact the exact type above described as a Canzona; the style is commonly rather dry, and the general effect chiefly a complacent kind of easy swing such as is familiar in most of Handel's fugues. In the Chamber Sonatas the character of the second movement is rather more variable; in some it is an Allemande, which, being dignified and solid, is a fair counterpart to the Canzona in the other Sonatas: sometimes it is a Courante, which is of lighter character. The third movement is the only one which is ever in a different key from the first and last. It is generally a characteristic one, in which other early composers of instrumental music, as well as Corelli, clearly endeavoured to infuse a certain amount of vague and tender sentiment. The most common time is 3-2. The extent of the movement is always limited, and the style, though simply contrapuntal in fact, seems to be ordered with a view to obtain smooth harmonious full-chord effects, as a contrast to the brusqueness of the preceding fugal movement. There is generally a certain amount of imitation between the parts, irregularly and fancifully disposed, but almost always avoiding the sounding of a single part alone. In the Chamber Sonatas, as might be anticipated, the third movement is frequently a Sarabande, though by no means always; for the same kind of slow movement as that in the Church Sonatas is sometimes adopted, as in the third Sonata of the Opera Seconda, which is as good an example of that class as could be taken. The last movement is almost invariably of a lively character in Church and Chamber Sonatas alike. In the latter, Gigas and Gavottes predominate, the character of which is so familiar that they need no description. The last movements in the Church Sonatas are of a similar vivacity and sprightliness, and sometimes so alike in character and rhythm as to be hardly distinguishable from dance-tunes, except by the absence of the defining name, the double bar in the middle, and the repeats which are almost inevitable in the dance movements. This general scheme is occasionally varied without material difference of principle by the interpolation of an extra quick movement, as in the first six Sonatas of the Opera Quinta; in which it is a sort of show movement for the violin in a 'Moto continuo'

style, added before or after the central slow movement. In a few cases the number is reduced to three by dropping the slow prelude, and in a few others the order cannot be systematised.

In accordance with the principles of classification above defined, the Church Sonatas appear to be much more strictly abstract than those for Chamber. The latter are, in many cases, not distinguishable from Suites. The Sonatas of Opera Quinta are variable. Thus the attractive Sonata in E minor, No. 8, is quite in the recognised suite-manner. Some are like the Sonate da Chiesa, and some are types of the mixed order more universally accepted later, having several undefined movements, together with one dance. The actual structure of the individual movements is most uncertain. Corelli clearly felt that something outside the domain of the fugal tribe was to be attained, but he had no notion of strict outlines of procedure. One thing which hampered him and other composers of the early times of instrumental music was their unwillingness to accept formal tunes as an element in their order of art. They had existed in popular song and dance music for certainly a century, and probably much more; but the idea of adopting them in high-class music was not yet in favour. Corelli occasionally produces one, but the fact that they generally occur with him in Gigas, which are the freest and least responsible portion of the Sonata, supports the inference that they were not yet regarded as worthy of general acceptance even if realised as an admissible element, but could only be smuggled-in in the least respectable movement with an implied smile to disarm criticism. Whether this was decisively so or not, the fact remains that till long after Corelli's time the conventional tune element was conspicuously absent from instrumental compositions. Hence the structural principles which to a modern seem almost inevitable were very nearly impracticable, or at all events unsuitable to the general principles of the music of that date. A modern expects the opening bars of a movement to present its most important subject, and he anticipates its repetition in the latter portion of the movement as a really vital part of form of any kind. But association and common sense were alike against such a usage being universal in Corelli's time. The associations of ecclesiastical and other serious vocal music, which were then preponderant to a supreme degree, were against strongly salient points, or strongly marked interest in short portions of a movement in contrast to parts of comparative unimportance. Consequently the opening bars of a movement would not be expected to stand out in sufficiently strong relief to be remembered unless they were repeated at once, as they would be in fugue. Human nature is against it. For

not only does the mind take time to be wrought up to a fully receptive condition, unless the beginning is most exceptionally striking, but what comes after is likely to obliterate the impression made by it. As a matter of fact, if all things were equal, the portion most likely to remain in the mind of an average listener, is that immediately preceding the strongest cadences or conclusions of the paragraphs of the movement. It is true, composers do not argue in this manner, but they feel such things vaguely or instinctively, and generally with more sureness and justice than the cold-blooded argumentation of a theorist could attain to. Many examples in other early composers besides Corelli, emphasise this point effectively. The earliest attempts at structural form must inevitably present some simply explicable principle of this sort, which is only not trivial because it is a very significant as well as indispensable starting-point. Corelli's commonest devices of form are the most unsophisticated applications of such simple reasoning. In the first place, in many movements which are not fugue, the opening bars are immediately repeated in another position in the scale, simply and without periphrasis, as if to give the listener assurance of an idea of balance at the very outset. That he did this to a certain extent consciously, is obvious from his having employed the device in at least the following Sonatas—2, 3, 8, 9, 10, 11, of Opera 1^{ma}; 2, 4, 7, 8, of Opera 3^{da}; and 2, 4, 5, and 11, of Opera 4^{ta}; and Tartini and other composers of the same school followed his lead. This device is not, however, either so conspicuous or so common as that of repeating the concluding passage of the first half at the end of the whole, or of the concluding passages of one half or both consecutively. This, however, was not restricted to Corelli, but is found in the works of most composers from his time to Scarlatti, J. S. Bach and his sons; and it is no extravagant hypothesis that its gradual extension was the direct origin of the characteristic second section and second subject of modern sonata movements. In many cases it is the only element of form, in the modern sense, in Corelli's movements. In a few cases he hit upon more complicated principles. The *Corrente* in Sonata 5 of Opera 4^{ta}, is nearly a miniature of modern binary form. The well-known *Giga* in A in the fifth Sonata of Opera 5^{ta}, has balance of key in the first half of the movement, modulation, and something like consistency to subject-matter at the beginning of the second half, and due recapitulation of principal subject-matter at the end. The last movement of the eighth Sonata of the Opera Terza, is within reasonable distance of rondo-form, though this form is generally as conspicuous for its absence in early sonatas as tunes are, and probably the one follows as a natural consequence of the other. Of the simple primary

form, consisting of corresponding beginning and end, and contrast of some sort in the middle, there is singularly little. The clearest example is probably the *Tempo di Gavotta*, which concludes the ninth Sonata of Opera Quinta. He also supplies suggestions of the earliest types of sonata form, in which both the beginnings and endings of each half of the movement correspond; as this became an accepted principle of structure with later composers, it will have to be considered more fully in relation to their works. Of devices of form which belong to the great polyphonic tribe, Corelli uses many, but with more musical feeling than learning. His fugues are not remarkable as fugues, and he uses contrapuntal imitation rather as a subordinate means of carrying on the interest, than of expounding any wonderful device of pedantic wisdom, as was too common in those days. He makes good use of the *chaconne*-form, which was a great favourite with the early composers, and also uses the kindred device of carrying the repetition of a short figure through the greater part of a movement in different phases and positions of the scale. In some cases he merely rambles on without any perceptible aim whatever, only keeping up an equable flow of sound with pleasant interlacings of easy counterpoint, led on from moment to moment by suspensions and occasional imitation, and here and there a helpful sequence. Corelli's position as a composer is inseparably mixed up with his position as one of the earliest masters of his instrument. His style of writing for it does not appear to be so elaborate as that of other contemporaries, both older and younger, but he grasped a just way of expressing things with it, and for the most part the fit things to say. The impression he made upon musical people in all parts of the musical world was strong, and he was long regarded as the most delightful of composers in his particular line; and though the professors of his day did not always hold him in so high estimation, his influence upon many of his most distinguished successors was unquestionably powerful.

It is possible, however, that appearances are deceptive, and that influences of which he was only the most familiar exponent, are mistaken for his peculiar achievement. Thus knowing his position at the head of a great school of violinists, which continued through several generations down to Haydn's time, it is difficult to disunite him from the honour of having fixed the type of sonata which they almost uniformly adopted. And not only this noble and vigorous school, comprising such men as Tartini, Vivaldi, Locatelli, Nardini, Veracini, and outlying members like Leclair and Rust, but men who were not specially attached to their violins, such as Albinoni and Purcell, and later, Bach, Handel, and Porpora, equally adopted the type. Of Albinoni not much

seems to be distinctly known, except that he was Corelli's contemporary and probably junior. He wrote operas and instrumental music. Of the latter, several sonatas are still to be seen, but they are, of course, not familiar, though at one time they enjoyed a wide popularity. The chief point about them is that in many for violin and figured bass he follows not only the same general outlines, but even the style of Corelli. He adopts the four-movement plan, with a decided canzona in the second place, a slow movement first and third, and a quick movement to end with, such as in one case a Corrente. Purcell's having followed Corelli's lead is repudiated by enthusiasts; but at all events the lines of his Golden Sonata in F are wonderfully similar. There are three slow movements, which come first, second, and fourth; the third movement is actually called a Canzona; and the last is a quick movement in 3-8 time, similar in style to corresponding portions of Corelli's Sonatas. The second movement, an Adagio, is the most expressive, being happily devised on the principle above referred to, of repeating a short figure in different positions throughout the movement. In respect of sonata-form the work is about on a par with the average of Corelli or Biber.

The domain of the Sonata was for a long while almost monopolised by violinists and writers for the violin. Some of these, such as Geminiani and Locatelli, were actually Corelli's pupils. They clearly followed him both in style and structural outlines, but they also began to extend and build upon them with remarkable speed. The second movement continued for long the most stationary and conventional, maintaining the Canzona type in a loose fugal manner, by the side of remarkable changes in the other movements. Of these the first began to grow into larger dimensions and clearer proportions even in Corelli's own later works, attaining to the dignity of double bars and repeats, and with his successors to a consistent and self-sufficing form. An example of this is the admirable *Larghetto affettuoso* with which Tartini's celebrated 'Trillo del Diavolo' commences. No one who has heard it could fail to be struck with the force of the simple device above described of making the ends of each half correspond, as the passage is made to stand out from all the rest more characteristically than usual. A similar and very good example is the introductory *Largo* to the Sonata in G minor, for violin and figured bass, by Locatelli, which is given in Ferdinand David's 'Hohe Schule des Violinspiels.' The subject-matter in both examples is exceedingly well handled, so that a sense of perfect consistency is maintained without concrete repetition of subjects, except, as already noticed, the closing bars of each half, which in Locatelli's Sonata are rendered less obvious through the addition

of a short coda starting from a happy interrupted cadence. It is out of the question to follow the variety of aspects presented by the introductory slow movement; a fair proportion are on similar lines to the above examples, others are isolated. Their character is almost uniformly solid and large; they are often expressive, but generally in a way distinct from the character of the second slow movement, which from the first was chosen as the fittest to admit a vein of tenderer sentiment. The most important matter in the history of the Sonata at this period is the rapidity with which advance was made towards the realisation of modern harmonic and tonal principles of structure, or, in other words, the perception of the effect and significance of relations between chords and distinct keys, and consequent appearance of regularity of purpose in the distribution of both, and increased freedom of modulation. Even Corelli's own pupils show consistent form of the sonata kind with remarkable clearness. The last movement of a Sonata in C minor, by Geminiani, has a clear and emphatic subject to start with; modulation to the relative major, E \flat , and special features to characterise the second section; and conclusion of the first half in that key, with repeat after the supposed orthodox manner. The second half begins with a long section corresponding to the working out or 'free fantasia' portion of a modern sonata movement, and concludes with recapitulation of the first subject and chief features of the second section in C minor; this latter part differing chiefly from modern ways by admitting a certain amount of discursiveness, which is characteristic of most of the early experiments in this form. Similar to this is the last movement of Locatelli's Sonata in G minor, the last movement of Veracini's Sonata in E minor, published at Vienna in 1714, the last movements of Tartini's Sonatas in E minor and D minor, and not a few others. It is rather curious that most of the early examples of what is sometimes called first-movement form are last movements. Most of these movements, however, in the early times, are distinguished by a peculiarity which is of some importance. It has been before referred to, but is so characteristic of the process of growth, that it will not be amiss to describe it in this place. The simple and almost homely means of producing the effect of structural balance by making the beginning and ending of each half of a movement correspond, is not so conspicuously common in its entirety as the correspondence of endings or repetition of cadence bars only; but it nevertheless is found tolerably often, and that in times before the virtue of a balance of keys in the first half of the movement had been decisively realised. When, however, this point was gained, it is clear that such a process would give, on as minute a scale as possible, the very

next thing to complete modern binary form. It only needed to expand the opening passage into a first subject, and the figures of the Cadence into a second subject, to attain that type which became almost universal in sonatas till Haydn's time, and with some second-rate composers, like Reichardt, later. The movements which are described as binary must be therefore divided into two distinct classes:—that in which the first subject reappears in the complementary key at the beginning of the second half, which is the almost universal type of earlier times; and that in which it appears in the latter part of the movement, after the working-out portion, which is the later type. The experiments in Corelli and Tartini, and others who are close to these types, are endless. Sometimes there are tentative strokes near to the later form; sometimes there is an inverted order reproducing the second portion of the movement first. Sometimes the first subject makes its appearance at both points, but then, may be, there is no balance of keys in the first half, and so forth. The variety is extraordinary, and it is most interesting to watch the manner in which some types by degrees preponderate, sometimes by combining with one another, sometimes by gradual transformation, some nearer and more decisively like the types which are generally adopted in modern times as fittest. The later type was not decisively fixed on at any particular point, for many early composers touched it once or twice at the same period that they were writing movements in more elementary forms. The point of actual achievement of a step in art is not marked by an isolated instance, but by decisive preponderance, and by the systematic adoption which shows at least an instinctive realisation of its value and importance.

These writers of violin sonatas were just touching on the clear realisation of harmonic form as accepted in modern times, and they sometimes adopted the later type, though rarely, and that obscurely; they mastered the earlier type, and used it freely; and they also used the intermediate type which combines the two, in which the principal or first subject makes its appearance both at the beginning of the first half and near the end, where a modern would expect it. As a sort of embryonic suggestion of this, the *Tempo di Gavotta*, in the eighth Sonata of Corelli's *Opera Seconda*, is significant. Complete examples are—the last movement of Tartini's fourth Sonata of Opus 1, and the last movement of that in D minor above referred to; the last movement of Geminiani's Sonata in C minor; the main portion, excluding the Coda, of the *Corrente* in Vivaldi's Sonata in A major; the last movement of a Sonata of Nardini's, in D major; and two *Capriccios* in B \flat and C, by Franz Benda, quoted in F. David's '*Hohe Schule*,' etc.

The four-movement type of violin sonata was not invariably adopted, though it preponderates so conspicuously. There is a set of twelve sonatas by Locatelli, for instance, not so fine as that in F. David's collection, which are nearly all on an original three-movement plan, concluding with an 'Aria' and variations on a ground-bass. Some of Tartini's are also in three movements, and a set of six by Nardini are also in three, but always beginning with a slow movement, and therefore, though almost of the same date, not really approaching the distribution commonly adopted by Haydn for Clavier Sonatas. In fact the old Violin Sonata is in many respects a distinct genus, which maintained its individuality alongside the gradually stereotyped Clavier Sonata, and only ceased when that type obtained possession of the field, and the violin was re-introduced, at first as it were furtively, as an accompaniment to the pianoforte. The general characteristics of this school of writers for the violin, were nobility of style and richness of feeling, an astonishing mastery of the instrument, and a rapidly-growing facility in dealing with structure in respect of subject, key, modulation, and development; and what is most vital, though less obvious, a perceptible growth in the art of expression and a progress towards the definition of ideas. As a set-off there are occasional traces of pedantic manners, and occasional crudities both of structure and expression, derived probably from the associations of the old music which they had so lately left behind them. At the crown of the edifice are the Sonatas of J. S. Bach. Of sonatas in general he appears not to have held to any decisive opinion. He wrote many for various instruments, and for various combinations of instruments. For clavier, for violin alone, for flute, violin, and clavier, for viol da gamba and clavier, and so on; but in most of these the outlines are not decisively distinct from Suites. In some cases the works are described as 'Sonatas or Suites,' and in at least one case the introduction to a church cantata is called a Sonata. Some instrumental works which are called Sonatas only, might quite as well be called Suites, as they consist of a prelude and a set of dance-tunes. Others are heterogeneous. From this it appears that he had not satisfied himself on what lines to attack the Sonata in any sense approaching the modern idea. With the Violin Sonatas it was otherwise; and in the group of six for violin and clavier he follows almost invariably the main outlines which are characteristic of the Italian school descended from Corelli, and all but one are on the four-movement plan, having slow movements first and third, and quick movements second and fourth. The sixth Sonata only differs from the rest by having an additional quick movement at the beginning. Not only this but the second movements keep decisively the formal lineaments of the ancient type of free

fugue, illustrated with more strictness of manner by the Canzonas. Only in calibre and quality of ideas, and in some peculiar idiosyncrasies of structure do they differ materially from the works of the Italian masters. Even the first, third, and fifth Sonatas in the other set of six, for violin alone, conform accurately to the old four-movement plan, including the fugue in the second place; the remaining three being on the general lines of the Suite. In most of the Sonatas for violin and clavier, the slow movement is a tower of strength, and strikes a point of rich and complex emotional expression which music reached for the first time in Bach's imagination. His favourite way of formulating a movement of this sort, was to develop the whole accompaniment consistently on a concise and strongly-marked figure, which by repetition in different conditions formed a bond of connection throughout the whole; and on this he built a passionate kind of recitative, a free and unconstrained outpouring of the deepest and noblest instrumental song. This was a sort of apotheosis of that form of rhapsody, which has been noticed in the early Sonatas, such as Biber's and Kuhnau's, and was occasionally attempted by the Italians. The six Sonatas present diversities of types, all of the loftiest order; some of them combining together with unfailing expressiveness perfect specimens of old forms of contrapuntal ingenuity. Of this, the second movement of the second Sonata is a perfect example. It appears to be a pathetic colloquy between the violin and the treble of the clavier part, to which the bass keeps up the slow constant motion of staccato semiquavers: the colloquy at the same time is in strict canon throughout, and, as a specimen of expressive treatment of that time-honoured form, is almost unrivalled.

In all these movements the kinship is rather with the contrapuntal writers of the past, than with the types of Beethoven's adoption. Even Bach, immense as his genius and power of divination was, could not leap over that period of formation which it seems to have been indispensable for mankind to pass through, before equally noble and deeply-felt things could be expressed in the characteristically modern manner. Though he looked further into the future in matters of expression and harmonic combination than any composer till the 19th century, he still had to use forms of the contrapuntal and fugal order for the expression of his highest thoughts. He did occasionally make use of binary form, though not in these Sonatas. But he more commonly adopted, and combined with more or less fugal treatment, an expansion of simple primary form to attain structural effect. Thus, in the second movements of the first and second Sonatas, in the last of the third and sixth, and the first of the sixth, he marks first a long complete section in his principal key, then takes his way into modulations and development, and discussion

of themes and various kinds of contrapuntal enjoyment, and concludes with simple complete recapitulation of the first section in the principal key. Bach thus stands singularly aside from the direct line of the development of the Sonata as far as the structural elements are concerned. His contributions to the art of expression, to the development of resource, and to the definition and treatment of ideas, had great effect, and are of the very highest importance to instrumental music; but his almost invariable choice of either the suite-form, or the accepted outlines of the violin sonata, in works of this class, caused him to diverge into a course which with him found its final and supreme limit. In order to continue the work in veins which were yet unexhausted, the path had to be turned a little, and joined to courses which were coming up from other directions. The violin sonata continued to make its appearance here and there as has already been mentioned, but in the course of a generation it was entirely supplanted by the distinct type of clavier sonata.

Meanwhile there was another composer of this time, who appears to stand just as singularly apart from the direct high road as Bach, and who, though he does not occupy a pedestal so high in the history of art, still has a niche by no means low or inconspicuous, and one which he shares with no one. Domenico Scarlatti was Bach's senior by a few years, though not enough to place him in an earlier musical generation; and in fact though his works are so different in quality, they have the stamp that marks them as belonging to the same parallel of time.

His most valuable contributions are in the immense number of sonatas and studies which he wrote for the harpsichord. The two names are used as synonyms, for each of the thirty 'Esercizii per Gravicembalo' is separately entitled 'Sonata.' But whatever they are called they do not correspond in appearance to any form which is commonly supposed to be essential to the Sonata. Neither can they be taken as pure-bred members of the fugal family, nor do they trace their origins to the Suite. They are in fact, in a fair proportion of cases, an attempt to deal with direct ideas in a modern sense, without appealing to the glamour of conscious association, the dignity of science, or the familiarity of established dance rhythms. The connection with what goes before and with what comes after is alike obscure, because of the daring originality with which existing materials are worked upon; but it is not the less inevitably present, as an outline of his structural principles will show.

His utterance is at its best sharp and incisive; the form in which he loves to express himself is epigrammatic; and some of his most effective sonatas are like strings of short propositions bound together by an indefinable sense of consistency and consequence, rather than by actual development. These ideas are commonly brought

home to the hearer by the singular practice of repeating them consecutively as they stand, often several times over; in respect of which it is worth remembering that his position in relation to his audience was not unlike that of an orator addressing an uncultivated mob. The capacity for appreciating grand developments of structure was as undeveloped in them as the power of following widely spread argument and conclusion would be in the mob. And just as the mob-orator makes his most powerful impressions by short direct statements, and by hammering them in while still hot from his lips, so Scarlatti drove his points home by frequent and generally identical reiterations; and then when the time came round to refer to them again, the force of the connection between distant parts of the same story was more easily grasped. The feeling that he did this with his eyes open is strengthened by the fact that even in the grouping of the reiterations there is commonly a perceptible method. For instance, it can hardly be by accident that at a certain point of the movement, after several simple repetitions, he should frequently resort to the complication of repeating several small groups within the repetition of large ones. The following example is a happy illustration of his style, and of his way of elaborating such repetitions:—

VOL. IV

It must not be supposed that he makes a law of this procedure, but the remarkably frequent occurrence of so curious a device is certainly suggestive of conscious purpose in structural treatment. [It is only right to point out the recognised custom of repeating phrases on the harpsichord with a change of registration, which may account in some measure for the habit here referred to.] The result of this mode is that the movements often appear to be crowded with ideas. Commonly the features of the opening bars, which in modern times would be held of almost supreme importance, serve for very little except to determine the character of the movement, and do not make their appearance again. On the other hand, he carries the practice before referred to, of making the latter part of each half of the movement correspond, to an extraordinary pitch, and with perfect success; for he almost invariably adopts the key distribution of binary form in its main outlines; and though it would not be accurate to speak of such a thing as a 'second subject' in his sonatas, the impression produced by his distribution of repetition and the clearness of his ideas is sufficient, in his best movements, to give a general structural effect very similar to complete binary form on a small scale. In order to realise to what extent the process of recapitulation is carried by him, it will be as well to consider the outline of a fairly characteristic sonata. That which stands fifteenth in the easily available edition of Breitkopf & Härtel¹ commences with eight bars only in E minor; the next forty-six, barring merely a slight and unimportant digression, are in G major. This concludes the first half. The second half begins with reference to the opening figures of the whole and a little key digression, and then a characteristic portion of the second section of the first half is resumed, and the last thirty-four bars of the movement are a recapitulation in E minor of the last thirty-five of the first half, the three concluding bars being condensed into two.

In many respects his principles of structure and treatment are altogether in the direction of modern ways, and alien to fugal principles. That vital principle of the fugue—the persistence of one principal idea, and the interweaving of it into every part of the structure—appears completely alien to Scarlatti's disposition. He very rarely wrote a fugue; and when he did, if it was successful that was less because it was a good fugue than because it was Scarlatti's. The fact that he often starts with imitation between two parts is unimportant, and the merest accident of association. He generally treats his ideas as concrete lumps, and disposes them in distinct portions of the movement,

¹ It is also the fifteenth in the 'Esercizi' in Fauer's edition it is No. 18; in the 'Trésor des Flautistes,' No. 19; and occurs on p. 22 of Roseingrave's second volume. It has not yet appeared in Signor Longo's complete edition.

which is essentially an unfugal proceeding; but the most important matter is that he was probably the first to attain to clear conception and treatment of a self-sufficing effective idea, and to use it, if without science, yet with management which is often convincingly successful. He was not a great master of the art of composition, but he was one of the rarest masters of his instrument; and his divination of the way to treat it, and the perfect adaptation of his ideas to its requirements, more than counterbalance any shortcoming in his science. He was blessed with ideas, and with a style so essentially his own, that even when his music is transported to another instrument the characteristic effects of tone often remain unmistakable. Vivacity, humour, genuine fun, are his most familiar traits. At his best his music sparkles with life and freshness, and its vitality is apparently quite unimpaired by age. He rarely approaches tenderness or sadness, and in the whole mass of his works there are hardly any slow movements. He is not a little 'bohemian,' and seems positively to revel in curious effects of consecutive fifths and consecutive octaves. The characteristic daring of which such things are the most superficial manifestations, joined with the clearness of his foresight, made him of closer kinship to Beethoven and Weber, and even Brahms, than to the typical contrapuntalists of his day. His works are genuine 'sonatas' in the most radical sense of the term—self-dependent and self-sufficing *sound-pieces*, without programme. To this the distribution of movements is at least of secondary importance, and his confining himself to one alone does not vitiate his title to be a foremost contributor to that very important branch of the musical art. No successor was strong enough to wield his bow. His pupil Durante wrote some sonatas, consisting of a Studio and a Divertimento apiece, which have touches of his manner, but without sufficient of the nervous elasticity to make them important.

The contemporary writers for clavier of second rank do not offer much which is of high musical interest, and they certainly do not arrive at anything like the richness of thought and expression which is shown by their fellows of the violin. There appears, however, amongst them a tendency to drop the introductory slow movement characteristic of the violin sonata, and by that means to draw nearer to the type of later clavier or pianoforte sonatas. Thus a sonata of Wagenseil's in F major presents almost exactly the general outlines to be met with in Haydn's works—an Allegro assai in binary form of the old type, a short Andantino grazioso, and a Tempo di Minuetto. A sonata of Hasse's in D minor has a similar arrangement of three movements ending with a Gigue; but the first movement is utterly vague and indefinite in form. There is also an Allegro of

Hasse's in B \flat , quoted in Pauer's 'Alte Meister,' which deserves consideration for the light it throws on a matter which is sometimes said to be a crucial distinction between the early attempts at form and the perfect achievement. In many of the early examples of sonata-form, the second section of the first part is characterised by groups of figures which are quite definite enough for all reasonable purposes, but do not come up to the ideas commonly entertained of the nature of a subject; and on this ground the settlement of sonata-form was deferred some fifty years. Hasse was not a daring originator, neither was he likely to strike upon a crucial test of perfection, yet in this movement he sets out with a distinct and complete subject in B \flat of a robust Handelian character:—

and after the usual extension proceeds to F, and announces by definite emphasis on the Dominant the well-contrasted second subject, which is suggestive of the polite reaction looming in the future:—

The movement as a whole is in the binary type of the earlier kind.

The period now approaching is characterised by uncertainty in the distribution of the movements, but increasing regularity and definition in their internal structure. Some writers follow the four-movement type of violin sonata in writing for the clavier; some strike upon the grouping of three movements; and a good many fall back upon two. A sonata of Galuppi's in D illustrates the first of these, and throws light upon the transitional process. The first movement is a beautiful Adagio of the Arioso type, with the endings of each half corresponding, after the manner traced from Corelli; the second is an Allegro, not of the fugal or Canzona order, but clear binary of the older kind. A violin sonata of Locatelli's, of probably earlier date, has an Allemande of excellent form in this

position, but this is not sufficiently definite in the inference it affords to throw much light on any transition or assimilation of violin sonata-form to clavier sonata-form. Galuppi's adoption of a movement of clear sonata-qualities in this place supplies exactly the link that was needed; and the fugal or canzona type of movement being so supplanted, nothing further was necessary but expansion, and the omission of the introductory Adagio (which probably was not so well adapted to the earlier keyed instruments as to the violin), to arrive at the principle of distribution adopted in the palmiest days of formalism. Later, with a more powerful instrument, the introductory slow movement was often reintroduced. Galuppi's third movement is in a solid march style, and the last is a Giga. All of them are harmonically constructed, and the whole work is solid and of sterling musical worth.

Dr. Arne was born only four years after Galuppi, and was amenable to the same general influences. The structure of his sonatas emphasises the fact above mentioned, that though the order of movements was passing through a phase of uncertainty their internal structure was growing more and more distinct and uniform. His first sonata, in F, has two movements, Andante and Allegro; both of which follow harmonically the lines of binary form. The second, in E minor, has three movements, Andante, Adagio, Allegro. The first and last are on the binary lines, and the middle one in simple primary form. The third Sonata consists of a long vague introduction of arpeggios, elaborated in a manner characteristic of the time, an Allegro which has only one subject but is on the binary lines, and a Minuet and two Variations. The fourth Sonata is in some respects the most interesting. It consists of an Andante, Siciliano, Fuga, and Allegro. The first is of continuous character but nevertheless in binary form, without the strong emphasis on the points of division between the sections. It deserves notice for its expressiveness and clearness of thought. The second movement is very short, but pretty and expressive, of a character similar to examples of Handel's tenderer moods. The last movement is particularly to be noticed, not only for being decisively in binary form, but for the ingenuity with which that form is manipulated. The first section is represented by the main subject in the treble, the second (which is clearly marked in the dominant key) has the same subject in the bass, a device adopted also more elaborately by W. Friedemann Bach. The second half begins with consistent development and modulation, and the recapitulation is happily managed by making the main subject represent both sections at once in a short passage of canon. Others of Arne's sonatas afford similar though less clear examples, which it is superfluous to consider in detail; for neither

the matter nor the handling is so good in them as in those above described, most of which, though not rich in thought or treatment, nor impressive in character, have genuine traits of musical expression and clearness of workmanship.

In the same year with Dr. Arne was born Wilhelm Friedemann Bach, the eldest son of John Sebastian. He was probably the most gifted, the most independent, and unfortunately the wildest and most unmanageable of that remarkable family. Few of his compositions are known, and it is said that he would not take the trouble to write unless he was driven to it. Two sonatas exist, which are of different type, and probably represent different periods of his chequered career. One in D major, for its richness, elaborateness, expressiveness, is well worthy of the scion of so great a stock; the other is rather cheap, and though masterly in handling and disposition of structural elements, has more traces of the elegance which was creeping over the world of music than of the grave and earnest nobleness of his father and similar representatives of the grand period. The first, in D, is probably the most remarkable example, before Beethoven, of original ingenuity manipulating sonata-form under the influence of fugal associations and by means of contrapuntal devices. The whole is worked out with careful and intelligible reasoning, but to such an elaborate extent that it is quite out of the question to give even a complete outline of its contents. The movements are three—Un poco allegro, Adagio, Vivace. The first and last are speculative experiments in binary form. The first half in each represents the balance of expository sections in tonic and complementary keys. The main subject of the first reappears in the bass in the second section, with a new phase of the original accompaniment in the upper parts. The development portion is in its usual place, but the recapitulation is tonally reversed. The first subject and section is given in a relative key to balance the complementary key of the second section, and the second section is given in the original key or tonic of the movement; so that instead of repeating one section and transposing the other in recapitulation, they are both transposed analogously. In each of the three movements the ends of the halves correspond, and not only this but the graceful little figure appended to the cadence is the same in all the movements, establishing thereby a very delicate but sensible connection between them. This figure is as follows:—

The formal pauses on familiar points of harmony characteristic of later times are conspicuously few, the main divisions being generally marked by more subtle means. The whole sonata is so uncompromisingly full of expressive figures, and would require to be so elaborately phrased and 'sung' to be intelligible, that an adequate performance would be a matter of considerable difficulty. The second Sonata, in C, has quite a different appearance. It is also in three movements—Allegro, Grave, and Vivace. The first is a masterly, clear, and concise example of binary form of the type which is more familiar in the works of Haydn and Mozart. The second is an unimportant intermezzo leading directly into the Finale, which is also in binary form of the composita type. The treatment is the very reverse of the previous sonata. It is not contrapuntal, nor fugal. Little pains are taken to make the details expressive; and the only result of using a bigger and less careful brush is to reduce the interest to a minimum, and to make the genuineness of the utterances seem doubtful, because the writer appears not to have taken the trouble to express his best thoughts.

Wilhelm Friedemann's brother, Carl Philipp Emanuel, his junior by a few years, was the member of the younger family who attained the highest reputation as a representative composer of instrumental music and a writer on that subject. His celebrity is more particularly based on the development of sonata-form, of which he is often spoken of as the inventor. True, his sonatas and writings obtained considerable celebrity, and familiarity induced people to remark things they had overlooked in the works of other composers. But in fact he is neither the inventor nor the establisher of sonata-form. It was understood before his day, both in details and in general distribution of movements. One type obtained the reputation of supreme fitness later, but it was not nearly always adopted by Haydn, nor invariably by Mozart, and was consistently departed from by Beethoven; and Emanuel did not restrict himself to it; yet his predecessors used it often. It is evident therefore that his claims to a foremost place

rest upon other grounds. Among these, most prominent is his comprehension and employment of the art of playing and expressing things on the clavier. He understood it, not in a new sense, but in one which was nearer to public comprehension than the treatment of his father. He grasped the phase to which it had arrived, by constant development in all quarters; he added a little of his own, and having a clear and ready-working brain, he brought it home to the musical public in a way they had not felt before. His influence was paramount to give a decided direction to clavier-playing, and it is possible that the style of which he was the foster-father passed on continuously to the masterly treatment of the pianoforte by Clementi, and through him to the culminating achievements of Beethoven.

In respect of structure, most of his important sonatas are in three movements, of which the first and last are quick, and the middle one slow; and this is a point by no means insignificant in the history of the sonata, as it represents a definite and characteristic balance between the principal divisions, in respect of style and expression as well as in the external traits of form. Many of these are in clear binary form, like those of his elder brother, and his admirable predecessor, yet to be noted, P. Domenico Paradisi. He adopts sometimes the old type, dividing the recapitulation in the second half of the movement; sometimes the later, and sometimes the composite type. For the most part he is contented with the opportunities for variety which this form supplies, and casts a greater proportion of movements in it than most other composers, even to the extent of having all movements in a work in different phases of the same form, which in later times was rare. On the other hand, he occasionally experiments in structures as original as could well be devised. There is a Sonata in F minor which has three main divisions corresponding to movements. The first, an Allegro, approaches vaguely to binary form; the second, an Adagio, is in rough outline like simple primary form, concluding with a curious barless cadenza; the last is a Fantasia of the most elaborate and adventurous description, full of experiments in modulation, enharmonic and otherwise, changes of time, abrupt surprises and long passages entirely divested of bar lines. There is no definite subject, and no method in the distribution of keys. It is more like a rhapsodical improvisation of a most inconsequent and unconstrained description than the product of concentrated purpose, such as is generally expected in a sonata movement. This species of experiment has not survived in high-class modern music, except in the rarest cases. It was however not unfamiliar in those days, and superb examples in the same spirit were provided by John Sebastian, such as the Fantasia

Cromatica, and parts of some of the Toccatas. John Ernst Bach also left something more after the manner of the present instance as the prelude to a fugue. Emanuel Bach's position is particularly emphasised as the most prominent composer of sonatas of his time, who clearly shows the tendency of the new counter-current away from the vigour and honest comprehensiveness of the great school of which his father was the last and greatest representative, towards the elegance, polite ease, and artificiality, which became the almost indispensable conditions of the art in the latter part of the 18th century. Fortunately the process of propping up a tune upon a dummy accompaniment was not yet accepted universally as a desirable phenomenon of high-class instrumental music; in fact such a stride downward in one generation would have been too cataclystic; so he was spared the temptation of shirking honest concentration, and padding his works, instead of making them thoroughly complete; and the result is a curious combination, sometimes savouring strongly of his father's style:—

and sometimes coldly predicting the style of the future:—

In general, his building up of movements is full of expressive detail, and he does not spare himself trouble in enriching his work with such things as ingenuity, genuine musical perception, and vivacity of thought can suggest. He occasionally reaches a point of tenderness and poetic sensibility which is not unworthy of his descent, but there is also sometimes an uncomfortable premonition in his slow movements of the posturing and posing which were soon to be almost inevitable in well-bred Adagios. The spirit is indeed not greatly deep and earnest, but in outward things the attainment of a rare degree of point and emphasis, and of clearness and certainty in construction without emptiness, sufficed to give Philipp Emanuel a foremost place among the craftsmen of the art.

P. Domenico Paradies was Emanuel Bach's senior by a few years. Two of his sonatas, at least, are deservedly well known to musicians. The structural qualities shown by the whole set

of twelve, emphasise the opinion that binary form was familiar to composers of this period. They differ from Philipp Emanuel's chiefly in consisting uniformly of two movements only. Of these, the first movements are almost invariably in binary form. That of the first sonata is perfectly complete and of the later type; many of the others are of the early type. Some details in the distribution of the movements are worth noticing. Thus the last movement of No. 4 is a very graceful and pretty minuet, which had hitherto not been so common an ingredient in sonatas as it afterwards became. The last movement¹ of No. 3 is called an aria; the arrangement of parts of which, as well as that of the last movement of No. 9, happens to produce a rondo, hitherto an extremely rare feature. His formulation and arrangement of subjects is extremely clear and masterly, and thoroughly in the sonata manner—that is, essentially harmonical. In character he leans towards the style of the latter part of the 18th century, but has a grace and sincerity which are thoroughly his own. In a few cases, as in the last movements of the Sonatas in A and D, Nos. 6 and 10, which are probably best known of all, the character assumed is rather of the bustling and hearty type which is suggestive of the influence of Scarlatti. In detail they are not so rich as the best specimens of Emanuel's, or of Friedemann Bach's workmanship; but they are thoroughly honest and genuine all through, and thoroughly musical, and show no sign of shuffling or laziness.

The two-movement form of clavier sonata, of which Paradies's are probably the best examples, seems to have been commonly adopted by a number of composers of second and lower rank, from his time till far on in the century. Those of Durante have been already mentioned. All the set of eight, by Domenico Alberti, are also in this form, and so are many by such forgotten contributors as Roeser and Barthélemon, and some by the once popular Schobert. Alberti is credited with the doubtful honour of having invented a formula of accompaniment which became a little too familiar in the course of the century, and is sometimes known as the 'Alberti Bass.' (See vol. i. p. 63a.) He may not have invented it, but he certainly called as much attention to it as he could, since not one of his eight sonatas is without it, and in some movements it continues almost throughout. The movements approach occasionally to binary form, but are not clearly defined; the matter is for the most part dull in spirit, and poor in sound; and the strongest characteristic is the unfortunate one of hitting upon a cheap device, which was much in vogue with later composers of mark, without having arrived at that mastery and definition of form and subject

¹ In some modern reprints of this sonata the order of the movements has been reversed.

which alone made it endurable. The times were not quite ripe for such usages, and it is fortunate for Paradisi, who was slightly Alberti's junior, that he should have attained to a far better definition of structure without resorting to such cheapening.

There are two other composers of this period who deserve notice for maintaining, even later, some of the dignity and nobility of style which were now falling into neglect, together with clearness of structure and expressiveness of detail. These are Rolle and George Benda. A sonata of the former's in E \flat shows a less certain hand in the treatment of form, but at times extraordinary gleams of musically poetic feeling. Points in the Adagio are not unworthy of kinship with Beethoven. It contains broad and daring effects of modulation, and noble richness of sentiment and expression, which, by the side of the obvious tendencies of music in these days, is really astonishing. The first and last movements are in binary form of the old type, and contain some happy and musical strokes, though not so remarkable as the contents of the slow movement. George Benda was a younger and greater brother of the Franz who has been mentioned in connection with Violin Sonatas. He was one of the last writers who, using the now familiar forms, still retained some of the richness of the earlier manner. There is in his work much in the same tone and style as that of Emanuel Bach, but also an earnestness and evident willingness to get the best out of himself and to deal with things in an original manner, such as was by this time becoming rare. After him, composers of anything short of first rank offer little to arrest attention either for individuality in treatment or earnestness of expression. The serious influences which had raised so many of the earlier composers to a point of memorable musical achievement were replaced by associations of far less genuine character, and the ease with which something could be constructed in the now familiar forms of sonata, seduced men into indolent uniformity of structure and commonplace prettiness in matter. Some attained to evident proficiency in the use of instrumental resource, such as Turini; and some to a touch of genuine though small expressiveness, as Haessler and Grazioli; for the rest the achievements of Sarti, Sacchini, Schobert, Méhul, and the otherwise great Cherubini, in the line of sonata, do not offer much that requires notice. They add nothing to the process of development, and some of them are remarkably behindhand in relation to their time, and both what they say and the manner of it is equally unimportant.

Midway in the crowd comes the conspicuous form of Haydn, who raised upon the increasingly familiar structural basis not only some fresh and notable work of the accepted sonata character, but the great and enduring monument of his

symphonies and quartets. The latter do not fall within the limits of the present subject, though they are in reality but the great instrumental expansion of this kind of music for solo instruments. An arbitrary restriction has been put upon the meaning of the word Sonata, and it is necessary here to abide by it. With Haydn it is rather sonata-form which is important, than the works which fall under the conventional acceptance of the name. His sonatas are many, but they are of exceedingly diverse value, and very few of really great importance. As is the case with his quartets, some, which internal evidence would be sufficient to mark as early attempts, are curiously innocent and elementary; and even throughout, with a few exceptions, their proportionate value is not equal to that of other classes of his numerous works. But the great span of his musical activity, reaching from the times of the Bach family till fairly on in Beethoven's mature years, the changes in the nature of keyed instruments, and the development of their resources which took place during his lifetime, make it inevitable that there should be a marked difference in the appearance and limits of different members of the collection. However, he is always himself, and though the later works are wider and more richly expressed, they represent the same mental qualities as the earliest. At all times his natural bent is in favour of simplification, as against the old contrapuntal modes of expression. His easy good-humour speaks best in simple but often ingeniously balanced tunes and subjects, and it is but rare that he has recourse to polyphonic expression or to the kind of idea which calls for it. Partly on this account and partly on account of narrowness of capacity in the instrument to which in solo sonatas he gave most attention, his range of technical resource is not extensive, and he makes but little demand upon his performers. His use of tunes and decisively outlined subjects is one of the most important points in relation to structure at this period. Tunes had existed in connection with words for centuries, and it is to their association with verses balanced by distinct rhythmic grouping of lines, that the sectional tune of instrumental music must ultimately be traced. It appears not to be a genuine instrumental product, but an importation; and the fact that almost all the most distinguished composers were connected with opera establishments, just at the time that the tune-element became most marked in instrumental works, supports the inference that the opera was the means through which a popular element ultimately passed into the great domain of abstract music. In preceding times the definition of subject by hard outlines and systematic conformity to a few normal successions of harmony was not universal; and the adoption of tunes was rare. In Haydn and Mozart the culmination of regularity in the building of subjects is reached.

The virtue of this process is that it simplifies the conditions of structure in the whole movement. When a correct system of centralisation is found by which the subject is restrained within the limits which strictly illustrate but one single tonality, the feelings which this suggests to the hearer are such as will be satisfied with equally simple order in all other parts of the complete structure. If the creative power is not sufficiently concentrated and disciplined to restrain the direction of its activity within comprehensible bounds, the result can only be to make perfect balance and proportion impossible. Thus if the first section of a movement is so decentralised that its connection with any particular key cannot possibly be followed by the hearer, one of the primary conditions of abstract music has been violated, and the balance of parts rendered undistinguishable. Yet the subject or section may range broadly in its course, and touch upon many alien tonalities without violating these conditions; but then the horizon is broadened so as to necessitate an equal relative extension in every part of the movement. If a poet sets out with a passage expanded to the full with imagery and implication, in which almost every word is suggestive of wide horizons of thought, and carries inference behind it as complicated as those which lie in simple external manifestations of nature, it is useless for him to go back afterwards to a more limited and statuesque mode of expression. Even a person of little cultivation would feel at once the violation of artistic proportion. A relative degree of heat and intensity must be maintained at the risk of the work being as a whole unendurable. But if a more restricted field of imagination be appealed to at the outset, the work may be the more easily and perfectly carried out in simpler and narrower limits. In abstract music, balance, proportion, equality in the range of emotional and structural elements, are some of the most important conditions. Not that there is to be equal intensity all through, but that the salient and subordinate parts shall be fairly proportionate; and this cannot be tested or stated by formulas of science, but only by cultivated artistic instinct. In music the art of expressing an idea within the limits and after the manner necessary for abstract music had to be discovered. The process of selection from experimental types had brought this to the closest point consistent with completeness in the latter half of the 18th century. At that time the disposition of the musical mind was specially set upon obviously intelligible order and certainty in the structural aspect of works. It was a necessary condition for art to go through; and though not by any means the sole or supreme condition of excellence, it is not strange that the satisfaction derived from the sense of its achievement should cause people, in social circumstances which were peculiarly favourable, to put disproportionate

stress upon it; and that modern writers who have not been able to keep pace with the inevitable march and change in the conditions of musical utterance should still insist on it as if it were the ultimate aim of art; whereas in fact its prominence in that epoch was a passing phase having considerable dependence upon unique social conditions, and its existence in art at any time is only one of numberless constituent elements. The condition of art of that time enabled the greatest composers to express the utmost of their ideas, and to satisfy their audiences, within the limits of a very simple group of harmonies. And this simplified the whole process of building their works to the utmost. Haydn manipulates the resources which lie within such limits to admiration. Hardly any composer so successfully made uniformity out of compounded diversity on a small scale. He delights in making the separate limbs of a subject of different lengths, and yet, out of their total sum, attaining a perfect and convincing symmetry. The harmonic progression of the subjects is uniformly obedient to the principles of a form which is on a preconceived plan, and without some such device the monotony of well-balanced phrases must soon have become wearisome. With regard to the actual distribution of the movements, Haydn does not depart from that already familiar in the works of earlier composers. Out of forty sonatas, comprising works for pianoforte alone, for pianoforte with accompaniment, and some adaptations, ten have only two movements, twenty-nine have three, and only one has four, this last comprising the only Scherzando in the whole collection of one hundred and eleven movements. Nearly all the first movements are in binary form with an occasional rondo; the last is often a rondo, more often in binary form, and occasionally a theme and variations. In the sonatas which have more than two movements, at least twice as many retain the old adagio as those which have the characteristic minuet and trio; but as a set-off, several of the sonatas either conclude with a dance form, or a rondo, or set of variations in the 'Tempo di Minuetto.'

The actual structure of the movements presents occasional peculiarities. In a few cases the pure old binary type, with repeat of first subject at the beginning of the second half, reappears. A considerable number are in the composite form, in which the first subject makes two distinct reappearances in full in the second half, as before described. The two halves of the movement are generally, but not invariably, repeated—the first half almost invariably; in fact, the absence of the double bar in the middle of the Sonata in D major (No. 32 in Breitkopf & Härtel's edition) appears to be the only exception. The distribution of subjects in balancing keys appears to be absolutely without exception, as tonic and dominant, or tonic minor and relative

major. Each movement has usually two distinct subjects, but occasionally, as is observable in Haydn's predecessors, the second is not strongly marked. In a few cases the same subject serves for both sections. There are a few examples of his anticipating Beethoven's usage of introducing clear accessory subjects to carry on the sections. Haydn illustrates forcibly the usefulness of defining the main division of the movement, not only by emphasising the harmonic formula of the cadence, but by appending to it a characteristic phrase or figure, the position of which, immediately before the full stop, renders it particularly easy to recognise. The purpose and fitness of this has been already discussed. Haydn's cadence-figures are generally peculiarly attractive, and seem to be made so of set purpose.

As a rule the outlines of his binary movements are more persistently regular than those of his rondos. Haydn was the first composer of mark to adopt the rondo with frequency in sonatas. It had existed in isolation and in suites for a long while, and examples there are in plenty by Couperin and other early Frenchmen, who were much given to it; and also by various members of the Bach family, including the great John Sebastian. But hundreds of sonatas, from the highest to the lowest grade, may be taken at random with a fair probability of not finding a single example. The influence of the opera may probably be here traced again; in the set tunes and dance types as significantly as in the general structure. However, though Haydn's kind of rondo is peculiarly familiar and characteristic, he does not make use of the form in his sonatas nearly so proportionately often as later composers do. The proportion in comparison with Mozart is almost as one to two. The value and appropriateness of this form is a matter of opinion. The greatest masters have used it frequently, and Beethoven with the profoundest effect. The usage of some other composers may be fairly described as obtrusively obvious, and it lends itself with greater readiness than any other plan of its scope to frivolity and commonplace. Haydn's subjects are often singularly slight, but his development of the form is almost always ingenious. Thus he varies his disposition of the episodes, so that sometimes the main subject and a single episodic subject alternate in different circumstances throughout; at other times they are disposed so as to resemble the recapitulation in binary form. In the returns of the main theme he always exercises some consideration. In hardly any case does he simply repeat the theme as it stands throughout; commonly each reappearance is a fresh variation. Occasionally the middle repeats are variations, and the first and last statements simple and identical; and sometimes variations of theme and episode alternate. In all such points his readiness and energy are apparent, and make his treatment of the form a model in its particular line.

The slow movements of all the composers of sonatas till Beethoven's time are rather artificial and inclined to pose, owing partly to the weakness and want of sustaining power in their instruments. They contain too little of the deep and liberal feeling which is necessary to make the highest impression, and too much decorative finger-play, corresponding no doubt to the roudades and vocal gymnastics for which operatic singers found such admirable opportunities in the slow beats of adagios. Haydn's management of such things is artistic, and he occasionally strikes upon an interesting subject, but hardly any of the movements approach to the qualities expected in the ideal slow movement of modern times.

His distribution of the keys of the movements is simple. In some of the earlier Sonatas all three are in the same, or major and minor of the same key. In more mature examples he adopts the familiar antithesis of subdominant, which in later works, preponderates so strongly. In one case he adopts a very unusual antithesis. This is in the largest and most elaborate of all the sonatas, of which the first and last movements are in E_b , and the middle movement in E_t .

One point requires notice in connection with his violin sonatas, viz. that they are the very reverse of those of the great school of half a century earlier; for inasmuch as with them the violin was everything, with Haydn it was next to nothing. Except in obviously late sonatas it does little more than timidly accompany the pianoforte. It was in this manner that the violin, having departed grandly by the front door in the old style, crept back again into modern instrumental music by the back. But small as such beginnings were, Haydn's later and fuller examples are the ostensible starting-point of a class of music which in the 19th century has extended the domain of the solo sonata, by enlarging its effective scope, and obtaining a new province for experiment in the combination of other instruments with the pianoforte upon equal terms, and with equal respect to their several idiosyncrasies.

John Christian Bach, the youngest son of John Sebastian, was Haydn's contemporary and junior by three years. In his day he was considered an important composer for the pianoforte, and his style is held to have had some influence upon Mozart. A sonata of his, in B_b , op. 17, is fluent and easily written, but not particularly interesting, and thoroughly in the style of the latter part of the 18th century. It consists of three movements, all in binary form of the older type. Another sonata, in C minor, is, for the date, in very singular form; beginning with a slow movement, having a fugue in the middle, and ending with a 'Tempo di Gavotta.' Its style is not strikingly massive, but there are many traits in it which show that his parentage was not entirely without influence. The fugue,

though ably written, has too much of the hybrid effect common in such works, after the harmonic structural ideas had laid strong hold of men's minds, to be worthy of comparison with the genuine achievements of his father. The style of the work is broad, however, and some ideas and turns of expression may not unreasonably be taken to justify the influence attributed to him.

The difference of age between Haydn and Mozart was twenty-four years, but in this interval there was less change in the form of the sonata than might be expected. It was, in fact, an almost stationary period, when the attainment of satisfactory structural principles by the labours of a century and more of composers left men time to pause and contemplate what appeared to them to be perfection; the rhythmic wave of progress poised almost balanced for a short time before the rush which brought about an unexpected culmination in Beethoven.

The difference between Haydn and Mozart is plainly neither in structure nor altogether in style of thought and expression, but in advantages of temporal position. Haydn began nearer to the time of struggle and uncertainty. He found much ready to his hand, and he tested it and applied it and improved it; and when Mozart came there was little to do but adapt his supreme gifts of fluency, clearness, and beauty of melody to glorify the edifice.

The progression of artistic instinct is at present an unexplained phenomenon; it can only be judged from observation that the children of a later generation are born with a predisposed facility to realise in perfect clearness the forms which preceding generations have been wanderingly and dimly striving after. It is possible that the affinity between genuine music and the mental conditions of the race is so close that the progress of the latter carries the former with it as part of the same organic development. At all events, Mozart was gifted with an extraordinary and hitherto unsurpassed instinct for formal perfection, and his highest achievements lie not more in the tunes which have so captivated the world, than in the perfect symmetry of his best works. Like Haydn's his ideas are naturally restricted within limits which simplify to the utmost the development of the form which follows from them. They move in such perfect obedience to the limits and outlines of the harmonic progressions which most certainly characterise the key, that the structural system becomes architecturally patent and recognisable to all listeners that have any understanding. In his time these formal outlines were fresh enough to bear a great deal of use without losing their sweetness; and Mozart used them with remarkable regularity. Out of thirty-six of his best-known sonatas, twenty-nine are in the now familiar order of three movements, and no less than thirty-three have the first movement in binary form. That binary form

is moreover so regular, that the same pauses and the same successions of harmony, and the same occurrences of various kinds, may often be safely anticipated at the same point in the progress of the movements. He makes some use, often conspicuously, of the device of repeating short phrases consecutively, which has already been described in connection with Scarlatti's work. Thus in a Sonata in D major for Violin and Pianoforte, the first section of the first movement may be divided into seven distinct passages, each of which is severally repeated in some form or other consecutively. There are some peculiarities, such as the introduction of a new subject in the working-out portion of the work, instead of keeping consistently to development of the principal ideas; and the filling of the episodes of a rondo with a variety of different ideas, severally distinct; but as these points are not the precursors of further development, they are hardly worth discussing. It only requires to be pointed out that occasionally in pianoforte and other sonatas he makes experiments in novel distribution and entirely original manipulation of the structural elements of binary and other forms; which is sufficient to prove not only that he recognised the fitness of other outlines besides those that he generally adopted, but that he was capable of adapting himself to novel situations, if there had been any call for effort in that direction. As it happened, the circumstances both of musical and social life were unique, and he was enabled to satisfy the highest critical taste of his day without the effort of finding a new point of departure.

His treatment of rondo-form is different, and less elementary than Haydn's. Haydn most commonly used a very decisively sectional system, in which every characteristic portion, especially the theme, was marked off distinct and complete. This accorded with the primitive idea of rondos as exemplified, often very happily, in the works of early French composers, and in certain forms of vocal music. The root-idea appears in the most elementary stages of musical intelligence as a distinct verse or tune which forms the staple of the whole matter, and is, for the sake of contrast, interspersed with digressions of subordinate interest. It is so obvious a means of arriving at something like structural balance, that it probably existed in times even before the earliest of which evidence remains. In the earliest specimens to be found in sonatas, the traces of their kinship can be clearly followed. Reference has been already made to the two examples in the sonatas by Paradies, which consist of an aria, a contrasting passage, and then the aria pure and simple again, and so forth. Haydn adopted the general outline. He frequently begins with a complete theme systematically set out with double bars and repeats, and a full conclusion. He then begins something entirely different either in a new related key, or in

the minor of the principal key, and makes a complete whole of that also, and so on right through, alternating his main tune with one or more others all equally complete. Under such circumstances his principle of giving variations at each return of the theme or repetition of an episode is almost indispensable to avoid monotony. Mozart rarely makes any point of this plan of adopting variations in his sonata-rondos, because it is not required. He does not often cast his theme in such extremely distinct outlines. In structure it is more what an ordinary binary subject would be; that is, complete and distinct in itself as an idea, without being so carried out as to make its connection with the rest of the movement a matter of secondary rather than intrinsic consequence. Haydn's conception is perfectly just and rational, but Mozart's is more mature. The theme and its episodes are more closely interwoven, and the development of the whole has a more consistent and uniform texture. Mozart does not avoid varying his theme; on the contrary, he constantly puts in the most delicate strokes of detail and of graceful adornment, and sometimes resorts to delightfully ready development of its resources; but with him it is not so indispensable, because his conception of the form gives it so much more freedom and elasticity.

The central movement of his three-movement sonatas is almost invariably a slow one, commonly in the key of the subdominant. The style of these is characteristic of the time; that is, rather artificial and full of graces, which require to be given with a somewhat conscious elegance of manner, not altogether consonant with the spirit of later times. They rarely touch the point of feeling expected in modern movements of the kind, because the conception formed of the proper function of the slow movement in his time was clearly alien to that of the 19th century. As specimens of elegance and taste, however, Mozart's examples probably attain the highest point possible in their particular genus.

The technique of his sonatas, from the point of view of instrumental resource, is richer and fuller than Haydn's, but still thin and rather empty in sound to ears that are accustomed to the wonderful development of the resources of the modern pianoforte; but the refinement and self-containment of his style make him particularly acceptable to artists who idealise finish and elegance in solo performance, and nicety of *ensemble* in works for combined instruments, as the highest and most indispensable condition of art. His instinct for adapting his thoughts to instrumental idiosyncrasies was of a very high order when the instruments were familiar and properly developed. This with the pianoforte was not yet achieved, and consequently some of his forms of expression are hardly adapted to its nature, and seem in these days to be rather compromises than perfectly suitable utterances.

With regard to the technical matter of the development of the resources of the pianoforte, Mozart's contemporary, Muzio Clementi, occupies a most important position. Clementi, in his early days, according to his own admission, applied himself rather to the development of the resources of playing than to the matter to be played, and attained a degree and a kind of mastery which no one before his time had heard the like of. When he began to apply himself more to the matter, this study served him in good stead; and his divination of the treatment most appropriate to the instrument, expanded by this means in practical application, marks his sonatas as among the very first in which the genuine qualities of modern pianoforte music on a large scale are shown. They begin to approach to that broad and almost orchestral style which is sometimes said to be characteristic of Beethoven; and the use of octaves and fuller combinations of sounds, and the occasional irruption of passages which bring into play stronger muscles than those of the fingers, are all in the direction of modern usage. In respect of structure, it is not necessary to consider more than that he commonly accepted the three-movement type of sonata, beginning with a movement in binary form and ending with a rondo, and having a slow movement in the middle. His handling is free and at the same time thoroughly under control. One of his characteristics is the love of importing little touches of learning or scientific ingenuity into the treatment; as in the Sonata in G (of four movements) in which two canons in direct and contrary motion take the place of the minuet and trio. In another sonata, in F, one figure is woven through the whole substance of the first movement, appearing in the different sections diminished and inverted, and in various phases of expression which quite alter its aspect. His slow movements are sometimes equally simple and expressive, but also frequently of that ornamental order which has been sufficiently commented on.

In one celebrated case he anticipated the modern taste for programme by calling one of his longest and most pretentious sonatas 'Didone abbandonata. Scena tragica.' But appearance of dramatic purpose does not turn him aside from regularity of form any more than in other sonatas. His style is not exempt from the family likeness which is observable in all composers of the latter part of the century. His ideas are large and broad, and not unworthy to have exerted some influence upon both Mozart and Beethoven. A certain dryness and reticence makes him unlikely to be greatly in favour in modern times, but his place as an important figure in the development of the sonata in its relation with the pianoforte is assured.

One further composer who deserves some consideration in connection with the sonata

before Beethoven's time is J. L. Dussek, who was born ten years after Clementi, and soon after Mozart. His most noteworthy characteristics are an individual, though not incisive style, and an instinct of a high order for the qualities and requirements of the pianoforte. There is some diversity in point of value between his early and his later sonatas. The former are rather narrow in idea and structure, whereas the latter, such as op. 70 in A \flat , are quite remarkable for freedom and elaboration of form and subject. Both in this sonata and in the op. 77 he makes use of the hitherto almost unknown device of extending the effect of the first sections by subordinate transitions as well as by accessory subjects. In the first movement of op. 70 there is the unusual feature of a happy modulation out and back again in the actual substance of the second subject—a characteristic which is common enough in the works of such moderns as Schumann and Brahms, but was exceedingly rare in Dussek's time. Another characteristic which Dussek has in common with more modern writers is the infusion of a certain amount of sense and sentiment even into his passages and flourishes, which with his immediate predecessors had been too commonly barren. He also takes thought to enliven his recapitulations by variation or ingeniously diversified transposition of order in the ideas (as in op. 77). His writing for the instrument is brilliant and sparkling, and has certain premonitions of Weber in it. The ideas are sometimes, even in his best works, trite and vapid, but more often delicate and attractive. The slow movements have a sustained and serious manner, also unusual in his time, and said to be derived from his having studied the organ considerably in his younger days. He stands historically with giants on either hand, and this has contributed to make him appear somewhat of a parenthesis in the direct course of sonata development. Their vastness of artistic proportion did not however suppress his personality, or extinguish his individuality, which is still clear in his own line, and has exerted some influence both upon the modern style of playing and also upon the style of musical thought of a few modern composers for the pianoforte to whom the giants did not strongly appeal.

The direct line of development after Haydn, Mozart, and Clementi is obviously continued in Beethoven. As we have pointed out, the changes which took place after Emanuel Bach's labours were less rapid and remarkable than in times preceding. The finishing touches had been put to the structural system, and men were so delighted with its perfection as structure, that they were content to hear it repeated over and over again without calling for variety or individuality in the treatment, and very often without caring much about the quality of the

thing said. The other side of development was technical. The pianoforte being a new instrument, the manner of musical speech best adapted to it had to be discovered. With the earlier composers forms of expression better suited to other instruments were adopted; but by degrees experiments in effect and assiduous attention to the capabilities of the hand, such as Clementi gave in his early years, had brought the mechanism of expression to a tolerably consistent and complete state; so that when Beethoven appeared he was spared the waste of force incident to having to overcome elementary problems of instrumental technique, and the waste of effect incidental to compromises, and was enabled to concentrate all his powers upon the musical material.

Beethoven's works introduce a new element into the problem, and one that complicates matters immeasurably. With his predecessors structural simplicity had been a paramount consideration, and often straitened somewhat the freedom of the idea. The actual subjects seem drilled into a regular shape, admitting of very little variation, in order that the development of the movement might march direct and undeviating in its familiar course. Musicians had arrived at that artificial state of mind which deliberately chose to be conscious of formal elements. Their misconception was a natural one. The existing conditions of art might lead a man to notice that uncultivated people delighted in simple and single tunes, and that cultivated people enjoyed the combination of several, when disposed according to certain laws, and to conclude from this that the disposition was of more importance than the matter. But, in fact, the mind is led from point to point by feelings which follow the ideas, and of these and their interdependence and development it is necessarily conscious; but of the form it is not actively conscious unless the ideas have not sufficient force to possess it, or the necessities of logical consequence are outrageously violated. It is only under peculiar social and intellectual conditions that structural qualities can be so excessively emphasised. The production of a genuine master must be ultimately reducible to logical analysis, but not on the spot or at once; and to insist upon art being so immediately verifiable is not only to set the conclusion to be drawn from its historical development upside down, but to refer the enjoyment of its highest achievements to the contemplation of dry bones. The imagination and the reason must both be satisfied, but before all things the imagination.

In the middle years of the 18th century the imaginative side had not a fair chance. Music was too much dependent upon the narrow limits of the taste of polite circles, and the field of appeal to emotion was not free. But when at last the natural man threw off the incubus that had so long oppressed him, the apiritual uprising

and the broadening of life brought a new kind of vigour into art and literature. Beethoven was the first great composer to whom the limitless field of unconventionalised human emotion was opened, and his disposition was ready for the opportunity. Even in the ordinary trifles of life he sometimes showed by an apparently superfluous rebellion against polite usages his antipathy to artificiality, and conversely the bent of his sympathy towards unmistakable realities of human feeling. He thus became the prototype of genuine modern music, and the first exponent of its essential qualities; and the sonata form being ready in its main outlines for his use, and artistic instinct having achieved the most perfect spontaneity in its employment, he took possession of it as an appropriate mode of formulating some of the richest and most impressive of his thoughts. With him the idea asserted its rights. This is not to say that structure is ignored, but that the utmost expansion and liberty is admitted in the expression of the vital parts which can be made consistent with perfect balance in the unfolding of the whole; and this obviously depends upon the powers of the composer. Under such circumstances he can only be guided by the highest development of instinct, for the process of balance and distribution becomes so complicated that it is almost out of the reach of conscious analysis, much more of the dictation of science. The evolution of this vital ingredient, the idea, is so obscure and difficult that it is out of the question to enter upon it in this place. It is an unhappy fact that the scientists who have endeavoured to elucidate music, with a few great and honourable exceptions, foreseeing that the analysis of ideas was quite beyond their reach, at all events until immense advances are made in the sciences which have direct reference to the human organism, have set their faces to the structural elements, as if music consisted of nothing but lines and surfaces. The existence of idea is so habitually ignored that it necessarily appears to be non-existent in their estimate of art. On the other hand, the philosophers who have said anything about it appear on the surface not to be in accord; though in reality their views are both compatible and necessary, but require a more detailed experience of the art and of its historical development to explain their interaction. But meanwhile the external method of the scientists gains disproportionate pre-eminence, and conscientious people feel uneasily that there may be no such things as ideas at all, and that they will be doing better to apply themselves to mathematics. And yet the idea is everything, and without it music is absolutely null and void; and though a great and comprehensive mathematician may make an analysis after the event, a synthesis which is merely the fruit of his calculations will be nothing more than a sham and an imposture. In fact, the formulation of the idea is a most

vital matter in musical history, and its progress can be traced from the earliest times, proceeding simultaneously with the development of the general structure of the sonata. The expressive raw material was drawn from various sources. The style of expression developed under the influences of religion in the ages preceding the beginnings of instrumental music, supplied something; dance music of all orders, mimetic and merely rhythmic, supplied much; the pseudo-realism of the drama, in respect of vocal inflexion and imitations of natural circumstances, also something; and the instincts surviving in the race from countless past ages, the actual cries arising from spontaneous nervous reaction, and many other similar causes, had a share in suggestion, and in actual, though unrealised, motive power. And all these, compounded and inseparably intermingled, supplied the basis of the expressive element in music. Through all the time from Monteverde to Beethoven this expressive element was being more and more clearly drawn into compact and definite proportions; floating at first vaguely on the surface, springing out in flashes of exceptional brightness here and there, and at times presenting almost perfect maturity by fits of individual good fortune; but hardly ever so free but that some of the matrix is felt to be clinging to the ore. It obtained complete but restricted symmetry with the composers immediately preceding Beethoven, but arrived only at last with him at that expansion which made it at once perfect and intelligible, and yet boundless in range within the limits of the art-material at the composer's command.

Prior to Beethoven, the development of a long work was based upon antitheses of distinct tunes and concrete lumps of subject representing separate organisms, either merely in juxtaposition, or loosely connected by more or less empty passages. There were ideas indeed, but ideas limited and confined by the supposed necessities of the structure of which they formed a part. But what Beethoven seems to have aimed at was the expansion of the term 'idea' from the isolated subject to the complete whole; so that instead of the subjects being separate, though compatible items, the whole movement, or even the whole work, should be the complete and uniform organism which represented in its entirety a new meaning of the word 'idea,' of which the subjects, in their close connection and inseparable affinities, were subordinate limbs. This principle is traceable in works before his time, but not on the scale to which he carried it, nor with his conclusive force. In fact, the condition of art had not been sufficiently mature to admit the terms of his procedure, and it was barely mature enough till he made it so.

His early works were in conformity with the style and structural principles of his predecessors; but he began, at least in pianoforte works, to

build at once upon the topmost stone of their edifice. His earliest sonatas (op. 2) are on the scale of their symphonies. He began with the four-movement plan which they had almost entirely reserved for the orchestra. In the second sonata he already produces an example of his own peculiar kind of slow movement, full, rich, decisive in form, unaffected in idea, and completely divested of the elaborate graces which had been before its most conspicuous feature. In the same sonata also he produces a scherzo, short in this instance, and following the lines of the minuet, but of the genuine characteristic quality. Soon, in obedience to the spread of his idea, the capacity of the instrument seems to expand, and to attain an altogether new richness of sound, and a fullness it never showed before, as in many parts of the fourth Sonata (op. 7), especially the *Largo*, which shows the unmistakable qualities which ultimately expanded into the unsurpassed slow movement of the opus 106. As early as the second Sonata he puts a new aspect upon the limits of the first sections; he not only makes his second subject in the first movement modulate, but he develops the cadence-figure into a very noticeable subject. It is fortunately unnecessary to follow in detail the various ways in which he expanded the structural elements of the sonata, as it has already been described in the article *BEETHOVEN*, and other details are given in the article *FORM*. In respect of the subject and its treatment, a fortunate opportunity is offered by a coincidence between a subordinate subject in a sonata of Haydn's in C, and a similar accessory in Beethoven's Sonata for violoncello and pianoforte in A major (op. 69), which serves to illustrate pregnantly the difference of scope which characterises their respective treatment. Haydn's is as follows:—

and Beethoven's:—

As has been already explained, an expansion of this kind makes inevitable a similar expansion in the whole structure of the movement, and a much wider choice of relative keys than simple tonic and dominant in the expository sections; or else a much freer movement in every part of the sections, and emphasis upon unexpected relations of harmony. Even without this, the new warmth and intensity of the subject precludes mere reiteration of the accustomed usages, and necessitates a greater proportionate vitality in the subordinate parts of the work. The relative heat must be maintained, and to fall back upon familiar formulas would clearly be a jarring anomaly. In this manner the idea begins to dictate the form. But in order to carry out in equal measure the development of the idea, every resource that the range of music can supply must be admissible to him that can wield it with relevance. Hence Beethoven, as early as op. 31, No. 2, reintroduces instrumental recitative with extraordinary effect. Later, he resumes the rhapsodical movement which Bach and earlier composers had employed in a different sense, as in the Sonata in E \flat , op. 81, and in the third division of that in A, op. 101, and in the most romantic of romantic movements, the first in E major of op. 109. And lastly, he brings back the fugue as the closest means of expressing a certain kind of idea. In these cases the fugue is not a retrogression, nor a hybrid, but a new adaptation of an old and invaluable form under the influence of perfectly assimilated harmonic principles. The great fugue in the Sonata in B \flat , op. 106, for instance, is not only extraordinary as a fugue, but is distributed in a perfectly ideal balance of long contrasting periods in different states of feeling, culminating duly with a supreme rush of elaborate force, as complex and as inexorable as some mighty action of nature. In these sonatas Beethoven touches all moods, and all in the absolute manner free from formality or crude artifice, which is the essential characteristic of genuine modern music. In a few of the earlier sonatas he reverts to manners and structural effects which are suggestive of the principles of his predecessors. But these occasional incursions of external influence are with rare exceptions inferior to the works in which his own original force of will speaks with genuine and characteristic freedom. The more difficult the problem suggested by the thought which is embodied in the subject, the greater is the result. The full richness of his nature is not called out to the strongest point till there is something

preternaturally formidable to be mastered. The very statement of the opening bars of such sonatas as that in D minor, op. 31, No. 2; C major, op. 53; F minor, op. 57; B \flat , op. 106; C minor, op. 111, is at such a level of daring breadth and comprehensive power, that it becomes obvious in a moment that the work cannot be carried out on equal proportionate terms without almost superhuman concentration, and unlimited command of technical resources, both in respect of the instrument and the art of expression. In such cases, Beethoven rises to a height which has only been attained by two or three composers in the whole history of music, in that sublimity which is almost his peculiar monopoly. But, fortunately for average beings, and average moods of people who have not always a taste for the sublime, he shows elsewhere, on a less exalted scale, the highest ideals of delicate beauty, and all shades of the humours of mankind, even to simple exuberant playfulness. The beauty and the merriment often exist side by side, as in the exquisite little Sonata in G, op. 14, No. 2, and in that in F \sharp major, op. 78; and in a loftier and stronger spirit in company with more comprehensive ranges of feeling, in the Sonata in A, op. 101. In all these and many more there is an ideal continuity and oneness which is musically felt even where there is no direct external sign of the connection. In a few, however, there are signs of more than this. In the B \flat Sonata, op. 106, for instance, the similar disposition of intervals in the subjects of the various movements has led to the inference that he meant to connect them by transformations of one principal subject or germ. The same occurs with as much prominence in the Sonata in A \flat , op. 110, which is in any case a specimen where the oneness and continuity are peculiarly felt. It is possible that the apparent transformations are not so much conscious as the result of the conditions of mind which were necessary to produce the oneness of effect, since concentration upon any subject is liable to exert influence upon closely succeeding action, whether of the mind or body, and to assimilate the fruit unconsciously to the form of the object contemplated. This, however, would not lessen the interest of the fact, but would possibly rather enhance it. It only affects the question whether or no Beethoven consciously reasoned about possible ways of extending and enhancing the opportunities of sonata-form—too large a subject to be entered upon here. As a rule, great masters appear to hit upon such germinal principles in the process of composition, without exactly formulating them in so many equivalent terms; and those who come after note the facts and apply them as useful resources, or sometimes as invaluable starting-points of fresh lines of development. It is a noticeable fact that Beethoven only seldom indicated a pro-

gramme, and it is extremely rare in him to find even the dimmest suggestions of realism. In fact, as must be true of all the highest music, a work of his is not representative of a story, but of a mental process. Even if it deals with a story it does not represent the circumstances, but the condition of mind which results from its contemplation; or, in other words, the musical counterpart of the emotion to which it gives rise; and it is the coherency and consistent sequence of the emotions represented which produce the effect of oneness on the colossal scale of his greatest works, which is Beethoven's crowning achievement. With him the long process of development appears to find its utmost and complete culmination; and what comes after, and in sight of his work, can be little more than commentary. It may be seen, without much effort, that mankind does not achieve more than one supreme triumph on the same lines of art. When the conditions of development are fulfilled the climax is reached, but there is not more than one climax to each crescendo. The conditions of human life change ceaselessly, and with them the phenomena of art, which are their counterpart. The characteristics of the art of any age are the fruit of the immediate past, as much as are the emotional and intellectual conditions of that age. They are its signs, and it is impossible to produce in a succeeding age a perfect work of art in the same terms as those which are the direct fruit of a different and earlier group of causes; and it is partly for this reason that attempts to return to earlier conditions of art, which leave out the essential characteristics of contemporary feeling, invariably ring false.

The time produced other real men besides Beethoven, though not of his stamp. Weber and Schubert were both of the genuine modern type, genuinely musical through and through, though neither of them was a born writer of sonatas as Beethoven was. Beethoven possessed, together with the supremest gift of ideas, a power of prolonged concentration, and the certainty of self-mastery. This neither Weber nor Schubert possessed. Beethoven could direct his thought with infallible certainty; in Weber and Schubert the thought was often too much their master, and they both required, to keep them perfectly certain in the direction of their original musical matter, the guiding principle of a consciously realised dramatic or lyrical conception, which was generally supplied to them from without. As should be obvious from the above survey of the process of sonata development, the absolute mastery of the structural outlines, the sureness of foot of the strong man moving, unaided, but direct in his path, amidst the conflicting suggestions of his inspiration, is indispensable to the achievement of great and genuine sonatas. The more elaborate the art of expression becomes, the more difficult the success. Beet-

hoben probably stood just at the point where the extreme elaboration and the most perfect mastery of combination on a large scale were possible. He himself supplied suggestion for yet further elaboration, and the result is that the works of his successors are neither so concentrated nor so well in hand as his. Weber was nearest in point of time, but his actual mastery of the art of composition was never very certain nor thoroughly regulated, though his musical instincts were almost marvellous. He had one great advantage, which was that he was a great pianist, and had the gift to extend the resources of the instrument by the invention of new and characteristic effects; and he was tolerably successful in avoiding the common trap of letting effect stand for substance. Another advantage was his supreme gift of melody. His tunes are for the most part of the old order, but infused with new life and heat by a breath from the genius of the people. His two best sonatas, in A \flat and D minor, are rich in thought, forcible, and genuinely full of expression. He always adopts the plan of four movements, and disposes them in the same order as Beethoven did. His treatment of form is also full and free, and he often imports some individuality into it. As simple instances may be taken—the use of the introductory phrase in the first movement of the Sonata in C, in the body of the movement; the rondo structure of the slow movements, especially in the Sonata in D minor, which has a short introduction, and elaborate variations in the place of exact returns of the subject; and the interspersing of subjects in the first movement of the Sonata in E minor, op. 70, so as to knit the two sections of the first half doubly together. An essentially modern trait is his love of completing the cycle of the movement by bringing in a last allusion to the opening features of the whole movement at the end, generally with some new element of expression or vivacity. Specially noticeable in this respect are the first and last (the ‘Moto perpetuo’) of the C major, the last of the A \flat , and the first and last in both the D minor and E minor Sonatas. Weber had an exceptional instinct for dance-rhythms, and this comes out very remarkably in some of the minuets and trios, and in the last movement of the E minor.

As a whole the Weber group is a decidedly important item in pianoforte literature, instinct with romantic qualities, and aiming at elaborate expressiveness, as is illustrated by the numerous directions in the A \flat Sonata, such as ‘con anima,’ ‘con duolo,’ ‘con passione,’ ‘con molt’ affetto,’ and so forth. These savour to a certain extent of the opera, and require a good deal of art and musical sense in the variation of time and the phrasing to give them due effect; and in this they show some kinship to the ornamental adagios of the times previous to Beethoven,

though dictated by more genuinely musical feelings.

Schubert's sonatas do not show any operative traits of the old manner, but there is plenty in them which may be called dramatic in a modern sense. His instincts were of a pre-eminently modern type, and the fertility of his ideas in their superabundance clearly made the self-restraint necessary for sonata-writing a matter of some difficulty. He was tempted to give liberty to the rush of thought which possessed him, and the result is sometimes delightful, but sometimes also bewildering. There are movements and even groups of them which are of the supremest beauty, but hardly any one sonata which is completely satisfactory throughout. His treatment of form is often daring, even to rashness, and yet from the point of view of principle offers but little to remark, though in detail some perfectly magical feats of harmonic progression and strokes of modulation have had a good deal of influence upon great composers of later times. The point which he serves to illustrate peculiarly in the history of music is the transition from the use of the idea, as shown in Beethoven's Sonatas on a grand and richly developed scale, to the close and intensely emotional treatment of ideas in a lyrical manner, which has as yet found its highest exponent in Schumann. In this process Schubert seems to stand midway—still endeavouring to conform to sonata ways, and yet frequently overcome by the invincible potency of the powers his own imagination has called up. The tendency is further illustrated by the exquisite beauty of some of the smaller and more condensed movements, which lose nothing by being taken out of the sonatas; being, like many of Schumann's, specimens of intense concentration in short space, the fruit of a single flash of deep emotion. Among the longer movements, the one which is most closely unified is the first of the A minor, op. 143, in which a feature of the first subject is made to preponderate conspicuously all through, manifestly representing the persistence of a special quality of feeling through the varying phases of a long train of thought. Like many other movements, it has a strong dramatic element but more under appropriate control than usual.

As a whole, though illustrating richly many of the tendencies of modern music, the Sonatas cannot be taken as representing Schubert's powers as a composer of instrumental music so satisfactorily as his Quartets, his String Quintet, and some of his finest Symphonies. In these he often rose almost to the highest point of musical possibility. And this serves further to illustrate the fact that since Beethoven the tendency has been to treat the sonata-form with the fresh opportunities afforded by combinations of instruments, rather than on the old lines of the solo sonata.

Two other composers of sonatas of Beethoven's time require notice. These are Woelfl and Hummel. The former chiefly on account of his once celebrated sonata called 'Ne plus ultra,' in which he showed some of the devices of technique which he was considered to have invented—such as passages in thirds and sixths, and ingenious applications of the shake. The matter is poor and vapid, and as throwing light upon anything except his powers as a player, is worthless. Its very title condemns it, for Woelfl had the advantage of being Beethoven's junior; and it is astonishing how, by the side of the genuine difficulty of Beethoven's masterpieces, such a collection of tricks could ever have been dignified, even by the supposition of being particularly difficult. It seems impossible that such work should have had any influence upon genuinely musical people; but the sonata has all the signs of a useful piece for second-rate popular occasions; for which the variations on 'Life let us cherish' would doubtless be particularly effective.

Hummel in comparison with Woelfl was a giant, and certainly had pre-eminent gifts as a pianoforte-player. Like Weber he had an aptitude for inventing effects and passages, but he applied them in a different manner. He was of that nature which cultivates the whole technical art of speech till able to treat it with a certainty which has all the effect of mastery, and then instead of using it to say something, makes it chiefly serviceable to show off the contents of his finger *répertoire*. However, his technique is large and broad, full of sound and brilliancy, and when the works were first produced and played by himself they must have been extremely astonishing. His facility of speech is also wonderful, but his ideas were for the most part old-fashioned, even when he produced them—for it must not be forgotten that he was eight years younger than Beethoven and twenty-six younger than Clementi. The spirit which seems to rule him is the consciousness of a pianist before an audience, guided by the chances of display. His modulations are free and bold, but they are often superfluous, because the ideas are not on the level of intensity or broad freedom which necessitates or even justifies them. He probably saw that modulation was a means of effect, but did not realise that there is a ratio between the qualities of subject and the development of the movement that springs from it. From this it will be obvious that his sonatas are not written in the mood to produce works that are musically important. He had the very finest possible opportunities through living in Mozart's house during his most impressionable days, and the fruit is sufficiently noticeable in the clearness with which he distributes his structural elements, and in much of his manner of expressing himself; but he had not the inventive gift for musical ideas, which contact

and even familiar intercourse with great masters seems inadequate to supply. The survival of traits characteristic of earlier times is illustrated by some of his slow movements, in which he brought the most elaborate forces of his finished technique to serve in the old style of artificial *adagio*, where there is a hyper-elaborated grace at every corner, and a shake upon every note that is long enough; and if a chord be suitable to rest upon for a little, it is adorned with quite a collection of ingenious finger exercises, artificially manipulated scales and arpeggios, and the like contrivances; which do not serve to decorate anything worthy of the honour, but stand on their own merits. There are occasional traits of expression and strokes of force in the sonatas, but the technique of the pianist preponderates excessively over the invention of the composer. At the same time the right and masterly use of the resources of an instrument is not by any means a matter of small moment in art, and Hummel's is right and masterly in a very remarkable degree.

After the early years of the 19th century, the sonata, in its conventional sense of instrumental work for a solo or at most for two instruments, occupies a smaller and decreasing space in the domain of music. Great composers have paid it proportionately very little attention, and the few examples they afford have rather an effect of being out of the direct line of their natural mode of expression. In Chopin, for instance, the characteristic qualities of modern music, in the treatment of ideas in short and malleable forms specially adapted to their expression, are found abundantly, and in these his genuine qualities are most clearly displayed. His sonatas are less successful, because, though quite master enough to deal with structure clearly and definitely, it was almost impossible for him to force the ideas within the limits which should make that structure relevant and convincing. They are children of a fervid and impetuous genius, and the classical dress and manners do not sit easily upon them. Moreover the luxuriant fancy, the richness and high colour of expression, the sensuous qualities of the harmony, all tend to emphasise detail in a new and peculiar manner, and to make the sonata-principle of the old order appear irrelevant. The most successful are the Sonatas in B \flat minor for pianoforte, op. 35, and that for pianoforte and violoncello in G minor, op. 65. In both these cases the first movements, which are generally a sure test of a capacity for sonata-writing, are clearly disposed, and free from superfluous wandering and from tautology. There are certain idiosyncrasies in the treatment of the form, as for instance in the recapitulation, which in both cases is almost limited to the materials of the second section, the opening features of the movement being only hinted at in conclusion. The subjects themselves are

fairly appropriate to the style of movement, and are kept well in hand, so that on the whole, in these two cases, the impression conveyed is consistent with the sonata-character. In scherzos Chopin was thoroughly at home, and moreover they represent a province in which far more abandonment is admissible. In both sonatas they are successful, but that in the Pianoforte Sonata is especially fascinating and characteristic, and though the modulations are sometimes rather reckless the main divisions are well proportioned, and consequently the general effect of the outlines is sufficiently clear. The slow movements of both are very well known; that of the Pianoforte Sonata being the Funeral March, and the other being a kind of romance in Chopin's own free manner, which is familiar to players on the violoncello. The last movement of the Pianoforte Sonata is a short but characteristic outbreak of whirling notes, in general character not unlike some of his Preludes, and equally free and original in point of form, but in that respect not without precedent among the last movements of early masters. In the mind of the composer it possibly had a poetical connection with the Funeral March. The other last movement is a free kind of rondo, and therefore more consonant with the ordinary principles of form, and is appropriate, without being so interesting as the other movements. The total effect of these sonatas is naturally of an entirely different order from that of the earlier types, and not so convincing in oneness as the works of great masters of this kind of form; they are nevertheless plausible as wholes, and in details most effective; the balance and appropriate treatment of the two instruments in the op. 65 being especially noteworthy. The other sonatas for pianoforte, in C minor and B minor, are more unequal. The first appears to be an early work, and contains some remarkable experiments, one of which at least has value, others probably not. As examples may be mentioned the use of 5-4 time throughout the slow movement, and the experiment of beginning the recapitulation of the first movement in B \flat minor, when the principal key is C minor. In this sonata he seems not to move with sufficient ease, and in the B minor, op. 58, with something too much to have the general aspect of a successful work of the kind. The technical devices in the latter as in the others are extremely elaborate and effective, without being offensively obtrusive, and the ideas are often clear and fascinating; but as a complete and convincing work it is hardly successful.

Sonatas which followed implicitly the old lines without doing more than formulate subjects according to supposed laws do not require any notice. The mere artificial reproduction of forms that have been consciously realised from observation of great works of the past without importing

anything original into the treatment, is often the most hopeless kind of plagiarism, and far more deliberate than the accidents of coincidence in ideas which are obvious to superficial observers.

As examples of independent thought working in a comparatively untried field, Mendelssohn's six sonatas for the organ have some importance. They have very little connection with the Pianoforte Sonata, or the history of its development; for Mendelssohn seems to have divined that the binary and similar instrumental forms of large scope were unsuitable to the genius of the instrument, and returned to structural principles of a date before those forms had become prominent or definite. Their chief connection with the modern sonata type lies in the distribution of the keys in which the respective movements stand, and the broad contrasts in time and character which subsist between one division or movement and another. Different members of the group represent different methods of dealing with the problem. In the large movements fugal and contrapuntal principles predominate, sometimes alternating with passages of a decidedly harmonic character. In movements which are not absolute fugues the broad outlines of form are commonly similar to those already described as exemplified in Bach's Sonatas, and in the first and last movements of his Italian Concerto. This form in its broadest significance amounts to a correspondence of well-defined sections at the beginning and end, with a long passage of 'free fantasia,' sometimes fugally developed, in the middle. The clearest example in these sonatas is the first movement of the third Sonata, in A major, in which the corresponding divisions at either end are long, and strongly contrasted in the modern quality and more simultaneous motion of the parts, with the elaborate fugal structure of the middle division. In the last movement of the Sonata in B \flat the corresponding sections are very short, but the effect is structurally satisfying and clear. In no case is the structural system of keys used with anything approaching the clearness of a pianoforte sonata. Material is contrasted with material, sometimes simply as subjects or figures, sometimes even in respect of style; as a chorale with recitative, chorale with fugal passages, or harmonic passages with contrapuntal passages. Sometimes these are kept distinct, and, sometimes, as in the first movement of the Sonata in B \flat , they are combined together at the end. The general laying out of the complete works, though based on the same broadest radical principles, is in actual order and manner quite distinct from that of pianoforte sonatas. The longer movements alternate with very short ones, which commonly resemble Romances, Lieder ohne Worte, or such expressive lyrical types; and occasionally the whole sonata concludes with a little movement of this sort, as No. 3 in A and

No. 6 in D. They are generally in the simplest kind of primary form with a proportionately important coda. In point of actual style and treatment of the instrument there is a great diversity in different sonatas. In some the solid old contrapuntal style predominates, in similar proportion to that in the organ preludes, sonatas, etc. of Bach; but this rarely occurs without some intermixture of modern traits. The most completely and consistently modern in style is the Sonata in D major, No. 5, which is practically in three divisions. The first is a chorale, the second a kind of 'song without words' in B minor, and the third a species of fantasia, in which the sections are balanced by distinct figures, without more tonal structure than emphasis upon the principal key at the beginning and end, and variety of modulation with some thematic development in the middle. In other sonatas different modes of writing for the instrument are used as a means of enforcing the contrast between one movement and another. Thus in the second Sonata the first division is a kind of prelude in a modern manner, chiefly homophonic and orchestral; the second corresponds to a distinct romance or 'song without words' with clearly defined melody and graceful and constantly flowing independent accompaniment. In the third movement, which though in 3-4 time has something of a march quality, the modern harmonic character is very prominent, and the last movement is a fugue. Similar distribution of styles and modes of writing are as clearly used in the first and fourth Sonatas; in the former more elaborately.

Among the few attempts which have been made to add something genuine to the literature of the Pianoforte Sonata, that in F# minor, op. 11, by Schumann, first published under the pseudonym of Florestan and Eusebius, is most interesting. This was clearly an attempt to adapt to the sonata-form the so-called romantic ideas of which Schumann was so prominent and successful a representative. The outward aspect of the matter is twofold. First, the absolute subordination of the sectional distribution to the ideas contained, and, secondly, the interchange of the subject-matter so as to connect the movements absolutely as well as intrinsically. The first point is illustrated by the continuity of the Allegro Vivace and the constant shifting and swaying of modulation and changing of tempo; also by the variety of the subjects and the apparently irregular manner of their introduction, if judged from the point of view of the older sonatas. Thus the part which corresponds to the first section comprises a first subject, containing a figure which may be called the text of the movement, and many subsidiary features and transitions. The second section follows continuously, with new matter and allusions to the first subject, all in a constant sway of transition, till at the end of the first half of the movement

a long continuous subject in A is reached, which in its sustained and earnest calmness seems to supply the point of rest after the long preceding period of activity. This same subject is the only one which is given with complete fulness at the end of the whole movement, the rest of the subject-matter, though all represented in the recapitulation, being considerably condensed and curtailed. The second point is illustrated by the connection between the introduction and the two following movements. The introduction itself is in an elaborate kind of primary form. Its impressive principal subject is reintroduced in the middle of the succeeding allegro; and the subject of the middle portion serves as the main staple of the beautiful aria which is the central movement of the whole sonata. The success of such things certainly depends on the way in which they are done, and mere description of them gives very little impress of their effectiveness in this case. There can hardly be a doubt that in these devices Schumann hit upon a true means of applying original thought to the development of the structural outlines, following the suggestion which is really contained in Beethoven's work, that the structure is perceptible through the disposition of the ideas, and not only by emphasising the harmonic sections. The actual distribution of the structure which is hidden under the multiplicity of ideas is remarkably careful and systematic. Even in the development portion there is method and balance, and the same is true of large expanses in the last movement. The freedom with which Schumann uses subordinate transitions makes the balance of keys a matter requiring great concentration; but it is remarkable in his work, as contrasted with similar modern examples by other composers, that he rarely makes random and unrestrained flights, but keeps within the bounds which make proportionate balance possible. It is no doubt a matter of very great difficulty to carry out such principles as this work seems to embody; but if the sonata form be really capable of any fresh extension it will probably be to a great extent on such lines.

Schumann's second Sonata, in G minor, op. 22, though written during almost the same period, seems to be a retrogression from the position taken up by that in F# minor. It is possibly a more effective work, and from the pianist's point of view, more capable of being made to sound convincing. And yet in detail it is not so interesting, nor is it technically so rich, nor so full and noble in sound. He seems to aim at orthodoxy with deliberate purpose, and the result is that though vehement and vigorous in motion, it is not, for Schumann, particularly warm or poetical. The second subjects of the first and last movements are characteristic, and so is a great part of the peculiarly sectional and epigrammatic scherzo. The andantino also has remarkable points about

it, but is not so fascinating as the slow movement of the F# minor Sonata.

The principles indicated in the sonata opus 11 reappear later with better results, as far as the total impression is concerned, in larger forms of instrumental music, and also in the D minor Sonata for violin and pianoforte. In this there is a close connection between the introduction and the most marked feature of the succeeding quick movement, and similar linking of scherzo and slow movement by means of a reference to the subject of the former in the progress of the latter, with a distinctly poetic purpose. The Sonata in A minor for the same combination of instruments is not on such an elaborate scale, nor has it as many external marks to indicate a decided purpose; but it is none the less poetical in effect, which arises in the first movement from the continuity of structure and the mysterious sadness of spirit which it expresses, and in the slow movement from its characteristic tenderness and sweetness.

Liszt, in his remarkable Sonata in B minor dedicated to Schumann, undoubtedly adopts the same principles of procedure, and works them out with more uncompromising thoroughness. He knits the whole sonata into an unbroken unity, with distinct portions passing into one another, representing the usual separate movements. The interest is concentrated upon one principal idea, to which the usual second subjects and accessories serve as so many commentaries and antitheses, and express the influences which react upon its course. This is further illustrated by the process sometimes defined as 'transformation of themes,' already referred to in connection with Beethoven's Sonatas in B \flat and A \flat ; which is really no more than a fresh way of applying that art of variation which had been used from almost the earliest times of sonata-writing, in recapitulating subjects in the progress of a movement, as well as in regular set themes and variations; though it had not been adopted before to serve a poetical or ideal conception pervading and unifying the whole work. In the actual treatment of the subject-matter, Liszt adopts, as Beethoven had done, the various opportunities afforded not only by harmonic structural principles, but by the earlier fugal and contrapuntal devices, and by recitative, adapting them with admirable breadth and freedom to a thoroughly modern style of thought. It seems almost superfluous to add that the purpose is carried out with absolute mastery of technical resource, in respect both of the instrument and of the disposition of the parts of the movement.

The pianoforte sonatas of Brahms are as astounding specimens of youthful power and breadth and dignity of style as exist in the whole range of the art; but it must at present be considered doubtful if they represent his maturer convictions. All three appear to have been

written before he arrived at the age of twenty; and it is certain that he was then more influenced by the romantic theories which Schumann represented, than he was in his later works. His adoption of shorter and more individual forms, such as *capriccios*, *intermezzi*, *rhapsodies*, in his mature age, lends at least indirect countenance to the view that the tendency of music is to subordinate form to idea; and that if the classical form of the sonata is not expansible enough, other forms must be accepted which will admit of more freedom of development. This implies a question as to the proper meaning of the word 'sonata,' and a doubt as to its being legitimately assimilable to the tendency to centralise the interest upon the idea, as a contrast to the old practice of making an equal balance between two main subjects as a means of structural effect. If the word is to be so restricted, it will only be another conventional limitation, and, it may be added, must before long put an end to further enrichment of the literature of so-called sonatas.

In the finest of Brahms's three early sonatas, that in F minor, op. 5, the first slow movement is headed by a quotation from a poem of Sternau, and another movement is called *Rückblick*. These are clearly external marks of a poetical intention. In the actual treatment of the subjects there is no attempt to connect the movements; but the freedom of transition, even in the actual progress of a subject (see the second subject of the first movement), is eminently characteristic of the composer, and of a liberal view of sonata development. In the last movement—a rondo—the most noticeable external mark of continuity is the elaborately ingenious treatment of the subject of the second episode in the latter part of the movement. Brahms added no more to the list of solo pianoforte sonatas, but he illustrated the tendency to look for fresh opportunities in combinations of solo instruments, as in his pianoforte quartets and quintet, which are really just as much sonatas as those usually so designated; in fact, one of the versions of the quintet, which stands as a duet for two pianofortes, is in that form published as a 'sonata.' The three for pianoforte and violin require notice as the work of a great master, but throw very little light on any sort of extension of the possibilities of sonata-form. There seems to be a sort of poetic design in the complicated arrangement of the first half of the first movement in the first Sonata, op. 78, in which the characteristic figures of the first subject reappear, as if to connect each section with the centre of interest; and the half concludes with a complete restatement of the first subject simply and clearly in the original key, as is the case also in the same composer's *Serenade* in A for small orchestra. It may be observed in passing that this device curiously recalls the early composite form, in which the

first subject reappears at the beginning of the second half [see pp. 510, 511]. There is one other slightly suggestive point—namely, the reappearance of the introductory phrase of the slow movement in one of the episodes of the final Rondo. [In the second sonata we may notice the fusion of the Scherzo and slow movement into one.]

Certain traits in his treatment of form, such as the bold digressions of key at the very outset of a movement, and the novel effects of transition in the subjects themselves, have already been described in the article *FORM*. It is only necessary here to point out that Brahms seems most characteristically to illustrate the tendency in modern music which has been styled 'intellectualism'; which is definable as elaborate development of all the opportunities and suggestions offered by figures, harmonic successions, or other essential features of subjects or accessories, so as to make various portions of the work appear to grow progressively out of one another. This sometimes takes the form of thematic development, and sometimes that of reviving the figures of one subject in the material or accompaniment of another, the object being to obtain new aspects of close and direct logical coherence and consistency. Beethoven is the prototype of this phase of modern music, and the examples of it in his later instrumental works are of the finest description. There are several examples which illustrate this tendency in the *F* minor Quintet. One of the most obvious is the case in which the cadence concluding a paragraph is formulated, as in the following example at (a), the phrase being immediately taken up by a different instrument and embodied as a most significant feature in the accessory subject which follows, as at (b).

(a) Pianoforte.

(b) Violin.

Under the same head of Intellectualism is sometimes erroneously included that broad and liberal range of harmony which characterises the best composers of the day. This may doubtless call for intellectual effort in those who are unfamiliar with the progress of art, or of in-expansive powers of appreciation, but in the composer it does not imply intellectual purpose, but only the natural step onwards from the progressions of harmony which are familiar to those which are original. With composers of

second rank such freedom is often experimental, and destructive to the general balance and proportion of the structure, but with Brahms it appears to be a special study to bring everything into perfect and sure proportion, so that the classical idea of instrumental music may be still maintained in pure severity, notwithstanding the greater extension and greater variety of range in the harmonic motion of the various portions of the movement. In fact Brahms appears to take his stand on the possibility of producing new instrumental works of real artistic value on the classical principles of abstract music, without either condescending to the popular device of a programme, or accepting the admissibility of a modification of the sonata-form to suit the impulse or apparent requirements of a poetical or dramatic principle.

A sonata which bears more obviously on the direction of modern art in the poetic sense is that of Sterndale Bennett, called 'The Maid of Orleans.' This is an example of programme-music in its purest simplicity. Each of the four movements has a quotation to explain its purpose, and in the slow movement the second section has an additional one. Nevertheless the movements are simple adaptations of the usual forms, the first standing for an introduction, the second representing the usual binary allegro, the third a slow movement in condensed binary form, and the last a rondo. There is but little attempt at using any structural means, such as original distribution of subject-matter, to enforce the poetic idea; so the whole can only be taken as an illustration of a poem in sonata form. But this nevertheless has some importance, as showing the acceptance of the aptitude of sonata-form for such purposes by a composer who was by no means in full sympathy with the lengths to which Schumann was prepared to carry the romantic theories.

Among other recent composers who treat sonata-form in a poetic fashion, we may name Raff and Rubinstein. The works of the former are always admirable in the treatment of the instruments, and both composers frequently present subjects of considerable fascination; but neither have that weight or concentration in structural development which would demand detailed consideration. Poetic treatment is commonly supposed to absolve the composer from the necessity of attending to the structural elements; but this is clearly a misconception. Genuine beauty in subjects may go far to atone for deficiency and irrelevancy in the development, but at best it is only a partial atonement, and those only are genuine masterpieces in which the form, be it ever so original, is just as clear and convincing in the end as the ideas of which it is the outcome.

The whole process of the development of the Sonata as an art-form, from its crudest beginnings to its highest culmination, took nearly

two hundred years; and the progress was almost throughout steady, continuous, and uniform in direction. The earlier history is chiefly occupied by its gradual differentiation from the Suite-form, with which for a time it was occasionally confounded. But there always was a perceptible difference in the general tendency of the two. The Suite gravitated towards dance-forms, and movements which similarly had one principal idea or form of motion pervading them, so that the balance of contrasts lay between one movement and another, and not conspicuously between parts of the same movement. The Sonata gravitated towards more complicated conditions and away from pure dance-forms. Diversity of character between subjects and figures was admitted early into single movements, and contrasts of key were much more strongly emphasised; and while in the Suite, except in extremely rare cases, all the movements were in one key, amongst the very earliest Sonatas there are examples of a central movement being cast in a different key from the rest.

In a yet more important manner the capacity of the Sonata was made deeper and broader by the quality and style of its music. In the Suite, as we have said, the contrasts between one movement and another were between forms of the same order and character—that is, between dance-forms and their analogues; but in the Sonata the different movements very soon came to represent different origins and types of music. Thus in the early violin sonatas the slow introductory first movement generally shows traces of ecclesiastical influence; the second, which is the solid kind of allegro corresponding to the first movement of modern sonatas, was clearly derived from the secular vocal madrigals, or part music for voices, through the instrumental canzonas, which were their closest relations. The third, which was the characteristic slow movement, frequently showed traces of its descent from solo vocal music of various kinds, as found in operas, cantatas, or other similar situations; and the last movement earliest and latest showed traces of dance elements pure and simple. A further point of much importance was the early tendency towards systematic and distinct structure, which appears most frequently in the last movement. The reason for the apparent anomaly is not hard to find. The only movement in the group on a scale corresponding to the last was the second, and this was most frequently of a fugal disposition. The fugue was a form which was comparatively well understood when the modern harmonic forms were still in embryo; and not only did it suffice for the construction of movements of almost any length, but it did not in itself suggest advance in the direction of the sonata kinds of form, though it was shown to be capable of amalgamation with them when they in their turn had been definitely brought to

perfection. In the dance movements on the other hand, when the fugal forms were not used, all that was supplied as basis to work upon was the type of motion or rhythm, and the outlines of structure had to be found. As long as the movements were on a small scale the structure which obtained oftenest was the equal balance of repeated halves without contrasting subjects, of which the finest examples are to be found in Bach's Suites. The last movement was in fact so long a pure suite movement. But when it began to take larger dimensions, emphasis began to be laid upon that part of the first half of the movement which was in the dominant key; then the process of characterising it by distinct figures or subjects became prominent; and by degrees it developed into the definite second section. Meanwhile the opening bars of the movement gradually assumed more distinct and salient features, making the passage stand out more clearly from its immediate context; and in this form it was repeated at the beginning of the second half of the movement, the second section being reserved to make a complete balance by concluding the whole in a manner analogous to the conclusion of the first half. So far the change from the suite type of movement rests chiefly on the clearer definition of parts, and more positive exactness in the recapitulation of the subjects; but this is quite sufficient to mark the character as distinct, for in the movements of the Suite (excluding the prelude) balance of subject and key was never systematically recognised. The further development of binary form, in which the recapitulation of the distinct subjects was reserved for the conclusion, took some time to arrive at, but even at this early stage the essential qualities of sonata-form are clearly recognisable. The Violin Sonata was naturally the kind which first attained to perfection, since that instrument had so great an advantage in point of time over the keyed instruments used for similar purposes; and its qualities and requirements so reacted upon the character of the music as to make it appear almost a distinct species from the Clavier Sonata. But in fact the two kinds represent no more than divergence from a similar source, owing to the dissimilar natures of the instruments. Thus the introductory slow movement was most appropriate to the broad and noble character of the violin, and would appeal at once by its means to an audience of any susceptibility; whereas to the weak character of the early keyed instruments, so deficient in sustaining power, it was in general inappropriate, and hence was dropped very early. For the same reason in a considerable proportion of the early clavier sonatas, the third or principal slow movement was also dropped, so that the average type of sonatas for clavier was for a time a group of two movements, both generally in a more or less quick time. In these the canzona movement was early supplanted by

one more in accordance with the modern idea, such as is typified in the clavier sonata of Galuppi in four movements [see p. 514], and by occasional allemandes in the earlier sonatas. As keyed instruments improved in volume and sustaining power the central slow movement was resumed; but it was necessary for some time to make up for deficiencies in the latter respect by filling in the slow beats with elaborate graces and trills, and such ornaments as the example of opera-singers made rather too inviting. The course of the violin solo-sonata was meanwhile distinctly maintained till its climax, and came to an abrupt end in J. S. Bach, just as the clavier sonata was expanding into definite importance. In fact the earliest landmarks of importance are found in the next generation, when a fair proportion of works of this class show the lineaments of clavier sonatas familiar to a modern. Such are the disposition of the three movements with the solid and dignified allegro at the beginning, the expressive slow movement in the middle, and the bright and gay quick movement at the end; which last continued in many cases to show its dance origin. From this group the fugal element was generally absent, for all the instinct of composers was temporarily enlisted in the work of perfecting the harmonic structure in the modern manner, and the tendency was for a time to direct special attention to this, with the object of attaining clear and distinct symmetry. In the latter part of the 18th century this was achieved; the several movements were then generally cast on nearly identical lines, with undeviating distribution of subjects, pauses, modulations, cadences, and double bars. The style of thought conformed for a while sufficiently well to this discipline, and the most successful achievements of instrumental music up to that time were accomplished in this manner. Extrinsically the artistic product appeared perfect; but art could not stand still at this point, and composers soon felt themselves precluded from putting the best and most genuine of their thoughts into trammels produced by such regular procedure. Moreover, the sudden and violent changes in social arrangements which took place at the end of the century, and the transformation in the ways of regarding life and its interests and opportunities which resulted therefrom, opened a new point of public emotion, and introduced a new quality of cosmopolitan human interest in poetry and art. The appeal of music in its higher manifestations became more direct and immediate; and the progression of the idea became necessarily less amenable to the control of artificialities of structure, and more powerful in its turn of reacting upon the form. This is what lies at the root of much which, for want of a more exact word, is frequently described as the poetic element, which has become so prominent and indispensable a quality

in modern music. By this change of position the necessities of structural balance and proportion are not supplanted, but made legitimate use of in a different manner from what they previously were; and the sonata-form, while still satisfying the indispensable conditions which make abstract music possible, expanded to a fuller and more co-ordinate pitch of emotional material. Partly under these influences, and partly, no doubt, owing to the improvements in keyed instruments, the Clavier Sonata again attained to the group of four movements, but in a different arrangement from that of the Violin Sonata. The slow introduction was sometimes resumed, but without representing an ingredient in the average scheme. The first movement was usually the massive and dignified Allegro. The two central portions, consisting of a highly expressive slow movement, and the scherzo which was the legitimate descendant of the dance movement, were ruled in their order of succession by the qualities of the first and last movements, and the work ended with a movement which still generally maintained the qualities to be found in a last movement of Corelli or Tartini. The tendency to unify the whole group increased, and in so far as the influence of intrinsic character or of the idea became powerful it modified the order and quality of the movements. For particular purposes which approve themselves to musical feeling the number of movements varied considerably, some exceedingly fine and perfect sonatas having only two, and others extending to five. Again, it is natural that in certain moods composers should almost resent the call to end with the conventional light and gay movement; and consequently in later works, even where the usual form seems to be accepted, the spirit is rather ironical than gay, and rather vehement or even fierce than light-hearted. The same working of the spirit of the age had powerful effect on the intrinsic qualities of the Scherzo; in which there came to be found, along with or under the veil of ideal dance motions, sadness and tenderness, bitterness, humour, and many more phases of strong feeling; for which the ideal dance rhythms, when present, are made to serve as a vehicle: but in some cases also are supplanted by different though kindred forms of expression. In other respects the last movement moved farther away from the conventional type, as by the adoption of the fugal form, or by new use of the Variation-form in a more continuous and consistent sense than in early examples. In many cases the movements are made to pass into one another, just as in the earlier stages the strong lines which marked off the different sections in the movements were gradually toned down; and by this means they came to have less of the appearance of separate items than limbs or divisions of a complete organism. This is illustrated most clearly by the examples of

slow movements which are so modified as to be little more than *Intermezzi*, or introductory divisions appended to the last movement; and more strongly by a few cases where the distinct lines of separation are quite done away with, and the entire work becomes a chain of long divisions representing broadly the old plan of four distinct movements with kindred subjects continuing throughout. Since Beethoven the impetus to concentrate and individualise the character of musical works has driven many genuine composers to the adoption of forms which are less hampered by any suspicion of conventionality; and even with sonatas they seemed to have grasped the object in view with less steadiness and consistency than in previous times. Some have accepted the artifice of a programme, others admit some doubtful traits of theatrical origin; others develop poetic and æsthetic devices as their chief end and object, and others still follow up the classical lines, contenting themselves with the opportunities afforded by new and more elaborately perfect treatment of details, especially in music for combinations of solo instruments. In the latter case it is clear that the field is more open than in sonatas for single instruments, since the combination of such instruments as the piano-forte and violin or piano-forte and violoncello in large works has not been dealt with by the great masters so thoroughly and exhaustively as the solo sonata. But in any case it is apparent that fresh works of high value on the classical lines can hardly be produced without increasing intellectualism. The origin and reason of existence of abstract music are, at least on one side, intellectual; and though up to a certain point the process of development tended to reduce the intellectual effort by making the structural outlines as clear and certain as possible, when these were decisively settled the current naturally set in the direction of complication. The inevitable process of accumulating one device of art upon another is shown in the free range of modulation and harmony, and in the increasing variety and richness of detail both in the subjects and in the subordinate parts of works. In such cases the formal outlines may cease to be strictly amenable to a definite external theory; but if they accord with broad general principles, such as may be traced in the history of abstract music so far, and if the total effect is extrinsically as well as intrinsically complete and convincing, it appears inevitable to admit the works to the rank of 'Sonatas.' The exact meaning of the term has in fact been enforced with remarkable uniformity during the whole period from the beginning to the present day, and decisively in favour of what is called abstract music. Fair examples of the successful disregard of form in favour of programme or a dramatic conception can hardly be found; in fact, in the best examples extant, programme

is no more than the addition of a name or a story to an otherwise regular formal sonata; but on the other hand there is plenty of justification of the finest kind for abstract works in free and more original forms, and it rests with composers to justify themselves by their works, rather than for reasoning to decide finally where the limit shall be.

C. H. H. P.

SONATINA. This is a work in the same form and of the same general character as a sonata, but shorter, simpler, and slenderer. The average form of the sonata appears to be the most successful yet discovered for pure instrumental works of large scope. It is admirably adapted for the expression and development of broad and noble ideas; and the distribution of the various movements, and the clearness with which the main sections and divisions of each movement are marked out, give it a dignity and solidity which seem most appropriate in such circumstances. But the very clearness of the outlines and the strength of contrast between one division and another, make the form less fit for works of smaller scope. As long as such a work is laid out on a scale sufficiently large to admit variety of treatment and freedom of movement within the limits of these divisions, there is fair chance of the work having musical value proportionate to the composer's capacity; but if the limits are so narrow as to admit little more than mere statement of the usual form, and no more than the conventional order of modulations, the possibilities of musical sense and sentiment are reduced to a minimum, and a want of positive musical interest commonly results. Consequently sonatinas form one of the least satisfactory groups of musical products. The composers who have produced the greatest impression with short and concise movements in modern times have uniformly avoided them, and adopted something of a more free and lyrical cast, in which there is a more appropriate kind of unity, and more of freedom and individuality in the general outlines. It might be quite possible to group these small pieces so as to present a very strong analogy to the sonata on a small scale; but it has not been attempted, owing possibly to a feeling that certain limitations of style and character are generally accepted in the musical world as appropriate for works of the sonata class, and that it would be superfluous to violate them.

The sonatina form has, however, proved peculiarly convenient for the making of pieces intended to be used in teaching. The familiar outlines and the systematic distribution of the principal harmonies afford the most favourable opportunities for simple but useful finger-passages, for which the great masters have supplied plentiful formulas; and they furnish at the same time excellent means of giving the student a dignified and conscientious style, and a clear insight into the art of phrasing and into

the simpler rules of classical form. These works may not have any strong interest of a direct kind for the musical world, but they have considerable value in so far as they fulfil the purposes they are meant to serve. The most famous and most classical examples of this kind are Clementi's sonatinas, of opp. 36, 37, and 38. And much of the same character are several by F. Kuhlau, which are excellently constructed and pure in style. Of modern works of a similar kind there are examples by L. Koehler. Those by Carl Reinecke and Hermann Goetz are equally adapted for teaching purposes, and have also in general not a little agreeable musical sentiment, and really attractive qualities. Some of Beethoven's works which are not definitely described as such are sufficiently concise and slight to be called sonatinas: as for instance those in G and G minor, op. 49, which were first announced for publication as 'Sonates faciles' in 1805. That in G major, op. 79, was published as a 'Sonatine' in 1810, though it is rather larger in most respects than the other little examples. Prior to Beethoven the average scale of sonatas was so small that it seems difficult to see how a diminutive could be contrived; and indeed the grand examples which made the degrees of comparison specially conspicuous were not yet in existence. A modern work on such a scale, and made in the conventional manner, would probably be considered as a Sonatina, and apart from teaching purposes it would also be likely to be an anachronism. C. H. H. P.

SONG. INTRODUCTION. In relation to the study of music, a Song may be defined as a short metrical composition, whose meaning is conveyed by the combined force of words and melody.

The Song, therefore, belongs equally to poetry and music. For the purposes of this Dictionary the subject should properly be treated with exclusiveness regard to music; but the musical forms and structure of songs are so much determined by language and metre, and their content by the emotions the words express, that their poetic and literary qualities cannot be put aside. In the strictest sense, lyrical pieces alone are songs; but adherence to so narrow a definition would exclude many kinds of songs whose importance in the history of music demands that they should be noticed. Attention, however, will be directed chiefly to homophonic forms of secular songs—i.e. songs for one voice or unisonous chorus.

It should, moreover, be mentioned that the history of the Song in this article will be treated in regard to country and not to period. For the study of any other branch of music among the leading nations of Europe,¹ a chronological arrangement would probably be more scientific and instructive; but the Song is that

branch of music in which national peculiarities and idioms linger longest, and international affinities grow most slowly. Again, without attempting to trace the origin of Song, or to say whether or not Song preceded speech or language, it may safely be asserted that certain successions of sounds or intervals varying with different nationalities, have in all ages possessed some particular significance and conveyed some message of meaning from man to man. So that the music of each nation has qualities and idioms of its own as distinct and definite as those of its language.

Vocal music is probably the oldest branch of the art; but from the fact that dance-songs preponderate in the music of nations whose musical culture remains in a primitive stage, it is reasonable to conclude that vocal music may have been at first a mere accessory of the dance. (See DANCE-RHYTHM.) Choral singing at religious and other festivals was also a practice of very remote antiquity. Recitations by bards, commemorative of the exploits of heroes, were a further and distinct development of vocal music. Hence the work done by the minstrels, Troubadours and Trouvères, Minnesinger and Meistersinger, will call for notice in their different countries.

During the last quarter of a century, the Song as a branch of music has assumed great importance. With regard to the Folk-song, scientific musicians and composers in most European countries have deemed it worthy of serious study. They have assiduously collected and made use of what remains of the indigenous musical material still left untouched by the hand of civilisation. Governments have given aid to such enterprises, thereby showing the value they attach to the preservation of the songs of their people. Folk-lore has become a scientific study; societies have been formed to collect and arrange in musical notation the songs orally handed down by uncultured singers, and truly the object is well worthy of the labour. For the folk-song is the origin of all our modern music. From it we have derived not only our scales, but the shape of our melodies, the outlines of our musical form, and indirectly even the art of our harmony and cadences.² Hence in treating the history of the Song in each successive country, it is necessary that the folk-song should hold its place.

There is another form of Song which, for want of a better term (where a distinction is necessary), it is convenient to designate by the German phrase *Kunstlied*, or Art-Song. These songs are more regular and finished compositions, written with conscious art by men who have made music their study. But formerly there was no branch of music so freely handled by inferior and unpractised hands. The lyric song may not need so accurate a knowledge of formal

¹ Scotland, Ireland, and Wales are purposely left out of this scheme, as the articles in this Dictionary on the music of those countries give sufficient information on the Songs.

² See Parry's *Art of Music*, p. 52 et seq.

principles as other kinds of music, but it both demands, and at last has received, the care and serious attention necessary for its proper cultivation and appreciation. For the art-song simple 'guitar' accompaniments no longer suffice; the instrumental part must have a beauty, a fulness and elaboration of its own apart from the voice, though primarily its duty is to enhance and support the melody and the meaning of the words. Further, composers have now recognised that no song can be really good without correct accentuation and emphasis; they have turned their attention to the study of accent, and to the proper relations of musical cadence to grammatical punctuation.¹ (See ACCENT, DECLAMATION (iii).)

The importance of the choice of words is happily now manifesting itself in every country, for the necessary dependence of the Song upon poetry is obvious.² Until the poet supplies lyrics of adequate power and beauty of form, the skill of the composer alone cannot develop the full capacities of the Song. When, however, poets and composers of the first rank have worked together in mutual sympathy and admiration, as did the German poets and composers of Goethe's age, the Song has quickly mounted to the loftiest heights of art. Time alone can produce men of genius and breathe the inspiration of great events, but poets and composers are alike the children of their age, and vividly reflect the dominant emotions of the hour and the scene in which they live. History colours every branch of art, and none more so than the Song, for it is the first and simplest mode of giving expression to strong feeling. Men naturally sing of what fills their heads and hearts; and thus there is a close correspondence between great historic events and the multitudes of songs to which they generally if not invariably gave birth.

Enough has now been said to show the right the Song has to be cultivated as a branch of pure art, and it remains to attempt to trace its history, so far as possible, in each civilised country. In some countries the art of music has not advanced beyond the most primitive stage of national melody, but in others the development of music can be followed from the simplest folk-song to the highest form of artistic composition.

FRANCE

As France was the original home of the Troubadours, France may legitimately occupy

¹ In M. Mathis Lussy's *Traité de l'Expression musicale* clear rules will be found for the correspondence between the musical rhythm and the verse rhythm, with examples which show how the sense of the musical phrase may be destroyed, if it be interrupted by a new line of the verse, and how the verse in turn may be marred by the interruption of rests or pauses in the musical phrase. There the student may learn why the strong and weak accents of the music should coincide respectively with the long and short syllables of the verse, and when the departures from this rule are justifiable. This excellent treatise was translated into English by M. E. von Glehn, and published by Novello & Co.

² That the poet's share in the Song is at length recognised, is proved by the poet's name being given nearly as often as that of the composer in the programmes of the present day.

the first place in this scheme. Another valid reason for treating this country first is that it possesses, perhaps, one of the oldest songs in existence. This is a *Complainte* on the death

of Charlemagne, 813. It may be found in a MS. in *fonds-latin* dated 1154, in the Bibliothèque Nationale in Paris,¹ and has been attributed to S. Columbanus. The music has been reduced to modern notation by both Coussemaker and Fétis, but their versions vary. It must be remembered that there is less certainty on the subject of early music than on early language, for music was handed down solely by oral tradition. And even when about the year 1000 the necessity was felt for some method of musical notation, the plans adopted were so numerous and confused that the question of time or rhythm or actual notes of a mediæval MS. is constantly interpreted differently by musical historians. We therefore give in facsimile a fragment of the MS. (see p. 537), and a few bars of both versions for comparison:—

Ex. 2. COUSSEMAKER'S VERSION.²

Ex. 3. FÉTIS'S VERSION.

The melody has only four notes; indeed, up to the last phrase only three, showing that the peculiar French fondness for a small compass has survived for 1000 years. Since the 10th century the practice existed of using well-known tunes (which later would be called *timbres*) to different Latin words.³ And most of the Crusaders' songs which have come down to us from the 11th century are in Latin.⁴ But an important exception amongst them is a song commencing 'O Marie, Deu maire,' dated 1096, which is in the vernacular, and this date marks the epoch when the Latin language began to be superseded by the French.

It is necessary to emphasise the close connection which has ever existed—and perhaps in France more than in any other country—between the folk-song and the Church. There is reason to believe that some melodies, or fragments of melodies, of Celtic origin have been preserved from the days before Christianity was introduced into France. The old heathen

popular songs were in the early centuries of the Christian era a subject of much trouble to the Church, and Christian people were forbidden to frequent places where they were sung. Even Charlemagne, who ordered a collection of epic songs to be made, condemned the vulgar, reprehensible type of songs which were sung round about the Churches. In speaking of the music of the Church it must be remembered that it had two distinct groups; first, the liturgical portion, or plain-song, without regular rhythm; and second, the music to the hymns (prose or sequence, *sequentia*), which was both melodious and rhythmical, and represented the popular part of the service. By degrees, the secular spirit crept into these *proses*⁵ and from the 11th century onwards popular songs⁶ are to be found in the vulgar tongue side by side with the Latin canticles. These were called *proses farcies* or *épîtres farcies*.⁷ Laudable attempts also were made by the Church to adapt secular festivals and customs to Christian purposes. Thus the Christian festival of Easter corresponded with the heathen celebration of the spring. Many of the old Celtic May-day songs⁸ still exist, and a great similarity of melody can be traced between them and the Easter music of the Church. The origin of the well-known Easter hymn 'O filii et filias' is unknown, but it is certainly as old as the 12th century, and has usually been attributed to French sources. It is unlike Gregorian music in character, but its affinity with some of the following examples of old May-day songs, called *Chansons de quête*, still sung in different parts of France, is incontestable.⁹

³ Fétis speaks of two Latin poems sung to tunes called *Modus Iudithinis* (l'air de l'amour), and *Modus Florum* (l'air des fleurs). *Ibid.* iv. 430.

⁴ Such as the beautiful 'Jerusalem Mirabilis,' which is a solemn piece, like a Gregorian hymn, and probably sung by the people in the open air. *Ibid.* iv. 432.

⁵ Lavoix, *La Musique Française*, p. 20.

⁶ Usually *Complaintes*, recognisable by their rhythm.

⁷ For example see Fétis, v. 103.

⁸ These contain strange relics of old Celtic words, such as *Trianette*. See Tiersot, *Histoire*, p. 192.

⁹ Tiersot, *Histoire de la Chanson Populaire en France*, p. 261. Other pagan or Celtic festivals, such as midwinter (called *la fête de*

Another example of the resemblance between the Church and folk-songs is afforded by the Tonus Peregrinus, the chant sung to the Psalm 'When Israel came out of Egypt.' Again the origin is obscure, but already in the 9th century it was held to be very old. Like 'O filii et filiae' it differs in many ways from Gregorian music, but several old French songs could be given where the melody is almost note for note that of the Tonus Peregrinus. For instance, the 'Chant des Livrées,' a very old song still sung at country weddings; or the beautiful 16th-century 'Rossignolet des bois.'¹

Ex. 7.

Ros-si-gno-let des boys Qui chante au verd ho-
As-tu ou-y la voix D'ung gar-son du vil-

pas l'u-sa-ge Comme c'est qu'il faut af-mer.

Though there is no definite evidence in this case that the Church adopted a popular melody for the chant, nor that the people used a chant which they heard in church for their own songs, it proves the popularity of this fine melody, and that it was common property to both. And it will be seen that this practice of intermixing sacred and secular music has continued from those early centuries to the present day.

It was incidentally remarked in the introduction to this article that the folk-songs have given us our scales; and these scales include not only the modern major and minor but also the ecclesiastical or Gregorian scales and modes. Modal melodies have existed for hundreds of years, and still exist all over France. It must, however, be admitted that the commonest scales for the French folk-songs are the modern major and minor scales.² Among the most beautiful modal tunes are those found in Brittany, such as 'Le Clerc du Trémélo,' which is in the ecclesiastical Dorian or first mode; a singularly pathetic religious song sung in a time of famine, 'Disons le chapelet' in the Phrygian or third mode; and the well-known 'Ma douce Annette,' or the beautiful 'Le

¹ *Aquilanens* or *Aquilanens* or midsummer, answering respectively to the Church festivals of Christmas (see CAROL), the Epiphany, or St. John the Baptist, gave rise to masses of songs still sung in France, and common to both kinds of music. Space forbids further mention of this subject, but full and interesting information will be found in M. Tiersot's above-quoted volume, p. 186 et seq. (In this same chapter the famous 'Maurmède' Chansons are alluded to.)

The narrative form of song is very popular in France, and the generic terms for this class of song is the *Complainte*. The old Celtic epics and the later collection of epics made by Charlemagne, the *chansons de geste*, the early *romances*, the *légendes* of the Passion and of the Christian saints, and the old pathetic *ballades* of the peasants would all come under that name. The wonderful *légende* called the 'Ballade de Jésus Christ' is still sung in Picardy.⁴ The simplicity of the language and the modal melody point to its being of popular origin. The 'Chanson de la Perronelle,' which has lived in the mouths of the people for centuries,⁵ resembles the oldest *complaintes* in its poetic form, consisting of couplets of two lines without a refrain.⁶

M. Tiersot calls attention to the strange fact, that although these *chansons narratives* were known to exist, they were far less often included in the collections made from the 13th to the

³ The above are included in M. Bourgauff-Ducoudray's 'Trente Mélodies Populaires de la Basse Bretagne'; and here it would be convenient to state briefly M. Bourgauff-Ducoudray's theory. He denies that these modal songs have their origin in the Church. His argument is that the modes found in these and other popular melodies, not only of France, but of Ireland, Scotland, Greece, etc., are actually the survival of music common to the early Indo-European race. He maintains that the Greeks alone cultivated music as an art; that the Church, taking its scales from Greece and afterwards carrying them to other countries, brought to Brittany, for instance, a kind of music which was already familiar to the Bretons in their popular songs; that the so-called modes may be as old and as common to many nationalities as many of the familiar words common to the different languages of the Indo-European family. On the strength of this, Ducoudray's nomenclature of the modes is the Greek and not the ecclesiastical, and this has been adopted by other continental writers (see Monse). Throughout this article, however, the Church names and Gregorian numbers of the modes are retained, except in the section relating to Song in Greece.

⁴ This legend is widely spread in France. It is found in connection with several saints in the *Légende Aurea* of Jacobus de Voragine. See Champfleury and Wekerlin's 'Chansons pop. des provinces de France'.

⁵ The earliest record of the words and music of this song is to be found in a MS. in the Bibliothèque Nationale called 'Chansons du 15^{me} Siècle,' published by Gaston Paris and Gervais.

⁶ Tiersot, *Histoire*, p. 12.

17th centuries than the *chansons satiriques*, *chansons d'amour*, *pastourelles*, etc. Of recent years their extreme beauty has claimed more attention, and many modern collections of them have been published.

To trace the development of song it is now necessary to return to the early Middle Ages. Some strong impulse was evidently given to the human mind in Europe towards the close of the 11th century, and the songs of the Troubadours, like the numerous schools of philosophy which illuminated the 12th century, were fruits of an awakened ardour for intellectual pursuits. With the Troubadours a new type of music was introduced, which may be described as songs written with conscious art. These versifiers, the Troubadours and Trouvères to whom music and literature owe much, derived their names from 'trobar' or 'trouver' (to find or invent). They belonged respectively to the south and north of France, and wrote in the Langue d'Oc and Langue d'Oïl. It was not unnatural that in Provence and Languedoc the new life should especially express itself in music and verse, for the circumstances of those provinces were favourable to the development of sentiment and imagination. The rise of the Troubadours in southern France was quickly followed by the appearance of the Trouvères in northern France. There was less gaiety about these northern versifiers than about the southern, but in other respects the resemblance between them was very close. At first the Troubadours and Trouvères sang their own verses, but the functions of the poet and singer soon became distinct. Hence a class of professional musicians arose, who sang the songs of their own lords and other composers. These wandering singers from Provence and Picardy, known as *Jongleurs* or *Chanteurs* in the south, and *Menétriers* or minstrels in the north,¹ went from court to court, country to country, and joining the Crusaders they returned from the Holy Land filled with enthusiasm and singing songs of love and war. The war-songs or *chansons de geste* were musically uninteresting; they were merely long chanted tales where the melody only occurs in the short refrain. But the love-songs were poems of exquisite grace, perfect rhythm, and highly expressive. Their very names reveal their origin, such as the *pastourelle*, *alba* and *serena*, *tensons* and *sirvente*.² To the

Troubadours likewise may be ascribed the *canzo* and *canzone*, the *soula* (soulagement), a merry song, and the *lai*,³ which is of a melancholy character; and to the Trouvères more especially the *romance*.⁴ The Troubadours and Trouvères were not less fertile in the invention of dance songs, combining solo and chorus. Such were the famous *carol* or *rondet de carol*, the *espringerie* (or jumping dance), and the *ballata*.

The earliest of the Troubadours on record was Guillaume, Duke of Guienne, who joined the first Crusade in 1096. And among the illustrious Troubadours and Trouvères of the 12th and 13th centuries, whose names survive and many of whose melodies have come down to us, there were: Richard Cœur de Lion, Bertran de Born, Pierre Rogier, Bernard de Ventadour, the Châtelain de Coucy, Guirant de Bornel, Blondel de Nesle, Gacé Brulé, Hugues de Lusignan, Thibaut de Champagne (King of Navarre), Jehan Erars, Girant de Calenson, Perrin d'Angecourt, Adam de la Bassée, Adenet le Roi, and Adam de la Hale. The prime of the Troubadours was past when in the year 1320, the Troubadour Academy of Toulouse was founded for the cultivation and preservation of their art.⁵ (See TROUBADOUR.)

The Troubadours and Trouvères owe great debts to the Church and to the Folk-song. Their music was a compound of the folk-song for its melody and form; and of the Gregorian chant for its declamation and ornament. But inasmuch as the art of literature was then highly developed, and music was still in its infancy, it was impossible to combine the elaborate and highly finished forms of poetry with the music then existing, and a new kind of song, more artistic and more developed, was the result. The Troubadours were eager to invent new, ingenious and graceful phrases, metres, and rhythms,⁶ and their work was of real value in handing down the rhyming stanza as the most perfect vehicle for lyrical expression. Also, by the preference the Troubadours gave to the modern major scale they helped to establish it in European music before the close of the 13th century. In this, and in the simple repetitions of their musical phrases, they followed the popular instinct. And though the Troubadour melodies are more developed and finished than those of the *chansons populaires*, it is in many cases impossible to state with certainty which are folk-songs and which are the work of trained musicians. For instance, a pastoral song, 'La reine d'Avril,' belonging to the 12th

¹ The Menétrier seems to have attained a higher standard of culture and taste than the Jongleur, who soon added other modes of popular diversion (such as juggling and acrobatic feats) to his musical accomplishments. It must, however, be remembered that the lower classes in France were untouched by the Troubadour movement, which covered the time from the 11th to the 14th centuries. They had nothing more in common with the *lai*, *sirvente*, etc. than they had with the old *chansons de geste*. The Jongleur were the sole connecting link between the people and the courts.

² In the *pastourelle* the poet feigned to meet and woo a shepherdess; the *alba* and *serena* were arabesques and serenades. The *tensons* were metrical dialogues of lively repartee on some disputed point of gallantry, and the *sirvente* was an address of a devoted lover to his mistress. To this latter form of composition, which was also much employed in satire, a special celebrity belongs, because its metre—the *terza rima*—was adopted by Dante and Petrarch.

³ See F. Wolf, *Ueber die Laien*.

⁴ The romance is the lyrical outcome of the narrative *complaintes* and *chansons de geste* in Northern France. 'Belle Volans' of the 12th century is an example. See Tiersot, *Histoire*, p. 414.

⁵ There were schools in other parts of France where the Gay Science was taught, and whither the Troubadours resorted in Lent (when not allowed to appear in public) to learn new songs and melodies. The minstrels also had rights granted to them to form corporations or guilds in several towns. The earliest charter dates 1333, signed by Robert de Cavaen, and lasted until the 16th century.

⁶ See P. Aubry, *La rythmique musicale des Troubadours*, etc., Paris, 1907.

century, is said to be of popular origin; it is melodious and rhythmical, it has a refrain, and the first little phrase is four times repeated. 'L'autrier par la matinée,' by Thibaut, King of Navarre (1201-54), opens with a phrase exactly similar, which is also repeated.¹ There is the same charm of sincerity and pretty sentiment about an older song, the *Châtelain de Coucy's* (1192) 'Quant le rossignol,'² though the form is less concise. It is composed in phrases of seven bars each, like many other mediæval songs.³ Both are good illustrations of Troubadour songs.⁴

Very few *serventes*, but many *pastourelles*, have been preserved from the 12th century. This period was specially rich in sacred and secular dramatic representations; and, as before stated, proses and canticles in plain-chant melody are found side by side with light, rhythmical popular tunes. It is thus in 'Daniel Ludus' by one Hilaire, played in 1250. The

'Jeu de S. Nicolas' and 'Le Juif' were of the same type, at once sacred and comic. The character of the mysteries remained faithful to tradition; these were only a continuation of the liturgical dramas of the 11th century.⁵ But by the end of the 13th century the Trouvères had broken loose from the Church, and resorted to little village histories or love-stories for their material. 'Aucassin et Nicolette,' the well-known *chant-fable*, belongs to this time. Musically more important was Adam de la Hale's celebrated *pastorale* 'Le jeu de Robin et de Marion,' which was played at the court of Charles of Anjou at Naples in 1285. This work has long been attributed solely to Adam de la Hale's own invention, but M. Tiersot has now shown that A. de la Hale probably wrote the play, and then strung together a number of popular tunes (many of them of far older date) to suit his words.⁶ Thus this pastoral comedy forms probably the oldest collection of French folk-tunes in existence. Adam de la Hale, together with Guillaume de Machault, should more properly be classed among the *Chansonniers*, or the early musicians, who in the 13th century paved the way for the contrapuntal school, which for two centuries was to be the predominating influence in European music. A. de la Hale, surnamed 'Le bossu d'Arras,' was born in 1240; Machault in 1285, thus forming the link between the Trouvères and the scholar musicians of a little later time. Like the Trouvères they often invented both the words and the melodies of their songs, but they also attempted to write in the polyphonic form of composition; and raw and imperfect as these efforts were, they marked a step in advance. To Adam de la Hale and G. de Machault French music owes much; not only can the form of the future

vaudeville be detected in the *pastorale* 'Robin et Marion,' but its chansons are strictly similar

¹ Ambros, *Geschichte der Musik*, ii. 227, and Tiersot, *Hist.*, p. 371.
² Ambros, *Ibid.*, ii. 223. Burney and Pernes put these into modern notation, and where they differ, Burney's are the lower notes.

³ Another of Thibaut's songs, 'Je ne quidoie partir d'amour,' given by Ambros, *Ibid.*, ii. 228, has an alternating rhythm of two and three bars, but it preserves a perfect symmetry of form.

⁴ Further examples of Troubadour songs will be found in Wolf's *Ueber die Late, Kiesevetter's Schicksale und Beschaffenheit des wäldchen Gesanges*; J. Stifford Smith's 'Musica Antiqua,' and in the histories of music by Ambros, Fétis, Burney, and others. Also for modernised versions see Wegerlin's 'Echoes du Temps passé,' vol. i.

⁵ See Lavoix, *La Musique Française*, p. 41.

⁶ Space prohibits quoting here at length M. Tiersot's interesting and conclusive arguments. They are given in different places in his *Histoire de la Chanson Pop.* See especially p. 422 *et seq.*, and the article HALE, Adam de la, vol. ii. p. 273.

in structure and character to chansons of modern date. In the old and new alike we find a strongly marked rhythm, easy intervals, and a paucity of notes, repetition of one short melodic phrase, the major mode, the favourite 6-8 time, and an extreme simplicity of general plan.¹ Though hundreds of years have passed since 'Robin et Marion' was written, the song 'Robin m'aime' (ex. 11) is still sung in Hennegau.²

In two volumes of old French and Latin poems, the author Guillaume de Machault is styled poet and musician. The forms of the poems are very varied, and among them are a great number of *lais*, *virelais*, *ballades*, *rondeaux*, and *rondelets*, with description of the music to which they are set.³ Machault seems to have been most renowned for his graceful and rhythmical *balloettes*, which are written, as a rule, in triple or compound time. It should be noted that in the songs of this early period the melody is never protracted and drawn out to the detriment of the words, but closely follows the quick succession of syllables without visible effort. And these old melodies often have the Iambic rhythm, for instance⁴

Contemporary with, or a little junior to Machault, was Jehannot Lescurel, who wrote romances which are still extant in MS. One of these, 'A vous douce débonnaire,' which has been translated into modern notation by Fétis,⁵ exhibits a more developed melody and a more modern tendency than other productions of the same date.

If it be true that during the 14th and 15th centuries, the Church exercised an exclusive dominion over music, she was nevertheless a friend to secular songs. By taking popular tunes for the themes of their masses and motets, such as 'L'omme armé,' 'Tant je me déduis,' 'Se la face ay pale' (used by Dufay); or 'Baisez-moi' (by Roselli), 'Malheur me bat' (by Josquin des Prés), etc.,⁶ the musicians of the Church preserved many a melody which would otherwise have perished. 'L'omme armé' is undoubtedly the most famous song of the Middle Ages, and it owes its notoriety not so much to its beauty as to the fact that contrapuntal composers, from Dufay, at the end of the 14th century, to Palestrina, used it more than any other folk-song. (See L'HOMME ARMÉ, vol. ii. p. 687.) From want of such adoption by the Church, some of the airs have been lost to which the curious old Noëls, printed

in black letter at the end of the 15th century, were sung, though the names of the airs (such as 'Faulce trahison,' etc.) remain as superscriptions. (See NOËL.)⁷

In that great age of serious polyphonic music a high place was held by the French school, or, to speak more correctly, by the Gallo-Belgian school, for during the 14th and 15th centuries no distinction, as regards music, can be drawn between northern France and Flanders.

The direct use made of secular music for ecclesiastical purposes is remarkably illustrated by the works of Clément Marot. He was a translator of a portion of the Psalms; and the first thirty of them, which he dedicated to his king, François I., were set or 'parodied' to the favourite dance-airs of the Court.⁸ Popularity was thus at once secured for the Psalms, which members of the Court could sing to their favourite *courantes*, *sarabandes*, and *bourrées*. After Marot's death Béza continued his work at Calvin's instance.⁹ Much doubt existed for a long while as to whom belonged the credit of having set the Psalms to music. Some ascribed it wholly to Marot, others to Goudimel; but M. Douen has now made it clear that these men, together with Jambe de Fer, Franc, Claudin, and others, adapted the Psalms to old secular songs.¹⁰ In the 'Psautier Flamand Primitif' (1540) all the psalms are for one voice, and with only two exceptions they can all be traced back to their sources in popular French and Flemish songs.¹¹ (See PSALTER.)

While secular music was thus made to minister to the Church, it had a separate though less conspicuous sphere of its own. This is attested by the *vaux-de-vire* (or drinking-songs),¹² *voix-de-ville* (better known by their modern name of *vaudevilles*) and *airs-de-cour*, collected and published in the 16th

⁷ A list of collections of Noëls is given by Tiersot, *Hist.*, p. 242.

⁸ Wokerley says in his 'Echos du Temps passé,' iii. 156, that when any dance-air became popular, rhymers immediately 'parodied' it, i.e. put words to it, so that it could be sung. The term 'parody' thus had no sense of burlesque, but it simply meant adaptation. The Ballards issued a quantity of these songs.

⁹ Calvin, who detested the arts, recommended music, nevertheless, from the purely utilitarian point of view, 'la parole chantée qui porte beaucoup plus fort.'

¹⁰ See Clément Marot et le Psautier Huguenot, i. 606. One of the most noted is the magnificent Huguenot Battle Hymn, 'Que Dieu se mette seulement' (Psalm 68), sometimes called 'La Marcellaise Huguenote.' It is a secular tune of Alsatian origin, and it appeared first in the first edition of the Strasbourg Psalter.

¹¹ For *cantiques*, moreover, as well as masses and psalms, secular airs were openly utilised. And according to Douen (pp. 688 and 703) the Roman Catholics have never ceased to adapt secular airs to ecclesiastical uses from the 16th century down to the present time. He supports this statement by reference to 'La pieuse alouette avec son tire-lire; Chansons Spirituelles, le plupart sur les airs mondains, par Ant. de la Cauchie, 1619'; 'Imitations de Jésus-Christ en Cantiques sur des airs d'Opéra et de Vau-deville, par Abbé Felegrin, 1727' (Paris); and 'Concerts Spirituels,' a collection published at Avignon in 1835, of masses, hymns, requiems, prayers, etc., on operatic melodies by Gluck, Piccini, Mozart, Cimarosa, Rossini, Méhul, and others.

¹² Baselin and Jean le Roux, who lived in the little valleys (*vaux*) around Vire in Normandy, in the second half of the 15th century, wrote many favourite drinking-songs, and hence drinking-songs came to be called *vaux-de-vire*. Some writers have confused this term with the *voix-de-ville*, which applied to chansons sung in the streets, and later to any songs with gay airs and light words. Jehan Chardavoine's famous collection of monodic songs of the 16th century is described as containing *vaux-de-ville* and *voix-de-ville*, chansons de ville, pièces littéraires avec leur musique originale, telle que 'Mignonne, allons voir si la rose,' by Ronsard, etc. See Tiersot, *Histoire*, pp. 228 and 433 for other similar collections.

¹ Tiersot, *Histoire*, p. 373.

² This example is taken from M. Lussy and E. David's *Histoire de la Notation Musicale*, p. 105.

³ The volumes were found in 1747 by Count de Caylus in a royal library in France. Burney, *Hist. of Mus.* ii. 303.

⁴ Ambros, *Ges. der Musik*, ii. 295.

⁵ This song is to be found in the *Revue Musicale*, vol. xii. No. 34.

⁶ Ambros, *Ges. der Musik*, iii. 15 et seq.

century. Much grace, indeed, and gaiety were evinced in the poetry and music of the songs and *romances* of this period, and it would be wrong to disparage such writers as Guillaume le Hurlteur, Noël Faigntier, Pierré Vermont, and François I., whose song, 'O triste départir,' with music by A. Murst, is full of feeling. But more important work was undoubtedly being done by their polyphonic contemporaries.¹

The effects of the great change which came over vocal music at the end of the 16th century were perhaps more marked in France and in the Netherlands than elsewhere. Polyphonic music, whether in masses or in madrigals, had been, as we have seen, the glory of the Gallo-Belgian School; but when once the monodic system had gained universal recognition polyphonic music began to decline, even where it had flourished most; and the French-Flemish School surrendered its individuality by absorption into the Italian School. The French composers were likewise influenced by two other great innovations of this time, namely, the creation of discords by Monteverde, and the application of music to the drama. Henceforward original melodies of their own invention were expected of musicians, and the old practice of choosing themes for their compositions in folk-songs or popular dance-songs died out, though its disappearance was gradual.² Songs for one voice, such as the 'Airs de Cour' of the early 17th century, accompanied by lute or harpsichord, began to find favour and to drive airs for several voices from the ground they had occupied for more than 150 years. And that most characteristic type of French song, the *romance*, was soon to commence, or rather resume, a reign of popularity which is not yet ended.

Scudo³ defines the *romance* as a song divided into several 'couplets,' the air always simple, naive, and tender, the words to treat of sentiment and love. Unlike the *chanson* it is never political or satirical. It was one of the very earliest fruits of French grace, sensibility, and gallantry; and though its attributes may have varied from time to time, it remained unchanged in its essence from the era of the Troubadours until the 19th century. There

was, it is true, a period after the disappearance of the Troubadours, when the *romance* was threatened with extinction, by its formidable rival, the polyphonic *chanson*, but the 17th century saw it again in possession of all its old supremacy. Louis XIII. wrote several; and his music-master, Pierre Guéron, was perhaps the foremost composer of *romances* of that time. One of the best examples of his work, 'Aux plaisirs, aux délices, bergères,'⁴ contains modulations which are remarkable for that date. Guéron's son-in-law, Boësset, was the author of a very famous *romance*, 'Cachez beaux yeux.' And the names of Beaulieu, Deschamps, Colasse, Bernier, Lefèvre, Lambert, and Pierre Ballard may be recorded as composers of this age. The last (whose 'Belle, vous m'avez blessé,' was a favourite) was a member of the famous Ballard family of music-printers and also composers. As printers they preserved a large quantity of *brunettes* (see BRUNETTE), *musettes*⁵ and other dance-songs and drinking-songs. Several *brunettes* were included in the great collection of the old French popular songs which A. Philidor copied out with his own hand, and dedicated to Louis XIV. Many were undoubtedly written on old Noël airs, especially those in parts.⁶ After the 17th century they became scarcely distinguishable from *romances*.

For excellent and typical specimens of the *romances* of the 18th century we may quote J. J. Rousseau's 'Le Rosier' and 'Au fond d'une sombre vallée,' both of which are found in his collection entitled 'Les Consolations des Misères de la vie.' The musicians of this period seem to have been inspired by the grace and delicacy of contemporary poetry to create tender and simple melodies. Insipid as these songs must seem to us now, they are thoroughly representative of the age which produced them. It was the time of that singular phase of thought and feeling which will be for ever associated with the name of J. J. Rousseau; a time of yearning to return to some imagined state of native innocence, to an ideal pastoral life in some visionary and often artificial Arcadia. All this was faithfully reflected in the works of its poets and musicians. Monsigny instinctively returned to the style of the folk-song, even to the *pastourelle* and *complainte*. His frequent use of the minor seventh of the scale gives a touch of medievalism to his songs:⁷

¹ A celebrated collection, with a dedication to Charles IX., by Roniard, was published in 1572, under the title of 'Mélanges de chansons,' and it contained songs for four, six, and sometimes eight voices by all the best-known Gallo-Belgian composers, such as Josquin, Mouton, Claudin, etc. These songs, like others of the same date, have strong melodies, and are full of canonic devices. Pierre Roniard's sonnets were set to music by Philippe de Monte, in five, six, and seven parts, and his songs in four parts, by Bertrand and Reynard. Mention should also be made of Crespel, Rati, and Clement Janneguin, whose descriptive songs (such as the *Cris de Paris*) formed a new feature in music, also Gombert and Certon. But with the true polyphonic song this article is not concerned.

² When public opinion first ceased to approve this practice, composers did not at once abandon it, but they no longer produced vocal pieces which were avowedly parodies or adaptations; it now became their habit to attach their names to all their melodies, whether they were original or borrowed. As a typical case CHARLES GABRIELLE may be quoted: neither the words of which were by Henri IV. nor the music by his maître de chapelle, Du Courroy. The air is really an old Noël of unknown authorship, and probably some court poet, Desportes, perhaps, wrote the words. See also J. B. Wekerlin, 'Chansons Populaires du Pays de France,' ii. 217.

³ Scudo, *Critique et Littérature musicales*, vol. ii.

⁴ Published in Wekerlin's 'Echos du Temps passé,' vol. iii. p. 10. It is taken from a very rare collection entitled 'Airs de Cour de différents auteurs, 5 livres, publiés de 1615 à 1628. Paria, chez Pierre Ballard.' (Guéron's melody is in the first book.)

⁵ Here we may mention the drone-bass which occurs so frequently in musettes and other dance-songs. Numerous examples may be found in Wekerlin's 'Echos du Temps passé.'

⁶ In Wekerlin's second vol. of his 'Echos du Temps passé' he states that this collection especially characterises the 17th and 18th centuries, and 'though written earlier the songs were only published when their popularity was great enough to justify it.' Wekerlin gives a valuable list of the collections drawn upon for this volume, with full descriptions and dates. The favourite 'Menuet d'Exaudet' (Exaudet was a famous dancing-master), with words by Favart, is included among the *chansons à danser*. All these dance-songs, except the minuet, are in common or 2-4 time, and in regular periods.

⁷ Tiersot, *Histoire*, p. 525.

Ex. 13.

Grétry, on the other hand, who was a far more advanced musician, consciously set himself the task of reproducing the old melodic form of the folk-song. He confesses to have written the *romance* of Richard Cœur de Lion, 'Une fièvre brûlante,' *dans le vieux style*.¹ And certainly when the little art-songs or *romances* of this period are closely examined, they show externally but little difference from the folk-songs, though in their essence they are wide apart, being artificial rather than natural and spontaneous. As examples it will suffice to mention a few favourites such as: Monsigny's 'O ma tendre musette' (words by La Harpe); 'Il pleut, bergère,' by Simon; 'Les petits oiseaux,' by Rigel; 'L'amour fait passer le temps,' by Solié; 'Le point de jour,' by Dalayrac; 'Annette et Lubin,' by Favart, and 'Que j'aime à voir les hirondelles,' by Devienne.

Although romances were so much in vogue and reached so high a degree of popularity there were songs of other kinds written by the composers of the 18th century of equal importance. Amongst these, political songs are prominent, and in no country have they been more so than in France. The Mazarinade of the 17th century was a vast collection of more than 4000 satirical effusions against Mazarin, adopted to popular airs. Early in the 18th century was heard the famous song, 'Malbrouk s'en va-t-en guerre,'² and later on, in the first throes of the Revolution, the Royalists were singing 'Pauvre Jacques' (words by the Marquise de Travenet), and the air resounded with 'Ça-ira,' from the throats of the insurgent rabble of Paris. 'O Richard, ô mon Roi' and 'Où peut-on être mieux' have become historical by their use at the same terrible period. As might have been expected of so profound a movement, the Revolution gave birth to many remarkable songs. To the stormy years at the close of the 18th and the opening of the 19th centuries are due the finest *chants* or patriotic songs of France. Supreme among these stands the 'Marseillaise,' which has won immortality for its author and composer, Rouget de Lisle. Next in fame come three songs of Méhul's, the 'Chant du Départ' (words by Chénier), the 'Chant de Retour,' and the 'Chant de Victoire.' And by the side of these may be set the fine 'Réveil du Peuple' by Gaveaux, and the 'Père de l'Univers' by Gossec. Contemporary with these songs, but on a lower level of political importance and musical value, were 'Cadet Rousselle,' the 'Chanson de Dagobert,' 'Fanfan

la tulipe,'³ 'Te souviens-tu,' the 'Récit du Caporal,' and many others it would be tedious to enumerate. Of a different kind was the official national anthem of the Restoration,—the beautiful old song 'Vive Henri IV.,'⁴ which was much in vogue in 1814 after the Allies entered Paris.

After the accession of Napoleon and the accompanying revival of monarchical traditions, the demand for *romances* was more eager than ever, and there was no lack of composers ready to supply it.⁵ The most successful were Plantade, Garat, Pradher, and Lambert. Another popular contemporary, possessing more musical erudition, was Dalvimare, whose 'Chant héroïque du Cid' is a fine song. Choron was founder of a school whence issued Duprez, Scudo, and others, who were both singers and song composers. The names of several women should also be included among *romance* writers: Mme. Gail, Queen Hortense, Mme. Duchambge, and Loïsa Puget. The first named was the best musician. About Queen Hortense there was more of the amateur composer, and she would trust to Drouet, Carbonnel, or Plantade to put her airs into musical shape. Her best songs were 'Partant pour la Syrie' and 'Reposez-vous, bon chevalier.' Mme. Duchambge owed her reputation to the skill with which Nourrit sang her songs, and Loïsa Puget was a favourite in schools and convents. Of others who wrote about the same time and in the same manner, it will suffice to mention A. de Beauplan, Panseron, Jadin, Bruguère, Mengal, Dolive, Berton, Lis, and Pollet. As a general reflection on these songs, it may be said that their most common fault is the endeavour to express inflated sentiment with inadequate means. A discrepancy is constantly felt between the commonplace simplicity of the accompaniments and modulations, and the intense sentimentality or turgid pomposity of the words. The disparity could only be concealed by highly dramatic or expressive singing.

Out of the revolutionary era of 1830 there came in France a splendid outburst of lyric poetry. This was the era of Victor Hugo, Lamartine, Delavigne, Alfred de Musset, and Béranger. And it was natural that the song should be responsive to the poetic movement of the time. In 1828 Monpou's setting of Béranger's 'Si j'étais petit oiseau' attracted the notice of the poets of the Romantic School. Many of de Musset's and Victor Hugo's ballades and romances were also composed by him. But Monpou was not a highly trained musician; though striking and original his music was faulty. He was a slave to the influence of the

³ An old song of irregular metre by Souvignère de St. Marc, set to an old tune, and extremely popular between 1702 and 1802.

⁴ Beeri IV., 1503-1610. The melody is certainly older than his date, as it first appears as the *tremble* of a Noël in a collection published in 1651.

⁵ Specimens of these little songs are to be found in Wekerlin's 'Chansons Populaires du Pays de France.'

¹ Grétry, *Essais sur la Musique*, i. 388.

² For further mention of these political and historical songs see separate headings in the Dictionary; and for the tunes see J. B. Wekerlin's 'Chansons Pop. du Pays de France.'

Romantic School, and his songs well illustrate the extreme exaggeration to which it was prone. Similar qualities were likewise displayed by an incomparably greater musician, Hector Berlioz. In him there was a depth of poetic insight and a subtle sense of beauty, to which Monpou could make no pretension. Of all Berlioz's works his songs are the least tinged with exaggeration. He wrote twenty-seven in all, of which perhaps the 'Nuits d'été,' op. 7, are the best. 'Sur les lagunes' and 'L'Absence' are especially beautiful. 'La Captive,' op. 12, is a long piece written for contralto voice, with a varied and elaborate accompaniment. 'Fleurs des Landes,' op. 13, consists of five romances for one or more voices, all bearing a distinctively local colouring. No one can study Berlioz's songs without being struck by the fragmentary character of the melodies, and the want of symmetry in the rhythmic phrases. But these defects are atoned for by the exquisite beauty of the melodic fragments, and the rhythmic phrases are never abruptly broken or disjointed without justification. An explanation will always be found in the words, which it was Berlioz's constant study to illustrate with perfect fidelity. Nothing could be more poetical than the opening phrase of his song 'L'Absence.' Berlioz's accompaniments are highly developed, and participate fully in the poetic intention of the words. A proof of his skill in this respect is afforded by the close of the 'Spectre de la Rose,' where, after a full, rich accompaniment throughout, he gives to the last words merely single notes, and thus unmistakably marks the transition from the passionate tale of the rose to its epitaph. Many examples of Berlioz's poetic faculties might be adduced, but enough has already been said to indicate his exalted position as a song-composer. Another musician allied to the Romantic School was Félicien David, who, without being a song-writer, indirectly influenced later composers' songs by introducing the element of orientalism into French music. This, with its strange Eastern rhythms and tonalities, has attracted many subsequent composers.

The French have a manifest preference for dramatic music, and although many of their modern opera-composers, such as A. Thomas, Gounod, Saint-Saëns, Delibes, Bizet, Reyer, Joncières, and Massenet, have written truly lyric songs, they are seldom heard in concert-rooms. The singers and the public prefer the songs extracted from their dramatic works with which they are more familiar. Few composers have regarded song-writing as an important branch of their art, though an exception must be made in the case of Gounod, who had a distinct lyric talent, and who strongly influenced his generation. Much of the present revulsion of feeling against Gounod was engendered by his followers, who imitated his mannerisms

without possessing his gifts. It may be admitted that he set a bad example in the dangerous sentimentality of his sacred songs; but it cannot be denied that many of his other songs are of true and enduring beauty, and always pre-eminently vocal. Among his best may be named 'Le Vallon,' 'Le Soir,' 'The fountain and the river,' 'Ring out, wild bells,' 'Le Printemps,' 'Médjé,' and the collection of twenty songs entitled 'Biondina,' which are full of the Southern spirit. Massenet possesses much the same sensuous vein of melody, but the form of his songs is more concise, and his accompaniments more brilliant. In the songs of Saint-Saëns, Lalo, Bizet, and A. Chabrier there is individuality; but they, as well as Widor, Joncières, Guiraud, Dubois, Paladilhe, Pierné, Boisdoffre, Lefebvre, Augusta Holmès, Thomé, Chaminade, and other lesser composers are greatly indebted to Gounod, and generally speaking may be said to belong to the old school. Delibes and Godard should also be included, but their music has a distinct character of its own. Amongst his other works, Léo Delibes has written many graceful, refined, and typically French songs, full of colour; whilst Benjamin Godard has chiefly distinguished himself in this lyric form by the peculiar charm and melancholy sentiment of his songs.¹

A totally different school of song from that above described now exists in France. At the present day the old rules of form, cadence, and harmony are discarded; a studied simplification of melody, restless modulation, vague tonalities, and a preference for prose rhythms² prevail and indicate a radical change of method. The causes, direct and indirect, are varied. M. Bruneau attributes the new seriousness of French composers to the results of the disastrous war of 1870, and the misery and gloom which overshadowed France. Wagner's influence again penetrated through Opera to Song, realising the importance of the sound of words as well as their meaning, and equalising the importance of the instrumental part and the voice parts. Another incitement to change is based on the revival of the folk-song now used by modern song-writers, not only as a medium of national or local colour but as a source of inspiration.³ Musicians, no less than painters, have their *plein-air* school. The love of

¹ Godard has been aptly described as a musician of the autumn or of the twilight (see *French Music in the 19th Century*, by Arthur Harvey).

² A. Bruneau, in *La Musique Française*, at p. 223, speaks of his efforts to combine prose with music, and adds that Saint-Saëns and he himself agree in thinking that in time prose will supplant poetry in drama and song.

³ M. Fieret truly remarks that 'the element of the folk-song vivifies and refreshes art, for it comes direct from the deepest source of inspiration in a nation.' But it is not only the spirit of the peasant's lyric and dramatic songs that modern composers have assimilated; they also make use of the old forms, such as the *chansons d'ancien, ballades, and légendes*. These are frequently found in Bruneau's and his contemporaries' works; and Charpentier, in his opera 'Louise,' has used the old *cria-de-Paris* as Clément Jarnacquin did centuries ago. Many composers also have thought it worth their while to collect and arrange the folk-songs; see for instance Vincent d'Indy's 'Chansons populaires recueillies dans le Vivarais,' and Bourgault-Ducoudray's beautiful volume of 'Trente mélodies populaires de la Basse-Bretagne.'

nature and its elements, of the earth and of the growths of the soil has asserted its empire in the kingdom of art.¹ But while the influence of the folk-song conducted to simplicity, another influence stamped French song with a new impress. César Franck (a Belgian by birth but a naturalised Frenchman), a profound scholar, an idealist by character and aims alike, raised the level of contemporary art to a greater seriousness, and gave it a more complete emancipation. In his works, depth of feeling, profound humanity and austere beauty combined with a consummate mastery of technique are undeniable qualities. But the special quality assimilated by the younger school of French song-writers is the element of mysticism. In César Franck's song, 'La Procession,' a noble simplicity and fervid mysticism are displayed, which exemplifies what has been said above. In adopting Franck's mysticism, it is stated that some of his followers have forfeited their race qualities of clearness of design and straightforwardness of expression. But their gains are manifest if we study the songs of Gabriel Fauré, Vincent d'Indy, and Alfred Bruneau, and compare them with the romances and songs of the older school. Among this younger generation song-writing is on a far higher plane. Gabriel Fauré is a song-writer *par excellence*. Both in quality and quantity he ranks highest. His kinship with Schumann and César Franck is apparent, but withal he is original. The exquisite form of his melodies, the fancy displayed in his accompaniments, his whimsical, but always justified harmonies and modulations are all his own. In many of Fauré's songs there is a profound sadness and deep pathos, but without crudeness. Again, over others there is cast a dark veil of mysticism which necessitates an intimate knowledge of the songs before they can be appreciated. In A. Bruneau's songs there is more strength and freedom, humanity and realism, yet great rhythmical beauty. Vincent d'Indy's songs show extreme delicacy and refinement, but a somewhat morbid restlessness. Claude Debussy possesses originality, and a certain aloofness of thought. He seems to wish to express not what he feels and sees, but the passing impressions of his dreams and ideals, and the atmosphere of the poem he sets.

To the above names may be added many others who have treated the form of song with the same serious aims. The following have produced songs of real distinction and interest: G. Charpentier, Reynaldo Hahn, E. Chausson; also L. Wurmser, C. Blanc, E. Moret, P. de Bréville, H. Duparc, H. de Gorsse, E. Trémisot, L. Moreau, P. Vidal, G. Marty, S. Rousseau, Hillemacher frères, G. Ropartz, A. Chapuis, A. Gédalge, De Castillon, G. Hüe, M. Ravel, and many others.

¹ Bruneau's 'Lièdes de France,' and 'Chansons à Danser' form a striking example of the above qualities.

It is necessary to add that modern French poets have had a great influence on these composers, and there exists a close sympathy between them. Obscurity of form, eccentricity, a feverish egoism which tends to over-subjectiveness, a subtlety which to an exaggerated degree substitutes suggestion for expression are the worst features of the school. An aptitude for intensity in the presentment of emotional themes, and an acute perception of the artistic values of personal emotion, a keen appreciation of evasive effects, of the fugitive and illusive beauty of sounds, implied or felt rather than heard,—these are amongst the gifts they have utilised to the full.

To sum up we may quote M. Bruneau's words,² that the young French song-writers have all the same aim in view, though they approach it by different roads. Some by the old healthy conventional methods, some through the free paths of life and nature, and others through the labyrinth of unreality and mysticism. But their aim is the same—that of pure art and beauty.

The folk-songs of France vary widely in every part, and each province is worthy of separate study. Fortunately a vast number of these songs have been carefully collected; and all that can be attempted here is to indicate the general characteristics, and refer the student to the various collections.³ In Paris and the other large cities in France, the popular songs of the hour are only favourite tunes from comic operas, or those which have been heard at a café-chantant.⁴ But in the country the real folk-songs still exist, and their distinct attributes are generally determined by the locality to which they belong. The airs of Southern France are distinguished by exuberant gaiety and graceful poetic sentiment. Many of them resemble the old Troubadour Songs, as for instance the well-known 'O Magali.'⁵ The songs of Auvergne and Bourbonnais are chiefly *bourrées*, and Burgundy is rich in *Noëls*⁶ and drinking-songs. The Bearnois airs are patriotic and melodious,⁷ and their words mostly of love; while, on the other hand, the subjects of the songs of Normandy are generally supplied by the ordinary pursuits and occupations of life. The mill-songs and the begging-songs, called *chansons de part à Dieu*, are especially common in Normandy, and have a character of their own. The complets of the former consist of two lines with a *refrain*. This *refrain*, in which the audience joins, forms the principal part of the song. The words are usually meaningless syllables of a merry kind, such as *tra la la, or ton reloton, ton tontaine, la tontaine*. But the *refrains* occur in the folk-songs of every part of France; each province having its own kind of *refrain* of apparent nonsense-syllables, which can only be explained in *patois*. The May-time songs of Champagne and Lorraine are very numerous and beautiful.⁸ The character of the songs of Brittany has been best described by Rousseau: 'Les airs ne sont pas piquants, mais ils ont je ne sais quoi d'antique et de doux qui touche à la longue.' But their grave beauty

² *La Musique Française*.

³ See especially Champfleury and Wekerlin's 'Chansons Populaires des provinces de France,' where individual examples are given from every part of France with interesting remarks.

⁴ A few composers have attempted to supply songs of this kind, such as Pierre Dupont, who wrote for the *peuple*, Darcier for the *courrier*, and Nadand for the *bourgeois* class.

⁵ Ambrose quotes the modern Provençal air as having a strong resemblance to an old dance-song, anterior in date even to the 12th century. *Geschichte der Musik*, ii. 242.

⁶ Philibert le Duc has collected some curious *Noëls* in his 'Noëls Bretons.'

⁷ Champfleury gives a beautiful old example: the 'Cantique Autour' by Jeanne d'Albret 'en accouchant Henri IV.'

⁸ In nearly every *Chanson de Mai*, from Lorraine, the curious old word *Trinasso* occurs, the meaning of which is as obscure as that of the word *Trimousette* mentioned above.

and pathos can only be fully felt by those who have heard the peasants sing them. Georges Sand and G. de Nerval did much to arouse interest in the songs from Berry and the Île de France by describing the airs and the curious words and customs. But at the present day the folk-song is regarded from a more scientific point of view.

Numerous old collections of French polyphonic songs are mentioned in Fierot's *Histoire de la Chanson pop. en France*. Paris, 1889.

(The writer is also indebted to Mr. Walter Ford for permission to quote from his *Lectures on French Song*, 1905.)

SPAIN AND THE BASQUE COUNTRY

In Spain and Portugal the Song can scarcely be said to have a history. While both countries can boast of numerous celebrated composers of secular and ecclesiastical polyphonic music, in neither has there been any systematic development on the monodic side. The latter remains what it was in the earliest times; and all the best songs of Spain and Portugal are the compositions of untaught and unlettered musicians. With regard to these folk-songs

there is an initial difficulty in determining whether they are more properly songs or dances, because the favourite songs of Spain are, with a few exceptions,² sung as accompaniments to dancing.

Spanish literature is rich in remains of antique poetry, and of poetry which from the time of the Troubadours was intended to be sung. The art of these singers, called *La gaita Ciencia* or *Gaya-Saber*, soon crossed over the border from southern France, and flourished especially in the Courts of Aragon and Castile. The words referred chiefly to the adventures of heroes defending their country against the Moors, and dealt with their deeds of chivalry and gallantry; but the dialect, melodies, and even the notation so forcibly remind one of their Provençal origin, that it is scarcely necessary to dwell on the subject [see FRANCE]. Besides her *Trobadores* Spain had also her *Juglares*³ (*Jongleurs*) and *Zaharrones*, who were of a lower class than the *Juglares*.⁴ Like France, Spain counted kings, princes, and nobles among her *Trobadores*; for instance, Alfonso II. and X., Pedro III. and IV., the Infante D. Federigo, afterwards King of Sicily, Hugo de Mataplana, Giraldo de Cabrera, Manuel de Esca, Pons de Ortafá, etc. The most prominent names of later *Trobadores* were Pedro Lopez de Ayala, Fernan Perez de Guzman, Sanchez Calavera, and Ausius Marc, called the Spanish Petrarch.⁵

Among the most precious relics Spain possesses are two parchment volumes preserved in the Library of the Escorial. The first contains over 400 *Cantigas* (called the *Cantigas de Santa Maria*), with numerous melodies, some in gallego and Portuguese dialect, and some in the Castilian of that time. The second volume consists of 200 *Noventas* in the same languages and in the same musical notation. These were composed in the 13th century by the Troubadour King, Alfonso el Sabio; but Soriano Fuertes⁶ thinks some are of older date, and were only collected by Alfonso. A third MS. (formerly at Toledo) is in the Biblioteca Nacional at Madrid. Nearly all the songs which have their melodies attached to them, are sacred, relating to miracles or various festivals. It is unfortunate that the secular tunes were not preserved; but the reason probably was that these were improvised by the *Juglares*, and too popular and well known to need writing down.⁷ The following example⁸ reduced to modern notation by Ambros, is entitled:—

² Such as the *coñas* and *playeras*.

³ There were also *Joglareas*, i.e. women who roamed about with *Joglars* (or *Juglares*), chiefly as players. *Paleografía Española*, F. Estevan de Terreros, 1756, p. 82.

⁴ Marqués de Fidal gives a good account of the *Juglares* in his *Introducción al Cancionero de Baena sobre la poesía del siglo XIV.* y XV.

⁵ *Historia de la Musica Española*, Mariano Soriano Fuertes, i. 93, 123 et seq.

⁶ Soriano Fuertes, i. 96.

⁷ The poems (without the music) were edited by the Marqués de Valmar and published in 1869.

⁸ Soriano Fuertes gives numerous examples at the end of vol. i. of his history.

¹ Most of the collections contain valuable information about the songs given.

Prologo des milagros y loores de S. Maria.

Ex. 1.

The 'Cancionero musical de los Siglos XV. y XVI.', edited in 1890 by Francisco Asenjo Barbieri, is in the library of the Royal Palace at Madrid, and contains nearly 500 sacred and secular songs in parts.¹ Juan del Encina is one of the principal contributors, and about sixty other native composers are named; but many of the songs are anonymous. Close examination will show that the Spaniards of the 15th century stood nearly as high as the French and the Italians in music. Similar and also somewhat later collections exist in Toledo and Seville. Among such literary relics are the celebrated *cancioneros* and *romanceros* of the 15th and 16th centuries, in which a great number of *canciones*, *invenciones*, *preguntas*, *villancicos*, and ballads will be found.² The *romanceros* consist chiefly of ballads in 8-syllabled verse in assonance, the vowels only rhyming. The tunes are stated to have been transmitted by blind ballad-singers who sang them in the streets; and not one note of music was written down. But these old ballads are still sung by the people in Spain to traditional airs which have passed from mouth to mouth through many generations.

The *villancicos* have always been an important feature in the musical life of Spain. The term has been variously applied: it may mean the sacred songs sung at great festivals,³ or it may apply to the peasant's songs in general with their refrains or burdens⁴ (*estribillos*), but most probably the *villancicos* of Spain answer to the *noëls* of France.⁵ Towards the close of the 15th century secular music was introduced into the churches in order to induce the congregation to join in the singing. Miracle plays and mysteries (especially those relating to the Nativity) were also allowed to be held in the churches, and to the chanted dialogues between

priest and people, the name *villancicos* was given. The greater number refer to the Nativity, such as the following example, which dates about the end of the 15th century:—

Ex. 2.

There are numerous *villancicos* of later date, and those for six voices by Puebla and the collections of P. de Ruimonte,⁶ S. Raval, Araniez,⁷ and Pardiñas⁸ prove that learned musicians turned their attention to them. But in proportion to the quantity of extant words very little of the music has come down to us. Other church festivals, such as the Feast of the Asses (in memory of the Flight into Egypt), the Feast of the Fools, and of the Innocents contain burlesque *villancicos* with long nonsensical verses.⁹ (See Noël, vol. iii. p. 385.) Still, in Spain, the tone of these songs was never so indecorous as in the northern countries of Europe.

For historic reasons there was frequent and close intercourse between Spain and the Netherlands, and many Flemish composers are known to have resided in Spain, and left the deep impress of their learned school. But although many of the Spanish polyphonic composers may have used Flemish folk-songs for their masses and motets, there are scarcely any Spanish folk-songs preserved in this way. A few exceptions may be mentioned, such as, 'Una musque de buscagaya,' used by Josquin des Prés¹⁰:—

Ex. 3.

On the other hand, there are also many Spanish folk-song survivals in Jewish worship-music.

A most interesting and trustworthy record of the songs of the 16th century is to be found in a book, written in Latin by Francesco de Salinas of Burgos, who died in 1590.¹¹ In his chapter on rhythm, Salinas quotes as examples numerous popular songs of his period, belonging

¹ See also Oxford Hist. of Music, II. 306 et seq., H. Woodbridge.

² The fashion of making such collections, generally called *cancioneros*, was very common in Spain just before and after the introduction of printing; and many, both printed and in manuscript, have been well preserved. Juan P. Eizko, in his *Notes on Early Spanish Music*, gives descriptions and examples of over seventy medieval MSS. existing chiefly in Toledo and Madrid, and ranging from the 10th to the 16th century. The Bibliothèque Nat., Paris, contains no less than seven collections. See *Octalogo de MSS. Españoles en la Biblioteca Real de Paris*, 378-520, Paris, 1844. See also Ticknor's *History of Spanish Literature*, xiii. 391.

³ Riemann.

⁴ Soriano Fuentes derives the term from the peasant's songs called *villanas*, I. 92.

⁵ Fétis derives *villancicos* from *villano*—peasant, because the shepherd were the first to announce the birth of Our Lord, and most *villancicos* were Nativity Plays or Songs. *Histoire gen. de la Mus.* v. 144.

⁶ 'El Parnaso Español de Madrigales y Villancicos' for several voices, published at Antwerp like so much other Spanish music.

⁷ Villancicos de Natividad, 1624.

⁸ To Pardiñas are also attributed those *Cantares gallegos* which, like the *villancicos*, were sung by troops of pilgrims.

⁹ Soriano Fuentes, I. 217, gives a song from the Feast of the Asses. See also Fétis, v. 130 et seq. for variants of same.

¹⁰ Printed in Petrucci's 'Canti C. numero Cento Cinquenta,' 1503. This tune was also used by H. Isaac. See Ambros, II. 263.

¹¹ Several editions of the book of this learned blind organist were issued at Salamanca between 1577 and 1592.

to various districts. This gives us the authentic age of many tunes still heard in Spain, such as:

Ex. 4.

lla - ma hí - ja dí na pe-cheroy yo no lo say.

The national songs of Spain widely differ in the several provinces, and it is the easiest plan to divide them into four geographical groups: (1) those of Biscay and Navarre; (2) Galicia and Old Castile; (3) Southern Spain (Andalusia, etc.); (4) Eastern Spain (Catalonia). In the first of these groups are the songs of the Basques, who are believed to be the oldest inhabitants of the Peninsula.

(1) The exclusiveness with which the Basques have kept themselves a distinct and separate race has made it difficult, if not impossible, to trace their music to any primeval source.¹ Even at first glance we see that the Basque songs and dances have nothing in common with the Greco-Roman or medieval music.² Therefore if the music of the Basques is of great antiquity, it must have sprung up under wholly different conditions from that of other nations. It has a strange affinity with modern music, but this modern effect may be due to the constant use of the leading note and the rapid and incessant changes of key. The Basque melodies are not founded on any particular scale; augmented intervals, whole tones, semitones, and even quarter-tones are freely intermixed, and a curious result is obtained by the constant repetition of a short phrase with alternating major and minor thirds. The time and rhythm of the Basque songs are irregular and complicated. The *zorricio*, for instance, is in 5-8 or 7-4 time thus:—

Ex. 5.

But generally the bar has two beats, a weak and strong, which alternate in position. The first note of a song is usually surrounded by a *grupetto*,³ which gives it an indefinite and uncertain effect. The *grupetto*, though less elaborate, also sometimes occurs before, or on the last note of a song (see above), but usually the last note has a firm, loud, and long-sustained

¹ There has been a good deal of speculation on this point. It is not necessary to put forward the numerous conjectures as to its origin or to its relationship with other European nations, but the writer has noticed a certain likeness between the Basque tunes and those of other nations of Toranian origin, such as the Hungarians and Finns. M. Georges Amé, in an article on Iztueta's collection of Basque dance-tunes, remarks 'that many remind him of Haydn, which is quite possible, when we think how many of Haydn's melodies are borrowed from Hungarian themes.'

² These remarks are taken from *Euskara*, an organ in the interest of the Basque Society, and quoted by W. Brambach.

³ Madame de Villéhelio speaks in her collection of 'Aire Basques' of 'une sorte de grupetto intraduisible, qui est à la phrase musicale ce qu'est une parappe précurseur d'une majuscule dans certaines exercices calligraphiques.'

sound. The rhythmical grouping of the phrases is absolutely irregular; the periods are unequal in number, and none corresponds with the other. In many cases the last bar of a period is at the same time the beginning of a new melodic phrase. Even the short and comparatively simple 'Sant Basque,' which F. Michel quotes (*Le Pays Basque*, p. 541) as the most popular tune which the Basques possess, is surprisingly irregular. This imperfect description gives, however, little idea of the originality and peculiar charm of the music of this people; like their language it stands apart.

In Aragon and Navarre the popular dance is the *jota*, and according to the usage of Spain it is also the popular song. The *jota* is almost always sung in thirds, and has the peculiarity that in the ascending scale the minor seventh is sung in place of the major. (See JOTA.)

(2) The songs of the second group are less interesting. The rule of the Moors over Galicia and Old Castile was too brief to impart an Eastern colouring to the music of those provinces. It is, however, gay and bright, and of a strongly accented dance-rhythm. The words of the songs are lively, like the music, and in perfect accord with it. To this geographical group belong the *boleros*, *manchegas*, and *seguidillas*, but this last class of songs is also heard in the Moorish provinces. Examples are given in every collection, and as they are also referred to under their own headings in this work, it is not necessary to dwell on them here.

(3) The third group is the most worthy of study. Of all true Spanish songs those of Andalusia are the most beautiful. In them the Eastern element is richest and deepest, and the unmistakable sign of its presence are the following traits: first, a profusion of ornaments around the central melody; secondly, a 'polyrhythmic' cast of music—the simultaneous existence of different rhythms in different parts; and thirdly the peculiarity of the melodies being based on a curious scale, founded apparently on the Phrygian and Mixolydian modes.⁴ Another indication of the oriental element is the guttural sound of the voices. Of these characteristics the most obvious is the rhythm. In the Andalusian songs there are often three different rhythms in one bar, none predominating, but each equally important as the different voices are in real polyphonic music. For example:—

Ex. 6.

⁴ Introduction to the Study of National Music, C. Engel.

Ex. 10.

LOS PREGONES.
Cantes del florero.

The ZARZUELAS form the most truly national part of Spanish art. They are described in their own place.

In the art-songs of Spain there is nothing on which it is profitable to dwell. If publishers' collections may be accepted as evidence, the favourite song-writers would appear to be Tapia, Yradier, Sors, Garcia, Leon, Barbieri, Murgia, Saldoni, Eslava, Arietta, Albeniz, Perez, Cuellar, Tadeo. But although most of these composers have made contributions to song-literature, they have won higher laurels in other branches of music.¹ The limited capabilities of the guitar and mandoline—the invariable accompanying instruments—have naturally dwarfed and stunted the development of accompaniments in Spanish songs.

PORTUGAL

The folk-music of Portugal bears a close affinity to that of Spain, especially in dance-songs. But there are certain clearly-marked differences. The Portuguese is more pensive and tranquil than the fiery excitable Spaniard; and as all national music is more or less a reflection of racial characteristics, there is a repose and subdued melancholy, and an absence of exaggeration in Portuguese music, qualities seldom found in the more vivacious and stirring music of Spain. From the same cause, and perhaps because the Moorish ascendancy was of briefer duration in Portugal than in Spain, there is less ornament in what music remains to us of an undoubtedly oriental character. The poetry of the two countries has also much in common. Most of the Portuguese epics are of Spanish origin, and even at the present day the Spanish and Portuguese romance forms are almost identical.

In the lyrics of both races the rhyme follows the assonance principle, and is a more important element than the metre. Moreover, the national poets of Portugal used the Castilian language for centuries as much as their own, especially for poetry intended to be sung.

Portugal is less rich than her neighbour in collections of early music. And unfortunately a mass of valuable manuscript and printed music which existed in the splendid library founded by King D. João IV. (1604-56), perished in the Lisbon earthquake in 1755. Much was also destroyed during the demolition of the monasteries and convents which followed the revolution of 1834.

The earliest and most important musical records preserved in Portugal belong to the Troubadour period.³ D. Diniz, sixth King of Portugal (1279-1325), who founded a university with a chair for music at Coimbra, was a grandson of Alfonso el Sabio, and well versed in the art of the Troubadours. Of D. Diniz's bastards sons D. Pedro, Count of Barcellos, and D. Alfonso Sancho we have nine *trovas*, and a *cancioneiro*⁴ consisting of the work of their father and of 127 other Portuguese troubadours. Two copies are extant; one in the Vatican and one in the Ajuda at Lisbon. The former has the melody indicated for each line, and the other has pictures of the various musical instruments then in use.⁵ The *Jogral* (*jongleur*) also

³ Soriano Fuertes, in his *Historia de la musica Española*, i. 117, gives a hymn of a somewhat earlier date, written by D. Francisco Coutinho, Count of Marialva, in the same notation as Alfonso el Sabio used.

⁴ A *cancioneiro* always means a collection of romances. *Trovas* has the same meaning as in Provence, only the term continued to be applied in Portugal to all extemporised songs, until the 18th century (*Portugiesische Musik*, Mendel's *Lexikon*) (Platon von Waxel).

⁵ *Trovas e Cantares do Conde de Barcellos*, F. A. von Varnhagen, Madrid, 1849.

played an important part in Troubadour life in Portugal; and the last was Gil Vicente (1470-1536), at once poet, actor, musician, and composer. His works, which give interesting information about the various customs and forms of song of his time,¹ are written partly in Portuguese and partly in Castilian. Interspersed in his pieces are *vilhancetes*, *cançonetas*, *cantigas*, *romances*, *canções pastorais*, *cantigas de berço*, *cantigas marítimas*, etc.; and in his *enselladas* songs with Latin and French words also occur, such as the *chanson*, 'Ay de la noble ville de Paris.'

The *vilhancetes* or *vilhancicos*, *autos*, and *loás* were similar to the Spanish in character; semi-sacred, popular, and yet a form which learned musicians adopted and elaborated, such as Fr. Francisco de Santiago, Gabriel Diaz, and many contrapuntists from Duarte Lobo's celebrated school, as, for instance, Felipe de Magalhães and Lesbio. The earliest *vilhancicos* we hear of were those by Juan del Encina² and Gil Vicente³ in the late 15th century, and the last by the Abbot Luiz Calisto da Costa e Faria in 1723.⁴

The old Pagan festivals and the mediæval Christian festivals blended in Portugal as elsewhere, and heritages from those times are the *Maias* and *Janeiras* songs. These festival songs are still sung on certain days of the year; the principal ones are 'O São João,' sung on St. John the Baptist's Day (Midsummer); 'As Janeiras,' sung at the New Year; and 'Os Reis,' sung at the Epiphany.⁵

Various forms of songs are given in the works of the poets of the Renaissance, Ribeiro, Juan del Encina, Gil Vicente, Sà de Miranda, and Camoëns, and these were clearly intended to be sung, as the accompanying instruments and the manner of singing them are frequently recorded.⁶ Many are identical with the Troubadour forms, for example the *serranilha* and *solão*, which answer to the *pastoralla* and *soula*. We read also of the *endeicas* or funeral songs; the *celebramas* sung in chorus by sailors or workmen;⁷ the *descantes* which are always 8-syllabled and

have *estribilhos* (refrains), and the *sonetos*. And among the dance-songs the *xacara* (a gipsy song) and the *chula* which is similar to it, the *capitva* or *mourisca* and the *judenga*. The two latter naturally disappeared with the expulsion of the Moors and Jews.⁸

It is difficult to trace the music of the above-mentioned songs. Still no one can deny the antiquity of many of the *cantigas* and *canções* still sung among the peasants in the country districts of Portugal; and here, unlike Spain, the dance-songs are not more prevalent than other kinds. In some the oriental element is still evident; there is a careless ease, tinged with melancholy about them, which is the secret of their charm. They are generally sung by one voice without any accompaniment; and to the ears of foreigners have the sound of recitatives, as the rhythm is often wholly obscured by the singer.⁹ The following little song, which the women sing whilst reaping, always inventing new verses, is a fair example:—

And on the plains the shepherds and labourers may be heard any evening chanting in a minor key, with a pointless, halting measure and vague rhythm *cantigas* which are purely Moorish in character.¹⁰ In the province of Minho it is quite common to hear one peasant in his harsh, guttural Eastern voice challenge another to sing one or more verses against him. The curious custom for the men and women to sing in fourths and fifths still exists in the southern province of Alentejo. This example, wholly Moorish in character, was heard on a popular feast-day in the little town of S. Thiago do Cacem in 1897¹¹:—

Although the words *cantiga* and *canção* are used indiscriminately for all kinds of songs, the so-called *Cantigas das ruas* are a special form, and chiefly sung in the towns by blind beggars. Many of the tunes are very old,

¹ It is said that Erasmus learnt Portuguese simply to be able to read Gil Vicente's works. Several volumes of various editions are in the British Museum.

² It is doubtful whether Juan del Encina is Spanish or Portuguese.

³ Gil Vicente was among the first to write *autos*, 'religious pieces resembling in their nature the miracle-plays common all over Europe at the time. . . . Most of these are Christmas pieces, and the dramatists often took advantage of the story of the shepherds to introduce the elements of what may be called pastoral comedy.' *History of Portugal*, by Morse Stephens.

⁴ Vasconcellos, li. 191.

⁵ 'As Janeiras' and 'Os Reis' are especially sung on the respective eves of the New Year and of the Epiphany. The minstrels go from door to door in the evening, singing the praises of the inmates of the house, and accompanying their songs with metal triangles, bells, etc. They are generally rewarded by the master of the house with money, sausages, or dried figs. But if they get nothing they sing:—

'Esta casa cheira a bren

'Aqui mora algum Judeu.'

(This house smells of tar; some Jew lives here); or else—

'Esta casa cheira a unto

'Aqui mora algum defunto.'

(This house smells of ointment; there is a dead body in it).

⁶ Gil Vicente speaks of the 'pissing way the *sonetos* were sung with guitar accompaniment.' See Th. Braga's *Historia da Literatura Portuguesa*, vol. viii. p. 228.

⁷ See Camoëns, *Lusiadas*, li. 15.

⁸ See *Portugiesische Musik*, Mendel's *Mus. Con. Lex.* p. 499 et seq. (Platon von Waxel).

⁹ Nos. 8, 7, and 11 of J. A. Ribas's collection give some idea of this kind of song, but they are spoiled by their accompaniment.

¹⁰ It is curious that in the mountainous parts of Portugal no Arab music is heard. The voices also are sweeter.

¹¹ Sung by D. Augusto Machado (Director of the Lisbon Conservatoire) to A. Hammerich. *Studien über isländische Musik, Sammelbände*, I.M.G. 1899, p. 341.

but the words are constantly changed.¹ The *fado* is the most purely national type of dance-song which exists in Portugal, and it has always maintained its integrity.² It is seldom heard outside towns, and properly belongs to the lowest classes of the population, though during the last century it acquired popularity among the higher classes.³ The guitar (which is much less used than in Spain) is always employed for the *fados*, and has a strongly rhythmical and uniform accompaniment:—

There are many varieties of *fados* and *fadinhos* in the different towns, but they are all binary in form and have the same rhythm.

Except during the period when the Netherlands exercised their influence upon the ecclesiastical music of Portugal (that is, during the 16th and 17th centuries) this country can claim no great composers, nor school of its own. For when not avowedly borrowing various forms from other countries, Portugal fell unconsciously under their influence. The *trovas* (Troubadour songs) were merely adopted Provençal forms, the *vilhancicos*, *autos*, and *loás* were borrowed from Spain and France; the polyphonic 17th century *tonos* were in reality Italian madrigals written to Spanish words, with *estribillos* added to them. And late in the 18th century all attempts to form a national opera failed, owing to the invasion of the Italian opera, which has exercised complete hold over Portuguese music for the last two centuries.

It is only in two small and unimportant forms of vocal music, the *fado* and the *modinha*, that Portugal can claim to have created and established a distinct genre of her own. Of the *fados* we have already spoken. The *modinha*, which is the only kind of art-song that Portugal has as yet produced, is, moreover, the direct offspring of the Italian opera. Though written by trained musicians and sung by educated people, neither as regards form nor character can the *modinhas* be assigned high rank as artistic music. Still they have retained their popularity from early in the 18th century down to the present day, and are written as a matter of course by every Portuguese composer.

These *modinhas*, or Portuguese romances, are of a literary as well as a musical form.⁴ The

first mention of them occurred in the so-called 'Jewish operas,'⁵ which rapidly became popular. In the burgher classes *modinhas* remained simple sentimental melodies; but at the Court and among the more educated classes they developed into highly elaborate brilliant arias, and celebrated composers and poets did not disdain to use this form. In Das Neves' *Cancioneiro de Musicas populares* there are twelve songs (*Modinhas*) from Gonzagas' *Marilia de Dirceu*, which, according to good evidence,⁶ were set to music by Marcos Antonio, better known as Portogallo. In 1793 F. D. Milcent published a monthly *Jornal de Modinhas* at Lisbon, from which the following example is taken, to show the brilliant type of *modinha*:—

Ex. 4.
Moda a Solo del S. Ant. da S. Leite M. de Capela no Porte.

Adagio.

Tem - po que hre - ve pas
- sas - ti que hre ve pas
- sas - ti tar - de, etc.

Since the 16th century, when Portugal colonised Brazil, there has been continual intercourse between these countries; and during the first quarter of the 19th century, whilst the Portuguese Court was domiciled in Brazil, the *modinhas* were as fashionable there as in Portugal. But they differed in character; the *modinhas brasileiras* were always very primitive in form, devoid of workmanship; somewhat vulgar, but expressive and gay. In short, a mixture between the French *romance* of the 18th century and *couplets* from the vaudevilles. And this description applies to the type of Portuguese *modinhas* of the present day, which are written for one or two voices, strophic in form, with easy guitar or pianoforte accompaniments.

A complete list of greater and lesser composers, who have tried their hand at this form of song, is too long to give, but the following are amongst the most celebrated. In the 18th century Portogallo and also Cordeiro da Silva and João de Sousa Carvalho; a little later, Rego, Bomtempo, Soares, Pereira da Costa, Coelho, Cabral, and João de Mesquita. In Coimbra,⁷ José Manrico; in Oporto, Silva Leite,

the *modinhas brasileiras*. For further information see Th. Braga's *Historia da Literatura Portuguesa (Filinto Elycio e os dissidentes da Arcadia)*, vol. xx, p. 603 et seq.

⁵ Thus named from Antonio José da Silva, born in 1705, a baptized Jew from Brazil, who wrote Portuguese comedies with these inter-spersed.

⁶ Braga, *Historia da Literatura Portuguesa*, vol. xv, p. 604, note.

⁷ The *modinhas* vary somewhat in the different districts.

¹ Numerous examples are given in Das Neves' and other collections.

² Platen von Waxel derives this dance-form from the *zaccara* of the Portuguese gipsies, and the word from *fattire* or verse-maker. See also M. Roeder's Essay *Das Tacuino*, p. 145.

³ A celebrated modern singer of *fados* was José Dias (1824-69), who improvised with wonderful skill. He was a great favourite at the Court, and in the salons at home and abroad. Pinto de Carvalho and Alberto Pimentel have written on the *Fados*.

⁴ The derivation of the word is doubtful. Some say it came from *mode* or *moda*, and that it had its origin in Brazil. We certainly read in a folio dated 1729 (*Annals of the B.M. of Rio de Janeiro*, II. 129) that on a wedding-feast of the Viceroy 'um alegre divertimento musico de Cantigas e Modas da terra, de que ha abundancia nesta pais.' Also many travellers of that time describe with admiration

Nunes, Pires, João Leal, and Edolo;¹ and nearer our own time, Domingos Schiopetta, the two monks J. M. da Silva and José Marquis de Santa Rita, Frondoni (an Italian, long resident in Lisbon), R. Varella, and Vasconcellos de Sâ. But the most popular *modinhas*, such as 'A Serandinha,' 'O Salvia,' 'As Peneiras,' 'Mariquinhas meu Amor,'² and 'Tem minha amada'³ are anonymous. An exception is Vasconcellos de Sâ's canção, 'Margarida vae à fonte,' which is the favourite *modinha* of the moment.⁴

There are many patriotic and political songs in every collection. The pianist Innocencio wrote a whole series; Portugallo's 'Hymno da Patria' was the customary national anthem until King Pedro IV.⁵ composed his 'Hymno da Carta' in 1826; and Frondoni was the author of the popular hymn of the revolution of Maria da Fonte in 1848.

Of late, serious attention has been directed to the national poetry and music of Portugal. One of the first to do so was the poet Almeida Garrett in his *Romanceiro*. He was followed by Vasconcellos and Th. Braga, who in his numerous volumes on the history of Portuguese literature often touches on the musical form.⁶ Leading musicians, such as B. Moreira de Sâ, A. Machado (Director of the Conservatoire), and J. Vianna da Motta and others have shown their practical interest in the subject.

ITALY

Italy was more slowly caught by the poetic flame which the Provençal Troubadours had kindled, than other southern countries. For not until the middle of the 13th century, when Raymond Berenger, Count of Provence, visited the Emperor Frederick II. at Milan, bringing Troubadours and Jongleurs in his train, do we hear of them in this country. A similar patronage was extended to them by Raymond's son-in-law, Charles of Anjou, king of Naples and Sicily. Through which of these two gates the Provençal language entered Italy has ever been a disputed point. But taught by these singers, whom the common people called *Uomini di Corti*,⁷ Italy soon produced her own *Trovatori* and *Giocolini*. At first they deemed their native dialect unsuitable to poetry, and used the Provençal language. But it is certain that already, by the time of Dante, the *volgar poesia*, which sprang from it, had reached a stage when it was capable of receiving rules and of being taught in the schools founded for the purpose. After Dante, no Italian could longer doubt the capacities of his own tongue for all forms of poetry. It must not be forgotten that the *terza rima*, used by the Provençal troubadours for the *sirvente*, was adopted by Dante for the 'Divina Commedia' and by Petrarch in his 'Trionfi.' But soon the verse of the Troubadours began to pale before the splendours of the great poet; and towards the middle of the 14th century, the *Trovatori* declined in numbers and popularity, and after 1450 were heard of no more.⁸

Notwithstanding the subordination of lyric song to other branches of poetry and music in Italy, her long and careful study of *la melica poesia*—poetry wedded to music—has not been surpassed elsewhere. Dante's sonnets and Petrarch's 'Trionfi' were among the earliest poems set to music. Dante's own contemporary and friend Casella⁹ (born 1300), who set his sonnet 'Amor che nella mente' to music, is believed to have also composed the music for a *ballata* by Lemmo da Pistoja, still extant in the Vatican.¹⁰ The *ballate* and *intuonate* were perhaps the oldest forms of songs written in the vernacular; both were love-songs sung to a dance.¹¹ After them the *maggiolate* or May-day

⁷ So called because these singers appeared as retainers from princely courts. Also *Clariatani*, because the exploits of Charlemagne were a constant theme of their songs.

⁸ For further information about the *Trovatori* see H. von der Hagen's work on the *Minnesänger*, vol. iv.

⁹ See the fourth Canto of the 'Purgatorio,' and the second Canzone in the 'Convito,' where Casella's name occurs several times.

¹⁰ Burney tells us that the Vatican MS. No. 3214 is a poem on the margin of which is written: 'Lemmo da Pistoja, e Casella diede il suono.'

¹¹ Arteaga gives the words of a *ballata* of the 13th century by

songs had their popularity. These also were love-songs, sung in the spring-time by bands of young men. The hunting-songs or *cacci*¹ equally deserve mention. The most celebrated were written by Soldanieri and Sacchetti, and the words are far better than their music by Nicolaus da Perugia, Laurentius, and Ghirardellus. Some are realistic, imitating the sounds of the hunt;² others are canonic in form, and others again interesting from the historic side, as they bring in the street-cries of the time.³ When later the *Canti Carnascialeschi* came into vogue they at first were Carnival songs, but under the skilful hand of Lorenzo di Medici a kind of consecutive drama grew out of them.⁴

During the 14th century there existed a class of dilettante musicians called *cantori a liuto*, whose business it was to set other poets' verses to music and sing them. They differed from the *Trovatori* who were poets, and who sang their own verses to their own music or to that of others, and equally from the *Cantori a libro*, who were the learned professional musicians.⁵ Casella (see above) and Minuccio d'Arezzo, mentioned by Boccaccio,⁶ would belong to the *cantori a liuto*. It was the habit of these musicians to improvise,⁷ for until the 16th century musical notation remained so difficult that only learned musicians were able to avail themselves of it. This is the reason why the melodies of the strophic songs, which contemporary writers⁸ show to have been so popular and universal during the 14th and 15th centuries, have not survived.

The compositions of the Netherlands school of music, with their severe contrapuntal style, found their way into Italy in the 15th century, and in time began to exercise a strong influence there. But the prevailing type of Italian secular songs continued to be of a very light order during this and the following century. Petrucci, who issued in 1502 the motets and masses of the Netherland composers, had nothing better to offer of native productions than *frottole* and *villanelle*, tuneful but light part-songs. In form the *villanelle* adhered to the contrapuntal style, though in spirit they

were essentially popular. Gradually the term *frottola* disappeared; the more serious *frottola* passed into the madrigal, while the gayer, merrier type was merged in the *villanelle*.⁹ But although the *frottola* were despised by contrapuntists they showed a sense of form in repeating the first part again, and attention was paid to the words by having different music for each verse, whereas the *villanelle* were strophical—that is, the same melody was repeated for each stanza.¹⁰ Other songs, light in character, were the rustic songs, *Canzone Villanesche*, or *Villotte*, which peasants and soldiers used as drinking-songs. More refined and yet more trifling were the *Villotte alla Napoletana*.¹¹ The so-called *fa-la-la* was a composition of a somewhat later date and more merit. Those which Gastaldi wrote (about 1590) were good, and so too his *balletti*.

The vocal music to which our attention has been thus far directed, consisted either of songs in parts, or unisonous chorus with little or no accompaniment. Sometimes the principal or upper voice had a sort of *cantilena*, but solo-singing was yet unknown. The first instance of solo-singing is supposed to have occurred in 1539, when Sileno sang in an *Intermezzo*¹² the upper part of a madrigal by Corteccia, accompanying himself on the violone, while the lower parts which represented the satyrs were taken by wind instruments. But the piece itself shows it was far from being a song for one voice with accompaniment; the under parts are as much independent voices as the upper one. (See Ex. 1 on next page.)

During the last decades of the 16th century a sweeping change came over music in Italy. Hitherto the highest art-music belonged exclusively to the Church, from which the elements of rhythm, modern tonality, and human expression were rigorously excluded. But the spirit of the Renaissance, which had affected the other arts of poetry, painting, and sculpture many years earlier, gradually asserted an influence over music. With the awakening of the human mind, and its liberation from the bonds of the medieval Church, which is the real meaning of the Renaissance, it was inevitable that men should seek for a new form in music wherein to express themselves. Each individual now desired to think and speak for himself, and was no longer content to be merged

Frederick II., and of another by Dante. See *Le Rivoluzioni del Teatro musicale Italiano*, p. 12.

¹ They may have been written specially for hunting, but Gaspari, in his history of Italian Literature, proves that any quick movement at that time would be called a *Caccia*.

² In this they resemble the *Farfalle*.

³ They are counterparts of the *Cris de Paris*, which Jannequin brought into his motet 'Voulez ouyr les cris de Paris,' the 'Cries of London,' and 'Court Cries' used by Richard Deering. See J. Wolf's article *Florenz in der Musikgeschichte des 15ten Jahrhunderts*, *Sammelbände*, I.M.G., 1901-2, iii.

⁴ Many of these were written by special invitation by Heinrich Isaac (born 1445). Nanmann's *Hist. of Mus.* i. 438.

⁵ The important part played in Italian music by such a one as Francesco Landini (1325-90) is well described by Fétis, v. 310 *et seq.*

⁶ Decam, Giorn X. No. 7. See Ambros, *Ges. der Mus.* ii. 487.

⁷ The 'improvisatore' has been for centuries a well-known figure in Italian life.

⁸ We read in Sacchetti's novels that Dante's *ballate* were everywhere known and sung, and how Dante overheard a blacksmith singing his song and scolded him for having altered it. And Trucchi quotes, in proof of Dante having made the music for his own poems, an anonymous writer of the 13th century, who says Dante was 'dilettoso nel canto e in ogni suono' (*Poesie Italiane inedite*, ii. 140). See also Ambros, *Ges. der Mus.* ii. 489, for further account of the songs in the *Decamerone*.

⁹ A *frottola*, printed in Jnate's Roman collection of 1526, evidently became, ere long, a *villanelle*, for it is still sung in Venice with the same words and melody, 'Le son tre Faustine, tutti tre da maridar.' Originally, however, it was a part-song with the tune in the tenor. Ambros, iii. 455.

¹⁰ See Frottola, also Ambros, iv. 150 *et seq.*; *Florenz in der Musikgeschichte d. 15ten Jahrhunderts*, J. Wolf; *Sammelbände*, I.M.G., 1901-2, iii.; *Die Frottole im 15ten Jahrhundert*, R. Schwarz; *Vierteljahrsschrift f. Musikwissenschaft*, 1886.

¹¹ These were gallant addresses from singing-masters to their feminine pupils. They were as popular in northern Italy as in Naples. For examples, see in Kiaeewetter's *Schickel- und Beschaffenheit des weltlichen Gesanges*, app. Nos. 12, and 13 by Cambio (1547) and Donati (1555). Several collections of these songs still exist in the various libraries, and a specially important one at Naples.

¹² The *Intermezi* were usually madrigale interspersed in the earlier Italian plays.

in the mass. Thus ecclesiastical music was gradually driven from the field by secular music; and choral or collective song by pure solo-song, which was the medium best fitted for the expression of the thoughts, emotions, and actions of individuals. Poetry, which had hitherto been smothered in the web of contrapuntal music (where many voices were simultaneously singing different words) once again asserted herself, and claimed attention to her meaning and form.¹ Further, the art of singing, which by the close of the 16th century had reached a highly advanced stage, demanded the prominence of the solo-singer. In short, a different kind of music was now required, and the monodic style supplied the want. Who were the actual inventors of this kind of music it is impossible to decide. Historians have clearly shown that the latent germs must have been present wherever folk-music existed.² The predilection for a marked rhythm, the disuse of the old Church scales, the feeling for the dominant, the use of the leading-note which is an essential feature in melody,³ all these elements, which form the basis of modern music, were instinctively present in

folk-music before being formulated and taught in schools.

According to the historian G. B. Doni,⁴ V. Galilei was the first composer who wrote actual melodies for one voice.⁵ He further tells us that Galilei set to music the passage of the 'Inferno,' which narrates the tragic fate of Count Ugolino, and that he performed it himself 'very pleasingly,' with viola accompaniment. But be that as it may, an epoch in musical history was undoubtedly marked by Giulio Caccini, when he published in 1601, under the title of 'Le Nuove Musiche,' a collection of *madrigali*, *canzoni*, and *arie* for one voice. These compositions have a figured bass, and some are embellished with *fiortiture*. In the preface⁶ to his collection, Caccini gives minute directions as to the proper mode of singing his pieces, and his airs are well supplied with marks of expression, as the following example will show:⁷—

Jacopo Peri succeeded Caccini with a work entitled 'Le varie mnsiche del Sig. J. Peri a una, due, tre voci per cantare nel Clavicembalo o Chitarrone' (Florence, 1609). They are simpler than those by Caccini, and less declamatory.¹ Caccini had numerous followers in the path he had opened, and thus the 'expressive Monodia,' i.e. the attempt to render certain thoughts and feelings in music, and to adapt music to the meaning of the words, was virtually established. But these early pioneers of solo-song were amateurs, and it remained for trained musicians to carry on their work systematically. With Monteverde (1562-1654) a turning-point in music was reached. To him we owe that revolution in harmony which showed the use of discords as an effective means of representing the element of expression; and the development of the recitative which led to the beginning of the Opera—the most important moment in the whole history of music. We also owe to him a debt in the history of Song for having established the so-called ternary form which was soon to become stereotyped for the aria and song. This consisted of an air in three parts; the last part being a mere repetition of the first, while the middle part contained a passage of contrast. This form was already familiar in the folk-songs of the Middle Ages, but its first appearance in art-music would seem to be in Monteverde's 'Lamento' from 'Ariadne' (1610)² (Ex. 3). Although in this article the aria proper should be excluded, having already been treated (see ARIA), it is necessary to allude to it here, as the secular monodic song henceforth chiefly showed itself in the aria-form and became, in short, identical with it. Monteverde's successors, Cesti and Cavalli, both showed aptitude for pleasant melodious solo-music of this form, although Cavalli sometimes wrote arias with only two contrasting portions.

¹ See 'Bellissima Regina' in Parisotti's 'Piccolo album.'

² This was afterwards arranged as a madrigal in five parts. See Parry, *Music of the Seventeenth Century* (Oxford History of Music), p. 47. Parry further clearly shows how this simple form later dominated one branch of music completely, and indeed 'became the bane of one period of Italian art.'

Other composers of the transition period which witnessed the growth of the opera and cantata were Radesca da Foggia, who published five books of 'Monodie' in 1616; A. Brunelli, who published in the same year and in 1618 two books of 'Scherzi, Arie, Canzonette, and Madrigali';³ G. F. Capello, whose most remarkable work was a set of 'Madrigali a voce sola'; G. Fornacci, celebrated for his 'Amorosi Respiri Musicali', which appeared in 1617; Sigismondo d'India, Pietro della Valle, Luigi Rossi,⁴ and finally Salvator Rosa.⁵ A great quantity of these vocal compositions are treated in the strophic form, and the words of all are love-poems of a stilted, artificial character.⁶

If Cortecchia's madrigal be compared with the following example from Capello, it will be seen how great an advance had been made in solo-singing in less than a century. And a striking resemblance may be observed between Capello and his successor Stradella.

³ Brunelli's collection included several pieces by other composers of the Florentine group.

⁴ For the numerous existing collections of Rossi's 'Monodie' see Rossi.

⁵ Salvator Rosa certainly was Carissimi's contemporary, but the example Burney gives shows that he wrote much like the aforementioned composers.

⁶ Ambros, iv, 330.

etc.

During the 17th century the influence of Carissimi was great. He had a strong sense for modern tonality and for secular rhythm, and hence his style grew different from that of the older school. The Cantata, which was to become the chief form of chamber-music, reached a high stage of maturity under Carissimi, Legrenzi, Caldara, Stradella, and finally A. Scarlatti. Legrenzi's 'Cantate e Canzonette a voce sola' (published 1676) show his position in the development of the art of his time. (See CANTATA.) With A. Scarlatti's name the *da capo* form of the *aria* is associated, and for the many other debts the classical *aria* owes him, both in the opera and the cantata. (See SCARLATTI.)

We know how fierce the battles were between the monodic and polyphonic systems in Italy. But although the monodic form finally prevailed, it proved to be merely the prelude to the dramatic and not to the lyric form of song. No sooner were the 'expressive monodia' and the recitative started than the opera became firmly established. And in the same way the madrigal and the cantata,¹ which were both important, at least as regards vocal chamber-music during the 16th and 17th centuries, were doomed to insignificance by the use of this great and overshadowing rival. For an account of the origin and marvellous popularity of the OPERA, the reader must turn to that article. It need only be said here that all other kinds of secular vocal music had, and still have to yield precedence in Italy to the opera and its offshoots, the *scena*, *cavatina*, and *aria*.

If we closely examine the vocal works of the great composers of the 17th and 18th centuries, we see how little the *arie*, *ariette*, *canzonette*,

etc., published separately in collections² differ either in form or spirit from the arias extracted from their cantatas and operas. In the latter class some of the most beautiful examples of pure lyrics may be found, like Salvatore Rosa's 'Star vicino'; Cesti's 'Intorno all' idol mio'; Stradella's 'Ragion sempre addita'; Leo's 'Ahi, che la pena mia'; A. Scarlatti's 'Voi fuggiste', 'Le Violette', and 'Cara Tomba'; and Caldara's 'Come raggio di Sol.' Many of the operas and cantatas from which such lovely airs are taken are dead and forgotten, or their names only remain in history as the shells which contained such treasures.

Turning to another branch of the subject, namely the folk-song, it is clear that in Italy it never held the same place as among other nations. That Italian composers ranked the folk-songs of other countries higher is proved by their choosing French or Gallo-Belgian folk-songs for their masses and motets in preference to their own.³ In Petrucci's 'Canti Cento Cinquanta', published in 1503, the best songs belong to France, Germany, and the Netherlands; and the part-songs called *Canzoni alla francese*⁴ were among the most popular songs in Italy in the early 16th century. Traces no doubt exist of *canti popolari* of the 15th, 16th, and 17th centuries, but very few have come down to us in their complete or native form. It was in the gay, busy town of Venice that the folk-song first became recognised, and found free development. It was there that Petrucci printed the many *frottole*, *ballate*, *barcajuoli*, etc., which contained folk-songs like 'Le son tre fantinelli' (mentioned above), or the popular 'La Bernardina' used by Josquin des Prés, or 'Lirum bilirum' and 'Quando andarete al monte' used respectively by Rossini di Mantua and J. B. Zesso. It was here, too, that G. Scotto printed the Venetian master A. Willaert's collection which has preserved to us the celebrated 'Canzon di Ruzante.'⁵ But though many of the songs used for the polyphonic works bear Italian titles, there is nothing to prove their Italian origin. Only in a few instances have the words been preserved in their integrity, and the melodies have no distinguishing characteristics. They are somewhat dull and formless.⁶ Much more akin to the typical *canti popolari* in liveliness and simplicity of style were the

² See such collections as—'Arie antiche,' 'Piccolo album di Musica Antica,' Parisotti; 'Echi d'Italia,' Viardot; 'Gloires de l'Italie,' Govaert; 'Tesori antichi,' M. Roeder; 'Ommine d'antichità,' published by Ashdown; 'Alt-Italienische Canzonetten und Arien,' Lindner.

³ L'homme armé' is a well-known example. It must not be forgotten though, that Italy was for many centuries the meeting-place for musicians from all countries,—hence the cosmopolitan character of the themes chosen for the great contrapuntal works.

⁴ 'Canzoni Francese a due voci, huone da cantare e suonare,' published by Gardano, Venice, 1558. The words are love-songs, and the music chiefly by Sermisy, Peletier, Hertzer, and Gardano himself. Gardano had published in the previous year 'Venticinque canzoni francesi,' consisting chiefly of four-part songs by Jannequin.

⁵ This collection is called 'Canzon Villanesche alla Napolitana di Messer Adriano; a quattro voci con la canzon di Ruzante. Libro I. Venezia, Girolamo Scotto, 1548.'

⁶ For an example see 'La Bernardina' in Kiese-wetter's *Schicksale*, etc. App. p. 13.

¹ Cantatas, which are really vocal sonatas, became by degrees a mixture of the formal aria and recitative. There was practically no difference in structure and style between the arias from these 'slices out of the opera' and the opera itself. Parry, *Music of the Seventeenth Century* (Oxford History of Music).

hymn-tunes, known as 'Laudi Spirituali.' These, in the Middle Ages, were introduced in the oratorios in order to popularise such performances; and the connection between these *Laudi* with popular dance-songs is obvious. (See LAUDI SPIRITUALI.)

But although we find within recent years that the study of the folk-lore of Italy has received serious attention, materials for a satisfactory treatment of the *canti popolari* do not exist. Much has been written about the words of traditional songs, and innumerable collections of popular poetry have been published,¹ but no attempt has been made towards a scientific and systematic work on the melodies, tracing their origin and development and various forms. In the many volumes of the *Archivio per lo Studio delle tradizioni popolari*, edited by Giuseppe Pitre and S. Salomone-Marino, and in G. Pitre's excellent work, *Bibliografia delle tradizioni popolari d'Italia* (Clausen, Turin, 1894), mention is made of the various collections of *canti popolari*; and in the former volumes there are occasional short articles which refer to the tunes, and give a few musical examples. During the latter half of the last century Ricordi and other publishers have issued large quantities of modern *canti popolari* in volumes entitled 'Canzonette Veneziane,' 'Stornelli Toscani,' 'Canti Lombardi,' 'Napolitani,' 'Siciliani,' etc., purporting to be local songs belonging to the several provinces of Italy. But whether these songs can be accepted as the genuine productions they profess to be, or whether they are new compositions, or at any rate new arrangements of old popular tunes, and whether they are really sung by the peasants in the form in which they are here given, is very doubtful.² There are exceptions, such as the 'Canti Lombardi,' the melodies at least of which are genuine; also the 'Canti Siciliani,' edited by Frontini, and the 'Canti Abruzzesi,' collected by P. Tosti and G. Finamore. The latter, in an interesting article³ on the harvest-songs of this district, draws attention to the solemn, religious character of the melodies, in contrast to the words, which are merry love-songs. This peculiarity Finamore attributes to the great antiquity of the melodies,⁴ which have remained unchanged for centuries, though the words have

altered. The following *Canti della Mietitura* (harvest) are amongst the commonest; the tonality of both is curious, the first being pure Lydian and the second of more or less Phrygian character.⁵

EX. 5.

EX. 6.
Largo assai.

Aria della notte.⁶

Some of the songs from the Abruzzi collected by Tosti are of extreme beauty in form, melody, and words. Many of the Sicilian and Neapolitan songs begin with a long-drawn high note; they are sung very fast and strongly accented.

The wealth of *canti popolari* is prodigious, and although (as mentioned above) they vary greatly in the different districts, their general characteristics are the same. The harmonic and formal structure is simple. The accompaniment, which is usually intended for the guitar, consists merely of the tonic and dominant chords, and rarely modulates into anything except the nearest related keys.⁷ Few modal *canti popolari* are extant, although the flattened supertonic which is characteristic of the Sicilian and Neapolitan folk-songs recalls the Phrygian mode.⁸ The time is more frequently triple than duple, and this especially applies to the dance-songs. The largest proportion of folk-songs consists of eight-lined verses of eleven syllables, and are variously called *strambotti*, *rispetti*,⁹ *dispetti*, *siciliani*, or *ottavi*. The three-lined verses are called *ritornelli*, *stornelli*, *fioretti* or *fiorette*. But it should be added that the terms *canti*, *canzoni*, *canzonette*, *stornelli* are

¹ See, for instance, G. Pitre's *Studi di poesia popolare* (Palermo, 1872); Rublieri's *Storia della poesia popolare italiana* (Florence, 1877); A. D'Ancona's *La poesia popolare italiana* (Leipzig, 1878). See also Carducci's *Canilene e Ballate*, *Strambotti e Madrigali nel sec. XIII. e XIV.* (Pisa, 1871); and an interesting but unfinished work entitled *Canzoni antiche del popolo italiano*, *ripubblicate secondo le vecchie stampe a cura di Mario Monzini*, Rome.

² Speaking of Tuscan songs, Miss Busk shows how in these days of cheap printing and half-educated editing 'the literary songs (i.e. art-songs) have got mixed up with the folk-songs.' As instances, she quotes 'Stella Confidente,' 'Non mi amaro,' 'Ritorno: che t'amo' which were sung in London drawing-rooms as much as on the waysides and in the slums of Italy. Such songs also as Tosti's 'Vorrei morire' are constantly heard in the streets. *The Folk-songs of Italy*, p. 261 et seq.

³ *Melodie popolari Abruzzesi; i canti della Mietitura*, G. Finamore, see vol. 13 of the *Archivio per lo studio delle tradizioni popolari*, 1894.

⁴ 'Chaque acte de la vie de l'agriculture était accompagné de sacrifices, et on exécutait les travaux en récitant des hymnes sacrés.' De Coulanges, *La Cité Antique*, p. 184.

⁵ From the Vasto district, noted by L. Anelli. It should be accompanied by the cornamusa.

⁶ From the Guardiagrele district, noted by M. Bruni. Finamore adds that they are sung in turn by one voice at a time, accompanied by the *chitarra budente*, a sort of *colaccone*. The verses are of interminable length.

⁷ A weak and very modern colouring is imparted to the harmony of the published folk-songs by an excessive use of the chord of the seventh.

⁸ It has been remarked that the flat supertonic may be found in the canzonette from the comic operas by Vinci and Leo; and that an air from A. Scarlatti's cantata 'Andate o miei sospiri,' marked *alla Siciliana*, has the same characteristic, showing that Scarlatti realised it as essential to the native quality of the melody. (See E. J. Dent's A. Scarlatti, *His Life and Works*, 1905.)

⁹ *Rispetti* are always sung, and as eight lines is the normal number, the popular mode of speaking either of inventing or singing them is, *dar l'ottava*. R. Busk, *The Folk-songs of Italy*, p. 20.

very loosely and indiscriminately employed.¹ But speaking generally, *stornelli* are lively songs of love, *canzoni* and *canzonette* narrative songs, and *canto* is a generic term applicable to almost any form. Modern composers generally use the word *melodia* for a lyric song (*Lied*).

A strong claim to the title of 'canti popolari' may be advanced in favour of the popular melodies taken from operas. Ambros tells us that during the 17th and 18th centuries, favourite 'couplets' from operas, which at first had nothing in common with the folk-song beyond being melodious and simple, acquired by degrees a place similar to that held by the *Volkstied* in Germany.² And the immense popularity of operatic tunes in Italy during the last century cannot surprise us when we remember the theatre is an ubiquitous institution there, and that the quick ear of the Italian instantly catches melodies with a distinct rhythm and an easy progression of intervals.³ Having regard, therefore, to the wide diffusion of the opera and its influence on all classes during nearly three centuries, it is reasonable to conclude that it may have checked the normal development of songs, and perhaps helped to obliterate the traces of old traditional tunes. It will be seen later that the exactly contrary process took place in some northern countries, where in order to make their operas popular, composers introduced favourite folk-songs or dances, or indeed whole operas were based on national melodies.

The so-called *canti nazionali* belong to a period commencing about the year 1821. They have all been inspired by the political movement of the last century for the regeneration of Italy. Their tone is naturally warlike, but the melodies are ultra-simple and rather weak. The most celebrated of them are: 'Addio, mia bella';⁴ 'O dolce piacer, goder libertà'; 'Daghela avanti un passo';⁵ 'Innodi Mameli'; 'Fratellid'Italia'; 'La bandiera tricolore'; 'Inno di Garibaldi,' and 'All'armi' by Pieri. The years in which Italy has been most deeply stirred by struggles for independence were 1821, 1848, and 1859, and all the songs whose names have just been cited can be traced to one or other of those revolutionary periods.

For many important forms of both vocal and instrumental music we are primarily and especially indebted to the Italians, but as

regards the art-song proper we owe them little. From the latter part of the 17th to the early part of the 19th century, the *canzoni*, and *canzonette da camera* exhibited neither merit nor improvement. Several collections were published at intervals, yet apparently they attracted little attention. Many were of a religious tendency; not hymns but *canzoni spirituali e morali*, as they were called. Even when the *canzoni madrigaleschi* were reduced to two voices (as, for instance, those by Benedetto Marcello, published at Bologna in 1717) they continued to be essentially polyphonic, one voice imitating the other.

During the 18th century the lyric poet Metastasio exercised a certain effect on vocal music, and many of his *ariette* were set by contemporary musicians; but his influence was not lasting. A little later, a few inferior composers, such as Asioli, Barni, Federici, Blangini, and Romagnesi⁶ (all born in the second half of the 18th century) turned their attention to song-writing, and published quantities of *ariette*, *canzonette*, *rondi*, *notturni*, and *romanze*, but they were too weak to stand the test of time, and such popularity as they may once have known has been brief and fleeting. In fact, few Italian composers of merit ever deemed it worth while to bestow pains on this kind of work; to write an opera was their natural ambition, and on this they concentrated their powers. 'With all the best talent devoted to the service of the Church or the theatre there was little room left for the more solitary and self-contained expression of lyric feeling.'⁷ Nor was there any demand for lyric songs. Just as the 'couplets' and favourite tunes from the operas supplied the people with many *canti popolari*, the *aria* and *cavatina* provided the vocal pieces which the educated classes preferred. If we look through the work of Paisiello, Cimarosa, Mercadante, Bellini, Donizetti, Verdi, and other celebrated composers of opera, very numerous examples of the above-mentioned miscellaneous kinds of songs may be found, but none evince any serious thought. They were obviously thrown off in leisure moments, and now they are never heard of. An exception, however, must be made in favour of Rossini, some of whose songs have fine melodies and interesting accompaniments.⁸ Among song-writers who lived nearer our own time Gordigiani, Mariani, and Giordani are undoubtedly the best for simple melodious songs.⁹ They wrote in the true Italian style, with the utmost fluency and sentimentality.

¹ *Canzona* is the Sicilian equivalent of *riapetto*, and *cluri* of *stornello*. The children's songs in Italy are very numerous, and are usually called *Altre-Nanne* or *Nane* in Venice. Busk, *op. cit.* p. 47.

² Orloff records how an aria from an opera by F. Cafaro (born 1706), 'Belle luci,' was for half a century the best-known and most widely-sung song all over Italy; the melody was even painted on china and embroidered on robes (*Essai sur l'Histoire de la musique en Italie*, i. 283). See also the account of the popularity of Piccini's opera 'La Cecchina' in the *Oxford History of Music*, vol. 5, *The Viennese Period*, p. 97, W. H. Hadow.

³ The chorus of an opera is frequently chosen from amongst the workmen and labourers of the place where it is performed; and thus even difficult choruses may be heard in the streets and suburbs of towns which possess a theatre.

⁴ This is an adaptation of Italian words to 'Partant pour la Syrie,' and was probably made during the war of 1820, in which France assisted Italy to liberate herself from the yoke of Austria.

⁵ A ballet-song written by P. Giorda in 1855.

⁶ These last two composers were better known in Paris than in their own country.

⁷ W. H. Hadow, *Oxford Hist. of Music*, v. 325.

⁸ See for example 'La Regata Veneziana,' No. 2, where the rhythmical figure in the left hand represents the regular movement of the oars, whilst the right hand has continuous *legato* passages in double notes.

⁹ Rossini once aptly summed up the Italian ideal of a song: 'Il diletto dev'essere la bassa e lo scopo di quest'arte—Melodia semplice—Ritmo chiaro.'

With few exceptions Italian songs are marked in a greater or less degree by the same qualities. The voice-part is ever paramount in them, and all else is made to yield to it. The beautiful quality and the wide compass of Italian voices,¹ and the facility with which they execute difficult vocal phrases, tempt the composer to write brilliant and effective passages where a simple melody would be far more appropriate to the words. The words may indeed give the form to the song, and the music may substantially agree with them, but we miss that delicate subtle understanding between the poet and the musician, where the music often interprets the words, or a single word gives importance to a note or passage. Again, the accompaniment holds a very subordinate place. Its sole use is to support the voice; rarely has it any artistic value of its own,² and seldom, if ever, does it assist in expressing the poetic intention of the work.

It would be wrong, however, to apply these criticisms without reserve to all modern Italian composers. P. Tosti, for instance, knows how to rise above the common defects of his countrymen if he chooses; he possesses a genuine lyric talent, and some of his melodies are charming. Clever accompaniments also are met with in the compositions of Marco Sala, Faccio, Bozzano, Coronaro, and Smareglia. The last two have paid especial attention to the words of their songs. A cycle of songs, entitled 'La Simona,' by Benedetto Junck, would have a high rank assigned to them in any country; and the same can be said of Sgambati's beautiful songs, with their highly developed accompaniments. E. de Leva's, Enrico Bossi's, P. Tirindelli's, and Rotoli's songs have merit; and an interesting new composer, Leone Sinigaglia, writes with grace and originality, though his songs are scarcely Italian in character, and he approaches nearer to the German school of song-writers.

Amongst the works of the most celebrated composers of modern Italy, such as Martucci, Boito, Mancinelli, Catalani, Mascagni, Leoncavallo, Giordano, Franchetti, Puccini, and Cilea, etc., the writer has searched in vain for any mention of songs. It seems as if that branch of music has not yet aroused the interest, nor attained the rank, in Italy which are accorded to it in other countries.

¹ It is curious to note how limited is the compass of voice for which modern Italian composers write songs intended for circulation in foreign countries, while the songs they write for the home-market often exceed the compass of two octaves.

² A point to be taken into consideration as greatly impoverishing and limiting the accompaniments is, that on account of the climate and the outdoor life the Italians lead, the guitar and mandoline are as much used as the pianoforte.

SWITZERLAND

Although this country is bound together by a strong national feeling, it contains great diversities of idiom. More than half the population speak German; the rest either French or Italian, and a small fraction Romansch or Ladin. Hence there is little specifically national music, as it generally resembles that of the country to which it lies nearest. For instance, the folk-songs on the southern side are essentially Italian in character, while the French-Swiss and German-Swiss folk-songs are included in the collections of France and Germany. A purely indigenous feature in Swiss music is the cow-call, or *Kuhreihen*, which has been already treated. (See *RANZ DES VACHES*.) The old watchman-songs should also be mentioned. These date back for centuries, but are probably of German origin; as in the canton of Tessin, where Italian is the common language spoken, the night watch-call is still sung in Old German. Nearly all the true Alpine songs can be played on the Alphorn, to which in fact they owe their birth. The Swiss peasants have always possessed a remarkable harmonic aptitude. The herdsmen can skilfully improvise songs in many parts, and vary them with *Jodels* as ritornels or refrains. In many of the dance-songs the rhythm, too, is highly developed, necessitating constant changes of time-signature. Otherwise the melodies, like the poetry, are of the simplest character in form and metre.

Looking back on the past history of music in Switzerland we find that the composers of any note in this country have generally identified themselves with other nationalities. Thus in the 16th century the great contrapuntist, Ludwig Senfl's¹ name appears among German composers; in the 18th, J. J. Rousseau is claimed by France, just as Nægeli, Raff, and Schnyder von Wartensee, nearer our own time, are by Germany. But Switzerland has never been without her own musicians, who have striven in all ages to keep up the national feeling, although their names are now scarcely remembered.

The Reformation exerted a great influence in French Switzerland. The Psalms of G. Franc, the two Bourgeois and Davantes are still heard around Geneva. Some of the *coraules* of the Fribourgeois have beautiful refrains, recalling the ecclesiastical sequences; and in many of the old songs used in the peasants' *Festspiele* are traces of Goudimel's fine hymns adapted to secular words. These festival-plays, in which the peasants represent some national legend or historic event by word, dance, and song, are held in different districts, and form a powerful factor in the musical life of Switzerland. In recent years they have incited some of the younger Swiss musicians, such as Baud-Bovy, G. Doret, and F. Niggli, to take down the songs sung on these occasions by the peasants and to write simple popular melodies in the same spirit. Whilst the Church cultivated the taste for hymns and chorales,² the frequent wars gave rise to innumerable songs of satire, strife, and politics. Some of the earliest French collections of these songs were printed by P. de Vingle at Neuchâtel in the 16th century.³ He also printed many books of carols (Noëls Nouveaultz, 1533), usually with very irreverent words set to favourite sacred and secular tunes.

In the 17th and 18th centuries music-schools were formed in the various towns of Zurich, Basle, Berne, and Coire, and their libraries have preserved numerous collections of songs by Dillhern, Simler, Krüger, Briegel, Musculi, the Molitors, Diethold, Menzingen, and especially L. Steiner (born 1688),—the first Swiss composer to cultivate a love for his country's music. J. Schmidli, who set Lavater's 'Chansons Suisses' to music, and Egli, who published several 'Chansons Suisses avec mélodies,' followed in his steps. After Egli's death in 1810, his pupil Walder carried on his work, together with Ott, Albertin, Bachofen (a special favourite)

Greuter, Felix Huber, Kuhn, and Zwinger, some of whom were national poets as well as musicians and collectors. J. G. Nægeli (as much a German as a Swiss song-composer) did much to promote musical education in the country of his birth. He was joined in this movement by Kunlin, Wachter, Krausskopf, the brothers Fröhlich, and Ferdinand Huber. As song-writers Karl Attenhofer, F. Grast, and Ignaz Heim should be especially mentioned, the latter being perhaps the most popular. Zwyssig composed the 'Cantique Suisse' (the national hymn) and Baumgartner the fine *chant* 'O ma Patrie.' The names of Methfessel, C. and F. Munziger, G. Weber, A. Meyer, and F. Hegar (who is principally famous for his choral songs) may complete the list of that period.

During the latter part of the 19th century, a new impetus has been given to Swiss music by a group of young and enthusiastic musicians, who have strongly felt the necessity of preserving the traditional treasures of their country and developing them with all the resources of modern art. They have hereby endeavoured to prove the essential unity of feeling in the nation. Though composed of such various races, the same patriotism, love of liberty, and independence have animated this little republic in all times of its history. The leaders of this movement are Hans Huber and E. Jaques-Dalcroze; the former bears an honoured name in other branches of music besides songs, and the latter is a refined poet, as well as being a prolific composer. His numerous volumes of 'Chansons romandes,' 'Chansons populaires et enfantines,' 'Chansons des Alpes,' 'Chansons patriotiques,' etc. contain graceful little pictures of national life, in which Jaques-Dalcroze cleverly introduces the types of melody, harmony, and rhythm characteristic of the various cantons.⁴

In the year 1900 the 'Union of Swiss musicians' was formed, which now numbers over 300 members, and holds yearly festivals for the performance of new works of all kinds by these composers. Especial interest is attached to those of the younger generation, all of whom have included song as an important branch of their art. The principal names are as follows: E. Jaques-Dalcroze, V. Andrae, Otto Barblan, E. Bloch, E. Combe, A. Dénéreaz, G. Doret, F. Klose, H. Kling, E. Raymond, Fritz Niggli, J. Ehrhart, R. Ganz, F. Karmin, J. Lauber, W. Pahnke, P. Maurice, W. Rehberg, G. Pantillon, L. Kempter, etc.

The revelation of so much home talent may surprise the world, but it proves that 'a Swiss school of music is rapidly rising, and may in time hold its own.'⁵

¹ Senfl contributed largely to the various collections of the 16th century; and in one of these called *Bicinis Gallia*, dated 1545, there occurs the oldest known version of a *Ranz des Vaches*.

² Towards the end of the 16th century L. Moser of Basle contributed largely to the popularisation of the Church songs. His book, *Ein vast notdürfftige Materi*, etc. contains a large number of German songs adapted to familiar Church melodies. See Becker, *Hist. de la Musique Suisse*.

³ The collection of 1508 contains the celebrated *complainte* on the heretics burnt at Berne: 'Die war History von den vier Ketzer Prediger ordens zu Bern in den Eydgenosseenschaft verbrant.'

⁴ Jaques-Dalcroze has done much to develop the rhythmical element among his countrymen by his choral, dance, and game-songs, and 'Gymnastiques Rhythmiques.' See also his striking article 'La pédagogie du rythme' in the *Rivista Musicale Italiana*, Anno xlii.

ROUMANIA

Roumania is a Romance country, and embraces both Moldavia and Wallachia. The character of its national music is, therefore, very mixed. Among the educated classes, a preference is shown for French and Italian music, and thus the Latin origin is betrayed. The real folk-music has also much in common with its Slavonic neighbours, and the gipsy element is strongly represented by the *Laoutari*.¹ Without these gipsy lutenists, no christening, wedding,² or funeral is held to be complete among the peasants, though at funerals in Roumania, as in Russia, it is the village women who are the professional 'wailers.' Their song of wailing, is a monotonous recitative chanted on a few notes, interspersed by a succession of sharp little cries, whilst the words enumerate all the qualities of the deceased.

The most beautiful of the Roumanian folk-songs are enshrined in their *doinas*.³ This is a generic term, as it includes songs of various origins. In times past, both pastoral and war-songs were alike called *doinas*, but at the present time they resemble the French *complaintes*, as indeed their name—*doina* = lament—indicates. They are usually in the minor key; the melody is full of turns, trills, and other embellishments, yet throughout they are of a melancholy cast.

¹ Both Verdi and Liszt have testified their approval of the *Laoutari* in enthusiastic language. See J. Schorr, 'Musik in Roumanien,' in *Die Musik*, 1903, No. 22.

² A Roumanian proverb says: 'Mariage sans *Laoutari* c'est-à-dire chose impossible.'

³ The name *doina*, according to Hladetz, is of Dacian origin, and may also be found in Sanscrit, as *d'haina*.

Ex. 1.

Though the folk-songs may be less original and striking than the national dances, they are extremely melodious and full of sentiment. The poetry is rhymed and often in five-lined stanzas. The metre is irregular, and refrains frequently occur either at the end of the line or the stanza, as the following well-known folk-song (*cântec popular*) shows:—

Pentru tine Jano.

Ex. 2.

The oldest and most celebrated dance is the *hora*, a slow choral dance written in rondo form usually in this rhythm:—

Ex. 3.

Another dance, equally written in rondo form, but usually in a major key, is the *sîrbă* (or *sirba*). Though the prevailing tendency of this country's national music is melancholy, some of the dance-tunes are, nevertheless, gay and light. The occurrence of the augmented second between unusual intervals is frequent, and doubtless due to gipsy influence. Melodies of more recent date consist usually of the first phrase in the major and the second and concluding phrases in the relative minor, as in so many Slavonic tunes.

As mentioned above, the Roumanians seldom sing at all themselves; the songs are sung to them as solos by the *Laoutari*, and singing in harmony is quite unknown. The melody is also often played by the chief singer on the *cobza*, a sort of flute.

The renaissance of music in this country did not begin until the middle of the 19th century, and its principal promoters were Professor Wachmann (who especially called attention to the national music), Flechtenmacher and

Candella. The latter was the creator of the Roumanian national opera, and together with Ventura, Scheletti, and Cavadi, composed numerous and favourite songs. These closely resemble the typical French and Italian *romances*, and have little in common with the German or Russian art-song. Mention should also be made of Eduard Hübsch, the composer of the national hymn. Musicescu and Kiriac have reproduced in their compositions the old Roumanian church and folk-songs. Margaritescu, Stăphănescu, Spirescu, Ciran, Ercole, and Dumitrescu have written numerous songs and ballads, besides other works; and among the younger generation, Enescu and Lăcrătescu, who have already won for themselves European reputations in more than one branch of music, perhaps stand the highest.

The cultivation of the national poetry and songs is due to the poet Vasili Alexandri,¹ to Asaki, Carmen Sylva, H. Vacaresco, Wachmann, Adamescu, Kogolniceanu, and others. And the establishment of Conservatoires at Bucarest and Jassy, where young musicians can obtain a scientific training in their own country, augurs well for the future of Roumanian song-writers.

There is also a considerable Roumanian colony of Balkan origin in Hungary, who first established themselves here in 1230. They lead a more or less wandering life among the mountains, pasturing flocks. Their language, of a Latin stem, is much intermixed with Albanian, Slavonic, and Hungarian words, but their folk-songs and dances are quite distinct, and essentially their own. Among the dances we find the true Roumanian *hăra*, *șirba*, *tarina*, and *ardelana*; and their innumerable songs and ballads are of Balkan rather than Hungarian origin. The oldest are theological or mystical in subject, but in the historical ones the heroes fight against the Turks. Among the *kolindas*, the religious kind are the commonest, treating of the life of our Lord, of the Virgin and saints, and the melodies are in plain-song.²

MODERN GREECE

It is difficult if not impossible to avoid the mention of Oriental Songs, when treating those of Greece, because in the islands and on the mainland the songs are intermingled. M. Bourgaunt-Ducoudray says that in Greece the oriental chromatic scale is often found:—

Ex. 1.

And again in Smyrna and other parts of Asia Minor the Aeolian scale³ is in constant use. The melodies sung along the coast and in the Ionian islands are very Italian in character, and are easily distinguished from the genuine Greek melodies by being in the European minor scale. But inland, and away from the coast of Asia Minor, the pure Greek songs predominate.⁴

Until within a recent period there existed a number of minstrels or bards who combined the profession of musicians with that of chroniclers, and whose function it was to band down by word of mouth, and thus keep alive, the great traditions of their country's history. These men were held in high esteem in their time; but, as in other countries, education and the introduction of printing have brought about their rapid disappearance. Yet we are told that only a few years ago, an old and blind minstrel, by name Barba Sterios,⁵ sat, surrounded by a crowd, on the roadside by the gate of Kalamaria in Thessalonica. He played and sang in a melancholy and monotonous tone to his *lúpa*,⁶ without raising his voice to a high pitch, and in pathetic parts drew deep emotion from his audience. In epic recitations of this kind the lyre is only used as an accompaniment in succession to the chanted words, and not with them. For instance, the old man to whom reference has just been made, would start by touching a prelude on his lyre, and then commence intoning a couple of verses, after which the instrument came in again, and so on to the end, alternately playing and singing.⁷

³ The Greek names of the modes are here retained in preference to the ecclesiastical, and those readers not conversant with the interchange ofomenclature are referred to the article on *MODES*, *ECCLIASTICAL*.

⁴ M. Bourgaunt-Ducoudray says in the preface to his 'Trente Mélodies Populaires de Grèce et d'Orient' (using the Greek names) that the Greek Hypodorian, which only differs from the European A minor scale by the absence of the leading-note, is of frequent occurrence among the popular melodies of Greece. The Greek Dorian, Phrygian, Hypophrygian, and Mixolydian modes are also fairly often met with; and the Hypolydian with the fourth lowered (which may easily be confused with the Western major scale of F) is at the present time the commonest of all.

⁵ Barba = uncle, is used as a term of endearment, like *dyadya* = uncle in Russian.

⁶ A rough sort of stringed instrument, recalling the classic *lúpa* with five sheep-gut; the bow consisting of a stick bent at one end and a bunch of horse-hair strung along it.

⁷ G. E. Abbott's *Songs of Modern Greece*.

The *τραγούδια του χορού*, or choral songs, are ballads in the original sense of the word, for they are sung as an accompaniment to a complicated set of steps and mimic evolutions. At weddings, Christmas, on May-Day, and similar festivals, men and women may be seen dancing together in a ring, hand in hand, outside their country inns. The leader of the dance as he sweeps on, waves a handkerchief and sings a verse, accompanying it with appropriate gestures, while the rest of the dancers sing alternate verses in chorus. There are also other dance-songs, which are sung antiphonally by distinct sets of voices. This music is of a light and gay kind, consisting of short phrases which often end on the high octave:—

Ex. 2.

with little or no variety in melody or rhythm. The words of the many Greek cradle-songs are of great beauty, but the melodies are monotonous and limited in compass.¹ Greater interest is imparted to the lyric folk-songs belonging to the eastern parts of Greece and the adjacent islands (where the melodies are naturally of an oriental character), by the irregular rhythms and constant change of time, such as alternate 2-4 and 3-4 time.

The Greeks have a gift for improvising or reciting in verse, and the preponderance of open vowels and the facility of rhyming in the Romaine language² render their task easy. Also they are keenly sensitive to emotions roused by striking events, and incidents both of past and present history. Many of their songs have reference to the customary periods of absence from home, when the villagers, who follow the professions of merchants or pedlars, descend from their hills to ply their trades in foreign lands.³ Thus a youth who quits his home for the first time is accompanied a certain distance on the road by his family and friends. Before taking final leave of her son the mother laments his departure in a song either improvised or traditional, and in response the youth bewails the hard fate which drives him from his home.⁴ There is proof that among the mass of folk-poetry still extant, much of it dates back to old classical times. For example, the famous swallow-songs, when boys go about the streets greeting in song the reappearance of the swallows, embody a very ancient custom.⁵

¹ The lullabies are called *Βαυκαληματα*, *Νινυρισματα*, *Ναυαριμα* from *νανρίζω*, to lull to sleep.

² The words of the folk-songs are all in modern Greek, *i.e.* Romaine, though they vary in dialect. The vernacular language is never taught, but many of the best modern poets have adopted it, and the effort made at the time of the War of Independence for the restoration of the classical language has had but a poor success.

³ The Romaine language is more easily transcribed into Italian than any other tongue. Hence the reason that song-collectors such as Bourgault-Ducoudray, Büchner, and others, make use of it.

⁴ Like the *Viachs* in the Valley of Zagari who go to Spain.

⁵ See Garnett's *Greek Folk-Poetry*, and Pasow's song 'The Exile.'

⁶ For the words of the Swallow and May-time songs see Kind and Pasow. Many have been translated into English by Miss Lucy Garnett in *Greek Folk-Poetry and Greek Folk-songs*.

Serenades and aubades are most in vogue in the large towns, and each province has its own special songs; but there are some ancient songs of great celebrity, such as 'The Fall of Constantinople,' which are the common heritage of all the provinces.

*The Fall of Constantinople.*⁶

Ex. 3.

In the Greek folk-songs, as among other nations, the last words or lines are often repeated, or the words are broken up into meaningless syllables, recurring three or four times before the word is completed. Or it may be that the words are interrupted by interjections or refrains. It should be noted also that the accents of the words and music do not always agree, which clearly proves that different words were set to already extant melodies. It is difficult to represent these Eastern songs in our present notation, but the following example, of which a few bars are given, is a love-story from the Island of Samos,⁷ and shows many of the above-mentioned features, including the peculiar tonality, limited compass, changing time and deep melancholy, inherent to them. Stringed

Ex. 4.

instruments are used to accompany these songs, and nowadays principally guitars and mandolines.

The literary revival which followed the War of Independence, and the abundance of poetry written in the present day, have, however,

⁶ This song was taken down by Büchner from an old woman of eighty, who again had heard it from her infancy, sung by old people.

⁷ Büchner, 'Griechische Volksweisen,' p. 406.

produced no effect on the music of the country. The Greek song-writers worthy of mention are lamentably few; the generality of their published songs are with few exceptions either trivial or sentimental. Among the Greek composers who have won European fame, Spiro Samara may be noted as the best. At an early period of his career he achieved success in Paris by his graceful little songs. Other song-composers scarcely known beyond their own country are: Zacharopoulos, Sidere, Beloudion, Lampalete, Karrère, Rodios, and Leonardos.

The few and best exceptions to the general average of songs are those in which either the composer has taken the folk-song as his model, or the actual folk-songs themselves, such as are to be found in L. A. Bourgaunt-Ducoudray's 'Trente Mélodies Populaires de Grèce et d'Orient'; and more recently in the collection of M. Pakhtikos, Director of the School of Music in Constantinople, who personally noted them down in remote districts of Thrace, Macedonia, Crete, the Aegean Islands, etc.

RUSSIA

No country is richer in national music than Russia, and nowhere has it been more carefully preserved from neglect or oblivion. For many years the folk-songs and dances of the most remote districts have been collected by order of the Government: musicians and savants of the highest rank¹ have joined in folk-song research and assisted in the task of compilation. This was all the more necessary as civilisation is everywhere gradually killing oral tradition, and it is only the old people in the villages who still sing the ancient epic songs. Moreover, the modern school of Russian music, which holds so important a place in art, owes, in part, its

strength and magnetic attraction to the ingrain colour derived from race temperament. Though Russian music has only lately achieved European renown, it has always been loved and cultivated in its own country. Hence from birth onwards the peculiar harmonies and rhythms of his native land have so possessed the ear of every Russian musician, that consciously or unconsciously he re-echoes them in his works.

The oldest form of national poetry would seem to be the *butlini*, of which there is evidence that they existed 1000 years ago. They are national epics akin to the historical romances; of great length and in unrhymed metre.² The music, which is a kind of monotonous chant, accompanies one line, or at most two lines of the song, repeating to the end.

As it befell in the capital Kieff.³

Ex. 1.

The *horovodi* or choral songs belong solely to the Slav races. They celebrate the change of seasons and the successive festivals of the ecclesiastical or agricultural calendar, while some are especially appropriate to various peasant occupations.⁴ These *horovodi* are sung in a curious manner: the first voice sings a melody, the other voices in succession sing variants of the same melody, and as the voices fall in with one another a kind of harmony is established, whilst each voice retains its independence.

Ex. 2.

1st Voice.

The historian Melgounov, one of the highest authorities on Russian folk-music, contends that from the earliest time it was essentially polyphonic in structure, and he refutes the general idea that folk-songs were sung in unison.⁵ In taking down the songs from the peasants he carefully recorded each voice separately, and attributed great importance to the preservation of the popular counterpoint. His examples show that the secondary parts (*podgoloski*) constitute really a free imitation of the main melody:

² One of the most interesting small collections of *butlini* was made by E. James, an English clergyman, who spent the winter of 1819 in the far north of Russia. His MSS. are now in the Bodleian Library.

³ Rimsky-Korsakov, 'Chants nationaux Russes,' No. 1. (Communicated by Moussorgsky.)

⁴ The singers of the christening, wedding, funeral, or even consecration songs are always elderly women, and no ceremony is considered properly conducted without them. They are to some extent 'Improvisatrici'—reflecting in their song, past and present, individual and general conditions. See preface to Dloufah, Lippmann, and Istomlin's 'Songs of the Russian People.'

⁵ See preface to J. Melgounov's 'Russian Songs,' and see vol. iii. p. 1055.

¹ Such as Balakirev, Rimsky-Korsakov, Serov, Melgounov, and others.

Ex. 3.

1st Voice.

2nd Voice.

4th Voice.

The *piessni* or solo songs are very often sung to the accompaniment of the *balalaika*, a guitar-like instrument. These are mainly lyrical in character, and reflect the emotions and episodes of peasant life. Some of the love-songs are beautiful, and the wailing songs—*zaplachki*—most pathetic. The melancholy and monotonous cradle-songs have a strange charm of their own; and the so-called 'laudatory' songs (glorifying some individual indiscriminately, before or after death), which are the peculiar property of the Slav, rank high in importance among the songs of the peasants.¹

The rhythm of Russian folk-songs is often characterised by extreme irregularity. The tunes usually begin on the first beat of the bar, but the phrases are of unequal length; they are frequently in 7-4 or 5-4 time, or 2-4 and 3-4 time alternating; but it must be remembered on the authority of Sokalski and others, that the division of the melodies into bars is arbitrary.² The original tunes, handed down by oral tradition, owed their rhythm to no symmetrical repetition of accents, but to the cadences suggested by the flow of the verse itself. Again it frequently happens that the accent of the verse varies, which renders it difficult to arrange under the regular metrical accentuation of the time system. The accent moves from one syllable or one word to another, for instance, *gory* or *gor'y* (hills)—as if to avoid monotony; and the inequality of the number of syllables in each half verse, each of which has one main accent, appears to be one of the characteristics of Russian folk-songs.³ Naturally the dance-songs have more regular accents and rhythms, especially those of gipsy origin, when the dancers mark the time with their feet. Peasants do not like singing solos; they prefer to sing in *artel* or companies, in which each member is a performer and composer, owing to the above-mentioned structure of the songs.

Glinka and many other theorists have made the peculiar tonality and harmonisation of Russian songs their life-long study. Melgounov says that they are based on the so-called natural (untempered) scale, which is impossible to represent in our present notation; and that the foundation of the major and minor scales

is contained in this simple formula: $1\ 1\frac{1}{2}\ 1\ 1\frac{1}{2}$. That is, if the relative minor of the scale of C is taken descending from dominant to its octave, the result is:—

$$c_1\ d_1\ c_2\ b_1\ a_1\ g_1\ f_1\ e.$$

This when reversed will be found to be identical with the ecclesiastical Phrygian mode.⁴ Certainly there is an indisputable connection between the musical theory of the ancient Greeks and the oldest and actually existing Slavonic melodies founded on these scales, more especially those of the western part of Russia. To modern ears the tonality, therefore, is of an uncertain character, and many melodies commence in the major and bear distinctly the stamp of the major key, until towards the end, where they modulate into the minor key in which they conclude. Further they more often begin and end on the supertonic, or indeed on any degree of the scale rather than the tonic. Another peculiarity we find in the folk and art-songs alike are the florid passages on one syllable; for instance in 'The Cossack of the Don' and some of Rubinstein's songs. This and many other features in Russian Song could be traced to Asiatic influence, for in Russia the eastern and western temperaments meet and inter-mingle.⁵

Early in the 19th century national representation was lacking in Russian music. It awaited emancipation from the foreign influences under which it had so long lain. It was Glinka who first began to effect its liberation, and the importance of his work cannot be exaggerated. Though his national opera, 'La vie pour le Czar' (except for a few bars in the opening chorus), incorporates no single folk-song, Glinka so identified himself with the feeling and spirit of the national music, that his melodies became at once familiar to his countrymen. Glinka has truly been named the father of the Russian art-song. Previous to him, other song-composers, such as Alabiev, Varlamov, Kozlovsky, Verstovsky,⁶ and Lvov, wrote songs of the simple, popular type, imitating so faithfully the external qualities of the real folk-song, that some, such as Alabiev's 'Nightingale' and Varlamov's 'Red Sarafan' have been accepted as national melodies. Lvov was the composer of the Russian national hymn,⁷ the tune of which, though fine and suitable to the words, is not Russian in character.⁸ Again, others like

¹ Tchaikovsky's remarks on the character of the folk-songs are worth quoting. In writing to Tolstol to acknowledge some songs he had sent him, Tchaikovsky says, 'I must frankly say the songs have not been skilfully treated, and thereby all their original beauty has been lost. The chief fault is, that they have been forced into a regular, formal rhythm. The *butirs* have nothing in common with the dances. Besides this, the greater part of these songs are written in the cheerful D major scale, and this does not agree in the least with the tonality of the true Russian Volkslied, which is always of an uncertain tonality, so that one can really only compare them with the old church modes.'

² Cui remarks that the 'Tartar influence is so strong that there is hardly one Russian folk-song not affected by it.'

³ Verstovsky, who was hailed for a time as the true Messiah of Russian music, owed his fleeting popularity to his operas more than to his songs.

⁴ Composed to order in 1833, the words by Shukovsky.

⁵ It has recently been stated that Lvov was not the true composer

¹ The numerous other kinds of songs which the above classifications do not include cannot here be dealt with. They will be found under their different headings in any standard collection. See also Ralston's *Songs of the Russian People*, pp. 34, 39 et seq.

² Sokalski's *Russian Folk-Songs*.

³ See preface to Lineff's 'Peasant Songs of Great Russia.'

Gurilev, Vassilev, and Dübüque arranged a number of national airs, especially the so-called gipsy tunes, to modern words in rhyme and four-line stanzas, with a simple pianoforte accompaniment. Glinka's songs stand on a higher level, though they vary in merit; some of the earlier ones betray the Italian influence, and have elementary accompaniments; some are in dance-rhythm pervaded by a local colouring; others are pure lyrics and very expressive, but his finest effort is the powerful ballad 'The Midnight Review.' Dargomijsky was nearly Glinka's contemporary, and shared the same enthusiasm for his country's music. His songs show more dramatic power; many consist of short declamatory phrases akin to recitative, and all evince a high regard for the meaning and metre of the words. Dargomijsky has, moreover, caught the intense but languorous spirit of the East. His ballads take high rank, especially one called 'Knight Errant.'¹ Rubinstein is a strange paradox. More cosmopolitan and western in feeling than any other Russian composer, it is his eastern songs which are the best. Many of his songs belong to the German *Lied*, the accompaniments being clearly based on Schumann as a model, as for instance, 'Nun die Schatten dunkeln' (Geibel), and 'Nacht' (Eichendorff). But his settings of Mirza Schaffy's words are by far the most beautiful and original of all his songs, and all are essentially vocal.

The following five composers may be said to constitute the new school of Russian music: Borodin, Balakirev, Cui, Moussorgsky, and Rimsky-Korsakov. They are frankly progressive; their aims are high and, generally speaking, they maintain their ideal. They formulated certain principles of their art, one of which directly concerns Song, 'that vocal music should be in perfect accordance with the meaning of the text.' And though each composer with his individual tendencies produced different work, they were unanimous on this point, as may be seen on closer examination of their songs. They were mostly cultivated men, and with regard to the *culte* of their native music they were directly under the influence of Glinka and Dargomijsky. Borodin's songs are of rare beauty and distinction. They are original in form, and remarkable for certain peculiarities of harmony. Borodin had a strong predilection for the rhythms and modes of the East.² Balakirev, one of Glinka's true disciples, wrote only twenty-five songs; they are chiefly lyrical in feeling, and all are scrupulously finished and polished. For his words, he chose only

of this hymn, but merely took the melody of the trio of a *Geschwind-marsch*, composed by F. Bogdanovitch Hassa, bandmaster of the St. Petersburg regiment of the Guards, and published in a March Collection in 1825. The notes are identical, the only change being made in the time.

¹ C. Cui says of this ballad: 'It is impossible to put into adequate words all the laconic strength, the picturesque qualities and vivid realism conveyed by this song. It breathes the spirit of the past and appeals to the mind as vividly as a picture.'

² See Borodin and *Lied*, by Alfred Eshete, translated by Mrs. Newmarch.

from the best Russian poets. His 'Song of the golden fish,' with its developed and interesting accompaniment, is one of the most perfect specimens of modern Russian songs. Among César Cui's best songs are those set to French words, which may be explained by the French blood in his veins. But he has a special gift for song-writing, and among his numerous songs—over 150 in number—not one is lacking in melody, grace, and polish. Dargomijsky's direct successor may be said to be Moussorgsky, an interesting but unequal composer. Gloom, tragedy, and grim humour are to be found in his songs, but there also exist sincerity and pathos. Rimsky-Korsakov's love for his country's music and his valuable collections have been already alluded to, and throughout his songs this national spirit may be felt. His songs are neither long nor numerous, and their beauty is of a restrained kind. Their chief characteristics are 'beautiful and uncommon harmonies and elaborated accompaniments, by which he gives relief to the melodic phrases.'³ Rimsky-Korsakov has excelled in the composition of eastern songs, and 'all are characterised by a certain languid monotony, in keeping with the oriental style of the words.'⁴ Tchaikovsky cannot be classed in any school; he stands alone. He was more cosmopolitan than the afore-mentioned composers, and more individual than national in his music. The emotional value and the beautiful melodies of his songs compensate for the inadequacy of ill-chosen words and for the defects of a certain diffuseness of treatment. But notwithstanding these artistic demerits, as an expression of passion, tragic or triumphant, his songs make a direct appeal and elicit a direct response. To this quality may be attributed his wide popularity in non-Slavonic countries.

Sacred and spiritual songs are greatly sung in Russia, and in connection with them Lvov, Bortniansky, Bachmetiev, and Dmitriev's names are well known. The eminent antagonistic critics Stassov and Serov also deserve mention, although song-writing was not their forte.

In conclusion it remains to give the names of some other contemporary song-writers; Alpheraky, Antipov, Arensky, Artchibouchev, S. and F. Blumenfeld, Davidov, Glazounov, Grethaninov, Grodsky, Kopylov, Liadov, Liapounov, Rachmaninov, Rebikov, Scriabin, Sokolov, Stecherbathev, Wihtol, etc. Some of these musicians are young, and their work varies in merit, but it cannot be denied that in Russia, Song, both the folk- and art-song, is regarded as a serious branch of music, and treated with care and reverence.

SOUTH AND OTHER SLAVONIC NATIONS

Much that has been said about the national music of Russia would apply also to other branches of the Slavonic people.¹ There are, nevertheless, important variations in the traits they appear to have in common, and certain characteristics peculiar to each nation which claim notice. The remarks will, however, refer chiefly to the folk-music, as in many of the countries music remains still in its primitive state, or can hardly be said to have developed beyond the stage of national airs; no musical schools have been formed, and the composers would merely be classed under the generic term, Slavonic.² But of the beauty and enormous wealth of the folk-songs in these countries proof has been afforded by the many and valuable collections which already exist and yearly increase.

Indigenous to the Ukraine³ is a kind of epic song of irregular rhythm recited to a slow chant. These *doumas* were originally improvised by the *Bandurists*, but these wandering minstrels are now nearly extinct, and their function has devolved upon the village women, who invent both the poetry and melodies of the songs which

¹ Roughly speaking the Slavonic people may be thus divided. East Slavs: Great Russians and Little Russians with Ruthenes, Ukrainians, and the White Russians. West Slavs: Czechs, Slovaks, Moravians, Poles, and Wends. South Slavs: Slovenes, Croats, Serbs, and Bulgarians, including Bosnians, Dalmatians, and Montenegrins.

² As for instance Borodin, who is a Georgian composer, is mentioned under Russia.

³ The dialects of the Ukraine en est tout différent du Russe. Ce n'est pas un patois, c'est un dialecte constitué, qui possède une brillante littérature. C'est surtout la noblesse de Kiev, de la Volhynie, Podolia qui a subi l'influence polonoise; le *motif* de l'Ukraine est resté en dehors de son action par la nature de sa vie et surtout par la différence de religion, car il pratique toujours la rite grec. Dr. A. Bonnier, *Notes pour la Russie d'Europe*, p. 430 et seq.

they sing. Among the peculiarities of these interesting songs, one is, that if the song ends on the dominant or lower octave, the last note of the closing verse is sung very softly, and then without a break the new verse begins loud and accented, the only division between the two being such a shake as described by the German phrase *Bocktriller*. This feature is common also to Cossack songs,⁴ and to the songs of that Wendic branch of the Slavonic race which is found in a part of Saxony.

Wendic Folk-song.

Ex. 1.

The Wendic songs, except when dance-tunes, are generally sung *tremolando* and very slowly. And the exclamation 'Ha' or 'Hale,' with which they almost invariably commence, may be compared with the 'Hoj' or 'Ha' of the Ruthenians and the 'Ach' of Great Russia. One of the most popular Ruthenian songs is 'Ein Kosakritt,' better known under the name of 'Schöne Minka.'⁵ The superior charm of the songs of Little Russia is due, for the most part, to a prevailing cast of melancholy. Inhabited by a people who vie with the Poles in susceptibility to poetic sentiment, Little Russia is naturally rich in songs. The greater part are in the minor, or based on the Church scales, of a slow tempo, and frequently with a halt or drag in the rhythm produced by shortening the first syllable and prolonging the

second, thus:—

Croatian peasants, men or women, never use songs already composed; they improvise the words as well as the melodies themselves. Hence only those songs which sprang from the people are sung by them.⁶ This does not apply to the ritual songs which have been handed down by oral tradition for centuries, and in which the Croats are very rich. The following song is sung at Midsummer as the men and women leap and dance round the fires lighted on the hill-tops and call to the heathen goddess 'Lado.'⁷

Ex. 3.

La-do! La-do! Bogpomana tomu stau ilaps f' La-do!

⁴ The Don Cossacks are Great Russians, and the Zaporogues Cossacks are Little Russians. Dr. A. Bonnier, *Notes pour la Russie d'Europe*, p. 417.

⁵ The music and original words are given in Prach's collection, and the German version in Fink's *Mus. Hauschatz*, No. 157. See also *Schöne Minka*.

⁶ F. Kuhse in a letter to Mr. Barclay Squirs from Agram in 1893.
⁷ From F. Z. Kuhse's article in the *Oesterreichisch-ungarische Monarchie*, vol. vii. p. 110 et seq.

The chief dance-song of the Croats and Serbs is the *kolo*, of which there are many kinds. To the *oro kolo* the peasants sing religious songs; to the *junačko kolo* heroic ballads; to the *zensko kolo* love-songs; and to the *salgivo kolo* humorous songs. There is a marked difference between the town and village songs. The latter exhibit the truest Croatian feeling; the town songs are more cosmopolitan, and are much influenced by the wandering *Tanburists*, who, like the Hungarian gipsies, sing and play the *tambura* (the national instrument) in taverns.

Since the Illyrian movement of 1835, a national school of music has arisen in Croatia, and been fostered by educated musicians of the country. Previous to this, a Conservatoire of music had been founded at Agram, but it was not until 1846, when Vatroslav Lisinski's popular opera 'Ljubovi zlova' was given, that Croatian art-music gained notice.¹ Lisinski, Ferdo Livadić, Ferdo Rusan, Ivan Zajc and his pupil G. Eisenhuth, the historian V. Klaić, and the young composer Vilko Novak have contributed to the lyric music of Croatia.² F. Z. Kuhšč's large collection of South Slavonic folk-songs is of great value. The composer of the Croatian national anthem, 'Liepa naša domovina,' was an officer named Josip Runjanin.

All the Serb songs are of remarkable beauty and expressiveness, and although they resemble the Russian songs as regards their scale and tonality and the same elastic metre prevails, yet the melodies are more sustained and flowing. And

¹ *Musik in Croatia*, by Ferdo Miler, p. 174 et seq. in *Ost.-ung. Mon.*

² Although Haydn was a Croatian by birth and freely used his native folk-songs in his instrumental works, he is rightly classed among German composers. But the remarkable resemblance between his greatest German song, 'Gott erhalte,' the Austrian National Hymn, and a folk-song from the Bistritz district of Croatia cannot be passed over in silence. It has given rise to much discussion; see for instance, H. Reinson and P. Kuhšč in the *Allgemeine deutsche Musikzeitung*, 1893 (Nos. 40-42); also Hugo Coorât's article in *Die Musik*, Jan. 1, 1906; and Josip Haydn, by Dr. Kuhšč. The tune is as follows:—

EX. 3. *Stal se jesem.*

O. Flescher, whilst admitting the resemblance of Haydn's melody to the folk-song, prefers to trace its origin back to the Church, and quotes many examples of hymns which open with the same phrase as 'Gott erhalte,' thus:—

EX. 4.

from the Franciscan Requiem; and

EX. 5.

a Stabat Mater from Cantarium S. Galli, 1845 (see *Zur vergleichenden Liedforschung*; *Sammelbände* of the I.M.G., III. 2). See also Hadow, *A Croatian Composer*.

among these south-eastern nations the affinity with the music of the Arabs and other nations of Western Asia is more often indicated. The Servian drinking-songs are noticeable; grave, solemn, and devotional, they are quite unlike those of any other country; but as among the Serbs the hymns and secular songs are so frequently intermingled, this may be accounted for. Most of the Servian and many of the Bulgarian songs end on the supertonic, as in the Servian national hymn:—

EX. 6.

The Bulgarian songs are also quite irregular in metre, and far more fragmentary than the Servian:—

EX. 7. *Lento.*

The Bulgarians have a great love for the folklore of their country, and the volumes of the *Sbornik*, which the State publishes yearly, contain legends, ballads, and songs with music.

BIBLIOGRAPHY

The best information on the songs of the above nations is contained in the different volumes of *Die österreichisch-ungarische Monarchie* and the prefaces to the collections.

POLAND

The songs of the Poles are mainly presented to us in the form of hymns, or in the form of their national dance-rhythms. One of the earliest and most celebrated examples of the former, dating from the 10th century, is St. Adalbert's hymn to the Virgin ('Boga Rodziça'), which is engraved in plain-chant on his tomb

in the cathedral of Gnesen.¹ Here and at Dombrova on the Warka, it is still sung every Sunday. The hymn is, however, well known throughout Poland, as it is used on all solemn occasions, for triumphant or sad ceremonials and on the battlefield² :—

Ex. 1.

Another familiar hymn is the 'Hajnal,' which is heard every morning from the towers of Cracow to awaken the sleeping town. In the old sacred song-books called *Kancjonaly* or *Cancionales*³ preserved in cathedrals, convents, and in the libraries of the great nobles, many old secular folk-songs are to be found incorporated in masses and motets;⁴ likewise many *kolendas* which are peculiar to the Polish people. These *kolendas* (noëls) are old folk-songs, some dating from the 13th century, and are still sung in every house and street at Christmas time, and it is in one of these *kolendas* that we meet with the rhythm of the polonaise:—

W Złobie leży.

Ex. 2.

1. W złobie leży Ktoż po bierzy Ko-leś-o-wac ma le mu.

2. Je-su so-wi Chry-s-tu so-wi Dzis nam na-ród-zo rem-u.

Ras-tusz ko-wie przy-by-waj-cie, Je mu walśie znie

przy-gry-waj-cie Ja - ko Pa - nu na - sze - mu.

The Poles have ever loved their simple, dignified hymns, and are so familiar with them that they may be truly called their national music.⁵

Unlike the Russian and other Slavonic races the Poles are singularly exempt from Asiatic influences, and are far more European in feeling. At an early date they accepted the Roman Catholic faith; and while adhering to the Slav language, they adopted the characters of the Latin alphabet. The Poles are excitable and

more finely susceptible to romance than the Russians, and their music is full of fire and passion. Their songs are somewhat wanting in melodic invention, though this deficiency is hidden by the wonderful skill with which they are varied and embellished; and they are marked by a poetic melancholy which makes them attractive. In colouring, they are instrumental rather than vocal, as revealed in their difficult intervals:—

Ex. 3.

It is rather to their characteristic and striking rhythms, free, varied, and elastic and yet contained in dance forms, such as the *polonez*, *krakowiak*, and especially the *mazur* or *mazurek*, that they owe their rare beauty and brilliance. The *mazurek*⁶ is usually a melancholy yet quick and strongly accented dance-song in 3-4 time; the *tempo* is irregular and closely follows the words. These may treat of peasant occupations—hay-making, harvest, vintage, or of love, sorrow, parting, or meeting. Some of the oldest *mazurs*, *polonezes*,⁷ and more especially the hymns, take their name from a battle or historic event recounted in the text. The *krakowiak*⁸ is described by C. Miaskowski in a book of poems published in 1632, proving that this lively dance-song in duple time has long been popular in the country. And to the same date and genre belong the *gregorianki*—songs which the market-women of Cracow sing on the festival of their patron-saint.

In scientific and ecclesiastical composers Poland excelled for many centuries, but in the 17th century these gave place to Italian musicians who reigned supreme at Court. The first efforts to counteract the Italian influence were made by Kaminsky, J. Stefani, and J. Elsner in the second half of the 18th century. These founders of Polish national opera, by incorporating a large number of their country's songs into their works, won immense popularity. Elsner also wrote many volumes of songs, besides two treatises on the rhythm and prosody of the Polish language and its suitability for singing. Elsner's melodies are simple and facile; and though scarcely known beyond the borders of Poland, there, he is still one of the favourite composers.

Rather earlier in the same century the charming poems of François Karpinski were set to music—either to original or adapted tunes, and, sung by rich and poor alike, belonged in their turn to the national song-group, such for instance, as 'Yuz misionę zeszeł' ('Déjà la lune se lève'), which is still heard. In 1816 the poet Niemcewicz published his great work, *Śpiewy historyczne z muzyką i rycinami*

¹ St. Adalbert was born in 938. Ending life a member of the Polish hierarchy, St. Adalbert belongs to Poland; by birth, however, he was Bohemian, and, at one time, Bishop of Prague.

² For the hymn (translated into modern notation by F. Lessel) see Sowinski, *Les Musiciens Polonais*, p. 64.

³ The Bohemian Brothers first printed the *Cancionales* at Prague and at Cracow, in 1593.

⁴ This is not the place to speak of the interesting polyphonic school of music which flourished in Poland during the late 15th and 16th centuries, and of the work done by the so-called College of Roratists at Cracow. This school was represented by such composers as Pelastyn, Leopolda, Szamotulski, Szadek, etc., all of whom were clearly under Flemish influence.

⁵ Two hymns to the Virgin and a Resurrection hymn are especially celebrated, and these were printed by the Abbé Mioduszewsky in his collections of sacred songs at Cracow in 1838. For further information on these historic hymns, see E. Olof, *Polnische Liedergeschichte*, 1744.

⁷ See POLONAISE.

⁸ See CRACOVIANSK.

(Historical Songs with Music), and invited the best-known musicians (men and women) of the day to compose or arrange melodies for it. This work, which included some of the oldest hymns (amongst them the celebrated 'Boga Rodziąca'), war songs, and legends, stimulated the patriotism of the Polish nation, and is cherished by every class.

In most of the songs belonging to the early part of the last century the national characteristics are to be found; and especially is this the case with those of Ig. F. Dobrzynski, E. Jenicke, W. Kazynski, Ig. Komorowski, M. Madeyski, J. Nowakowski, A. Sowinski, C. J. Wielhorski, K. Wysocki, and A. Zarzycki. But while these composers are hardly known beyond their native country, Chopin and Moniuszko have attained a world-wide reputation. Though neither are wholly Poles by birth, they have closely identified themselves with the Polish national spirit. Moniuszko was born in Lithuania, but this country has long been connected with Poland.¹ Both he and Chopin have drawn from the beautiful Lithuanian folk-music, and especially from the *dainos*,² which, monotonous as they are, yet possess a peculiar charm.³ Moniuszko borrowed many traditional tunes from other Slavonic provinces, but all his songs, whether original or borrowed, are delicate, fresh, and varied, and through them all rings a strange but attractive personal note. They are deservedly loved and sung throughout Poland, Galicia, and Lithuania. Chopin's songs would take higher rank had they not been eclipsed by his instrumental works. Though partly of French extraction, the poetic, chivalrous, and patriotic spirit of the true Pole permeated Chopin's whole being. His seventeen songs, op. 74, were written at different periods of his life, and vary widely in character. The words of most are by his friend S. Witwicki, others are by A. Mickiewicz, Zaleski, and Krasinski. Some of the songs may be traced to traditional sources, so far as the melody goes,⁴ but Chopin's exquisitely refined harmony raises them to a high artistic value. Three of the most beautiful are the 'Lithuanian Song' (written in 1831), the tender and sad 'Melodya' (1847), and the strange 'Dwojaki koniec' (Two corpses), with the simple chorale-like air. But those in the mazurka form, such as 'Zyczenie' ('Maiden's Desire'), 1829; 'Moja Pieszezotka' ('My Joys'), and 'Pierścień' ('The Ring'), 1844, are more widely known and sung.

Ig. Paderewski resembles Chopin in one respect; he is national without being a slave to

it, and yet on hearing his songs one feels that no one but a Pole could have written them. In some an undercurrent of sadness prevails, veiled by a proud reserve, as for instance in op. 7. Others are brilliant and effective, and the accompaniments always developed and interesting.

BOHEMIA

When Christianity was first introduced into Bohemia, the influence of the Church was strenuously exerted to suppress the songs of the people; but the effort was made in vain, and the nation continued to sing its popular songs. The *Kolody* (*Ansingelieder*), which are still in use, are generally acknowledged to be of pagan origin. As in other countries, the early Christian Church allowed the congregation to join in the Kyrie Elision, and the oldest Bohemian hymn is merely a translation and development of this 'Krleš.' Tradition ascribes it to St. Adalbert⁵; it was really a prayer for peace and mercy, and was sung both in churches and on the battlefield as the national song. Another celebrated hymn, which holds the same place, was dedicated in the 13th century to St. Wenceslas, the patron saint of Bohemia.⁶ These national hymns, and the so-called *Rorate*,⁷ are a compound of liturgical melodies and secular folk-songs. They are peculiar to Bohemia, and were allowed to be sung in the vernacular, and thus belonged to the people not less than the Church. Then later, during the Hussite movement, a like popular spirit reasserted itself in the Church. The Hussites and the Bohemian Brothers chose many secular melodies for their hymns, and thus again the hymns passed into genuine folk-songs.⁸ One

¹ The Lithuanians are said to be of Sanscrit origin, and their language differs widely from that of other Slavonic nations.

² A term for secular songs in contradistinction to *pe'me*, sacred songs.

³ L. D. Rhesa collected a large quantity of old Lithuanian songs, and published them at Berlin in 1828, with remarks on their metre and rhythm.

⁴ Karasowski states that many songs sung by the people in Poland are attributed to Chopin, and chief among them one called 'The third of May,' *Fr. Chopin*, p. 132.

⁵ It is given in facsimile in Hostinski's article on Bohemian Music in *Die Ost.-ung. Monarchie*.

⁶ This hymn was composed by Arnest, Archbishop of Prague, and is given in Hostinski's article referred to above.

⁷ The *Rorate* are joyful Advent hymns, and some have been preserved in a beautiful *Cantionale* of the 14th century at Prague.

⁸ To John Hus (Huse) only one sacred song can with authority be attributed. 'Staia matka zalostiva,' which contains three strophes of equal length, and a melisma of three notes to a syllable, and is nearly diatonic.

important factor in music was the national opera. The first and for a long time the favourite opera was written by F. Škroup (or Škraup) and the poet Chmelensky. Škroup's name will, however, be best preserved by his famous song 'Kde domov můj?'¹ ('Where is my home?'), which remains to this day the most popular of Bohemian songs. Between 1823 and 1830 Chmelensky and F. Škroup, together with Tomaschek and Th. Kroř published many songs. Tomaschek was less successful in his songs than in his other compositions, but he was privileged to win Goethe's approval of his settings of German words. Amongst Kroř's many songs with Bohemian words his Hussite song 'Tešine se blahon' has become national.² Yet another stimulus to the cultivation of native songs was the collection edited by Chmelensky and Škroup entitled 'Venec' ('The Garland'), which contained songs by thirty-three Czech composers. Among them are the names of Ružička, Drechsler, Vašík (or Vašák) Skřivan, Tomaschek, F. Kittl, J. Vorel, Karas, and Rosenkranz, the author of the popular song 'Vystavím se skromnov chaloupka' ('Let us build a modest hut'). In later editions of the 'Venec' issued by other editors, songs were added by Suchánek, Stasny, Veit, and A. Gyrowetz. Again in 1844 the Moravian composer Ludwig Ritter von Dietrich published a volume of songs which included his fine patriotic song 'Morava, Moravička milá.' Among other song-writers there may be cited the names of Zvonář, Procházka, J. N. Škroup, Kolesovsky, Zelenski, K. Slavik, F. Laub, E. Napravnik, Shnerský, Vojáček, and V. Zavertal. To sum up the general characteristics of their songs, they may be described as a flowing and clear *cantilena*, recalling to mind the traits of Italian song. Their harmony and rhythm are very simple; and their sentiment and humour have the grace of spontaneity. By their own people these songs are dearly cherished, but in the scale of musical compositions their intrinsic worth is slight.

F. Smetana was the first to reproduce in his own original works the true Bohemian spirit, and mostly so in his national operas and symphonic poems. In the latter he has used many old folk-songs, and one called 'Tabor' is really a splendid polyphonic fantasia on the Hussite battle-song. Nor are the national songs forgotten in A. Dvořák's music. In the overture called 'Husitska' he introduces the St. Wenceslas and the Hussite hymns; and in another called 'Mein Heim' he has made use of 'Kde domov můj' as thematic material. Dvořák, W. Blodek, Rozkošný, Sebor, Hřimalý, Karel Bendl, and Reznicek have tried to carry the merry humorous

spirit of the Bohemian peasant into their music, and the beauty of Bendl's and Dvořák's tender yet brilliant gipsy-songs is incontestable. Antonín Dvořák is the most Slavonic and the least German of Czech composers. He betrays in his songs both the merits and the defects of his nationality and origin. He has all the Czech wealth of ideas, freshness of invention, and spontaneity of melody, but is somewhat lacking in self-control and intellectual grasp. The simplicity of his themes shows that the folk-songs of his childhood influenced the whole tone of his music; and his greatest works (such as the Stabat Mater, in which the solo numbers are unmistakably national in origin) are those in which he spoke in the idiom of his own country. Perhaps the most beautiful of his songs, after the already mentioned Zigeunerlieder, op. 55, are the four songs, 'Im Volkston,' op. 73, and the seven Liebeslieder, op. 83. In these we find richness of harmonic colour and bold, unexpected modulations combined with the simplest and most naive tunes. Throughout his songs we can trace a close and intimate sympathy with Franz Schubert, of whose works he made a special study. Z. Fibich's few published songs, on the other hand, clearly show the influence of Schumann in their delicate refined workmanship.

The extraordinary development of Bohemian music during the last forty or fifty years is mainly owing to the enthusiasm of modern Czech composers for their country's melodious folk-songs and merry dances. And if a Bohemian school of music can now be said to exist, it is as much due to the peasant as to the conscious efforts of Bendl, Smetana, Fibich, A. Stradal, and Dvořák. For every peasant in Bohemia is a real music-lover, and in this country at least it is not likely that the folk-songs will ever die out.

HUNGARY

The songs of Hungary comprise both those of the Slovaks and the Magyars, but the music

¹ This is the blind fiddler's song which Škroup wrote for J. Týl's musical play *Přilodážka*, in 1831.

² This somewhat commonplace song contains a chorus in the middle, and has been used by Liszt, Balfe (in the 'Bohemian Girl') and others. (In Kappey's 'Songs of Eastern Europe' the date 1460 is wrongly given.)

of the Slovaks who inhabit the north-west part of the Hungarian kingdom has such a close affinity with the music of the Slavonic nations that it requires no separate notice. The music of the Magyars,¹ which is generally accepted as the national music, is of Oriental origin. It should be observed that the Hungarian language has nothing in common with the Indo-Germanic. Together with the Finnish, and Turkish (and possibly Basque) languages, it stands isolated in Europe, and belongs to the Turanian or Ural-Altaic family.

Gipsy music also plays an important part in Hungary, but it must be clearly understood that Hungarian music is quite distinct from gipsy music. Indeed the gipsies do not compose; they simply imitate and perform the music of their adopted countries. It is difficult to discover with any certainty the origin of this wandering race; but they are supposed to have come from the North-West provinces of India, and to have entered Hungary as well as other parts of Europe in the beginning of the 15th century. It has been pointed out that the gipsies flourish most² 'among the Spaniards, Roumanians, and Hungarians, where the national music excels in originality, fantastic *rubatos*, and a certain rhapsodical spirit.' And it is a recognised fact, that although the same melodic intervals and rhythmic peculiarities occur in Tsigane music all over the world, it was in Hungary, where an affinity of scale existed, that gipsy music reached its highest point. Among the Magyar gipsies—i.e. those gipsies who live among the Magyars and can speak their language, the songs may have gipsy words, but the actual tune and rhythm are Magyar. Moreover, the gipsies rarely sing and nearly always play the songs of other nations, imparting their own fire, impetuosity, and embellishments to the music of their adoption.³ It is often difficult, when the gipsies play the *csárdás*, *verbunkos*, *hallgatós*, or *palatos* and other dances, to recognise the original folk-song on which they are based. So full of imagination are they, that the execution of the extremely difficult music always appears to be spontaneous and improvised. It delights Hungarians to hear their own music played and embellished by these wandering musicians, and thus it was in Hungary that gipsy music first became a recognised factor in Art. Many composers, such as Haydn, Hummel, and others, loosely and indiscriminately employed the words *all' ongarese* and *alla zingarese*, sometimes with

one meaning and sometimes with the other. Likewise Schubert, Liszt, and Brahms, when they coloured their music with the Hungarian character, took the real Magyar folk-songs with their peculiar rhythm and scale, and used also the grace-notes, arabesques, and ornaments which the gipsies had added to the melodies with such skill that they had become an essential feature of the melody. In short, it is clear that although the gipsies have done much to preserve the folk-music of other nations by imitation and adoption, they cannot be regarded as creators of national music in any strict sense.⁴

As in other countries, so in Magyar-land, the introduction of Christianity was followed by a burst of hymn-poetry. But so strong was the national feeling that the hymns were sung even in the churches in the vernacular instead of Latin; also it seems that the ecclesiastical tonal system never took the same hold of the sacred music as it did elsewhere. A few of these venerable hymns are still sung. Such, for instance, is one sung to the Virgin, by Andreas Vászrheli (printed at Nuremberg, 1484) and another to King Stephen, the patron saint of Hungary. Again, the influence of the Reformation was deeply felt both in music and poetry; and there arose among the Protestants a literature of hymn-music, such as had already been stirred among the Hungarian Roman Catholics. In 1560 the Roman Catholic Church forbade, under severe penalties, the use in Church of any popular Magyar songs, but the old collections of both churches offer proof that the tunes of the secular songs were always freely used, set either to Latin or Hungarian sacred words.

Further evidence of the cultivation of music in the 16th century is supplied by the Hoffgraff collection⁵ and by the songs of Sebastian Tinódi, both published by G. Matray in 1859. Tinódi, commonly called Sebastian the Lutenist, died about 1559, and was the last survivor of Hungary's wandering minstrels. His 'Cronica,' dedicated to King Ferdinand, contains songs of battles lost and won, of the joys and sorrows of the Magyar people, and the vicissitudes of their destiny. Such songs being truly national in their spirit soon passed into folk-songs, and are sung at this day.⁶ It should also be noticed that dramatic representations interspersed with songs were introduced by these wandering minstrels, harpists, and lutenists, and secured a great popularity.

Neither in the 17th nor 18th century did the development of music keep pace with that of poetry, except in sacred lyrics. The difference

¹ The origin of their language can hardly be traced with certainty. Hungarian philologists are divided; the 'Orientalists' assert its affinity with the Turco-Tartaric languages, while the 'Finnists' contend that it belongs to the Ugric branch of the Finnish group. That some likeness exists between the Magyar and Finnish language and music has long been recognised.

² See *Nationality in Music*, F. Korbay.

³ The true gipsy songs are never sung by the 'professional' gipsy in public. Those songs are reserved exclusively for themselves in their tented wanderings, and there they are never played but always sung. See Archduke Joseph's article in vol. vi. (*Ungarn*) of *Die Oesterreich-ungarische Monarchie*, 1902.

⁴ For further information about gipsy music, see Archduke Joseph's article; *Die Zigeuner in Ungarn*, *Die Oesterreich-ungarische Monarchie*, vol. vi.; L. A. Smith, *Through Romya Song-Land*, 1889, p. 3 et seq.; Liszt, *Die Zigeuner und ihre Musik in Ungarn*, Pressburg, 1861.

⁵ The collection contains nineteen songs, chiefly biblical narrative songs, by K. Bajnai, M. Esztergy, M. Tarjai, A. Farkas, and others.

⁶ For Tinódi's life see Áron Szűldás's *Répi Magyar Emlékek Tára*, a recent work on old Magyar poets.

between the melodies of the Roman Catholic churches on the one hand, and of the Protestants on the other is curious and worthy of note. The Roman Catholic melodies were of a florid and ornamented character, with passing notes and chromatic intervals, which may have been due to the instrumental music used in their churches. But the Protestants adhered to severely simple melodies in the style of Goudimel, for a time at least. As the hymns became folk-songs, the strong national rhythm prevailed, and changed their character. Thus:—

Ex. 1.

The most remarkable feature, both of the poetry and the music of the Hungarians, is the rhythm. At an early date their lyric poetry shaped itself into sharp and bold strophical sections, and their melodies underwent a corresponding division into distinct phrases and periods. Great diversity of accents, and the unequal length of the lines, impart richness and variety to the musical rhythm. In the music of some nations there is a rhythmical and metrical sameness, but in Hungarian it is far more varied. The prevailing metrical feet are the choriambus: | - - - - | and the antispastus: | - - - - |. Most tetrapodies are like this: | |, but constantly three or even five and seven-bar rhythms are met with. The correct accentuation and phrasing of Hungarian music is closely interwoven with the language. Every first syllable has an emphasis of its own, whether short, as in Ex. 2, or long, as in Ex. 3, and

Ex. 2.

Ex. 3.

hence the reason why no song begins with the up-beat.¹ The constant recurrence of syncopa-

¹ F. Korbay, *Nationality in Music.*

tion and the augmented intervals have already been alluded to under *MAGYAR MUSIC*, but the Hungarian method of harmonising the airs is peculiar, for where the Germans would employ 'contrary motion' they prefer 'direct.' Again, the scales in which the songs fall are very varied; numerous instances of the Dorian and Phrygian modes occur, nor are the augmented seconds in the minor scale so prevalent as is generally believed. In many, however, the tonality is most curious, such as

Ex. 4.

The following example begins with the peculiar 'call' found in many Hungarian songs²:—

Ex. 5.

Long pause.

All Hungarian music has a strongly individual character. Its abrupt transition from deep melancholy to wild merriment, its variations of tempo, its richly applied cæsuras, constant \sim on different beats of the bar, its unexpected modulations, and its many peculiarities, both melodic and rhythmic, give to it the charm of distinctive originality. A few bars of this beautiful folk-song³ will suffice to indicate the characteristics here named.

Ex. 6.

The time of Hungarian national airs, whether songs or dances, is mostly 2-4. Triple and compound time are rare, excepting 5-4 or 5-8, or 7-4 and 7-8, of which many examples may be found in any collection. The Hungarians are rich in their historic ballads relating to national events. For instance, during the Rakoczy period the celebrated and sturdy Kurutzen songs, or old Crusaders' songs, were revived and widely sung⁴ (see *RAKOCZY MARCH*). The ballads from the Szekler district are very old; they are mostly sad and simple, as may be seen from this example.⁵

² Given by Béla Bartók. An examination of any good collection of these folk-songs would prove the truth of the above remarks.

³ Called 'Autumn' in J. Kappey's 'Songs of Eastern Europe.'

⁴ Julius Káldy published in 1852 about thirty 'Liedweisen aus der Thekly- und Rakoczyzeit,' under the title of 'Kurutzenlieder.'

⁵ This was taken down from the lips of the peasants by the enthusiastic folk-song collector, Béla Bartók.

Ex. 7.

Slow.

Many districts have kept strictly to their own special songs; and have jealously excluded any outside influence or innovation. Such are the above-named Szekler ballads, the oldest and the most beautiful of the national Hungarian songs; or the Pusztén songs, in which the true Magyar peasant life is reflected, and the Betyar songs. The different classes of songs also fall into clearly distinct sets, such as love and wedding songs, drinking, soldiers', peasants', funeral, and satirical songs, all of which M. Jokai has described in an interesting manner.¹

The excitable temperament and sensitive organisation of the Hungarian render him keenly susceptible to the refinements of melody and rhythm; to those qualities he owes also his wealth of poetry and songs, which are of unsurpassed beauty as regards national music. But, on the other hand, the exclusiveness with which he clings to his own music and his neglect of the music of other countries has proved a hindrance to the progress of his musical cultivation. The list of Hungarian composers does not present many celebrated names until we reach the 19th century.

The first national opera ('Béla's Flight') was written in 1823 by Ruzsicska, and though a slight work it contained some songs which immediately became popular. Heinisch and Bartay followed, but the first unmistakably successful opera was Franz Erkel's 'Maria Bathori,' given in 1840, with words by the famous Benjamin Egressy; and Erkel may with justice be designated as the creator of the Hungarian national opera. Erkel was also a prolific composer of songs, some of which were embodied in his operas; and he was the author of the Hungarian national hymn. Other successful writers of opera were F. and K. Doppler, Reyer, K. Huber, Szerdahelyi, A. Erkel, G. Császár, and most of these composers freely used their country's folk-songs. Moreover, there is a specifically Hungarian form of drama called the folk-play (*Völksschauspiel*), the matter for which is taken from the domestic life of the people, and its music consists entirely of folk-songs and folk-dances. E. Szigligetti was the originator of this form, and J. Szerdahelyi, Ig. Bognár, Jul. Káldy, Jul. Erkel, A. Nikolits and others have contributed to establish it. These folk-plays have at least

served to rescue many beautiful melodies from oblivion.

Among the song-writers of the 19th century, who adhered to the national school, the best-known names are Michael Mosonyi² and his pupils, the two Erkels and E. Mihalovich. The Magyar songs of this last-mentioned composer are more especially beautiful and poetical. Béla M. Vágvölgyi is also worthy of notice on account of the originality and popularity of his songs entitled 'Szerelmi dalok'; and not less worthy of notice is his valuable collection of national airs under the title of 'Népdal-gyöngyök.' Other names may be cited, such as E. Székely, Cornel, L. Zimay, K. Huber, Abrányi senior (his ballads are essentially Hungarian), E. Bartay, E. Moór, S. Bartalus, and V. Langer, whose song-cycle 'Ögyek's songs' is especially noteworthy. Benjamin Egressy likewise maintained a great popularity among the peasants and burghers during the first half of the 19th century. His songs may be found in every national collection, together with those of E. Szentirmay, Limbay, Simonffy, Erkel, Horváth, Füreidy, Janko, Bolla, Zagonyi, etc.

F. Korbay's songs, either original or arranged, are well known in England. In the two volumes entitled 'Hungarian Songs,' and the volume of 'Twelve Magyar Songs,' Korbay has taken some of the most beautiful songs of his country,³ to which he has added skilful and interesting accompaniments, keeping the while true to the national characteristics of harmony and rhythm. Some of the songs included are of Slavonic origin, as for instance⁴ 'Azt mondják nem adnak.' Neither Volkmann (Hungarian by adoption) nor Goldmark has added much to song literature, though both have incorporated the spirit of the national songs in their instrumental works.

The greatest Hungarian song-writer is Franz Liszt; although considering the fact that his larger number of his songs have German texts they would be more accurately classed as belonging to the German school. Moreover, the national elements—the Magyar rhythms and melodies, and the gipsy ornaments which abound in his instrumental music—are, with two exceptions—'Farewell' and the 'Three Gipsies'—absent from his vocal music.⁵

Among Hungarian song-writers of the present day, Emil Abranyi, Pista Dankó, Béla Bartók, and Ernő Lanyi stand on a high level. Many, such as Erdélyi, Bartalus, Káldy, Bognár, Bartók and others, have devoted their time to exploring, collecting, arranging, and publishing

² His real name was Michael Brandt.

³ Amongst them several by Elemér Szentirmay, Benjamin Egressy, Füreidy, Kálmán de Simonffy, etc.

⁴ (Vol. I. No. 13.) Even among the collections of true Magyar songs unmistakable Slavonic melodies are to be found. The external evidence of their origin may lie in the less strongly marked rhythms, the flattened sevenths and the absence of augmented intervals, but also it is clearly shown in the whole character of the song. Compare, for instance, the above-mentioned song, vol. I. No. 13 of Korbay's 'Hungarian Songs.' 'No, they say,' with No. 3 of the same volume.—'Far and high the cranes give cry.'

⁵ For detailed descriptions see Liszt; also Vogel's essay published by Kahnt, Leipzig, 1887, and Finck's *Songs and Song-Writers*.

FINLAND

Finland (Finnish *Suomi*) is 'the land of a thousand lakes,' vast stretches of moors, deep silent woods, and long dark winters. These elements and scenery are reflected in the gloomy, mystical, fantastic yet monotonous poetry and music of the in-dwellers. No country is more poetic than Finland, as the *Kalevala* proves. This glorious national epic of nearly 23,000 verses has been transmitted from generation to generation from long past ages. The Finns also possess a very large quantity of lyric songs and ballads; and to Elias Lönnrot (who died in 1884) the credit is due for having given the nation these two treasures in a collected form: the national epics which form the *Kalevala* and the collection of lyrics which are entitled the *Kanteletar*.

The Finnish language, a branch of the Finnish-Ugric stem, is peculiarly melodious and full of open vowels. The verse metre is simple, and consists mostly of trochees, four times repeated—the last foot being lengthened in order to mark the close of the line:

hūwā | kellō | käuwās | küülüū

This is the usual explanation of the five-beat rhythm in the music, which is the commonest in the old Finnish songs or *runos*,¹

¹ *Runo* or *runolaulus* means 'air' or 'ballad,' and has nothing to do with the Anglo-Saxon runes or runic writing-stones.

Ex. 1.

songs of Western Europe, some of the Finnish melodies have their basis in the ecclesiastical modes; but there are traces of an older, and as yet unfathomed and unexplained tonal influence which gives a peculiar interest to the music of this country. Those which come from the southern part of Finland, where nature is less severe, possess a certain idyllic cheerfulness, and many which are sung along the coast are undoubtedly of Scandinavian origin. These melodies range over a wider compass, the rhythm is more varied, and they are usually in common or triple time, and more often than not in our modern tonality¹ :—

Ex. 4.

The herdsmen's songs (*Paimen laulottamus*), as in Scandinavia, are numerous. They are closely akin to the notes of the herdsman's pipe, and of no definite form in tune or words.

Between the 12th and 14th centuries, Sweden took possession of, and christianised Finland, but it was only in towns and at Court that the Swedish language was used. Finland has always been an apple of discord between Sweden and Russia, and the perpetual wars hindered this country's artistic development. Finally, since early in the last century (1809), when it was conquered by Russia, strenuous efforts towards its complete Russification have never ceased. It is, however, highly improbable that Russia will ever succeed in taking away from Finland her own peculiar character and culture. Her national poetry and songs have long stood alone and aloof, independent of foreign bondage and influence.

The modern history of music in Finland begins early in the 19th century, when F. Pacius and B. Crusell, both Germans by birth, settled there. By using Finnish folk-songs in their works, and taking the words of Finnish poets, such as Runeberg, Qvanten, Topelius, etc., for their national songs and hymns, they awoke the spirit of patriotism in Finland, and hence have been justly called the fathers of Finnish music. Pacius, who died at a great age in 1891, wrote many fresh and effective songs, but his name will live for having given Finland her national hymns: 'Our Country' ('Vårt Land') and 'Finland's Song' ('Suomen laulu'), which every Finn knows and sings from his childhood. (See Ex. 5.)

His son-in-law, Karl Kollan, wrote also patriotic songs in the peculiar march-like rhythm which is popular in Finland. Crusell was a

Ex. 5.

prolific and favourite composer, but his melodies are commonplace. K. Greve, L. Bergström, M. Wegelius, Ph. von Schantz, G. Wasenius, F. Ehrstrom, K. Flodin, S. Linsén, H. Borenus, R. Faltin, and a younger generation which includes O. Merikanto (a very popular but somewhat shallow writer), O. Katilainen, P. Hannikainen, and S. Palmgren all belong, more or less, to the same school of song-writers. Whilst introducing many of the old Finnish folk-songs into their works, and choosing the words of Finnish poets for their songs, the music practically belongs to the German Mendelssohn-Spohr period, and cannot in any sense be called racial.

The true national period of Finnish music begins with R. Kajanus. Imbued with the classic-romantic traditions, yet heart and soul a Finn, Kajanus drew his inspirations from the *Kalevala*, and did much to originate and stimulate interest in his country's music. But the actual representative of Finnish music is Jean Sibelius. His art reflects the grave and austere beauty of Finland's scenery and poetry, and expresses the inner life of the people—the despairing and passionate struggles and yearnings, the childlike simplicity and proud melancholy. Hence the worship Sibelius evokes among his countrymen, and his power and influence over his young disciples. His songs, whilst original, dramatic, and powerful, are the true counterpart of the Finnish folk-song. Essentially modern in feeling, yet Sibelius uses frequently the old, simple scale, limited harmony, and the curious uneven rhythm of the folk-songs. One of his most beautiful songs, with a modal melody, is 'Men min Fogel märks dock icke'; 'Svarta Rosar' ('Black Roses') is effective; and 'Atinares Säng,' perhaps the best known, is a fine war-song in march-rhythm. If Sibelius be the lyric and dramatic representative of Finnish music, A. Järnefelt may be called the epic. He has written many songs, but it is the peculiarly national ballad-like feeling in his orchestral works which arrests attention. Mention must also be made of Ilmari Krohn and E. Melartin (born in 1875), whose songs are of distinct merit.

The enthusiasm, patriotism, zeal, and activity of the younger generation of composers, combined with the keen interest and research by students and historians among the national

¹ For some of the most beautiful, see G. Hägg's collection, 'Soreimmat Soinnut Suomesta.'

treasures of poetry and song, indicate the prevalence of a new movement in Finland's music.

SCANDINAVIA

To this group belong Sweden, Norway, Denmark, parts of Finland, Iceland, and the adjacent islands. There is a great affinity between the Scandinavian languages. At the present time Danish is the language of the educated class in Norway, although it has a harder pronunciation.² And in an article written early in the last century, entitled *Alte Volksmelodien des Nordens*,³ it was pointed out that the Swedish songs only differed from the Danish in dialect and not in language. Danish is also as much spoken as Norwegian in the Farö Islands,⁴ where also many Icelandic and Danish songs are heard.

The poetry of Scandinavia is peculiarly rich in ballads, legends, and tales of ancient and mediæval warriors on sea or land—the heroic element being abundant, while the lyric element plays little part except in the refrains to the ballads. The Scandinavians have always been a music-loving nation, but not until comparatively recent times have systematic collections of their folk-music been made.⁵ Collectors have found great difficulty in taking down the music of the *Kämpavisor*,⁶ owing to the free declamatory way in which they were sung. The formal melody occurs only in the

refrains, or *Omkväde*, of the *Kämpavisor*. The *Omkväd*⁷ (Danish *Omkvæd*), which is undoubtedly of very ancient origin, forms an important part of northern songs.⁸ It may be a line at the end of each verse, used to strengthen the meaning of the poem, or a line interpolated in the middle of the verse corresponding with its contents; or it may contain satirical or contemptuous remarks sung by a chorus; or it may only concern the reciter, applauding and encouraging him.⁹ Musically the *Omkväd* was the most important part of the song, and remained always intact and unvaried, whereas the actual song was often improvised or changed according to the solo-singer's desire. In the Farö Islands, for instance, the old ballads are still sung to the mediæval dances, and collectors often find variants in the songs themselves, whilst the refrains are identical in every part of the islands. The *Omkväd* naturally influences both the form and harmony of the songs. It necessitates the extension or repetition of a musical phrase, and sometimes a change of time and accent, which impart a great freedom of form to the Scandinavian songs. Again, if the song be in the minor, the *Omkväd* would be in the major, or *vice versa*; also if the song be sung as a solo, or in unison, the *Omkväd* is most frequently sung in parts.

Och Jungfrun.

Ex. I.

Och, jungfrun hon skul-le sig åt ot-te sän-gen gå;
 Oh! the maiden she hurries to even-song;

OMKVÄD.

Tiden gör mig lång. Så gick hon den vägen åt
 Time is long. So she went the way hy

höga berget låg; Men jag vet att sor-gen är tung.
 the high hill; But I wot that sorrow is heavy.

These refrains are universal in Scandinavian songs, and occur as often in other forms as in the *Kämpavisor*.

It is a well-known fact (and has been briefly alluded to in several sections of this article) that some of the most famous folk-songs of different countries are founded on the same subject, whether it be a legendary or historical event, or an incident of ordinary life. The accessories of course vary, and impart a local colouring to each version of the song, but the central theme is in all the same. In like manner the same tunes are the property of

¹ *Suomalaisen Kirjallisuuden Seura*. Dr. Ilmari Krohn says that this publication, which is still in progress, will, when completed, be the fullest and most systematic collection.

⁴ *Tans, Dichtung und Gesang auf den Färöern*, *Sammelbände* of the I.M.G., II. 11, pt. II, 1902, H. Thuren.

⁵ T. Norblad, in his *History of Swedish Music*, speaks of certain isolated collections, such as 'Petri Piae Centones,' dated 1682, which contains folk-songs written in parts to sacred words. He calls attention especially to the melodious 'School and Spring Songs.'

⁶ That is, the heroic epic folk-poetry or ballads of the Middle Ages. The wandering players called *Leikarar* (or in modern Danish *Legere*) were the professional preservers or 'spreaders' of Scandinavian music at that period, and are mentioned in the old chronicles as honoured guests of the northern kings and nobles.

⁷ *Om* (German *um*) = round, about; *Kvæd* = song, singing, 'quoth.'

⁸ Jamieson, in his *Popular Ballads and Songs*, Edinburgh, 1808, remarks: 'In our ancient songs equally remarkable and incomprehensible *Omkvæds* occur.'

⁹ Glejer contends in his *Seneka Folkvisor*, p. 228, that the *Omkvæde* had no other significance than that the extemporiser of the song or the listener should use them to gain time—the one to produce his own thoughts, and the other to remember what he had just heard.

different countries.¹ Their identity may not, perhaps, be detected at first, beneath the disguises in which it is enveloped by national varieties of scale and rhythm and harmony; but it is certain that closer examination would establish many relationships hitherto unsuspected. An especially strong affinity exists between the English, Scotch, Welsh, German, and Scandinavian folk-poetry. This interesting subject, which is well worth separate study, can only be dwelt on shortly, and a few examples given. Geijer in his 'Svenska Folk-visor' quotes three lines of a Norwegian folk-song, also heard in Wermland and Småland—

Månan skinar (the moon shines),
Dödmän rider (dead men ride),
Är du inte rädder än, Bolla?
(Are you not afraid thereof, Bolla?)

which correspond to the German Lenore ballad²—

Der Mond scheint so helle,
Die Todten reiten schnelle,
Feins Liebchen! graut Dir nicht?

Geijer also gives the Swedish version of the legend of the Swimmer,³ the classical story of Hero and Leander, which has a local habitation in Holland, Germany ('Ach Elslein'), Russia, etc. 'The Jolly Beggar' of Scotland is identical with the 'Bettlerlied' still sung in many parts of Germany and Sweden.⁴ The 'Edward' ballad as given in Percy's *Reliques* is the well-known Swedish 'Sven i Rosengård,' the Danish 'Svend i Rosensgaard,' and the Finnish 'Welisurmaaja.'⁵

of ours! A - wait me late or never.

Ex. 4.

Welisurmaaja.

The tunes of the three last-named countries appear to have a common origin, but the tune of the 'Edward' ballad cannot with certainty be traced. Still, as Engel points out, many of our old English tunes bear a strong resemblance to the Scandinavian, both in character and construction; and the remarkable affinity, especially between the Welsh and Danish songs, has been noticed by Dr. Croft and others.⁶

But although the Scandinavian nations may have many songs in common, it is evident, on comparing as a whole the collections of the different countries, that there is a great difference in their general character.⁷ The Swedish folk-songs are the most beautiful and poetical, and though tinged with melancholy they are not gloomy and tragic like the Norwegian, nor monotonous and regular like the Danish. The latter, however, possess a peculiarly idyllic and pastoral beauty of their own; they recall the upland meadows, fertile plains, and wooded valleys of the country. The 4- or 8-bar rhythm is usually clearly defined, independently of the refrain⁸ :—

Ex. 5.

⁶ Engel says, 'One of the most popular of the Welsh tunes, "Ar hyd y nos," is also current in Denmark, especially among the peasantry in Jutland. It may be worth noticing that Jutland is generally believed to have been inhabited in ancient times by the same Celtic race which we find in Wales. But whether the tune originated in Denmark or in Wales is a question which will probably never be solved' (*Introduction to the Study of National Music*, p. 360). In the introduction to his *Ballad Book*, Allingham calls attention to the similarity between many Scotch ballads, such as the 'Douglas Tragedy,' 'Mary Colvin,' 'Clerk Saunders,' and others, and those contained in the Swedish Folk-song collection by Ahelius and Arvidsson. See also Motherwell's *Minstrelsy, Ancient and Modern*, Glasgow, 1827.

⁷ Berggren, the great Danish collector of folk-songs, draws attention to the close connection between the word-accent and the melodic outline of the three nations' songs.

⁸ This is from the old song-cycle, 'King Dietrich Bern,' and is one

The northern melodies usually begin with the up-beat, and by preference with the step of the fourth (as 'Och Jungfrun'). They are very frequently in common or 2-4 time, and adhere to the simplest modulations. The phrases are not repeated on different steps of the scale as in so many other countries, and this gives the melodies great variety. The 'Vermelandsvisa,' one of the most beautiful folk-songs in the world, exemplifies the above qualities; it begins thus:—

Ex. 6. *Vermelandsvisa.*

It may be safely asserted that nine out of every twelve Scandinavian songs are in the minor, or partly so, for many begin in the minor, and end in the major or *vice versa*. Some of the older melodies recall the Church scales, and especially the Mixolydian and Phrygian modes, but these occur most frequently among the Norwegian and Danish songs.¹ The epic songs which have been collected in Telemarken (in the S.W. of Norway) are evidently of great antiquity, as for instance, the following relating to Sigurd's fight with the dragon, with its curious rhythm and melancholy original melody.²

Ex. 7.

Slow.

Important sections of the people's songs are those of the foresters and wood-cutters and the herdsmen. The words of these songs are often mere exclamations, and contain no formal verses. The herdsman or girl calls the cattle home from the mountain-side, either with the cowhorn or *Lur*, or by singing a melody with

the echo formed on that instrument. Another class of songs are those of the sailors and fishermen. Many old ballads relating the brave deeds of the sea-fighting heroes are to be found in the Swedish and Norwegian collections, and many typically nautical songs in the more modern.³

The national dances have greatly influenced the melodies, though the *Syvspring*, *Slängdansen*, *Halling*, and many others are not usually accompanied by singing.⁴ The famous ring or chain-dances, and children's game-songs, and certain festival-songs (such as the old May-Day and Epiphany songs) are relics from mediæval times. In the province of Dalecarlia the 3-4 time dance-songs are especially cultivated; one called 'Necken's Polska'⁵ is widely known. The Norwegian *Springer* is its equivalent. Both dances are sung, whilst the drone fifths in the bass show the old national instrument used. The *Hardangerfele* (*fele*=fiddle) belonging to the Norwegian highlands is the most perfect of their instruments, but it is only used for marches and dances. The peasant marks the time by double tapping of the toe and heel uninterruptedly, playing all the while brilliantly. The richest districts in national songs are Telemarken in the S.W. of Norway, the centre of Jutland,⁶ and the southern part of the Farö Islands. These islands were ever in close connection with Iceland, and many songs show their Icelandic origin. Doubtless the Icelandic Sagas incited many Scandinavian songs, and the poetry and language of this island have much in common with the rest of Scandinavia; but the music is of such a totally different character that a few words must be devoted to its most salient points.

Iceland has ever been a land of history. With true love and devotion its inhabitants have preserved their old tales, traditions, and customs. Their language, which the Norwegians brought with them when they settled there at the close of the 9th century, remains unchanged, as also their strangely mediæval music.

The chief source for studying Icelandic music is the Arnarnagunnar MS. in the University Library at Copenhagen. And if we compare this collection with those of a far later, or even quite recent date, we find the same forms now as then. There has been no development of music in Iceland; it has been stationary. Iceland, indeed, adopted the form prevailing in the Middle Ages, and has clung to it up to the

³ See L. A. Smith's *Music of the Waters*, p. 218.

⁴ This does not apply to the Farö Islands, where musical instruments are practically unknown. Here the inhabitants are passionately fond of dancing, and, as mentioned above, accompany their dances with singing the old epics and ballads.

⁵ Lindgren in his *Ör Svensk Musikens Häfder*, p. 137, tells us that the Polska is not of national origin, but was introduced from Poland in the 17th century in the Lute-books under the name of *Poloneska* (polonaise).

⁶ This district was called the 'knitting-district,' because until quite recently the peasants used to meet during the winter evenings in different houses knitting woollen goods, and relating or singing tales, songs, ballads, and legends. Their wealth of songs was so great that in many places the same song was not allowed to be sung more than once a year.

of the few early northern songs preserved in writing. As here given it was noted down in 1875 by J. Lorentz, an organist at Copenhagen.

¹ There are many examples of modal tunes in Kristensen's *Øydske Folkelviser*.

² Thus given by Lindemann. In Telemarken the refrain is often called *Stein*, but the *Stein* consists really of improvised verses of love or satire, sung on certain festive occasions and gatherings, to traditional tunes. See Landstad and Dr. von Ravn in Mendel's *Lexikon*.

present century. The music of her secular songs¹ is of an ecclesiastical character; instrumental music hardly exists; the old scales or modes are retained,² for the wave of modern tonality which swept over Europe in the 17th century never reached Iceland. An even stronger evidence of mediævalism than the modal tonality is afforded by the peculiar form of part-singing in Iceland, called *Tvisöngur*, which closely resembles Huchald's *Organum*. Examples are to be found in the Arnarnagnáan MS. of the 15th century; and although earlier traces of it are extant in other countries, Iceland alone has retained it for her secular music down to the present day. This is proved by the following example taken from the 'Icelandic Student's Söngbók,' of 1894³:—

Ex. 8.

NATIONAL SONG—*Island*.

Lento.

Given by PASTOR THORSTEINSSON.

Islandi far-æð-da frón, og haðsæl-da hrimhvíta móðir!

Tenor (Melody).

Hvar er þin foru-æð-da frægð frels-ðs og manu-dæð-in best?

Until the last generation the *Tvisöngur* held its own all over Iceland; but now in the 20th century it only exists in certain isolated localities. The increasing development of communication with other countries, coupled with the knowledge of musical notation, the spread of choral societies, and the publication of numerous collections of songs and hymns, have all combined to induce the Icelanders to adopt at last the more modern methods of music. 'The *Tvisöngur* is, therefore, fast dying out, and with it the last remains of an interesting episode in musical history.'⁴

The so-called Scandinavian school of music is of very recent birth; for until the close of the 18th century it was greatly under foreign influence. Thus, during the 16th century, the Court-music of Denmark was chiefly in the hands of Flemish musicians, whilst in the 17th, Dowland and many other Englishmen, besides French, German, Polish, and Italian composers, visited and settled in Copenhagen and Stockholm. The latter part of the 17th and the

first part of the 18th were monopolised by the ballet, and French melodies (especially in Sweden) predominated over all others. A fresh impetus was given to northern music by the operas and *Singspiele* of German composers, such as B. Keiser, J. A. P. Schulz, and Kunzen. And in the imitations of these by Weyse, Kuhlau, and Hartmann,⁵ Scandinavian folk-songs were first introduced on the stage. The compositions in which the vernacular was first used were the sacred and secular cantatas, oratorios and hymns, both by Danish and German composers, such as Iversen, A. Scheibe, and J. E. Hartmann in Denmark, and in Sweden, J. Roman, Per Frigel, and J. B. Struve. But the chief impulse towards a national school of music was given by the literature of the country. Towards the end of the 18th century the didactic school of poetry began to give way to a more natural lyrical style; and by the beginning of the 19th (influenced by the romanticism of Germany) a strong intellectual national movement arose in Northern poetry. It was greatly promoted in Denmark by the poet Oehlenschläger, in Norway and Sweden by the patriotic 'Norwegian Society,' and by the founding of the so-called 'Götiska förbundet' (Gothic union). About this time the first collections of national songs appeared. Poets and musicians became interested in the old epics and ballads, with their beautiful melodies, and their wealth of new materials both in ideas and form, and hastened to avail themselves of the treasure. Thus within the last hundred years or so a new school of music has arisen, containing in its ranks the distinguished names of Lindblad, Gade, Kjerulf, Grieg, Sjögren, Sinding, etc.

DENMARK.—In Denmark the homely, humorous, or idyllic *Singspiele* especially took root, and it would be legitimate to say that the *Kunstlied* originated in the theatre-songs. Some of these melodies by the elder Hartmann, Schulz, Kunzen, and Zinck—singing of social pleasures, friendship, and wine, or those of a more romantic and sentimental type—are still popular in Denmark, in the Faroë Islands, and far into the north of Norway. It is worthy of notice that the three founders of the Danish school of music, C. E. F. Weyse, F. Kuhlau, and J. Hartmann, were Germans by birth, and that a strong tinge of the German element has prevailed through the works of Danish musicians to the present day. J. Hartmann, the founder of the Hartmann family of composers, is the author of one of Denmark's most national songs, 'King Christian stood by the mast.' Weyse is considered the creator of the Danish romance. Full of romantic feeling, and possessing a fluent gift of melody, the songs from his *Singspiele*, his child-like, pious 'Morning and Evening

¹ See especially Ólafur Davidson's 'Íslenskar Skemtanir.'

² The Icelanders have an especial love for the Lydian mode with its tritone.

³ The parallel fifths do not sound so harsh if the melody is taken by loud full voices, and the second (upper) part by a few singers, very subdued, and the whole song sung very slowly and emphatically.

⁴ *Studien über isländische Musik*, by A. Hammerich (*Sammlung* of the I.M.C. I. iii. 1900), to whom the writer is indebted for the above information.

⁵ Kuhlau's romantic 'Der Erlenkübel' (1828), and later J. P. Hartmann's 'Liden Kirken' (1846), (the latter consisting almost wholly of folk-songs) are still popular in Denmark.

Songs,' and more especially his 'Nine Danish Songs' to words by the national lyrists Oehlenschläger, Ewald, Grundtvig, Heiberg, and Winther, are justly popular. Later in life Weyse devoted himself to collecting and harmonising two volumes of 'Gamle Kæmpewise-Melodier' (Old Hero-songs). He died in 1842. His contemporary, F. Kuhlau, also loved the simple, noble melodies of the *Kæmpeviser*, which he had noted down in his youth. These he used later with success in the romance form, and it is difficult to distinguish them from the genuine folk-songs of this kind. Still Kuhlau never cared for Danish poetry, and always preferred to use German words. Contemporary native musicians were less celebrated, and Sørensen, Claus Schall, and Niels Schiørring are names now scarcely remembered. But the improvement in literature due to the poets Oehlenschläger, Heiberg, Hertz, Hans C. Andersen, and the publications at Copenhagen of the numerous collections of Scandinavian folk-songs, naturally influenced and stimulated the musical feeling and inventive powers of the song-writers. The consequent development of Danish song we owe to J. P. E. Hartmann, Niels Gade, and P. Heise. The songs of the latter vary very much in merit, but his fine song-cycles, 'Gudrun's Sorg' and 'Dyvekes Sange' (words by Drachmann), have never received their due appreciation. J. P. E. Hartmann's songs are gloomy and northern in colouring, and in form less perfect than Heise's and Gade's. Among the best are the six to Winther's poem 'Hjortens Flugt,' and the nine entitled 'Salomon and Sulamith,' op. 52; but at the present day they sound somewhat old-fashioned. At first, Gade, who was steeped in the atmosphere of Schumann and Mendelssohn, wrote only German songs. But by degrees—influenced, doubtless, by his old master, Berggreen (the great folk-song collector)—he became more national in feeling, and joined the ranks of the northern romanticists, writing music to Oehlenschläger's and Heiberg's romances. His influence has been great over all subsequent Scandinavian composers, and Gade's cultured musical taste and true cosmopolitan feeling never allowed his art to become bounded by too narrow an horizon. Gade's lyrics are always expressed in the simplest language, and suffer from a certain poverty of rhythm. He shares with other Danes the preference for the monotonous, swaying 6-8 time, and he rarely modulates beyond the nearest keys. A group of composers who have treated the song in the same simple and popular way are: H. Rung, Barnekow, A. Winding, J. O. Hornemann, S. Salomon; and Gade's pupils, K. Attrup and L. Schytte. More individual and more developed in the accompaniment are those by Emil C. Hartmann, C. F. Hornemann, A. Hamerik, O. Malling, A. Enna, and notably R. Hansen and

P. E. Langemüller, whose 'Sulamith' cycle is interesting, and as well known abroad as in Denmark. A new note in Danish music has been touched by Carl Nielsen (b. 1865). He has written only a few, but remarkable songs, evincing in his rhythm and modulation a strong originality.

NORWAY.—Although Norway was for a time joined to Sweden, and in the past shared the destinies of Denmark, whose language it still retains, it ever remained the most independent branch of the Scandinavian kingdom. The people are intelligent and well educated, and intensely jealous of their national rights. Foreign music and literature never had the same influence in Norway as in Sweden and Denmark, and the *Singspiel* and the opera were never popular. The modern period in poetry and music began with the awakening of national life which received its first impulses in 1772, from the 'Norwegian Society';¹ from the national poets, Wergeland (called the Schiller of Norway), Welhaven, Munch, Moë, and Jensen; from the folk-tale collector Faye, the hymn-writer Landstad, and most of all from the folk-song collectors Bagge and L. M. Lindemann. The latter did valuable work in familiarising the national melodies of his country. He published them as psalms, hymns, songs, and dances, and his work was carried on by C. Elling. The first real song-writer of Norway was Halvdan Kjerulf, whose lyrics long suffered from unaccountable neglect. His two books of 'Sånger och Visor' contain songs of real beauty, as for instance, 'Lokkende Toner,' 'Kärlekspredikan,' 'Saknaden,' 'Eremiten,' 'Mit Hjerte og min Lyre' ('My Heart and Lute'), and 'Natten pas Fjorden.' The voice-part and accompaniments are well written and interesting,² and there is no straining for effect or originality. Among the song-writers born between the years 1837 and 1847, we find the same inclination to represent the national spirit in their art. But neither Winter-Hjelm, J. Selmer, C. Cappelen, nor even J. S. Svendsen, who wrote two books of highly expressive songs, touched the true note. This was reserved for R. Nordraak and Eduard Grieg. Nordraak was a cousin of the poet-novelist Bjørnson, and modelled his songs, which are of a homely and popular type, after Bjørnson's peasant-novels. Nordraak died young in 1866, but his patriotism and intimate knowledge and love of his country's songs exercised a strong influence on his friend Grieg, whose taste when young had hitherto been essentially German. Grieg's talent is curious and delicate. It is strongly stamped with his own individuality, and not without power,

¹ A band of patriotic Norwegians living in Copenhagen, who combined to found a native university in Christiania in 1811, and to recover their native independence in 1814.

² To a certain degree Kjerulf resembles the German song-writer Robert Franz. Both pay the same strict regard to the words and accent, and in both the accompaniments are often treated polyphonically. (See for example Kjerulf's op. 23, No. 2.)

humour, and pathos, but it is limited. His songs, romances, and ballads, especially those set to the northern poets Drachmann, Björnson, Münch, Moë, and Ibsen constitute a characteristic portion of his best work. Owing to the exigencies of the concise song-form, and to Grieg's close study of the folk-music, and his aim, above all, to be simple in form and melody, his songs, though essentially national in colour, never become wearisome or mannered. They may be lacking in intensity of passion, and in the deeper psychological qualities, but they are full of poetry and imagination.

An intimate friend of Grieg's, a celebrated pianist, Agathe Backer-Grøndahl, has written simple and expressive songs, which are very popular in Norway. Other song-writers, born in the second half of the last century, are: J. Holter, Ole Olsen, C. Sinding, Per Winge, and his cousin Per Lasson, C. Elling, J. Halvorsen, Andersen, Alnaes, and Sigurd Lie. The last-named highly gifted composer was born in 1871 and died young. He has left few songs, but they are of rare beauty and poetry. Sinding has an abundance of melodic ideas, and is full of energy, character, and expression, and the strength which works with simple means. He responds to every phase of northern thought; and such songs as 'Es schrie ein Vogel,' with its harsh colouring, or 'Viel Träume,' with its tender intimacy, or the fine national song 'Vi vil os et Land,' show the intensity with which he realises and reproduces a situation.

SWEDEN.—In the 16th century musical art in Sweden reached a high level. Gustav Vasa was a connoisseur in music, and encouraged composers of the Netherlands and Italian Schools to his court. The Thirty Years' War brought Sweden into contact with other European nations, and many Germans flocked thither. Under Charles XII., French music reigned supreme, and long held its sway over all native composers. The Düben family (Germans by origin), who settled in Sweden early in the 17th century, and have been called the 'founders of Swedish music,' hardly deserve this name, for though they did much to further and develop music in Sweden they were entirely under foreign influence. Gustav Düben (died 1690) wrote songs of the type of Heinrich Albert in Germany, whilst his brother Anders Düben, who inclined more to French music, wrote only little arias for the Court of the French chanson kind. In the 18th century the music of German and Italian composers, such as Fux, Graun and Handel, Scarlatti and Lotti, predominated, but simultaneously the Swedish composers J. H. Roman, Agrell, and Zellbell were pursuing the right road towards founding a national school, by using the vernacular in their vocal works. The opera, which has always played an important part in Stockholm, remained chiefly French under Dalayrac and Monsigny, though German

dramatic influence was exerted by Gluck, Naumann, Haefner, etc. The only dramatic composer of Swedish descent was the popular K. Stenborg, who used his native folk-songs in his operas, and led the way through Dupuy and Randel to Hallström, the real creator of the national opera.

The song of the Gustavian period (i.e. the close of the 18th century) answers exactly to that of J. A. Hiller, Schulz, Reichardt, and Zelter of Germany, and bore the same homely, popular character, without, however, being in any sense national. The forerunner of the true Swedish Song was Olof Åhlström, who published at the beginning of the 19th century a collection of eighteen volumes called 'Skalde-stycken Sätte i Musik,' containing songs by himself, by Haefner, Stenborg, Palm, and others. Many songs in this collection, as well as those by Dupuy, Nordblom, Crusell,¹ etc., still show the same tendency towards the Berlin School, but the words of Swedish poets were used, and attention was thus called at last to Swedish composers. A yet greater service Åhlström did was to edit the songs of that strange original genius C. M. Bellmann, under the title of 'Fredmans Epistlar och Sanger' (1790-95). These are in reality splendidly humorous pictures of Stockholm life, skilfully adapted to favourite foreign (chiefly French) and native airs; very few tunes are original, but they remain household words in Sweden to the present day.

Literature and music kept pace during the early 19th century, and both drank from the same national source. It is difficult to say whether poetry or music owes most to the so-called Gothic revival, of which Geijer, Afzelius, Tegner, Arwidsson, and Atterbom were the leaders. The first impetus towards the new lyric was given by Afzelius and Geijer in their publication of old Swedish folk-songs in 1814-1816.² The melodies in these volumes were revised and harmonised by Haefner and Groenland. A little later Erik Drake published another series, in which Afzelius joined. Arwidsson (a Dane by birth) devoted himself to the same subject, and published, between 1833 and 1837, three volumes of old war, hunting, and love songs; Bergström, Hoijer, R. Dybeck, and K. Södling following suit.

The earliest composers who breathed the romantic national atmosphere and sang the characteristic melodies of Sweden, were Geijer, A. Lindblad, J. A. Josephson, Wennerberg, Berwald, Hallström, Rubenson, L. Norman, and A. Södermann. The classic time of the Romanze belongs to the three first named. Geijer's songs are impregnated with the true

¹ Crusell would really be considered a Finnish composer, but the interests and destinies of Finland and Sweden have been closely interwoven. This indeed applies to most of the literature and music of the Scandinavian countries, and it is often hard to define to which country the several poets and composers belong.

² These volumes contain valuable prefaces and notes.

folk-song spirit, and are powerful and expressive, but Lindblad's won wider fame. These also bear the national stamp; they are pure, natural, unaffected, and withal really poetic and graceful compositions. Among the most interesting are those to Atterhom's words, especially 'Trohet.'¹ And others worthy of mention are 'Saknad,' 'O kom, nij droj,' 'Am Aaren See,' 'Strykningsvisa,' and the nine Heine songs which have more developed and original accompaniments. Lindblad's songs owe their fame and popularity in a great measure to having been sung by Jenny Lind. Josephson surpasses the others in the real lyric; and the melancholy tenderness which pervades his songs is a racial characteristic. Wennerberg's collection of duets, 'Gluntarne' (Scenes of student-life in Upsala), were once famous, but though his thoughts show independence, his musical treatment is somewhat amateurish. Norman was a truly idyllic composer, and amongst his songs the beautiful 'Skogs Sångar' and 'Månestrålar' should be better known. With the great ballad composer, A. Södermann, Swedish romanticism reached its highest point. Among his solo-ballads and songs, such as 'Tannhäuser,' 'Kvarnruinen,' and the 'Black Knight,' we find a great development in the accompaniment. Södermann filled the old forms with new dramatic life, and is therefore considered the great reformer of Swedish Song. Less well-known names are those of J. A. Hägg, A. Körling (whose songs 'Weisse Rosen' and 'Abendstimmung,' of the Mendelssohn type, are favourites), A. Myrberg, V. Svedbom, F. Arlberg (also a fine singer), Henneberg, Kjeller, Byström, Nordquist, A. Bergenson, etc. Among living song-writers, Emil Sjögren holds an important place. Grieg's influence may be traced in his harmonies and Schumann's in his rhythms, but withal he is an independent and interesting composer. The constant repetition of melodic phrases, and the sequences of harsh and ugly discords which occur in his songs, always have their meaning and justification. His settings of Geibel's Spanish Cycle cannot rank with Jensen's, but the beauty of such songs as 'I drommen du är,' 'Så far då väl,' or 'Dröm,' with its lovely vague harmony, and 'Alla mina drömmar,' with its strange impressive tonality, is incontestable.

During the last twenty-five years a change has come over Swedish music. The genius of Berlioz, Liszt, and Wagner has dominated the talents of the living representatives of Swedish romanticism. Of the youngest school of song-writers, Vilhelm Stenhammar, born 1871, stands pre-eminent. His father, P. W. Stenhammar, was a prolific composer of ultra-simple religious, old-fashioned songs. V. Stenhammar is equally successful in any form of song he touches, whether it be the ballad, such as his

fine setting of 'Florez and Blanchiflor,' or a little folk-song like 'Irmelin Rose,' or the true lyric, such as the splendid song 'Fylgia.' In freshness, warmth, and wealth of harmony and melody, none of the younger composers have surpassed Stenhammar. In W. Peterson-Berger's Swedish songs, 'Svensk Lyrik' and the cycle entitled 'Ut Fridolin's Lustgård,' the tender, melancholy national tone is reflected; whereas in his German songs, such as the 'Gesänge nach Nietzsche,' he is more directly under Wagner's spell. Hugo Alfvén, Tor Aulin, and E. Åkerberg belong also, with others, to this group.

In all the modern Scandinavian composers' songs there is the same strong feeling for tone-colour, which may be traced to the innate, deep-rooted love and reverence for the folk-music of their respective homes. And nowhere in Europe has the spirit of romanticism exercised a stronger and higher influence than in these northern countries.

THE NETHERLANDS

Under this comprehensive term are included the countries which extend from the North Sea to the Somme in France, comprising Holland, Flanders, Belgium, the Walloon country and the chief part of the old province of Artois. The population is partly Teutonic, represented by the Flemings; partly of Romance origin, represented by the Walloons. Two languages are spoken—Dutch and French, for Flemish is nearly akin to Dutch, and the Romance dialect spoken by the Walloons is closely allied to French, which is the official language of Belgium. Still, until the 19th century when Holland and Belgium were formed into independent kingdoms, the Netherlands was practically one country. In dealing with the folk-songs, however, a distinction must be made, as each division of the country possessed its own songs. Yet even so the subject is confusing, for while the official designation of 'Netherlands' is retained by what we now call Holland, the 'Spanish Netherlands,' which in the 16th and early 17th centuries played so important a part in history, and gave birth to the finest songs, comprised rather the districts of Flanders and Belgium. Again, the songs of the North of France and Flanders, and the Low German and Dutch songs, have so much in common, that to write the history of one is to write the history of the other.¹

The *Trouvères* of the 11th and 12th centuries, with their *langue d'oïl*, belonged equally to Northern France and to Belgium, and as they have already been mentioned under FRANCE it is unnecessary to refer to them again here. Further, the Old French and Flemish schools of music were practically identical, and the Gallo-Belgian School, whose most successful period lies between 1360 and 1460, was considered by other nations as French, and the composers indiscriminately called *Galli* (see *ante*, p. 542). But with the Netherlands School proper we are treading on different ground. This school penetrated into every cultured country in Western Europe, formed schools of its own, identified itself with other nationalities, and was held in universal esteem until, in the latter part of the 16th century, the Italians became the leading musical nation in Europe. This great school, however, was essentially polyphonic, and with it and its chief repre-

sentatives (such as Okeghem, Obrecht, Josquin des Prés, Gombert, Orlandus Lassus, and others) this article is only indirectly concerned. These prefatory remarks will explain to some extent the complex character of the history of song in the Netherlands.

Among the earliest traces of the *langue d'oïl* is the 'Cantique de S^{te} Eulalie' (without music), preserved in the Valenciennes Library, and belonging to the 9th or early 10th century.² This language of the *Trouvères* was spoken in Northern France and Belgium for some centuries, and during the 11th, 12th, and 13th numerous songs were composed which, with their melodies, still exist. With regard to the Flemish songs, Fétis says it is more difficult³ to decide with certainty whether they are as old as they are reputed to be. Of these, one famous song, to judge by the character of the poetry, reaches back to the Norman traditions of the 10th century.⁴ It is known by the name of 'Heer Halewijn,' and Willems, who published the song in 1836 with the original text, says it is still heard in Brabant and Flanders.⁵ The many versions of the melody make it impossible to date it with accuracy, but the following (in the Hypomixolydian mode) is considered the oldest and purest:—

Ex. 1. Heer Halewijn.

Heer Halewijn zong een lie-de-ki-jn, al die dat hoor-de

wou hi hem zijn, al die dat hoor-de wou hi hem zijn.

Although it is true that the aim of the representative Netherlands School (1425-1625) was polyphonic, it is a mistake to suppose that the work of these learned contrapuntists was the only form of music prevailing in the country at this time. National songs existed contemporaneously with it; and the tunes these great masters used as themes for their glorious masses, motets, and polyphonic chansons were practically their own folk-songs. That such historic French and Flemish tunes as 'L'Homme armé,' 'Cents mille ecus,' 'Forseulement,' 'Je me demande,' 'Myn Hert,'⁶ 'Het daghet,'⁷ were not merely worthy of local recognition is proved by their constant use throughout Europe.

² Fétis, *Histoire Gén. de la Mus.* iv. 485.

³ *Ibid.* v. 55 et seq.

⁴ Oscar Fleischer in *Ein Kapitel vergleichender Musikwissenschaft* (Sammelbände, I.M.G., I. i. 1899), shows the resemblance between the Halewijn melody and a Brittany ballad, 'Die drei Monniken' (see Villemarqué, p. 185), and the melody of a hymn, 'Siclus solare,' from a Neapolitan MS. of the 11th and 12th centuries, and discusses which is the older.

⁵ F. van Duyse corroborates this by saying that Pol de Mont (poet and folk-artist) heard the 'Halewijnslid' in 1896 in the environs of Leuven. (See *Het oude Nederlandsche Lied*, i. 13.) In this standard work Duyse practically includes all the songs found in the Netherlands with the words and tune of each, and their variants. The valuable preface explains the verse metre, rhythm, scales, and general form, and is indispensable to the student.

⁶ Used by Pierre de la Rue in a 4-part chanson. See Ambros, iii. 241.

⁷ Used by Clemens non Papa in a 3-part chanson. See Duyse, i. 124.

¹ See Coussemaker's *Chants des Flamands de France*; and Böhm's 'Alte deutsches Liederbuch.'

The Netherlands masters, however, rarely gave the whole melody even to the leading part, and seldom more than one *couplet* of the words, and hence the fragmentary character of the songs they bequeathed to us. But gradually the spirit of the folk-song began to influence their highest forms of composition, and they realised that in their *chansons*, *villanelles*, and *canzonettes*, written in four, five, six, seven, or eight parts, 'mechanical invention must be subservient to idea, and euphony and expression should equally be the objects of the composer.'¹ Amongst the works of Dufay, Binchois, Faugues, Busnois, and in Petrucci's 'Canti cento cinquanta,' there are songs which, in regularity of form and simplicity of character, rival the folk-songs. Nor are examples wanting in the minor works of Okeghem, Pierre de la Rue, Josquin des Prés, Gombert, Willaert,² Goudimel, Clemens non Papa, Jannequin,³ Arcadelt, and Orlandus Lassus, of secular melodies conceived in a strain of freshness, naïveté, humour, and brightness, or marked by a power of lyric expression belonging to a much later time.

The picture of an age and its culture is always vividly reflected in its folk-songs; it was therefore the natural result of the intensity of the impulse given to religious life by the 'mystics' that so great a number of sacred songs were created during the 14th century.⁴ The ground had already been prepared by the celebrated ascetics Greert Groote and Johann Ruysbrock, and the numerous sacred *Minne-songs*⁵ were the especial outcome of the mystic movement. About the middle of the 15th century the early *Rederykers*⁶ (who correspond with the German *Meistersinger*) substituted for the harshly realistic secular songs of the day their own carefully prepared sacred songs.⁷ For these they either altered the words of the secular songs to give them a sacred meaning, or they adapted totally new religious words, retaining the secular tune unchanged.⁸ And this practice prevailed in the Netherlands throughout the 16th and 17th centuries. In 1561 Tylman Susato published his 'Souterliedekens,' consisting of portions of the Psalms according to the rhymed Flemish version, set unaltered to the popular song-tunes

of the day. This publication was succeeded by Fruytlier's 'Ecclesiasticus' (1565) and the various Roman Catholic song-books, such as 'Theodotus,' 'Het Paradijs' (Antwerp, 1621), which similarly contained a mass of secular melodies. Whilst the Church scales were still in use the greater part of the earlier melodies were in the Dorian mode, though the Phrygian and Lydian were also represented.⁹

Very different in character from the sacred songs of the mystics, of the *rederykers*, of the Roman Catholics, or those which the Reformation produced, were the songs of liberty and patriotism sung a generation later during the Spanish oppression. Amongst other collections the famous song-book of the Gueux¹⁰ ('Geusen-Liedenboeckkens,' 1588), and Adrianus Valerius' 'Gedenck-Clanck' (1621-26)¹¹ (see VALERIUS), contain the classics of Dutch musical literature, and are historically of inestimable value. They give us the ballads of 'Egmont and Horn,' the 'Storm of Leyden'; the splendid political songs of satire on the Spanish generals, such as the 'Spotlied op de Bossu,' 'Spotlied op de Alva,' or the patriotic songs such as 'Ein Liedje op den Briel,' or 'De Geuzen bij Antwerpen,' and 'Wilhelmus van Nassouwe'—the Dutch national anthem. (See WILHELMUS VAN NASSOUWE.) These grand old Netherlands songs breathe a spirit of protest against tyranny, and of warlike determination tempered with resignation under disaster, which sets them on a distinct plane of their own. In many of the collections only the name of the tune (*stem*) is mentioned to which the song was sung. Such is the case with those in the 'Geusen Liederenboeckkens,' but Valerius has given the actual melodies as well. Many tunes are derived from foreign sources, and especial interest is attached to those of English origin, of which the following collections contain the most: 'Friesche Lusthof' (1621);¹² 'Gedenck-Clanck' (1621-26);¹³ 'Den singende Zwaen' (1664); 'Stichtelycke Rymen' (1624);¹⁴ 'Bellerophon' (1633);¹⁵ and Thysius's and Vallet's lute-books. At the time of Queen Elizabeth, when the cultivation of music in England was at its height, intercourse between this country and the Netherlands was most frequent. English traders arrived in Dutch harbours, English students studied at Leyden, English actors played in Amsterdam,¹⁶

¹ Neumann's *Hist. of Mus.* i. 388.

² In Willaert we clearly see the modern spirit, not only in what he did for harmony but also for his recognition of the value of the solo-voice. In 1536 he arranged some of Verdelot's madrigals for solo-voice with accompaniment of lute.

³ Woodbridge gives a lovely little song, 'Ce Moys de Mai,' by Jannequin, showing the transition between the two styles, where the harmony is in plain chords, but 'the polyphonic element is still present in the melodious flow and independent interest of the separate parts.' *Oxford Hist. of Music*, ii. 277.

⁴ See W. Bäumker, *Niederländische geistliche Lieder, Viertelfahrtschrift*, 1888.

⁵ All these songs deal with Christ as the Bridegroom for Whom the loving soul yearns.

⁶ For information on the guilds of poets and musicians in the Netherlands, see Motley's *Rise of the Dutch Republic*, i. 76 et seq.

⁷ For examples from the later *rederyker*, M. van Castelyn's songs (*Diverse Liederken*), see Duyse, ii. 1530 et seq. One of Castelyn's songs, 'Ghepeys, Ghepeys, vol van euvelfen,' is included in most collections.

⁸ In this manner many secular songs have been preserved intact, instead of only to a fragmentary or mutilated form, such as we have seen the polyphonic writers reduced them to.

⁹ Bäumker has given examples of these interchangeable sacred and secular songs from two old MS. collections: one is in the K. K. Fideikommissbibliothek in Vienna, and the other in the Königl. Bibliothek in Berlin. The tunes are nearly all to be found in Böhme's 'Altdeutsches Liederbuch,' and frequently occur again in Dutch collections. See also 'Geistliche und Weltliche Compositionen des XV. Jahrhunderts,' bearbeitet von Guido Adler and Oswald Koller.

¹⁰ Or 'Geuzen beggars.' For the origin of the word see Motley's *Rise of the Dutch Republic*, i. 432 et seq.

¹¹ Dr. A. Loman has harmonised a selection from the Geusenliedenboeckkens and the 'Gedenck-Clanck.' Both, with his interesting prefaces and notes, were published by the Maatschappij tot bevordering der Toonkunst for 1871 and 1872. (See VERAGENDINO.)

¹² J. Starmer.

¹³ See J. P. Land's article on Valerius's 'Gedenck-Clanck' in vol. i. of the *Tijdschrift der vereeniging voor Noord-Nederlandsche Musiekgeschiedenis*. (Land's references are to the 1st edition of Chappell's *Pop. Music*.)

¹⁴ Camphuyzen. ¹⁵ D. P. Pers.

and English soldiers fought side by side with the Dutch against the Spaniards. And it is clear that Dutch musicians were well acquainted with English ballads, for certain songs, such as 'Fortune,' 'What if a day' (identical with 'Wilhelmus van Nassouwe'), 'Barafostus' Dream,' and the 'Cobbler's Jig,'¹ were evidently favourites, as they occur so frequently. The last-named tune is used in the 'Gedenck-Clanck' for the song 'Wie dat sich selfs verheft,' and Valerius calls the stem 'Engelslapperken.' On comparing this Dutch song of satire on Alva's standard with the English version, it will be seen that not a note has been altered.

Ex. 2. *Wie dat.*

Wie dat sich selfs ver-heft te-met, wort wel een ar-me
duc d'Alf n beeld, tet spiijt ge-set, waer af-ge-tro-ken

sle-ter, u boosed daed, die ghij begaet bij al-len toch on-
be-ter,

Bij - dig is en strij-dig is niet on-ser Landen staet.

One of the most beautiful songs in this collection, 'Waer datmen sich al keerd of wend' (a fine patriotic poem by Valerius), set to the stem 'Pots hondert duijsent' slapperment' (named also by Valerius 'Allemande Pekelharing'), bears a strong resemblance to 'Walking in a country town.'³

Ex. 3. *Waer datmen.*⁴

² *Toussent* in some versions. See Starter's, from whom Valerius possibly took the tune.

³ Chappell, I. 117.

⁴ Thus arranged by Loman. (The opening phrase recalls the Swedish song 'O Wermeland'.)

woe-ste Zee, Als door het bosch de Leeuw.

Valerius has also included nineteen purely Dutch folk-tunes in the 'Gedenck-Clanck,' and one cannot fail to be struck by the bold sweeping melodic lines, massive structure, and stately dignity of these songs. The Dutch and North Flemish folk-songs have, in fact, much in common with the German Volkslied, which is explicable when we consider the consanguinity of the races, the resemblance of temperament, and the similarity of language and poetical forms.⁵ Many of the tunes are modal, and yet have a feeling for harmony which is unusual in such tunes. The melodies most frequently begin on the up-beat, and as the musical rhythm follows the words very closely⁶ frequent changes of time are necessitated, although the actual rhythmical figures present little variety:—

Ex. 4. *Het daghet.*⁷

Hot daghet in den Oosten, het lich-tet o - ver-

al hoe luttel weet mijn lief

ken, och waer ick he-nen sal!

The songs are by no means always in regular periods; constantly the first part consists of eight and the second part of five or six bars, or of five and seven bars each as in the 'Spottlied.' (See p. 590, Ex. 5.) Sometimes only one bar is added, as if to give emphasis to the last words. Melodic *melismas* are of frequent occurrence, even in strophical songs, and are probably due to the influence of the Church. And yet, paradoxical as it may seem, the songs never

⁵ It may be safely asserted that two-thirds of the songs given in Duyse's famous collection occur also in F. Böhme's 'Altdeutsches Liederbuch' and other German collections, with only slight differences in the words and melodies. As one example, take 'Daer staet een clooster in Oostenrijc' (Duyse, I. 478) and 'Es lieft ein Schloss in Oesterreich' (Böhme, 154). Böhme drew attention to this point in his preface, saying: 'The German and old Netherland folk-songs are indistinguishable, for from the last half of the 15th to the end of the 16th century they had a fund of folk-poetry in common. And amongst the songs contained in the Netherland collections (see especially those in the Antwerp Song-book of 1544) many were written both in High and Low German; and in the German collections (see for instance, Böhme's 'Biederlied') songs occur with Netherland text and sometimes with the mark *Arabantica* annexed. This interchange need cause no surprise when the close intercourse promoted by the Hanseatic League is taken into account.'

⁶ Following the verse-metre closely is peculiarly characteristic of Dutch folk-songs.

⁷ This 15th-century song is set to Psalm iv. in the 'Gouteliedekens' (1540), and was used by Clemens non Papa in a chanson for three voices, and published in Antwerp in 1558. It occurs also in a different form in the *Gueux song-book* (1578), set to 'Och God will doch vertroosten,' also in Camphuysen's and many other collections. See Duyse, I. 124.

Ex. 5. *Spotlied op de Bossu.*¹

Ma-xi-mi-lia-nus de Bos-su ben ick eeo Graef Ge-hee -
ten, ick heb ge-weest eijn ad - mi-ni-streel, de Oeu-sen te
doo - den prin - ci-pael, dít heb ick mij ver-me-ten.

lose their classical character of regularity of form.

Belgium being a bilingual country the folk-songs are divided into two classes, Flemish and Walloon.² The Flemish are more numerous and widespread; indeed they extend north into Holland, where they intermingle with the Dutch. The Walloon songs are more local, though they include all those sung in French or in the curious Walloon dialect.³ Just as the Flemish people show affinity with the German, the Walloons resemble the French. The grace and liveliness of the French *chanson*, the love the French have for satirical words and strongly marked dance-rhythms,⁴ are qualities exhibited by the Walloons. In the district round Liège a particular genre of satirical song exists, called *la pasqueye*, and amongst the numerous Belgian dance-songs, the 'Cràmignons' of the same district should be especially noticed. The following is a favourite:—

Ex. 6. *Cràmignon.*⁵

Faur' mohe! quan t'us sa-vér' tu? Wisse' doe?
po dris les ca - bus. Vo - chal vi-nov' l'a-
règne, Po v'ni ma-gni l'mohe. l'mohe, l'e-règne!
Tutti.
mohe, l'a-règne l'mohe. Faur' mohe! quan t'usavér'
tu? Wisse' don? po dris les ca bus.

The traditional ballads of the old French

¹ This song does not appear in the first editions of the *Gueux* song-book, but the melody is given in Luther's hymn-book of 1524 to words by Speratus, 'Es ist das Heil'; afterwards it was used by the Bohemian Brothers, and by the Lutherans in Antwerp in 1573. Winterfeld says in his *Evangel. Kirchenpsalm*, i. 41, that in its original form it was undoubtedly a secular folk-song.

² *Chansons pop. des provinces Belges* (preface), Ernest Cloosson. This dialect was dying out, but within the last twenty years efforts have been made by the Liège poet Nicolas Detrecheux and by folk-singers to preserve it.

³ 3-4 and 6-8 time are very common amongst the Walloon songs.

⁴ Terry and Chaumont's collection, from which the above is taken, includes over 200.

provinces, Lorraine, Picardy, Auvergne, and Provence, survive in the Ardennes. In the Walloon songs the *refrains* follow much the same lines as other countries; rhyme is by no means universal, and is often replaced by mere assonance; the dialogue form is very common, and consists of innumerable strophes.⁶ Modal melodies are frequently found amongst the Noël's and other religious songs. The profound sincerity and naïveté of the Noël's must appeal to all, and if a vein of realistic familiarity, attractive to the peasantry, is repellent to the more cultivated taste, none will deny that they possess a touching charm of their own, difficult to convey in words.

It is inevitable that songs handed down century after century should undergo changes, but this is less so in the Netherlands than in most other countries. Conscious of their value, Flemish and Dutch musicians have at all times been assiduous in forming collections of their songs and thus preserving them in their original condition.⁷ This has not been the case with the French and Walloon-speaking inhabitants of the country. They have depended on oral tradition, and hence their songs have suffered considerable deterioration in the course of time. Indifference to the folk-song steadily gained ground among this people, and their preference for debased tunes from the *vaudeville* and *opéra-comique* was fostered by inferior composers, who wrote in accordance with the prevailing taste. Fortunately this evil is now being counteracted by earnest musicians,⁸ who are devoting themselves to the task of rescuing the folk-songs from neglect, and issuing exhaustive collections from the various districts. The wealth of songs and their hearty have fully justified their labours.

After the 16th century, the glory of the Flemish school⁹ waned; the contrapuntal age was over and monody reigned in its place. From henceforth very few musicians of any importance devoted their talents to vocal music. As representative songs of the 18th century we may mention those by the Flemish composer G. de Fesch, who came over to England about 1730 and published there a volume entitled '*Canzonette ed Arie a voce sola.*' They are sentimental like the French songs of the period, regular in form, with fairly agreeable harmony. Of greater interest are the songs interspersed in

⁶ The (Flemish) lace-makers for instance have their own especial songs with apparently meaningless words, but which represent to them a given number or kind of stitch. Each worker takes up one of these endless verses in turn. See Lootens and Fey's *Chants pop. flamands*.

⁷ The efforts of the members of the *Maatschappij tot bevordering der Toonkunst* and their interesting publications have greatly contributed to this end. H. Rogge, J. P. Land, A. D. Lemaux, J. Röntgen, F. van Duyse, D. F. Scheutels, and Enschedé also deserve special recognition in this connection.

⁸ Amongst these the names of L. Terry and Chaumont, Lootens and Feys, L. Joret, E. Cloosson, O. Colson (the director of the Liège review *Wallonia*, which contains much information about the Walloon folk-songs), and the curé J. Bols hold an honoured place.

⁹ Technically, the term Flemish has no longer the same significance as it had earlier; that is to say, it is now more identified with Belgian than with Dutch art.

the short allegorical, mythological, and pastoral plays then much in vogue. Van der Straeten¹ gives as a characteristic example, a pretty little 'Bergère Flamande,' from Lambrecht's 'Vlaemsche Vrede-Vreucht'; but whether it was original or an adopted folk-song is an open question. 'Le Voegge de Chofontaine,' an opéra-bouffe by the Liège composer G. Noël Hamal, contained the favourite couplets and dances in the district in which it was written.² By degrees, however, these unimportant local operas died out,³ and composers sought their laurels in Paris. Both Belgium and France lay claim to Gossec and Grétry as national composers; and similarly Grisar, César Franck, and many others, who, although Belgians by birth, are practically regarded as French composers, having identified themselves with the French school.

BELGIUM.—The year 1834 witnessed the constitution of Belgium as a separate kingdom, and the formation of a Belgian nationality. Up to that date there are no songs worthy of mention, with the possible exception of LA BRABANÇONNE, the national song of Belgium, composed by Van Campenhout in 1830. The generality of composers had hitherto continued to use indiscriminately French and Flemish words for their songs, until within recent years a small group of musicians arose who avowedly are endeavouring to give Flemish art once more a national character. This has been designated the *mouvement flammingant*, and the foremost personalities belonging to it were P. Benoit, whose songs set to Flemish words are full of life and colour, and Edgar Tinel. The latter is an interesting composer with a strong individuality, but his songs are few. Many other excellent musicians, who have all written ballads and songs, joined this movement, such as Lenaerts, Wambach, and Jan Blockx, the most brilliant of them all. Mention must also be made of Blockx's pupil, Vleeshower, and of Van den Eeden, who succeeded Huberti as director of the Mons Conservatoire. Less exclusively Flemish song-writers are Eyken and Tilman, who chiefly confined themselves to sacred songs; Miry, C. Meerens, and A. Goovaerts, who wrote for the most part nursery or school songs; and Van Gheluwe, J. Radoux, A. Samuel, J. Meertens, G. Huberti, and E. Mathieu, who are the best-known names. Mathieu has set many of Goethe's ballads, in which the accompaniments are highly elaborate, and the melodies at times expressive. But they lack proportion and unity, and their great length detracts from their effect. In Mathieu's shorter songs the interest is better sustained. Meertens and Huberti have written songs both graceful and

melodious, and of a simple character; whilst those of Jan Blockx, G. Lekeu, Paul Gilson, and the younger school of composers, if somewhat eclectic, manifest originality, novelty, and boldness of invention. The curious phase of thought and the peculiar qualities shown in the literature of Belgium by the writings of Maeterlinck, Rodenbach, and Verhaeren, cannot fail to leave their mark also on the music of the period.

HOLLAND.—After the numerous song-books which appeared in Holland between 1600 and 1700, Dutch composers devoted themselves principally to instrumental music. Even on the title-pages of vocal pieces we find *om te singen of te spelen*; and Sweelinck's skillful organ and clavier variations on the songs were greater favourites than the songs themselves. As lutenists, organists, carillonneurs, or theoreticians, Dutch musicians held a high place in Europe;⁴ and although among the works of various members of musical families (and music in Holland was an essentially hereditary gift) we find incidental mention of songs or song-collections, it is evident that this form of art was on the wane. Hooft's anonymous publication, 'Emblemata Amatoria,' is the last collection of any value in the 17th century, though Jacques Vredeman (a member of the Vredeman family of lutenists) is known to have written some *canzoni* and *villanelle* to words in the Frisian dialect.

To the 18th century belong De Koninck and Snep, who were the authors of some 'Nederlandsche liederen met een en twee Stemmen,' with figured bass, but these are of no musical value. The same may be said of the vocal works of the following composers who lived in the early part of the 19th century: A. Ten Cate, J. G. Wilms, G. Hutschenruijter, G. W. Smits, J. Boers, and D. H. Dijkhuijzen. Their names still appear in all popular collections of school and patriotic songs, together with those by composers of a later date and higher rank, such as J. Viotta, J. Anthennis, Van Eyken, Richard Hol, S. de Lange (the elder), Prudens van Duyse, and J. van Riemsdijk. The songs of the last-named composers are best described under the German term *volkstümlich*, though some of them have shown more interesting and original work, as, for example, Riemsdijk in his 'Tranenkruidje' and 'Sant Jans Gheleide' from the *Loverkens*.⁵

The most typical Dutch composers of the last century, the words of whose songs are in the vernacular, were undoubtedly Richard Hol, J. Verhulst, and W. F. G. Nicolai. The first named is better known for his patriotic songs and choruses. Nicolai, who was a prolific

¹ *La Musique aux Pays-Bas*, E. Vander Straeten, iii. 22.

² The opera was revived a short time ago in Paris, edited by L. Torny.

³ In 1810 Van der Ginst wrote an opera with Flemish words; and later Miry, Van den Acker, and Meertens attempted Flemish vanderlindes, achieving, however, only local success.

⁴ D. F. Scheurleer gives an interesting picture of musical life in Holland, *Amsterdam in de 17de eeuw*, *Het Muziek leven*, The Hague, 1894.

⁵ Hoffmann von Fallersleben's *Loverkens* were favourite words with Dutch composers.

writer and a great favourite, has written melodious and expressive songs, somewhat resembling Mendelssohn. Verhulst was one of the most gifted Dutch musicians, a friend of Schumann's, and also well known abroad. He has set a number of the Flemish poet Heijze's words to music, amongst others a volume of children's songs, 'Kinderleeven, 29 Lieder en voor een stem,' which are of great charm. Another very favourite writer of children's songs in Holland is Catarina van Rennes.

Modern Dutch song-writers approach more closely to the German school than to the French; and although at this moment a strong national feeling is asserting itself amidst some of the Dutch composers, the general tendency towards Germany cannot be denied. Space forbids more than the mere enumeration of the following names, many of whom have written songs possessing high qualities: J. Brandts-Buys, J. Wagenaar, Hendrika van Tussenbroek, J. Smulders, S. de Lange, Diepenbroek, Gottfried Mann, Julius Röntgen, B. Zweers, K. Kuiler, A. Spoel, J. H. Louts, H. Viotta, van Bruckenfok, and Cornelis van Oosterzee.

The writer owes her warm thanks to Professor Julius Röntgen of Amsterdam for his kind help.

ENGLAND

Never within historic times has England been indifferent to the art of music. If John Dunstable who lived early in the 15th century cannot claim to have invented polyphony, at least he was one of the first to bring scientific and artistic order into the chaos of harmony, and raise vocal music to the rank of a structural art. But about the year 1240¹—two centuries before the time of Dunstable—the song 'Sumer is icumen in' was written by John of Fornsete, a monk of Reading Abbey. Whether this beautiful canon, still extant, is the sole survivor of many such compositions, or was a solitary inspiration, is hidden from us, but it certainly implied a long previous course of study and practice.

As France gave birth to the Troubadours, and Germany to the Minnesingers, so did England in a remote age produce her own Bards and afterwards her Scalds and Minstrels, her Gleemen and Harpers, all of whom were held in high repute by their countrymen. And there is a record of a company or brotherhood, called 'Le Pui,' formed by some merchants in London, at the end of the 13th century, for the encouragement of musical and poetical compositions. With this purpose they assembled periodically, and competitions were held, though the reluctance of the brotherhood to admit any but members to those meetings prevented their influence being widespread. The name denotes a French origin, which is easily possible considering the close intercourse between France and England after the Norman Conquest and during the time of the Crusades.² Of the

¹ Or 1226, according to Dr. Willibald Nagel's *Geschichte der Musik in England*, i. 76, et seq., where an interesting discussion of that song will be found. (See SUMER IS ICMEN IN.)

² See H. I. Riley's *Libri Custumarii*, p. 886. The languages of Latin, French, and English were for a time intermingled, but by the middle of the 14th century French had become a foreign language, Latin was reserved for ecclesiastics and scholars, and every

abundance of popular tunes in the 14th century evidence is supplied by the number of hymns written to them. For instance, 'Sweetest of all, sing,' 'Good-day, my leman dear,' and many others were secular stage-songs, to which the Bishop of Ossory, who lived about 1350, wrote Latin hymns. While the minstrels flourished, notation was difficult and uncertain, and they naturally trusted to memory or improvisation for the tunes to which their tales should be sung. [See MINSTRELS.] But with the end of the 15th century the Minstrels disappeared, their extinction accelerated by the invention of printing. When the pedlar had begun to traverse the country with his penny books and his songs on broadsheets the Minstrel's day was past.¹ To the time of the Minstrels belongs, however, the famous 'Battle of Agincourt' song,² with the date 1415.

 s, red - de pro - vic - to - ri - a.

To the reigns of Henry VI. and Edward IV. belong also many carols, and amongst them the celebrated 'Nowell, Nowell' and the 'Boar's Head' Carol, sung even now every Christmas

Englishman, high or low, spoke his own tongue. *See d. Musik in England*, Dr. W. Nagel, li. 8 et seq.

¹ For further information about the minstrels see *Old English Popular Mus.*, Chappell, i. 1 et seq.; and *See d. Musik in England*, Nagel, i. 98 et seq.

² *Old English Popular Music*, i. 25. Chappell further says that when Henry V. entered the city of London in triumph after the Battle of Agincourt . . . boys with pleasing voices were placed in artificial turrets singing verses in his praise. But Henry ordered this part of the pageantry to cease, and commanded that for the future no ditties should be made and sung by minstrels or others in praise of the recent victories for that he would whollie have the praise and thanks altogether given to God.³ Nevertheless among many others, a minstrel piece soon appeared on the *Seyge of Harflett* (Harfleur), and the *Battaille of Agincourt*, evidently, says Warton, adapted to the harp, and of which he has printed some portions (*History of English Poetry*, li. 257). The above song, which was printed in the 16th century by Percy, Burney, and J. Stafford Smith, from a MS. in the Pepysian collection in the Library of Magdalene College, Cambridge, has been shown by Mr. Fuller Maitland to be an incomplete transcript from one in Trinity College, Cambridge, in which the melody stands as above. (See 'English Carols of the 15th Century.')

at Queen's College, Oxford.³ Some of these carols may have been composed by John Dunstable or his contemporaries. Although in England there is little left of this earliest English School of composers, on the Continent recent discoveries have been important. 'O rosa bella,' a three-part love-song, by Dunstable, was found at Rome, and afterwards in a different version at Dijon,⁴ and it is evidently counterpoint on a popular song. A number of other MSS. of English composers' works of this period exist at Modena and Trent, and the latter library contains another secular song 'Puisque m'amour' by Dunstable.⁵ (See DUNSTABLE.)

In the period between 1485 and 1547,⁶ which covers the reigns of Henry VII. and Henry VIII., social and political ballads multiplied fast; and among the best-known productions of these reigns are the following: 'Pastyme with good company,' composed by Henry VIII. himself; 'The three ravens,' 'John Dory,' 'The hunt is up,'⁷ 'We be three poor Mariners,' 'Robin, lend me thy bow,' 'My little pretty one,' 'Sellenger's Round,' 'Westron Wynde,'⁸ etc. It should be noticed here that many variations in the copies of old tunes indicate uncertainty in oral traditions. Formerly the general opinion was that the old secular music of European countries was based upon the same scale or mode as the modern major scale, i.e. the Ionian mode. But it is now generally acknowledged that the ecclesiastical modes were fully used in England in the composition of all kinds of secular music until early in the 17th century, and many of the popular songs were written throughout this period in the Dorian, Mixolydian, and other modes.⁹ Thus, amongst the early songs, 'The King's Ballad,' 'Westron Wynde,' and others agree in some of their many versions with the Dorian mode. And as will be later shown, modal influences exist to the present day in our simplest folk-songs. But in the 16th century the easy Ionian mode was the favourite of strolling singers and ballad-mongers; and in spite of prohibition and censure by the Church and the disdain with which skilled musicians treated what they

³ The words to this carol were printed by Wynkyn de Worde in 1521, but the music appears to be of an earlier date.

⁴ See Ambros, *Geschichte der Musik*, Musik Beilage, p. 22, where the Roman version is reprinted.

⁵ These were discovered in 1892 by Mr. W. Barclay Squire, and copies are now in the British Museum.

⁶ Here the chapter on 'The English School' in Prof. H. Woodbridge's second vol. of the *Oxford Hist. of Mus.* may be studied with advantage.

⁷ Any song intended to arouse in the morning, even a love-song, was formerly called a *hunt's up* (Shakespeare so employs it in *Romeo and Juliet*, Act iii. Scene 5). There are many different versions of the tune.

⁸ This song is famous for being the only secular song which our Church composers employed; it was the subject of three Masses by Taverner, Tye, and Shepherd in the 16th century. See Chappell, *op. cit.* i. 58 for the melody.

⁹ At the time the previous editions of Chappell's work were published this fact had not been freely accepted, and a certain number of the tunes had had sharps and flats added to them, which transformed an ecclesiastical mode into a major or minor key. In the present edition, 1893, these signs have been removed. Moreover, in this edition it is stated that there are 44 Dorian, 19 Mixolydian, and 12 Aeolian tunes out of 118. The other 43 are mostly in the major. The Phrygian, and Lydian modes occur less often, however, in English music than in that of other countries. See Woodbridge's preface to Chappell's *Old Eng. Pop. Music*.

contemptuously termed *il modo lascivo*, this popular scale triumphantly survived the collapse of the Gregorian system, and has formed the basis of our modern system of scales and keys.

Of secular songs antecedent to the middle of the 16th century few have come down to us. The principal relics are the songs in the Fayrfax MS.¹ This manuscript, which once belonged to and was probably written down by Dr. Robert Fayrfax, an eminent composer of the reigns of Henry VII. and Henry VIII., consists of forty-nine songs by the best musicians of that time.² They are all written in 2, 3, and 4 parts in the contrapuntal style; some in the mixed measures—four-time in the one part and three-time in another—which was common at the end of the 15th century. But owing to the want of bars the time is often difficult to discover, and there is also a great confusion of accents. During the latter half of the 16th century musicians of the first rank seldom composed airs of the short rhythmical kind appropriate to ballads, and poets rarely wrote in this metre, for ballad-writing had become a separate employment. It should also be noted that English Church composers did not take popular or folk-songs for the subjects of their masses and motets as was the custom in foreign countries, though they were freely used as themes for variations, or *canti fermi* for polyphonic works by instrumental composers.

In Queen Elizabeth's reign music was generally cultivated, and song was universal: 'tinkers sang catches; milkmaids sang ballads; carters whistled; each trade, even the beggars, had their special songs.'³ The best-known songs of this period from 1558 to 1603 were 'The Carman's Whistle,' 'All in a Garden Green,' 'Dulcina,' 'The British Grenadiers,' 'Death and the Lady,'⁴ 'Near Woodstock Town,' 'Light o' Love,' 'Children in the Wood,'⁵ 'The Bailiff's Daughter of Islington,' 'Willow Song,'⁶ 'Greensleeves,' 'The Friar of Orders Gray,' 'O Death, rock me asleep,'⁷ and 'Frog Galliard.' This last song by John Dowland is almost the only instance to be found in the Elizabethan period of a favourite folk-tune known to have come from the hand of a celebrated composer. Dowland originally wrote it as a part-song to the words, 'Now, O now, I needs must part,' but afterwards adapted it for

one voice with accompaniment for the lute. This practice of writing songs for either one or many voices seems to have been common in England, as in Italy; and in both countries the lute or theorbo sustained the under parts when sung by one voice. Dowland's contemporary, Thomas Ford, published songs for one or four voices, one of which, 'Since first I saw your face,' not only still retains its popularity, but is remarkable as being one of the earliest melodies written by a trained musician in modern tonality. William Byrd's adoption of the 'Carman's Whistle' in the Fitzwilliam Virginal Book is well known; it is a dance-tune, and so also is 'Greensleeves,' and many others. In fact, nearly all the dance-tunes contained in these, and somewhat later collections of lute and virginal music, are the most valuable sources we possess for accurate and trustworthy versions of the music of the folk-songs. They are trustworthy because they were written down at the time by skilled musicians, and therefore escaped the risks of transmission by ear alone. The names or words of many ballads are handed down to posterity in the works of Shakespeare⁸ and other Elizabethan dramatists.⁹

A few words may be introduced here on the form of popular English ballads, or, in other words, folk-songs.¹⁰ In dance, or march, or ballad music which has grown from the recitation of words to a chant, or to a short rhythmical tune, the musical design is found to reside chiefly in the rhythm, and not in the balance of keys. The ordinary rhythm of ballads was the even fashion of four-bar phrases, as, for instance, in 'The hunt is up':—

EX. 2. *The Hunt is up.*

The three-bar phrase rhythm is generally met with in the jig and hornpipe tunes of England, such as 'Bartholomew Fair,' but it sometimes occurs in songs of other kinds. Of the rhythm in 'My little pretty one,' which has three phrases of two bars each, and a fourth of three bars, there are several other examples; and,

⁸ The following are some of the ballads Shakespeare refers to: 'The hunt is up,' 'Heartsease,' 'Willow, Willow,' 'It was a lover and his lass,' 'Greensleeves,' 'Under the greenwood tree,' 'Bonny Sweet Robin,' etc.

⁹ Ben Jonson's poem, 'Drink to me only,' is for ever associated with the equally beautiful 18th-century tune ascribed to Col. Mollish, about 1780.

¹⁰ The word 'ballad' was applied in a loose sense to every kind of song. The ballad of this period and, indeed, up to the 18th century, usually means 'pieces of narrative verse in stanzas,' the music of the first stanza being repeated for every successive one. It was also used in England for that which in other countries is designated a 'folk-song,' and this term has of recent years been also accepted in England for any form of song which essentially belongs to the people.

¹ Mention must also be made of three MSS. in the British Museum. Add. MSS. 3955 contains some ballads. This MS. was discovered by Elton, and a few pieces were printed in J. S. Smith's 'Musica Antiqua.' Add. MSS. 31,922 is a volume containing no less than thirty-three songs by King Henry VIII. amongst them 'Green grow the holly,' which is a fine song, the rest by Cornishe, Farthing, John Fluyd, Pygott, and others. Royal MSS. appendix 88 contains tenor-parts of twenty secular songs, perhaps written before 1500. This collection contains many dance-tunes, such as 'My Lady Carew's Dompie,' also printed in 'Musica Antiqua,' with several of the older songs. Davey, *History of English Music*, p. 94 et seq.

She is a joy-lic one, and gentle as can be;

1 2 1 2

With a beck she comes anon, with a wincks she wil he gon,

1 2 1 2 3

No doubt she is alone of all that ev-er I see.

indeed, there are abundant varieties of irregular rhythm. But it may be held as a general conclusion that the musical rhythm follows the rhythm and metre of the words, and varies with them. Compound time is very common in English ballads, especially during and after the reign of Charles II., and may be accounted for by the influence of the French dance-music, which Charles II. brought into England. In modulations they exhibit but little variety. The most frequent arrangement is the half-close on the dominant, and the leading note preceding the tonic at the end of the melody, as in 'The hunt is up.' In another arrangement the half-close is on the sub-dominant, and the penultimate note is on the supertonic. In minor-key ballads the relative major-key often takes the place which is held by the dominant in major-key ballads. Another peculiarity of many old ballads are 'burdens.' Sometimes the burden was sung by the bass or basses underneath the melody to support it, as in 'Sumer is icumen in'; or it took the shape of 'ditties,' the end of old ballads, introduced to eke out the words of the story to the length of the musical phrase, as in the 'Willow Song.' In this case the burden was sung continuously by the same voice,

but in other instances it was taken up by the chorus at the end of a solo song, or solo and chorus combined, as for instance in the burden of 'Sir Eglamore.' The burdens often consist of meaningless syllables, as in 'It was a lover and his lass,' or the last example quoted.²

With the advent of the 17th century there commenced a period of transition in the history of music, and more especially in the history of Song. The change was marked by the acceptance of many new principles in musical composition, and by a steady growth of skill in instrumental performances. But its most distinguishing feature was an increase of attention to the conformity of notes with words; that is, to the diligent study of everything that goes to perfect what is called expression in music.³ And this was the natural development of the monodic revolution whose origin in Italy has already been described.⁴ But the success of the new departure was at first as partial and imperfect in England as elsewhere. In Burney's words, 'Harmony and contrivance were relinquished without compensation. Simplicity indeed was obtained, but devoid of accent, grace, or invention. . . . The first attempts at air and recitative were awkward, and the basses thin and unmeaning. Indeed the composers of this kind of music had the single merit to boast of affording the singer an opportunity of letting the words be perfectly well understood, as their melodies in general consisted of no more notes than syllables, while the treble accompaniment, if it subsisted, being in unison with the voice part, could occasion no embarrassment or confusion.'⁵

Nothing was more significant of the change coming over music in England at the beginning of the 17th century than the numerous collections of 'Ayres' or 'Ayres and Dialogues' for solo voices, or for groups of voices accompanied by the lute. These collections also were remarkable for the dainty and delicate poems they contained; in many cases the poet and the composer were one and the same person.⁶ Solo songs with instrumental accompaniment had been composed by Byrd,⁷ but they were rearranged for several voices when he published them in 1588. The first collections of songs published as solos appeared about the year 1600, contributed by the most eminent composers of this period, Jones, Rosseter, Morley,⁸ Coperario, Ford, Ferrabosco, Campion and Johnson.⁹ The

⁷ Twelve in the collection called 'Psalmes, Sonets, and Songs of Sadness and Pietie.'

⁸ Morley's celebrated 'It was a lover and his lass' appeared in his 'First booke of Aires or Little Short Songes to sing and play to the Lute with the Base-Viol,' in 1600; and Nagel says that previously in 1597 he had arranged a series of canzonets by Italian and English composers as a collection for one voice with lute. Nagel, ii. 138.

⁹ Johnson's beautiful air, 'As I walked forth one summer's day,' is given in Hullah's 'English Songs of the 17th and 18th Century.'

style of their solo songs, consisting of a very simple unaffected tune supported by simple harmonies, had a close resemblance to the part-songs, though in some few cases a melodious declamation was attempted. In Rosseter, Jones, Ford, and Campion, the lyric element was more pronounced than in Ferrabosco.¹ Nearly all the above-mentioned composers were among the contributors to the collection published by Sir W. Leighton in 1614. This collection was entitled 'Teares or Lamentacions of a sorrowfull soule,' but its contents were mostly songs in four parts.² Ford's song, 'Since first I saw your face,' shows the kind of lute accompaniment employed for these songs.³

The popularity of masques at Court offered opportunities to composers for the introduction of lyric songs and dance-tunes. Some scientific musicians may have disdained this kind of work, which only required simple little ditties akin to the folk-songs. Nevertheless Campion, Johnson, and later on Henry Lawes, won great favour in this branch. Henry Lawes merits a special mention as a composer. Known as a professed writer of songs, he was the first Englishman who made it a study to give expression to words by musical sounds,⁴ and the care with which he set words to music won him recognition from the chief poets of his day. One of his best-known songs, 'Sweet Echo,' is taken from Milton's 'Comus.' Lawes published also several books of Ayres and Dialogues for one, two, and three voices, with the assistance of his brother, William Lawes, whose fame chiefly rests on his music to Herrick's words 'Gather ye rosebuds.' At this epoch the influence of the Italian recitative style can be plainly traced in all English composers. Henry Lawes was undoubtedly familiar with the works of his Italian contemporaries and recent predecessors, and especially with Monteverde, whose hennishes and beauties were reflected in his own music. A good illustration, both of his skill and of the fragmentary character of his melody, will be found in his music to Waller's 'While I listen to thy voice.'⁵

It was a custom with poets in the 16th and 17th centuries to write new words to favourite old tunes, and this practice has made it almost impossible to assign precise dates to many songs and ballads. Thus in Sir Philip Sidney's poems the heading 'to the air of' etc.—often a French or Italian tune—constantly

recurs; and many of the folk-tunes were sung to three or four sets of words bearing different dates, and having little or no relation to each other. Among songs to be found in the principal collections of the first half of the 17th century was the tune of 'Cheerily and Merrily,' afterwards sung to George Herbert's 'Sweet day,' and better known by its later name. 'Stingo, or oil of harley,' 'The country lass,' and 'Cold and raw' were all sung to the same tune, and many another example might be adduced.

During the Commonwealth secular music flourished in England, and notwithstanding the abolition by the Puritans of cathedral choirs and theatre music, domestic music was much cultivated. A few of the favourite ballads of that time, both Puritan and Loyalist, were, 'Hey then, up we go,' 'Love lies bleeding,' 'I live not where I love,' 'When love was young,' 'When the king enjoys his own again,'⁶ and 'I would I were in my own country.' At the end of the Commonwealth the secularisation of music was complete, and with the Restoration of the Stuarts in 1660 a lighter and more melodious kind of music was introduced. In his exile Charles II. had grown fond of French dance music. Ballads, too, came into popular favour again, as the king was partial to lively tunes with strongly marked rhythms. Of the abundant songs of that period, amongst the most celebrated were: 'Here's a health unto his Majesty,' 'Come lasses and lads,' 'Troy Town,' 'Barbara Allen,' 'Under the greenwood tree,' 'Dulce Domum,' 'Lilliburlero,'⁷ and 'May Fair,' now better known as 'Golden Slumbers.'⁸

As already mentioned, educated musicians of England were about this time very much under the influence of the Italian and French schools. The style of Pelham Humphrey, whom Charles II. sent to France to study under Lully, was entirely founded on that of his teacher; and on his return to England Humphrey effected a revolution in English music. Few artists have exercised a more powerful influence on their countrymen and contemporaries than Humphrey; and his work was all accomplished in the brief space of seven years. He returned from Paris in 1667, and died in 1674, at the early age of twenty-seven. His song, 'I pass all my hours in a shady old grove,'⁹ has hardly yet ceased to be sung, and it is a good example of his work, 'which shows a continually varying adaptation of music to changing sentiment of words, and the most fastidious observance of

¹ Parry, *Music of the Seventeenth Century* (Oxford Hist. vol. iii.), p. 198 et seq.

⁸ During the 17th century many of our ballad-tunes had found their way into the Netherlands, and were there printed with Dutch words (only preserving the English titles) in most of the miscellaneous collections of songs. For instance 'The hunt is up' and 'Fortune my foe' appear severally in the Leyden Lute-Book and the 'Nederlandsche Gedenck-Clanck,' 1626. Chappell, *Old English Popular Music*, i. xv. 76, 84. (See *The Netherlands* section of this article.)

⁹ The words are attributed to Charles II.

their emphasis and quantity.¹ Many songs of his may be found in the various collections of the time.² A fellow-student in the Chapel Royal, to whom Humphrey taught much, was John Blow. In 1700 Blow published a volume of his own songs under the title of 'Amphion Anglicus,' and his setting of Waller's 'Self-Banished' is evidence that he could sometimes compose with tenderness and grace. Then Matthew Lock, the famous masque-composer who wrote 'The delights of the bottle,' a most popular song in its day, is worthy of notice, and he had the honour paid to him of an elegy by Purcell at his death in 1677.

Had Henry Purcell never written anything but songs, he would still have established his claim to be the greatest of English musicians. In dignity and grandeur, in originality and beauty he has no equal among English song-writers. After his death, his songs were collected under the title of 'Orpheus Britannicus,' and 'Full fathom five,' 'Come unto these yellow sands,' 'From rosy bowers,' 'I attempt from love's sickness to fly,' amongst others, have been sung down to our own times. He was a contributor also to Playford's publication 'Choice Ayres and Dialogues,' but his finest songs will be found in the operas and plays for which he composed the incidental music. 'Dido's Lament' should be noted for the skill with which the whole song is constructed on a ground bass of five bars. This is repeated without intermission in the lowest part, but so unconstrained are the upper parts, so free and developed is the rhythm, so pathetic and varied is the melody, that the device would easily escape observation.³ Between 1683 and 1690 Purcell devoted himself to the study of the great Italian masters, and their teachings are manifest in his music. He did not indeed lose any of his individuality, but the melody of his songs became henceforth smoother and more flowing, and the accompaniments more varied. A common fault of the music of Purcell's time was a too servile adherence to the meaning of the text, and the changing sense of the words was too often blindly followed to the sacrifice of musical construction.⁴ Purcell avoided these faults; with his fine instinct for melody and harmony, and his thorough scientific education, no extravagances of any school could lay a strong or permanent hold upon his genius.

From 1700 to 1800 England's previous repute as a land of music sank to a low ebb. Purcell had no successor as a great creative and original musician. There were, however, a number of tunes produced in the 18th century which are still familiar to us. John Eccles

and Richard Leveridge published large selections of songs; and to the latter we owe the famous songs, 'Black-eyed Susan' and 'The Roast Beef of Old England.' A beautiful song called 'Felton's Gavotte,' or 'Farewell, Manchester,' said to have been played by the troops of Charles Stuart in quitting Manchester in December 1745, was originally part of a concerto composed by the Rev. W. Felton. Other popular songs of this period were 'Old King Cole,' 'Down among the dead men,' 'Cease your funning,' 'The Vicar of Bray,' and 'Pretty Polly Oliver.' A marked stimulus was given to song-culture in George II.'s reign by the Ballad-operas, of which the 'Begger's Opera' (1727) was the first; and it was these operas which brought about the first reaction of the popular taste against Italian music. They were spoken dramas with songs interspersed, the songs being set to old ballad tunes, or imitations of them.⁵ Thenceforth most of the popular songs were composed by educated musicians, but the great and enduring popularity of some would entitle them to be classed as national songs. In regard to musical structure they are generally strophical, with an easy accompaniment, a marked rhythm, and a pleasing melody very simply harmonised.

Very popular in his day was Henry Carey, to whom our splendid national anthem was for a time attributed.⁶ William Boyce also claims recognition for the spirited 'Come, cheer up, my lads' ('Heart of Oak'), which he wrote to Garrick's words in 1759. A yet greater composer was Thomas Arne, who has been pronounced to be our most national song-writer. 'Rule, Britannia' was written by Arne in 1740 as a finale for the masque of 'Alfred'; and as the song passed from mouth to mouth it soon grew pre-eminent among national airs. It was said by Wagner that the first eight notes of 'Rule, Britannia' express the whole character of the British people. In that same year Arne produced his beautiful songs in *As You Like It*, which he followed with songs in other plays of Shakespeare. In later years Arne's style deteriorated. An imitator of Handel without his genius, Arne overloaded his airs with florid passages, as may be seen in the songs of his opera, 'Artaxerxes.' The obligations of the English people to opera-writers and of the latter to them, have been reciprocal. While some of the best national airs were due to the opera-writers, they in turn won applause by the free introduction of current popular songs into their operas.⁷

Passing on to another generation, we meet with William Jackson of Exeter, who was thirty

¹ Hullah's *Transition Period of Musical History*, p. 203.

² J. Stafford Smith prints five songs in 'Mus. Ant.' ii. 170 et seq., and also one of John Blow's.

³ This song is included in Hullah's 'Songs of the Seventeenth and Eighteenth Centuries.'

⁴ In fact Lewis's meritorious efforts in this direction were soon exaggerated and overdone by his followers.

⁵ See BALLAD OPERA. ⁶ See GOD SAVE THE KING.

⁷ Most indeed of the best songs of a period extending from Purcell's time down to the early part of the 19th century were once embodied in dramatic pieces; but these pieces have faded into oblivion, while the songs have survived through successive generations. As dramatic forms of song, these compositions lie outside the scope of this article, but as national and popular songs, they come within it. A list of forty operas entirely set to current popular airs is given under ENGLISH OPERA.

years younger than Arne. About Jackson's songs there clings a sense of tameness and insipidity, but in his day no collection was held to be complete without his 'Time has not thinned my flowing hair,' or 'When first this humble roof I knew.' Among his contemporaries, but a little junior to him, were Thomas Carter, Samuel Arnold, Samuel Webbe, and Charles Dibdin, who was a patriotic ballad-writer rather than a musician. The pathos of 'Tom Bowling' has rescued it from neglect, but only by sailors are his other songs remembered now. To Dibdin's generation also belonged John Percy, the composer of 'Wapping Old Stairs,' and James Hook, best known for 'The Lass of Richmond Hill,' and 'Twas within a mile of Edinboro' Town,' a pseudo-Scotch song, like Carter's 'O, Nanny, wilt thou gang with me?' Two better musicians than the foregoing appeared a little later, namely, William Shield and Stephen Storace, both of whom were distinguished by a gift of melody. But their songs are seldom heard now, excepting perhaps 'The death of Tom Moody' by Shield, and Storace's 'With lonely suit.' A well-known song of that period was 'The Bay of Biscay' by John Davy of Exeter.

The special merit of English songs of the late 18th century is their melody, which seems to have then been a common gift; but the strongest feeling of the nation was patriotism, and the compositions that survive are almost all short songs, expressive of patriotic sentiment, or connected with it by their nautical subjects.¹ John Braham, Charles Horn, and Henry Bishop were all born in the 18th century, but so near its close that their works must be ascribed to the 19th century. Braham himself was a celebrated singer, and his sea-song 'The Death of Nelson' ² merits the fame which it has won. To Horn we owe 'Cherry Ripe,' and 'The deep, deep sea.' Sir Henry Bishop stood foremost among all his contemporaries and immediate predecessors, alike in science, taste, and facility, and possibly also in invention. His accompaniments are varied and skilful, and though his melodies contain rapid divisions requiring vocal skill, they are graceful and effective. With such care also, did he study correctness of accent, that in his songs the metre of the poetry is seldom disturbed by the rhythm of the music. 'Bid me discourse,' 'Should he upbraid,' and 'Home, Sweet Home' are well-established favourites, which need no eulogy. As other illustrations of the songs of the first part of the 19th century may be mentioned, 'I'd be a butterfly,' by Haynes Bayly; 'She wore a wreath of roses,' by Knight; 'The blue bell of Scotland,' by Mrs. Jordan, and others by Rooke, Rodwell, Thomas Cooke, Lee, and

Lover. But speaking generally of these songs and of many others like them, their sole and only merit consisted in the voice-part being pleasant and melodious, and the accompaniments very easy. Weighed in the balance of pure and scientific music they have little value.

It can be easily understood that although this type of song was popular, it had nothing in common with the genuine folk-song. There is indeed an impression that by the end of the 18th century traditional song had died out in England,³ but this is by no means the case. The many valuable books of traditional songs collected and published during the 19th and present centuries, afford proof that the popularity of song has never been lost in England. Each part of England preserves its special songs as much as its own customs for certain days and seasons. And collectors of songs can bear witness that the habit of inventing songs is not yet extinct among the country people. This circumstance may account for the existence of many quite distinct airs for a set of favourite words.⁴ Recent collections also show that the modal influence (already spoken of in this article) is still evident in many of the English folk-songs. Numerous examples of tunes clearly belonging to the ecclesiastical modes could be given, did space permit. Many of the more recently collected folk-songs are mere variants of older versions, and it is often very difficult to trace them back to their original form. The districts where music is largely cultivated among the poorer classes are not those where the old tunes are most carefully preserved and handed down. The reason of this is, that the popular song of the day is ever the enemy of folk-music; and although the neighbourhood of a town may afford opportunities of musical instruction and cultivation, it likewise offers facilities for acquiring familiarity with this commoner and less desirable class of song. As a general rule the English folk-songs are diatonic in melody and regular in form, and lack any striking characteristics as regards either rhythm or harmony. They hold, however, a high place among the folk-songs of other nations, and they owe it to symmetry of form, simplicity and directness of melody, and the absence of sentimentality.⁵

It would be difficult at this date to write a just appreciation of English songs of the 19th century. Although there have been many composers of real merit, the standard of the general public taste was low, and the demand for high or serious work was limited. A numerous section of song-writers clung to the ever-popular

³ Chappell's 'Old English Popular Music' ends with the close of the 18th century.

⁴ See preface to 'English County Songs,' by Lucy Broadwood and J. A. Fuller Maitland.

⁵ Sir Hubert Parry said in his inaugural address to the Folk-song Society: 'The folk-songs are characteristic of our race; of the quiet reliance of our country folk, courageous and content to meet what chance shall bring with a brave heart. All the things that mark the folk-music of the race also betoken the qualities of the race, and as a faithful reflection of ourselves, we needs must cherish it.'

¹ Davey's *History of English Music*, p. 425 et seq.

² On the curious similarity of musical idea between this and Méhul's 'Chant du départ' (amounting almost to identity), see Davey, *op. cit.* p. 477.

ballad-form, and as they considered the voice-part to be their paramount consideration, they attempted nothing more than the simplest harmonies and accompaniments, and disregarded alike the accent and meaning of the poem for the sake of repeating the same commonplace tune again and again. Yet within these narrow limits there are songs of various degrees of merit; some composers have raised their songs by force of natural gifts and instinctive taste to a high level.

For a considerable period it seemed as if England knew not how to speak her own language in music. It is an open question whether the effects produced by the Italian opera in Handel's time, and succeeded later by the strong influence of Mendelssohn, were baneful or beneficial to English music. But it is certain that during the first two-thirds of the last century, very few genuine English songs—that is, purely English in idiom and turn of expression, as well as in thought and feeling—could be met with. Of these few exceptions we may name J. L. Hatton's 'To Anthea,' and 'Simon the Cellarer,' J. Hullah's 'Three Fishers,' F. Clay's 'The Sands of Dee,' A. S. Sullivan's 'Orpheus' and his other songs from Shakespeare and Tennyson. In excellence of workmanship many of the above songs cannot compete with those of a perfectly distinct class of writers, among whom W. Sterndale Bennett stands pre-eminent. Of the refinement, delicacy, and perfect symmetry of his songs, such as 'May Dew' and 'Dawn, gentle flower' there could be no question; and had he not shared in common with Mendelssohn a tiresome mannerism of frequent repetition of the same phrase, his songs would have been more fully recognised and appreciated. To much the same period belong the songs of E. J. Loder, whose graceful 'Brooklet' is one of the best of English songs, W. Davison, G. A. Macfarren, Henry Hugo Pierson, and Edward Bache. The last died very young, but not before he had given promise of high merit in the clearness of his ideas. Pierson's songs displayed strength and originality, but wholly neglected the rules of form. The true English ring of Arthur Sullivan's songs has already been noticed, but there was some other undefined quality, which contributed to secure his great successes. It was not his brilliant humour, for that quality hardly appears in his songs. Possibly the charm lay in some veiled touch of emotion. He wrote various kinds of songs: some nearly descended to the drawing-room ballad, while others rose to a far higher level, such as his Shakespeare songs and the setting of Tennyson's 'The Window, or the Loves of the Wrens.'¹

In this last beautiful little cycle there are a tenderness and grace combined with fine workmanship which are enduring qualities. The last word of the ballad-type of song seems to have been said by Sullivan; since his time, this class of song has not been considered worthy of notice by musicians. Popular taste may not yet have changed, but the aims and work of serious musicians have perceptibly done so.

During the last thirty or forty years Song in England has once more been regarded as one of the most important forms of art, and men have approached it in a different spirit. Once more the importance of the words has been fully recognised, and it is now established that there is no insuperable barrier to the setting of English poetry to music. Some difficulties may no doubt arise from the irregular occurrence of the accents in English poetry; but accent is a study which has at last received attention, and much is owed to the care and thought which Sir Hubert Parry has bestowed on the due correspondence of the accents of the verse with the rhythm of his music. In his several books of 'English Lyrics' the respect with which he treats the meaning of the words, is also plainly shown, and his influence on this point is evident in the works of the younger generation of English composers. Parry, Stanford, Mackenzie, Elgar, and Goring Thomas have adhered, more or less, to the high standard of song-writing; but though their names are grouped together as the modern leaders of music in England, each composer has his own individuality. No two composers, indeed, stand farther apart in their songs than Parry and Goring Thomas. The latter's songs, with their long-drawn-out phrases and peculiar romantic atmosphere, are more French in feeling, while Parry's songs, with their elaborate polyphonic accompaniments, incline more to the German school, though throughout, his melodies have a thoroughly English ring. Sir Charles Stanford has written striking and manly ballads, and a vein of true melody traceable to his Irish descent pervades his lyrics. In Elgar's works an exceptionally poetic imagination and great technical skill are manifest, which encourage the hope that he may turn his attention more frequently to song-writing. Feminine song-writers are abundant now, but none have reached the position attained by Maude V. White, whose ever-effective songs are full of expression and refinement; and a conspicuous merit with her is her choice of good words.

It is interesting to note among the band of earnest young song-writers, the pains and skill bestowed upon the accompaniments of their songs. The accompaniment is now rightly held to be an integral part of the whole composition, and as instrumental skill has reached a very high level, technical difficulties can be ignored. Whether the voice-part is always

¹ These words were written by Tennyson expressly for Sullivan at Sir George Grove's request. The latter had proposed in October 1866 to Tennyson, to write a 'Liederkreis' for Millais to illustrate, and Sullivan to set to music. *Life and Letters of Sir George Grove*, by C. L. Graves, p. 133.

treated effectively is open to question, but for intrinsic musical value, the modern song has far surpassed the song of former days.

Criticism in detail of the works of living and rising composers is always an invidious task. We stand too near to judge their work without awakening suspicions of prejudice or partiality. Time alone is the true touchstone of merit, and before that high tribunal, the work of the following song-writers must be judged: Granville Bantock, W. H. Bell, Frederick Cowen, H. Walford Davies, Fritz Delius, Edward German, W. H. Hadow, Noel Johnson, C. A. Lidgley, S. Liddle, Hamish McCunn, Albert Mallinson, Roger Quilter, Cyril Scott, Arthur Somervell, S. Coleridge-Taylor, E. Walker, R. Walthew, Amherst Webber, R. Vaughan Williams, and others.

AMERICA

THE UNITED STATES.—Unlike most other countries, America has no distinctive characteristics of her own in music. Her inhabitants are of too mixed a character to constitute a genuine nationality. From all parts of the world representatives of every race have flocked to the United States of America. Dutch, English, Irish, German, Scandinavian, Slavonic, and other races have followed each other in quick

succession. And thus it is only natural to find the influence of these different races affecting the music. Deprived as it has been of its natural foundation, *i.e.* the folk-song, her national music must be formed on the individuality of her composers.

Moreover, it should not be overlooked that what may be called America's musical civilisation is of comparatively recent origin. Strangely enough, it was to the Puritan settlers of the 17th century that America owed her first awakening to music. The art remained in a crude and stagnant state at first, developing in the 18th century in the direction only of rough psalmody, under William Billings. Then followed Stephen Foster, who in the first half of the 19th century attempted to interpret the spirit of the Southerners with his so-called 'plantation' or negro-melodies. Excessively sentimental and poorly harmonised as these songs are, no one will deny their melodiousness, nor disparage the hold they have obtained on white and blackmen alike. (See *NEGRO MUSIC*.)

It is only within the last fifty years that American song-writers have claimed attention in the musical world. The first composer of musical scholarship was John K. Paine. Although he himself paid little heed to the Song, it is a form much cultivated by Americans, and Paine's numerous pupils have won distinction in this line. Prominent among them is Arthur Foote, whose graceful little 'Irish Folk-Song,' and 'I'm wearing awa', are favourite songs also in Europe. G. W. Chadwick and his pupil Horatio Parker, are names of greater weight. Parker has done more important work in other branches of music, but the accompaniments of his songs are interesting and varied. Chadwick's songs are very numerous and widely sung. His fine song 'King Death' may be quoted as one of his best compositions. Walter Damrosch's and Mrs. Beach's songs are refined and well-written, and never commonplace or vulgar. The same cannot be said of many other American composers, whose songs, whilst enjoying a great popularity, descend almost to the lowest level of vocal music. These composers have obviously chosen the modern English 'ballad' form as their model. Fortunately others have fallen more under the influence of Schumann, R. Franz and Grieg, and have produced songs of a far higher standard. Edward MacDowell (d. 1908), who justly held the first place among American song-writers, shows traces of his Scottish ancestry and European education. But though no distinct nationality is discernible in his music there is distinct personality. His songs are those of a true and cultivated musician; the voice and instrumental part alike are

¹ The patriotic songs such as 'Hail Columbia,' 'Yankee Doodle,' etc., are not alluded to here as they have been dealt with under separate headings in this Dictionary.

moulded and finished with care, whilst the emotional and poetical qualities are seldom lacking. The most popular of his songs are 'Thy beaming eyes,' 'The robin sings in the apple-tree,' and 'Is it the shrewd October wind?'; but the eight songs to words by Howells are among his best and most original. Philip Dalmas's settings of Walt Whitman's words are original and impressive.

The following are the names of a few other song-composers of various kinds and degrees of merit: Ethelbert Nevin, R. de Koven, Van der Stucken, S. Schlesinger, B. O. Klein, Victor Herbert, G. Osgood, C. Hawley, Clayton Johns, E. Stillman Kelley (whose settings of Poe's 'Eldorado,' and his song, 'The lady picking mulberries,' written in the pentatonic scale, have attracted attention); H. Holden Husa, V. Harris, Athorp, Spalding, Dudley Buck, Whitney Coombs, E. Finck, etc.

GERMANY

In no country has the Song held so prominent a place as in Germany, and in no other country has this form of music been carried to greater perfection. Its history has been so thoroughly explored by German writers that its course may be followed from very remote ages, when Song was scarcely distinguishable from speech, and *singen* and *sagen* were convertible terms.¹ But until the time of the Minnesinger the Song had not acquired form either in metre or melody, and this therefore must be our starting-point.

The Minnesinger were the German counterparts of the Troubadours, but they were of rather later date, and the tone of their compositions was somewhat different. While the Troubadourssang generally of love and gallantry, the Minnesinger constantly introduced into their songs praises of the varied beauties of nature. And the expressions of homage to the Virgin, or of other devotional feeling, which burst so frequently from their lips were the

outcome of a deeper religious sentiment than any to which the light-hearted Provençals were ever subject. The Minnesinger always sang and accompanied their own compositions, and took no remuneration for the entertainment they gave. They were more numerous in Southern than in Northern Germany; Austria was especially prolific in them. (See MINNESINGER.)

The most representative names in the first period, 1150-1190, were Dietmar von Aiste, Meinloh von Sevelingen, Der von Kurenberc and Spervogel. The second and best period, which was the stage of maturity, was covered by the last years of the 12th century, and at least half of the 13th century. To this period belonged Heinrich von Veldeke, Friedrich von Hansen, Heinrich von Morungen, Reinmar der Alte (the master of Walther von der Vogelweide), Hartmann von der Aue (the author of the celebrated poem 'Der arme Heinrich'), and Walther von der Vogelweide himself, whose fine lyrics won for him a place among national poets. Early in the 13th century the Sängerkrieg, or Minstrel-contest, was held on the Wartburg by the Landgrave Hermann of Thuringia, and among the champions who took part in it, were Heinrich von Ofterdingen, Tannhäuser, and Wolfram von Eschenbach. Wolfram's Minnelieder had some success, but higher renown was gained for him by his Wächterlieder and his 'Parsifal.' The third period was a time of decline, and of transition to the Meistersinger. The art of the Minnesinger then descended to trivial and unpoetic themes, and a growing carelessness as to the forms of poetry plainly revealed its deterioration. Nithart von Renenthal (whose poems were chiefly descriptive of peasant life), Ulrich von Lichtenstein, Reinmar von Zweter, der Marner, and Konrad von Würzburg were the principal Minnesinger of this period.

Medieval MSS. contain a great number of the poems of the Minnesinger, and the large Jena and Colmar MSS. the melodies also. These remains attest the especial pains bestowed on the poetic words, the finish of their verses as regards metre and rhythm, and in short the superiority of their poetry to their music. But this perfection was of course only reached by degrees. Beginning with alliterative words they advanced to regular rhymes, and then rules of composition were laid down prescribing the number of lines of which different kinds of song should consist. The structure of the verses was closely followed by the Minnesinger melodies, and as there was necessarily a pause wherever the rhyme fell, a certain form was thus imparted to them. Their mode of notation was similar to that then used in the Church, and their melodies were founded on the ecclesiastical modes. There were three principal kinds of Minnesong: the *Lied* (song), the *Leich* (lay), and the *Spruch* (proverb). The *Lied* was usually

¹ Fragments exist of the Hildebrandlied of the 8th century (see list of MSS. and printed collections at end of this section), of which the well-known Volkalied of the 13th century 'Ich will zu Land ausreiten' is an offshoot (Böhme, 'Altdeutsches Liederbuch,' p. 3). Also of the Ludigalied which was sung in honour of Ludwig III. when he gained the victory over the Normans in 922 at Saucourt. These are the earliest songs in the German language.

divided into three parts; the first and second were called *Stollen* (props), and were of the same metre. These constituted the *Aufgesang*. The third or concluding section, the length of which was not prescribed, was called the *Abgesang*. This, after beginning with a contrasting metre and melody, usually (but not invariably) repeated the *Stollen*. A good example is the 'Rügelied' from the Jena MSS., arranged by R. von Kralik thus¹—

Rügelied.

EX. 1. HERMANS VON DAMEN.

Aufgesang.

Abgesang.

ich ein se-lig Mann. Ich weiss gar
nur auf Missgunst sann.
viel der Schwachen za-gen, die den Bie-dern
im-mer nei-den und das Bö'ste von ihm sa-gen.

The *Leich*, according to its character, was formed either from the Church sequences or from the old dance tunes (*Reigen*). If the latter was the case the *Leich* was composed of differently constructed strophes and each of these had a different melody. If taken from the *sequentia* it exhibited the same monotony and absence of rhythm as the ecclesiastical melodies of that time²—

EX. 2.

Daz er-ste Syn-gen his no tut
Heynrich von Otterdingen In des e-eln vur-sten thon.

The *Spruch* was composed of one entire strophe, or, if other strophes were added they could be all sung to the same tune. Walther von der Vogelweide's solitary surviving song (which is in the Colmar MSS., folio 734) is a *Spruch*³; it is clearly meant to be sung, and differs from the ordinary didactic *Sprüche*. It must be remembered that in speaking of the 'tone' of a song, the Minnesinger referred exclusively to the metrical structure of the strophe, and the

¹ *Poesie und Musik der Minnesinger*, R. v. Kralik. (*Die Musik*, April 1, 1904.)

² From the Jena MSS. Fr. Heinrich von der Hagen gives this example in its original notation (iv. 843, No. xxix.). His work on the Minnesinger is the best authority to consult. In the fourth volume a very instructive essay on the music of the Minnesinger will be found, together with many examples of their melodies, some of which are transcribed in facsimile, whilst others are given in modern notation. See also the new editions of the Colmar MSS. by Paul Bunge and Hugo Eismann (1898); and of the Jena MSS. by G. Holz, E. Bernoulli, and Fr. Saran (1902).

³ R. von Kralik gives this song in his above-mentioned work. It is too long to quote, and the words are certainly of later date.

word did not therefore indicate the use of any especial melody or mode.

The 'fahrenden Sänger' (wandering minstrels), also called merely *die Fahrenden* or *Gaukler*, formed a link between nobles and people. Belonging clearly to the 'Jongleur' class, discouraged by the priests and patronised by courts, they were at once acrobats, ballad-mongers, and performers on various instruments. Their ranks comprised unfrocked monks, disbanded crusaders, soldiers, serving-men. Essentially musical, they made known the people's songs at courts, and transmitted the songs of Church and Minnesinger to the people. The music was a fusion of secular and ecclesiastical elements, their language a mixture of German and Latin.⁴ But they especially loved the Volkslied, and it is to them that we owe the preservation of these priceless songs which found their way into the numerous collections published in the first half of the 16th century.⁵

In the 14th century feudalism had passed its prime. With the extinction of the art-loving Hohenstaufen dynasty, the taste for poetry and music declined at court, and with it the patronage extended to the Minnesinger. Power was slipping from the grasp of princes, prelates, and nobles into the hands of burghers and artisans. Out of these middle classes came the Meistersinger,⁶ who supplanted the more patrician Minnesinger. The name of Heinrich von Meissen (1260-1318), commonly called Frauenlob, forms the connecting-link, for by some he is considered the last of the Minnesinger and by others the founder of the Meistersinger. In 1311 he came to Mainz, and instituted a guild or company of singers, who bound themselves to observe certain rules. Though somewhat stiff and pedantic, Frauenlob's poems evince intelligence and thought;⁷ and the example set by him was widely imitated. Guilds of singers soon sprang up in other large towns in Germany; and it became the habit of the burghers, especially in the long winter evenings, to meet together and read or sing narrative or other poems, either borrowed from the Minnesinger and adapted to the rules of their own guild, or original compositions. By the end of the 14th century there were regular schools of music at Colmar, Frankfurt, Mainz, Prague, and Strasburg, and a little later they were found also in Nuremberg, Augsburg, Breslau, Regensburg,

⁴ Schneider, *Das musikalische Lied*, i. 193.

⁵ The 'fahrenden Sänger' were also counted as Meistersinger, but belonged to a different circle. In the 15th century, the greatest was Michael Beheim (or Behaim), who was a favourite in the courts of the princes on the Rhine and Danube and at Copenhagen. Beismann in his collection gives an example of his songs, and the Dresden MSS. of the 15th century contain some mystical hymns to the Virgin by Behaim. [R. v. Liliencron, *Deutsches Leben im Volkslied* von 1500.]

⁶ The origin of the term Meistersinger is uncertain. Ambros says that it was applied to every Minnesinger who was not a noble, and thus became the distinguishing appellation of the burgher minstrel. Reissmann, however, maintains that the title 'Meister' indicated excellence in any art or trade; and that having been at first conferred only on the best singers, it was afterwards extended to all members of the guild.

⁷ A complete collection of Frauenlob's poems were published in 1843 by Ettmüller, Quedlinburg.

and Ulm. In short, during the 15th and 16th centuries, there was scarcely a town of any magnitude or importance throughout Germany which had not its own Meistersinger. The 17th century was a period of decline, both in numbers and repute. The last of these schools of music lingered at Ulm until 1839, and then ceased to exist; and the last survivor of the Meistersinger is said to have died in 1876.

Famous among Meistersinger were Hans Rosenblüt, Till Eulenspiegel, Muscatblüt, Heinrich von Müglin, Püschman, Fischart, and Seb. Brandt; but the greatest of all by far was Hans Sachs, the cobbler of Nuremberg, who lived from 1494 to 1576. His extant works are 6048 in number, and fill 34 folio volumes. 4275 of them are Meisterlieder or *Bar*, as they were called.¹ To Sachs's pupil, Adam Puschman, we are indebted for accounts of the Meistersengesang.² The works of the Meistersinger had generally a sacred subject, and their tone was religious. Hymns were their lyrics, and narrative poems founded on Scripture were their epics. Sometimes, however, they wrote didactic or epigrammatic poems. But their productions were all alike wanting in grace and sensibility; and by a too rigid observance of their own minute and complicated rules of composition or *Tablatur* (as they were termed) they constantly displayed a ridiculous pedantry. The Meistersinger clearly adopted (especially in lyric-song) the forms of the Minnesinger, such as the two *Stollen*, and the *Auf-* and *Abgesang*, but without the instrumental preludes, interludes or postludes.³ Churches were their ordinary place of practice. At Nuremberg, for instance, their singing-school was held in St. Katherine's church, and their public contests took place there. The proceedings commenced with the *Freisingen*, in which any one, whether a member of the school or not, might sing whatever he chose, but no judgments were passed on these preliminary performances. Then followed the contest, in which Meistersinger alone might compete. They were limited to Scriptural subjects, and their relative merits were adjudged by four *Merker* or markers who sat hidden by a curtain at a table near the altar. It was the duty of one of the four to heed that the song faithfully adhered to Holy Writ; of another to pay special attention to its prosody; of a third to its rhyme, and of the fourth to its melody. Should the singer fail in any of the rules of the *Tablatur*, the *Merker* declared him *versungen*

and *verthan*, and the competitor who had the fewest faults obtained the prize, a chain with coins. One of the coins, bearing the image of King David, had been the gift of Hans Sachs, and hence the whole *Gesänge* were called the 'David' and the prizeman the 'Davidwinner.' Every Davidwinner might have his apprentices, but no charge was made for teaching. The term 'Meister' (strictly speaking) applied only to those who invented a new metre or melody; the rest were simply 'Sänger.'

The Meistersinger possessed a store of melodies for their own use; and these melodies were labelled with distinctive but apparently meaningless names, such as the blue-tone,⁴ the red-tone, the ape-tune, the rosemary-tune, the yellow-lily-tune, etc. A Meistersinger might set his poems to any of these melodies. The four principal were called the *gekrönten Töne*, and their respective authors were Müglin, Frauenlob, Marner, and Regenbogen. So far were the Meistersinger carried by their grotesque pedantry that in setting the words of the twenty-ninth chapter of Genesis to Müglin's *lange Ton*,⁵ the very name of the hook and the number of the chapter were also included. Thus:—

Ex. 3.

Ge-ne-sis am neun und zwanzig-ten uns bericht,
wie Ja-cob foh vor sein Bru-der E-sau ent-wicht
Das er in Me-so-po-ta-mi-am kom-men.

To all external appearance the melodies of the Meistersinger (like those of the Minnesinger) had a strong affinity with Church music and kept to the Ecclesiastical modes. But on closer scrutiny many melodies may be found which would sound just like our major and minor scales, were it not for their modal cadences and the many liturgical fragments introduced. Still their songs are for the most part poor and simple, and too devoid of rhythm ever to be really popular, and very few of them found sufficient favour to become *Volkslieder* in the 15th and 16th centuries.⁶ On the other hand, the Meistersinger themselves sometimes appropriated *Volkslieder*. Thus Hans Sachs has

⁴ With the Meistersinger the word *Ton* referred to the music only, and not to the poetry, as with the Minnesinger.
⁵ Wagner has made us familiar with Müglin's *lange Ton*, in his *Meistersinger fanfare*:—

and it is evident that Wagner studied and fully understood the Meistersinger melodies, and adopted many genuine ones.

⁶ According to Böhme, in the preface to his 'Alt. Liederbuch,' p. xxiii, the writers of the *Volkslieder* never signed their names, whilst the Meistersinger generally introduced his own name, and very often the date of his composition, into the last rhyme of the poem. A Meistersinger's song can thus be distinguished from a true *Volkslied*.

¹ The celebrated chorale 'Warum betrübtest du dich, mein Herz,' was long believed to be the work of Hans Sachs; but it has been conclusively shown by Böhme ('Altd. Liederbuch,' p. 748) that the words were written by G. A. Oemler, and then set to the old secular tune, 'Dein gund mein Freud.'

² They bear the titles of *Gründlicher Bericht des deutschen Meistersengesangs* (Güclitz, 1571); and *Gründlicher Bericht der deutschen Reimen oder Reimern* (Frankfurt a. O., 1596). Both are partially reprinted in the *Sammlung für altdeutsche Literatur*, edited by F. H. v. der Hagen, J. G. Büchling, and others, Breslau, 1812. See also *Das Eingebuch des A. Puschman nebst den Original-melodien des M. Behaim und H. Sachs*, by G. Müntz (Leipzig, 1906).
³ *Ton den Meistersingern und ihrer Musik*. Curt Mey, 1903.

reproduced the beautiful old Mailed (May-song) in his *Fastnachtspiel*, 'Der Neydhart mit dem Feyhel,' written Feb. 7, 1562.¹ He calls it a *Reigen* or roundelay, and its original date was evidently anterior to the 14th century. In its 16th-century form it is as follows:—

Ex. 4.

In fine, the Meistersinger cannot be said to have reached a high level of excellence either in poetry or in music, but they undoubtedly exercised an important influence on the formation of the Song by the attention they paid to rhyme, and by their numerous inventions of new metrical arrangements. And they rendered a still greater service to music when they carried it into every German home, and made it a grace and pastime of domestic life.

While more regular and formal varieties of the Song were thus being studied and practised, it had never ceased to issue in its own spontaneous form of Volkslied from the untutored hearts of a music-loving people. From that source it came in native vigour, unforced and untrammelled. And far more was done for melody and harmony by the obscure authors of the Volkslied than was ever done by Minnesinger or Meistersinger. As Ambros has pointed out,² the importance of the part played by the Volkslied in the history of the music of Western Europe was second only to that of the Gregorian modes. Further, the moral struggle against the anti-humanism of the mediæval church found victorious expression in the assertive humanism of the folk-song—anathematised by spiritual authority. A partial reconciliation of the contending forces followed when the great polyphonic masters adopted Volkslied melodies as theme or foundation of their greatest sacred and secular works. Later, a yet closer union was effected in the Choral of the Reformation period. Whoever were the authors of the Volkslied, it was not their habit to write them down; the songs lived on the lips and in the hearts of the people. But happily, even in remote times, there were collectors who made it their business to transcribe these popular songs; and of collections thus made none are more important than the 'Limburger Chronik' and the 'Locheimer Liederbuch.' The former work consists of Volkslied which would seem

to have been in vogue from 1347 to 1380;³ while songs of a little later date are found in the other collection.⁴ This book contains forty-four songs, some of great melodic beauty, and showing considerably developed rhythm and structure as well as a delicate sense of poetic feeling. The *Lehrcompendium* of H. de Zelandia also contains some very fine Volkslied of the 14th and 15th centuries.⁵ Finally, among the many Minnesinger and Meistersinger and other MS. collections named after the various towns (such as the Nuremberg, Prague, Dresden MSS.), numbers of genuine Volkslied are to be found.⁶

The subjects of the earliest Volkslied were historical;⁷ they were indeed epic poems of many stanzas set to a short melody. But by the time that the Volkslied had attained to its meridian splendour, about the beginning of the 16th century, almost every sentiment of the human heart and every occupation of life had its own songs. Students, soldiers, huntsmen, pedlars, apprentices, and other classes had their own distinctive songs. The best are undoubtedly the love-songs—those, in fact, where feeling is the strongest. Amongst them the songs of parting (*Abschiedslied*) are the most numerous and beautiful, especially the *Wächterlied*⁸ or *Tagelieder*, in which the watchman announces the dawn.⁹ As a rule, the music of the Volkslied was better than the words. So loose was the structure of the verse that syllables without any sense were inserted to fill up the length of the musical phrase, as:

Dort oben auf dem Berge
Dölpel, dölpel, dölpel
Da steht ein höches Haus.

or a sentence was broken off in the middle, or meaningless *unds* and *abers* were lavishly interspersed. But notwithstanding these laxities of composition there was a close connection between the words and the melody.

The Volkslied was always strophical in form, and therein differed from the *Sequences* and *Proses* of the Church and the *Leichen* of the Minnesinger. Another marked feature was its rhyme. When the final rhyme had been substituted for mere alliteration and assonance, a definite form was imparted to the verse, and its outline was rendered clearer by the melody of the Volkslied which emphasised the final rhyme, and by covering two lines of the poetry

³ In the 'Limburger Chronik' we are told of a leper monk living by the Rhine, c. 1370. Despite his leprosy, the beauty of his compositions drew men to his cell from all quarters.

⁴ Ambros, *Gesch. der Mus.* ii. 376.

⁵ From the Prague MS. Ambros (ii. 277) gives one, 'Herr Conrad ging,' both in its original and in modern notation.

⁶ For the history of the Meistersinger see J. C. Wagenaell's *Buch von der Meistersinger haldseitigen Kunst*. 1697.

⁷ For the best authority consult B. von Lillencron's *Die historischen Volkslieder*, etc.

⁸ A *Wächterlied* still sung, 'Der Wächter auf dem Thürmelein sass,' is given in Erk's 'Deutsche Liederhort,' No. 135.

⁹ These *Abschiedslieder* are full of the sounds of nature—described with poetic charm. They were the special property of the Minnesinger (Wolfram von Eschenbach's were the most famous), but equally loved by the people.

¹ See Böhme's 'Alt. Liederbuch,' p. 366.

² Ambros, *Gesch. der Mus.* ii. 276.

with one phrase of the melody constructed a symmetrical arrangement.

Ex. 5. *Meine liebe Frau Mutter.*

It will be noted in the above example that the half-close is on the dominant harmony and the full-close on the tonic, and this principle, which was originally a peculiar attribute of the Volkslied, has been gradually introduced into all other kinds of music, and it is now one of the most important factors of form. (See FORM.) Many of the Volkslieder were composed in different ecclesiastical modes, but by degrees the Ionian mode, in which alone the dominant principle can have full weight, obtained pre-eminence. The form of the Volkslied is generally very concise as in the above example, and this perhaps is the secret of its great charm. But looser forms are sometimes met with, and were probably due to the influence of the Church. To the same influence may be ascribed the melodic *melismata* or vocal flourishes which occur even in strophical songs. In the Gregorian music, where little attention was paid to rhythm, the melody might be indefinitely prolonged upon any syllable; and similarly we sometimes find in the Volkslied many notes given to one word, as in this example:—

Ex. 6. *Abschied.*

These melodic *melismata* also allow the voice great scope in the so-called *Kehrreim* or refrain. Another noticeable peculiarity of rhythm in the Volkslied is the variety of ways in which the

metre is treated. In many cases the time changes with every bar, and the above example illustrates a different representation of the metre in every line of the stanza.¹ Few of the Volkslieder begin on the first beat of the bar; and therefore the usual metre is Iambic, thus:—

and a preference has always been shown by the Germans for equal or common time; it is a quieter and more formal time than the triple, which is essentially dance-rhythm.² Other common, though not invariable attributes of the Volkslied were a diatonic intervallie progression, the reiteration of one note, a limited compass, the key or mode steadily adhered to, and unlike the songs of many other countries, the melody of the Volkslied always maintained a complete independence of the accompanying instrument. In character the old Volkslieder are marked by a certain earnestness and dignified self-restraint. They are cheerful and even gay, but without impetuosity or excitability. There is no attempt at word-painting; the same tune must serve for the numerous verses. Hence the necessity for concise melodies. The tendency of the German spirit is to look inwards, to portray the deeper and more permanent emotions rather than the transient and superficial; to aim less at beauty than expression.

The Volkslied would seem to have fixed, as it were, instinctively our modern major tonal system; and, moreover, songs even of the 15th century are extant, which correspond to our minor keys. The following example clearly belongs to the old system, but the beginning and close and the intervals on which the principal rhymes fall, make it evident that the key of A minor was intended.³

Ex. 7. *Ach Elstein.*

In Hans Judenkünig's (1523) and Hans Neusiedler's (1536) Lute-books this melody is always in A minor with the G# marked. In

¹ See Böhme, p. 335, No. 257. The melody and words of this song are taken from the *Gassenhawerin*, 1535, No. 1. There are many versions of this fine melody; and in collections subsequent to 1540 it is often to be found set to the morning hymn 'Ich dank Dir, lieber Herr,' and with this setting it appears in all chorale books down to the present day.

² Böhme, however, maintains that until the 14th century no trace of any time except *Tempus perfectum* (which means triple time) can be found. 'Alt. Liederbuch,' Preface, p. 54.

³ Another good example is 'Es warh ein schöner Jüngling' (Georg Forster, *Ein Aufzug guter alter und neuer Teutscher Liedlein*, etc., 1539-1556, l. 49). This and 'Ach Elstein, liebes Elstein,' are some of the numerous versions of the legend of the Swimmer. 'Ach Elstein' is found in all the old collections of the 16th century. For instance, in Joh. Ott, 1534, No. 37; Schmelzler, *Quodlibet* x. 1544; Rhaw, *Bleimia*, ii. 1545, No. 19, etc.

the Song-books the sharp was never marked, but undoubtedly always used.

Consideration has thus far been given to the very important contributions of the Volkslied to the determination of permanent form in music; but its influence on contemporary music also requires notice.

It has already been shown that the composers of other countries in the 14th, 15th, and 16th centuries, took secular tunes as themes for their masses, motets, and other sacred works. The German composers did the same to a certain extent, but they more commonly employed the secular tunes in their secular polyphonic works. Nevertheless, as regards Church music the Volkslied occupied a higher place in Germany than elsewhere; for it is not too much to say that more than half the melodies of the chorale-books were originally folk-songs, and these melodies were among the simplest and most beautiful ever created. (See CHORALE.) Heinrich von Lauffenberg (or Loufenberg) in the 15th century systematically set his sacred words to secular tunes,¹ especially using the favourite *Tage* and *Wächterlieder*; but the Reformation made the practice very much more common. The Reformers wished the congregation to join as much as possible in the singing of hymns, and with that object they naturally preferred words in the vernacular, and melodies which were familiar with the people.² A well-known example of the combination of sacred words and secular melody is the song 'Isbruck, ich muss dich lassen,' set by Heinrich Isaak in four parts in 1475,³ with the melody in the upper part—a rare arrangement at that time. After the Reformation this tune was adapted by Dr. Hesse to the sacred words 'O Welt, ich muss dich lassen'; and in 1633 Paul Gerhardt wrote to it the evening hymn 'Nun ruhen alle Wälder,' in which form it still remains a favourite in all Lutheran churches.⁴ After many transformations the old love-song 'Mein Gmüth ist mir verwirrt'⁵ now lives in one of the most beautiful and solemn chorales of both the Lutheran and Roman Catholic churches, namely 'O Haupt voll Blut und Wunden,' which Bach has introduced so often in his Passion music according to S. Matthew. Again 'Könt ich von hertzen singen' (one of the most famous of the many *Wächterlieder* and *Tageweisen* melodies the Church borrowed) was adapted to the chorale

'Hilf Gott, das mir gelinge'; 'Ich hört ein frewlein klagen' to 'Hilf Gott, wem soll ich klagen'; 'O lieber Hans, versorg dein Gans' to 'O lieber Gott, das dein Gebot'; and 'Venus du und dein Kind' to 'Auf meinen lieben Gott.' Many dance-songs, especially the so-called *Ringel* and *Reigentänze*, were likewise set to sacred words.⁶

It is clear that the chorale gained rather than lost by the adoption of secular melodies; they emancipated it from stiffness and formality; they gave it heart and living warmth. So far removed from irreverence were the secular melodies, and so appropriate to the sacred text, that the music is generally more expressive of the words in the Chorale than in the Volkslied. But perhaps the true explanation of this is, that in the case of the Chorale, the words were either written expressly for a chosen melody, or the melody was selected for its appropriateness to particular words.⁷ The melody of that just mentioned, 'O Haupt voll Blut und Wunden,' is obviously secular, but what melody could better express a deep and poignant religious sorrow? In the Roman Catholic Church the use of the Volkslied was chiefly confined to the hymns to the Blessed Virgin (*Marienlieder*) and to the Saints, and to the Christmas Carols, especially the sacred cradle-songs, such as the lovely 'Josef, lieber Josef mein.' But upon the whole, the Roman Catholic hymns are all conceived in the 'traditional fixed cadence of the Gregorian song.'

The progress of polyphonic music in Germany had been checked by the discontinuance of the mass after the Reformation, but a new impetus was given to it by the contrapuntal treatment of the Volkslied by great composers. As examples of such treatment may be mentioned 'Allein dein G'stalt,' 'Ach herzig's herz,' by H. Finck; 'Mir ist ein roth Goldfingerlein,' by L. Senfl; 'Der Gutzgach auf dem Zaune sass,' by L. Lemlin. This brings us to the *Kunstlied*, which in its primary sense signified only the contrapuntal treatment of the song by learned musicians.⁸ With the polyphonic Kunstlied we have here no concern, beyond what just suffices to point out the changes through which it successively passed, and the important part the Volkslied held in it. The composers who used the Volkslied thus were masters of every form of counterpoint; sometimes they worked one melody with another, as Arnold von Bruck, who combined the song 'Es taget vor dem Walde' with 'Kein Adler in der Welt';⁹ or if they did not treat the melody as a canon, as Eckel treated 'Ach

¹ Ambros, iii. 375.

² Naumann (*Hist. of Mus.* p. 454 *et seq.*) points out that Luther being both a practical and theoretical musician saw clearly how powerful a factor the Volkslied had become in tonal practice, and in using it he insisted on the importance of the appropriateness of the melody to the sacred words, and on correctness of accent.

³ Georg Forster, i. No. 36. The words are supposed to be by the Emperor Maximilian I. in whose court Isaak was living.

⁴ See ISAAC, also Böhme, 'Aldt. Liederbuch,' p. 332, where the song is given in its original form with a *melisma*. Böhme also gives an interesting remark on the admiration Bach and Mozart evinced for this song.

⁵ This song is to be found in Hans Leo Haasler's *Lustgarten neuer deutscher Gedänge*, etc., Nuremberg, 1601. The melody was also used for a death-song 'Herzlich dich mich verlangen,' and later it was set to the universally sung 'Beñel du deine Wege' (Handel employed it in 1709, previous to Bach).

⁶ See Böhme, 'Aldt. Liederbuch,' p. 368 *et seq.* Böhme gives a list at p. 810 of secular melodies with sacred words.

⁷ The sacred Volkslieder (*geistliche Volkslieder*) differ from the chorale in that the former were printed on broadsheets and sung by the people of every class, whereas the chorales were written for and sung by the cultivated only.

⁸ The very much wider signification which the term *Kunstlied* afterwards acquired has been referred to at the outset of this article.

⁹ Reissmann, *Gesch. d. deutschen Lieder*, p. 69.

Jungfrau, ihr seid wolgemuth,'¹ they broke it up into fragments for imitation. They were careful always to choose familiar and favourite tunes, so that they might stand out and be easily recognised amidst the web of other parts surrounding them. When composing their own melodies, they always adhered to the ecclesiastical modes, using the new system only when they adopted a Volkslied.² The contrapuntal treatment had, however, one great disadvantage—it constantly necessitated the severance of the melody into fragments, and thus the clear, concise form of the song, which the Volkslied had done so much to establish, was in danger of disappearing. But happily at this juncture (about 1600) Hans Leo Hassler came to its rescue. Having studied in Italy, he breathed into his songs the light, secular spirit of the Italian *Villanella* and *Fa-la-la*, and gave more prominence to the melody than to the other voice-parts. His dance-songs also, with their short rhythmical phrases, did much to restore the concise form. Similar characteristics are noticeable in Melchior Franck's, Regnart's, and other contemporary collections of songs.³

In the beginning of the 17th century solo songs were first heard in Germany. There, as everywhere else, the introduction of the monodic system was due to the influence of Italy. The revolution begun by that country would seem to have first affected the Church music rather than the secular music of Germany. Innovations of Italian origin are plainly discernible in the sacred works of Praetorius and Heinrich Schütz; but neither of these composers improved the secular monodic song. German poetry had now fallen to a debased condition. It produced nothing better than songs of a vapid and artificial sentiment addressed to a conventional Phyllis or Amaryliss. And the language it employed was a nondescript mixture of French, Latin, and stilted German. Since Luther's death the simple vernacular had ceased to be in repute. But on August 24, 1617, a meeting of German patriots was held, who set themselves to restore their native tongue to

honour, and with that view to study the introduction of method and rule into its grammar and poetry. Other patriotic groups were soon formed with a like purpose, and by the year 1680 these associations numbered 890 members. Their labours quickly bore good fruit. The success of a group of Königsberg poets was specially remarkable, and was doubtless due in a great measure to the skill with which one of the best of them—Heinrich Albert—set his own and his associates' songs to music. His compositions consequently won great popularity, and he has been named 'the father of the volkstümliches Lied.' Schein and Hammerschmidt had preceded Albert in the right path, but their taste and talent had been frustrated by the worthlessness of the words they set to music. The poetry on which Albert worked was not by any means of a high order, although it had sufficient merit to demand a certain measure of attention. And from his uncle, Heinrich Schütz, Albert had learnt the new Italian methods of singing with correct expression and brilliant execution, introducing vocal embellishments.⁴ Several of his songs are for one voice with clavicembalo accompaniment, but their harmony is poor. The movement begun by Albert was carried on by J. R. and J. G. Ahle, and Adam and Joh. Krieger. Johann's songs are good, and exhibit a marked improvement in grace and rhythm. The first bars of his song, 'Komm, wir wollen wandeln,' have all the clearness of the best Volkslieder:—

Ex. 8.

Meanwhile the Kunstlied or polyphonic song had ceased to advance. Other branches, especially instrumental and dramatic music, had absorbed composers, songs began to be called 'odes' and 'arias,' and French and Italian influence was strongly felt, both in music and literature. Writing in 1698, Keiser tells us that cantatas had driven away the old German songs, and that their place was being taken by songs consisting of mixed recitatives and arias.⁵

¹ In the preface to the fourth part of his *Arien* Albert says he has borrowed some melodies from other composers, 'Aus Liebe und Wohlgefallen zu denselben Weisen.' He rarely names the composers, but merely calls the songs 'Aria gallica,' 'Aria polonica,' etc. He only used one Italian air, which is the more curious, as in the preface to the sixth part of his *Arien* he says, 'Was für herrliche und geistreiche Compositionen aus Italien . . . siehe ich oftmals mit höchster Verwunderung an.' See L. H. Fischer, *Fremde Melodien in H. Albert's Arien, Verzeichniss*, 1886.

² See the preface to his cantata collection. See also Lindner, *Gesch. d. deutschen Lieder*, p. 53.

¹ Reissmann, *Gesch. d. deutschen Lieder*, p. 72.

² Georg Forster's collections contain a large quantity of songs thus treated. See Forster, *etc.*

³ See, for example, 'Tricinia nova Heilicher amorsorischer Oeslinge mit schönen poetischen Texten gederet und etlicher Massen nach Italienischer Art mit Fleiss componirt durch Melchior Francken,' Nürnberg, 1611; and 'Kurzweilige deutsche Lieder zu dreien Stimmen nach Art der Neapolitanen oder Welschen Villanellen durch Jacobus Regnart in Druck verfertigt,' Nürnberg, 1578.

The so-called *Gesellschaftslieder* of the 16th and 17th centuries belong to this category of song. They arose when song was cultivated among the burgher and middle classes to a high extent, and ceased with the efforts of the Silesian poets in 1617. At first they resembled the Volkslied in form and spirit, but later they approached more closely to the Kunstlied. Most contemporary musicians took part in this popular development of music, and collected and arranged the favourite songs of the time in parts, either retaining or altering the words. The editors and publishers encouraged the introduction of Italian melodies with translated or imitated words. Between 1640 and 1694, the following musicians (amongst many others) issued collections of such songs: Georg Forster, Orlando Lussus, Ivo de Vento, Jacob Regnart, Joh. Ecard, C. Demantius, H. L. Hasler, M. Praetorius, M. Franck, E. Widmann, H. Schein, and several Italians. For further information see Hoffmann von Fallersleben, *Die deutschen Gesellschaftslieder*, etc., and E. v. Liliencron, *Deutsches Leben im Volkslied*, etc.

Among the writers of the 18th century who almost invariably called their songs 'odes' and 'arias' were Graun, Agrioola, Sperontes, Telemann, Quantz, Doles, Kirnberger, C. P. E. Bach, Marpurg, Nichelmann, J. G. Krebs, Neeffe, and many others. Also large quantities of collections of 'Arien und Oden' were published at this time, either separately or in numbers, of which the most famous was Sperontes' 'Singende Muse an der Pleisse' (Leipzig, 1742-45).¹ J. P. Kirnberger has been called (perhaps not with perfect accuracy) the inventor of the 'durchcomponirtes Lied,' that is, a song with different music for every stanza. C. P. E. Bach used the same form, and his best-known vocal work is his setting of Geilert's 'Geistliche Oden' (1758); but he was a musician of a higher and more genial type than the afore-mentioned. Still, this group of composers rendered some services to the song. They set a good example of attention to the words, both as regards metre and expression;² they varied the accompaniments by arpeggios and open chords, and displayed a thorough command of the different forms they employed. But notwithstanding these merits their songs (with few exceptions) must be pronounced to be dry, inanimate, and either deficient in melody, or the melody is overburdened with florid passages and tasteless ornaments, and rarely, if ever, spontaneous.³

It might strike the reader as strange if the great names of J. S. Bach and Handel were passed by in silence; but neither Bach nor Handel ever devoted real study to the Song. Such influence as they exercised upon it was indirect. Bach, it is true, wrote a few secular songs, and a little love-song, 'Bist Du bei mir,' is simple and sincere.⁴ His two comic cantatas also contain several of great spirit, and show his use of the Volkslied.⁵ And amongst his 'Geistliche Arien' we have the beautiful 'Gieb dich zufrieden' and 'Schlummert ein, ihr matten Augen.' But these are isolated instances, and it was through his choral works that he most powerfully affected the song. Handel's name frequently occurs to songs in 18th-century English song-books, or single sheets, or in collections, but it is difficult to say which are original, and which are adaptations of Italian

songs or minuets set to English words. 'Stand round, my brave boys,'⁷ 'From scourging rebellion,'⁸ 'The unhappy lovers,'⁹ and 'Twas when the seas were roaring'¹⁰ were some of the best-known examples. The Händel-Gesellschaft have published a whole volume of 'German, Italian, and English Songs and Airs,' but Handel's real influence upon the Song was through his operas and oratorios, and there it was immense.¹¹ Equally indirect, as will be seen presently, were the effects produced on it by the genius of Gluck, Haydn, and even of Mozart.

At the period we have now reached, namely the end of the 18th century, a group of poets, called the 'Göttinger Dichterbund,' or 'Hainbund,' were actively engaged in providing simple lyrics for the people.¹² Simultaneously in music, a new and popular form of the Kunstlied appeared which was the 'volkstümliches Lied.' This term defies exact translation; but, speaking broadly, it means a simple and popular form of the art-song. The decline of the Volkslied during the 17th century has been sometimes attributed to the distracted state of Germany; and certainly the gloomy atmosphere of the Thirty Years' War, and the desolation of the Palatinate, cannot have been favourable to it. But no political or social troubles could affect its existence so deeply as an invasion upon its own ground by the Kunstlied. So long as the Kunstlied dwelt apart among learned musicians the Volkslied had little to fear. But when once it had become simple and melodious enough to be caught by the people the Volkslied was supplanted. In churches and schools, at theatres and concerts the public grew habituated to the Kunstlied, and where civilisation existed the old Volkslieder faded from memory.¹³ The 'volkstümliches Lied' is, in short, a combination of the Volkslied and the Kunstlied, and its area of capacity is a very wide one. It may rise to a high level of poetic beauty, and may descend to low depths of stupidity or triviality without ceasing to be 'volkstümlich.' Songs there were, undoubtedly, before the time of J. A. Hiller, to which this epithet could be properly applied, but he was the first to secure for them a thorough recognition.¹⁴ He

⁷ A song made for the Gentlemen Volunteers of the city of London, and printed in the *London Magazine*, November 1748.

⁸ *London Magazine*, July 1748.

⁹ *Merry Musician*, iv, p. 33, c. 1733.

¹⁰ From a *Select Collection of English Songs with their original Airs*, by J. Ritson, London, 1813.

¹¹ See Schneider, *Das mus. Lied*, ii, p. 180.

¹² This group consisted of the poets Bode, Hölty, Overbeck, Bürger, Claudius, Voss, and the Stolbergs. They revered Klopstock, and opposed the French tendency.

¹³ It is, however, well to remember that this new departure of German song which we have been describing may—paradoxical as it sounds—be traced to the zeal displayed by Herder, Goethe, and others in collecting and arousing the enthusiasm for the folk-poetry of Germany and other kindred nations. It was the same desire to return to simple, natural forms, though it led in poetry as in music in different directions.

¹⁴ It would have seemed more methodical to trace the rise and decline of particular kinds of songs in separate and clearly defined sections of time, but this is altogether impossible, because their respective periods are interlaced with one another. Thus the volkstümliches Lied had come into existence, while the Ode and the Aria were at their zenith; and again composers were using the aria form even after the introduction of the lyric song.

¹ Schneider, *Das mus. Lied*, ii, 206, and B. Seyfert, *Das mus. volkstümliche Lied*. Although this collection was popular, it was of a very mixed nature, containing solemn odes, vulgar drinking-songs, parodies, or arrangements of French instrumental pieces, and Italian arias.

² In his life of C. P. E. Bach, C. Bitter says: 'Mit diesem schönen, edlen Werke ist C. Bach, der Begründer und Schöpfer des deutschen Liedes in seiner jetzigen Bedeutung geworden,' i, 143.

³ Generally speaking, expression and tempo marks were sparingly used until the end of the 18th century. But it is curious to see how the composers of this period indicated the tempo by such words as *fröhlich*, *munter*, *ängstlich*, *traurig*, showing, thereby, their wish to express, above all, the mood or character of the song.

⁴ Full information and abundant examples of these songs will be found in Lindner's and Schneider's histories of the Song.

⁵ Another in praise of tobacco, of a different character, is in the same book.

⁶ P. Spitta, *J. S. Bach*, ii, 561 et seq. The English folk-song, 'When Adam was first created' (see Kidson's *Traditional Tunes*, p. 153), was used by Bach in one of these cantatas.

belonged to the second half of the 18th century, and was really an operatic composer. It was indeed the songs in his *Singspiele* which took so strong a hold of the public, and a favourite tune of his, 'Die Jagd,' will serve as a specimen of his work :—

Ex. 9. *Die Jagd.* J. A. HILLER.

Commodetto.

Alle ich auf meine
Da kam aus dem Ge-

Biel - che ein Stückchen gar be - goss Das
sträu - che ein Mädchen a - them - los.

sprach, ach babter-bar-men, steht meinem Va - ter bei! Dort

schlag ein Fall dem Armen das lioke Beu ent-zwei!

Another, 'Ohne Lieb und ohne Weib,' taken from his *Singspiel* 'Der Teufel ist los,' and still sung in Germany with much zest, was one of the first *Kunstlieder* to be received into the ranks of the *Volkslieder*. J. André, the author of the 'Rheinweinlied,' and J. A. P. Schulz, were contemporaries of Hiller's, and did much for the *volkstümliches Lied*. Schulz was careful above others of his time to select poetic words for his music, and so long as he kept to the simpler forms, he was always successful; many of his songs are still the delight of German children. Composers were now provided with a store of fresh and natural poems of a popular type by the poets of the Göttingen school, to whom later the names of Körner, Brentano, Arnim, and Uhland¹ may be added; and the love of poetry and song steadily increased in the German nation.

Starting from Hiller and Schulz, the *volkstümliches Lied* pursued two different roads. Its composers in the Hiller school, such as F. Kauer, Wenzel Müller, and Himmel were shallow and imperfectly cultivated musicians, whose sentimental melodies had for a time a certain superficial and undeserved repute, such as

¹ Körner's patriotic poems and the publication of 'Des Knaben Wunderhorn' acted as powerful incentives to song.

Himmel's 'An Alexis send' ich dich,' or 'Vater, ich rufe dich.' The dramatic composers Winter and Weigl may be reckoned among this school, in so far as they were song-writers; and its tendencies reappeared nearer our own day in Reissiger and Abt. On the other hand, Schulz's followers were real musicians; and if they became too stiff and formal it was the outcome of a strict regard to form and symmetry, and of a praiseworthy contempt for false sentiment. Whenever they chose the *volkstümliches Lied* they proved their mastery of it; but most of them could write at will in more than one style, and their names must therefore be mentioned in more than one class of song. The first and best of Schulz's school was Mendelssohn's favourite J. F. Reichardt, but his most valuable services to the Song were given on other ground, as will appear later. Next to him came Kunzen, A. Weber, and Nägeli. Zelter, Klein, L. Berger, and F. Schneider are entitled by their songs for male chorus to be counted among the followers of Schulz. The operatic songs of C. Kreutzer and H. Marschner, and the simple melodious songs by C. Krebs, F. Kücken, Silcher, Gersbach, and Gustav Reichardt have proved themselves to be truly *volkstümlich* by their firm hold on the hearts of the people.

In the many collections of so-called *Volkslieder*, beginning with the South German 'Blumenlese' (1782) and the North German 'Mildeheimisches Liederbuch' (1799), down to those which are continually issuing from the musical press of to-day, there will be found numerous *volkstümliche Lieder* converted into *Volkslieder*. Some of these are by celebrated authors whose fame was won in other fields,² and some by men who wrote nothing but *volkstümliche Lieder*. Of many songs the authorship is wholly unknown, and of others it is disputed.³ Worthy

² The *Blumenlese*, edited by H. P. Bossler, contains Beethoven's earliest song, 'Schuldner eines Mädchens,' composed when he was eleven. A very good and typical example of the *volkstümliches Lied* may here be added. It is taken from his sketch-book of 1815 and 1816 (cited by Nottebohm in the *Mus. Wochenblatt*, Nov. 1878).

Ex. 10. *Die Zufriedenheit.* BEETHOVEN.

Was frag' ich viel nach Geld und Gut, wenn ich zufrie - den

hin? Gibt Gott mir nur ge - sun - des Blut, so

hin ich fro - her Sinn, und sing aus dank-bar-

em Gemüth, mein Morgen- und mein Abendlied.

The words of the song are by J. Müller. It has been set also by Mozart and Noë.

³ Bühme, in his work entitled *Volkstümliche Lieder der Deutschen im 18. und 19. Jahrhundert*, has done much to rectify current errors

to be mentioned as representative songs of this class are: 'Es ist bestimmt in Gottes Rath'; 'Ach, wie ist's möglich dann'; 'Prinz Eugenius'; 'Zu Mantua in Banden'; 'Wir hatten gebaut ein stattliches Haus'; 'Es zogen drei Burschen'; 'Morgen muss ich fort von hier'; 'Aenuchen von Tharau'; 'Bekränzt mit Laub'; 'Gaudemus'; 'Es geht bei gedämpftem Trommelklang'; 'Was blasen die Trompeten'; 'Morgenroth'; 'Ich weiss nicht, was soll es bedeuten'; 'In einem kühlen Grunde'; 'Mädele ruck, ruck, ruck'; 'So viel Stern am Himmel stehen'; 'Es kann ja nicht immer so bleiben'; 'Der Mai ist gekommen'; 'O Tannenbaum'; 'Ich hatt' einen Kameraden'; 'Was ist des Deutschen Vaterland'; 'Die Wacht am Rhein,' etc.¹ None of these songs are vulgar, nor even commonplace. They are familiar in all classes, young and old; and the heartiness with which they are everywhere sung attests their vitality. Singing in unison is comparatively rare among Germans; their universal love and knowledge of music naturally predispose them to singing in parts. A regiment on the march, a party of students on a tour, or even labourers returning from work, all alike sing their favourite songs in parts, with remarkable accuracy and precision. And the natural aptitude of the nation for this practice is perpetually fostered by the *Singvereine* which exist in the most secluded corners of Germany.

The mere enumeration of the qualities by which the volksthümliches Lied can be recognised explains its popularity. It is strophical in form, and is easy to sing; it has an agreeable, usually diatonic melody, a simple and pure harmony, an unpretentious accompaniment, a regular rhythm, and words inspired by natural sentiment. But it lacked the poetic and thoughtful treatment, both of words and music, which subsequently raised the lyric song to the level of true art.

It is now time to inquire in what manner the Song was treated by some of the greatest composers of the 18th and 19th centuries—by Gluck, Haydn, Mozart, Beethoven, Spohr, and Weber. Gluck was the contemporary of Graun, Agricola, and Kirnberger; and like them he called most of his songs odes. But the standpoint from which he regarded the song was very different from theirs. Applying his theories about the Opera to the Song, he steadfastly aimed at a correct accentuation of the words in the music, and the extinction of the Italian form of the melody, which required the complete subordination, if not the entire sacrifice to itself, of every other element of composition. 'The union,' wrote Gluck to La

Harpe in 1777, 'between the air and the words should be so close that the poem should seem made for the music no less than the music for the poem,' and he conscientiously strove to be true to this ideal in all his work. But though he revolutionised the Opera, he left no deep mark on the Song, for indeed, he never devoted to it the best of his genius. His few songs, chiefly Klopstock's odes, have no freshness about them, they are dry and pedantic; and with all Gluck's superiority to his contemporaries in aims and principles of composition, his odes are scarcely better than theirs.²

With Jos. Haydn the influence of the Volkslied is once more apparent. Hence the vitality of his melodies where this element is strongest. His finest song, the Austrian National Anthem, 'Gott erhalte Franz den Kaiser,' closely resembles a Croatian folk-song³ (see EMPEROR'S HYMN), and in his instrumental works numerous instances of his use of his native songs could be adduced. Yet, taking the bulk of Haydn's songs it cannot be denied that they are lacking in the freshness displayed in his instrumental works. The melodies are carefully and elaborately written, and the accompaniments often interesting and developed (see for instance 'O süsser Ton,' 'Rückerinnerung,' or 'Der erste Kuss'); but his want of interest in the words he chose, and his disregard both for their meaning and proper accentuation, rob them of the first conditions necessary for the true lyric. His songs are conceived too exclusively from the instrumental point of view. As Schneider truly says, Haydn 'treats the vocal melody exactly as a pianoforte or violin motif, under which he places some words which only superficially agree in rhythm with the melody.'⁴ Freest from these defects and amongst his best and most popular songs are the twelve canzonets, containing such graceful and melodious numbers as 'My mother bids me,' 'Recollection,' and 'The Mermaid.' These and such simple little German songs as 'Jede meint das holde Kind' and the pretty serenade 'Liebes Mädchen, hör' mir zu' will never lose their charm.

The versatility of Mozart's powers is visible in his songs. Some of them might be described as arias, and others as volksthümliche Lieder; some are lyrical, and others dramatic, and yet Mozart cannot be said to have impressed his own great individuality upon the Song except in a few instances. It was in the Opera that he put forth his whole strength, and his operatic songs often derive from their simple joyous melodies a truly popular character. It is evident that he treated Song, pure and simple, as mere recreation, and bestowed little pains thereon. Many faults of accentuation could be pointed out in his songs, but his exquisite

as regards the authorship of these songs, such as attributing 'Herz, mein Herz, warum so traurig' to Beethoven instead of to F. Gluck, and 'Willst du dein Herz mir schenken' to J. S. Bach instead of to Giovanniuni, etc.

¹ In the various collections mentioned at the end of this article, the reader will find a multitude of other similar songs, including *Studenten-, Soldaten-, Trink-, Fest-, Tanz-, National-, Begräbnis-, Geistliche-, Kinderlieder*, etc.

² For a good example see 'Willkommen, o silberne Mond,' given by Schneider, ii. 267.

³ See the South Slavonic section of this article, p. 570, note 2.

⁴ Schneider, *Das mus. Lied*, ii. 269.

melodies and skilful accompaniments almost obliterate such defects. Mozart wrote many volkstümliche Lieder; some humorous, like 'Die Alte' (with its amusing expression-mark, 'Ein wenig durch die Nase zu singen'); some fresh and joyous as 'Komm, lieber Mai,' and the favourite 'Ich möchte wohl der Kaiser sein.'¹ But it is in the form of the Aria and *durch-componirtes Lied* that we find his most perfect song-writing. 'Abendempfindung,' with the beautiful opening phrases expressive of the calm moonlight evening, and his masterpiece, 'Das Veilchen,' which he wrote to words by Goethe, are on a level with his best work in other branches.

Some of Beethoven's earlier songs, such as 'An einen Säugling,' 'Das Kriegslied,' 'Molly's Abschied,' and 'Der freie Mann,' are volkstümlich; the form is small, and the accompaniment nothing more than the melody simply harmonised. The structure is similar in Gellert's sacred songs, op. 45, except in the 'Busslied,' where there is a fuller development, both of voice and accompaniment. 'Adelaide' is also an early work, but it is written in a larger form, and shows signs of the dramatic treatment which for a while influenced Beethoven's vocal writing. Many other songs cast in the scena and aria form could be instanced, but of far higher interest are those written in the lyrical vein. He set six poems of Goethe's, as op. 75, and three as op. 83, and although there is much in these songs which might have tempted Beethoven to use the scena or the cantata form, he resisted it. He adhered to the strophical divisions, and left it to the instrumental part to satisfy their dramatic requirements. In Mignon's song, 'Kennst du das Land,' each stanza has the same beautiful melody, and the accompaniment alone varies and intensifies. In Jettles' Liederkreis, 'An die ferne Geliebte,' op. 95, the unity which makes the cycle is wholly the work of the composer, and not of the poet. It is Beethoven who binds the songs together by short instrumental interludes modulating into the key of the next song, and by weaving the exquisite melody with which the cycle begins into the last song. Most of the songs of this immortal cycle are strophical, but with great variety of accompaniment; and the just balance of the vocal and instrumental parts, and the warmth and fervour of the expression, equally contribute to the faithful representation of lyric thought and feeling. Enough stress cannot be laid on the importance of Beethoven's work in song-writing, for having effectively shown the power of harmony and modulation as means of expression; also for having enlarged the part sustained by the piano-forte. He taught his instrument, as it were, to give conscious and intelligent utterance to

the poetic intention of the words. Furthermore, we must recognise that although Beethoven's genius rose to its loftiest heights in other branches of music, it was he who first raised Song from the entirely subordinate position it had hitherto held to an honourable place in the ranks of musical art.

Spohr also wrote lyric songs, and was fitted for the work by his romantic and contemplative nature. But his songs are marred by excessive elaboration of minutiae, and in the profusion of details clearness of outline is lost. Again, his modulations, or rather chromatic transitions, are so frequent as to be wearisome. Of all his songs, 'Der Bleicherin Nachtlid' and 'Der Rosenstranch' are free from these faults, and they are his best.

A greater influence was exercised upon the Song by Carl Maria von Weber.² He published two books of Volkslieder, op. 54 and op. 64, perfect in their simplicity and of real distinction. Of his other seventy-eight songs the most celebrated are those from Körner's 'Leyer und Schwert'; the cradle-song, 'Schlaf Herzenssöhnchen,' 'Die gefangenen Sänger,' and the finest of all, 'Das Mädchen an das erste Schneesglöckchen.' These songs deserve their celebrity, and there are indeed many others which are not so well known, nor as often heard as they deserve to be. Weber's fame as a song-writer has perhaps suffered somewhat from the circumstance that many of his best songs are in his operas, and it has been partially eclipsed by the supreme excellence of one or two composers who were immediately subsequent to him.

Incidental reference has already been made more than once to Goethe, to whom the obligations of the Song are great. The fine outburst of lyric song which enriched the music of Germany in his lifetime was very largely due to him. The strong but polished rhythm, and the full melody of his verse, were an incentive and inspiration to composers. J. Fr. Reichardt was the first to make it a systematic study to set Goethe's lyrics to music, and between 1780 and 1810 he issued several collections.³ So long as Reichardt merely declaimed the words in melody, or otherwise made the music subordinate to the verse, he was successful. Goethe's words were, in short, a sure guide for a talent like his. Reichardt was not a great master, but he may claim the honour of having struck the true keynote of lyrical songs, and greater artists than himself immediately followed in his footsteps. Nothing he ever wrote is better than his setting of Tieck's 'Lied der Nacht,' and in this song he clearly shows himself to be the fore-

¹ It is worth while to note that Weber himself says in his literary works, that 'strict truth in declamation is the first and foremost requisite of vocal music. . . . Any vocal music that alters or effaces the poet's meaning and intention is a failure.'

² Some of Goethe's words appeared among Reichardt's miscellaneous songs as early as 1780; but in 1789 he published a separate collection, entitled 'Goethes lyrische Gedichte,' containing thirty poems. And in 1809 he issued a more complete collection under the title of 'Goethes Lieder, Oden, Balladen, und Romanzen mit Musik, von J. Fr. Reichardt.'

³ The little cradle-song, 'Schlafe, mein Primchen,' long attributed to Mozart, has recently been proved by Dr. Max Friedländer to have been written by Bernhard Flies.

runner of Schubert and Schumann. A younger contemporary, Zelter, also made his reputation by setting Goethe's words to music. Zelter was himself a friend of Goethe's, and so great an admirer was the poet of Zelter's settings that he preferred them to Reichardt's, and, through some strange obliquity of taste or judgment, to those of Beethoven and Schubert. Zelter's early songs were strophical, but in later years he adopted more freely the *durchkomponierte* form. Others of this group of writers were Ludwig Berger and Bernard Klein, albeit they differed somewhat in their treatment, both of the voice and instrumental parts.

If the general results of the period through which we have just passed be now regarded as a whole, it will be seen that the various conditions requisite for the perfection of the Song had matured. The foundations and all the main structure had been built; it required only to crown the edifice. Starting from the *volkstümliches Lied*, the Berlin composers had demonstrated the necessity of full attention to the words. Mozart and Weber had given it a home in the Opera. Mozart and Beethoven had developed its instrumental and dramatic elements; and had further shown that the interest of the Song is attenuated by extension into the larger scena-form. Nothing, therefore, of precept or example was wanting, by which genius might be taught how to make the compact form of the song a perfect vehicle of lyrical expression. The hour was ripe for the man; and the hour and the man met when Schubert arose.

This wonderful man, the greatest of song-writers, has been so fully and appreciatively treated in other pages of this Dictionary,¹ that it would be superfluous to do more here than examine the development of the Song under him. So fertile was Schubert's genius that we have more than 600 of his songs, and their variety is as remarkable as their number. He was master of the Song in every stage—whether it were the Volkslied, or the Ode, or the *volkstümliches Lied*, or the pure lyric song, or the Ballade and Romanze. And the secret of his greatness was largely due to his complete recognition of the principle that the balance between the melodic form and emotional meaning should be perfectly adjusted. The essence of true Song, as Schubert clearly saw, is deep, concentrated emotion, enthralling words and music alike. Full of poetry himself, he could enter into the very heart and mind of the poet; and so wide was his range of sympathetic intuition that he took songs from all the great German poets, and as their styles varied, so did his treatment. His best compositions are lyrical, and it is scarcely possible to conceive higher excellence than is displayed in these masterpieces. Beauty

and finish are bestowed with so even a hand, both on the voice-part and on the accompaniment, that it would be difficult to say that either takes precedence of the other. In the music which he wrote to the more dramatic, legendary, or ballad-like forms, such as Schiller's 'Der Taucher,' and 'Gruppe aus dem Tartarus,' Collins's 'Der Zwerg,' Mayrhofer's 'Memnon,' or Goethe's 'Ganymed' and 'Schwager Kronos,' the accompaniment is more important than the voice-part. Schubert's treatment of the song-cycle differed from that of Beethoven, inasmuch as Schubert did not weld together the music of the set, but bound them to one another by community of spirit. They can all be sung separately, but the 'Müllerlieder' and 'Winterreise,' which tell a continuous tale, lose much of their dramatic power if they be executed otherwise than as a whole. Some of Schubert's finest songs are strophical in form, and others have a change of melody or accompaniment, or both, for every stanza. But whatever treatment the words might call for, that Schubert gave them with unerring instinct.

Mendelssohn, although he comes after Schubert, belongs to an earlier school of song-writers. His songs exhibit all the best characteristics of the Berlin School; they are perfect in form, melodious, and easy of comprehension. But they lack the marvellous variety we find in Schubert's songs. This is partly owing to the fact that Mendelssohn could not surrender himself completely to the poet whose words he was setting;² the words to him were only an aid or incentive to the composition of a song already preconceived in his own mind. He also adhered to certain clearly pronounced types of melody and harmony; so that his songs all bear a strong resemblance to each other. He preferred the strophic form; and ranked the independence of the melody higher than the variations of expression the words demanded. Hence the slight influence Mendelssohn has exercised upon the Song in Germany. Yet granted these limitations, the joyousness of his spring-tide songs, the tranquil beauty of such compositions as 'Scheidend' and the 'Nachtlied,' and the true Volkslied tone of 'Es ist bestimmt,' have rendered his songs popular in the best sense of the word. (See MENDELSSOHN.)

Meyerbeer's songs in general are but little known; but amongst the '40 Mélodies' published in 1840 by Brandus, Paris, many are remarkable and well worth reviving; as, for instance, 'Le moine,' 'Le poète mourant,' 'Sur le balcon,' 'Du schönes Fischermädchen.' Still, they are open to Mendelssohn's criticism,

² It is a strange paradox that Mendelssohn, with all his finished culture and literary tastes, never realised his responsibilities towards the poet, and did not hesitate to change the words if it suited his music better. To give one instance out of many: in Heine's 'Ich wollt' meine Schmerzen ergößen sich,' Mendelssohn substitutes 'Lied' for 'Schmerzen,' thereby wholly altering the sense. Another strange contradiction is the fact that although Mendelssohn was steeped in Bach and possessed great contrapuntal skill, his accompaniments are never polyphonic.

¹ The reader should also consult Reissmann's 'Das deutsche Lied in seiner historischen Entwicklung und his Geschichte des deutschen Liedes.' Also Hadow's vol. v. of the *Oxford History of Music*.

that they are too pretentious and exaggerated, and are wanting in naïveté and spontaneity. Methods were adopted by Meyerbeer more suitable to the exigencies of opera than to the simple song.

With Robert Schumann we approach a new departure in song-writing; and no composer since Schubert has exerted so wide and deep an influence upon the subsequent development of this art, both in Germany and in other countries. Schumann was at once poet and musician. His songs are the very soul of romantic poetry. With scrupulous art he reproduces all that runs in the poet's mind, be it ever so subtle and delicate, but he also permeates it with a deeper shade of meaning. This may be seen especially in his settings of the poets Heine, Reinick, Kerner, Geibel, Chamisso,¹ Rückert,² and Eichendorff, the last five of whom were essentially romantic poets. Schumann's kindred imagination was stimulated into full activity by the supernatural splendour, mediæval charm, and mystic vagueness of their conceptions. Visions of midnight scenes arise in prompt obedience to the spell of Schumann's music. It conjures up for eye and ear the dark vault of the starry heavens, the solitudes of haunted woods, the firefly's restless lamp, the song of nightingales, the accents of human passion idealised, and all else that makes the half-real and the half-unreal world in which the romantic spirit loves to dwell. It is to Heine that Schumann's nature most deeply responded. Whether the poet be in a mood of subtle irony or bitter mockery, of strong passion or delicate tenderness, of joy or sorrow, with equal fidelity is he portrayed in the composer's music. What Schubert was to Goethe, Schumann was to Heine; but the requirements of the two poets were not the same. Goethe's thought is ever expressed in clear and chiselled phrase; while it is a habit of Heine to veil his meaning and leave whatever may be wanting to be supplied by the reader's imagination. The composer who would adequately interpret him must, therefore, have poetic fancy no less than a mastery of his own art. This Schumann had, and none of his songs rank higher than the splendid cycle 'Dichterliebe' from Heine's *Buch der Lieder*. Their melodic treatment is declamatory; not in recitative, but in perfectly clear-cut strophes, with great attention bestowed on the accentuation of emphatic words. As a general rule the instrumental part of Schumann's songs is too important, too independent to be called an accompaniment; it is an integral factor in the interpretation of the poem. While the voice-part often seems only to suggest, the

pianoforte part unfolds the sentiment of the song, and evolves from the poem a fuller significance than it could ever have owed to the poet's own unaided art.³ These few remarks will have sufficed to show that together with Schubert in music, and Goethe and Heine in literature, Schumann has lifted Song to a higher pinnacle of excellence than it ever reached before.

We will here allude to another branch of modern German song, which comprises the *Ballade*, the *Romanze*, and the *Rhapsodie*. In the ordinary English sense, the *ballad* is primarily a poem descriptive of an event or chain of incidents, leaving the reader to gather sentiment and reflection from bare narration. But the *Ballade*, as a German form of song, has some other properties. Goethe says it ought always to have a tone of awe-inspiring mystery, which fills the reader's mind with the presence of supernatural powers, and contain strong dramatic elements. The *Romanze* is of the same class as the *Ballade*, but is generally of more concise form, and by more direct references to the feelings which its story evokes approaches nearer to the lyric song. As distinguished from the *Ballade* and *Romanze*, the *Rhapsodie* is deficient in form, and its general structure is loose and irregular. The first poet who wrote poems of the true *Ballade* type was Bürger; his example was followed by Goethe, Schiller, Uhland, and others, and then the attention of composers was soon caught. Inspired by Schiller, Zumsteeg composed in this vein, and his work is interesting as being the first of its kind. But Zumsteeg had too little imagination to handle this form successfully, and his best songs belong more correctly to the *Romanze*. We miss in his *Balladen* the bold, melodic, principal theme (which should stand out in relief from all secondary themes and ideas, and be repeated wherever the story needs it),⁴ although in some of them the details are very well and truthfully painted—for instance, the fine gloomy opening phrase of the 'Pfarrers Tochter.' Neither Reichardt nor Zelter succeeded any better with the *Ballade*. They treated the 'Erlkönig' as a *Romanze*, and Schiller's *Balladen*, 'Ritter Toggenburg,' and 'Der Handschuh,' as *Rhapsodies*. And even Schubert in his longer pieces was inclined to compose in a rhapsodical form. In some, such as 'Der Taucher,' 'Die Bürgschaft,' 'Der Sänger,' where he is faithful to the *Ballade* form, and where there are exquisite bits of melody appositely introduced, and the accompaniments are thoroughly dramatic, the general effect of the piece is overlaid and marred by multiplicity of elaborate details, and drawn out to too great length. To the *Romanze* Schubert gave the pure strophical form, as, for instance, in Goethe's 'Heidenröslein.'

¹ Chamisso's cycle 'Frauenliebe und Leben' is described fully under SCHUMANN.

² Rückert's verse did not perhaps evoke in Schumann so full a measure of spontaneous melody as Eichendorff and Kerner. The most melodious, and perhaps the best known of the Rückert collection, are Nos. 2, 4, and 13, and these are by Frau Clara Schumann.

³ Further evidence of the importance of Schumann's innovations in song-writing will be found under SCRUBBANS.

⁴ Loewe's ballads strikingly illustrate the value of this characteristic.

The founder of the true Ballade in music was J. C. G. Loewe, who caught, as it were instinctively, the exact tone and form it required. His method was to compose a very short, distinct, though fully-rounded melody for one or two lines of a stanza, and then repeat it throughout with only such alterations as were demanded by the narrative. This secures unity for the Ballade, but it necessitates a richly-developed accompaniment to contribute to the dramatic colouring of the incidents. The simpler the metrical form of the Ballade, the better will this treatment suit it. Take, for example, Uhland's 'Der Wirthin Töchterlein.' All Loewe's music to it is developed from the melody of the first line; though other resources are brought into play as the tragic close draws near, the original idea is never lost to view, and the character with which the accompaniment began is preserved intact to the end. Still more importance is given by Loewe to the pianoforte part in the gloomy Northern Balladen 'Herr Olaf' and 'Der Mutter Geist,' and to his wonderful setting of 'Edward,' 'Archibald Douglas,' and the 'Erkönig.' But his popular Balladen are 'Heinrich der Vogler,' 'Die Glocken zu Speier,' and 'Goldsehmieds Töchterlein.' These have fresh and genial melodies, accompaniments full of characteristic expression, and, stroke upon stroke, they effect a vivid presentment of animated scenes.

Mendelssohn never touched the Ballade form for the solo voice; and Schumann greatly preferred the Romanze. To his subjective lyric cast of mind the underlying thought was of more concern than external facts. In his beautiful music to Kerner's 'Stirb, Lieb' und Freud' he treats the melody as a Romanze, and puts the Ballade form into the accompaniment. On the same plan are his 'Entfieh' mit mir,' 'Loreley,' and 'Der arme Peter,' from Heine. More developed is the powerful 'Löwenbraut,' and the most perfect as regards unity in variety and impressiveness is 'Die heiden Grenadiere.' When Schumann essayed to treat the Ballade melodramatically he failed. Singing, in his opinion, was a veil to the words; whenever, therefore, he wished them to have emphatic prominence he left them to be spoken or 'declaimed,' and attempted to illustrate the narrative of the song by the musical accompaniment. Still the Ballade form was too small and contracted for this kind of treatment, which is better suited to larger and more dramatic works aided by the orchestra. Subsequent composers have used the Ballade and Romanze form in various ways,¹ but with the exception of Martin Plüddemann none can be said to have devoted themselves exclusively to it. Plüddemann was at first under Wagner's influence: in his musical phrases he attempted to introduce the peculiarly pathetic declamatory

utterances, and the 'leit-motiv' (see, for instance, 'Volkers Nachtgesang' or 'Jung Siegfried'). But, later, he recognised Loewe to be the only true exponent of this form, and on Loewe's methods Plüddemann achieved his greatest success. It is a vexed question whether the repetition of the melody for every verse, or its variation throughout is the better structure for the Ballade; but the former arrangement would seem to be the best adapted for short and simple pieces, and the latter for lengthier ones. If the melody be repeated for every verse in long Balladen, and unless the varied instrumental part be of paramount importance, an impression of monotony is apt to be created, and the necessarily varying aspects of the poem are imperfectly represented in the music.²

The lyric song continued to hold in Germany the high place to which it was raised by Schubert and Schumann, and their traditions have been worthily sustained by their successors, Robert Franz and Johannes Brahms. Franz devoted himself almost exclusively to the Song, which was the form of music best suited to his lyrical temperament. His favourite poets are writers of quiet, pensive verse like Osterwald, Lenan, Geibel, and Eichendorff. There is no lack of melody in his songs, but the chief interest lies in the accompaniments, which are as finely worked out³ and highly finished as miniatures. Franz's songs are frequently akin to the old Volkslied and Chorale, as the modal harmony and peculiar sequential structure of the melody in his 'Zu Strassburg an der Schanz' (Dorian) or 'Es klingt in der Luft' (Phrygian), among many other examples, will prove. Most are strophical as regards the voice-part, but the richness and fullness of the instrumental part grow with each successive stanza; or else the harmony is slightly altered to suit the words, as in the subtle change that occurs in the second stanza of 'Des Abends.' Indeed, the perfection of truth with which Franz renders every word is one of his highest merits. There is not, perhaps, enough spontaneity and passion in Franz's compositions to carry us away in a transport of enthusiasm, but the finish of his workmanship compels our deliberate admiration.

All the best tendencies of the 19th century were summed up in the songs of Johannes Brahms. The perfection of formal structure, the high distinction of melody, the beauty and fitness of the accompaniments, the depth of thought, and throughout the ring of truth and sincerity place his songs among the immortal works of the great classical masters. At all times Brahms gave earnest attention to the Volkslied.⁴ The simple sentiment and origin-

¹ See Vischer's *Ästhetik*, pt. iii. p. 996; Albert Bach's *The Art of Ballad*; Reissmann's *Das deutsche Lied*, p. 236; and M. Runze's *Schiller und die Balladenmusik (Die Musik, 4. Jahr. Heft 10)*.

² In his skilful polyphonic accompaniment, such as 'Mutter, sing' mit zur Ruh,' Franz shows his close, loving study of Bach's methods.

⁴ P. Spitta, *Zur Musik*.

¹ See Brahms's 'Balladen und Romanzen.'

ality of conception in the poetry of the folk-songs of his own and other countries were a strong incitement to him, and were reflected in his music with unsurpassable truth. Even where he uses Hungarian or other idioms, his language is always his own.¹ His use of the old modes and of complex rhythms which had long fallen into disuse,² show he had drunk deeply of the past in music, but he ever amalgamated it with his own living musical utterance. Brahms's full, rich accompaniments have also a character of their own. It is clear that he attached the highest importance to the fundamental bass, and there are many songs in which the bass alone is sufficient to support the voice. Again, whilst his consummate skill in the contrapuntal line is shown by the melodic life he has given the inner parts, his complete mastery over every technical resource of his art is visible in the multifarious rhythms and exquisite harmonies he employs.³ His accompaniments sometimes lead, sometimes follow the voice, or they pursue their own independent course. Many instances of these occur in the magnificent song-cycle from Tieck's *Magelone*. The poetical and intellectual qualities of Brahms's songs, as well as their more serious and spiritual properties, have been fully described elsewhere; and it suffices to say that the songs of this great artist make it hard to believe that the highest development of the German Lied has not been attained.

Turning to a side-group of composers who have worked more on the lines laid down by Mendelssohn, we find the names of Curschmann, Tanbert, F. Lachner, F. Ries, Eckert, Rietz, Reinecke, Raff, and Fanny Hensel. Their best work is unpretending and simple, but they lack the higher qualities of song-writing. Far more interesting, and very different names are those of Cornelius, Jensen, Brückler, Herzogenberg, and Lassen. Jensen was richly responsive to the vein of tender sentiment brought into prominence by the romantic school. The exquisite 'Dolorosa' cycle, the brilliant 'Spanisches Liederbuch' and gay student songs have won success for him. Both he and Hugo Brückler, whose posthumous songs Jensen edited, possessed the true lyric feeling for melody, and both wrote elaborate and interesting accompaniments. But in each of these song-writers we find a want of self-restraint and self-criticism, and an over-ferveish imagination. Heinrich von Herzogenberg did not err in this respect; his refined and thoughtful songs, if lacking in spontaneity, are carefully worked out, and

appeal to those who care for the intellectual side of song-writing. The number of E. Lassen's songs is great, and they vary much in merit. He had a sensitive feeling for the æsthetic side of art; and the slightness of means and material wherewith he obtains his effects is admirable.⁴ But his over-sentimentality and desire for popularity place Lassen on a far lower level than the above-mentioned composers. P. Cornelius stands on a wholly different plane, being as much a poet as a musician, and having too strong an individuality in thought and mode of expression to belong to any school. In Cornelius's personality there is a strange combination of subtle mysticism and transparent simplicity, which imparts a rare charm to his songs. The beautiful 'Weihnachtslieder' cycle, with their childlike sincerity, and the exquisitely poetical 'Bräutlieder' cycle represent his best work, but all his songs need to be intimately studied before they can make their full impression.

The history of German song during the last century bears witness to a continuous attempt towards heightening, by means of melody, harmony, and rhythm, the effect of the words. The musical idea, nevertheless, did not subserve the literary, nor were the essentials of pure musical art forgotten. The latest development of German song has carried to the extreme the tendency of giving a place of primary importance to the words, and musical form is sacrificed to literary construction. The composer selects poems with regard to their literary value; the exigencies of verbal accent are enforced; repetition or alteration of words and other verbal licences countenanced in past days are prohibited. Musically regarded, the importance and independence of the instrumental part has reached its climax; declamatory passages have replaced melodic phrases; all the resources of modern music in modulation, in harmonic and rhythmical combinations have been expended on the song-form with a lavish and often indiscriminating hand.⁵ Sounds, musically chaotic, are tolerated by the æsthetic principle which recognises no obligation save the obligation to emphasise the mood or meaning of the verse. Expression, not beauty, is now the composer's ideal. This song-formula was adopted by Hugo Wolf and Richard Strauss, and carried to its apogee by Max Reger and others belonging to the same school of thought—each engrafting thereon his individual qualities and idiosyncrasies. No one can deny the sincerity of these composers' methods of writing. They have realised the æsthetic value of complexity and ugliness, and it needs no defence in their minds. And yet

¹ To show the power Brahms had to limit this form to its own compact structure, and without change evolve fresh meaning for every verse, see the pathetic Volkslied 'Schwesterlein.' And that he could equally raise it to the highest development of the art-song is exemplified by his treatment of the Wendic folk-song 'Von ewiger Liebe.'

² Compare his use of the *Aemilia* with those which occur in Handel's 'I tuetti da Camera.' Spitta, *Zur Musik*.

³ See, for example, 'Frühlingstrost' and 'O wüsst' ich doch,' from op. 63.

⁴ See P. Bachmann's essay on Lassen in *Die Musik*, Feb. 1904.

⁵ The application of Wagner's methods to the Song cannot here be discussed, as he practically stood apart from this form, although his indirect influence upon Song has been undeniable, and the few examples he left are of great beauty.

all have shown that if they wished to write anything simple and beautiful they could do so—every resource in musical art being at their command.¹ Strauss and Reger will probably not rank among musicians primarily as song-writers, but with Hugo Wolf his songs are his master-work, and as such he justly holds the highest place. His earliest works show an unerring penetration into the very heart of the poet. His art demanded lyrical objectivity, and he deliberately avoided the subjective poets. This objectivity of theme requires a more vivid imaginative grasp and a wider sympathy than is necessary to a composer who makes the songs only represent his own emotion. There is no diffuseness in Wolf's writing; the finest thought is compressed into the smallest possible space. He seems to have triumphantly solved the problem of imparting a feeling of unity into the most declamatory and fragmentary phrases of his songs. He produces the effect on the one hand by concentration of imaginative conception, and on the other hand by the more mechanical method of retaining one figure or *motif* throughout the whole song, which adapts itself with wonderful elasticity to each change in the situation. Wolf's accompaniments are usually polyphonic, or consist of kaleidoscopic and unconventional successions of chords and discords, the latter extended also to the voice-part. Songs of extreme heauty are to be found both in the 'Italienisches' and 'Spanisches Liederbuch,' and the 'Geistliche Lieder' of the latter cycle testify to the depth of his nature. In short, what music Wolf wrote was in all sincerity what Wolf felt. Fantastic, realistic, and original he may be, but never wilfully affected or extravagant.

Many interesting and beautiful songs have, moreover, been written by Weingartner, Henschel, Hans Schmidt, Hans Sommer, E. d'Albert, Max Schillings, Th. Streicher, and others.² It may also be said that every German composer of modern times, with every diversity of talent, has cultivated the Song as a serious branch of his art. And the reverence of devotion with which the Song is regarded hears full promise for the future.

In connection with essential requisites of the Song, much might be said about the sound of the words in the voice-part, about the incidence of open words on certain notes and careful combination of consonants. Much, too, of the duties and responsibilities of the singer with regard to accentuation and phrasing; and the varied delivery and interpretation the different kinds of song require. But the discussion of such topics would carry us far beyond the limits of this article. It is hoped, however, that

enough has been said in this imperfect sketch to show that the investigation of the history of Song offers a fruitful field for the highest faculties of musical research and exposition.

BIBLIOGRAPHY AND COLLECTIONS

A. MSS. from the 8th to the 17th Century

1. Fragments of the 'Hildebrandlied' (8th century) in the Landesbibliothek, Cassel. (Facsimile published by W. Ortmann in 1890. See O. Schade's *Altdeutsches Lesebuch*, 1862-66.)
2. The Wolfenbüttel MSS. (10th century), in the Ducal Library, Wolfenbüttel. (Contains some of the oldest secular songs in Germany.)
3. MSS. of the 'Ludwigsalied' (10th century) in the Valenciennes Library. (See Schade's *Altdeutsches Lesebuch*.)
4. The St. Gall Cod. Lat. No. 393 (11th century).
5. 'Nithart's Song-book'—MSS. (13th century). In the possession of Professor v. der Hagen. (Printed in his work on the Minnesinger.)
6. The Limburg Chronicle (1347-80), in the Limburg Library. (This MSS., reprinted in 1617, 1826, and 1880, contains chiefly 'Knights' and Monks' songs.)
7. The 'Jena Minnesinger Codex' (14th century) in the University Library. (Contains fine specimens of Minnesinger melodies, and amongst them Vogelweide's 'Reiseliad.' Latest reprint 1902.)
8. The Colmar Minnesinger MSS. (14th century), at Munich. (Latest reprint, 1896.)
9. H. von Loufenberg's Song-book (1415-43), at Strasburg. (Destroyed by fire, 1870, but copied previously by Wackernagel.)
10. Spörl's Song-book (end of 14th and beginning of 15th century), in the Imperial Library, Vienna.
11. The Prague MSS. (early 15th century), in the University Library, entitled *Ein musikalischer Lehrcompendium d. H. de Zetlandia*.
12. The Locheim Song-book (1452-60), in the Ducal Library, Wernigerode. (Edited in 19th century by Arnold and Bellermano.)
13. The Dreesde Minnesinger MS. (15th century), in the Royal Public Library. (Contains MS. Schicksals hymns.)
14. The Vienna Song-book (1538), in the Imperial Library. (Consists of sacred and secular part-books, words and music.)
15. Hager's Meisterliederbuch (1600). (Contains portrait of Hans Sachs, and many Meisterlieder melodies from the Nuremberg School.)
16. Werlitz Song-book (1648), in the Royal State Library, Munich. (Contains many thousand songs; some are genuine Volkslieder of the 15th and 16th century, and others later and more artificial.)

B. Modern Collections of Volkslieder, Volksthümliche Lieder, and Chorale, and Works relating to the History of German Song, chronologically arranged.³

A. H. W.

SONG-SCHOOL. A considerable part in the development of the art of music has been played by Song-Schools. It was the establishment of the *Schola cantorum* at Rome (see SISTINE CHOIR) that led to the development of Gregorian Plain-song in the 5th and 6th centuries, and it was the establishment of other such schools at St. Gall, Reichenau, Metz, etc., which disseminated widely the knowledge of the Roman music. In England such musical centres were set up in the earliest days of the Roman mission, and in the 6th and 7th centuries there was great enthusiasm and much good work done under a succession of teachers who came from the Roman *Schola*. After the Danes had devastated monastic life, and with it the bulk of Saxon culture, musical and other, the recovery took place. Under S. Ethelwold a Benedictine revival took place which recovered music among other things, and English music long preserved some special features which it had learnt in French Benedictine music-schools, particularly at Fleury-sur-Loire.

In the later period before the Reformation two forces were at work in giving practical musical training. In connection with the

monasteries a song-school was almost a necessity. In such song-schools not only foreigners, like Guido of Arezzo or Regino of Prüm, learnt their music, but English musicians too, such as Odington, Tunsted, Hothby, Fairfax, and, finally, Tallis. At Durham, for example, there was in the monastic days a song-school in which six children were taught and kept under a master, who was also bound to play the organ at the chief services. After the dissolution the building was pulled down, but the school continued under its old master in a different position; and still the song-school flourishes in connection with the present cathedral. Like the monasteries the secular cathedrals had also a song-school, and others were maintained not only by the King for the Chapel Royal, but also by great ecclesiastics and nobles. Secondly, the foundation of chantries tended to multiply song-schools; for the work stipulated for from the chantry priest after he had said his Mass daily was usually schoolmaster's work, and in many cases either a song-school or a grammar school was annexed to the foundation. Hundreds of these smaller schools were mostly destroyed when Edward VI. confiscated the chantries, and English music has never recovered from the loss. The prevalence of song-schools made it possible for England to be a nation of musicians in the 15th and 16th centuries; but few survived the Reformation, except in connection with great collegiate or cathedral churches, and England lost its skill. W. H. F.

In Scotland 'Sang Schools' flourished from the 13th century onwards. A 'scule' for teaching singing existed in almost every one of the cathedral cities in Scotland, and in many of the smaller towns, such as Ayr, Dumbarton, Lanark, Cupar, and Irvine. Even in the far north, in 1544, Bishop Reid founded and endowed a 'Sang School' in Orkney. Prior to the Reformation the teaching in these schools was principally confided to 'musick, meaners, and vertu,' but at a later date it extended to the proverbial 'three R's.' Music, however, seems to have been the chief course of instruction, and the original idea of confining its study to the cathedral singers was so far enlarged, that laymen were admitted to the schools, in which the Gregorian chant had naturally an early and important place. The master of the school was held in high esteem, and was occasionally selected from the clergy, the appointment at times leading to important preferment—thus William Hay, master of the Old Aberdeen School in 1658, was made Bishop of Moray; and John Leslie, Bishop of Ross, was once a teacher in the Aberdeen School.

Great attention seems to have been paid by the Parliament of the day to the study of music, for a statute was passed in 1574 'instructing the provost, baillies, and counsals, to sett up ane sang secul, for instruction of the youth in

¹ The writer wishes also to express her thanks to Mr. Walter Ford for permission to quote from his Lectures on German Song.

² See also Pierre Aubry's *Équipes d'une Bibliographie de la Chanson populaire en Europe.* Paris, 1905.

the art of musick and singing, quhilk is almaist decayit and sall shortly decay without tymous rsemeid be providit.' Comparatively little interest seems to have attended either the Edinburgh or Glasgow schools, and from a minute of the Town Council of the latter we gather that the institution collapsed in 1588, 'the scuile sumtyme callit the sang scuile' being sold to defray the expenses incidental to the heavy visitation of a plague. The Aberdeen school appears to have been the one of chief celebrity, attracting teachers of even Continental fame, and the Burgh records contain references of a curious and amusing description. The school existed so early as the year 1370, its class of pupils being the same as those attending the grammar school. Both vocal and instrumentual music were taught, as we learn from the title of Forbes's scarce work, 'Cantus, Songs and Fancies both apt for Voices and Viols as is taught in the Music School of Aberdeen' (1662). About this period, Mace, in his *Musick's Monument*, directed the attention of his countrymen to the sang school of Scotland as an institution well worthy of imitation south of the Tweed. A few excerpts from the Burgh records of Aberdeen and other places may not be uninteresting, and we give the following as a fair example of the attention paid by the civic authorities of the day to the subject of music. On Oct. 7, 1496, a contract was entered into between the Town Council of Aberdeen and Robert Huchosone, sangster, 'who obliges himself by the faith of his body all the days of his life to remain with the community of the burgh, upholding matins, psalms, hymns,' etc., the Council also giving him the appointment of master of the Sang School. The four following extracts are also from the Aberdeen Burgh records, as faithfully transcribed by the editors of the Spalding Club publications:—

4th October, 1577.

The said day the counsell grantit the sounne of four poundis to the support of James Symsonne, doctour of thair Sang Scuill, to help to buy him cloythis.

23 Novr., 1597.

The maister of the sang schoole sall serve bayth the Kirkis in uptacking of the psalmes theirin.

1594.

Item to the Maister of the sang schoile xiiij.

1609.

'The bairnie and scleris of the sang schoolis' are ordered to find caution for their good behaviour.

From Dundee Records, 1602.

Item to the master of the sang scule lxxx lbs.

From Air Records, 1627.

Item to the Mr of musick scule for teaching of the musick scule and tacking up the psalmes in the kirk x bolls victuall and xiiij of silver.

From Irving Records, 1633.

Our doctour and musicianer jell.

The stipend of the master of the Edinburgh sang school appears to have been the modest allowance of ten pounds in sterling money.

J. T. F.

SONGE D'UNE NUIT D'ÉTÉ, LE (A Midsummer Night's Dream). An opéra-comique in three acts, an absurd caricature of scenes in the life of Queen Elizabeth and Shakespeare, with no relation to his play. The words are by Rosier and De Leuven, and the music by Ambroise Thomas, and it was produced at the Opéra-Comique, Paris, April 20, 1850.

SONGS WITHOUT WORDS. (See LIED OHNE WORTE, vol. ii. p. 727.)

SONNAMBULA, LA. An Italian opera in two acts; libretto by Romani, music by Bellini (written for Pasta and Rubini). Produced at the Teatro Carcano, Milan, March 6, 1831; at the King's Theatre, London, July 28, and at Paris, Oct. 28 of the same year. At Drury Lane (with Malibran) in English, under Italian title, May 1, 1833.

SONNLEITHNER, a noted Viennese family of musical amateurs. The first, CHRISTOPH, born May 28, 1734, at Szegegin, came to Vienna at two years old and learned music from his uncle Leopold Sonnleithner, choir-master of a church in the suburbs. He also studied law, became an advocate of some eminence, was employed by Prince Esterhazy, and thus came into contact with Haydn. He composed several symphonies, which his friend Von Kees (often mentioned in Haydn's life) frequently played with his orchestra; and also thirty-six quartets, mostly for the Emperor Joseph, who used to call him his favourite composer. His church-compositions, remarkable for purity of form and warmth of feeling, have survived in the great ecclesiastical institutions of Austria, and are still performed at High Mass. Christoph Sonnleithner died Dec. 25, 1786. His daughter, Anna, was the mother of Grillparzer the poet. His son IGNAZ, Doctor of Laws and professor of commercial science (ennobled 1828), was an energetic member of the Gesellschaft der Musikfreunde, and took part in their concerts as principal bass-singer. At the musical evenings held at his house, the so-called 'Gundelhof,' in 1815-24, in which his son, Leopold, took part as chorus-singer, Schubert's 'Prometheus,' though only with piano accompaniment, was first heard (July 24, 1816), as were also part-songs, 'Das Dörfchen' (1819), 'Gesang der Geister über den Wassern' (1821), and the 23rd Psalm for female voices (1822). Ignaz died in 1831. A second son, JOSEPH, born 1766, devoted himself with success to literature and the fine arts, and in 1799 was sent abroad by the Emperor Franz to collect portraits and biographies of savants and artists for his private library. During this tour he made the acquaintance of Gerber and Zelter. In 1804 he succeeded Kotzebue as secretary of the Court theatres, and as such had the entire management of both houses till 1814, and also of that 'an der Wien' till 1807. He directed his endeavours principally to German opera, and himself wrote or translated several librettos,

including Beethoven's 'Leonore' from the French of du Bouilly (the title of which was changed against the composer's wish to 'Fidelio');¹ 'Agnes Sorel' and others for Gyrowetz; 'Kaiser Hadrian,' and 'Die Weihe der Zukunft'—a *pièce d'occasion* for the visit of the Allies—for Weigl; 'Faniska' for Cherubini; an oratorio, 'Die vier letzten Dinge,' for Eybler, and numerous plays from various languages. He edited the Viennese *Theater-Almanach* for 1794, 1795, and 1796, which contains valuable biographies, and articles on the then condition of music in Vienna. For his services as founder (1811) and honorary secretary of the 'Gesellschaft adeliger Frauen zur Beförderung der Guten und Nützlichen' he was made a counsellor. With indefatigable energy he next applied himself to founding (1813) the *Gesellschaft der Musikfreunde*, and continued to act as its honorary secretary till his death, devoting himself unremittingly to the welfare of the society. Another institution in which he took equal interest was the Conservatorium, founded in 1817.² The formation of the archives, and especially of the library, was almost entirely his work, through his acquisition of Gerber's literary remains in 1819, and his legacy of 41 MS. vols. in his own hand, full of valuable materials for the history of music. [His discovery of the S. Gall Antiphoner in 1827 was an important event in the history of old liturgical music. The curious incident of the unique copy of Forkel's collection of 16th century church music, undertaken at Sonnleithner's instance, has been narrated under FORKEL, vol. ii. p. 72b.] He lived in close friendship with Schubert and Grillparzer up to his death, which took place Dec. 26, 1835. He received the Danebrog Order and honorary diplomas from several musical societies. His nephew, LEOPOLD EDLER VON SONNLEITHNER, son of Ignaz, advocate and eminent amateur, born Nov. 15, 1797, was a great friend of the sisters Fröhlich, Schubert, Schwind the painter, and Grillparzer. He took great care to preserve Schubert's songs, and to introduce the composer to the musical world, by publishing, with the help of other friends, his 'Erlkönig' and other early songs, for the first time. The 'Erlkönig' was sung by Gymnich³ at a soirée of the *Gesellschaft der Musikfreunde*, Jan. 25, 1821, and for the first time in public on the 7th of March following, at the old Kärnthnertheater, by Vogl, with immense success. As member of the *Gesellschaft der Musikfreunde* (from 1860 an honorary one), Sonnleithner took an unwearied interest in the concerns of the society, to whose archives he left, among other papers, his highly valuable notes on the operas produced, on concerts, and other musical events in Vienna. His

numerous articles on music are scattered through various periodicals. He was an intimate friend of Otto Jahn's, and furnished him with much valuable material for the life of Mozart, as Jahn acknowledges in his preface. Leopold von Sonnleithner was Ritter of the Order of the Iron Crown, an honorary member of the *Gesellschaft der Musikfreunde*, and of the *Musikvereine* of Salzburg, Innsbruck, etc. He died March 3, 1873, and with him disappeared a most persevering investigator and collector of facts connected with the history of music in Vienna, a class which daily becomes rarer, though its labours were never of more value than in the present age of new appearances and general progress. C. F. P.

SONS OF THE CLERGY, THE CORPORATION OF THE. This venerable institution, which was founded in 1655 by sons of clergymen, has for its objects the assisting necessitous clergymen, pensioning and assisting their widows and aged single daughters, and educating, apprenticing, and providing outfits for their children. To aid in procuring funds for these purposes it holds an annual festival (at no fixed date), consisting of a choral service with a sermon, followed by a dinner. The first sermon was preached in the year of foundation at St. Paul's Cathedral by the Rev. George Hall, D.D., minister of St. Botolph's, Aldersgate Street. That similar meetings took place in following years is most probable, but there are no means of proving it, owing to the unfortunate destruction of the early records of the institution by fire, in 1838. We find, however, that in 1674 and 1675 sermons were preached at St. Michael's, Cornhill; that from 1676 to 1696 they were delivered at Bow Church, Cheapside; and that from 1697 down to the present year (1907) they have been invariably given at St. Paul's Cathedral. The association was incorporated by charter of Charles II. in 1678. It was in 1698, according to the records, that 'music' (*i.e.* orchestral accompaniment to the service and anthems) was first introduced at the festivals. The compositions then performed were Purcell's *Te Deum* and *Jubilate* in D, composed for the celebration on St. Cecilia's Day, 1694, and these were annually repeated until 1713, when Handel's *Te Deum* and *Jubilate*, composed on the Peace of Utrecht, were given, from which time the two compositions were alternately performed until 1743, when both were laid aside in favour of the *Te Deum* composed by Handel to celebrate the victory at Dettingen, which continued to be annually performed (with the exception of one or two years when Purcell's *Te Deum* was revived) until 1843, after which its performance was discontinued in consequence of the services of the instrumental band being dispensed with in deference to the wishes of the Bishop of London (Blomfield). Handel's overture to the oratorio 'Esther' was almost invariably played as a prelude to the service from near the time of its

¹ Revised by Treitschke for the revival of the opera in 1814. [See vol. i, p. 191.]

² The first scheme of instruction was drawn up by Hofrath von Mosel.

³ August von Gymnich, an imperial official, and a much esteemed tenor, died Oct. 6, 1821, aged thirty-six.

production in 1720 until 1843. Dr. W. Hayes was at one time conductor of the festivals, and added instrumental parts to the Old Hundredth Psalm tune for their use. Dr. Boyce also was for many years their conductor, and composed for them his two anthems, 'Lord, Thou hast been our refuge,' and 'Blessed is he that considereth the poor and needy,' besides adding accompaniments to Purcell's *Te Deum* and *Jubilate*, and expanding several movements in them. After 1843 the services were for some thirty years accompanied by the organ only, the choir being, as before, very largely augmented. Since 1873 orchestral accompaniment has again been called into requisition; *Evensong* has taken the place of *Matins*; and modern compositions by various living composers, often written expressly for the festival, have been introduced. [A history of the corporation, by Rev. E. H. Pearce, was published in 1904.]

W. H. H.

SONTAG, HENRIETTE, COUNTESS ROSSI, was born at Cöhlentz, Jan. 3, 1806. Her father was a good comedian, her mother an actress of no ordinary merit, to whom the daughter, when at the height of fame, continued to turn for instruction. At six, Henriette made her first public appearance, at the Darmstadt theatre, as *Salome*, in Kauer's '*Donauweibchen*.' Three years later her mother, then a widow, settled at Prague, where Weber was conductor at the theatre. Here Henriette acted in juvenile parts, and in 1815 was admitted, though under the prescribed age, as a pupil to the Conservatorium of the city. She studied singing under Bayer and Frau Czegka, and when only fifteen was suddenly called upon to replace the *prima donna* at the opera in the part of the Princess in Boieldieu's '*Jean de Paris*.' Her precocity, appearance, and vocal gifts at once created a great impression, but shortly afterwards her mother removed with her to Vienna, where the next few years were spent, Henriette Sontag singing both in Italian and German opera, and deriving, according to her own statement, incalculable benefit from the counsels and example of Mme. Fodor-Mainvielle. Here Weber, in 1823, after hearing her in the '*Donna del Lago*,' went next day to offer her the title-rôle in his '*Euryanthe*,' whose production, Oct. 25, was a triumph for Mlle. Sontag. Beethoven could not hear her, but 'How did little Sontag sing?' was his first question to those who had been at the performance. When, in 1824, his Ninth Symphony and Mass in D were produced, it was she who sustained the difficult and ungrateful soprano part. She was next engaged at Leipzig, and then for Berlin, making her first appearance at the Königsstadt theatre, August 3, 1825, as *Isabella* in the '*Italiana in Algieri*.'

Henceforward her career was one unbroken triumph. She made her début in Paris in June

1826, as *Rosina* in the '*Barbiere*,' and became a favourite at once. Her introduction of Rodé's air and variations created a furore. She sang also in the '*Donna del Lago*' and '*Italiana in Algieri*,' and returned to Germany in July with heightened prestige. Everywhere her beauty, charming voice, and exquisite vocalisation combined to excite an admiration amounting to frenzy. At Göttingen her post-chaise was thrown into the river by the ardent crowd, no mortal being counted worthy to make use of it after her. Even Ludwig Börne, after commenting humorously on the extravagance of the public, confesses to have yielded in his turn to the prevailing infatuation. Her figure was slender and *mignonne*, her hair between auburn and blonde, her eyes large, and her features delicate. Her voice, a soprano of clear and pleasing quality, was specially good in the upper register, reaching the E in alt with facility, and in perfection of execution she seems to have been unsurpassed by any singer of her time. But she was deficient in dramatic power, and only appeared to the highest advantage in works of a light and placid style. On her return to Paris, in January 1828, she essayed parts of a different order, such as *Donna Anna* and *Semiramide*, with success, but in passion and emotion never rose to the distinction she attained as a songstress.

In England she appeared first on April 19, 1828, at the King's Theatre, as *Rosina*, and met with a most flattering reception, sharing with Malibran the honours of that and the succeeding season.

At Berlin, Mlle. Sontag had formed the acquaintance of Count Rossi, then in the diplomatic service of Sardinia. An attachment sprang up between them, and was followed by a secret marriage. It was feared that the young diplomat's future might be compromised were he to acknowledge an artist of low birth as his wife. But after a time Count Rossi's efforts to procure Court sanction to his union were successful—the King of Prussia bestowed a patent of nobility on the lady, who henceforth appeared in documents as *née de Launstein*, and she definitely bade farewell to artistic life. As Countess Rossi she accompanied her husband to the Hague, where he was representative of the Sardinian Court. Occasionally she would sing for public charities, in concerts or oratorio—a style in which she is said to have been unrivalled; still, for nearly half her lifetime she remained lost to the musical public, following the career of her husband at the Courts of Holland, Germany, and Russia. As to her domestic felicity and the character of her husband, we quote the positive testimony of her brother, Carl Sontag: 'Rossi made my sister happy, in the truest sense of the word. Up to the day of her death they loved each other as on their wedding-day!' But the disorders of 1847-48 had impaired their fortunes, and she

HENRIETTE SONTAG, COUNTESS ROSSI

was tempted to return to the opera. It was notified to Rossi that he might retain his ambassador's post if he would formally separate from his wife—on the tacit understanding that so soon as her operatic career was concluded she should be allowed to return to him: This he, however, at once refused, and resigned his post, though remaining on a friendly footing with the Court. Lumley, then manager of Her Majesty's Theatre, having offered the Countess Rossi £6000 for six months, it was accepted, and in July 1849 her reappearance in London as 'Linda' was announced. The curiosity excited was extreme. Her voice and charms were unimpaired, and the unanimous opinion seems to have been that, in the words of Adolphe Adam, she now united to youth and freshness the qualities of a finished artist. As Amina, though Jenny Lind was fresh in the public memory, she was rapturously received, as also in Desdemona, and Susanna in the 'Nozze,' one of her favourite parts, and pronounced by a German critic the most perfect thing he had seen on any stage. Her extraordinary preservation of her powers was partly due, no doubt, to long exemption from the wear and tear of incessant public singing; but Sontag was always extremely careful of her voice, discarding any rôle that did not lie well within her register. Thus, in an early contract at Berlin, she expressly stipulates that she shall not be bound to sing in the operas of Spontini!

After a tour in the English provinces in the winter of 1849, she went to Paris, where a successful series of concerts, also under Lumley's management, preceded in the spring of 1850 her reappearance at Her Majesty's to win fresh laurels as Norina in 'Don Pasquale,' Elvira in the 'Puritani,' and Miranda in Halévy's new opera 'La Tempesta.' As Zerlina and the 'Figlia del Reggimento,' she appeared for the first time, and with pre-eminent success. In the autumn of 1850 she sang in Italian opera at Paris, Lumley again being director of the company. During this season Alary's 'Tre Nozze' was produced, and the polka-duet between Sontag and Lablache never failed to send the public into ecstasies. It was brought out in London in 1851, with similar results. During this season, Mme. Sontag's last in London, she sang in a round of her favourite parts, and in the production of 'L'Enfant Prodigue.'

In Germany, wherever she went she carried all before her. At a concert at Munich she was expressly requested to stay to hear the last piece. It proved to be a 'Huldigungs Chor'—verses composed expressly in her honour by the Crown Prince, and set to music by Lachner.

In 1852, Mme. Sontag received offers from the United States, which tempted her thither with her husband in the autumn. The results were brilliant. Her voice was strengthened by the climate, and at this time she could sing in

'Lucrezia Borgia' and the 'Figlia del Reggimento' on a single evening without over-fatigue! Her last appearance was made in 'Lucrezia' at Mexico, in 1854. She was attacked by cholera, and on June 17 a brief illness cut short a life of unchequered prosperity.

Berlioz, remarking on the fact that Sontag had less to suffer than other equally famous singers from hostile criticism and party spirit, ascribes it to her having so many favourite qualities—sweetness unsurpassed, fabulous agility, perfect intonation, and expression. In this last her scope was limited, and warranted Catalani's *mot*, 'Elle est la première dans son genre, mais son genre n'est pas le premier.' Her success in certain pathetic rôles must be attributed to the charm of her singing. She used to say, 'A Donna Anna over her father's corpse, a Pamina in the air "Ach ich fühl's," who cannot move the public to tears, has no idea of Mozart.' By her delivery of the short phrase alone, 'Tamino, halt! ich muss ihn sehn,' sung by Pamina behind the scenes, she could rouse the house to the stormiest applause. She was a thorough and conscientious artist, and her style won her the special favour of eminent musicians. Mendelssohn entertained the highest admiration for her, and she obtained a like tribute of praise from connoisseurs in every country. It fell to her lot to achieve an international popularity and fame never before accorded to a German singer. B. T.

SOPRANO. The human voice of the highest pitch or range. Its peculiar clef is the C-clef upon the lowest line of the staff; but in modern times this has been almost universally superseded by the treble or G-clef on the second line.

The word 'Soprano' is etymologically synonymous with 'Sovrano,' the head, chief, or highest. In the present day the soprano is the highest natural voice of women and boys—the artificial sopranos belonging to the past; and in women it is, perhaps, the voice which varies most in compass. That of AGUJARI is the highest and most extended on record, and that of TIETJENS one of the largest in quality and power. But, as with other voices, it is not a question of compass alone, but of timbre. Many mezzo-sopranos can sing higher notes than many sopranos; but there is a middle to every voice, which, as a rule, it is not difficult to find, and about this the *tessitura* (literally texture) of the music and the practice should be woven. *Tessitura* is the technical term used by the Italians to signify the notes or part of the scale upon which music is framed, and though, as said above, a mezzo-soprano may sing higher notes than a soprano, it would generally be found distressing to the former voice to dwell upon that part of the scale upon which even a limited soprano part is written. [See *TESSITURA*.] Faustina, Cuzzoni, Mingotti, Anastasia

Robinson, Mara, Banti, Catalani, Mrs. Billington, and Miss Paton are some of the principal sopranos of bygone days, possessing exceptionally good voices; and those of Grisi, Clara Novello, Tietjens, Adelina Patti [and Melba] may perhaps be considered the best natural soprano voices of modern times. H. C. D.

SORCERER, THE. Comic opera in two acts; libretto by W. S. Gilbert, music by Arthur Sullivan. Produced at the Opéra-Comique Theatre, Nov. 17, 1877.

SORDINO, Mute,¹ or Damper (Fr. *Sourdine*; Ger. *Dämpfer*). The violin Sordino is described below.

In the pianoforte the contrivance is called in English the damper. The first pianofortes, as we find Cristofori's and Silbermann's, were made without stops. In course of time a practice common with the harpsichord was followed in the pianoforte, and led the way to the now indispensable pedals.

The first stops were used to raise the dampers; and by two brass knobs on the player's left hand the dampers could be taken entirely off the strings in two divisions, bass and treble. C. P. E. Bach, in his *Versuch*, makes few references to the pianoforte; but in the edition of 1797 he remarks (p. 268) that the undamped register of the Fortepiano is the most agreeable, and that, with due care, it is the most charming of keyed instruments for improvising ('fantasieren'). The higher treble of the piano is not now damped. These short strings vibrate in unison with the overtones of deeper notes, and, as a distinguished pianoforte-maker has said, give life to the whole instrument.² The terms 'Senza sordini' and 'Con sordini' applied to the damper stops were used exclusively by Beethoven in his earlier sonatas. He did not use the now familiar 'Ped.' or 'Pedal,' because the pedal was of recent introduction, and was less commonly employed than the stops, which every little square piano then had. The 'Genouillière,' or knee-pedal, replaced the damper stops in the German Grands. For the Italian words signifying Without and With dampers the signs ☉ and * were substituted by Steibelt, and eventually became fixed as the constant equivalents. The oldest dated square piano existing, one of Zumpe's of 1766, has the damper stops; as to the Genouillière, Mozart tells us (letter, October 1777) how Stein had one in his improved Grand, and M. Mahillon's Stein of 1780, or thereabouts, accordingly has one. There is one in Mozart's Walthar Grand at Salzburg, and in each of the two Huhn (Berlin) Grands of 1790, or earlier, preserved at Potsdam. The action of the Genouillière consists of two levers which descend a little below the key-bottom of the piano, and

meet opposite the knees of the player, who, pressing the levers together, by an upward thrust moves a bar which takes the whole of the dampers off the strings. [See Hipkins's *History of the Pianoforte*, pp. 93, 108, and 110 (footnote).]

Contemporaneous with the employment of the Genouillière was that of the *piano stop* (German *Harfenzug*, Fr. *Céleste*), afterwards transferred, like the dampers, to a pedal. An interesting anonymous Louis Quinze square piano belonging to the painter M. Gosselin of Brussels had this Céleste as a stop. Its origin is clearly the harp-stop of the harpsichord, the pieces of leather being turned over so as to be interposed between the hammers and the strings.

A note of directions for the use of the pedals prefixed to Steibelt's three sonatas, op. 35, gives an approximate date to the use of the pedals becoming recognised, and put under the composer's direction, instead of being left entirely to the fancy of the player. He says: 'The Author wishing to make more Variety on the Piano Forte finds it necessary to make use of the Pedals, by which alone the tones can be united, but it requires to use them with care, without which, in going from one chord to another, Discord and Confusion would result. Hereafter the Author in all his Compositions will make use of the following signs to denote the Pedals.

☉ The Pedal which raises the dampers.

* The Piano Pedal.

To take the foot off the Pedal that was used before.'

Steibelt's op. 35 was published in 1799, by Longman, Clementi & Co.³

The leather was applied in one length to mute the strings more effectually, and was then called in French 'Sourdine.' John Broadwood was the first to put the 'sordin'—as it is called in his patent of 1783—upon a foot-pedal; he put the dampers upon a pedal at the same time, and for fifty years the pedal-foot was cloven, to divide the dampers into bass and treble sections, as the stops had previously been divided for the same purpose. The use of the pianissimo mute was indicated by the Italian word 'Sordino.' Mr. Franklin Taylor has pointed out to the writer the use of this term in the sense of a mute as late as Thalberg's op. 41 (Ashdown's edition).

The 'Verschiebung,' or shifting pedal, for shifting the hammer first to two strings and then to one (una corda), ultimately gained the day over the muted pedals or stops. The effect of the 'una corda' was charming, and is expressly indicated by Beethoven in his G major Concerto, in op. 106, etc. The *pp* and *ppp* soft pedal in course of time shared the fate of the divided

¹ It will be noticed that the metaphors at the root of the Italian and English terms are deafness in one case and dumbness in the other.

² Even in Viridung, A.D. 1511, we find the practice of leaving sympathetic strings in the clavichords; as he says to strengthen the resonance.

³ Steibelt gives a description of the pedale, with his signs for them, in his *Méthode de Piano*, first published by Janet, Paris, 1805. He names Clementi, Dussek, and Cramer as having adopted his sign. They differ from and are better than Adam's (*Méthode de Piano au Conservatoire*), also published in Paris, 1802. Steibelt calls the 'una corda' *celeste*.

damper pedal; such refinements were banished as being of small service in large rooms. In the six-pedal Viennese Grand of Nannette Stein at Windsor Castle, the 'Verschiebung' and 'Harfenzug' co-exist.¹ The latter has of late years again come forward, at first in oblique pianos that could not shift, and since more generally; and has, to a certain extent, gained the favour of amateurs. The material used is cloth or felt. [See also the glossary of terms in Hipkins's *History of the Piano-forte*, p. 123.] A. J. H.

Most instruments are capable of having their tone dulled for particular effects, and this is accomplished by partially preventing the vibrations by the interposition of a foreign substance. Violins are muted either by placing an ebony, xylonite, or brass instrument upon the bridge,

Violin Mute

or by slipping a coin or strip of horn between the strings above the bridge. These two means produce different results. The brass mute is so heavy as entirely to extinguish the tone, especially of a small or inferior violin, while the strip of horn sometimes produces scarcely any effect at all. A penny squeezed between the bridge and tailpiece produces just the right effect. The brass mute should be reserved as a special effect of itself. On the other hand, the mutes for the violoncello and double-bass are rarely made heavy enough, and this has given rise to the erroneous idea that mutes do not produce much effect on these instruments. The double-bass mutes used by the present writer are of brass, and weigh rather over a pound. They produce a beautiful veiled tone, and it is probable that larger patterned basses would bear even a heavier mute.

Brass instruments can be muted in three ways. The first and most effective is—as in 'stopping' a horn—the introduction of the closed hand or a rolled-up handkerchief into the bell. This raises the pitch of the instrument, but produces a good muffled tone. The second way is by inserting a pear-shaped piece of wood covered with leather into the bell, which it fits, small studs allowing a portion of the wind to pass.

The tone thus produced is thin, nasal, and unpleasing. Wagner has frequently used it ('Siegfried,' Acts 1 and 2; 'Meistersinger,' last scene) as a comic effect, imitating the sound of a toy-trumpet. The third means produces a very distant-sounding, but still more nasal quality of tone, and is known to orchestral players as the 'coffee-pot effect.' It is obtained by allowing the sound to issue from the small end of a small double cone of metal, styled the 'echo attachment.' A good cornet player can, by these three devices, produce on his instrument exact imitations of the horn, oboe, and bagpipe.

Trombones, Tubas, etc., can also be muted in the same way, and the effect of the former has been tried in Richard Strauss's 'Heldenleben.' For muting by means of the hand in the bell, see HORN, vol. ii. p. 431a.

It has been frequently stated that 'Berlioz muted the Clarinet by enveloping the bell in a bag of chamois leather,' and that 'The Oboes in Handel's time were muted by placing a ball of cotton wool in the bell.' But these devices only affect the bottom note of the instrument, as all others issue from the holes and not from the bell at all.

The laying of any substance, even a handkerchief, on the kettledrums is sufficient to check the vibrations and produce a muffled effect. In the 'Dead March' the big drum is usually beaten enveloped in its cover.

Various means have been used to obtain *sour-dine* effects from voices. Berlioz, like Gossec before him [see vol. ii. p. 203], has employed the device of a chorus in a room behind the orchestra ('L'Enfance du Christ'), and the interposition of a veil, or curtain ('Lélio'). He has also suggested that the chorus should hold their music before their mouths, or should sing with their backs to the audience. One important effect, however, deserves more attention than it has received. French composers, especially Gounod, are fond of the device called *à bouche fermée*. The choir hums an accompaniment without words, keeping the mouth quite, or nearly, closed. But composers have lost sight of the fact that several totally distinct effects may be thus produced, and they usually confuse the matter still more by writing the sound 'A-a-a' underneath the music—just the very sound which can not possibly be produced by a closed mouth. The effect would be better designated by writing the exact sound intended, and consequently the exact position of the mouth. For instance, by closing the lips entirely, the sound of 'n' or 'm' may be hummed *through the nose*. By opening the lips slightly either of the vowel-sounds may be used, each making a distinct effect. F. C.

SORIANO (or SURIANO, SURIANUS, or SURIANI), FRANCESCO, was born at Rome in 1549, and at the age of fifteen entered the choir at St. John Lateran. After the breaking of his

¹ The remaining pedals in Nannette Stein's Grand are the 'Fagotzug,' by which a piece of card or stiff paper is brought into partial contact with the strings, and the 'Janissary' drum and triangle. See SREX.

voice he became a pupil of Montanari, then of G. M. Nanini, and lastly of Palestrina. After this his fame went on always increasing. In 1581 we find him Maestro di cappella at S. Ludovico dei Francesi; in 1583 he was at the Court of Mantua; in 1587 at S. Maria Maggiore; in 1599 at S. John Lateran. He returned, however, to S. Maria Maggiore, and in 1603 made his final step to the head of the choir of S. Peter's. He retired in June 1620, died about 1621, and was buried at S. Maria Maggiore. Soriano published his first work in 1581, a book of madrigals, *a 5*. This was followed by a second in 1592; by a book of motets, *a 8*, 1597; by a second book of madrigals, *a 4*, 1601, 1602; by a book of masses for 4, 5, and 6 voices, 1609; by a collection of 110 canons on 'Ave Maris Stella,' 1610, and by a second book of psalms and motets, *a 8*, 12, and 16, 1616. His last work was a Magnificat and Passione, *a 4*, Rome, 1619, containing his portrait. A complete list of his works is given in the *Quellen-Lexikon*. He will be remembered longest for having arranged Palestrina's Missa Papae Marcelli for 8 voices. The Passion already mentioned, a Magnificat and five Antiphons, are included in Proske's 'Musica Divina,' vols. iii. and iv., and two Masses in the 'Selectus novus.' G.

SORIANO-FUERTES, MARIANO, born in Murcia, 1817, a Spanish composer and *littérateur*, according to Riemann was the son of a musician, and so determined in his pursuit of music that though forced into a cavalry regiment he left it for the musical career. His works were many, and in many spheres; in 1841 he founded a periodical, *Iberia musical y literaria*; in 1843 became teacher in the Conservatoire at Madrid; in 1844 director of the Lyceums at Cordova, Seville, and Cadiz; conductor of the opera at Seville, Cadiz, and (1852) at Barcelona, where he founded the *Gaceta Musical Barcelonesa* in 1860. During this period he wrote several 'Zarzuelas' or operettas; but it is from his literary works that he will derive his chief fame—*Musica Arabo-Española* (1853); *History of Spanish Music from the Phœnicians down to 1850* (4 vols., 1855-59); *Memoir on the Choral Societies of Spain*; and *Spain, Artistic and Industrial, in the Exposition of 1867*. Soriano died at Madrid, March 26, 1880. G.

SOSTENUTO, 'sustained'; a direction which has of late come to be used with a considerable degree of ambiguity. It originally signified that the notes were to be held for their full value, and was thus equivalent to *tenuto*; but in music of the modern 'romantic' school it very often has the same meaning as *meno mosso*, or something between that and *ritenuto*—i.e. the passage so marked is to be played at a uniform rate of decreased speed until the words *a tempo* occur. No precise rule can be given for its interpretation, as its use varies with

different masters, and even in different works by the same master. M.

SOSTINENTE PIANOFORTE. The term implies a pianoforte capable of producing a sustained sound, such as that of the organ, harmonium, or violin. It must, however, be borne in mind that by giving the pianoforte this power of sustaining sound, the special character of the instrument is transformed, and in point of fact the 'sostinente' pianoforte is a pianoforte in name only. It is the rapid diminution of the fugitive tone that raises the ordinary pianoforte to that ideal *terrain* wherein it finds one of its chief excellences, the prerogative of freedom from cloying; the emotion of the hearer entering actively into the appreciation of its unsubstantial and ethereal tones. Under this head of PIANO-VIOLIN the Hurdy-gurdy is referred to as the germ of sostinente keyed instruments; and allied to the harpsichord we next meet with it in the Gamberwerk of Hans Haydn of Nuremberg, dating about 1610. The Lyrichord, patented by Roger Plenius in London in 1741, demands notice as being a harpsichord strung with wire and catgut, made on the sostinente principle, and actuated by moving wheels instead of the usual quills, so that the bow of the violin and the organ were imitated. There is no specification to the patent, but a magazine article of 1755, in the possession of the writer, gives a drawing and complete description of the instrument, which was otherwise remarkable for sustaining power by screws, springs, and balanced tension weights for tuning; for silver covering to the bass strings, like the largest 'Bass-violins'; for the use of iron to counteract the greater pull of the octave-strings (in the drawing there are apparently four iron bars connecting the wrest-plank and sound-board, thus anticipating the later introduction of steel arches in grand pianofortes for similar service); and lastly for the Swell obtained by dividing the lid or cover into two parts, one of which is movable up and down by means of a pedal governed by the foot of the player, a practice followed by Kirkman in his harpsichords, and perhaps by Shudi, until he introduced, about 1766, his important improvement of the Venetian Swell. Another patent of Plenius, in 1745, added the 'Welch harp,' or buff stop (in his patent by a pedal), to the instrument. We have thus dwelt upon the Lyrichord because as an ingenious combination of inventions its importance cannot be gainsaid.¹ Another 'Sostinente' harpsichord was the 'Celestina' of Adam Walker, patented in London in 1772. An important 'Sostinente' instrument was the 'Claviol' or 'Finger-keyed Viol,' the invention of Dr. John Isaac Hawkins of Bordertown, New Jersey, U.S.A., an Englishman by birth, who invented the real upright pianoforte. This upright piano (called 'portable

¹ Plenius is said to have been the first to attempt to make a pianoforte in England.

grand') and the 'Claviol,' which was in form like a cabinet piano, with ringbow mechanism for the sostenente, were introduced to the public in a concert at Philadelphia, by the inventor, June 21, 1802. There is a description of the Claviol in *Rees's Cyclopædia*, 1819, and also in the *Mechanic's Magazine* for 1845, No. 1150, p. 123. About Hawkins himself there are interesting particulars in *Scribner's Magazine* (1880), in an article on 'Bordertown and the Bonapartes.' Hawkins was in England in 1813 and 1814, exhibiting his Claviol, and in the latter year complained of his idea being appropriated by others through the expiration of his patent. He afterwards lived here and was a prominent member of the Institution of Civil Engineers. Isaac Mott's 'Sostenente Piano Forte,' patented by him in 1817, was a further development of the idea, and is fully described in the patent, No. 4098. Mott claimed the power to increase or diminish the tone at will; and by rollers acting on silken threads, set in action by a pedal, the 'sostenente' was brought into action or stopped. Mott's instrument had some success, he being at the time a fashionable pianoforte-maker. See PIANO-VIOLIN and MELO-PIANO.¹ [See also p. 95 of Hipkins's *History of the Pianoforte*.] A. J. H.

SOTO, FRANCISCO, born 1534, at Langa in Spain, entered the college of the Pope's Chapel, June 8, 1562. He was a friend of St. Philip Neri, and in December 1575 took the direction of the music in the Oratory founded by him. He also founded the first Carmelite convent in Rome. He published the 3rd and 4th books of *Laudi Spirituali* (1588, 1591) in continuation of the two edited by G. Animuccia, and died as Dean of the Pope's Chapel, Sept. 25, 1619. G.

SOTTO VOCE, 'under the voice,' in an undertone; a direction of frequent occurrence in instrumental as well as vocal music. M.

SOUBIES, ALBERT, born in Paris, May 10, 1846, was educated at the Lycée Louis-le-Grand, but, after studying for the legal profession, music was too strong for him, and he entered the Conservatoire, where he studied under Savard, Bazin, and Guilman. His first essay as a writer on music, a career in which he has had remarkable success, was in the continuation of the *Almanach Duchesne* under the title of *Almanach des Spectacles* (1874 onwards). His principal work has been a history of music in a series of small volumes arranged under different countries: *Allemagne et Russie* occupy two volumes; *L'Espagne*, three more; *Le Portugal*, *La Hongrie*, *et la Bohême*, three; *Suisse* and *Hollande*, one each; *Belgique*, two; *États Scandinaves*, three; and *Îles Britanniques*, two. *Les Grands Théâtres Parisiens* is in four volumes, dealing respectively with the Comédie Française,

the Opéra (for sixty-seven years), the Opéra-Comique (for sixty-nine years), and the Théâtre Lyrique, 1851-70. *Une Première par jour* was crowned, with other of Soubies's works, by the Académie, and other non-musical books are in his list. He has collaborated with Ch. Malherbe in the *Histoire de l'Opéra-Comique* (1840-1887), *Mélanges sur Richard Wagner*, *L'Œuvre dramatique de Richard Wagner*, and in a *Précis de l'histoire de l'Opéra-Comique*, the last under the name of B. de Lomagne. He has written for the *Soir* since 1876, and for the *Revue de l'Art dramatique* since 1885. He is a frequent contributor to the *Guide Musical*, the *Ménestrel*, etc. G. F.

SOUND-BOARD or SOUNDING-BOARD.

I. In the organ the sound-board is the upper portion of the wind-chest, upon which the pipes stand.

II. In the pianoforte the sound-board is usually called the BELLY. See vol. i. p. 293*b*.

SOUND-HOLES, or *ff* HOLES (Fr. *ouïe*; Ital. *occhi*; Ger. *Schalloch*). The two apertures in the form of italic *f*'s which face one another in the bellies of violins—and the instruments of that family—on either side of the bridge. These exercise a powerful influence upon the tone, regulating as they do the entire system of vibrations of the various parts of the instruments, by governing the amount of air which is contained within the body. Scientific investigation has proved that the best tonal results are arrived at when the contained mass of air in the body of a violin answers to 512 vibrations (*i.e.* answering to middle C), and for this reason that standard of vibration has been generally adopted by all good violin-makers since the days of Stradivarius, whose violins are perfect examples of this system. The principle, however, cannot be applied by way of extension to the viola, or violoncello, a fact which was proved by those large violoncellos made by 17th century *luthiers* in accordance with violin measurements by mere augmentation, all of which have had to be reduced in size. According to M. Savart (*Mémoire sur la Construction des Instruments à Cordes et à Archet*) the pitch of the viola being a fifth below that of the violin, and an octave above the violoncello, the instrument should contain a mass of air answering to 341.33 vibrations (*f*: a system, however, not generally followed); and the violoncello, being pitched a fifth plus an octave below the violin, should give 170.66 vibrations (*F*)—neither of which, again, can be said to be arbitrary laws. The form of the *ff* holes and their position are therefore matters of great importance. Savart at first questioned the necessity of curved sound-holes, but his later experiments proved that any deviation from the *f* form, where the belly was arched, had a disastrous effect upon the tone of the instrument. He also tested the effect of dispensing with one sound-hole by covering it

¹ Mr. R. B. Prosser of the Patent Office has supplied the references to the Claviol.

with paper, with the result that the tone was immediately diminished, and the note given by the contained mass of air was flattened. A similar effect is produced when the holes are too small; but when they are too large the vibratory note of the air rises. Practically the proportions of the *ff* holes must depend upon the dimensions, thickness, height, etc., of the instrument, and they must be cut in strict relation to these conditions.

Although an established form and position of the sound-holes did not exist until the latter half of the 16th century, still there are evidences that sound-holes were employed in very early times. The monochord attributed to Ptolemy (circa A.D. 139) was apparently provided with a circular sound-hole, like some of the guitars depicted in ancient Egyptian frescoes, which show small sound-holes pierced in the upper table, on either side of the strings. Today those presumptive descendants of the original inhabitants of Egypt—the Berbers—monopolise a musical instrument called the 'kissar,' considered to be of very ancient origin, which has a circular sound-hole placed in the now generally adopted position. In the 9th century we find a figure from the MS. found by Gerber in the Monastery of St. Blasius in the Black Forest, and copied by him, which shows (Fig. 1) C-shaped sound-holes well placed, but

FIG. 1.

from that time to the 16th century pictorial and sculptural representations afford evidence that the various small predecessors of the viol properly so called depended entirely upon the whim of their makers for the shape of their sound-holes. Some of the viol's forerunners had as many as six sound-holes pierced in their diminutive bodies, others had four, and others two, but none among them approached the *f* form finally adopted by the violin-makers proper. At the beginning of the 16th century, makers began to show more dexterity in cutting the sound-holes, and even in the previous century some Italian makers had already come very near to realising their correct position. A glance at Fig. 2, reproduced from an early woodcut representation of a seven-stringed viol which ornaments the front page of the 'First Book of Songs' by 'Aurelius Augurellus Ariminensis' (Verona,

1491), a copy of which is in the library of the British Museum, will corroborate this state-

ment. During the first half of the 16th century the woodcut illustrations of bow instruments which appeared in the works of Sebastian Virdung (*Musica getutscht*, 1511), of Martin Agricola (*Musica Instrumentalis*, 1528), and of Hans Gerle (*Musica Teusch*, 1532), show rebecs with the C-shaped sound-holes on either side of the strings—sometimes turned inward and sometimes outward; also viols with a 'rose' in the centre and the C-shaped sound-holes set high up in the upper bouts. Far in advance of the German work was that of the contemporary

Italians as revealed by Ganassi del Fontego (Venice, 1542), in his *Regola Rubertina*, wherein graceful viols with large *f*-shaped sound-holes appear, and later in the century the still more elegant curves portrayed in

FIG. 2.

the still more elegant curves portrayed in

FIG. 3.

Domenichino's bass, in his picture of St. Cecilia (Fig. 3). Another form of sound-hole prevalent among viol-makers and extensively employed by them for the viola da gamba is that shown in Fig. 4, known as the 'flaming sword.' Generally speaking, the true era of the *f*-shaped sound-hole began with Andreas Amati (Cremona, about 1520-80) and Gasparo da Salò (Brescia, 1542-1609), and was the outcome of the ceaseless pursuit of perfection which marked the period

of the Renaissance. The C-shaped (Fig. 2) sound-holes, it was observed, lacked grace, so makers began to twist them about until they

FIG. 4.

FIG. 5.

assumed the greater elegance of form. An example of this progression is shown in Fig. 5, which is taken from a tenor viol on one of the carved screens of Cremona Cathedral, dating from the first part of the 16th century. This was a distinct step in the right direction; but neither Gasparo da Salò nor Andreas Amati could quite throw aside the C-shape, and the first employed that form for some of his grand tenors. Gasparo da Salò's *ff* holes are very long and pointed, stiff in appearance and parallel in position, while Andreas Amati's lack symmetry by reason of their being cut too wide. Gasparo's pupil Paolo Maggini (Brescia, 1590-1640), according to Savart's experiments, committed the same error, the muffled tone of his instruments being due to this cause, the contained volume of air within the body of his violins answering to the vibrations of middle D. The brothers Amati and Jerome's son Nicolas—who added a touch of boldness to his father's *ff*—put grace of design into their sound-holes, but robbed their violins of power by placing them too far apart on the belly. The fallacies inherent to these first attempts were discovered and rectified by Antonius Stradivarius (Cremona, 1644-1737), whose graceful, converging *ff* holes are acknowledged to be perfect in form, position, proportion, and intent. Although Stradivari had an ingenious method for ascertaining the correct place for his *ff* holes on the belly of the violin, and fixed upon the main features of these, yet on no two of his instruments can the *ff* holes be called identical. The spontaneous feeling and charm which characterised the work of his predecessors, who knew neither template nor pattern, or at least did not employ them, were by him preserved with an added touch of necessary exactitude. He realised the efficacy of flatter surfaces and the influence exercised by the contained mass of air, and made his *ff* holes to suit these ruling factors with a resulting balance of parts impossible to surpass. Deviations from the form or position established by Stradivari have never proved satisfactory.

What Joseph Guarnerius gained in power by his more heroic form of sound-hole—magnificent as it is in many cases—was at the sacrifice of the tone of the G string. The E A D of his violins are sonorous and brilliant, but the fourth string suffers from combined effects due to the excessive thickness of the plates, and the size of the sound-holes. In these days the form and position of the sound-holes have reached a point of almost mechanical perfection. With the exception of the attempted innovations made by Savart and Chanot, the present *f* shape has retained its position unchallenged for quite 300 years. Most makers now content themselves with copying the pattern of some one of the great masters, and at the large violin manufactories at MITTENWALD in Saxony and MIRECOURT the imitation is mechanical in the extreme. See the article VIOLIN-MAKING.

E. H.-A.

SOUND-POST (Fr. *âme*; Ital. *anima*; Ger. *Stimmstock*). A small pillar of pine wood which stands vertically within the body of the violin and the other instruments of that family. Originally it was a mere structural precaution, brought about by the introduction of the higher pitch, and consequent greater pressure upon the belly of the instrument; but it is in reality the centre round which the vibrations of the body of the instrument focus, and from which they proceed. This important tone-producing factor is made either of fine-grained Swiss pine or spruce wood, and it is placed so that the fibres of its wood run at right angles to those of the belly. Closely fitting against the arching of the back and belly of the instrument, it retains its position under, and slightly behind, the right foot of the bridge, and is kept in position solely by the pressure of the strings upon the belly. Its length depends upon the depth between the back and belly of the instrument for which it is intended, and its diameter is subject to slight alteration, according to the modelling. If the sound-post is too slight, the tone of the instrument in which it is placed will be relatively thin, and the opposite effect is produced where it is too thick. The correct position to be assigned to the sound-post is an important matter, as the smallest variation of position materially alters the tone. The extreme range over which it may be moved is comprised within an area

of about a quarter of an inch. As a general rule, when the vibrations of the back of an instrument are sluggish and require to be accelerated before the highest quality of tone of which it is capable can be produced, the sound-post should be brought nearer the bridge; in a contrary condition of things it should be moved farther away; and high-built instruments require the sound-post nearer the bridge than do those of flatter model.

The interesting series of experiments made in connection with the sound-post by Mons. Savart, and later by Sir William Huggins, have proved the following axioms:—

(1) That the sound-post conveys the combined vibrations of the belly and sides to the back of the instrument, controlling the action of these parts, and bringing them into unison and equilibrium with the contained mass of air in the body of the instrument.

(2) That the material of which the sound-post is made influences the tone of the instrument, as was evidenced by Sir W. Huggins's introduction of lead, and of sealing-wax, into the centre of the post, whereby the volume of tone was diminished greatly. A sheet of india-rubber firmly wedged in at the upper and lower end of the sound-post, when in position, influenced the tone in a still more disastrous manner.

(3) That the sound-post placed directly under the right foot of the bridge diminished the intensity of tone, rendering it as meagre in quality as it is when the sound-post is dispensed with; placed under the left foot of the bridge, on the same side as the bass-bar, similarly unsatisfactory results were produced.

The object of the sound-post, therefore, is not so much to convey the vibrations of any of the sections of the violin one to another, as to render the vibrations regular and consonant, and experiment has proved that these results are best obtained by placing the sound-post slightly behind the right foot of the bridge. This conclusion has been borne out by the fact that trial has shown the fallacy and inefficacy of all innovations such (to name but a few) as M. Petizeau's hollow glass sound-post (brought before the Academy of Sciences in Paris a few years ago); Haussel's broad, flat, thin sound-post (described in the *Allgemeine Musikalische Zeitung*, 1881 (p. 75); and Mr. P. Davidson's sound-post with drilled holes, together with such patents as David Herring's sound-post made elastic, so as to double the amplitude of the vibrations (No. 18,028); Simoutre's round-legged or oval sound-post (No. 11,936), and others to be found in the *Abridgements of Specifications relating to Music and Musical Instruments*, published by the Commissioners of Patents.

ments à Archet; Migge, Otto, *The Secret of the Celebrated Italian Violin-makers*; Gallay, J., *Les Luthiers Italiens*; Maugin, J. C., *Manuel de Luthier*; Davidson, P., *The Violin*; Heron-Allen, *Violin-making*. E. H. A.

SOUPIR (a sigh). The French name for a crotchet rest. A quaver rest is called *un demi-soupir*; a semiquaver ditto, *un quart de soupir*, and so on. G.

SOURDINE. An obsolete instrument of wood, with a small cylindrical bore, played with a double reed. The larger instruments of this family had two parallel tubes arranged much in the same way as those of the bassoon, and were furnished with several keys, as well as six finger-holes. [For Sourdine in the sense of Mute see SORDINO.] D. J. B.

SOUSA, JOHN PHILIP, popular bandmaster and composer, especially of marches, was born in Washington, D.C. (U.S.), on Nov. 6, 1856. In 1877 he was a violinist in the orchestra which Offenbach led on his visit to the U.S., and soon after became conductor of travelling troupes. In 1880 he enlisted in the service of the U.S., and was appointed leader of the band of the United States Marine Corps, developing great proficiency among the musicians and laying the foundations for the eminence which he achieved throughout America and in European lands with his own organisation later. He resigned from the service and organised his band in 1892. Facilities which his official post brought him enabled him to compile a useful collection of musical pieces entitled 'National, Patriotic and Typical Airs of All Countries,' which he dedicated to the Secretary of the Navy. He is the composer also of a number of comic operettas, some of which had considerable vogue, though his reputation rests on his marches. H. E. K.

SPACE. The stave is made up of five lines and four spaces. The spaces in the treble stave, counting upwards, make the word FACE, which is useful as a *memoria technica* for beginners. G.

SPAGNOLETTI, P. This violinist, who held the post of leader of the King's Theatre orchestra for nearly thirty years, was born at Cremona in 1768 (not, as the *Quellen-Lexikon* says, in 1761), and died in London on Sept. 23, 1834. No complete biographical notice of Spagnoletti has apparently appeared hitherto, but according to some MS. notes sent by the late Mr. George Bently—who was acquainted with some of Spagnoletti's relatives—to Dr. T. Lamb Phipson in 1877, this artist's real name was Paolo Diana. At the age of twelve he was introduced to the Director of the Naples Conservatorio as a very promising pupil, whereupon the director placed an elaborate composition before the young aspirant, who, it is said, astonished his auditors by glancing at the printed sheet for a few moments, and then playing the piece through with the music turned upside down before him. About 1802 he was

brought to London by the celebrated tenor Vagnoni, who heard him play at Milan, and shortly after, he was engaged as second violin in the King's Theatre orchestra. In 1812 he was leading the orchestra at the Pantheon, where Italian Opera was being played, under the patronage of many of the nobility who had become disgusted with the management of the King's Theatre. The following year with the establishment of the Philharmonic, Spagnoletti became one of the first thirty-eight Associates of that Society, and led a Septuor with Vaccari, Lindley, Hill, Petuder, Cramer, and Holmes, at one of the first of the season's concerts on April 19, 1813. In 1817 he was leader of the King's Theatre orchestra, and his services were requisitioned by nearly every important orchestral society in London. At the Lenten Oratorios at the King's Theatre, at the Ancient Concerts, at the Philharmonic, at the Royal Academy of Music concerts in the Hanover Square Rooms, at numberless benefit concerts during the season, Spagnoletti invariably led the orchestra, besides which he frequently led Quartets at the Philharmonic, and gave a benefit concert in the Argyll Rooms each year. Frequent notices of his performances, 'which were characterised by an excellent and spirited attack,' appear in the *Harmonicon* between the years 1823 and 1833. When Paganini came to London in 1831, the management proposed to engage another leader for his concerts; but when the Genoese virtuoso heard of this, he immediately demanded that Spagnoletti should be engaged for all his performances, accompanying his request with a well-merited compliment on his abilities. This occasioned some unpleasant feeling between the leader and Laporte, especially when the latter underpaid Spagnoletti for his services at thirteen Paganini concerts. A lawsuit ensued, and a letter from Spagnoletti on the subject appeared in the *Harmonicon* of that year. Spagnoletti was of a modest, retiring disposition, and so ardently devoted to his art that he invariably put it before all private interests, the result of which was his acknowledged pre-eminence as an orchestral leader rather than as a virtuoso. One of his last appearances—if not his last—was at Mr. Alsager's 'Queen's Square Select Society' on March 28, 1834, some months before his death, when he led the first performance of Cherubini's 'Requiem' in England. For several years he had been in a delicate state of health, owing to two severe strokes of paralysis, and it was a third seizure which deprived him of speech and the use of one side of his body, and to which he eventually succumbed. He was buried beside Madame Spagnoletti in Brompton Cemetery, but all trace of the grave-stone which marked the place where he rested has disappeared. Spagnoletti's favourite violin was a Joseph Guarnerius of excellent tone but poor preservation. It

eventually became the property of the late Sir Howard Elphinstone, V.C., at one time comptroller to the household of H.R.H. the Duke of Edinburgh. An engraving of Spagnoletti and Lindley was published by Sharp, after a picture by Mrs. Wigley of Shrewsbury, in 1836. He composed various rather unimportant violin pieces and some songs.—Parke, *Musical Memoirs*; Mason Clarke, *Biog. Dict. Fiddlers, Musical World*, vol. ii.; James T. Brown, *Biog. Dict. Mus., Quellen-Lexikon, The Harmonicon* (from 1823 to 1841), *Musical World* (1836); W. Gardiner, *Music and Friends, Musical Recollections of the last Half Century*, chap. iv. vol. i.; T. Lamb Phipson, *Celebrated Violinists, The Times*, and *Morning Post*, Sept. 26, 1834. E. H.-A.

SPARK, WILLIAM, Mus.D., son of a lay-vicar of Exeter Cathedral, was born at Exeter, Oct. 28, 1823. He became a chorister there, and in 1840 was articled for five years to Dr. S. Sebastian Wesley. On Wesley's leaving Exeter for the Parish Church, Leeds, his pupil went with him, and soon became deputy-organist of the parish church, and organist of the churches of Chapel-town and St. Paul's successively. He was next chosen organist to Tiverton, Devon, and Daventry, Northampton; and on Wesley's removal to Winchester, in 1850, was appointed to St. George's Church, Leeds. His activity in Leeds, outside his own parish, was remarkable. Within a year of his appointment he founded the Leeds Madrigal and Motet Society, and the People's Concerts, held in the Town Hall, just then built. [Municipal business had long required a new Town Hall, the central portion of which has ever since served the city for its chief concert-room.] The organ was built by Gray & Davison, from the designs of Henry Smart and Spark. The hall was opened April 1, 1859, and after a severe competition Spark was elected the Borough organist, a post he held until his death, which took place in Leeds on June 16, 1897. He took his degree as Doctor of Music at Dublin in 1861. In 1869 he started the 'Organists' Quarterly Journal' (Novello). It was followed by the *Practical Choir-master* (Metzler), and in 1881 by a biography of Henry Smart (Reeves, 8vo). [*Musical Memoirs* (1888), and *Musical Reminiscences* (1892), contain an amusing picture of his time, and he did good work in many Yorkshire towns as a lecturer on music.] He also published three cantatas, various anthems, services, glees, and other compositions.

[His brother, Frederick Robert Spark, born Feb. 26, 1831, became editor and publisher of the *Leeds Express* in the fifties. He was officially connected with the Leeds Festival from its commencement in 1858, being honorary secretary from 1877. After the festival of 1907 he retired from active service, and was presented with a portrait of himself painted by Sir George Reid. He is joint author, with Joseph

Bennett, of *A History of the Leeds Musical Festivals 1858-89* (1892). G.; additions by F. K.

SPEAKER-KEYS. On wind instruments of the reed family, certain keys are fitted to facilitate the production of harmonics. These are known as 'speaker-keys.' Two are usually supplied on the oboe, and one on the clarinet, giving octaves on the one instrument and twelfths on the other. These keys open small holes by which the continuity of the air-column is broken, and the setting up of a 'loop,' or point of least variation of pressure, is made easy. The theory of the action of speaker-keys is of much interest in acoustics, but would require more space for exposition than can be allowed in this work.

D. J. B.

SPEAKING-LENGTH. The pitch of the ordinary open flue-pipe on the organ is chiefly determined or controlled by the length of the portion above the mouth of the pipe, which is called the 'speaking-length.' Instances, however, occur in which the speaking-length differs from the true open flue length. See STOPPED PIPE, HARMONIC STOPS, and DIAPASONS. T. E.

SPECIFICATION. The working specification of an organ consists of a detailed description of the stops, materials, pipes, action movements, etc., and the method of procedure requiring to be followed in building the instrument. It is usual to submit the specifications of an organ-builder to an organist or musical expert for his approval.

T. E.

SPECIMENS, DR. CROTCH'S. An interesting collection of musical examples having for its title: *Specimens of various styles of music referred to in a course of lectures read at Oxford and London and adapted to keyed instruments by William Crotch*, 3 vols. folio, London, Robt. Birchall for the author. The lectures themselves were published separately in octavo, and were delivered in 1800-4 and 1820. The first volume of this music was issued by subscription shortly before 1807. The second is dated in the preface 1808, and the third came out a little later. The first volume is probably of the greatest general interest. It consists of 354 melodies of different nations, some published for the first time, and others gathered together from scattered sources. There are a number of Scandinavian, Russian, Chinese, East Indian, Native American airs, and the like. The Old English, Welsh, Scotch, and Irish tunes are mainly from early printed copies. The contents of the other volumes are given below; they are what Crotch states to be 'Scientific music, by which is to be understood such as was composed with a view to harmony.' They are taken from MSS. and scores printed works, and comprise much early Church music. In the work Dr. Crotch was greatly assisted by a Mr. Malchair, a clever musician and equally gifted water-colour artist, who then resided at Oxford. Dr. Crotch was at that time Professor

of Music at the University. The Folk-Song Society has lately become possessed of a very interesting MS. volume of airs noted by Malchair. It was originally one of a series, and shows how deeply Crotch was indebted to Malchair for his 'Specimens.' Malchair seems to have been very learned in national music.

The preface to the volumes, besides pointing out from where the specimens were obtained, are otherwise of interest.

VOLUME I.

Symphony to Sommi Dei. Handel.	Italian National Music, 1 example.
Symphony to Jealousy. Handel.	Swiss National Music, 2 examples.
Part of Overture to <i>Iphigénie</i> .	German National Music, 8 examples.
Gluck.	Spanish National Music, 15 examples.
Moses and the Children of Israel.	Polish National Music, 4 examples.
Handel.	Scandinavian National Music, 5 examples.
How excellent (opening). Do.	Norwegian National Music, 21 examples.
Who is like unto Thee. Do.	Danish National Music, 1 example.
He rebuked, and He led them. Do.	Russian Music, 16 examples.
Marchet in Berenice. Do.	Turkish Music, 10 examples.
Sonata for harpsichord (D). D. Scarlatti.	Chinese Music, 5 examples.
Sanctus. O. Gibbons.	East Indian Tunes, 32 examples.
Allegretto. F (Symphony). Haydn.	Musical of North America, 6 examples.
Jewish Music, 5 examples.	
Irish Music, 60 examples.	
Scotch Music, 76 examples.	
Welsh Music, 42 examples.	
Old English Music, 37 examples.	
French National Music, 20 examples.	

VOLUME II.

Various Styles.	Single Chant. T. Purcell.
Ambrosian Chant, A.N. 384.	Aria, <i>Opri il tuo. Aoco.</i>
Plain Chant. Guido (1022).	Do. No non amaro. Do.
Other Harmonies. Do.	Do. Due vaghe pupille. Do.
Harmony. Franco.	Do. Del tuo cor tempi. Do.
Chant. Joquin des Prés.	Do. Se tu credi. Do.
1st Psalm O. V. Martin Luther.	Do. Tanto bardi per far. Do.
38th Psalm O. V.	Do. Bella bocca di cinaro. Do.
1st Psalm O. V.	Do. Foglio lieve. Do.
With Psalm O. V. French Tune.	Do. Tu fuggisti O caro. Do.
I will exalt Thee. Tye.	Do. Crine vezozoe. Do.
Lord, for Thy tender mercies' sake.	Do. Dolce Amor mi dice spera.
Farrant.	Do.
Glória Patri. Do.	Do. Lusingami speranza. Do.
Deposuit Potentes. Palestrina.	Do. Begli occhi perdonatemi.
We have heard with our ears. Do.	Do.
Glória Patri. Tallis.	Do. Col freddo suo velen. Do.
'Dissi e l'amata mia.' Marenzio.	Do. Se il mio labbro. Do.
Now this ear. William Byrd.	Do. Gloria che amor. Do.
Non nobis Domine. Do.	Do. Se versasti da tuoi lumi.
Double Chant. Morley.	Do.
Symphony. 3 notes. Peri.	Do. Fantasmî orribili. Do.
Fate Festa al Signore. E. del Cellieri.	Do. Cantata, Taci O grada. Do.
Hosanna. O. Gibbons.	Do. Aria, Begli occhi d'amore. Do.
Almighty and everlasting. Do.	Do. Migravit Jnda. Do.
God is gone up. Do.	Do. Glória Patri. Dr. Child.
Glória Patri. Do.	Do. Dormi dormi ben mio.
The Silver Swan. Do.	Do. Cesti.
Awake, Sweet Love. Dowland.	Part of Cantata, Dite a lei. Stradella.
S' in ch' havro Sperto. Carissimi.	Cantata, Se gelose, sei Tu. Do.
Movement from <i>Amanche</i> che dita. Carissimi.	Do. Causonnet, Chi dirai. Do.
Hodie Simon Petrus. Do.	Do. Aria, Vado ben spesso. Salv.
Et ululantes—Jephtha. Do.	Do.
Ahlt ergo in montes. Do.	Glória Patri. Blow.
Florate Blum Israel. Do.	Anthem, I will arise. Creyghton.
Deum de Deo. Do.	Duet, Dormio l'aura estive.
Part of a Cantata, Fortunati miei.	Do. Durante.
maître. A. Scarlatti.	7th Concerto. A. Corelli.
Aria, Perché geme o tortorella. Do.	Part of 2nd Sonata, op. 3.
Do. Voglio amar. Do.	Fugue from the 4th Sonata, op. 3.
Do. Non da pin peni O cara. Do.	Do.
Do. Che più bram. Do.	Part of the 7th Solo. Do.
Do. Il seno de mia vita. Do.	Part of the 11th Solo. Do.
Cantata, Sen ferito. Do.	Anthem, Out of the deep. Al-drich.
Aria, Strada pensare. Do.	Do. O God, Thou hast cast us out. H. Purcell.
Do. Il destin. Do.	Glória Patri (4 settings).
Do. Illettre il sangue mio. Do.	Part of 1st Sonata. 1st set. Do.
Do. Con l'arte e il mio cor. Do.	From 8th Sonata. 1st set. Do.
Do. Miel ddi a vendetta. Do.	From 9th Sonata. 2nd set. Do.
Do. L'innocente diffendete. Do.	In guilty night. Do.
Duet, Non son più. Do.	Overture to King Arthur. Do.
Aria, Due bellissime pupille. Do.	Chaconne, before the Play. Do.
Do. Il mio figlio. Do.	Brave soul to be renewed. Do.
Part of Cantata, Che mesta horti esopiro. Do.	Glória Patri. Dr. Croft.
Metet, Domine quinque talents. L. Rossi.	Qui diligit Mariam. Stefani.
Anthem, Teach me, O Lord. Rogers.	Dixit Dominus. Leo.
	Part of a Mass. Pergolesi.
	Burlesque, dove sei (Orfeo). Do.
	Glória in Excelsis. Do.
	4th Psalm. Marcello.

7th Psalm. Marcello.
From Der Tod Jesu. Graun.
Te gloriosus (Te Deum). Do.
Overture to l. Pellegrini. Hasse.
Le Porte noi diserra. Do. Do.
Fellgrino e l' uomo. Do. Do.
Overture to Pastor Fido. Handel.

Aris, Son confusa (Poro). Handel.
He is my God (Israel in Egypt). Do.
Chorus, The listening crowd. Do.
Do. May no rash intruder. Do.
Double Chorus, He gave them
halibones. Do.

VOLUME III.

Fugue (in E). Bach.
No. 2 of the 12 solos for the Violin.
Tartini.
Air, Pupillette vèzzosette, from
Ormisda. Vinci.
Air, Indolce abbandonata. Do.
Concerto 6, op. 3. Geminiani.
Concerto 2. Ricciotti.
Part of Sonata 10. Paradisi.
Requiem. Jommelli.
Chorus, Santa Speme (Passione).
Do.
Sonata 3. Criepli.
Part of Sonata 4. Do.
Fantasia. C. F. E. Bach.
Concerto for a full Band. J. C.
Bach.
Overture to Iphigénie en Aulide.
Gluck.
Chorus, Que d'attraita.
Overture, Pierre le Grand.
Ortely.
Do. Don Quichotte. Cham-
pigny.

Overture, Tolson D'Or. Vogel.
Part of Sonata 2. Vauhall.
Part of Sonata 2, op. 9. Schobert.
Minuet and trio, Sonata 1, op. 5.
Do.
Part of Quintet 3, op. 12. Boc-
cherini.
Sonata 3, op. 23. Kozeluch.
Part of Quartet 1. 8th set.
Pleyel.
Do. 6, op. 8. Do.
Part of Sonata 1, op. 12. Krump-
holtz.
Do. 2, op. 11. Hüllmandel.
Do. 2, op. 4. Clementi.
Adagio from op. 11. Do.
Part of Sonata 4, op. 12. Do.
Recorders from Requiem. Mo-
zart.
Benedictus from Do. Do.
Overture, Le Nozze di Figaro. Do.
Part of Quartet 3, op. 76. Haydn.
Sinfonia, in E♭. Do. F. K.

SPEYER, WILHELM, composer, was born June 21, 1790, at Frankfurt-on-the-Main, where he died April 5, 1878. He received his musical education at Offenbach under Thieriot (the friend of Weber) and André. He was already a prominent violinist when he went to Paris in 1812, to become a pupil of Baillot, from whose instruction and from the acquaintance of such men as Cherubini, Boieldieu, Méhul, etc., he derived much benefit. Returning to Germany afterwards, he settled down at Frankfurt and exchanged the musical profession for that of a merchant, but continued to compose—at first chiefly chamber music. He published string quartets and quintets, and also violin duets, which last became widely popular. He afterwards devoted himself chiefly to vocal music, and it is as a writer of songs that his name is best known. Amongst his lieder—of which he published several hundred—many, such as 'The Trumpeter,' 'Rheinsehnsucht,' 'Die drei Liebchen,' etc., acquired great popularity. He also wrote vocal quartets and some choral works. G.

SPIANATO (Ital.), level, even. A word used by Chopin in the *Andante* which precedes the *Polonaise* in E♭, op. 22, to denote a smooth and equal style of performance, with but little variety. F. T.

SPICCATO (Ital.), accurately 'separate,' 'distinct.' A term applied in violin-playing to a particular vibratory style of bowing. 'Spiccato' and 'Saltato' are both explained under the head of **SPRINGING BOW**. G.

SPIES, HERMINE, was born Feb. 25, 1857, at the Löhnberger foundry, near Weilburg, Nassau, daughter of the resident manager. She was taught singing by Frau Fichtenberg at the Conservatorium of Wiesbaden, by Sieber at Berlin, and by Stockhausen at Frankfurt. In July 1880, while still a student, she sang at the Mannheim Festival, and in 1882 she made her début at a concert at Wiesbaden; in 1883

she sang in concerts at Leipzig, Berlin, etc., speedily establishing her reputation as an excellent mezzo-soprano or contralto singer. She also sang in Austria, Hungary, Holland, Denmark, and Russia. On June 3, 1889, she made her début in England at St. James's Hall at a Richter Concert, when she sang 'Che farò' and lieder of Schubert, Schumann, and Brahms. She attracted immediate attention on account of her fine voice and her excellent phrasing, expression, and general intelligence. She confirmed her success at her two recitals in a selection of Schumann's 'Dichterliebe,' etc., also at the Philharmonic, where she sang in English Handel's 'Return, O God of hosts,' etc. In 1892 she married Dr. W. A. F. Hardtmuth, of Wiesbaden, a doctor of jurisprudence, and died there Feb. 26, of the following year, to the regret of all. She was unrivalled in her singing the contralto part in Brahms's *Rhapsody*, op. 53, and in the lieder of the same composer. Her reading of 'Vergleichliches Ständchen' in particular was a perfect work of art. A memoir by her sister, Minna Spies, appeared in 1894. A. C.

SPINA, CARL ANTON. The successor of the Diabellis in that famous publishing house at Vienna, which for so long stood in the Graben, No. 1133, at the corner of the Bräunerstrasse. He succeeded them in 1852, and was himself succeeded by F. Schreier in July 1872. During that period Spina's activity showed itself especially in the publication of Schubert's works, a mass of whose MSS. he acquired from Diabelli. Chief among these were the Octet, Quintet in C, Quartets in D minor, G, and B♭; the Overture in the Italian style, those to 'Alfonso und Estrella,' 'Fierrabras,' 'Rosamunde,' with *Entr'actes* in B minor and B♭; the B minor Symphony, Sonata for PF. and Arpeggione, etc., all in score. Herr Spina's enthusiasm for Schubert was not that of a mere publisher, as the writer from personal experience of his kindness can testify. It was he who allowed the Crystal Palace Company to have copies of several of the orchestral works for playing, long before there was sufficient public demand to allow of their being published. G.

SPINDLER, FRITZ, pianoforte-player and composer for that instrument, born Nov. 24, 1817, at Wurzbach, Lobenstein, was a pupil of F. Schneider of Dessau, and was for many years resident in Dresden. His published works are more than 330 in number, the greater part brilliant drawing-room pieces, but amongst them much teaching-music, and some works of a graver character—trios, sonatinas, two symphonies, concerts for PF. and orchestra, etc. His most favourite pieces are—'Wellenspiel' (op. 6); 'Schneeglöcklein' (op. 19); 'Silberquell' (op. 74); 'Husarenritt'; six dance themes; Transcriptions of 'Tannhäuser' and 'Lohengrin.' He died at Niederlössnitz, near Dresden, Dec. 26, 1905. G.

SPINET (Fr. *Épinette*, *Clavicorde*; Ital.

Spinetta, Clavicordo; Span. *Clavicordio*; Eng. *Spinet, Virginal*). A keyed instrument, with plectra or jacks, used in the 16th, 17th, and 18th centuries; according to Burney (*Rees's Cycl.* 1819, *Harpsichord*) 'a small harpsichord or virginal with one string to each note.' The following definitions are from Florio's *New World of Words*, 1611:—'*Spinetta*, a kind of little spina . . . also a paire of Virginales'; '*Spinettegiare*, to play upon Virginales'; '*Spinetto*, a thicket of brambles or briars' (see Rimbault's *History of the Piano-forte*, 1860). We first meet with the derivation of spinet from *spina*, 'a thorn,' in Scaliger's *Poetices* (1484-1550; lib. i. cap. lxiii.). Referring to the plectra or jacks of keyed instruments, he says that, in his recollection, points of crowquill had been added to them, so that what was named, when he was a boy, 'clavicymbal' and 'harpichord' (*sic*), was now, from these little points, named 'spinet.' [See JACK.] He does not say what substance crowquill superseded, but we know that the old oithers and other wire-strung instruments were twanged with ivory, tortoiseshell, or hard wood. (See vol. ii. p. 328.) Another origin for the name has been discovered, to which we believe that Signor Ponsicchi (*Il Piano-forte*, Florence, 1876) was the first to call attention. In a very rare book, *Conclusioni nel suono dell' organo, di D. Adriano Banchieri, Bolognese* (Bologna, 1608), is this passage:—

Spinetta riceve tal nome dall' inventore di tal forma longa quadrata, il quale fù un maestro Giovanni Spinetti, Venetiano, ed uno di tali stromenti hò veduto io alle mani di Francesco Stivori, organista della magnifica comunità di Montagnana, dentrovi questa iscrizione: JOANNES SPINETUS VENETUS FECIT. A.D. 1503.

According to this, the spinet received its name from Spinetti, a Venetian, the inventor of the oblong form, and Banchieri had himself seen one in the possession of Stivori, bearing the above inscription. M. Becker of Geneva (*Revue et Gazette musicale*, in the *Musical World*, June 15, 1878) regards this statement as totally invalidating the passage from Scaliger; but not necessarily so, since the year 1503 is synchronous with the youth of Scaliger. The invention of the crowquill points is not claimed for Spinetti, but the form of the case—the oblong or table shape of the square piano and older clavichord, to which Spinetti adapted the plectrum instrument; it having previously been in a trapeze-shaped case, like the psaltery, from which, by the addition of a keyboard, the instrument was derived. [See VIRGINAL; and also for the different construction and origin of the oblong clavichord.] Putting both statements together, we find the oblong form of the Italian spinet, and the crowquill plectra, in simultaneous use about the year 1500. Before that date no record has been found. The oldest German writers, Virdung and Arnold Schlick, whose essays appeared in 1511, do not mention the spinet, but Virdung describes and gives a

woodcut of the Virginal, which in Italy would have been called at that time 'epinetta,' because it was an instrument with plectra in an oblong case. Spinetti's adaptation of the case had therefore travelled to Germany, and, as we shall presently see, to Flanders and Brabant, very early in the 16th century; whence M. Becker conjectures that 1503 represents a late date for Spinetti, and that we should put his invention back to the second half of the 15th century, on account of the time required for it to travel, and be accepted as a normal form in cities so remote from Venice. Considerable light has been thrown upon the hitherto profoundly obscure invention of the keyboard instrument subsequently known as the spinet, by that erudite searcher and scholar, M. Edmond Vander Straeten, in *La Musique aux Pays-Bas*, vol. vii. (*Les musiciens néerlandais en Espagne*, 1^{re} partie), Brussels, 1885. He quotes, p. 246, from a testamentary inventory of musical instruments which had belonged to Queen Isabella, at the Alcazar of Segovia, dated 1503: 'Dos Clavicimbanos viejos' that is to say, two old clavecins (spinet). One of her chamberlains, Sancho de Paredes (p. 248), owned in 1500 'Dos Claviorganos'—two claviorgans or organised clavecins. In a previous inventory, dated 1480 (and earlier), the same chamberlain appears to have possessed a manicoire or clavichord with tangents. But M. Vander Straeten is enabled to give a positive date, 1387 (p. 40, *et seq.*), when John the First, King of Aragon, had heard and desired to possess an instrument called 'exaquir,' which was certainly a keyboard stringed-instrument. He describes it later on as resembling an organ but sounding with strings. The name 'exaquir' may be identified with 'l'eschnaquel d'Angleterre,' which occurs in a poem entitled 'La Prise d'Alexandrie,' written by Guillaume de Machault in the 14th century. M. Vander Straeten inquires if this appellation can be resolved by 'échiquier' (chequers) from the black and white arrangement of the keys? The name échiquier occurs in the romance 'Chevalier du cygne' and in the 'Chanson sur la journée de Guinegate,' a 15th-century poem, in which the poet asks to be sounded—

Orgina, harpes, naquaires, chalemelles,
Bons echiquiers, guisternes, doucemelles.

The inquirer is referred to the continuance of M. Vander Straeten's notes on this interesting question, in the work above mentioned. It is here sufficient to be enabled to prove that a kind of organ sounding with strings was existing in 1387—and that clavecins were catalogued in 1503, that could be regarded as old; also that these dates synchronise with Ambros's earliest mention of the clavicymbalum, in a MS. of 1404.

M. Vander Straeten (*La Musique aux Pays-Bas*, vol. i.) has discovered the following

references to the spinet in the household accounts of Margaret of Austria :—

A ung organiste de la Ville d'Anvers, la somme de vi livres auquel madiete dame en a fait don en faveur de ce que le xv^e jour d'Octobre xv. xxii [1522] il a amené deux jeunes enfans, filz et fille, qu'ils ont joué sur une espinette et chanté à son diner.

L'organiste de Monsieur de Fiennes, sept livres dont Madame lui a fait don en faveur de ce que le second jour de Décembre xv. xxvi [1526] il est venu jouer d'un instrument dit espinette devant elle à son diner.

The inventory of the Château de Pont d'Ain, 1531, mentions 'una espinetta cum suo etuy,' a spinet with its case; meaning a case from which the instrument could be withdrawn, as was customary at that time. M. Becker transcribes also a contemporary reference from the Munich Library :—

Quatorze Gaillardes, neuf Pavannes, sept Bransles et deux Basses-Dances, le tout reduict de musique en la tablature du ieu (jeu) Dorgues, Espinettes, Manichordions et telz semblables instruments musicaux, imprimées à Paris par Pierre Attaignant MDXXIX.

The manichord was a clavichord. Clement Marot (Lyons, 1551) dedicated his version of the Psalms to his countrywomen :—

Et vos doigts sur les Espinettes,
Pour dire Saintes Chensonettes.

With this written testimony we have fortunately the testimony of the instruments themselves, Italian oblong spinets (*Spinetta* = *Tavola*), or those graceful pentangular instruments, without covers attached, which are so much prized for their external beauty. Miss Marie Decca owns a Rosso spinet dated 1550, and there is another by the same maker (signed Annibalis Mediolanensis) dated 1569, recently in the possession of Herr H. Kohl, Hamburg, who obtained it from the palace of the San Severino family, at Crema, in Lombardy. These spinets are usually made entirely of one wood, the sound-board as well as the case. The wood appears to be a kind of cedar, from its odour when planed or cut, at least in some instances that have come under the writer's notice. The next oldest bearing a date is in the Conservatoire at Paris, by Francesco di Portalupis, Verona, 1523. The next by Antoni Patavini, 1550, is at Brussels. In the Bologna Exhibition, 1888, Historical Section, was shown a spinet bearing the inscription 'Alessandro Pasi Modenese,' and a date, 1490. It was exhibited by Count L. Manzoni. It is a true Italian spinet in a bad state of repair. The date, which has been verified, does not invalidate the evidence adduced from Scaliger and Banchieri concerning the introduction of the spinet, but it places it farther back and before Scaliger, who was born in 1484, could have observed it. This Bologna Loan Collection contained, as well as the earliest dated spinet, the latest dated harpsichord (1802, Clementi) known to the writer. We have at S. Kensington two by Annibal Rosso of Milan, 1555 and 1577, and one by Marcus Jadra (Marco dai Cembali; or dalle Spinette), 1568. [A spinet in

the Dublin Museum of Science and Art, which Mr. Hipkins described in his *History of the Pianoforte*, p. 60, as dated 1590, and the work of Domenico da Pesaro, has since been discovered to be by Francesco da Brescia and to bear the much earlier date 1564. This inscription, on an inner panel of the instrument, was not discovered till recently. W. H. G. F.] Of the date 1568 is also a virginal, or *Spinetta Tavola*, in the collection of M. Terme of Liège; its compass is A-f^{'''}. It has boxwood keys, but the arrangement of the short octave is uncertain, as the lowest note may be G, F, or A. Signor Krans has, at Florence, two 16th-century spinets, one of which is signed and dated, Benedictus Florianus, 1571; and at the Hôtel Cluny, Paris, there is one by the Venetian Baffo, date 1570, whose harpsichord (*clavicembalo*) at S. Kensington is dated 1574.

For the pentangular or heptangular model with the recessed keyboard, it is probable that we are indebted to Annibal Rosso, whose instrument of 1555 is engraved in the preceding illustration. Mr. Carl Engel reprinted in the S. Kensington Catalogue (1874, p. 273) a passage from *La Nobilità di Milano* (1595), which he thus renders :—'Hannibal Rosso was worthy of praise, since he was the first to modernise clavichords into the shape in which we now see them,' etc. The context clearly shows that by 'clavichord' spinet was meant, *clavicordo* being used in a general sense equivalent to the German *Clavier*. If the modernising was not the adoption of the beautiful forms shown in the splendid examples at South Kensington—that by Rosso, of 1577, having been bought at the Paris Exhibition of 1867 for £1200 on account of the 1928 precious stones set into the case—it may possibly have been the wing-form, with the wrestpins above the keys in front, which must have come into fashion about that time, and was known in Italy as the *Spinetta Traversa*; in England as the Stuart, Jacobean, or Queen Anne spinet, or Couched Harp. There is a very fine *Spinetta Traversa*, emblazoned with the arms of the Medici and Compagni families, in the Kraus Museum (1878, No. 193). Praetorius illustrates the Italian spinet by this special form, speaks (*Organographia*, Wolfenbüttel, 1619) of larger and smaller spinets, and states that in the Netherlands and England the larger was known as the Virginal. The smaller ones he describes as 'the small triangular spinets which were placed for performance upon the larger instruments, and were

tuned an octave higher.' Of this small instrument there are specimens in nearly all museums; the Italian name for it being 'Ottavina' (also 'Spinetta di Serenata'). We find them fixed in the bent sides of the long harpsichords, in two remarkable specimens; one of which, by Hans Ruckers,¹ is preserved in the Kunst-und-Gewerbe Museum, Berlin (there is a painting of a similar double instrument inside the lid); the other is in the Maison Plantin, Antwerp, and was made as late as 1734-35, by Joannes Josephus Coenen at Ruremonde in Holland. In rectangular instruments the octave one was removable, as it was in those double instruments mentioned under RUCKERS (p. 183), so that it could be played in another part of the room.

According to Mersenne, who treats of the spinet as the principal keyed instrument (*Harmonie*, 1636, liv. 3, p. 101, etc.), there were three sizes: one of 2½ feet, tuned to the octave of the 'ton de chapelle' (which was about a tone higher than our old 'Philharmonic' or high concert pitch); one of 3½ feet, tuned to a fifth above the same pitch; and the large 5-foot ones, tuned in unison to it. We shall refer to his octave spinet in another paragraph.

The compass of the *Ottavina* was usually from E to C, three octaves and a sixth (a); of the larger 16th-century Italian *spinette*, four octaves and a semitone, from E to F (b). The French *épinettes* of the 17th century were usually deeper, having four octaves and a semitone from B to C (c).

The reason for this semitonal beginning of the keyboard is obscure unless the lowest keys were used for 'short octave' measure, an idea which suggested itself simultaneously to the writer and to Professor A. Kraus, whose conviction is very strong as to the extended practice of the short octave arrangement. The Flemish picture of St. Cecilia, in Holyrood Palace, shows unmistakably a short octave *organ* keyboard as early as 1484.²

Fortunately, we are not left to such suggestion for the spinet short octave. Mersenne, in a passage which has hitherto escaped notice (*Harmonie*, liv. 3, p. 107), describing his own spinet, which, according to him, was one of the

¹ See ante, p. 185, No. 5.

² Hubert, or Jan Van Eyck's St. Cecilia, in the famous 'Mystic Lamb,' may be referred to here although appertaining to the organ and not the spinet, as a valuable note by the way. The original painting, now at Berlin, was probably painted before 1426 and certainly before 1432. The painter's minute accuracy is unquestionable. It contains a chromatic keyboard like the oldest Italian, with box-wood naturals and black sharps. The compass begins in the bass at the half-tone E. There is no indication of a 'short-octave,' but there is one key by itself, convenient to the player's left hand; above this key there is a latchet acting as a catch, which may be intended to hold it down as a pedal. D is the probable note, and we have in Van Eyck's organ, it seems to us, the same compass, but an octave lower, as is the German Positiv of the next century at South Kensington—viz. D, E, then three chromatic octaves from F, and finally F#, G, A. There is no bottom-rail to the keyboard, nor is there in the painting at Holyrood.

smallest in use, says: 'The longest string has little more than a foot length between the two bridges. It has only thirty-one steps in the keyboard, and as many strings over the sound-board, so that there are five keys hid on account of the perspective (referring to the drawing)—to wit, three principals and two chromatics ("feintes"), of which the first is cut in two; but these chromatics serve to go down to the third and fourth below the first step, or C *sol*,

in notation  in order to arrive at the third octave, for the eighteen principal steps only make an eighteenth; that is to say, a fourth over two octaves.' Here is the clearest confirmation of short-octave measure in the spinet, the same as in the organ, both keyboards, according to Mersenne, being conformable. But owing to the fact that the woodcut represents a different spinet from that described (apparently descending to B), the description is not clear. To reach the third octave would require an F, for which one-half the cut chromatic in the spinet described may be reserved. But the B of the drawing would, by known analogy with organ practice, sound G, and A would be found on the C#, the B also on the D# key, though this is generally found retained as Eb on account of the tuning.³ It is inferred that F was reached by dividing the lowest natural key; these diagrams therefore represent what we will call the C short measure, as that note gave the pitch.

Mersenne's express mention of C as the longest string shows that the still deeper G and A were made so, in his spinet, by weight: an important fact, as we have not seen a spinet in which it could have been otherwise, since in large instruments the bridge is always unbroken in its graceful curve, as it is also in the angles—always preserved—of the bridge of an octave one. The intimate connection of the spinet and organ keyboards must palliate a trespass upon ground that has been authoritatively covered in ORGAN (vol. iii. p. 529). It is this connection that incites inquiry into the origin of the short octaves, of which there are two measures, the French, German or English C one, which we have described, and the Italian F one, which we will now consider. We propose to call this F, from the pitch note, as before. We have reason to believe these pitch notes originally sounded the same, from which arose the original

³ It may have been on account of the tuning that A and D were left unfretted in the old 'gehunden' or fretted clavicordes; but the double Irish harp which Quillet (*Dissertation on Ancient and Modern Music*, A.D. 1861) says had been adopted in Italy, had those notes always doubled in the two rows of strings, on importance our tuning hypothesis fails to explain.

divergence of high and low church-pitch; the C instrument being thus thrown a fourth higher. The Italian short measure having been misapprehended we have submitted the question of its construction to the high authority of Professor Kraus, and of Mr. W. T. Best, who made a careful examination of the organs in Italy. Both are in perfect agreement. Professor Kraus describes the Italian short octave as a progression of three dominants and tonics, with the addition of B *molle* (b) and B *quattro* (a) for the ecclesiastical tones. The principle, he writes, was also applied to the pedal key-boards, which are called 'Pedaliera in Sesta,' or 'Pedaliera a ottava ripiegata.'¹ Professor Kraus maintains the nearly general use of the short octave in Italian spinets, harpsichords, clavichords, and organs, and to some harpsichords he adds even another dominant.

According to this, the oldest harpsichord known to exist, the Roman one of 1521, at S. Kensington, is a short-octave F instrument. When, in the 18th century, the C short octaves were made long, it was by carrying down the G and A, and giving back the semitonal value to the B and C# (sometimes also the D#); but G# was not introduced, since it was never required as a drone. The drones had sometimes given way to semitones as early as the 14th and 15th centuries.

What was, then, the original intention of 'short measure'? We find it indicated in Mersenne's *Psalter* (G C D E F G A Bb C d e f g) and in many delineations of Portatives or Regals in pictures of the old masters, whose sincerity, seeing the accurate manner in which they have painted lutes, cannot be questioned. We will confine our references to Orcagna's 'Coronation of the Virgin' (1350), in the National Gallery, London, and Master Stephen's 'Virgin of the Rosary' (1450), at Cologne, with the Holyrood picture of 1484, already referred to as an illustration of a Positive organ with short measure. May not Dr. Hopkins's quotation [ORGAN, vol. iii. p. 525] of two long pipes in an organ of 1418 count as evidence for short measure as much as for pedals? We think so. In fine, we regard short measure as having been intended to supply, in deeper-toned instruments, drones for cadences, and in the shriller regals (which were no more than boxes of pitch-pipes, one, two, or three to a key), to prompt the intonation of the plain-song. The contraction of the

keyboard, whether diatonic or chromatic, to suit the size of the hand, was probably due to these small instruments—

Orgues avoit bien maniables,
A une seulle main portables.
Ou il mesmes soufflé et touché.
Roman de la Rose.

The contraction to the short-octave measure might have been intended to get rid of the weight of the heavier pipes not needed for dominants or intonation, and, at the same time, to keep the keyboard narrow. Both contractions—the keyboard and the short measure—were thus ready-made for the spinet, harpsichord and clavichord, when they came into use.

The short-octave group was finally partially doubled, so as to combine with the dominant fourths the ordinary chromatic scheme, by dividing the lowest sharps or chromatics, of which there is an example in a spinet by Pleyer or Player, made between 1710 and 1720, exhibited by Messrs. Kirkman at S. Kensington in 1872. This instrument, with black naturals, and apparently $4\frac{1}{4}$ octaves from B to D, has the lowest C# and D# divided, called in the quotation in the Catalogue (p. 12) 'quarter tones.' But it is difficult to imagine enharmonic intervals provided for the deepest notes. We believe it to have been intended for a 'short octave,' and to be thus explained:—

			D \sharp	E \flat	
			C \sharp	D \sharp	
Apparent notes	B	C	D	E	
			C \sharp	E \flat	
			A	B	
Real notes	G	C	D	E,	
			C \sharp	D \sharp	
			D \flat	E \flat	
or Apparent notes	B	C	D	E	
			A	B	
			C \sharp	E \flat	
Real notes	G	C	D	E	

A detailed examination of instruments contributed to the Historic Loan Collection (1885) proves that the natural keys of the Patavini Spinet mentioned on p. 633 are marked with their names. The lowest E key is clearly inscribed Do—C; on the next, the F, is written F. This writing is not so early as 1550, because Do was not then used for Ut. The probable date is about one hundred years later, when the solmisation was finally giving way before the simple alphabetic notation. There are other instances. As to the cut sharps:² the small Maidstone clavichord, said to have been Handel's, has the two nearer or front divisions intended for

¹ But not 'Ottava Rubata,' which some inaccurately apply to the lowest octave of the short octave manual. This is a contrivance in small organs with pedals to disguise the want of the lowest diapason octave on the manual, by coupling on to it the contrabasso of the pedals with the register of the octave above.

² The oldest spinet with cut sharps in the Historic Loan Collection was, according to the Facies, by Edward Blount; but on the first key, and less legibly on the jacks, is written 'Thomas Hitchcock his make in 1664.' A similar autographic inscription of this maker, but dated 1703, has been brought forward by [the late] Mr. Taphouse of Oxford. We are thus enabled to find Thomas Hitchcock's working time. We think John Hitchcock came after him, and was probably his son.

fourths below the next higher naturals, the two further or back divisions being the usual semitones.

A spinet by Keene, dated 1685, in possession of Mr. H. J. Dale, Cheltenham, and one by the same maker belonging to Mr. E. R. Hughes, of Chelsea, have the same apparently enharmonic arrangement. One by Player (*sic*), sent to South Kensington about 1882, is to be included with Messrs. Kirkman's and the Keenes, and also a Player which belongs to Dr. A. H. Mann of Cambridge; but a Keene of Sir George Grove's, undated, has not the cut sharps, which we are disposed to regard as for mixed dominants and chromatics, because the independent keynote value of the chromatics was, about A.D. 1700, beginning to be recognised, and the fretted clavichords were soon to give way to those without frets. It was the dawn of Bach, who set all notes free as tonics. We see in Keene and Player's spinets the blending of old and new—that which was passing away, and our modern practice.

Returning to the Spinetta Traversa, we find this model preferred in England in the Stuart epoch, and indeed in fashion for 150 years. The favourite makers during the reigns of Charles I. and II. were Thomas and John Hitchcock and Charles Haward; but there is an unaccountable difference between John Hitchcock's and Charles Haward's spinets in the fine specimens known to the writer, both the property of Mr. William Dale of London, the latter of much older character, though probably made after the former.

Thomas Hitchcock's spinets are better known than John's. The one in the woodcut belongs to Messrs. Broadwood, and is numbered 1379.¹ (The highest number we have met with of Thomas Hitchcock, is 1547.) Messrs. Broad-

wood's differs from the John Hitchcock of 1630 in having a curved instead of an angular bent side, and from the naturals being of ivory instead of ebony. The compass of these instruments—five octaves, from G, to g"—is so startling as to be incredible, were it not for the facts that several instruments are extant with

¹ This is the instrument in Millais's picture of 'The Minuet,' 1882. Thomas dated his spinets; John numbered them.

this compass, that the keyboard did not admit of alteration, and that the Sainsbury Correspondence [see RUCKERS, *ante*, p. 184] mentions that a greater compass obtained in England in the time of Charles I. than was expected or required on the Continent. The absence also of the sound-hole, regarded as essential in all stringed instruments of that time, where the sound-board covered the whole internal space,

shows how eminently progressive the Hitchcocks must have been. Not so Haward, in the instrument here represented. Chas. Haward appears to have been contemporary with the Hitchcocks, and yet he is as conservative to old Italian or French practice as if John Hitchcock had never made an instrument in England. The Haward spinet belonging to the Rev. L. K. Hilton, of Semley, Shaftesbury, is nearly like a Hitchcock, which proves that Haward did not remain with the model figured on this page. Mr. Kendrick Pyne acquired a Haward spinet (now in Mr. Boddington's collection) dated or numbered 1687, that has sharps like the Hitchcocks, with a strip of the colour of the naturals let in, in this instance black.

A John Hitchcock spinet, numbered 1676, has lately come under our notice. Thomas and John were probably father and son. The Charles Haward spinet is small, with short keys and limited compass, being only of 4 octaves and a semitone, B-c". The naturals are of snake-wood, nearly black; the sharps of ivory. There are wires on each bridge over which the strings pass, and along the hitchpin block, precisely the same as in a dulcimer. The decoration of the sound-board, surrounding an Italian rose, is signed 'I H,' with 'Carolus Haward Fecit' above the keys; and the name of each key is distinctly written, which we shall again have occasion to refer to. Pepys patronised Haward (or Hayward, as he sometimes writes the name). We read in his Diary:—

April 4, 1668. To White Hall. Took Aldgate Street in my way and there called upon one Hayward that makes Virginalle, and there did like of a little espinette, and will have him finish it for me: for I had a mind to a small harpsichon, but this takes up lesa room.

July 10, 1668. To Haward's to look upon an Espinette, and I did come near to buying one, but broke off. I have a mind to have one.

July 13, 1668. I to buy my espinette, which I did now agree for, and did at Haward's meet with Mr. Thacker, and heard him play on the harpsichon, so as I never heard man before, I think.

July 15, 1668. At noon is brought home the espinette I bought the other day of Haward; costs me 5l.

Another reference concerns the purchase of Triangles for the spinet—a three-legged stand, as in our illustration. A curious reference to Charles Haward occurs in *A Vindication of an Essay to the Advancement of Musick*, by Thomas SALMON, M.A., London, 1672. This writer is advocating a new mode of notation, in which the ordinary clefs were replaced by B. (bass), M. (mean), and T. (treble) at the signatures:—

Here, Sir, I must acquaint you in favour of the aforesaid B. M. T. that t'other day I met with a curious pair of Phanatical Harpsichords made by that Arch Hereticke Charles Haward, which were ready cut out into octaves (as I am told he abusively contrives all his) in so much that by the least hint of B. M. T. all the notes were easily found as lying in the same posture in every one of their octaves. And that, Sir, with this advantage, that so soon as the scholar had learned one hand he understood them, because the position of the notes were for both the same.

The lettering over the keys in Mr. W. Dale's Haward spinet is here shown to be original. It is very curious, however, to observe Haward's simple alphabetical lettering, and to contrast it with the Hexachord names then passing away. There is a virginal (oblong spinet) in York Museum, made in 1651 by Thomas White, on the keys of which are monograms of Gamaut (bass G) and the three clef keys, F *fa ut*, C *sol fa ut*, and G *sol re ut*!

Mace, in *Musick's Monument* (London, 1676), refers to John Hayward as a 'harpsichon' maker, and credits him with the invention of the Pedal for changing the stops. There was a spinet by one of the Haywards or Hawards left by Queen Anne to the Chapel Royal boys. It was used as a practising instrument until the chorister days of the late Sir John Goss, perhaps even later.

Stephen Keene¹ was a well-known spinet-maker in London in the reign of Queen Anne. His spinets, showing mixed Hitchcock and Haward features, accepting Mr. Hughes's instrument as a criterion, reached the highest perfection of spinet tone possible within such limited dimensions. The Baudin spinet, dated 1723 (said to have belonged to Simon Fraser, Lord Lovat), which belonged to the late Dr. Rimbault, and is engraved in his *History of the Pianoforte*, p. 69, was afterwards in the possession of the late Mr. Taphouse of Oxford. Of later 18th-century spinets we can refer to a fine one by

¹ Mr. H. C. Moffatt, J.P., of Goodrich Court, Ross, owns a fine virginal with this inscription on the jack rail:—"Stephanus Keene, Londini fecit 1688." The interval between 1688 and 1723 is very long for the work of one man.

Mahoon, dated 1747, belonging to Dr. W. H. Cummings, and there is another by that maker, who was a copyist of the Hitchcocks, at S. Kensington Museum. The late Sir F. G. Ouseley owned one by Haxby of York, 1766; and there is one by Baker Harris of London, 1776, in the Music School at Edinburgh. Baker Harris's were often sold by Longman & Broderip, the predecessors in Cheapside of Clementi and Collard. It is not surprising that an attempt should have been made, while the pianoforte was yet a novelty, to construct one in this pleasing wing-shape. Crang Hancock, of Tavistock Street, Covent Garden, made one in 1782 which was long in the possession of the late Mr. Walter Broadwood. It is now at Godalming. A. J. H.

SPIRITOSO, i.e. 'spiritedly,' is, like CON SPIRITO, a designation of style rather than of pace. It is occasionally met with in Haydn, rarely in Mozart, and in not one of Beethoven's original works. In his many arrangements of national airs 'Spirituoso' occurs not unfrequently, as in op. 107, No. 10; op. 108, Nos. 13, 22; but he probably found it on the copies sent him. Brahms, with a touch of wonted conservatism, uses Con Spirito in the Finale of his Second Symphony. G.

SPITTA, JULIUS AUGUST PHILIPP, a well-known musical *littérateur*, son of the author of the 'Pealter und Harfe'; born at Weehold, Hanover, Dec. 27, 1841; studied at Göttingen, and afterwards taught at Reval, Sondershausen, and Leipzig, where he took part in the founding of the Bachverein in 1874. So great was his progress during this time, that in 1875 he was made Professor of Musical History in the Berlin University, and Perpetual Secretary to the Academy of Arts there. At Easter of the same year he became teacher of Musical History in the Hochschule für Musik; in 1876 entered the direction, and at midsummer 1882 became a permanent director of that establishment. His principal literary work is *J. S. Bach*, in two vols. (B. & H.; vol. i. 1873, vol. ii. 1880)—an accurate and perfectly exhaustive treatise of all relating to the subject, but sadly wanting a better index. A translation by Clara Bell and J. A. Fuller Maitland was published in three volumes by Novello & Co. in 1884-85. He published a smaller biography of the same master, forming No. 1 of Breitkopf & Härtel's *Musikalische Vorträge*, and another of Schumann, which, though issued as Nos. 37, 38 of the same series, was written for this Dictionary. [See ante, pp. 346-383.] His article on SPONTINI, in this work, is the first adequate treatment of that singular individual. An article on Homilius will be found in the *Allg. Deutsche Biographie*, and many other productions of his pen in the *Leipzig Allg. Musikalische Zeitung* for 1875-1878, 1880-82, and in the earlier numbers of Eitner's *Monatshefte für Musikgeschichte*. He

was co-editor with Chrysander and Adler of the *Vierteljahrsschrift für Musikwissenschaft*, from 1885 to his death. His critical edition of the organ works of Buxtehude, in two volumes (B. & H. 1875, 1876), is an admirable specimen of editing, and, in addition to the music, contains much valuable information. He also edited the complete edition of Heinrich Schütz, and was a prominent member of the directorate of the 'Denkmäler deutscher Tonkunst.' He died in Berlin, April 13, 1894. A monument by Hildebrandt, the eminent sculptor, was erected to his memory in Berlin. G.

SPITZFLÖTE, SPITZFLUTE; *i.e.* Pointed flute. An organ stop, so called because its pipes are slightly conical, that is, taper gradually from the mouth upwards. The diameter of the top is generally one-third of that of the pipe at its mouth. The tone is thin and reedy, but pure and effective. The Spitzflöte may be of 8 ft., 4 ft., or 2 ft. pitch; in this country, stops of this kind are most commonly of 4 ft. pitch. J. S.

SPOFFORTH, REGINALD, glee composer, born in 1770 at Southwell, Nottingham, where his uncle, Thomas Spofforth, was organist of the Minster. From him and from Dr. Benjamin Cooke he probably derived all his instruction in music. About 1787 or 1788 he wrote a glee—probably his first—for three male voices, 'Lightly o'er the village green,' and in 1793 obtained two prizes from the 'Glee Club,' for his glees 'See! smiling from the rosy East,' and 'Where are those hours,' which brought him prominently forward. About 1799 he published a 'Set of Six Glees,' one of which, 'Hail, smiling morn,' at once caught the public ear, and has ever since retained its popularity. Another, 'Fill high the grape's exulting stream,' gained a prize in 1810. Spofforth's masterpieces, however, are not among his prize glees, and 'Come, bounteous May,' 'Mark'd you her eye,' 'Health to my dear,' and 'How calm the evening'—all for male voices—are among the finest specimens of his genius. Few English composers, perhaps, have excelled Spofforth in lively fancy joined to pure, chaste style. For several years before his death his health was bad, and he died at Brompton, Sept. 8, 1827. He was buried at Kensington, where a monument was erected to his memory in St. Mary Abbots Church. After his death W. Hawes published a number of his MS. glees, but some of these pieces are crude and imperfect, and probably not intended for publication. Reginald's younger brother, **SAMUEL**, was born in 1780, appointed organist of Peterborough Cathedral when only eighteen, and in 1807 was made organist of Lichfield Cathedral. He died in London, June 6, 1864, and is now best known as the composer of a once popular chant. D. B.

SPOHR, LOUIS,¹ great violinist and famous composer, was born April 5, 1784, at Brun-

¹ So, and not Ludwig, he calls himself in his Autobiography.

wick, in the house of his grandfather, a clergyman. Two years after, his father, a young physician, took up his residence at Seesen, and it was there that young Spohr spent his early childhood. Both parents were musical: the father played the flute; the mother was pianist and singer. The boy showed his musical talent very early, and sang duets with his mother when only four years of age. At five he began to play the violin, and when hardly six was able to take the violin-part in Kalkbrenner's trios. His first teachers were Riemenschneider and Dufour, both amateurs. The latter, a French émigré, was so much impressed with his pupil's exceptional talent, that he persuaded the father to send him for further instruction to Brunswick. Along with his first studies on the violin went his earliest attempts at composition, which consisted chiefly of violin duets.

At Brunswick he attended the grammar-school and continued his musical studies. His teachers were Kunisch, a member of the Duke's band, for the violin, and Hartung, an old organist, for counterpoint. This was the only instruction in the theory of music he ever received. According to his own statement, it was principally through an eager study of the scores of the great masters, especially Mozart, that he acquired mastery over the technicalities of composition. His first public appearance was at a school-concert, when he played a concerto of his own with so much success that he was asked to repeat it at one of the concerts given by the Duke's band. Kunisch then insisted on his taking lessons from Mancourt, the leader of the band, and the best violinist at Brunswick. Spohr was only fourteen when he undertook his first artistic tour. With a few letters of introduction in his pocket he set out for Hamburg. But there he failed even to get a hearing, and after some weeks had to return to Brunswick on foot, greatly disappointed, his slender means thoroughly exhausted. In his despair he conceived the idea of presenting to the Duke a petition asking for means to continue his studies. The Duke was pleased with the lad's open bearing, heard him, was struck with his talent, at once gave him an appointment in his band, and after a short time expressed his willingness to defray the expenses of his further musical education under one of the great recognised masters of the violin. Viotti and Ferdinand Eck both declined to receive a pupil, but the latter recommended his brother, Franz Eck, who was just then travelling in Germany. He was invited to Brunswick, and as the Duke was greatly pleased with his performances, an agreement was made that young Spohr should accompany him on his journeys and receive his instruction, the Duke paying one-half of the travelling expenses and a salary besides. In the spring of 1802 they started, master and pupil, for Russia. They made, however, pro-

LOUIS SPOHR

longed stays at Hamburg and Strelitz, and it was on these occasions that Spohr profited most from his master's tuition. Latterly this became very irregular. Spohr, however, derived much benefit from constantly hearing Eck, who certainly was a very excellent violinist, though but an indifferent musician. At this period Spohr, who had an herculean frame and very strong constitution, often practised for ten hours a day. At the same time he composed industriously, and among other things wrote the first of his published violin concertos (op. 1) which is entirely in the manner of Rode, and also the violin duets op. 3. In St. Petersburg he met Clementi and Field, of whom he tells some curious traits; and after having passed the winter there without playing in public, returned to Brunswick in the summer of 1803. There he found Rode, and heard him for the first time. The playing of this great master filled him with the deepest admiration, and for some time it was his chief aim to imitate his style and manner as closely as possible. After having given in a public concert highly satisfactory proof of the progress made during his absence, he again entered on his duties in the Duke's band. An intended journey to Paris in 1804 was cruelly cut short by the loss of his precious Guarnerius violin, the present of a Russian enthusiast. Just before entering the gates of Göttingen the portmanteau containing the violin was stolen from the coach, and all endeavours to recover it proved fruitless. He returned to Brunswick, and after having acquired, with the help of his generous patron, the Duke, another, though not equally good violin, he started on a tour to Berlin, Leipzig, Dresden, and other German towns. His success was everywhere great, and his reputation spread rapidly. At his Berlin concert he was assisted by Meyerbeer, then only a boy of thirteen, but already a brilliant pianist.

In 1805 Spohr accepted the post of leader in the band of the Duke of Gotha. It was there he met and married his first wife, Dorette Scheidler, an excellent harp-player, who for many years appeared with him in all his concerts, and for whom he wrote a number of sonatas for violin and harp, as well as some solo-pieces. Having at his disposal a very fair band, Spohr now began to write orchestral works and vocal compositions of larger dimensions. His first opera, 'Die Prüfung,' which belongs to this period, was performed at a concert. In 1807 he made a very successful tour with his wife through Germany, visiting Leipzig, Dresden, Prague, Munich, Stuttgart (where he met Weber), Heidelberg, and Frankfurt. In 1808 he wrote his second opera, 'Alruna'; but this, again, never reached the stage, although accepted for representation at Weimar and apparently gaining the approval of Goethe, at that time manager of the Weimar theatre, who was present

at a trial-rehearsal of the work. In the course of this year Napoleon held the famous Congress of Princes at Erfurt. Spohr, naturally anxious to see the assembled princes, went to Erfurt, where a French troupe, comprising Talma and Mars, performed every evening to a pit of monarchs. But on arrival he heard, to his great disappointment, that it was impossible for any but the privileged few to gain admittance to the theatre. In this dilemma he hit on a happy expedient. He persuaded the second horn-player of the band to allow him to take his place; but as he had never before touched a horn, he had to practise for the whole day in order to produce the natural notes of the instrument. When the evening came, though his lips were black and swollen, he was able to get through the very easy overture and entr'actes. Napoleon and his guests occupied the first row of stalls; but the musicians had strict orders to turn their backs to the audience, and not to look round. To evade this fatal regulation Spohr took with him a pocket looking-glass, and by placing it on his desk got a good view of the famous personages assembled.

In 1809 he made another tour through the north of Germany, and at Hamburg received a commission for an opera, 'Der Zweikampf mit der Geliebten'—or 'The Lovers' Duel'—which was produced with great success the year after. At this time he had already written six of his violin-concertos, and as a player had hardly a rival in Germany. The year 1809 is memorable for the First Music Festival in Germany, which was celebrated under Spohr's direction at Frankenhausen, a small town in Thuringia. It was followed by another, in 1811, for which Spohr composed his first symphony, in E♭. In 1812 he wrote his first oratorio, 'Das jüngste Gericht' (not to be confounded with 'Die letzten Dinge,' or 'The Last Judgment'), on the invitation of the French Governor of Erfurt, for the 'Fête Napoléon' on August 15. He naïvely relates¹ that in the composition of this work he soon felt his want of practice in counterpoint and fugue-writing; he therefore obtained Marpurg's treatise on the subject, studied it assiduously, wrote half-a-dozen fugues after the models given therein, and then appears to have been quite satisfied with his proficiency! The oratorio was fairly successful, but after two more performances of it at Vienna in the following year, the composer became dissatisfied, and laid it aside for ever. In autumn 1812 he made his first appearance at Vienna, and achieved as performer a brilliant, as composer an honourable, success. The post of leader of the band at the newly established Theatre 'an-der-Wien' being offered to him under brilliant conditions, he gave up his appointment at Gotha and settled at Vienna. During the next summer he composed his opera 'Faust,' one of his best works, and

¹ Selbstbiogr. i. 169.

soon afterwards, in celebration of the battle of Leipzig, a great patriotic cantata. But neither of these works was performed until after he had left Vienna. During his stay there Spohr naturally came into contact with Beethoven; but in spite of his admiration for the master's earlier compositions, especially for the quartets, op. 18, which he was one of the first to perform at a time when they were hardly known outside Vienna (indeed, he was the very first to play them at Leipzig and Berlin)—yet he was quite unable to understand and appreciate the great composer's character and works, as they appeared even in his second period. His criticism of the C minor and Choral Symphonies has gained for Spohr, as a critic, an unevitable reputation. He disapproves of the first subject of the C minor as unsuited for the opening movement of a symphony; considers the slow movement, granting the beauty of the melody, too much spun out and tedious; and though praising the Scherzo, actually speaks of 'the unmeaning noise of the Finale.' The Choral Symphony fares still worse; he holds the first three movements, though not without flashes of genius, to be inferior to all the movements of the previous eight symphonies, and the Finale he calls 'so monstrous and tasteless, and in its conception of Schiller's Ode so trivial, that he cannot understand how a genius like Beethoven could ever write it down.' After this we cannot wonder that he finishes up by saying: 'Beethoven was wanting in æsthetic culture and sense of beauty.'¹ But perhaps no great artist was ever so utterly wrapped up in himself as Spohr. What he could not measure by the standard of his own peculiar talent, to him was not measurable. Hence his complete absence of critical power, a quality which in many other cases has proved to be by no means inseparable from creative talent.

Although his stay at Vienna was on the whole very successful, and did much to raise his reputation, he left it in 1815, after having quitted his appointment on account of disagreements with the manager of the theatre. He passed the summer at the country-seat of Prince Carolath in Bohemia, and then went to conduct another festival at Frankenhausen, where he brought out his Cantata 'Das befreite Deutschland,' after which he set out on a tour through the west and south of Germany, Alsace, Switzerland, and Italy. On his road, with the special view of pleasing the Italian public, he wrote the eighth Concerto—the well-known 'Scena Cantante.' He visited all the principal towns of the Peninsula, played the concerto in Rome and Milan, and made acquaintance with Rossini and his music—without approving much of the latter, as will be readily believed.

Returned to Germany, in 1817 he visited Holland, and then accepted the post of conductor

of the opera at Frankfort-on-the-Main. Here, in 1818, his opera 'Faust' was first produced. It was quickly succeeded by 'Zemire and Azor,' which, though hardly equal to 'Faust,' gained at the time even greater popularity. Owing again to differences with the manager he left Frankfort, after a stay of scarcely two years. In 1820 he accepted an invitation from the Philharmonic Society in London, and paid his first visit to England. He appeared at the opening concert of the season (March 6), and played with great success his Concerto No. 8, 'Nello stilo drammatico.' [At a miscellaneous concert on March 22, Spohr was described on the programme as making his first appearance in England.] At the second Philharmonic concert he led his Solo Quartet in E. At the next he would naturally have been at the head of the violins to lead the band, while Ries, according to the then prevailing fashion, presided at the piano. But, after having overcome the opposition of some of the directors, Spohr succeeded in introducing the conductor's stick for the first time into a Philharmonic concert. It was on this occasion (April 10) that he conducted his MS. Symphony in D minor, a fine work, composed during his stay in London. At the last concert of the season another Symphony of his was played for the first time in England, as well as his Nonetto for strings and wind (op. 31). Spohr was delighted with the excellent performance of the Philharmonic Orchestra, especially the stringed instruments. Altogether his sojourn in London was both artistically and financially a great success. At his farewell concert, his wife made her last appearance as a harp-player, and was warmly applauded. Soon after she was obliged, on account of ill-health, to give up the harp for the piano, on which she would occasionally play in concerts with her husband, who wrote a number of pianoforte and violin duets especially for her.

On his journey home, Spohr visited Paris for the first time. Here he made the personal acquaintance of Kreutzer, Viotti, Habeneck, Cherubini, and other eminent musicians, and was received by them with great cordiality and esteem. His success at a concert which he gave at the Opéra was complete, although his quiet unpretentious style was not, and could not be, as much to the taste of the French as it was to that of the German and English public. Cherubini appears to have felt a special interest in Spohr's compositions, and the latter takes special pride in relating how the great Italian made him play a quartet of his three times over. Returned to Germany, Spohr settled at Dresden, where Weber was just then engaged in bringing out his 'Freischütz.' Spohr was no more able to appreciate the genius of Weber than that of Beethoven. It is curious that, without knowing of Weber's opera, he had had the intention of

¹ *Selbstbiogr.* i. 202, etc.

setting a libretto on the same story ; but when he heard that Weber had treated the subject, he gave it up. During Spohr's stay at Dresden, Weber received an offer of the post of Hofcapellmeister to the Elector of Hesse-Cassel ; but being unwilling to leave Dresden, he declined, at the same time strongly recommending Spohr, who soon after was offered the appointment for life under the most favourable conditions. On New Year's Day, 1822, he entered on his duties at Cassel, where he remained for the rest of his life. He had no difficulty in gaining at once the respect and obedience of band and singers, and soon succeeded in procuring a more than local reputation for their performances. Meanwhile he had finished his 'Jessonda,' which soon made the round of all the opera-houses in Germany, with great and well-deserved success. It must be regarded as the culminating point of Spohr's activity as a composer. At Leipzig and Berlin, where he himself conducted the first performances, it was received with an enthusiasm little inferior to that roused a few years before by the 'Freischütz.' In the winter of 1824 he passed some time in Berlin, and renewed and cemented the friendship with Felix Mendelssohn and the members of his family, which had been begun when they visited him at Cassel in 1822. In 1826 he conducted the Rhenish Festival at Düsseldorf, when his oratorio 'The Last Judgment' (Die letzten Dinge) was performed (see vol. ii. p. 648b). It pleased so much that it was repeated a few days later in aid of the Greek Insurgents. His next great work was the opera 'Pietro von Abano,' which however, like his next operas, 'Der Berggeist' and 'Der Alchymist,' had but a temporary success. In 1831 he finished his great Violin School, which has ever since its publication maintained the place of a standard work, and which contains, both in text and exercises, a vast amount of extremely interesting and useful material. At the same time, it cannot be denied that it reflects somewhat exclusively Spohr's peculiar style of playing and is therefore of especial value for the study of his own violin-compositions. It is also true that its elementary part is of less practical value from the fact that the author himself had never taught beginners, and so had no personal experience in that respect.

The political disturbances of 1832 caused a prolonged interruption of the opera performances at Cassel. Spohr, incensed by the petty despotism of the Elector, proved himself at this time, and still more during the revolutionary period of 1848 and 1849, a strong Radical, incurring thereby his employer's displeasure, and causing him innumerable annoyances. However he made good use of the interruption to his official duties, by writing his Symphony 'Die Weihe der Töne' (The Consecration of Sound, No. 4, op. 86), which was produced at Cassel in 1832. During the next year, which was saddened by the death

of his wife in 1834, he composed the oratorio 'Des Heiland's letzte Stunden' (Calvary), on a libretto which Rochlitz had offered to Mendelssohn, but which the latter, being then engaged on 'St. Paul,' had declined. Spohr's oratorio was first performed at Cassel on Good Friday, 1835. [In 1836 he married Marianne Pfeiffer, a pianist, who survived him, dying at Cassel, Jan. 4, 1892.] In 1839 he paid his second visit to England, where meanwhile his music had attained great popularity. He had received an invitation to produce his 'Calvary' at the Norwich Festival, and in spite of the opposition offered to the work by some of the clergy on account of its libretto, his reception appears to have surpassed in enthusiasm anything he had before experienced. It was a real success, and Spohr for the rest of his life refers to it as the greatest of his triumphs. Soon after his return to Cassel he received from Professor Edward Taylor the libretto of another oratorio, 'The Fall of Babylon,' with a request that he would compose it for the Norwich Festival of 1842. [For the circumstance of the Norwich Festival performances, see *Annals of the Norfolk and Norwich Musical Festivals*, by R. H. Legge and W. E. Hansell, 1896.] In 1840 he conducted the Festival at Aix-la-Chapelle. Two years later he brought out at Cassel Wagner's 'Der Fliegende Holländer.' That Spohr, who, in the case of Beethoven and Weber, exhibited such inability to appreciate novelty—and who at bottom was a conservative of conservatives in music—should have been the very first musician of eminence to interest himself in Wagner's talent is a curious fact not easily explained. To some extent his predilection for experiments in music—such as he showed in his 'Weihe der Töne,' his Symphony for two orchestras, the Historic Symphony, the Quartet-Concertante and some other things—may account for it ; while his long familiarity with the stage had doubtless sharpened his perception for dramatic effect, and thus enabled him to recognise Wagner's eminently dramatic genius. But there was in Spohr, both as man and as artist, a curious mixture of the ultra-Conservative, nay almost Philistine element, and of the Radical spirit.

To the great disappointment of himself and his English friends, he was unable to conduct the 'Fall of Babylon' at Norwich, since the Elector refused the necessary leave of absence. Even a monster petition from his English admirers and a special request from Lord Aberdeen, then at the head of the Government, to the Elector, had not the desired result. The oratorio, however, was performed with the greatest success, and Spohr had to be satisfied with the reports of his triumph, which poured in from many quarters. On the first day of his summer vacation, he started for England, and soon after his arrival in London conducted a performance

of this new oratorio at the Hanover Square Rooms. On this and other occasions his reception here was of the most enthusiastic kind. The oratorio was repeated on a large scale by the Sacred Harmonic Society in Exeter Hall. The last Philharmonic Concert of the season (July 3) was almost entirely devoted to Spohr, having in its programme a symphony, an overture, a violin-concerto, and a vocal duet of his. By special request of the Queen and Prince Albert an extra concert with his co-operation was given on July 10, in which also he was well represented. A most enjoyable tour through the South and West of England, and Wales, brought this visit of Spohr's to a happy end.

The year 1844 was marked by the composition of his last opera, '*Die Kreuzfahrer*' ('The Crusaders'), for which he had himself arranged the libretto from a play of Kotzebue. It was performed at Cassel and Berlin, but had no lasting success. During his vacations he made a journey to Paris, and witnessed at the Opéra the 32nd performance of the '*Antigone*' with Mendelssohn's music. The members of the Conservatoire orchestra arranged in his honour a special performance of his '*Consecration of Sound*.' In the same year he conducted the '*Missa Solemnis*' and the Choral Symphony at the great Beethoven Festival at Bonn. The year 1847 saw him again in London, where the Sacred Harmonic Society announced a series of three concerts for the production of his principal sacred compositions: '*The Fall of Babylon*,' '*Calvary*,' '*The Last Judgment*,' '*The Lord's Prayer*,' and Milton's 84th Psalm. However, on grounds similar to those which had roused so much opposition at Norwich, '*Calvary*' was omitted from the scheme, and '*The Fall of Babylon*' repeated in its place.

On his return to Cassel, Spohr seems to have been quite absorbed by the great political events then going on in Germany. In the summer of 1848 he spent his vacations at Frankfort, where the newly created German Parliament was sitting, and he was never tired of listening to the debates of that short-lived political assembly. In 1849 he composed a fresh symphony, '*The Seasons*'—his ninth. With 1850 a long chain of annoyances began. When his usual summer vacation time arrived, the Elector, probably intending to show displeasure at his political opinions, refused to sign the leave of absence—a mere formality, as his right to claim the vacation was fixed by contract. After several fruitless attempts to obtain the signature, Spohr, having made all his arrangements for a long journey, left Cassel without leave. This step involved him in a law-suit with the administration of the theatre, which lasted for four years, and which he finally lost on technical grounds.

For the London season of 1852 Spohr had received an invitation from the new Opera at Covent Garden to adapt his '*Faust*' to the

Italian stage. He accordingly composed recitatives in place of the spoken dialogue, and made some further additions and alterations. It was produced with great success under his own direction on July 15, the principal parts being sustained by Castellan, Ronconi, Formes, and Tamberlik. In 1853, after many fruitless attempts which were regularly frustrated by the Elector, he at last succeeded in bringing out Wagner's '*Tannhäuser*' at Cassel. In reference to it he says in his Autobiography, '*This opera contains a great deal that is new and beautiful, but also some things which are ugly and excruciating to the ear*,' and speaking of the 2nd finale he says: '*In this finale now and then a truly frightful music is produced*.' That he considered Wagner by far the greatest of all living dramatic composers he declared as soon as he became acquainted with '*The Flying Dutchman*.' From '*Tannhäuser*' he would have proceeded to '*Lohengrin*,' but owing to the usual opposition of the court, all his endeavours to bring it out were frustrated. In the same year he came for the sixth and last time to England, to fulfil an engagement at the New Philharmonic Concerts. At three of these he conducted not only many of his own works—especially the Symphony for two orchestras—but also the Choral Symphony. At the same time '*Jessonda*' was in preparation at Covent Garden. But as it could not be produced before the close of his vacation, Spohr was unable to conduct it himself.

From this time his powers began to decline. He still went on composing, but declared himself dissatisfied with the results. In 1857 he was pensioned off, very much against his wish, and in the winter of the same year had the misfortune to break his arm, which compelled him to give up violin-playing. Once more, in 1858, at the celebration of the fiftieth anniversary of the Prague Conservatorium, he conducted his '*Jessonda*' with wonderful energy. It was his last public appearance. He died quietly on Oct. 22, 1859, at Cassel, and thus closed the long life of a man and an artist who had to the full developed the great talents and powers given to him; who throughout a long career had lived up to the ideal he had conceived in youth; in whom private character and artistic activity corresponded to a rare degree, even in their foibles and deficiencies. That these last were not small cannot be denied. His utter want of critical power in reference both to himself and to others is fully exposed in his interesting Autobiography,¹ which, however, bears the strongest possible testimony to his rare manly straightforwardness and sincerity in word and deed, and to the childlike purity of mind which he preserved from early youth to latest age. Difficult as it is to understand

¹ *Louis Spohr's Selbstbiographie*; Cassel und Göttingen, G. H. Wigand, 1860. Two volumes, with portrait and seventeen facsimiles.

his famous criticisms on Beethoven and his interest for Wagner, their sincerity cannot be doubted for a moment. According to his lights he ever stood up for the dignity of his art, with the same unflinching independence of character with which he claimed, not without personal risk, the rights of a free citizen. It is true that he called himself a disciple of Mozart. But the universality of Mozart's talent was the very reverse of Spohr's exclusive individualism; and except in their great regard for form, and in a certain similarity of melodic structure, the two masters have hardly anything in common. Spohr certainly was a born musician, second only to the very greatest masters in true musical instinct; in power of concentration and of work hardly inferior to any. But the range of his talent was not wide; he never seems to have been able to step out of a given circle of ideas and sentiments. He never left the circle of his own individuality, but drew everything within it. At the same time he left much outside of that circle, and his ignorance of the achievements of others was often astounding. This is illustrated by a well-authenticated story. A pupil of his left him, and went for some time to Leipzig to study the piano and other branches of music. On his return to Cassel he called on Spohr, and was asked to play to him. The pupil played Beethoven's sonata in E minor, op. 90. Spohr was much struck, and when the piece was finished made the singular inquiry, 'Have you composed much more in that style, Herr — ?'

He was fond of experiments in composition—such as new combinations of instruments (to wit the Double Quartets, the Symphony for two orchestras, the Quartet-Concerto, and others), or adoption of programmes ('Consecration of Sound'; Concertino, 'Past and Present,' etc.), and thus showed his eagerness to strike out new paths. But after all, what do we find under these new dresses and fresh-invented titles but the same dear old Spohr, incapable of putting on a really new face, even for a few bars? 'Napoleon,' says Robert Schumann¹ (à propos of Spohr's Historical Symphony), 'once went to a masked ball, but before he had been in the room a few minutes folded his arms in his well-known attitude. "The Emperor! the Emperor!" at once ran through the place. Just so, through disguises of the Symphony, one kept hearing "Spohr, Spohr" in every corner of the room.' Hence there is considerable sameness—nay, monotony, in his works. Be it oratorio or concerto, opera or string-quartet—he treats them all very much in the same manner, and it is not so much the distinctive styles peculiar to these several forms of music that we find, as Spohr's peculiar individuality impressed upon all of them. He certainly was not devoid of originality—in fact his style and manner are so entirely his own that no composer is perhaps

so absolutely unmistakable as he is. That an originality so strong and so inalienable, unless supported by creative power of the very first order and controlled by self-criticism, would easily lead to mannerism is obvious; and a mannerist he must be called. Certain melodious phrases and cadences, chromatic progressions and enharmonic modulations, in themselves beautiful enough, and most effective, occur over and over again, until they appear to partake more of the nature of mechanical contrivances than to be the natural emanations of a living musical organism. The present lack of interest in Spohr's music is probably only the natural reaction from an unbounded and indiscriminating enthusiasm, which, in England at one time, used to place Spohr on the same level with Handel and Beethoven. These temporary fluctuations will, however, sooner or later subside, and then his true position as a great master, second in rank only to the very giants of art, will be again established.

The technical workmanship in his compositions is admirable, the thematic treatment his strong point; but it would appear that this was the result rather of a happy musical organisation than of deep study. He cannot be reckoned amongst the great masters of counterpoint, and the fugues in his oratorios, though they run smoothly enough and are in a sense effective, can hardly be called highly interesting from a musical point of view.

Symmetry of form is one of the chief characteristics of his works; but this love of symmetry grew eventually into a somewhat pedantic formalism. A cadenza without its preceding 'passage and shake' he is reported to have held in abhorrence. His instrumentation shows the master-hand throughout, although his predilection for extreme keys presents much difficulty to the wind instruments, and sometimes, especially in his operas, the orchestra is wanting in perspicuity, and not free from monotony.

To his violin-concertos—and among them especially to the 7th, 8th, and 9th—must be assigned the first place among his works. They are only surpassed by those of Beethoven and Mendelssohn, and are probably destined to live longer than any other of his works. They are distinguished as much by noble and elevated ideas as by masterly thematic treatment; while the supreme fitness of every note in the solo-part to the nature of the violin, need hardly be mentioned. They are not likely to disappear soon from the repertory of the best violinists. His duets and concertantes for two violins, and for violin and viola, are of their kind unsurpassed. By the frequent employment of double stops great sonority is produced, and, if well played, the effect is charming. The mass of his chamber-music, a great number of quartets, quintets, double quartets, trios, etc., is nowa-

¹ *Gesammelte Schriften*, iv. 88.

days most rarely heard in public. Though still favourites with amateurs of the older generation, they are, with few exceptions, all but unknown to the musicians of the present day. The reason for this must be found in the fact that a severer standard of criticism is applied to chamber-music in general, and especially to the stringed quartet, than to any other form of musical composition, not even excepting the symphony. Spohr as a composer of quartets was rarely able to shake off the great violin-virtuoso. Some of the quartets—the so-called *Quatuors brillants* or *Solo Quartets*—are avowedly violin-concertos accompanied by violin, viola, and violoncello, and appear to have been written to supply a momentary want. And even those which claim to be quartets in the proper sense of the term, almost invariably give to the first violin an undue prominence, incompatible with the true quartet-style. Allowing all this, it must be maintained that many of the slow movements are of great beauty; and altogether, in spite of undeniable drawbacks, his quartets contain so much fine and noble music as certainly not to deserve the utter neglect they have fallen into.

His oratorios, still enjoying a certain popularity in England, are but rarely heard in other countries. They contain, no doubt, much beautiful music, and occasionally rise even to grandeur and sublimity. Yet one cannot help feeling a certain incongruity between the character of the words and the musical treatment—between the stern solemnity of such subjects as ‘Calvary’ or ‘The Last Judgment’ and the quiet charm and sweetness of Spohr’s music, which even in its most powerful and passionate moments lacks the all-conquering force here demanded.

Of his many songs a few only have attained great popularity, such as ‘The Bird and the Maiden,’ and some more.

As an executant Spohr counts amongst the greatest of all times. Through Franz Eck he received the solid principles of the Mannheim School, and Rode’s example appears afterwards to have had some influence on his style. He was, however, too original to remain fettered by any school, still less under the influence of a definite model. He very soon formed a style of his own, which again—like his style as a composer—was a complete reflex of his peculiar individuality. It has often been remarked that he treated the violin pre-eminently as a singing instrument, and we can readily believe that the composer of the *Scena Cantante* and of the slow movements in the 9th and other Concertos, played with a breadth and beauty of tone and a delicacy and refinement of expression almost unequalled. A hand of exceptional size and strength enabled him to execute with great facility the most difficult double-stops and stretches. His manner of bowing did not materially differ from that of the old French School (Viotti, Rode). Even in quick passages

he preserved a broad full tone. His staccato was most brilliant and effective, moderately quick, every note firmly marked by a movement of the wrist. The lighter and freer style of bowing, that came in with Paganini, and has been adopted more or less by all modern players, was not to his taste. He appears to have had a special dislike to the use of the ‘springing bow,’ and it is a characteristic fact that, when he first brought out Mendelssohn’s *Midsummer Night’s Dream Overture* at Cassel, he insisted on the violins playing the quick passage at the opening with firm strokes.

If Spohr’s compositions for the violin do not present abnormal difficulties to the virtuoso of the present day, such was not the case at the time when they were written. They were then considered the *ne plus ultra* of difficulty. We must also remember that he was too great an artist and musician to care for display of executive skill for its own sake, and that in consequence the difficulties contained in his works do not by any means represent the limit of his powers as an executant. He had a large number of pupils, the best known of whom were St. Lubin, Pott, Ferdinand David, Kömpel, Blagrove, Bott, Bargheer. Henry Holmes belonged to his school, but was never his pupil. Spohr was considered one of the best conductors of his time. An unerring ear, imperturbable rhythmical feeling, energy and fire, were combined with an imposing personal appearance and great dignity of bearing.

As a man he was universally respected, although, owing to a certain reserve in his character and a decided aversion to talking, he was not rarely reproached with coldness and brusqueness of manner. At the same time he gained and kept through a long life certain intimate friendships—with Hauptmann¹ and others—and in many instances showed great kindness, and extended not a little courtesy, to brother artists. That this was not incompatible with an extraordinary sense of his own value and importance is evident in every page of his *Autobiography*, a most amusing work, deserving a better translation than it has yet found.²

His works, of which a catalogue is given below, comprise 9 great Symphonies; a large number of Overtures; 17 Violin-Concertos and Concertinos; many other Concert pieces (Pot-pourris, Variations, etc.) for the violin, for violin and harp; 15 Violin-Duets; Duets for violin and PF.; 4 Concertos and other pieces for clarinet; 33 String Quartets; 8 Quintets; 4 Double Quartets; 5 PF. Trios; 2 Sextets; an Octet; and a Nonet; 4 great Oratorios; a Mass; several Psalms and Cantatas; 10 Operas; a great many Songs, Part-Songs and other vocal pieces—over 200 works in all.

¹ Hauptmann’s letters to Spohr have been published by Schoene and Hiller. See also *Letters of a Leipzig Cantor*, translated and edited by A. D. Coleridge (1892).

Catalogue of Spohr's printed Works.

Founded on the Catalogue edited by H. M. Schletterer (B. & H., 1881).¹

- Op.
1. Concerto for Violin (No. 1, A min.).
2. Concerto for V. (No. 2, D min.).
3. 3 Duos Concertante for 2 V. & 2 String Quartet (C, G).
5. First Potpourri on Air of Iphigene for V. with acc. of 2nd V., Viola and Bass.
6. Variations (No. 1, D) for V. solo, 2nd V., Viola, and Bass.
7. Concerto for V. (No. 3, C min.).
8. Variations (No. 2, A min.) for V. solo, 2nd V., Viola, and Bass.
9. 2 Duos Concertante for 2 V. (Nos. 4, B).
10. Concerto for V. (No. 4, B min.).
11. Quatuor Brillant for 2 V., Viola and Vcello (No. 3, D min.).
12. Overture (No. 1, C min.).
13. Grand Duo for V. and Viola (No. 8).
14. *
15. 8 String Quartets (Nos. 4, 5; G, A).
15a. Overture (No. 2, D), 'Die Prüfung'.
16. Grande Sonate for FF. (or Harp) and V. (B.).
17. Concerto for V. (No. 5, Eb).
18. *
19. *
20. First Symphony (Eb). Peters.
21. Overture (No. 3, Eb), 'Altrona'.
22. Potpourri on themes of Mozart (No. 2, Bb) for V. with acc. of 2nd V., Viola, and Bass.
23. Potpourri on themes of Mozart (No. 3, G) for V. with acc. of Quartet, Flute, Oboe, Clarinet, 2 Bassoons, and 2 Horns.
24. Potpourri on Themes of Mozart (No. 4, B) for V. with acc. of 2nd V., Viola, and Bass.
25. 8 German Songs.
26. Concerto for Clarinet (No. 1, C min.).
27. Quartet for 2 V., Viola, and Violone (No. 5, 0 min.).
28. Concerto for V. (No. 6, 0 min.).
29. 3 String Quartets (Nos. 7, 8, 9; Bb, C min., F min.).
30. String Quartet (No. 10, A).
31. Orond Sonetto (F, maj.) for V., Viola, Vcello, Bass, Flute, Oboe, Clarinet, Bassoon, and Horn.
32. Octet (E maj.) for V., 2 Violas, Vcello, Clarinet, 2 Horns, and Bass.
33. 2 Quintets for 2 V., 2 Violas, and Vcello (No. 1, Eb; No. 2, G).
34. Notturno (in C) for wind instruments and Turkish band.
35. Fantasia for Harp (Ab).
36. Variations for Harp (F).
37. 8 German songs (2nd book of Songs).
38. Concerto for V. (No. 7, E min.).
39. 3 Duets for V. (Nos. 7, E, S; D min., Eb, E).
40. Grande Polonaise (A min.) for V. with Orch.
41. 8 German Songs (3rd book of Songs).
42. Potpourri. Arrangement for V. and FF. of op. 24.
43. Quatuor Brillant for stringed instr. (No. 11, Eb).
44. 6 4-part Songs for male voices.
45. 3 String Quartets (Nos. 12, 13, 14; C, E min., F min.).
- Op.
46. Introduction and Rondo (E) for FF. and V.
47. Concerto for V. No. 8, A min., 'In modo d'una Scena cantante.' ('Gangscene').
48. First Concertante for 2 V. and Orch. (A min.).
49. Second Symphony (D min.). Ded. to Philharmonic Society.
50. Potpourri (F min.) for V. and FF. on Airs from 'Die Zauberflöte.' Peters.
51. Grand Rondo for V. and FF. concertants.
52. Quintet for FF., Flute, Clarinet, Horn, and Bassoon (C min.).
53. Arrangement of op. 52 for FF. and stringed instr.
54. Mass for 5 Solo Voices and 2 6-part Chorus.
55. Concerto for V. (No. 9, D min.).
56. Potpourri for V. and FF. on Airs from 'Das unterbrochene Opferfest'.
57. Concerto for Clarinet (No. 2, Eb).
58. 3 String Quartets (Nos. 18, 17, 18; Eb, A min., G).
59. Potpourri (A min.) on Irish Airts for V. and Orch.
60. 'Faust.' Opera.
61. Quatuor Brillant for stringed instr. (No. 15, H min.).
62. Concerto for V. (No. 10, A min.).
63. 'Jessonda,' Opera.
64. Potpourri (Ab) on Airts from 'Jessonda,' for V. and Vcello with Orch.
65. Double String Quartet (No. 1, D min.).
66. Potpourri (A min.) on Airts from 'Jessonda,' for V. and Orch.
67. 3 Duos Concertante for 2 V. (Nos. 10, 11, 12; A min., D, G min.).
68. Quatuor Brillant (No. 19, A).
69. Quintet for stringed instr. (No. 3, E min.).
70. Concerto for V. (No. 11, G).
71. Scena and Airts for Soprano.
72. 8 German Songs (Book 4 of Songs).
73. 'Der Begeistert,' Opera.
74. 3 String Quartets (Nos. 20, 21, 22; A min., Eb, D min.).
75. Overture, 'Macbeth' (E min.).
76. 'Pietro von Abano,' Opera.
77. Double Quartet for stringed instr. (No. 2, Eb).
78. Third Symphony (C min.).
79. Concerto for V. (A min.).
80. Potpourri for Clarinet (F).
81. Fantasia and Variations for Clarinet (Eb).
82. 3 String Quartets (Nos. 23, 24, 25; A min., Eb, D min.).
83. Quatuor Brillant for stringed instr. (No. 26, Eb).
84. 3 String Quartets (Nos. 27, 28, 29; D min., Ab, E min.).
85. 3 Psalms for Double Choir and Solo Voices.
86. Fourth Symphony, 'The Consolation of Sound'.
87. Double Quartet for stringed instr. (No. 3, E min.).
88. Second Concertante for 2 V. with Orch.
89. 'Erinnerung an Marienbad,' Valses for Orch. (A min.).
90. 5 4-part Songs for Male Voices.
91. Quintet for stringed instr. (No. 4, 0 min.).
92. Concertino for V. (No. 2, E maj.).

- Op.
93. Quatuor Brillant for stringed instr. (No. 30, A min.).
94. 6 Songs for Contralto or Baritone (Book 5 of Songs).
95. Duo Concertant for FF. and V. (0 min.).
96. Duo Concertant for FF. and V. (F).
97. Hymn 'St. Casellia.' Chorus, Soprano Solo.
97a. Psalm 24, for Chorus, Solo Voices, and FF.
98. Hymne, 'Gott, du bist gross' (God, thou art great), for Chorus, Solo Voices, and Orch.
99. Fantasia on Raupach's 'Die Tochter der Luft' in form of a Concert-Overture for Orch. (see op. 102).
100. *
101. 6 German Songs (Book 6 of Songs).
102. Fifth Symphony (C min.). Fantasia op. 98 used as first movement.
103. 6 German Songs with acct. of FF. and Clarinet (Book 7 of Songs).
104. 'Vater unser' (words by Klopstock).
105. 6 Songs (Book 8 of Songs).
106. Quintet for stringed instr. (No. 4, G min.).
107. 3 Duets for Soprano and Tenor with FF.
108. 3 Duets for 2 Sopranos.
109. *
110. Concertino for V., 'Sonat und Jeta' (No. 3, A min.).
111. Rondo alla Spagnuola (C) for FF. and V.
112. Duo Concertant for FF. and V. (No. 3, E).
113. Sonate Concertante for Harp and V. (Eb).
114. Duo (Eb).
115. Duo (Ab).
116. Historical Symphony (No. 8, G). Dedicated to the Philharmonic Soc., London.
117. Fantasia for FF. and V. on Airts from 'Der Alchymist'.
118. Fantasia for FF. (or Harp) and V. on Airts of Handel and Aht Vogler.
119. Trio Concertant (E min.) for FF., V., and Vcello.
120. 6 4-part Songs for mixed Voices.
121. Double Symphony, 'Irdisches und Göttliches im Menschenleben,' for Double Orch.
122. Psalm 128. Chorus and Solo Voices with Organ or FF.
123. Trio Concertant for FF., V., and Vcello (No. 2, F maj.).
124. Trio Concertant for FF., V., and Vcello (No. 3, A min.).
125. Sonate (Ab) for FF. Dedicated to Mendelssohn.
126. Concert-Overture, 'Im ersten Styl' (D).
127. 'Elegisch u. humoristisch,' 8 Duettino in FF. and V.
128. Concerto for V. (No. 15, E min.).
- Op.
129. Quintet for stringed instr. (No. 5, E min.).
130. Quintet for FF., 2 V., Viola, and Vcello.
131. Quartet Concerto for 2 V., Viola and Vcello, with Orch.
132. String Quartet (No. 31, A).
133. Trio for FF., V., and Vcello (No. 4, Bb).
134. Psalm 84 (Milton). Chorus and Solo Voices with Orch.
135. Sechs Salonstücke for V. and FF.
136. Double Quartet (No. 4, Eb).
137. Symphony (No. 8, 0 min.). Dedicated to the Philharmonic Soc. of London.
138. Sonatina for FF. and Voices, 'An Sie an Clavier'.
139. 5 Songs (Book 9). Luckhardt.
140. Sextet for 2 V., 2 Violas, and 2 Vcellos (C maj.).
141. Quartet (No. 32, C).
142. Trio for FF., V., and Vcello (No. 5, G min.).
143. Symphony 'The Seasons' (No. 9).
144. Quintet for stringed instr. (No. 7, G min.).
145. Sechs Salonstücke for V. and FF.
146. String Quartet (No. 33, 0).
147. Septet for FF., Flute, Clarinet, Horn, Bassoon, V., and Vcello.
148. 3 Duets for 2 V. (No. 1, F)—dedicated to the brothers Holmes. (See opp. 150, 153).
149. Rondolette for FF. (G).
150. 3 Duets for 2 V. (No. 3, D). (See opp. 148, 153). Peters.
151. 6 4-part Songs for mixed V. and Vcello.
152. String Quartet, No. 34 (Eb).
153. 3 Duets for 2 V. (No. 3, C).
154. 6 Songs for a Baritone voice with acc. of V. and FF.

WORKS WITHOUT OPUS-NUMBERS.
'Der Zweikampf mit der Geliebten.' Opera.
Overture and Bass Air from the Cantata, 'Das befreite Deutschland'.
'Zemire and Azor.' Opera.
'Die letzten Dinge' (The Last Judgment). Oratorio.
'Vater Unser' (words by Mahlmann).
'Der Alchymist.' Opera.
Vollenschule.
'Des Hellenes letzte Stunden' (Calvary). Oratorio.
Overture and Song for the play 'Der Matrose'.
'Der Fall Babylon.' Oratorio.
'Die Kreuzfahrer' (The Crusaders). Opera.
36 Violin Studies by Fiorillo, with a 2nd V. part added, fingered and bowed.
A number of Songs, written for and published in various Albums and Collections.
A considerable number of works remain in manuscript.
P. D.

SPONDEE (Lat. *Spondæus*). A metrical foot, consisting of two long syllables (—), the first of which is enforced by an accent. Its effect is well illustrated in Handel's 'Waft her, Angels.'

It is also frequently employed in instrumental movements, as in the third subject of the Rondo of Beethoven's 'Sonate pathétique.' W. S. R.

¹ An earlier catalogue, imperfect but very useful in its time, was that of Jantzen—*Verzeichniss*, etc., Cassel, Luckhardt.
* Unknown and not to be found in Schletterer's Catalogue. Probably represented by works left in manuscript.

SPONTINI, GASPARO LUIGI PACIFICO, born Nov. 14, 1774, at Majolati, near Jesi (the birth-place of Pergolesi), of simple peasants. Three of his brothers took orders, and Gasparo was also destined for the priesthood. An uncle on the father's side took charge of the delicate child of eight, and gave him elementary instruction. It happened that a new organ was to be built for this uncle's church, and the builder, who had been sent for from Recanati, took up his abode for the time at the parsonage. Here he brought his harpsichord, and found an earnest listener in Spontini, who would try to pick out for himself what he had heard, whenever the organ-builder was absent. The latter noticed the boy's talent, and advised his uncle to have him educated as a musician; but to this the priest would by no means consent, resorting indeed to harsh measures to drive the music out of him. The result was that Spontini ran away to Monte San Vito, where he had another uncle of a milder disposition, who procured him music lessons from a certain Quintiliani. In the course of a year the uncle at Jesi relented, took back his nephew, and had him well grounded by the local musicians.

In 1791 his parents took him to Naples, where he was admitted into the Conservatorio de' Turchini. His masters for counterpoint and composition were Sala and Tritte, for singing, Tarantino.¹ In the Neapolitan Conservatories a certain number of the more advanced pupils were set to teach the more backward ones. These 'monitors,' as we should say, were called *maestrini* or *maestricelli*.² In 1795 Spontini became a candidate for the post of fourth *maestrino*, but the examiners gave the preference to another pupil. This seems to have roused the lad to special industry, and in a short time he was appointed first *maestrino*. His exercise for the competition of 1795 has been preserved, and is now in the archives of the Real Collegio di Musica at Naples. It must be the earliest of his compositions now in existence.³

Spontini had already composed some cantatas and church-music performed in Naples and the neighbourhood, and in 1796 had an opportunity of attempting opera. The invitation came from one of the directors of the Teatro Argentina in Rome, who had been pleased with some of Spontini's music which he had heard at Naples. The professors seem to have refused him leave to go, so he left the Conservatorio by stealth, and, reaching Rome, quickly composed 'I puntigli delle donne' with brilliant success. He was readmitted into the Turchini at the intercession of Piccini, who had lived at Naples since his return in 1791, and gave Spontini valuable advice with regard to composition, particularly for his next opera, 'L'Eroismo ridicolo'.⁴ This also

was produced in Rome (1797), as well as a third, 'Il finto Pittore' (1798). Next followed three operas for Florence, all in 1798. Meantime Naples had begun to fix its attention on Spontini. 'L'Eroismo ridicolo' (one act) was given at the Teatro Nuove during the Carnival of 1798, and reproduced in two acts as 'La finta Filosofia' at the same house in the summer of 1799. In the Carnival of 1800 the same theatre brought out a new work by the industrious composer, 'La fuga in maschera'.⁵ It is doubtful if he was present at the performance; for on Dec. 21, 1798, the Court, alarmed at the advance of the French troops, took flight to Palermo, and Cimarosa, who as maestro di cappella should have gone too, refusing to stir, Spontini was put in his place, and during 1800 composed for the Court in Palermo no less than three operas, in the facile and rapid style of a true disciple of the Neapolitan School. This is specially worth noting, as he afterwards completely changed in this respect, and elaborated most slowly and carefully the very works on which his European fame rests. In Palermo he also began to teach singing, but towards the end of 1800 was forced to leave, as the climate was affecting his health. After supplying more operas for Rome and Venice, he paid a visit to Jesi, and then took ship at Naples for Marseilles. His objective was Paris, and there he arrived in 1803.

From Lulli downwards all Italian composers seem to have been impelled to try their fortunes in the French capital. And, with the solitary exception of Gluck, we may say that each fresh development of French opera has originated with an Italian. Invariably, however, these foreign artists have had to encounter the onslaughts of the national jealousy. The Bouffonists, Gluck, Cherubini, all went through the same experience; it was new Spontini's turn. The work by which he introduced himself at the Théâtre Italien (as arranged in 1801), 'La finta Filosofia,' was, it is true, well received; but when he entered on the special domain of the French opéra-comique he was roughly disillusioned. His first work of the kind, 'Julie, ou le pot de fleurs' (March 1804), failed, and though remodelled by the composer and revived in 1805, could not even then keep the boards.⁶ The second, 'La petite Maison' (June 23, 1804), was hissed off. This fate was not wholly undeserved. Spontini had fancied that the light, pleasing, volatile style, which suited his own countrymen, would equally please the Parisians. The composition of 'La petite Maison' (three acts) occupied him only two months, and 'Julie' considerably less. I only know the latter, which was also produced (with-

made in print that it was Cimarosa and not Piccini who gave Spontini instruction in composition.

¹ Fétis speaks of yet another opera, 'L'Amore segreto' (Naples, 1799), but there is no mention of it in Florino's 4th volume.

² At least so says Fétis, who was living in Paris from the middle of 1804 to 1811, and who not only took great interest in Spontini's works but was personally acquainted with him. Ledebur, in his *Berliner Tonkünstler-Lexikon* (Berlin, 1861), p. 501, gives a wholly opposite account, but Fétis seems the more credible witness.

¹ Florino's *Cenno storico sulla scuola musicale di Napoli* (Naples, 1869), vol. i, p. 50. On p. 573 Florino speaks of Salieri and not Tarantino as Spontini's master.

² Lichtenthal, *Dizionario e Bibliografia della Musica* (Milan, 1826), vol. ii, p. 20.

³ Florino, pp. 595, 599, and elsewhere.

⁴ I can find no quite satisfactory ground for the statement so often

GASPARO LUIGI PACIFICO SPONTINI

out success) in Berlin, Dec. 5, 1808. Here and there some isolated bit of melody recalls the composer of the 'Vestale,' but that is all. Fétis remarks that the forms of this opera are identical with those of the earlier Neapolitans, Guglielmi, Cimarosa, and Paisiello. This is true; but it must be added that Spontini by no means attains to the sprightliness and charm of his predecessors. The melodies, though very attractive, are often trivial. Stronger work than this was needed to beat the French composers, with Méhul at their head, and Boieldieu, who had already written the 'Calife de Bagdad,' in their ranks. Spontini, however, was not discouraged. During this period Fétis met him occasionally at a pianoforte-maker's, and was struck with his invincible confidence in himself. He was making a livelihood by giving singing-lessons.

Seeing that he had no chance of making an impression with his present style he broke away from it entirely, and tried a new ideal. His very next opera, 'Milton' (Nov. 27, 1804), a little work in one act, is of an entirely different character, the melodies more expressive, the harmony and orchestration richer, the whole more carefully worked out, and the sentiment altogether more earnest. But the most interesting point in the score is the evidence it affords of Mozart's influence. One is driven to the conclusion that Spontini had now for the first time made a solid acquaintance with the works of the German masters. As Cherubini saw in Haydn, so Spontini henceforth saw in Mozart (and shortly afterwards in another German composer) a pattern of unattainable excellence. Even in old age he used to speak of Don Juan as 'that immortal *chef-d'œuvre*,' and it was one of the very few works besides his own which he conducted when director-general at Berlin. The fine hymn to the Sun (No. 4) has something of the mild solemnity which Mozart contrived to impart to the 'Zauberflöte,' and also to his compositions for the Freemasons. The most remarkable number is the quintet (No. 7). Here warmth and nobility of melody, impressive declamation, rich accompaniment, and charm of colour are all united. Such a piece as this is indeed scarcely to be found in his later works. With the Neapolitan school it has nothing in common, but is for the most part drawn from the Mozartean fount of beauty, with traces of that grandeur and nobility so emphatically his own. The change of style which separates his later works from his earlier ones is, at any rate in this quintet, already complete. In other pieces of the opera the Neapolitan is still discernible, as for instance, in the *crescendo*, which became so celebrated in Rossini's works, though known to others besides Spontini before Rossini's day.

'Milton' took at once with the French, and made its way into Germany, being produced in

Berlin (translation by Treitschke) March 24, 1806,¹ Weimar, Dresden, and Vienna.

The writer of the libretto, Étienne Jouy, played a considerable part in Spontini's life. He was present at the performance of 'La petite Maison,' but its complete fiasco (the work of a jealous clique) had no effect upon him. He saw in Spontini a man of great dramatic talent, and found in the despised work a host of beauties of the first rank. Meeting the composer the following morning, he offered him a libretto of his own, which Spontini, in no way disheartened by his failure, immediately accepted. This libretto was not 'Milton,' but 'La Vestale.'² It was originally intended for Cherubini, but he could not make up his mind to compose it, and after a long delay returned it.³ To Spontini it afforded the means of ranking himself at once with the first operatic composers of the day.

How 'Milton' and 'Vestale' stand to each other in matter of date it is impossible to ascertain. That the latter was composed before 'Milton' was put on the stage is not probable, since in that case the two must have been written within less than six months. What probably happened was this—an opportunity offered towards the close of 1804 of producing a small opera at the Théâtre Feydeau, and Spontini then broke off the longer work upon which he was already engaged to avail himself of this new chance. He may not have been sorry too to make a preliminary trial of his new style upon the public. On the other hand, we know for certain that the score of the 'Vestale' was finished in 1805. Jouy says that it took three years to overcome the opposition to its production, and the first performance took place Dec. 15, 1807.

He was now fortunately in favour with the Empress Josephine—to whom he dedicated the score of 'Milton'—and was appointed her 'Compositeur particulier.' A cantata, 'L' Eccelesia Gara,' performed Feb. 8, 1806, at the fêtes given in honour of Austerlitz, helped to increase this goodwill, which proved of vital importance to Spontini in maintaining his ground against the opposition of the Conservatoire. To such a length was this opposition carried that at one of the Concerts Spirituels in Holy Week, 1807, an oratorio of his was yelled off the stage by the students. Meantime, however, through the Empress's patronage, 'La Vestale' was in rehearsal at the Opéra. But so prejudiced were the artists against the work that the rehearsals went on amid ridicule and opposition,

¹ Treichmann's *Literary Remains*, edited by Dingelstedt (Stuttgart, Cotta, 1863), p. 415.

² See Jouy's own account, *Notes anecdotiques sur l'opéra de la Vestale*, in the *Théâtre d'Étienne Jouy* (Paris, 1824), vol. ii. p. 149 et seq.

³ So says Fétis. Others have stated that besides Cherubini it had been offered to Méhul, Boieldieu, Paër, and others, and that the then unknown Spontini was a last resource. That the latter part of the statement is positively untrue we know from Jouy himself, and the rest will not bear examination. The mistakes as to the details of Spontini's life are very numerous. Jouy even did not know the correct date of his birth, for he speaks of him in 1804 as 'à peine âgé de vingt-cinq ans.' For a long time he was universally supposed to have been born in 1778.

both inside and outside the theatre. Some foundation for this no doubt did exist. Even in the 'Finta Filosofa' the orchestra was said to have drowned the voices.¹ Whether this was justified I cannot say, but there is some ground for it in the 'Vestale,' which also fell short in many other points.² Fétis attended the rehearsals, and is an unimpeachable witness on this point. Spontini's thoughts were throughout fresh and significant, but, not having before attempted lyric tragedy, he did not in all cases succeed in giving them a satisfactory form. Then began an interminable altering and remodelling on his part; the most trying experiences at rehearsals did not discourage him from again and again re-casting passage after passage, until he had hit on the best possible form. This indefatigable polishing and experimenting became henceforth one of his characteristics, and instead of diminishing, as he acquired command of his means, as might have been expected, each new work seemed to strengthen the habit. He would alter a passage four and five times, each time pasting on the new version, and not unfrequently, after all this experimenting, he would revert to the original form.

The rehearsals were at length brought to a close after endless trouble, when, at the last moment, the performance was all but postponed, by a command from the Emperor that Lesueur's 'La Mort d'Adam,' which had long been accepted, should be given before it. When, however, the copyist was about to set to work, by some accident Lesueur's score could not be found, and thus Spontini secured precedence for the 'Vestale.' Its success was the most brilliant imaginable, and it long remained a favourite with the Parisians, having been performed 200 times as early as the year 1824. The cast on the first night was as follows: Licinius, Nourrit; Cinna, Laïs; the High-Priest, Déruvis; the Chief-Angur, Bonel; a Consul, Martin; Julia, Mme. Branchu; the Chief Vestal, Mme. Armand. Both composer and poet received permission to dedicate the work to the Empress. A higher distinction than this, however, awaited Spontini. Napoleon had founded a prize to be given every ten years to the new opera which should have made the greatest success within that period. The time of the award drew near. Méhul, Gossec, and Grétry were the judges, and their bestowal of the prize on the 'Vestale,' instead of on Lesueur's 'Bardes,' was a tacit acknowledgment that the organised opposition to the foreigner was at an end. The opera soon became known beyond France. The first per-

formance at San Carlo in Naples (to an Italian translation by Giovanni Schmidt) took place Sept. 8, 1811,³ with Isabella Colbran as Julia. It made a great sensation, and Spontini might perhaps have found a worthy successor among his own countrymen in Nicola Antonio Manfredi had this talented young man not been carried off by an early death. On the title-page of the 'Vestale' Spontini styles himself Chamber-composer to the Empress, and Maestro di cappella to the Conservatorio of Naples. Whether this title was a new honour, or whether he brought it with him to Paris I know not. Vigano adapted the 'Vestale' as a ballet, and in this form also it was universally popular in Italy. In Berlin the first performance took place Jan. 18, 1811, to a translation by Herklots. It was given at Munich on Jan. 14, and Würzburg, Jan. 10, 1812.

Jouy drew the material of his poem, the action of which takes place in the year of Rome 269, from Winckelmann's 'Monumenti antichi inediti.' It still ranks as one of the best librettos of the 19th century, and justly so. As for the music it is so entirely new, and so utterly unlike the Neapolitan style, that it is not to be wondered at if the malicious story that Spontini was not the composer of it has occasionally been believed. Not that this could have happened if 'Milton' had been better known, for in that little opera the metamorphosis of his style is already complete. His new style Spontini did not evolve entirely from his own resources. Of the influence of Mozart we have already spoken, but that of Gluck, with whose works he became acquainted in Paris, was more important still. 'Iphigénie en Aulide' is said to have been the opera the first hearing of which showed him his future path. Not that Gluck was in his eyes a greater master than Mozart. Some years later, at a banquet given in Spontini's honour at Berlin, some one said in his praise that as a composer he had fulfilled all the requirements of a master of the musico-dramatic art, when he exclaimed hastily, 'No, it is only Mozart who has done that.'⁴ But still it is obvious that Gluck was nearer of kin to him than Mozart. With Gluck he shares that touch of grandeur, the refined melancholy of which is often so peculiarly attractive, though as a rule the depth of Gluck's sentiment is beyond the reach of the Italian master. As with Gluck too the dramatic gift preponderates in Spontini over the purely musical. The moment that personal vindictiveness against Spontini ceased it could not but be acknowledged that 'La Vestale' was full of beauties, and that it seized the audience by its grand melodies and fiery outbursts, its depth of passion and truth of expression, its genuinely tragic style, and

¹ *Allg. Musik. Zeitung* for 1804, p. 382.

² The 'Vestale' was a marvel of noise for its day, and a good story was current about it in Paris at the time. A well-known physician had advised a friend to go and hear it as a remedy for his deafness, and accompanied him to the theatre. After one of the loudest bursts, 'Doctor,' cried the friend in ecstasy, 'Doctor, I can hear!' but alas, the doctor made no response, the same noise which had cured his friend had deafened him.

³ See Florimo, *Scuola Musicale di Napoli*, iv. 268. In his earlier work, *Cenno storico sulla Scuola musicale di Napoli* (Naples, 1809), p. 681, he says the first performance took place in 1809.

⁴ R. Dorn's *Zur meinem Leben*, pt. 3, p. 2; Berlin, Behr, 1870.

the singularly happy way in which the scenes and characters were individualised. On the other hand there were great shortcomings which could not be ignored. These chiefly lay—outside a certain monotony in the movements—in the harmony. When Berlioz afterwards ventured to maintain that scarcely two real faults in harmony could be pointed out in the score, he only showed how undeveloped was his own sense of logical harmony. It is in what is called unerring instinct for the logic of harmony that Spontini so sensibly falls short in 'La Vestale.'

This, no doubt, arose from the fact that his early training in Naples was insufficient to develop the faculty, and that when he had discovered the direction in which his real strength lay it was too late to remedy the want. Zelter, who in reference to Spontini never conceals his narrow-mindedness, made a just remark when he said that the composer of the 'Vestale' would never rise to anything much higher than he was then, if he were over twenty-five at the time that it was written.¹ He never really mastered a great part of the material necessary for the principal effects in his grand operas. His slow and laborious manner of writing, too, which he retained to the last, though creditable to his conscientiousness as an artist, is undoubtedly to be attributed in part to a sense of uncertainty.

Between the 'Vestale,' which we take to have been finished in 1805, and Spontini's next opera, four years elapsed. To this period apparently belongs a collection of six songs, with accompaniment for PF. or harp, entitled 'Sensations douces, mélancoliques et douloureuses, exprimées en vers par M. de G.—L., et en musique avec accompagnement de Piano ou Harpe par Gaspard Spontini, Maître de Chapelle du Conservatoire de Naples.' Some special series of events seems to have given rise to these pieces, but whether affecting the poet or the composer is not known. The first two are called 'Sentimens d'amour,' the third and fourth 'Regrets d'Absence,' and the last two 'Plaintes sur la tombe.' As might be expected they are all very theatrical, and exhibit many awkwardnesses in the harmony. No. 4 is the best, and its opening phrase deserves quoting as a specimen of refined melancholy:—

His next opera was 'Fernand Cortez,' the first performance of which took place Nov. 28, 1809, with Lavigne and Mme. Branchu in the principal parts. The libretto was again by Jouy, and not by Esménard,² who merely made some alterations and additions. Napoleon took an interest in the production of 'Cortez,' from an idea

that it might influence public opinion in favour of his plans for the Spanish war, then in progress. As soon as the preparations began Jouy was warned by the Minister of the Interior to introduce into the piece more distinct allusions to the topics of the day. He was specially to strengthen the contrast between the humane views of Cortez and the fanaticism of the Mexicans, and thus suggest a comparison between the liberal-minded French and the bigoted Spaniards of the day. Jouy declining to make these alterations, the Minister proposed Esménard for the work. Napoleon was present at the first performance,³ but the result did not fully answer his expectations. Spontini had thrown so much life into the character of the Spaniards, and had made them so bold, patriotic, and fearless of death, that the sympathies of the audience were enlisted in behalf of Spaniards in general, and Napoleon ran the risk of witnessing an exactly opposite effect to that which he intended. The success of the opera was very great, equalling if not exceeding that of the 'Vestale.' On the whole we should not be wrong in pronouncing 'Cortez' the more finished work of the two. The faults of harmony are fewer, the tendency (latterly so exaggerated) to pile up means in order to produce imposing effects is still kept within due bounds. Remarkable skill is shown in the treatment of the masses, and the construction of the larger dramatic forms. The martial tone demanded by the subject is well maintained throughout, the savage passions are delineated with an energy often startling, while some pieces are distinguished by grace and dignity. Throughout we are brought in contact with an individual artist, who has created for himself his own means of expression.⁴ The certainty of touch, too, in the different characters, especially Cortez, Amazily, and Telasco, is worthy of all praise. The way especially in which the opposite nature of the Spaniards and Mexicans is brought out shows consummate creative power. Here Spontini is seen to be a worthy successor of Gluck, who was the first to attempt this kind of problem in his 'Paris et Hélène.' Gluck had many able successors, such as Winter in Germany and Méhul in France, but Spontini comes still nearer to the great model, and has in his turn served as an example for others. Neither Rossini's 'Guillaume Tell' nor Marschner's 'Templer und Jüdin' would have been quite what they are but for him.

The form in which we know 'Cortez' is not that in which it first appeared. After a long interval it was revived May 26, 1817, in an entirely new shape. Esménard was dead, and for the alterations in the poem Jouy was entirely responsible. The third act now became the first,

³ Théâtre d'Etienne Jouy, vol. ii. p. 189 et seq.

⁴ In face of this self-evident fact but little importance will be attached to the discovery made in Paris that the Trio 'Créateur de ce nouveau monde,' was an imitation of an 'O salutaris hostia' of Gossec's. See Journal des Débats for June 1, 1817.

the first act the second, and a part of the second the third; some passages were suppressed and others added, and the part of Montezuma was entirely new. Jony had introduced Montezuma into his original sketch, but thinking the part weak and undramatic had omitted it in the first libretto. It now reappeared. The part of Amazily is simplified as regards her appearances, but the character is strengthened. The piano-forte score, arranged by F. Naue, and published by Hofmeister of Leipzig, gives the opera as it stood after a third and final revision made by the poet Théauleon. The full score came out in Paris in the fortieth year after Spontini's retirement from Berlin. The third act in its second form may be found in Jony's *Œuvres complètes*, vol. ii. p. 187.

In 1810 Spontini became conductor of the Italian opera, which was united with the Comédie Française under the title of 'Théâtre de l'Impératrice,' and located at the Opéon. He formed a distinguished company of singers, improved the orchestra, and threw more variety into the répertoire. One signal service was his production, for the first time in Paris, of 'Don Juan' in its original form. He remodelled Catel's 'Semiramide,' with fresh numbers of his own, and revived it with some success. He also instituted Concerts Spirituels, at which he successfully introduced such works as Mozart's Requiem, Haydn's Symphonies, and extracts from the 'Creation.' But he did not keep the conductorship long. Differences arose between himself and Alexandre Duval, the director of the theatre, and in 1812 Spontini was dismissed from his post by M. de Rémusat, surintendant of the Imperial theatres.

On the restoration of the Bourbons in 1814 Spontini was reinstated, but soon gave up the post to Catalani for a money consideration. His conduct as conductor of the opera does not give a favourable idea of his character. When Count Brühl was in Paris, Spontini was described to him by the managers of the Opéra as 'grasping and indolent; ill-natured, treacherous, and spiteful.'¹ Catalani, too, always averred that he had treated her badly. Some, however, took a more favourable view, and maintained that he had been both zealous and successful in his efforts for the furtherance of art. Fétis believed that it was not Spontini but Duval who should have been dismissed in 1812. It is curious thus to find the same difference of opinion in Paris with regard to Spontini's character which was afterwards so noticeable in Berlin.

On May 30, 1814, Louis XVIII. became king of France, and in commemoration of the event Jony and Spontini wrote a festival-opera in two acts called 'Pélage, ou le Roi de la Paix.' The first performance took place August 23, 1814. The work is of no value, and must have been very quickly composed. The subject is idyllic,

breathing only soft emotions, and therefore entirely contrary to the nature of Spontini's talent. The opera was dedicated to the king, who appointed Spontini his 'Dramatic composer in ordinary.' It is often said that Spontini's music displays the spirit of the age of Napoleon. The remark is true so far as the martial splendour, the vehemence energy, the overpowering massive effect of his grand operas are concerned. In all this the spirit of the time is recognisable enough. But it resides in the music only; and it would be very wrong to conclude that Spontini himself was an adherent of Napoleon's politics or person. He was as little of an imperialist as Weber (notwithstanding his songs in the cause of liberty) was a democrat. Art and Politics are two distinct things, and if Spontini did do homage to Louis after enjoying the favour of Napoleon there is no need to blame him.

He next took part with Persuis, Berton, and Kreutzer in an opéra-ballet, 'Les Dieux rivaux,' produced June 21, 1816, in honour of the marriage of the Duc de Berri. Spontini's share was confined to two or three dances, and a song, 'Voici le Roi, Français fidèles,' of little value. Other ballet-music however, composed for Salieri's 'Danaïdes,' rises to the level of 'Cortez' and the 'Vestale.' The opera, revived with this addition Oct. 22, 1817, was enthusiastically received.

But these *pièces d'occasion* sink into insignificance before the grand opera 'Olympie,' 'imitated' by Briffaut and Dieulafoy from Voltaire's tragedy. Spontini took a most unusual length of time for the composition. He was at work upon the last act in December 1815, and yet the opera was not finished by January 1819.² After so much trouble and pains he not unnaturally considered it his best work. 'This score,' he writes Nov. 27, 1819, 'must be ranked higher, for importance and range of subject, than those of "La Vestale" and "Cortez";' and to this opinion he adhered, in spite of many proofs that the public judged otherwise. At the first performance (Paris, Dec. 15, 1819) a bitter disappointment awaited him, for the opera failed in spite of his numerous supporters, and of the generally favourable disposition of the Parisians towards him. Spontini however was not the man to throw up his cause for a first failure. The libretto was chiefly to blame. The writers had adhered too closely to Voltaire, without remembering the requirements of the music, or the established forms of Grand Opera. The tragical conclusion especially was objected to as an innovation. This was remedied first of all, and a happy ending substituted. By February 1820, Spontini was at work on the revision, which he completed in less than a year, and the opera was produced in its new form, May 14, 1821, at Berlin. In 1822 it

¹ Letter of Brühl to Frederick William III., Oct. 8, 1819.

² Letters from Spontini to Count Brühl, dated Dec. 22, 1815, and Jan. 14, 1819.

was again revised, the changes this time being in the airs for Olympe and Cassandre, the duet for the same in the first act, and a new scene with terzetto in the third. As this last is not included in the printed edition it looks as if the final form of the opera had not even yet been attained. Schlesinger of Berlin published a complete pianoforte-score in 1826.¹ The opera was again put on the stage in Paris, Feb. 28, 1826, and by March 15 it had already been played six times.² Each time it pleased more, and at last Spontini was able to count it among his great triumphs. It was, however, only in Berlin, where he settled in 1820, that it kept a permanent place in the repertory. It had a short run at Dresden and Darmstadt in 1822, and was proposed at Vienna, but the performance did not take place. The opera has now completely disappeared from musical life, a fate it shares with Cherubini's 'Médée.' That no attempts have been made to revive it must be attributed partly to the enormous demands which it makes on the dramatic and scenic resources of a theatre, and also to the fact that Spontini's operas are of an individual type and require a peculiar style of representation. The few living musicians who remember the performances of Spontini's operas in Berlin between 1820 and 1830 know the kind of interpretation he used to give of them—one which by no means lay on the surface. Dorn, in his *Recollections*,³ says that at Leipzig in 1829 the final chorus in the second act of the 'Vestale' was ridiculed as a mere waltz-tune. When Dorn undertook the direction of the opera, and had to conduct the 'Vestale,' he made such good use of his recollections of the way in which it was conducted by the composer, that the chorus in question was scarcely recognised, and all adverse comments were silenced. 'Another fifty years,' continues he, 'and the Spontini traditions will have disappeared, as the Mozart traditions have already done.' It would be more correct to say that *both* have disappeared. The Spontini traditions might possibly have lived longer had his work in Germany been more successful than it was. But there is enough to account for this, and more, in the unsettled condition of all stage matters in Germany for many years past.

'Olympe' and 'Agnes von Hohenstaufen'—written ten years later—stand alone among operas of the 19th century for grandeur of conception. True, in isolated scenes of the 'Huguenots' and the 'Prophète,' Meyerbeer approached his predecessor, but he never succeeded in creating a whole of such magnificent proportions. The unity of design is remarkable, each act seems to be cast in one mould; and this from the fact that musically the several scenes of each act run into each other in a much more marked manner than in 'Cortez' or the 'Vestale.' There

is also, throughout, the closest connection between the music, the scenes on the stage, and the development of the plot—the *cachet* of the true dramatic artist. The principal characters are well defined, and the tone assigned to each at the start is skillfully maintained. The first entrances, always the most important moment in opera for fixing the character of a part, are always very significant. For instance, it is interesting to observe the entirely different nature of the music at the entrances of Olympe and of Statira. The latter, the principal character in the piece, has no rival, unless it be Cherubini's 'Médée,' or perhaps Gluck's 'Armide.' A sorrowful woman, burdened with horrible memories and burning for revenge, she is yet a Queen from the crown of her head to the sole of her foot, and a heroine, as all must acknowledge, worthy of Alexander the Great. Bearing in mind the grandeur of the subject, and its background of history, the composer's choice of material does not seem exaggerated.

But these great qualities are accompanied by considerable defects. Apart from the falsified history of the plot, which might easily disturb a cultivated spectator in these days of accuracy, the happy conclusion weakens the interest in the fate of the chief characters. The part of Statira, at any rate, was far more consistent and homogeneous when the ending was tragic. The music, undeniably grandly sketched as a whole, lacks charm in the details. Spontini was not an instrumental composer. His overtures, dances, and marches, are in all cases music without any independent existence, simply intended to introduce or accompany. Instrumental music, from its immense plasticity and variety, is the best possible school for developing all the rich resources of the musical art; but in this school Spontini had never been properly disciplined, and the neglect makes itself felt in his larger dramatic forms. These are monotonous and wearisome, while his hassés are poor, and his accompaniments wanting in variety. It seems strange that with his great reverence for Mozart—the great model in this respect also—he should never have been aware of this want in himself. His melodies lack plasticity, that bold free movement which is absolutely essential if the melody is to remain dominant over all the accumulated masses of sound. He has not sufficient command of language to have always ready to his hand suitable means of expression for the rapid changes of sentiment in the course of a scene. Nor has he the power of assigning the instrumental music its due share in the dramatic development. If all the work is done by the singing and acting, one is tempted to ask what is the object of all this overwhelming apparatus in the orchestra? The important part played by the instrumental music in an opera, that of preparing and elucidating the sentiments, making them subjectively more credible, and objectively clearer, this

¹ A full score, in 3 vols. was published by Erard at Paris.

² Marx's *Berliner Allgem. Mus. Zeitung* for 1828, p. 104.

³ *Aus meinem Leben-Erinnerungen* (Berlin, 1870), p. 131 et seq.

problem Spontini either did not grasp, or felt himself unable to solve. In all these respects he was far surpassed by Cherubini and Weber, each in his own line.

Whilst Spontini was busy in Paris composing 'Olympie,' the way was being prepared for the most important event in the second half of his life—his summons to Berlin. As no authentic account of the circumstances of his going there, or of his twenty-two years' sojourn and work in the Prussian capital, has yet been published, we must treat the subject somewhat in detail, from MS. authorities hitherto unused.¹ King Frederick William III., during a visit of two months to Paris (March 31 to the beginning of June 1814), heard Spontini's operas several times, and was deeply impressed by them. Not only was 'Cortez' at once put in rehearsal at Berlin and produced Oct. 15, 1814, but the king, on the return of peace, occupied himself with various plans for improving the state of music in Prussia. An establishment for the promotion of church music was thought of; a Conservatoire for music and declamation was projected, like that at Paris, and, above all, fresh impulse was to be given to the Court Opera by engaging a conductor of acknowledged ability. For this last post Spontini was the man fixed upon. So far back as the autumn of 1814 proposals had been made to him at Vienna, offering him the then immense salary of 5000 thalers (£750) on condition of his furnishing two operas a year for Berlin. Spontini was inclined to accept, but the plan did not meet with the approval of the Intendant of the Royal theatre—Count Brühl, who had succeeded Iffland in Feb. 1815. Brühl's opinion was entitled to the more weight as there had scarcely ever been a theatrical manager in Germany who knew his business so well. He was himself an actor of great experience, had studied several parts at Weimar under Goethe's direction, had sung Sacchini's 'Œdipe' in French, and taken other parts in grand operas at Rheinsberg, Prince Henry's palace. He had even played the horn for months together in the band. He was no inefficient scene-painter; had studied drawing with Genelli, and archæology with Hirt and Bötticher, had devoted some time to architecture, and was personally acquainted with nearly all the important theatres in Germany, Paris, and London. Add to this his refined taste, ideal turn of mind, and high social position, and it will be seen that he possessed qualities rarely found united in the person of a theatrical manager. It is not to be supposed that Brühl ignored the advantage of having so distinguished an artist at the head of the Berlin opera. It was, however, by no means certain that Spontini had had the necessary practice as a conductor, for in Paris no composer conducts his own operas.

¹ The principal sources upon which we have drawn are papers belonging to the royal theatres of Berlin, and to the Prussian Royal Family.

His ignorance of German would not only make it difficult for him and his musicians to understand each other, but would also prevent his composing a German opera. As yet he had only composed two operas of acknowledged merit, and it was possible that he would not be able to supply two new ones each year; and if he were able, the price paid for them would be exorbitant, unless it were quite certain that as interpreted under his own direction they would mark a decided step in advance. At this point therefore the negotiations hung fire, until the king returned to Paris in July 1815, when he renewed his offer to Spontini in person, and accepted the dedication of a piece of military music. At his request Spontini sent a collection of his marches to Brühl, following it on Dec. 22, 1815, with a letter, in which he begged him to exert his influence in arranging the matter. This not availing, he got a personal appeal made to him from the Prussian embassy. On March 28, 1816, Brühl returned an evasive answer, and on Nov. 3 wrote decisively that the king had settled the affair adversely to Spontini's wishes, and that he must abandon with regret the pleasure of seeing him settled in Berlin.

The matter now appeared wholly at an end, the king having yielded to the representations of his Intendant. Spontini had at that time no settled appointment in Paris, beyond that of court-composer, and it is easy to understand how tempting so brilliant an offer from Berlin must have seemed. He now entered into a fresh connection with Naples, and received in the following year the title of *maestro di cappella* to the King of the Two Sicilies. The French king also gave him a salary of 2000 francs, and thus all thoughts of Berlin seemed for the time to have vanished.

In 1817 King Frederick William came to Paris for the third time, heard 'Cortez' in its new form, was so delighted that he attended four representations, and directed that the score should be secured at once for Berlin. Spontini received the title of *Premier maître de chapelle honoraire*, and was permitted to dedicate to the king his grand 'Bacchanale,' composed for Salieri's 'Danaïdes.' This he was shrewd enough to arrange for a Prussian military band, introducing an air from the 'Vestale,' 'La paix est en ce jour la fruit de vos conquêtes.' To confirm himself in the king's favour he even composed a Prussian national anthem, completed between Nov. 25, 1817, and Oct. 18, 1818. The words, written by the king's private secretary J. F. L. Duncker, begin

Wo ist das Volk das kühn von That
Der Tyrannei den Kopf zertrat?

On the latter date (the anniversary of the battle of Leipzig), Brühl had the work performed for the first time at the Berlin opera-house, and from 1820 to 1840 it was played every year on the king's birthday, August 3. A Volkslied,

from inherent reasons, it never could become ; but it has a certain chivalrous stateliness and distinction of its own. After the death of Frederick William III. it gradually disappeared from the musical life of Berlin. The king, however, decreed in March 1818 that the 'Vestale' should be performed every year on April 1, in remembrance of the first time he passed in Paris in 1814.

This year also ended without realising the king's project of attaching Spontini to his court. Spontini, aware that Brühl was opposed to his coming, contrived to carry on the negotiations through Major-General von Witzleben, an ardent admirer of his music, and the person who had suggested his composing the Prussian national anthem. The contract was at length drawn up in August 1819, and signed by the king on Sept. 1. It provided that Spontini should receive the titles of chief Capellmeister, and General Director of Music, with an additional one of 'Superintendent-General of the Royal Music' to be borne abroad. He was to take the general superintendence of all musical affairs, and to compose two new grand operas, or three smaller ones, every three years. He was bound to conduct only at the first performances of his own works ; at other times he might conduct or not as he pleased. In addition he was to compose *pièces d'occasion* for the court festivals, and whenever the king pleased. Any other works he chose to compose and produce at the theatre were to be paid for separately. He was also at liberty, with slight restrictions, to produce his operas for his own benefit elsewhere, and to sell them to publishers. His salary was fixed at 4000 thalers, payable half-yearly in advance, besides an annual benefit, guaranteed to yield at least 1050 thalers, and a benefit concert, with the theatre free, and the gratuitous assistance of the members of the Royal opera and orchestra. He was to have four months' leave of absence every year, and an adequate pension after ten years' service. The Prussian ambassador interfered to procure his release from his engagement at Naples, and the king undertook to pay any necessary damages.

Although nominally subordinate to Brühl, Spontini was by this contract virtually made his colleague. Brühl's experienced eye, however, soon detected certain passages in the document admitting of two interpretations, and exposing the management to all the dangers of a divided authority. He could not help feeling mortified at the way he had been superseded in the business ; this would naturally make him mistrust Spontini, and thus the two came together under unfavourable auspices. According to the contract Spontini should have begun work at Berlin on Feb. 15, 1820, but he obtained leave to postpone his coming, first to March 15, and then to May 15, and did not arrive until May 28, 1820. The *corps dramatique*, piqued

at the exorbitant terms of his engagement, did not meet him in the friendliest spirit, but Berlin society was favourably disposed towards him, particularly the court circle. The newspapers were full of the subject, and thus it came to pass that all classes were keenly interested.

The Opera was at this time, thanks to Brühl's exertions, in a high state of efficiency. The company was unusually good—including such singers as Milder-Hauptmann, Seidler-Wranitzky, Schulz-Killitschky, and Eunnicke ; Bader, Stümer, Blunie, and Eduard Devrient. The band had been well trained by Bernhard Weber. Brühl took immense pains to secure finish in the performances, had added to the repertoire all the great masterpieces, and had introduced 'Fidelio' and 'Armida,' besides establishing other operas of Gluck's permanently in Berlin. He had also mounted the 'Vestal' and 'Cortez' with the utmost care and intelligence, and was entitled to boast that he had made the Berlin opera the first in Germany, as indeed every one allowed. Spontini found neither blemishes to remove nor reforms to introduce. He had at his disposal a company of first-rate artists, his power over them was practically unlimited, and the king's confidence in him unbounded. His obvious duty was to keep matters up to the standard to which Brühl had raised them.

He started with the best intentions. Brühl was informed of various plans for increasing the orchestra, establishing a training-school for the chorus, and introducing new methods into the existing singing-school. He was considering the best means of educating the singers in the dramatic part of their art, and drew up a new set of rules for the band. Little, however, came of all this, partly because several of Spontini's proposals were already in existence in other forms, and partly because of his own want of purpose and temper. In fact, it soon came to a trial of strength between him and Brühl. The latter insisted, a little too firmly, on his rights as supreme manager, and even appealed to the public through the press. Spontini, despotic, and exceedingly sensitive as to publicity, referred to his contract, which had been drawn up without Brühl's concurrence, and which he declined to interpret according to Brühl's views, and stated specifically that he was subject to no one but the King, or possibly the Home-Minister also. Unacquainted with Berlin or the German language, and surrounded by a crowd of parasites, he soon fell into mistakes which it was extremely difficult to rectify with so suspicious a person. A few months of ill-concealed irritation on both sides led to open collision. On Oct. 25, at a meeting to arrange the repertoire for the week, with Brühl in the chair, Spontini spoke of the latter's sketch as '*parfaitement ridicule*,' because it did not contain at least two grand operas, the 'Vestale'

and 'Armida'; styled the pieces selected 'des misères, des naïseries,' etc., and talked in the most violent way of the Count's bad management. Brühl tried to give him an idea of what subordination meant in Prussia, but subordination Spontini would not hear of. 'Don't attempt to treat me,' he writes on Nov. 12, 'as a mere subordinate, for I am nothing of the kind, neither by my person, my character, my contract, nor my talent; for although my post happens to be included in your department, it is so in a wholly different sense from what you appear, or pretend, to think.' The whole letter is very angry, and very rude, and it was long before the two were again on terms of even outward civility. Brühl took his grievance straight to the king, and peace was at length re-established. The following extract will show Brühl's opinion of Spontini at this time:—

'He is,' he writes to Witzleben, 'extremely passionate, and once in a passion oversteps all bounds; uses expressions which no man of honour can pardon, and then considers his natural bad temper excuse enough for anything. He is very auspicious, and at the same time very credulous, putting himself at the mercy of any one who will flatter his vanity; and in consequence is surrounded by a host of unsatisfactory characters, who make him their shuttlecock. His pride and vanity have really reached the sublime of the ridiculous; and temper, sometimes assuming the guise of modesty, direct, or rather misdirect, all his actions. . . . And to such a man has been confided the conduct of business of more than ordinary intricacy!'

This description, written under obvious irritation, should in justice be counterbalanced by the consideration of Spontini's great qualities as an artist. But that Brühl's estimate was in the main correct, the sequel will show.

During the preparations for the first performance of 'Olympia,' Spontini had an opportunity of appearing before the court and public with a new composition. In the beginning of 1821 the Grand Duke Nicholas, heir-presumptive to the throne of Russia, and his consort, paid a visit to Berlin, and court festivities on a grand scale were instituted in their honour. Moore's 'Lalla Rookh' was then much talked of, and Brühl conceived the idea of representing the principal scenes in a series of *tableaux vivants*. Schinkel undertook the scenery and arrangement of the groups, and Spontini composed the songs, introductory march, and dance-music. The performance took place Jan. 27, 1821, at the Royal Palace, and was pronounced to be the most brilliant and quaintly beautiful thing of the kind ever seen. The actors were all members of the court circle. On Feb. 11 the performance was repeated before a select audience comprising the most distinguished artists and scientific men in Berlin. Hensel, Fanny Mendelssohn's husband, was commissioned by the King to paint the *tableaux*, for presentation to the Grand Duchess.¹ A sort of running commentary on the representation was furnished by a number

of songs written by Spiker, set by Spontini, and executed behind the scenes by the best singers from the opera and a small orchestra.² Spontini's work consists of four instrumental and six vocal pieces. One of the latter is a chorus of genii (3 sopranos and 1 tenor) sung while Nourmahal is sleeping, and a real work of genius. The singers vocalise on A, while the instruments are playing a light accompaniment. The other vocal pieces are the songs, the second being a free translation of the opening of 'Paradise and the Peri.' Spontini's work now suffers from inevitable comparison with Schumann's music. As an Italian he had neither romantic imagination nor depth of expression enough for the subject. But taking the piece as a whole, it is possibly more in character with Moore's poetry than the oratorio form chosen by Schumann.

The first performance of 'Olympia' was eagerly anticipated. March 5, 1821, was first fixed, but it was postponed till May 14, a delay for which Spontini was entirely to blame. The translator, E. A. Hoffmann, only got the last act from him bit by bit, the chorus-master had not seen a note of it by Feb. 18, nor had the ballet-master been consulted. Spontini insisted on at least three months' rehearsals. The expenditure on the *mise-en-scène* was so lavish that even the king remonstrated. Statira was played by Milder, Olympia by Schulz, and Cassander and Antigonus by Bader and Blume. The chorus and orchestra were materially strengthened, the scenery was by Schinkel and Gropius, and there were forty-two rehearsals. The result was one of the most brilliant and perfect performances ever seen, and an enormous success. Even Brühl was carried away, and wrote to Milder, 'you have given us a perfect representation, and added another flower to your crown as an artist.' Spontini's triumph was complete. Even his opponents acknowledged that 'Olympia' had no rival among modern operas. Zelter wrote to Goethe that he did not like the work, but could not help going again and again.

Spontini's supremacy in the musical world lasted exactly five weeks, for on June 18, 1821, 'Der Freischütz' was produced at the newly erected theatre in Berlin. Its immediate success may not have more than equalled that of 'Olympia,' but it soon became evident that the chief effect of the latter was astonishment, while the former set the pulse of the German people beating. 'Olympia' remained almost restricted to the stage of Berlin, while the 'Freischütz' spread with astonishing rapidity throughout Germany and the whole world. Spontini could not conceal that he had, on the morrow of a great triumph, been completely vanquished by an obscure opponent, and that too after consciously doing his very utmost. Even this

¹ The importance of this event in Hensel's life may be seen from the *Mendelssohn Family*, vol. I, p. 85.

² 'Lalla Rookh.' A festival play with songs and dances, performed at the Royal Palace of Berlin, Jan. 27, 1821. Edited by Count Brühl and S. H. Spiker. Berlin, L. W. Wittich, 1822.

might not have discouraged him, but that in 'Der Freischütz' he was brought face to face with a phase of the German character totally beyond his comprehension. He had no weapons wherewith to encounter this opponent. A man of weaker will would have contented himself with such success as might still be secured in Germany; but Spontini could brook no rival, and finding that he could not outdo Weber's music, tried to suppress him by means wholly outside the circle of art. As director-general of music many such lay ready to his hand, and that he knew how to use them is shown by the fate of 'Euryanthe' and 'Oberon' in Berlin. The success of 'Freischütz' did not improve Spontini's relations with Brühl, a personal friend of Weber's, and a great admirer of his music.

From the first night of 'Der Freischütz' the public was divided into two parties. The national party, far the strongest in intellect and cultivation, rallied round Weber. The king and the court persistently supported Spontini, though even their help could not make him master of the situation. The Censorship interfered to check the expression of public opinion against him, and his complaints of supposed slights were always attended to.¹ But his artistic star, which had shone with such lustre after the first night of 'Olympia,' was now slowly setting.

The excellence of that first performance was acknowledged even by Weber himself,² and this may be a good opportunity for some remarks on Spontini as a director. Whether he had a specific talent for conducting cannot be determined, for as a rule he conducted only two operas besides his own—'Armida' and 'Don Juan,' and these he knew thoroughly.³ For the rest of the work there were two conductors, Seidel and Schneider, and two leaders, Möser and Seidler.⁴ When Spontini came to Berlin he had had very little practice in conducting, and at first declined to handle the bâton, but made the leader sit by him in the orchestra, and give the tempo according to his directions. Indeed he never completely mastered the technicalities of the art, his manner of conducting recitatives especially being clumsy and undecided. So at least says Dorn,⁵ a competent witness, who had often seen him conduct. In reading a score too he was slow and inexpert;⁶ and at the Cologne Festival of 1847 could scarcely find his way in his own score of 'Olympia,' which he had not conducted for some time. He was thus very slow in rehearsing a work, though not for this reason only, for the same laborious accuracy which he showed in composing was carried into every

detail of the performance. He never rested till each part was reproduced exactly as it existed in his own imagination, which itself had to be cleared by repeated experiments. Inconsiderate and despotic towards his subordinates, he wearied his singers and band to death by endless repetitions, his rehearsals not unfrequently lasting from 8 A.M. till 4 P.M., or from 5 P.M. till 11 at night. He only treated others, however, in the same way that he treated himself, for no trouble was too great for him to take in revising his work down to the smallest particulars. When the first night arrived, every member of the orchestra knew his work by heart, and Spontini might beat as he liked, all went like clockwork.⁷ If scenery or costumes which had been expressly prepared did not please him he ordered others, regardless of cost. Being a true dramatic artist, his eye was as keen on the stage as his ear in the orchestra, and everything, down to the smallest accessories, must be arranged to express his ideas. Soon after his arrival he fell out with Brühl, because in the 'Vestalin' he wanted Frau Milder to carry the Palladium in public, whereas Brühl maintained, on Hirt's authority, that the Palladium was never shown to the people. He was furious when it was suggested that the burning of the fleet in 'Cortez' should not take place on the stage; and he once went so far as to send his wife to Brühl to request that a sleeve of Schulz's dress might be altered! In choosing his actors he not only studied voice, temperament, and dramatic skill, but was most particular about appearance. A distinguished bass singer, recommended to him by Dorn for high-priest parts, was not even allowed to open his mouth because he was 'at least a foot and a half too short.' He insisted on the complete fusion of the vocal and instrumental, the dramatic and the musical elements, and demanded from the chorus, as well as the solo-singers, an entire absorption in their parts, and an intelligent rendering of each situation. His love for the grandiose and the awe-inspiring led him to employ all the resources of decoration, and what then seemed enormous masses of musicians, singers, and dancers; and also to employ the strongest accents and most startling contrasts. 'His forte,' says Dorn, 'was a hurricane, his piano a breath, his crescendo made every one open their eyes, his diminuendo induced a feeling of delicious languor, his sforzando was enough to wake the dead.'⁸ In this respect he exacted the very utmost from his singers and musicians. He insisted on Milder putting her whole force into Statira's exclamation 'Cassander!' and on one occasion she so overstrained herself as to lose her voice for the rest of the evening. From that moment he considered her useless, and in 1829 had her pensioned off. Seidler-Wranitzky was delicate, and her style

more suited to Lieder and serious music, so she found little favour with him, in spite of her exquisite singing. 'Il faut braver, Madame,' shouted he, when she showed symptoms of exhaustion at a rehearsal of the 'Vestale'; and he was scarcely moved when she fainted. It was not because he wrote unvocally, or overloaded his voices with accompaniment, that his parts were so trying—for he was too thorough an Italian not to rely upon the voice for his chief effects; but it was his propensity to extreme contrasts, and his want of consideration in rehearsing. It soon became a general complaint among women singers that Spontini ruined the voice. Seidler asked leave to retire on this account in 1826; in 1823 Milder begged that 'Olympia' might not be given more than once a fortnight, and Schechner refused an engagement because she was afraid of Spontini's operas. Even Schulz, who was devoted to him, was so angry in March 1824 at the continual strain of her heavy parts, as to lose her temper at rehearsal, and speak so rudely that she would have been punished had he not changed his mind.

Spontini's appearance at the head of his musicians was almost that of a general leading an army to victory. When he glided rapidly through the orchestra to his desk every member of the band was in position, and on the alert to begin. At such moments he looked an aristocrat to the backbone, but also an autocrat who would insist on subjugating all other wills to his own. The pedantic side of his character also came out in many little traits—he could only conduct from a MS. score, and his desk must be of a certain peculiar construction. His bâton was a thick stick of ebony with a solid ivory ball at each end; this he grasped in the middle with his whole fist, using it like a marshal's staff.¹

By May 14, 1821, the 'Vestalin,' 'Cortez,' and 'Olympia' had all been produced according to the composer's own ideas at the Berlin opera, where they long remained stock-pieces. But their frequent repetition was more to gratify the king than the public, and indeed the theatre had soon to be filled by a large issue of free admissions. Thus, for 'Olympia,' on Dec. 21, 1821, Spontini obtained from the office fifty free tickets, besides buying twenty-five more. In September 1824 he urged the Intendant not to raise the prices for grand operas (meaning his own), or the public would soon cease to come at all, and begged to have 'ordinary prices' in large letters on the bills for the next performance of the 'Vestalin.' A new opera of his was however still an exciting event, partly because of his own personality and position, partly because the public was sure of a splendid spectacle. He was bound to furnish two grand operas every three years; 'Olympia'

counted as one, and by the end of 1821 he was thinking of the second. After much consideration he chose the 'Feast of Roses,' from Moore's 'Lalla Rookh,' influenced, no doubt, by the success of his earlier Festspiel, and the prospect, welcome to a slow worker, of using portions of his old material; but the subject did not seem very congenial. The libretto was written by Herklots, librettist to the Opera. On March 22 Spontini wrote to Brühl that he was working 17 hours a day on the first act, and that there were only two. The first performance of 'Nurmahal' took place May 27, 1822, in honour of the marriage of the Princess Alexandrina of Prussia, to whom the Emperor dedicated the PF. score (Sahlesinger). This is not, as has often been said, merely a revised version of 'Lalla Rukh,' comparatively little of that music having been used in it. The introductory march became No. 8 of the opera; Nourmahal's song, No. 26; the drum chorus of genii No. 20; and the ballet-music was mostly retained. A song was also introduced from his 'Dieux rivaux,' and the ballet from the 'Danaïdes' (Nos. 10 and 14).

The merits of the librettos of the 'Vestalin,' 'Cortez,' and 'Olympia,' outweigh their defects. Not so, however, that of 'Nurmahal'; its plot and characters are alike insipid, and it is in fact a mere *pièce d'occasion*. The oriental colouring, which must have been its attraction for Spontini, still forms its sole interest. But, inferior as it is to 'Oberon,' it gives a high idea of its author's dramatic instinct, when we consider the utter inability of French and Italian composers as a rule to deal with the fantastic and mythical. Its best numbers are the first finale, the duet, No. 17, and the duet with chorus, No. 20. There is a striking passage in the finale—the lovers lying on opposite sides of the stage, and the people dancing about them to a bacchante-like strain, when suddenly the dance ceases, and the voices hold on a chord of the seventh on E, with an indescribable effect of unsatisfied longing. It is a stroke of true genius of which any German composer of the romantic school might be proud. The duet No. 17 contains some conventional thoughts, but the vehemence of its passion is irresistible, and it seems to have been the earliest instance of a kind of sentiment first employed among German composers by Marschner, e.g. in No. 17 of his 'Templer und Jüdin.' The spirit chorus No. 20 has a charming sound, produced by means entirely new; though, compared with Weber's tone-pictures, it strikes the hearer as superficial. It is impossible to help this comparison for many reasons, one being that in No. 21 of 'Nurmahal' one of Spontini's genii sings, 'From Chindara's warbling fount I come.'² A glance at the two compositions is enough to

¹ Richard Wagner's *Erinnerung an Spontini: Gesammelte Schriften*, vol. v. p. 116 (Leipzig, Fritzsche, 1872).

² Weber's setting of these words was his last composition, dated London, May 25, 1826. F. W. Jähna, *C. M. von Weber in seinen Werken*, p. 408. Berlin, Schlesinger, 1871.

show how far he fell short of the equalities required for this kind of work. The piece contains much that is beautiful, especially some passages in the *Andantino malinconico*, of startling novelty and expression, the gay introductory chorus, and the melodious Nos. 3, 4, and 5, so entirely in Spontini's Neapolitan manner that they might have been taken from his early operas. Here and there are touches recalling Mozart. The overture and ballets are brilliant and festal, and the overture has an open-airiness of style often found in Italian overtures. Clumsy accentuation of words, however, constantly betrays the fact that the composer is dealing with an unfamiliar language.

On June 9, 1821, Spontini started for a seven months' leave. He went first to Dresden, and there met Weber. Weber was cordial and obliging, while Spontini, though polite in manner, took pains to make his rival feel the newness of his reputation as a composer.¹ By June 29, he was in Vienna trying to arrange a performance of 'Olympia' for the following season; but this did not take place. Thence he went to Italy, revisiting his birthplace; and by September was in Paris at work on the revision of 'Olympia.' He also made some experiments on 'Milton,' telling Brühl (Jan. 12, 1823) that he would put it before him in three different forms. By the end of January he was back in Berlin, apparently anxious to keep on good terms with Brühl, though such good resolutions seldom lasted long. One of their many differences was on the subject of star-singers (*Gastspieler*). These Brühl wished to encourage, as a means of testing the artists, and their chance of popularity; but Spontini disliked the system. An appearance of Carl Devrient and Wilhelmine Schröder in the summer of 1823 evoked another impertinent letter to Brühl, who in reply (July 7) told him to mind his own business.

He had now been in office four years, and the stipulated two grand operas every three years, or smaller one each year, were only represented by a *scena* or two for 'Olympia,' and a couple of pieces for 'Nurmahal.' It was plain that he had undertaken a task wholly beyond his strength, owing to his pedantic manner of working. He thought (August 2, 1823) of turning 'Milton' into a grand opera with recitatives, choruses, and ballets, but soon relinquished the idea, and by Oct. 17 was 'busy, night and day, with "Alcidor." The libretto was by Théauleon, who had formerly altered 'Cortez.' On coming to Berlin, in Nov. 1823, Théauleon found the first scene already composed, and his business was to fit words to the music. His task was not easy: 'If I wrote lines of ten syllables,' he says, 'Spontini wanted them of five; scarcely had I hammered out an unfortunate stanza of five, when it had to be

lengthened to twelve or fifteen, and if I expostulated, on the ground that lines of that length were not admissible in French poetry, he would reply in a sort of recitative, accompanying himself on the piano, "The translation will make it all right." Never did so poor a poem cost its author so much trouble.'² It is evident from this that Spontini composed to French words, which were afterwards translated by Herklots. Schinkel and Gropius again painted the scenery. The rehearsals began in Sept. 1824, and the first performance took place May 23, 1825. Its reception by Spontini's adherents was unmistakably hearty, and many outsiders were dazzled by its new effects of scenery and music, but the national party were louder than ever in their disapprobation. Among the adverse critiques was a parody in the true Berlin style, in which 'Alcidor eine Zauberoper' was converted into 'Allzudoll eine Zauderoper.'³ Zelter alone was impartial, but he was no doubt influenced by his prejudice against Weber, and all that he can say is 'The piece was written by Théauleon in French, and set to French music, so we have at last a real Berlin original—that is a new coat turned'; and again, 'Spontini always reminds me of a Gold-King, flinging his gold at the people, and breaking their heads with it.'⁴ Not even a PF. score of 'Alcidor' was published; nor did it make its way beyond Berlin, any more than 'Nurmahal' had done.

Another grand opera was due for the summer of 1826, and a week after the production of 'Alcidor' Spontini asked Count Brühl whether a revised and lengthened version of 'Milton' would do for the purpose. The Count thought the material too scanty, but the King (June 29) agreed to the proposal. Spontini having obtained eleven months' leave, started for Paris, where he was present at a revival of 'Olympie' on Feb. 28, 1826, returning immediately afterwards to Berlin. Nothing more was heard of 'Milton,' and during this year he furnished no work for the King's theatre. Ernst Raupach was now librettist to the Opera, and Spontini agreed with him on a subject from German mediæval history, which eventually became the opera 'Agnes von Hohenstaufen.' The first act—long enough for a complete opera—was ready by 1827, and performed May 28. The whole three acts were finished in 1829, and produced June 12 for the marriage of Prince Wilhelm, (afterwards the Emperor William I.). Spontini, dissatisfied with his work, had the libretto altered by Baron von Lichtenstein and other friends, and made more vital changes in the music than in almost any other of his grand operas. In this form it was revived Dec. 6, 1837.

German mediæval history at this time occupied much attention, and thus no doubt influenced

⁴ C. M. von Weber, by Max von Weber, ii. 433.

Spontini's choice of a subject. He set to work with the seriousness which was his main characteristic as an artist; read, studied, and did everything to imbue himself with the spirit of the epoch, one wholly foreign to anything he had before attempted.¹ The libretto in its final form was a good one on the whole. The scene is laid at Mayence in 1194, during the reign of the Emperor Henry VI. of Hohenstaufen, and the plot turns on the factions of the Guelphs and Ghibellines. The music is thoroughly German, the harmonies richer and more satisfying, the melodies quite national in character; isolated passages recalling Spohr, and even Weber, though without anything like servile imitation. It is throughout the result of an entire absorption in the dramatic situation and characters. A comparison of it with the sentimental ballad-like effusions of even good German composers in similar circumstances will serve to accentuate the difference between them and Spontini. Neither is there any sign of exhaustion of inventive power. The stream of melody flows as freely as ever; indeed there is a breadth, an *elan*, and a fire in some of these melodies, to which he rarely attains in his earlier operas—instance the terzetto in the second act, 'Ja, statt meines Kerkers Grauen,' and Agnes's solo 'Mein König droben.' The criticisms of the day were most unjustly severe; but though the music was never published the MS. score exists, and an examination of it will fully bear out all that we have said. It is not too late to form an impartial judgment, and Germans should recognise that they have a duty to perform to 'Agnes von Hohenstaufen,' as the only opera which deals worthily with a glorious period of German history. When this has been fairly acknowledged it will be time enough to look out for its defects.

It was the last opera which Spontini completed. Various new plans and schemes continued to occupy him, as before, especially during the latter part of his stay in Paris, when 'Louis XI.,' 'La Colère d'Achille,' and 'Artaserse' had in turn been thought of for composition. For a successor to 'Olympia' he thought first of 'Sappho' or of 'Die Horatier,' and then of two of Werner's tragedies, 'Das Kreuz an der Ostsee' and 'Attila,' but none of these projects appear to have advanced far enough even for a preliminary rehearsal. More progress was made with a poem by his old friend Jouy, 'Les Athéniennes,' first offered him in 1819, and accepted in a revised form in 1822. In a review of the poem² written in 1830, Goethe implies that the music was complete, but at Spontini's death nothing was found but unimportant fragments.³ An opera founded on English

history occupied him longer. We have already mentioned the revision of his 'Milton.' His studies for this deepened his interest in the English history of the 17th century. In 1830 Raupach wrote a libretto for a grand opera, 'Milton,' which was bought by the committee of management for 30 Friedrichs d'or, and placed at Spontini's disposal.⁴ The only portion of the smaller opera retained was the fine Hymn to the Sun. After completing the revision of 'Agnes von Hohenstaufen,' Spontini wrote to the Intendant (May 9, 1837) that he hoped in the winter of 1838 to produce 'Miltons Tod und Busse für Königsmord' (Milton's death, and repentance for the King's execution). He spent the summer of 1838 in England, studying historical, national, and local colouring for this 'historico-romantic' opera. Raupach's poem; extended and revised by Dr. Sobernheim, had now assumed a political and religious tendency, so distasteful to the King as to make him prohibit the opera. Further alterations ensued, and it became 'Das verlorene Paradies' (Paradise Lost). By May 1840 the score of part of the 1st, and two-thirds of the 2nd act was complete. Up to March 1841 he certainly intended finishing it, but not a note of it has ever been heard. We may add that on June 4, 1838, he mentioned a fairy-opera to the King, and in Dec. 1840 professed himself ready to begin a new comic opera. He was apparently bent on composing fresh dramatic works, and often complained that the management did not offer him sufficient choice of librettos; but he was incapacitated from creation by his increasing pedantry, and by the perpetual state of irritation in which he was kept by his critics.

Spontini's other compositions during his residence in Berlin are unimportant. A hymn for the coronation of the Emperor Nicholas of Russia, to words by Raupach, was performed at Berlin, Dec. 18, 1826, and May 9, 1827.⁵ A cantata to Herklots' words, 'Gott segne den König,' had a great success at the Halle Musical Festival in Sept. 1829, which Spontini conducted so much to the general satisfaction as to procure him an honorary Doctor's degree from the University, and a gold medal inscribed *Liricæ Tragœdiæ Principi Germaniæ meritorum cultrix*. A 'Domine saluum fac regem,' a 12, with accompaniment of organs, trumpets, violoncelli, and basses, was written on Oct. 15, 1840, for presentation to the King. Besides these he published a number of French, German, and Italian vocal pieces, with P.F. accompaniment, the best of which is 'Die Cimbri,' a war-song for three men's voices. As a mere matter of curiosity may be mentioned that he set Goethe's 'Kennst du das Land,' and the Italian canzonet 'Ninfe, se liete,' in which he again clashed unconsciously with Weber's

⁴ In *Spontini in Deutschland* this libretto is said to be by Jouy. I have not been able to ascertain whether it was Jouy's work revised by Raupach, or an original production.

⁵ Raupach had intended to have *tableaux vivants* to each five stanzas; but this was not carried out.

very graceful composition to the same words (1811).¹

Considering his great position, Spontini did not accomplish much for music in Berlin. At the opera he made the band play with a fire, an expression, and an *ensemble*, hitherto unknown, forced the singers to throw themselves dramatically into their parts, and used every exertion to fuse the different elements into one coherent whole. He endeavoured to improve the existing school for singers and founded one for the orchestra. But his efforts as a rule were concentrated on the operas which he himself conducted—that is to say, his own, Gluck's 'Armida,' and 'Don Juan.' These works, through his genius, his influence on his subordinates, and his almost absolute power, he brought to a perfection then unequalled. The pieces directed by his vice-conductors went badly, partly because Spontini exhausted the singers, and partly because he took little interest in the general repertoire. He had, too, no power of organisation or administration. As long as the excellent material lasted which Brühl transferred to him in 1820 this defect was not glaring, but when his solo-singers began to wear out and had to be replaced, it was found that he had not the judgment, the penetration, nor the impartiality necessary for such business. Up to the autumn of 1827 he only concluded one engagement himself, and in that instance it was a solo-singer who proved only fit for the chorus. On the other hand he lost Sieber, a good bass, by insisting on reducing his salary to 100 thalers, and had shortly afterwards to re-engage him at 200, as there was no bass in the company capable of taking the parts in his own operas. The art of divining the taste of the public, of at once meeting it, elevating and moulding it—the art, in fact, of keeping the exchequer full without sacrificing artistic position—this was wholly out of his reach. At the King's theatre, the audience steadily fell off, especially after the opening of the Königstadt theatre in 1823. At times Spontini seems to have felt his incapacity, but unfortunately he was deluded by his own vanity and domineering temper, and the insinuations of so-called friends, into believing that the decline of the opera was owing to Brühl, whereas Brühl might have retorted that everything he proposed was met by a despotic and unreasoning veto. The Count at length, in 1828, wearied out by the unceasing opposition, resigned, and was succeeded by Count Redern, who received from the King a fresh code of instructions, somewhat circumscribing Spontini's powers, and concentrating those of the management. Opportunities for fresh differences still constantly arose, and Count Redern had much to contend with in Spontini's increasing irritability and inconsistency. In time even the admirers of his

music felt that his personal influence was bad, and that the opera would never prosper as long as he remained at its head.

Spontini was to have the receipts of the first nights of his own operas for his annual benefit, or in default of such representations a ann of 4000 francs. In the latter case he might give a concert, and in fact he gave a considerable number, both vocal and instrumental. 'My concerts,' in his own words, 'are dedicated to the great masters, whose memory I strive to keep alive with the public, while testifying my own respect by performing their works in the most brilliant and complete manner possible.'² His programmes consisted principally of German music, Handel, Haydn, Mozart, and Beethoven. The first performance in Berlin of Beethoven's Symphony in A was at a concert of Spontini's on May 12, 1824, and on April 30, 1828, he gave Beethoven's C minor Symphony, the Kyrie and Gloria from his Mass in D, the overture to 'Coriolan,' and the Credo from Bach's B minor Mass. As Bach's Mass had only just been published by Nägeli of Zurich, Spontini was the first to introduce a portion of it to the public of Berlin, as he had been to acquaint them with Beethoven's Masses. The performance itself seems to have been a poor one, and indeed it could hardly be otherwise, Spontini not having much in common with Bach; but the attempt was praiseworthy.³ Another point to his credit was that he gave his support to Möser's concerts. The King's band could not play without his permission, so he might have made difficulties if he had chosen.

As we have already mentioned, Spontini's late operas had no success outside Berlin. Except a couple of stray performances of 'Olympia' at Dresden and Darmstadt, they did not even gain a hearing. Occasionally he conducted one of his own works, as for instance the 'Vestalin' at Munich⁴ (Oct. 7 and 11, 1827), and Hamburg⁵ (Sept. 18, 1834). But such personal contact does not seem to have led to sympathetic relations. Speaking generally, the 'Vestalin' and 'Cortez' were the only operas of his appreciated in Germany.

In Berlin itself, each year added to the number of his opponents. In 1824 Marx entered the lists in his behalf in his *Zeitung*, and was seconded by Dorn; but Dorn left Berlin in March 1828, and Marx, though sincerely attached to Spontini, occasionally admitted adverse criticisms. Spontini was morbidly sensitive to public opinion, and the loss of his defenders was a serious one. Against the advice of judicious friends he replied in person to anonymous attacks, suffered flatterers to use unpractised pens in his behalf, and even called in the Censorship.

Such steps could but damage his cause. The opposition was headed by Rellstab, the editor of the *Vossische Zeitung*, an experienced littérateur with some knowledge of music, a great ally of Weber's, and a blind opponent of everything foreign. In Nos. 23 to 26 of the year 1827 of Marx's *Zeitung* appeared an article utterly demolishing the first act of 'Agnes von Hohenstaufen.' Dorn made a successful reply in Nos. 27 to 29, but far from being silenced Rellstab published a book, *Ueber mein Verhältniss als Kritiker zu Herrn Spontini*,¹ in which he unsparingly attacked Spontini as a composer and director, and exposed the absurd tactics of the Spontini clique.² The clique put forth a defence called *Spontini in Germany, an impartial consideration of his productions during his ten years' residence in that country* (Leipzig, 1830). It was, however, anything but impartial, was ignorant and badly done.³

Spontini's ten years' contract finished in 1830; it was renewed, on terms more favourable to the Intendant-General, and this, with the fact of his ceasing to compose, gave an opportunity to his enemies, and an unfortunate indiscretion on the part of one of his friends played into their hands. Dorow of Halle, the archaeologist, in a collection of autographs (1837) inserted a letter from Spontini (Marienbad, August 12, 1836) lamenting the degeneracy of the dramatic composers of the day. It was done in good faith, Dorow honestly believing that he was serving Spontini by thus publishing his opinions without authority; but his opponents issued the letter in a separate pamphlet with a German translation, and 'explanatory' remarks, in which Spontini was fiercely attacked in terms of ironical respect.⁴ In the same year, in Nos. 101 and 102 of the *Komet* appeared a pasquinade by a student named Thomas, stating that Spontini had opposed the production of 'Robert le Diable,' the 'Postillon de Longjumeau,' and 'La Muette de Portici,' till obliged to yield to the express command of the King; that a new code of instructions had altered his position, and made him entirely subordinate to the Intendant; that he had been reprimanded for selling his free admissions, and had had them withdrawn; that the engagements of certain singers contained a clause stipulating that they should not be obliged to sing in Spontini's operas, etc. etc.

Thomas, when called to account, referred to an 'official of high position' as his authority. And indeed there was a certain amount of truth in the charges. Without directly opposing the

production of the operas mentioned, he had not hesitated openly to avow his dislike of them: no new code of instructions had just then been issued, but that of 1831 did materially strengthen the Intendant's position, and to a certain extent make the Director-general his subordinate. Spontini had not himself sold free admissions, but his servant had, and in consequence the allotted number had been diminished, very much to his mortification. It was advisable, however, to prevent such a newspaper scandal from reaching the King's ears, so Count Redern replied, contradicting all the false statements, and passing over in silence all the true ones; Thomas was induced to make a public apology, and the affair seemed at an end. But Spontini's troubles were not yet over; and his unpopularity was so great that worse attacks might be expected.

On June 7, 1840, King Frederick William III. died, and Spontini's one mainstay was gone. Though obliged occasionally to express displeasure at his perpetual squabbles with the Intendant, the King had been steadfast in his attachment to Spontini and his music. The new King made no change in his position, but his sympathies were in a different direction, and no place was destined for Spontini in the grand designs he was elaborating. This soon became known. If Spontini could have kept himself quiet the change might have been delayed, but he was injudicious enough to lay before the King a paper complaining of the Management and of Count Redern. The King questioned the Intendant, and was satisfied with his explanations, but to obviate all appearance of partisanship he appointed a commission to inquire into Spontini's grievances. In the meantime the press had taken up the matter. A definite attack was made, to which Spontini was unwise enough to reply (*Leipzig Allgemeine Zeitung* of Jan. 20, 1841) in such a manner as to give Count Redern ground for an indictment for *lèse-majesté*, and (on Feb. 5) to a direct reprimand from the King.

But this disgraceful treatment of the royal house by a foreigner who had enjoyed for years almost unexampled Court favour immensely increased the public feeling against Spontini, and for two months he remained in private. On April 2, however, in spite of repeated warnings, he took his seat to conduct 'Don Juan.' His appearance was the signal for a tremendous uproar, and cries of 'hinaus! hinaus!'—'off! off!' He stood firm, began the overture, and would have proceeded with the opera, but a rush was made to get at him on the stage, and he was forced to retire from the theatre. He never entered it again as conductor.

The trial kept Spontini in Berlin all the summer, but he obtained leave from Aug. 31 to Dec. 10, and went to Paris. His connection with the opera was severed by the King on

¹ Leipzig, Whistling, 1827.

² But see RELLSTAB, ante, p. 620. It has been often, and even recently, stated that two articles by Rellstab in *Öcilia* (*Aus dem Nachlass eines jungen Künstlers*), vol. iv, pp. 1-42, and *Julius. Eine musikalische Novelle*, vol. vi, pp. 1-100, refer to Spontini. This is quite untrue, but it shows how carelessly damaging statements about Spontini are repeated.

³ Attributed, quite untrue, to Dorn.

⁴ *The Lament of Herr Ritter Gaspar Spontini . . . over the decline of dramatic music. Translated from the French, with explanatory remarks by a body of friends and admirers of the great master.* Leipzig, Michelsen, 1837.

Aug. 25, on terms of royal generosity. He was to retain his title and full salary, and live where he pleased, 'in the hope that in repose he might produce new works, which the King would hail with pleasure if he chose to conduct them in person at Berlin.' To these munificent arrangements no conditions whatever were attached. Spontini was convicted of *lèse-majesté*, and condemned to nine months' imprisonment, a sentence confirmed by the higher court to which he appealed, but remitted by the King. In the face of all this he had the effrontery to demand a further sum of 46,850 thalers, on the ground that the Management had not supplied him with a sufficient number of librettos, whereby he had lost the sum guaranteed him for first nights, besides profits from other performances and from publishers—reckoned at 3000 thalers for each opera! The King referred him to the Law Courts, but Spontini's better nature seems at length to have prevailed, and he withdrew his application Dec. 23, 1841. When he finally left Berlin in the summer of 1842, the King granted him a further sum of 6000 thalers. His friends gave him a farewell concert on July 13, 1842, for which he wrote both words and music of an 'Adieu à mes amis de Berlin.'¹

He left few friends behind him. His successor at the opera was Meyerbeer, who, with Mendelssohn, received the title of 'Generalmusik-director.' Neither had very friendly feelings towards him, and their paths as artists widely diverged from his. He was, however, long and gratefully remembered by the members of the King's band. The orchestra were proud of their majestic conductor, who so often led them to triumph, and who, moreover, had a tender care for their personal interests. The poorer members found his purse ready of access, and in 1826 he established a fund for them, called by special permission the 'Spontini-Fonds,' to which he devoted the whole proceeds of his annual benefit concerts. The fund speedily attained to considerable proportions, and still exists, though the name has been changed.

That he was badly treated by the Berlin public is indisputable. His ill-natured, unjust, spiteful attacks must have been very irritating, as even those who do not belong to the super-sensitive race of artists can understand, but the last scene at the opera looks like a piece of simple brutality, unless we remember that the real ground of offence was his being a foreigner. The political events of the period beginning with the War of Liberation had roused a strong national feeling in Prussia. The denial of a Constitution had concentrated attention on the stage, which thus became a sort of political arena; and that a foreigner, and moreover a naturalised Frenchman, should be laying down the law in this stronghold was intolerable.

¹ Robert, p. 52, etc.

In Spontini's character great and mean qualities were almost equally mixed, so that both friends and foes could support their statements by facts, while each shut their eyes to the qualities which they did not wish to see. After his friends had been silenced by the catastrophe of 1841 the verdict of his opponents prevailed, at any rate throughout Germany; but this verdict, we say emphatically, was unjust. The charge that he despised and neglected German music is simply untrue. That he admired and loved the great German masters from Handel to Beethoven he proved through life in many ways. Robert relates on unquestionable authority that he made great sacrifices for the family of Mozart. When Nissen published his biography Spontini exerted himself immensely to get subscribers, personally transmitted the money to the widow, superintended the translation of the book into French, and rendered all the help in his power.² A preference for his own works must be conceded to any artist actively engaged in production, nor is it reasonable to expect from him an absolutely impartial judgment of the works of others. Weber's music was incomprehensible and antipathetic to Spontini, and this did him as much injury in Berlin as anything else. But his delay in performing 'Euryanthe' and 'Oberon' was caused more by inaction than opposition. For Spohr he had a great respect, as he often proved.³ In Meyerbeer he took a great interest, until the appearance of 'Robert le Diable,' which he could not bear, calling it 'un cadavre'; but this is no reflection on his taste. For the non-performance of the 'Huguenots' he was not responsible, as the prohibition was the King's. He was certainly not justified in calling Marschner's 'Templer und Jüdin' an 'arrangement after Spontini'—always supposing that the expression was his—but everybody knows that Marschner was deeply influenced by him. He was by no means free from envy and jealousy, but, taking for granted that he allowed himself to be swayed by his passions, foreign composers suffered just as much at his hands as German ones. Of Cherubini he thought very highly (he mounted 'Les Abencérages' and sent the composer a considerable sum from the proceeds), but Auber's 'Muette de Portici,' and Halévy's 'Juive' he thoroughly disliked, took no trouble about their production, and was much annoyed at their pleasing the public. Nor did he like Rossini, his own countryman. His horizon was limited, but if it is possible to reconcile genius with narrow-mindedness, if Spohr may be forgiven for appreciating Beethoven only partially, and Weber not at all, we must not be too hard on Spontini. It is sad to see the incapacity of even cultivated people in Berlin to be just towards

² Robert, p. 56, etc.

³ The statement in the *Mendelssohn Family*, vol. i. p. 124, that he threw obstacles in the way of the performance of 'Jessonda' is quite unfounded. The minutes of the King's Theatre prove the contrary.

him. The Mendelssohn family, at whose house he at one time often visited, and to whom he showed many kindnesses, were never on good terms with him after the appearance of the 'Hochzeit des Camacho.'¹ He may not have done justice to that youthful work, but it is a pity that the noble-minded Mendelssohn should have permitted himself the angry and contemptuous expressions to be found in his letters.² The painful close of Spontini's career was enough to atone for all his shortcomings.

Of his last years there is little to relate. On leaving Berlin he went to Italy, and in Jan. 1843 was in Majolati. He had visited his native land several times since 1822. In 1835 he was in Naples, at San Pietro in Majella, and they showed him an exercise he had written forty years before when a pupil at the 'Turchini.' He looked at it with tears in his eyes, and then begged the librarian to tear up 'queste meschine e sconce note' (those wretched misshapen notes) and throw them in the fire.³ In 1838 he was in Rome, and wrote (June 4) to the King offering his services as mediator between himself and the Pope on the subject of the disturbances in Cologne.⁴ In 1843 he left Italy and settled at Paris, where he had many pleasant connections through his wife, an Erard, whom he had married soon after the production of 'Cortez.' He had been a member of the Institute since 1838. In 1844 the Pope made him Count of S. Andrea, and other distinctions followed. But the hope expressed by King Frederick William IV. that he would produce other works was not realised; Berlin had broken him down physically and mentally. He revisited Germany two or three times. In 1844 he was in Dresden, where Richard Wagner had prepared for him a performance of the 'Vestale,' which he conducted with all his old energy.⁵ He was invited to the Cologne Musical Festival of May 1847 to conduct some excerpts from 'Olympia,' and had a warm reception, but was too infirm to conduct, and his place was taken by Dorn, then Capellmeister at Cologne.⁶ In August he visited Berlin, and was most graciously received by the King, who gave him an invitation to conduct some of his own operas at Berlin during the ensuing winter. He was much delighted, and thought a great deal about the performances after his return to Paris, and also of the best manner in which he could express his gratitude and devotion to the King; but the project was never realised, as he was ill all the winter. In 1848 he became deaf, and his habitual gravity deepened into depression. He went back to Italy, and settled at Jesi, where he occupied

himself in founding schools and other works of public utility. In 1850 he removed to Majolati, and there died Jan. 14, 1851. Having no children he left all his property to the poor of Jesi and Majolati.

P. S.

SPONTONE, or SPONTONI, BARTOLOMMEO, a madrigal composer, of whom nothing appears to be known beyond the facts that he was a pupil of Nicola Mantovano, and was maestro di cappella in the cathedral of Verona; that he published a first book of Masses, *a 5, 6, and 8*, in 1588; a book of four-part madrigals in 1558; and three sets of madrigals for five voices at Venice in 1561 (2nd ed. 1583), 1567, and 1583. Others are contained in the collections of Waelrant (1594) and others. Cipriano de Rore prints a Dialogo, *a 7*, by him in 1568. A Mass, *a 6*, is in vol. ii of Torchi's 'L'Arte Musicale in Italia.' A fine four-part madrigal of Spontone's, 'The joyous birds,' is given in Hullah's Part Music. *c.*

SPRING GARDEN. See VAUXHALL.

SPRÜCHE—proverbs or sentences—are sung in the Lutheran service of the Berlin Cathedral after the reading of the Epistle:

1. On New Year's Day, 'Herr Gott, du bist unser Zuflucht.'
2. On Good Friday, 'Um unser Sünden willen.'
3. On Ascension Day, 'Erhaben, o Herr.'
4. On Christmas Day, 'Frohlocket, ihr Völker.'

Mendelssohn set these for eight-part chorus; and in addition two more:

5. For Passion Week, 'Herr, gedenke nicht unser Übelthaten.'
6. For Advent, 'Lasset uns frohlocken.'

The six form op. 79 of his works. No. 3 ('Erhaben') begins with the same phrase as his 114th Psalm, op. 51, but there the resemblance ceases. No. 2 is dated Feb. 13, 1844, and No. 5 (in minims and for 4-part chorus) Feb. 14, 1844, and each of the two is inscribed 'vor dem Alleluja'—before the Alleluia. They are mostly short, the longest being only fifty bars in length. Schumann entitled one of his little PF. pieces 'Spruch.' [The three 'Fest- und Gedenksprüche' of Brahms, op. 109, are for eight-part chorus *a cappella*:—(i.) 'Unsere Väter hoffen auf dich,' Ps. xxii. 4; (ii.) 'Wenn ein starker Gewappneter,' Luke xi. 21, 17; (iii.) 'Wo ist ein so herrlich Volk,' Deut. iv. 7, 9.] *c.*

SQUARCIALUPI, ANTONIO (also called Antonio degl' organi), a famous Florentine organist who lived in the 15th century, and who was living in Siena in 1450, and at the Florentine Court in 1467, as organist of Santa Maria. He died there about 1475. None of his compositions are extant, and he is only known as an esteemed contemporary of Dufay. A letter written by him to Dufay, dated 1467, is given by Otto Kade in the *Monatshefte* for 1885, No. 2. See also Haber's 'Dufay' in the *Vierteljahrschrift*, i. 436. A volume of music by various

early composers, which was in Squarcialupi's possession, is in the Bibl. Lanrenziana in Florence, and is described in J. Wolf's *Geschichte der Mensural-Notation*, pp. 228 ff. There is a monument to his memory in the Duomo at Florence. *Quellen- Lexikon*, Riemann's *Lexikon*.

M.
SQUIRE, WILLIAM HENRY, was born at Ross, August 8, 1871. His father was a clever amateur violinist, and the boy's first teacher. He gained a violoncello scholarship at the Royal College of Music in 1883, which was extended for a further period of three years. He studied under Edward Howell, and made his début at a concert of Señor Albeniz at St. James's Hall, Feb. 12, 1891. At the Crystal Palace he first appeared on April 20, 1895, in Saint-Saëns's Concerto in A. In the same year he held the place of principal violoncello at the Royal Opera, Covent Garden. He was elected an associate of the Royal College in 1889. He has written a concerto for his instrument, very numerous and successful works in a popular style, many songs, two operettas (unpublished), and has had a useful and prosperous career as a concert-player and in orchestras; he was a prominent member of the original Queen's Hall Orchestra, and for some time after the secession belonged to the London Symphony Orchestra. His sister, MME. EMILY SQUIRE, is a successful soprano singer, a pupil of the Royal College and the Royal Academy; she first appeared at Bath in 1888, and at the Crystal Palace in 1891. M.

STABAT MATER. [This mediæval poem, which has had a greater popularity than any similar composition, is of uncertain authorship. It is generally ascribed to Jacopone or to Pope Innocent III., but on no sufficient evidence. It was not liturgical, and had originally no music of its own; but it came into popular use as a devotion in the 13th century; indulgences were granted to those who used it, and finally it crept into liturgical books and was provided with musical settings. It did not obtain its place in the Roman Missal as a Sequence till 1727, nor did a cento from it obtain a place as a Hymn in the Breviary till even later. The musical history of the poem, therefore, is concerned with the polyphonic and later writers.]

The beauty of the poem has rendered it so great a favourite with composers, that the number of fine settings we possess is very great. The earliest example that demands special notice is the 'Stabat Mater' of Josquin des Prés, founded upon the Canto fermo just mentioned, in the Thirteenth Mode transposed.¹ So elaborate is the construction of this work, that not one of the most highly developed of the composer's

Masses surpasses it. The Canto fermo is sustained by the tenor, in Larges, Longs, and Breves throughout, while four other voices accompany it, in florid counterpoint, in constant and ingenious imitation of the most elaborate character.

But not even Josquin's masterpiece will bear comparison with the two grand settings of the 'Stabat Mater' by Palestrina, either of which, as Baini observes, would alone have sufficed to immortalise him. The first and best-known of these, written for a double-choir of eight voices, has long been annually sung, in the Sistine Chapel, on the Thursday in Holy Week, and was first published by Burney in his 'La Musica della Settimana Santa,' on the authority of a copy given to him by Santarelli.² It is enough to say that the composition signalises the author of the 'Missa Papae Marcelli' in every page; and that the opening phrase, containing a progression of three major chords, on a bass descending by major seconds, produces one of the most original and beautiful effects ever heard in polyphonic music.

Palestrina's second 'Stabat Mater' is written for twelve voices, disposed in three choirs; and is in every way a worthy companion to the preceding work.³ Ambros, indeed, denies its authenticity, and on the authority of an entry in the catalogue of the Altaempe-Ottoboni Collection in the Library of the Collegio Romano refers it to Felice Anerio, notwithstanding Baini's decisive verdict in its favour: but the internal evidence afforded by the work itself

¹ Pietro Aron quotes this fine composition as an example of the Fifth Mode; and Zarlino, as one of the Eleventh. The work was first printed in Petrucci's 'Motetti della Corona,' Lib. iii. No. 6 (Fossombrone, 1519). About 1840, Choron reprinted it in score, in Paris; and in 1881 it was given in the Notenbeilagen to Ambros's *Geschichte der Musik*, p. 61. The 'Glück Society' performed it, in London, on May 24, 1881.

² It was afterwards published, in Paris, by Choron; and by Alfieri, in his 'Raccolta di Musica sacra,' vol. vi. (Roma, 1848). For an interesting criticism upon it see Oulibiche's *Nouvelle Biographie de Mozart*, ii. 72. He was perhaps the first to call attention to it. It was more recently edited, with marks of expression, introduction of solo voice, and other changes, by Wagner.

³ First printed in Alfieri's 'Raccolta,' vol. vii. (Roma, 1846).

is enough to remove all doubt on the subject. It is not only a genuine work, but one of the finest Palestrina ever wrote. For the effect produced by the union of the three choirs at the words, 'O quam tristis,' as well as the manner of their alternation, in other parts of the Sequence, we must refer our readers to the work itself, in the 7th volume of Breitkopf & Härtel's complete edition.

Few modern settings of the 'Stabat Mater,' with orchestra accompaniments, are finer than (1) that by Pergolesi, for Soprano and Contralto, accompanied by Strings and Organ (to which Paisiello afterwards supplied additional accompaniments for wind). (2) Haydn's 'Stabat Mater' is a treasury of refined and graceful melody. (3) Next in importance to this we must rank a very fine one for six voices with accompaniments for two violins, three violas, basso, and organo, composed by Stefani, who presented it to the 'Academy of Antient Musick' in London, on his election as Honorary President for life, in 1724. (4) Clari wrote another beautiful one, which is among the Fitzwilliam MSS. at Cambridge. (5) A nearly contemporary work, by Astorga, is one of the best Italian productions of its period.¹ (6) Winter's Stabat Mater may be taken as a happy example of his refined and graceful style; and, if not a great work, is at least a remarkably pleasing one. (7, 8, 9, 10) The Royal College of Music possesses a Stabat Mater, α 3, by Pietro Raimondi, with one composed by Padre Vito, in 1783, and two others, by Gesualdo Lanza, and the Spanish composer, Angelo Inzenga. (11) The Chevalier Neukomm also wrote one which was very popular among his disciples. (12) Very different from all these is Rossini's setting of the text, which has made its words familiar to thousands, who would never otherwise have heard of them. (13) Yet even this does not represent the latest interpretation of these beautiful verses, which have been illustrated, in still more modern, and very different musical phraseology, by Dvořák.² [Two important English compositions deserve mention; (14) by Ernest Walker, still in MS.; (15) by Sir C. V. Stanford, performed at the Leeds Festival, 1907.] W. S. R.

STABILINI, GIROLAMO (or HIERONYMO), a violin-player, born at Rome about 1762. Having attained some distinction in Italy he was invited to Edinburgh, to replace Giuseppe Puppo, as leader of the St. Cecilia Hall concerts.

Stabilini arrived at Edinburgh in 1783, and died of dropsy there on July 13, 1815, being buried in the graveyard of St. Cuthbert's or the 'West Kirk.' His tombstone is still to be seen built into an old boundary wall. Stabilini, though he does not appear to have been of very extraordinary talent, was eminently popular in Scotland, a popularity not decreased by his per-

formance and arrangement of Scots airs. 'I'll gang na mair to yon toon' being especially associated with him.

There is a head of him in Kay's *Edinburgh Portraits*. F. K.

STACCATO (Ital.; Ger. *abgestossen*), 'detached,' in contradistinction to *legato*, 'connected.' The notes of a staccato passage are made short, and separated from each other by intervals of silence. Staccato effects are obtained on the pianoforte by raising the hand from the keys immediately after striking, usually by a rapid action of the wrist (this is called 'wrist-touch'), though sometimes, especially in *fortissimo*, from the elbow; and there is also a third kind of staccato-touch called 'finger-staccato,' which is less frequently used, and which, as described by Hummel, consists in 'hurrying the fingers away from the keys, very lightly and in an inward direction.' This kind of touch is of course only applicable to passages of single notes.

On stringed instruments staccato passages are generally bowed with a separate stroke to each note, but an admirable staccato can also be produced, especially in solo music, by means of a series of rapid jerks from the wrist, the bow travelling meanwhile in one direction, from the point to the nut. Staccato on wind instruments is effected by a rapid thrusting forward of the tongue, so as to stop the current of air; and in singing, a staccato sound is produced by an impulse from the throat upon an open vowel, and instantly checked. A striking example of vocal staccato occurs in Mozart's air, 'Gli angui d'inferno,' from 'Die Zauberflöte.' Upon the harp, or any similar instrument, and likewise upon the drum, a staccato note requires the immediate application of the palm of the hand to the vibrating string or parchment, to stop the sound.

The signs of staccato are pointed dashes '...', or rounded dots '...', placed over or under the notes, the former indicating a much shorter and sharper sound than the latter. [See DASH, vol. i. p. 664.] But besides the difference thus shown, the actual duration of staccato notes depends to some extent upon their written length. Thus in the following example the minims must be played longer than the crotchets (though no exact proportion need be observed), in spite of the fact that both are marked staccato alike:—

BEETHOVEN, Sonata Pathétique.

When dots placed over or under notes are covered by a curved line, an effect is intended which is of great value in the rendering of expressive and *cantabile* phrases. This is called *mezzo staccato* (half-detached), and the notes

¹ Published in score by Breitkopf & Härtel (1879).

² *Stabat Mater* für Soli, Chor, u. Orchester (Simrock, 1881). Performed by the London Musical Society, March 1883.

are sustained for nearly their full value, and separated by a scarcely appreciable interval. On stringed and wind instruments indeed they are frequently not separated at all, but are attacked with a certain slight emphasis which is instantly weakened again, so as to produce *almost* the effect of disconnection; on the piano-forte, however, they must of necessity be separated, though but for an instant, and they are played with a close, firm pressure, and with but little percussion. The following is an example of the use of *mezzo staccato*, with its rendering, as nearly as it is possible to represent it in notes:—

BEETHOVEN, Sonata in C, Op. 53.

When a movement is intended to be staccato throughout, or nearly so, the word is usually written at the commencement, with the tempo-indication. Thus Mendelssohn's Prelude in B minor, op. 35, No. 3, is marked 'Prestissimo Staccato,' and Handel's chorus, 'Let us break their bonds asunder,' is 'Allegro e staccato.' F. T.

STADEN, JOHANN, was born at Nuremberg in 1581 (not 1579, as stated in the *Quellen-Lexikon*). From 1603 to about 1616 he was in the service of the Margrave Christian Ernst of Kulmbach and Bayreuth as Court-Organist. In 1616 he returned to Nuremberg, where he received the appointment of organist, first to the St. Lorenz-Kirche, and shortly afterwards to the more important St. Sebald-Kirche, in which latter post he remained till his death, Nov. 15, 1634. Staden occupies a place of some importance in the transition period of musical history at the beginning of the 17th century, when German musicianship was endeavouring to combine with the older style of pure vocal music the advantages of the newer style of instrumental accompaniment with its greater freedom of harmonic modulation. Staden, however, was on the whole more conservative and less enthusiastically progressive than his contemporaries Michael Praetorius and J. H. Schein, not to mention Heinrich Schütz. His publications were fairly numerous, though all are not preserved complete. There are six of church works proper, partly with Latin, partly with German texts, entitled respectively, 'Harmoniae Sacrae pro festis praecipuis' 4-8 voc., 1616; 'Harmoniarum sacrarum continuatio' 1-12 voc., 1621; 'Kirchen-musik,' 1 Theil mit 2-14 St., 1625; 'Kirchen-musik,' 2 Theil zu 1-7 St., mit violen und anderen Inst., 1626; 'Harmoniae novae' 3-12 voc., 1628; 'Harmoniae Variatae,'

1-12 voc., 1623. In these works three styles of church music are represented: the pure vocal Motet, in which Basso Continuo is not required; the Motet with only Basso Continuo; and the Sacred Concerto with obligato accompaniment and instrumental preludes and interludes denominated respectively Symphonies and Ritorcelli. Another series of Staden's publications consists of sacred music on German texts intended more for private or domestic performance, a kind of music which would seem to have been much in vogue among the Nuremberg citizens of those days. His chief publication of the sort is expressly entitled 'Haus-musik,' which originally appeared in four separate parts in 1623-28, and afterwards in a complete edition in 1646. This work contains 118 mostly short and comparatively simple pieces *a* 3-4 for voices, or instruments *ad libitum*, in a few cases instruments *obligati*. Another work of the same kind, a little more elaborate, is entitled 'Musicalischer Freuden- n. Andachtswecker oder geistliche Gesängelein' zu 4-6 St., 1630. Other works belonging to the same class entitled 'Hertzentrosts-Musica,' 1630, and 'Geistlicher Music-klang,' 1633, contain mostly Lieder for one voice only with continuo accompaniment for organ, lute, or theorbo. Several of Staden's Lieder found their way into later Chorale-Books. Another department of Staden's activity as a composer consists of secular songs and instrumental dances. Three collections of secular songs *a* 4-5 with an appendix of instrumental dances appeared 1606, 1609, and 1610. Two other collections of dances alone, Pavanes, Galliardas, Courantes, etc., appeared 1618 and 1625. A comprehensive collection of instrumental works by Staden was published posthumously in 1643, containing not only dances, but pieces described as Sonatas, Symphonies, and Canzonas. Staden would appear to have been incited to the composition of these instrumental works by his official connection for a time with the Stadtpfeifer or town musicians of Nuremberg. It only remains to add that a recent volume (Jahrg. viii. Bd. i.) of the Denkmäler der Tonkunst in Bayern contains a selection of Staden's vocal works, including ten Latin Motets *a* 4-8 and twenty-five German pieces *a* 3-8, with a full biographical and critical introduction. A selection from his instrumental works is promised in a succeeding volume.

J. R. M.

STADEN, SIGMUND GOTTLIEB (or THEOPHIL), son of Johann Staden, was born in 1607. At the age of thirteen he was sent by the town authorities of Nuremberg, at the request of his father, to receive further musical instruction from Jacob Baumann, Organist and Stadtpfeifer or town musician of Angsburg. This might seem strange, considering that Johann Staden was himself a more distinguished musician than Baumann, but Baumann appears to have had during his lifetime a greater reputation as

an instrumentalist. Later on, in 1626, the younger Staden was again sent at the expense of the Nuremberg authorities to Berlin to receive instruction in the playing of the Viola bastarda, a form of the Gamba, from one Walter Rowe or Roy, an English instrumentalist in the service of the Elector of Brandenburg. In 1627 Staden received an appointment as one of the Stadtpfeifer or town musicians of Nuremberg. On the death of his father in 1634, Gottlieb or Theophil Staden, as he is indifferently called, became organist to the St. Lorenz-Kirche in succession to Valentin Dretzel, who took the elder Staden's place as organist to the St. Sebald-Kirche. Whether Staden received any further promotion is unknown. His death took place at Nuremberg, July 30, 1655. This younger Staden is now chiefly known as the composer of the first German operatic work that was ever published, an allegorical Singspiel, the full title of which is 'Dasgeistliche Waldgedicht oder Freundschafts-Spiel genant Seelewig. Gesangsweis auf Italienische Art gesetzt, 1644.' The work is an interesting example of the early monodic style for solo voices with accompaniment of figured Bass, but having also short instrumental preludes and interludes, sometimes for viols or violins only, sometimes for three flutes, at other times for two or three 'schalmeien' or oboes. It has been republished by Robert Eitner in modern form with the harmonics of the figured Bass written out. The text is by G. P. Harsdörffer, one of the founders of the Pegnitzschäfferei Gesellschaft in Nuremberg, who brought from Italy to Nuremberg the peculiar taste for artificial pastoralism in poetry, and for the Florentine monodic style of music in association with allegorical and spiritual dramas. Other poetical texts by Harsdörffer were set by Staden as simple Lieder for one voice with figured Bass. He did not, however, forsake altogether the older style of choral music. In 1637 he put forth a new edition of Hans Leo Hassler's 'Kirchengesänge mit vier stimmen simpliciter gesetzt' (1608), in which he included eleven new chorale-tunes and settings by his father, and five by himself. He also followed in the wake of his father in the encouragement of domestic sacred music, by publishing, in 1644, two collections entitled 'Seelenmusik,' with settings of hymns *a 4* with Basso Continuo, and furnishing new melodies to the various Gesangsbücher of the time. The *Quellen-Lexikon* mentions an Instruction-Book for singing by him, 1648.

J. R. M.

STADLER, MAXIMILIAN, ABBOT, a sound and solid composer, born August 4, 1748, at Melk, in Lower Austria. At ten became a chorister in the monastery of Lilienfeld, where he learnt music, completing his education in the Jesuit College at Vienna. In 1766 he joined the Benedictines at Melk, and after taking priest's orders worked as a parish priest and

professor till 1786, when the Emperor Joseph, who had noticed his organ-playing, made him abbot first of Lilienfeld, and three years later of Kremsmünster. Here his prudence averted the suppression of that then famous astronomical observatory. After this he lived at various country-houses, then privately at Linz, and finally settled in Vienna. [Between 1803 and 1816 he was parish priest at Alt-Lerchenfeld and afterwards in Bohemia.] Haydn and Mozart had been old friends of his, and at the request of the widow he put Mozart's musical remains in order, and copied from the autograph score of the 'Requiem,' the Requiem and Kyrie, and the Dies irae, both copy and original being now in the Hofbibliothek at Vienna. [See vol. iii. p. 308a.] He also came forward in defence of the Requiem against Gottfried Weber, in two pamphlets — *Vertheidigung der Echtheit des Mozart'schen Requiem* (Vienna, 1825-26), and *Nachtrag zur Vertheidigung*, etc. (ib. 1827). Stadler was an excellent contrapuntist, and an authority in musical literature and history. His printed compositions include Sonatas and fugues for PF. and organ; part-songs; two requiems; several masses; a Te Deum; 'Die Frühlingsfeier,' cantata, with orchestra, to Klopstock's words; psalms, misereres, responses, offertoriums, etc.; also a response to Haydn's farewell-card for two voices and PF. [See vol. ii. p. 362.] Among his numerous MSS. are fine choruses for Collin's tragedy, 'Polyxena.' Stadler's greatest work, 'Die Befreiung von Jernsalem,' an oratorio in two parts, words by Heinrich and Matthäus von Collin, was given with great success in 1816 at the annual extra concert of the Gesellschaft der Musikfreunde, for the benefit of the proposed Conservatorium, and in 1829 at Zurich. [For list of works see *Quellen-Lexikon*.]

Stadler died in Vienna, Nov. 8, 1833, highly esteemed both as man and musician. C. F. P.

STADLMAYR, JOHANN, was born at Freising in Bavaria. Fétis dates his birth 1560, but in the absence of precise documentary evidence Eitner, in the *Quellen-Lexikon*, considers this far too early, as the works published by the composer himself only begin in 1603 and continue to 1645. On the basis of the indications furnished by the title-pages and dedications of his works, Eitner gives the appointments which he held, as stated below. In 1603 Stadlmayr subscribes himself as a musician in the service of the Archbishop of Salzburg. In 1610 he was Capellmeister to the Archduke Maximilian of Austria probably at Innsbruck. In 1625 he acts in the same capacity to the Archduke Leopold at Innsbruck, and from 1636 he subscribes himself as Music-director to the Archduchess Claudia at Innsbruck. His death took place at Innsbruck on July 12, 1648, and he is then described as having been Hofcapellmeister. Stadlmayr's works are all for the

services of the Roman Church, but show the gradual supersession of the earlier pure vocal style of church music by the modern style of instrumental accompaniment. There is, first, the regular employment of Basso Continuo, followed by the substitution *ad libitum* of an instrumental choir, *a 4* or *8* as the case may be, for one or other of the vocal choirs, and the culminating point is reached in the definite specification of instruments which are now written for in a definitely instrumental style. The dates and titles, somewhat abbreviated, of Stadlmayr's chief publications as given below, will serve to confirm what we have said:—

1603. Magnificat *a 5-8*, 10 n. (No mention of Basso Continuo in the title of this or the work following.)
 1608. Magnificat *a 4-8*, 13 n.
 1610. Missae 8 voc., cum duplici Basso ad Organum. 5 n.
 1614. Magnificat. Symphonias variae secundum varios modos musicae, aliae actūs, una 12 voc., cum Bc.
 1618. Missae 12 voc., cum triplici Bc.
 1618. Cantici Mariani septies variati cum 12 voc. c. triplici Basso Org.
 1625. Musica super cantum gregorianum. Pars I. Missarum dominicalium Introitus. . . 52 n. Pars II. Festorum introitus. 50 n. 3 voc. c. Bc. *ad libitum*.
 1628. Hymni totius anni . . . *a 4*, quibus et alii pro Festis solemnioribus cum Symphonis *a 4-8*, accesserunt in quibus pro ratione variari possunt instrumenta Musica cum Basso continuo.
 1631. Missae concertatae *a 6* adjuncto Choro secundosive ripieni.
 1635. Odae sacrae . . . *a 5 v.* et totidem instr.
 1640. Salmi *a 2 et 3 v.* c. 2 V. o Cornetti.
 1641. Psalmi integri *a 4* voc. concertantibus, quatuor aliis accessoris ad lib. accinentis cum 2 Cornet, sive Violin.
 1642. Missae Concertatae *a 10-12 et instrum.*, cum 4 partibus pro secundo choro.
 1643. Missae ix voc. primo choro concert. *a 5* voc. Secundo pleno cum Symphonis.
 1646. Apparatus musicus Sacrarum cantorum 6-24 vocib. et instr.

Of all these works, the only one which has as yet appeared in a modern reprint is the Hymni *a 4*, 1628, edited by J. E. Habert for the Denkmäler der Tonkunst in Oesterreich, Band III. Erster Theil. But Habert has only given the simple Hymns *a 4*, without accompaniment. It might have been more interesting, historically, if he had also given the Hymns with instrumental accompaniment and ritornelli. J. R. M.

STÄNDCHEN (Ger.), 'Serenade.'

STAFFORD, WILLIAM COOKE, born in 1793 at York, published at Edinburgh in 1830 a 12mo volume entitled *A History of Music*, a work chiefly noted for its inaccuracy, but which notwithstanding was translated into French (12mo, Paris, 1832) and German (8vo, Weimar, 1835). [He died at Norwich, Dec. 23, 1876. *Brit. Mus. Biog.*] W. H. H.

STAGGINS, NICHOLAS, was taught music by his father, a musician of little standing. Although of slender ability he won the favour of Charles II., who, in 1632, appointed him Master of the King's Band of Musick; and in the same year the University of Cambridge, upon the King's request, conferred upon him the degree of Mus.D. The performance of the customary exercise being dispensed with, great dissatisfaction was occasioned, to allay which Staggin, in July 1684, performed an exercise, whereupon he was appointed Professor of Music in the University, being the first who held that office. Staggin composed the Odes for William III.'s birthday in 1693 and 1694, and for Queen

Anne's birthday, 1705. [In 1693 he was allowed £200 per annum as Master of the Musick (Calendar of Treasury Papers). W. H. G. F. In 1697 he gave a concert of his own music in York-buildings, London; in the following year Eccles succeeded him as Master of the King's Musick. *Quellen-Lexikon.*] Songs by him are contained in 'Choice Ayres, Songs and Dialogues,' 1675, and other collections of the time; and a dialogue, 'How unhappy a lover am I,' composed for Dryden's 'Conquest of Granada,' Part II., is included in J. S. Smith's 'Musica Antiqua.' He died in 1705. W. H. H.

STAHLSPIEL (Ger. *stahl*, 'steel,' and *spiel*, 'play'). 1. An instrument consisting of a series of accurately-tuned steel bars loosely fastened to a frame and generally played by means of two small hammers—one in each hand of the performer,—but sometimes constructed so as to be played from a keyboard. It is used in military music and known by the name *Lyra*, the steel bars being arranged on a lyre-shaped frame. For orchestral use the bars are arranged in two rows, in the exact relative positions of the white and black keys of the pianoforte. The compass is from two to two and a half octaves, and the tone incisive and penetrating, but although the instrument is susceptible of very charming effects it should be sparingly used. It is very frequently written for under the names *Glockenspiel* and *Carillon*, so much so that in modern use the three names are alternatives for one and the same thing. Originally the two latter were applied to an instrument consisting of a series of small *bells*; but steel bars have been found to be more convenient, more easily manipulated, better in tone—being free from the dissonant overtones so particularly prominent in *small bells*,—and capable of the most accurate tuning. Excellent examples of the effective treatment of the instrument will be found in the works of Wagner ('Walküre' and 'Meistersinger'), Tchaikovsky, Strauss, Elgar, Parry, Mackenzie, Cowen, etc.

2. An organ stop consisting of a series of steel bars played from the manuals and generally extending from middle C upwards, but rarely exceeding three octaves in compass. W. W. S.

STAINER, JACOB, a celebrated German violin-maker, born at Absam, a village near Hall, about one German mile from Innsbruck, July 14, 1621; died 1683. According to one story, the boy had a love of music, which induced the parish priest to send him to an organ-builder at Innsbruck. This trade, however, he found too laborious. He therefore took to making stringed instruments, serving his apprenticeship to an Innsbruck 'Lautenmacher'; after which he proceeded to travel, after the usual fashion of German apprentices. In the course of his travels, according to tradition, he visited and worked at Cremona and other places in Italy; and the common story is that he worked under Antonius

or Nicholas Amati, and afterwards spent some time at Venice, where he wrought in the shop of Vimercati. Of all this, however there is not a particle of evidence. It may be said that violins are in existence, signed by Stainer and dated from Cremona; but these are now believed to be spurious. Probably he found Italian violins in use among the Italian musicians at the court of the Archduke Ferdinand Charles, Count of the Tyrol, at Innsbruck, and after examining their construction and contrasting them with the rude workmanship of the ordinary German Lautenmacher, conceived the idea of making violins on Italian principles. He began at a very early age, if we may trust an apparently genuine label dated 1641. His reputation was very quickly made, for in 1643, according to the *Jahresbericht des Museums in Salzburg* for 1858, he sold a 'Viola bastarda' to the Archbishop of Salzburg for 30 florins. It is, however, possible that there may be a mistake as to this date. He married in 1645 Margaret Holzhammer, by whom he had eight daughters, and one son, who died in infancy. Henceforward, to his death in 1683, the life of Stainer shows little variety. He made a great number of stringed instruments of all sorts, which he chiefly sold at the markets and fairs of the neighbouring town of Hall. The forests of 'Haselfichte' [see KLOTZ], which clothe the slopes of the Lafatsch and the Gleirsch, supplied him with the finest material in the world for his purpose; and tradition says that Stainer would walk through the forest carrying a sledge-hammer, with which he struck the stems of the trees to test their resonance; and at the falling of timber on the mountain-slopes, Stainer would station himself at some spot where he could hear the note yielded by the tree as it rebounded from the mountain side. In 1648 the Archduke Ferdinand Charles paid a visit to Hall, in the course of which Stainer exhibited and played upon his fiddles, and the Archduke thenceforth to his death in 1662 became his constant patron. Ten years later he received by diploma the title of Hof-geigenmacher to the Archduke, and in 1669 (Jan. 9) the office was renewed to him by a fresh diploma on the lapse of the county of Tyrol to the Emperor Leopold I. Stainer seems to have been always in embarrassed circumstances, owing partly to his dealings with Solomon Hübner, a Jew of Kirchdorf, with whom he was constantly at law. In 1669, having fallen under a suspicion of Lutheranism, he was imprisoned and forced to recant. In 1672 he sold a viola da gamba and two tenor viols at Salzburg for 72 florins, and in 1675 at the same place a violin for 22 fl. 4 kr. He was still at work in 1677, in which year he made two fine instruments for the monastery of St. Georgenburg. Soon after this date he ceased from his labours. In the same year he presented an ineffectual petition to the Emperor for pecuniary assistance. In his

latter years Stainer became of unsound mind, in which condition he died in 1683, leaving his wife and several daughters surviving him: and in 1684 his house was sold by his creditors, his family having disclaimed his property on account of the debts with which it was burdened. His wife died in great poverty in 1689. There is therefore no truth whatever in the story of his retirement after the death of his wife to a Benedictine monastery, where he is said to have devoted himself to the manufacture of a certain number of violins of surpassing excellence, which he presented to the Electors and the Emperor. Stainer undoubtedly made violins, probably of special excellence, for the orchestras of some of the Electors; but such instruments were made and sold in the ordinary way of trade. In course of time, when one of his best-finished instruments turned up, the contrast between it and the crowd of common ones which bore his name caused it to be looked on as one of these 'Elector Violins.' These violins, however, cannot have been the work of his last years, during which he was insane, and had to be confined in his house at Absam, where the wooden bench to which he was chained is still to be seen.

Stainer's place in the history of German fiddle-making is strongly marked, and it accounts for his fame and his substantial success. He was the first to introduce into Germany those Italian principles of construction which are the secret of sonority. The degree of originality with which Stainer is to be credited cannot be precisely determined. Some trace his model to the early Tyrolese viol-makers, but in the opinion of other authorities the peculiarities of the Stainer violins are strictly original. As a mere workman Stainer is entitled to the highest rank, and if he had but chosen a better model, his best instruments would have equalled those of Stradivarius himself. Like that celebrated maker he was famous for the great number as well as the excellence of his productions. He made an immense number of instruments, some more, and others less, finely finished, but all substantially of the same model: and the celebrity which he gained caused his pattern to be widely copied, in Germany, in England, and even in Italy, at a time when Stradivarius and Joseph Guarnerius were producing instruments in all respects enormously superior. This endured more or less for a century; but the fashion passed away, and his imitators took to imitating those Italian makers whose constructive principles he had adopted. All Stainer's works bear his peculiar impress. The main design bears a rough resemblance to that of the Amati, but the model is higher; the belly, instead of forming a finely-rounded ridge, is flattened at the top, and declines abruptly to the margins; the middle curves are shallow and ungraceful; the *f*-holes are shorter, and have a square and somewhat mechanical

cut; the top and bottom volutes of the *f*'s are rounder and more nearly of a size than in the Cremona instruments, but the wood is of the finest quality; the finish, though varying in the different classes of instruments, invariably indicates a rapid and masterly hand; and the varnish is always rich and lustrous. It is of all colours, from a deep thick brown to a fine golden amber, equal to that of Cremona; and in his best works the exterior alone would justify the celebrity of the maker. But to understand the secret of Stainer's success the violin must be opened, and it then appears that the thicknesses of the wood and the disposition of the blocks and linings are identical with those of the Cremona makers. The difference will become more obvious when an old German viol is examined. It will be found that the older German makers, though they finished their instruments with great care and sometimes with laborious ornament, settled their dimensions and thicknesses by guess, and used no linings at all. Stainer's instruments are poor in respect of tone. The combination of height and flatness in the model diminishes the intensity of the tone, though it produces a certain sweetness and flexibility. Popular as the model once was, the verdict of musicians is now unanimous against it, and the Stainer instruments are now valued less for practical use than as curiosities. The violins, which are found of three different sizes, are the best worth having; the tenors are good for little. The violins are abundant enough, even after allowing for the vast number of spurious instruments which pass under the maker's name; but they vary greatly in value, according to their class, and the condition in which they are. Their value greatly decreased during the 19th century. A fine specimen that would have brought £100 a century ago will now scarcely produce £20, and the inferior instruments have depreciated in proportion. Small instruments of the common sort, which may be bought very cheap, are useful for children. Stainer's best instruments have written labels: some of the common ones have in very small Roman letterpress in the middle of a large slip of paper, 'Jacobus Stainer in Absam prope Oenipontum Anno (1678).' It is not impossible that some of these may have been made by other hands under his direction.

E. J. P.

[On the authority of Herr S. Rief, whose narrative of Stainer's life the above account follows, Stainer's father—Martin Stainer—married Sabina Gräfinger, by whom he had three sons: (1) Paul, who became a master-joiner and married Ursula Dankler; (2) Mark, who migrated to Austria where he established himself as a violin-maker but attained no celebrity; (3) Jacobus, the subject of this biography. This last, by his marriage with Margaret Holzhammer, left eight daughters, two of whom died,

single and in poverty, shortly after their mother in 1689. It must be borne in mind that the generally accepted date of Stainer's death, 1683, is only approximate. This date appears on the tablet attached to his house, and also on the handsome monumental stone erected to his memory in Absam Church in 1842 by the Pastor Herr Lechlatner. The sole evidence that goes to prove that Stainer no longer existed in 1684 is the purchase of his house by his brother-in-law Blasius Kiel, after which Stainer's widow and eight daughters became homeless wanderers. This house is to-day 'a well-to-do picturesque *châlet*, standing in its own garden and courtyard, half overgrown by a flourishing plum-tree that springs from the south-east corner.' It was bought by Stainer from his brother-in-law, Paul Holzhammer, on Nov. 12, 1666, and Blasius Kiel, as already mentioned, bought it for seven hundred florins in 1684. On a tablet affixed to the front of the house is the following inscription—

In diesem Hause lebte seiner Kunst Jakob Stainer, der Vater der deutschen Geige, Geboren zu Absam 14 Juli 1621, hier gestorben 1683.

Although this house was restored, and to some extent reconstructed in 1820, the balcony on which Stainer was known to store his wood still remains and is employed by its present owners for the like purpose. Within, the house is bereft of all relics of the great violin-maker, save the actual bench at which Stainer laboured.

No attempt to gather any record of Stainer's life was made for over one hundred years after his death; but the deficiency was filled in with numberless romances about 'the father of the German fiddle,' from 1825, when the *Orangenblut* published a story entitled 'Jacob Stainer,' to 1878, when a version of Dr. Schuler's novel was published at Innsbruck in the form of a play from the pen of Josef Erler, which adaptation was entitled *Des Kaisers Geigenmacher in Tirol*. Other fanciful versions of Stainer's life have appeared from time to time in various German newspapers and periodicals; a full list of these, together with the earliest trustworthy account of Stainer, is given by Herr S. Rief in his biography of the maker.

Rief, *Der Geigenmacher Jacobus Stainer von Absam in Tirol*, Innsbruck, 1872; Oka, F., *J. S. der erste deutsche Meister in Geigenbau* published in the *Neue Berliner Musikzeitung* Nos. 22, 23, 31, May 7, June 1854; Otto, *A Treatise on the Structure and Preservation of the Violin* (first edition (German), 1817; three English editions translated by John Bishop); Stoeving, *Von der Violine*; Wasielewski, *Die Violine*; Von Lutgendorff, *Die Geigen- und Lautenmacher*; Hawkins, *History of Music*; Vidal, *Les Instruments à Archet*; Grillet, *Les Ancêtres du Violon*; Pearce, *Violins and Violin-Making*; Reade, *A Lost Art Revived*; Racster, *Chats on Violins* (containing an English transla-

tion of Von Gilm's poem); Hill, *Violins and their Makers* (two pictures of Stainer's house); Heron-Allen, *A Pilgrimage to the House of Jacob Stainer* (*Musical Times*, August 1900). E. H. A.

STAINER, MARCUS, brother of the last mentioned, a celebrated Tyrolese violin-maker. Mark Stainer learned his trade from Jacob, and set up for himself at the village of Lanfen. The famous Florentine player Veracini* had two violins by this maker, christened 'St. Peter' and 'St. Paul,' and he reckoned them superior to all Italian violins. In sailing from London to Leghorn in 1746 Veracini was shipwrecked and the fiddles were lost. The instruments of this maker are extremely rare. They are made of unusually fine material, of somewhat large size, covered with dark varnish, and are sweet though decidedly feeble in tone. Like those of Jacob Stainer, they usually contain written labels. One of these runs thus: 'Marcus Stainer, Bürger und Geigenmacher in Kufstein, anno 1659.' Occasionally Marcus Stainer yielded to an obvious temptation, and sold his violins under the name of his more famous brother.

E. J. P.

STAINER, SIR JOHN, Mus.D., son of a schoolmaster, was born in London, June 6, 1840, entered the choir of St. Paul's Cathedral in 1847—by which time he was already a remarkable player and an excellent sight-singer—and remained there till 1856, very often taking the organ on occasion. In 1854 he was appointed organist and choirmaster of St. Benedict and St. Peter, Paul's Wharf, of which the Rev. J. H. Coward, classical master to the choristers, was Rector. At the same time he learnt harmony from Bayley, master of the St. Paul's boys, and counterpoint from Dr. Steggall, for whom he sang the soprano part in his Mus.D. exercise at Cambridge in 1852. Through the liberality of Miss Hackett he received a course of lessons on the organ from George Cooper at St. Sepulchre's. In 1856 he was selected by Sir F. Ouseley as organist of his then newly-founded College at Tenbury, where he remained for some time. In 1859 he matriculated at Christ Church, Oxford, and took the degree of Mus.B. Shortly after, he left Tenbury for Magdalen College, Oxford, where after six months' trial he was appointed organist and *informator choristarum*. He then entered St. Edmund Hall as a resident undergraduate, and while discharging his duties at Magdalen, worked for his B.A. degree in Arts, which he took in Trinity Term 1863. Meantime, on the death of Stephen Elvey, he had been appointed organist of the University of Oxford, and was conductor of a flourishing College Musical Society and of another association at Exeter College. But nothing interfered with his duties at Magdalen, where he raised the choir to a very high state of efficiency. In 1865 he proceeded to his Mus.D. degree, and 1866 to his M.A., and became one

of the examiners for musical degrees. In 1872 he left Oxford and succeeded Goos as organist of St. Paul's Cathedral. The services were at that time by no means what they should have been; but Stainer possessed the confidence of the Dean and Chapter, and his hard work, knowledge, and tact, at last brought them to a worthier pitch of excellence.

Dr. Stainer did not confine his activity to his own University. He was a member of the Board of Musical Studies at Cambridge, and for two years was also examiner for the degree of Mus.D. there. He was examiner for musical degrees in the University of London; an Hon. Member of the Royal Academy of Music, and Hon. Fellow of the Tonic Sol-fa College; a Vice-President of the College of Organists, and a Vice-President of the Musical Association, of which he was virtually the founder. He was a juror at the Paris Exhibition of 1880, and at its close was decorated with the Legion of Honour. He was attached to the National Training School, London, as a Professor of Organ and Harmony, from its foundation, and at Easter 1881 succeeded Sullivan as Principal. In 1882 he succeeded Hullah as Inspector of Music in the Elementary Schools of England for the Privy Council. He was also a Member of Council of the Royal College of Music. [In 1888 he was obliged to resign his post at St. Paul's owing to his failing sight. In the same year he received the honour of knighthood. He was appointed Professor of Music in the University of Oxford in 1889, was Master of the Company of Musicians in 1900, died at Verona, March 31, 1901, and was buried at Holywell Cemetery, Oxford, April 6, of the same year. See *Musical Times*, 1901, pp. 297, etc.] His compositions embrace an oratorio, 'Gideon'; a cantata, 'The Daughter of Jairus,' composed by request for the Worcester Festival of September 1878; a cantata, 'St. Mary Magdalen' (Gloucester Festival, 1883); and an oratorio, 'The Crucifixion'—his most popular work—1887. He also wrote many services and anthems, and among his most successful and artistic pieces of church music must be named the well-known 'Sevenfold Amen.' He is the author of the two very popular manuals of *Harmony* and *The Organ* in Novello's series, and of a work on Bible music, and was part editor with W. A. Barrett, of a *Dictionary of Musical Terms* (Novello, 1876 and 1898). He also edited the interesting *Dufay and his Contemporaries*, 1898. Sir J. Stainer was beloved and esteemed by all who knew him, and was an admirable and efficient musician in all branches; but his great excellence was in his organ-playing, and especially his accompaniments, which were unsurpassed. He was a shining example of the excellent foundation of sound musical knowledge which may be got out of the various duties and shifts of the life of a clever chorister in one of our cathedrals.

STAMATY, CAMILLE MARIE, son of a Greek father and a very musical French mother, was born at Rome, March 23, 1811. After the death of his father in 1818 his mother returned to France, remained some time at Dijon, and finally went to Paris. There, after long coquetting between music and business as a profession, Stamaty, in 1828, took an employé's post in the Prefecture of the Seine. But music retained its influence on him, and under Fessy and Kalkbrenner he became a remarkable player. An attack of rheumatism forced him from playing to the study of composition. In March 1835 he made his first public appearance in a concert, the programme of which contained a concerto and other pieces of his composition. This led to his being much sought after as a teacher. But he was not satisfied, and in Sept. 1836 went to Leipzig, attracted, doubtless, by the fame of Mendelssohn and Schumann, then both resident there. After a short course of instruction from Mendelssohn, he returned to Paris early in 1837, and introduced much more classical music—Bach, Mozart, Beethoven, etc.—into his programmes. In 1846 he lost his mother, in 1848 he married, in 1862 was made Chevalier of the Legion of Honour, and on April 19, 1870, closed a long career of usefulness. From a crowd of pupils it is sufficient to name Gottschalk and Saint-Saëns. His most permanent works are educational—'Le Rhythme des doigts,' much praised; 'Études progressives' (opp. 37-39); 'Études concertantes' (opp. 46, 47); 'Esquisse' (op. 19); 'Études pittoresques' (op. 21); 'Six études caractéristiques sur Oberon,' and 12 transcriptions entitled 'Souvenir du Conservatoire.'

Besides these, his solo sonatas in F minor and C minor; a PF. trio, op. 12; a concerto in A minor, op. 2; sonatas, opp. 8 and 14; and other works, were much esteemed at the time. The concerto and some brilliant variations on an original theme (op. 3) were reviewed very favourably by Schumann (*Ges. Schriften*, ii. 155, 181).

STAMITZ (sometimes called STEINMETZ). A Bohemian musical family of much renown in the 18th century. (1) JOHANN WENZL ANTON¹ born June 19, 1717, son of the schoolmaster at Deutschbrod; a man evidently of great originality and force. In 1742 he took part as a solo violinist in the festivities at the coronation of the Emperor Carl VII., and shortly afterwards was taken to Mannheim by the Elector, who in 1745 appointed him his leading violin and director of chamber-music; he remained there till his death on or before March 27, 1757. He wrote much music for the violin, which shows him to have been a great and brilliant player. Six concertos, 3 sets of 6 sonatas, and some solo exercises, giving the effect of duets, were published at Paris,

and 21 concertos and 9 solos are still in MS. He also wrote symphonies, of which several sets of 6 were published, as well as concertos and sonatas for the harpsichord. [The thematic catalogue of 45 symphonies and 10 orchestral trios is given in Jhrg. iii. 1 of the 'Denkmäler deutscher Tonkunst in Bayern,' where four of the symphonies and one trio are reprinted. The introduction by Hugo Riemann is the most detailed account of the family that has yet appeared.] The music shows a great advance in effect and expression on anything that preceded them. (2) His brother, ANTON THADDEUS, born 1721, was a violoncello-player; according to Gerber, he was also in the Mannheim band. He became a priest, rose to many dignities, and died at Altbunzlau August 23, 1768. Another brother, JOSEPH, was distinguished as a painter. Cannabich was one of Johann's pupils; but a still more memorable one was (3) his eldest son, CARL, born at Mannheim, May 7, 1746, and like his father a remarkable violinist and composer. [He was a second violin in the Mannheim band in 1762-70.] In 1770 he went to Paris, and was known there as a player of the viola and violad'amore. He played in London in 1778. His opera, 'Der verliebte Vormund,' was given at Frankfurt. In 1785 he returned to Germany, and in 1787 we find him at Prague and Nuremberg, in 1790 at Cassel, and then at St. Petersburg, where he remained for some years, and where he brought out a grand opera, 'Dardanus.' He died at Jena in 1801.

His works include 70 symphonies, many published in opp. 1, 2, 3, 4, 6, 9, 13, 15, 16, 18, 19, and 24; others are in MS. They are mostly for a larger orchestra than that employed by his father; some have two 'concertante' violin parts; there are also many concertos, quartets, trios, etc. (see the summary in Riemann's preface to *Denkmäler deutscher Tonkunst*, Jhrg. iii. 1). (4) Another son of Johann was ANTON, born at Mannheim, 1753. He went to Paris with Carl, and published 13 symphonies, 3 piano concertos, a violin concerto, a violoncello concerto, and many quartets, trios, and duets. [The family had a great influence on the development of the symphonic form; the father raised the band to a pitch of superlative excellence, and Carl's experiments in orchestration pointed the way for later men. See Riemann's *Lexikon*, the *Quellen-Lexikon*, etc.] He died about 1820. G.

STANFORD, SIR CHARLES VILLIERS, MUS. D., D. C. L., LL. D., was born Sept. 30, 1852, at Dublin, where his father, an enthusiastic amateur vocalist, was Examiner in the Court of Chancery. His first teachers were Arthur O'Leary and Sir Robert Stewart, and various efforts in songs, piano pieces, etc., were published while he was yet a child. His first composition is stated to have been a march composed in 1860, and played in the pantomime 'Puss in Boots,' at the Theatre Royal, Dublin, 1863-64 (see *Mus. Times*, 1898,

¹ The confusion between Johann and Carl, his son (see below), is made worse by the habit of calling the father 'Johann Carl' as many authorities have done. Either says that his son Carl sometimes used the name Johann.

p. 785). He matriculated at Queen's College, Cambridge, in 1870, as choral scholar. On his appointment in 1873 to the important post of organist to Trinity College, in succession to Dr. J. L. Hopkins, he 'migrated' as an undergraduate to that college, from which he graduated in 1874 in Classical Honours. He had filled the post of conductor of the Cambridge Amateur Vocal Guild for a year or two before this, and had brought Sir R. Stewart's cantata, 'The Eve of St. John,' to a hearing in 1872. This Society was soon joined to the Cambridge University Musical Society (the choir of which had hitherto consisted of male voices only), and Stanford raised the position of the Society to a remarkably high level, incidentally making Cambridge an important musical centre. He was appointed conductor of the Society in 1873, and his activity was not long in bearing good fruit, in the first performances in England of Schumann's 'Faust' (Part iii.) and many other things, such as Brahms's 'Rhapsodie.' In each year, from 1874 to 1876, he was given leave of absence in order to prosecute his studies first with Reinecke at Leipzig, and then with Kiel at Berlin. In the spring of 1876, on the production of Tennyson's 'Queen Mary' at the Lycæum Theatre, the incidental music was provided by Stanford, having been composed at the poet's suggestion. This work, and a symphony which gained the second prize in a competition held at the Alexandra Palace, in the same year, brought the young composer's name into prominence, and from that time onwards he has been more or less regularly before the public as composer and conductor. In 1877, when he proceeded M.A., he organised and directed a concert at which works by Brahms and Joachim were performed for the first time in England, on the occasion when the Honorary Mus.D. degree was offered to both composers, and accepted by the latter. This was the first of many concerts at which the recipients of honorary musical degrees were similarly honoured. In 1877, too, a Festival Overture was played at the Gloucester Festival, and subsequently given at the Crystal Palace. A setting of Psalm xlv. was produced at Cambridge, and afterwards at a Richter concert.

The symphony just mentioned, in B flat, was played at the Crystal Palace in March 1879, but like a second 'Elegiac' symphony in D minor, played at Cambridge in 1882, concertos for P.F. and for violoncello, etc., is not included in the list of opus-numbers. Stanford's first opera, 'The Veiled Prophet of Khorassan,' to a libretto by W. Barclay Squire, produced at the Court Theatre, Hanover, Feb. 6, 1881, was only given once in England, at Covent Garden, July 26, 1893; an orchestral serenade (op. 17) was produced at the Birmingham Festival of 1882. In 1883 he received the hon. degree of Mus.D. at Oxford, and the same

degree at Cambridge in 1888. In 1885 he succeeded Otto Goldschmidt as conductor of the Bach Choir, and in 1887 was elected Professor of Music in the University of Cambridge, on the death of Sir G. A. Macfarren. He devoted his energies to improving the standard of general education required for the musical degrees at Cambridge, and in this and many other ways his influence on the music of the University, and the country at large, has been of great importance. On the opening of the Royal College of Music he became Professor of Composition, conductor of the orchestra and of the annual operatic performances, which have maintained a high standard of excellence, and which have brought many neglected works, old and new, to a hearing. In 1892 he resigned the post of organist to Trinity College, and has since lived in London. In 1901 he was appointed conductor of the Leeds Festival, and received the honour of knighthood; in 1902 he gave up the conductorship of the Bach Choir. In 1904 he was elected a member of the Royal Academy of Arts at Berlin.

Stanford's Irish descent gives his music a strong individuality, which is not only evident in his arrangements of Irish songs and in his work as a collector (see IRISH MUSIC), but stands revealed in his 'Irish Symphony' (op. 28), in the opera, 'Shamus O'Brien' (op. 61), the two orchestral 'Irish Rhapsodies' (opp. 78 and 84), the 'Irish Fantasies' for violin, and in many other definitely Irish compositions. The easy flow of melody, and the feeling for the poetical and romantic things in legendary lore (illustrated in the early song, 'La Belle Dame sans Merci,' the 'Voyage of Maeldune,' and many other places), are peculiarly Irish traits; but his rare mastery of every resource of orchestra or voices, the thoroughness of his workmanship, and his remarkable skill as a teacher of composition, are qualities not generally associated even with the more brilliant natives of Ireland. His wonderful versatility allows him to adopt, successfully, styles far removed from one another; that of the Latin settings of 'Te Deum,' 'Requiem,' 'Stabat Mater,' and of the Mass in G, has an affinity with the Italian composers of the 18th century. Part of his oratorio, 'Eden,' is strictly modal in utterance, a large number of his instrumental compositions are in the classical idioms of Germany, and his use of the fantastic or rhapsodical style of Ireland has been already referred to. In yet another style he has won what is perhaps the greatest success he has yet achieved: the early song, 'In praise of Neptune,' from op. 19, may have been a kind of essay in the nautical style, which reached its full fruition in the splendid 'Revenge' (Leeds Festival, 1896), the choral ballad which is known and loved wherever the best choral music is practised. The five 'Songs of the Sea' (op. 91), for baritons solo, male chorus, and orchestra,

have had hardly a less success, and in all these there is a breezy and unmistakably English atmosphere that endears them to all hearers. His use of orchestral colour is full of interest, and his scores are models of effective yet not exaggerated writing; but in one and all the colouring is properly subordinated to the design, and in the thematic development of his subjects will be found the central interest of these compositions. Although his 'Shamus O'Brien' was a great success, running for many weeks, his more serious operas have not as yet been heard by enough English people to be properly assessed on their real merits. The first, already mentioned, was only given for one extra night after the close of one of Harris's seasons; his second, 'Savonarola,' brought out at Hamburg April 18, 1884, was only performed for a single night under Richter at Covent Garden, July 9, 1884, owing to difficulties connected with its publication; the third, 'The Canterbury Pilgrims,' had four performances at Drury Lane Theatre by the Carl Rosa Company, in 1884; 'Much Ado about Nothing' (words by Julian Sturgis) was produced with great care and effect at Covent Garden, May 30, 1900, but in spite of the success of its two performances it also disappeared quickly from the repertory. Of course it is necessary to remember the singular methods of operatic management in England before assuming that these works have failed to attract the English public. Neither 'Savonarola' nor 'The Canterbury Pilgrims' has a really good libretto; the former, which begins with a passionately emotional prologue, loses its dramatic interest before the end is reached, and the frequent allusions to the lovely 'Angelus ad virginem,' though beautiful musically, are of small value on the stage. In the same way, 'Sumer is iucmen in' is used as a kind of motto to 'The Canterbury Pilgrims,' and with all the brightness of its first act, and the romantic charm of the second, the impression left by the trial in the third act is not very strong. 'Much Ado about Nothing,' alone of these works, has a remarkably effective close, and the dirge to Hero strikes a note of welcome pathos. 'Shamus O'Brien' was furnished with regular recitatives in place of the original spoken dialogue, for the performance in Germany (Breslau, 1907); in its original form, and interpreted by capable actors, it is deliciously bright and characteristic, with a touch of wild and fantastic beauty in the 'caoine' of the banshee.

The list of Stanford's compositions is as follows:—

(Unpublished works are indicated by an asterisk.)

- Op. 1. Eight songs from George Eliot's 'Spanish Gypsy.'
2. Suite for pf.
3. Toccata for pf.
4. Six songs by Heine.
5. 'Die Auferstehung,' Resurrection Hymn by Klopstock, for choir and orchestra.
6. Incidental music for Tennyson's 'Queen Mary.' (Lyceum Theatre, 1878.)
7. Six songs by Heine.

8. Fa. xiv. for soli, choir, and orchestra.
9. Sonata, pf. and cello, in A.
10. Morning, Communion, and Evening Service in B flat.
11. Sonata for pf. and vln. in D.
12. Evening Service in A (Festival of the Sons of the Clergy, 1880, for choir, orchestra, and organ).
13. Three Intermezzi, pf. and clarinet.
14. Six songs ('Requiescat,' 'Ode to the Skylark,' 'Sweeter than the violet,' 'There be none of Beauty's daughters,' 'Tragédie,' and 'Le bien vient en dormant').
15. Quartet, pf. and strings in F.
16. 'Awake, my heart,' Hymn by Klopstock.
17. Serenade for full orchestra in G.
18. Three Cavalier Songs (Browning), for baritone and male choir.
19. Six songs ('A Hymn in praise of Neptune,' 'Lullaby,' 'To the Rose,' 'Come to me when the earth is fair,' 'Boat Song,' 'The Rhine Wine').
20. Pf. Sonata in D flat.*
21. Elegiac Ode (Walt Whitman), for soli and chorus and orch. (Norwich Festival, 1884.)
22. Oratorio, 'The Three Holy Children.' (Birmingham Festival, 1885.)
23. Incidental Music to the 'Eumenides.' (Cambridge, 1885.)
24. 'The Revenge' (Tennyson), choral ballad. (Leeds Festival, 1886.)
25. Quintet for pf. and strings, in D minor.
26. Carus Seculare (Tennyson), for soprano solo, and chorus. Composed for Queen Victoria's Jubilee, 1887.
27. Psalm cl. for soprano and chorus. (Opening of Manchester Exhibition, 1887.)
28. 'Irish Symphony' in F minor. Richter, 1887.
29. Incidental music to the 'Oedipus Tyrannus.' (Cambridge, 1887.)
30. A Child's Garland of Songs (Stevenson).
31. Symphony in F. (Berlin, Jan. 14, and Crystal Palace, Feb. 23, 1888.)
32. Suite for vln. and orchestra. (Berlin, Jan., and Philharmonie, March 22, 1888.)
33. Overture, 'Queen of the Seas.' (Armada Tercentary.)
34. 'The Voyage of Maeldune' (Tennyson), soli, choir, and orchestra. (Leeds Festival, 1888.)
35. Trio in E flat for pf. and strings.
36. Morning, Communion, and Evening Service in F.
37. Two Anthems.
38. Anthem, 'The Lord is my Shepherd.'
39. Second Sonata for pf. and cello in D minor.
40. Oratorio, 'Eden' (Robert Bridges). (Birmingham Festival, 1891.)
41. Choral Ballad, 'The Battle of the Baltic.' (Hereford Festival, 1891.)
42. Six Pf. pieces.*
43. Six Songs, to poems by R. Bridges.
44. String Quartet in G.
45. String Quartet in A minor.
46. Mass in G, for soli, choir, and orchestra.
47. Four part-songs.
48. Incidental Music to Tennyson's 'Becket.' (Lyceum Theatre, 1893.)
49. Six Elizabethan Pastorals for unaccompanied choir, 1st set.
50. Ode, 'The Bard' (Gray), for baritone, chorus, and orchestra.
51. Three Motets for unaccompanied chorus.
52. Ode 'East to West' (Swinburne) for chorus and orchestra.
53. Six Elizabethan Pastorals, 2nd set.
54. Six Irish Pastorals for vln. and pf.
55. Opera, 'Lorena.'*
56. Symphony in D, 'L'Allegro ed il Pensieroso.'*
57. Fantasia and Toccata for organ.
58. Ten Dances for pf. (Five of them also scored for orchestra as a Suite of Ancient Dances).
59. Concerto, pf. and orchestra, in G.*
60. Moore's Irish Melodies, restored, edited, and arranged.
61. Opera, 'Shamus O'Brien.' (Opera-Comique, London, March 2, 1896.)
62. Choral Ballad, 'Phaëdre Crohoore' (J. S. Le Fanu), for choir and orchestra. (Norwich Festival, 1896.)
63. Requiem for soli, choir, and orchestra in memory of Lord Leighton. (Birmingham Festival, 1897.)
64. String Quartet in D minor.
65. The Clown's Songs from 'Twelfth Night.'
66. Te Deum, for soli, choir, and orchestra. (Leeds Festival, 1898.)
67. Six Elizabethan Pastorals, 3rd set.
68. Cycle of Quartets from Tennyson's 'Princess' with pf. accompaniment.
69. Opera.*
70. Sonata for pf. and vln. in G.*
71. Variations on an English Theme ('Down among the dead men') for pf. and orchestra.
72. Ballad, 'Die Wallfahrt nach Kevlar' (Heine), voice and pf.
73. Trio, No. 2, for pf. and strings in G minor.
74. Concerto for vln. and orchestra in D. (Leeds Festival, 1904.)
75. 'The Last Post' (Henley), for choir and orchestra. (Hereford Festival, 1900.)
76. 'Songs of Erin,' a collection of 50 Irish folk-songs.
- 76a. Opera, 'Much Ado about Nothing.' (Covent Garden, May 30, 1900.)
77. An Irish Lull (Moira O'Neill), for voice and pf.
78. Irish Rhapsody, No. 1 in D minor.
79. Four Irish Dances for Orchestra.
80. Concerto for clarinet and orchestra.*
81. Morning, Communion, and Evening Service in G.
82. Five sonnets from 'The Triumph of Love' (R. Holmes), for voice and pf.
83. Motet, 'The Lord of Might' for chorus and orchestra. (Festival of the Sons of the Clergy, 1903.)
84. Irish Rhapsody, No. 2, for orchestra.*
85. Quintet for strings, No. 1, in F.*
86. Quintet for strings, No. 2, in C minor.*
- 87.
88. Six Preludes for Organ.
89. Four Irish Dances for orchestra.
90. Overture in the style of a Tragedy.*

- Op.
 91. Songs of the Sea for harp, meze choir, and orchestra.
 92. Three Rhapsodies from Dante, for pf. solo.
 93. Five Characteristic Pieces for violin and pf. (also for violin and pf.)
 94. Symphony in E flat. * (In memorial of G. F. Watts.)
 95. Serenade-Nonet in F for strings and wind.
 96. Stabat Mater, Symphonic Cantata for soli, choir, and orchestra. (Leeds Festival, 1907.)
 97. Six 'Songs of Faith' (Tennyson and Walt Whitman).
 98. Evening Service on Gregorian Tones.
 99. String Quartet in G minor.
 100. Wellington (Tennyson) for soli, chorus, and orchestra.
 101. Six Short Preludes and Postludes for Organ, 1st set.
 102. Overture and Incidental Music to 'Attila' (Binyon). (His Majesty's Theatre, 1907.) *
 103. Fantasia and Fugue for organ.
 104. String Quartet in B flat. (In memorial Joseph Joachim.)
 105. Six Short Preludes and Postludes for organ, 2nd set.

WITHOUT OPUS-NUMBERS.

- Festival Overture. (Gloucester Festival, 1877.)
 Symphony in B flat. (Alexandra Palace, 1878.)
 Elegiac Symphony, in D minor. (Cambridge, 1882.)
 Scherzo in B minor for pf. *
 Songs—'Irish Eyes,' 'A Valentine,' 'Three Ditties of the olden Time,' 'La Belle Dame sans Merci,' 'Prospice' (Browning), 'The Tenth,' contr. to an album published by Teague and King (Winchester), 'I like my love' (contr. to album of Twelve New Songs by British Composers, 1891).
 Arrangements of Irish Songs—'Songs of Old Ireland,' 1882; 'Irish Songs and Ballads,' 1893.
 The 'Fet in Collection of Irish Music' was edited by Stanford for the Irish Literary Society in 1902-5.
 The operas, 'The Veiled Prophet,' 'Savonarola,' and the 'Canterbury Pilgrims,' which have no opus-numbers, are referred to above.
 Mention should also be made of an Installation Ode for the Chancellor of the University (the Duke of Devonshire), in 1892, which is a 'quodlibet' on well-known tunes. (See for this and many other details of Stanford's career, the *Musical Times* of 1898, pp. 785 ff.) M.

STANLEY, CHARLES JOHN, Mus.B., born in London, Jan. 17, 1713, at two years old became blind by accident, at seven began to learn music from John Reading, organist of Hackney, and a few months later was placed with Maurice Greene, under whom he made such rapid progress that in 1724 he was appointed organist of All Hallows, Bread Street, and in 1726 organist of St. Andrew's, Holborn. On July 19, 1729, he graduated as Mus.B. at Oxford. In 1734 he was appointed one of the organists of the Temple Church. In 1742 he published 'Six Cantatas, for a Voice and Instruments,' the words by Hawkins, the future historian of music, which proved so successful that a few months later he published a similar set to words by the same author. In 1757 he produced his 'Jephthah,' and in 1760 joined J. C. Smith in carrying on the oratorio performances formerly conducted by Handel, for which he composed 'Zimri,' 1760, and 'The Fall of Egypt,' 1774. In 1761 he set to music Robert Lloyd's dramatic pastoral, 'Arcadia, or The Shepherd's Wedding,' written in honour of the marriage of George III. and Queen Charlotte. [Eight solos for a German flute, violin or harpsichord appeared as op. 1, and Six Concertos in seven parts, for strings, as op. 2; another set of flute solos was made from these latter.] He published also 'Three Cantatas and Three Songs for a Voice and Instruments,' and three sets, of ten each, of Organ Voluntaries. In 1774, on the retirement of Smith, he associated Thomas Linley with himself in the conduct of the oratorios. In 1779 he succeeded Boyce as Master of the King's Band of Music. Burney says he was 'a neat, pleasing, and accurate performer, a natural and agreeable composer, and an intelligent instructor.' He died May

19, 1786. His portrait by Gainsborough was finely engraved by Mary Ann Rigg (afterwards Scott), and another portrait, at the organ, was engraved by Mac Ardell. W. H. H.

STANSBURY, GEORGE FREDERICK, son of Joseph Stansbury, a player upon the flute, bassoon, and viola, residing in Bristol, was born in that city in 1800. When only twelve years old he was proficient on the pianoforte, violin, and flute, and at nineteen was engaged by Mme. Catalani as accompanist during a concert tour through England. He was, in 1820-23, musical director at the Theatre Royal, Dublin. In 1828 he appeared at the Haymarket Theatre as Capt. Macheath in 'The Beggar's Opera,' and on Jan. 15, 1829, at Covent Garden in A. Lee's 'Nymph of the Grotto.' He sang there and at Drury Lane for several years. [He was re-engaged at Dublin from 1833 to 1835; his music for 'Life in Dublin' was given there in 1834. W. H. G. F.]

He was engaged as musical director and conductor at the St. James's, the Surrey, and other theatres. He composed music for 'Waverley' (with A. Lee), and 'Puss in Boots,' 1832; 'The Elfin Sprite,' and 'Neuha's Cave,' 1833, and other pieces, besides many songs, etc. His voice was of poor quality, but he was an excellent musician, and a ready composer. He died of dropsy, June 3, 1845. W. H. H.

STANSFIELD, ELY, a Yorkshire musician, settled at or near Halifax in the early part of the 18th century. He issued 'Psalmody Epitomiz'd, being a brief collection of plain and useful Psalm Tunes, both old and new, in four parts, London, second ed., 1731, 8vo.' The book is of considerable interest as a volume of Yorkshire psalmody, many of the tunes being by Stansfield himself, and named after Lancashire and Yorkshire towns. F. K.

STAR SPANGLED BANNER, THE. An American national song, the melody being that of an English lyric commencing, 'To Anacreon in Heaven.' The story of the verses is as follows: Francis Scott Key, a young lawyer of Baltimore, during the English and American war in 1814, sought the release of a medical friend who had been captured by the English, and who was detained on one of the English vessels. With a flag of truce and a letter from the President, he rowed out on Sept. 13, 1814, and obtained his request; but as there had been planned an attack on Fort M'Henry, they were not allowed to leave until the next day. During the bombardment the Baltimore lawyer anxiously watched the stars and stripes floating over the fort until nightfall, and when morning dawned, to his great joy, the flag still held its position. Scott Key wrote the first verse during his detention and completed the song ashore. It was immediately published on a broadside, and in a newspaper, *The Baltimore American* for Sept. 21, 1814. The author had adapted it to the English air which had more

than once formed the vehicle for American patriotic songs, 'Adams and Liberty' being one of these effusions. This American popularity for such songs has caused several claims to be set up for the American origin of the air. For one of these see the *Musical Times* for August 1896, p. 516 ff.

The English song associated with the tune, 'To Anacreon in Heaven,' was written for, and sung at all important meetings of the 'Anacreontic Society,' held chiefly at The Crown and Anchor in the Strand. These words were by Ralph Tomlinson, a president of the Society, and the music was by John Stafford Smith, who claimed it as his in his *Fifth Book of Canzonets, Catches, and Glees* (circa 1780), long after its popularity had been established. An early appearance of the words is in *The Vocal Magazine*, 1778. After that date they were reprinted in nearly every subsequent collection.

In America, as before stated, the song was greatly sung, and its fine tune was adapted to numerous songs of a patriotic cast. The Freemasons, too, also used it for one or more songs relating to their Order. It is effectively introduced into Puccini's 'Madama Butterfly.' F. K.

STARCK (von Bronsart), INGEBORG, was born at St. Petersburg, of Swedish parents, 12/24 August 1840. Henselt was one of her first masters. When eighteen she studied for some time under Liszt at Weimar, and then made a long concert tour through the principal towns of Germany, playing at the Gewandhaus Concerts in 1858 and 1859, at Paris and St. Petersburg. In 1862 she married Hans von Bronsart. After staying some time in Leipzig, Dresden, and Berlin, Herr Bronsart and his wife settled in Hanover, where he was Intendant of the theatre. Here she devoted herself entirely to composition. An opera by her, 'Die Göttin von Sais,' had been unsuccessful in Berlin; but her next dramatic work, a setting of Goethe's 'Jery und Bätely,' was played with great success in Weimar, Cassel, and many other places. In 1870 she wrote a 'Kaiser Wilhelm March,' which was played at Berlin at a state performance, to celebrate the return of the troops. In 1891 her four-act opera, 'König Hiarne,' was produced, the libretto by Hans von Bronsart and Friedrich von Bodenstedt. ['Manfred,' a dramatic tone-poem in five pictures, was given at Weimar in 1901.] After settling in Hanover, Frau von Bronsart, who is a pianist of rare excellence, was seldom heard in public. Her compositions include a concerto and other PF. pieces, many songs, and some music for strings. W. B. S.

STARCK, LUDWIG, was born at Munich, June 19, 1831; was educated at the University there, and learned music in the good school of the Lachners. In 1856 he went to Paris, and after a short residence there removed to Stutt-

gart, and in conjunction with Faisst, Lebert, Brachmann, and Laiblin, founded the Stuttgart Music School, which has since become so well known. Among the teachers in the School were Speidel, Pischek, Levi, and other well-known names. Dr. Stark's energies were since that time continually concentrated on the school, which has flourished accordingly, and in July 1865 was allowed to assume the title of Conservatorium.

A large number of works have been prepared for the use of the students, among which the 'Grosse Klavierschule' of Lebert and Stark, in 4 vols., is conspicuous. Also by the same—'Instruktive Klavierstücke' in four grades; 'Jugendbibliothek' and 'Jugendalbum,' each in twelve parts; 'Instruktive klassischer Ausgabe,' of various writers, in 21 vols., by Lebert, Faisst, I. Lachner, Liszt, and Bilow; and many more. The famous Cotta edition of Beethoven's pf. sonatas is the best-known of these publications.

Dr. Stark was made Royal Professor in 1868, and Hon. Dr. Ph. 1873, and had many other distinctions; he died at Stuttgart, March 22, 1884.

STASSOV, VLADIMIR VASSILIEVICH, a celebrated art critic, and the literary champion of the New Russian School of Music. Born in St. Petersburg, Jan. 14, 1824, he was the son of an architect of great talent. Stassov was educated, like Serov and Tchaikovsky, at the School of Jurisprudence, which he left in 1848. From 1851 to 1854 he resided abroad, chiefly in Rome and Florence, as private secretary to Prince Demidov. In the former city he wrote his first important contribution to musical literature, *L'Abbé Santini et sa collection musicale à Rome*. On his return to St. Petersburg he began by being private assistant to the director of the Imperial Public Library, Baron Korf, and in 1872 was himself appointed director of the department of Fine Arts, a position which he held until his death on Oct. 23, 1906. He wrote indefatigably on a great number of subjects, artistic and literary, and was much preoccupied with the theory—which he shared with Glinka—that the national epics of Russia were mainly of Eastern origin. His earlier musical articles had chiefly an erudite and archaeological interest, but with the birth and struggles of the young Russian School they assumed a new and far more vigorous character, and henceforth he stood as the representative champion of nationality in art. His views are clearly and trenchantly defined in such remarkable essays as *Twenty-five Years of Russian Art*, *The Tracks of Russian Art*, *Art in the XIXth Century*, etc. His style is intensely individual, his sincerity unquestionable; while his views invariably incline to the progressive and liberal side. The value of his criticisms is increased by his extensive and accurate learning, which enabled him to use comparative methods most effectually. Apart from polemics, Stassov has

collected and published the most valuable materials for the biographies of the chief Russian composers. His monographs upon Glinka, Moussorgsky, Borodin, Cui and Rimsky-Korsakov are indispensable to those who desire to study the development of Russian national music. His influence on contemporary Russian art was immense, and can best be realised in the number of works undertaken at his suggestion, and dedicated to him. His collected works from 1847 to 1886 were published by his admirers in a jubilee edition (3 vols. St. Petersburg, 1894), and a fourth volume, dedicated to Count Tolstoi, was added in 1905. R. N.

STATUE, LA. Opéra-comique in three acts, text by Carré and Barbier; music by Ernest Reyer. Produced at the Opéra-Comique, Paris, April 11, 1861. Revived as a grand opera at the Opéra, 1903.

STAUDIGL, JOSEPH, one of the most distinguished and accomplished singers of modern times, born April 14, 1807, at Wöllersdorf, in Lower Austria. His father destined him for his own calling, that of Imperial huntsman (Revierjäger), but for this he was not sufficiently strong, and in 1816 he entered the Gymnasium of Wiener Neustadt, where his beautiful soprano voice soon attracted attention in the church. In 1823 he attended the philosophical college at Krems, and was persuaded, in 1825, to enter upon his novitiate in the Benedictine Monastery at Melk. Here his voice, which had developed into a fine sonorous bass, was invaluable for the church services. A vague impulse drove him in Sept. 1827 to Vienna to study surgery, but money ran short, and he was glad to accept a place in the chorus at the Kärnthnerthor Theatre. Here he took occasional secondary parts, until the sudden illness of one of the solo singers brought him forward as Pietro in the 'Stumme von Portici' ('Masaniello'), after which all the principal parts fell into his hands. High as was his position on the stage, he was still greater as a singer of oratorio and church music. In 1831 he was admitted to the Court Chapel, and in 1837 sang for the first time at the great musical festival of the Gesellschaft der Musikfreunde in the 'Creation.' In 1833 he sang in the 'Seasons' for the Tonkünstler Societät, a society to which he rendered the greatest services. Though not even a member, he sang at no less than eighty of its concerts, and absolutely declined to accept any fee. Differences with the management of the Court Theatre led him to the Theatre 'an der Wien' on its reopening in 1845. There he acted as chief manager, and, with Pischek and Jenny Lind, entered on a series of fresh triumphs. He returned to the Court Theatre in 1848, but only to expose himself to fresh annoyance up to February 1854, when an abrupt dismissal embittered the rest of his life. His last appearance in public was in 'St. Paul,' at the Tonkünstler Societät, on Palm Sunday,

1856. A few days after, insanity developed itself, and he was taken to an asylum, which he never quitted alive. His repeated tours abroad spread his fame far and wide, and he had many admirers in England, which he often visited, and where he sang in English. He created the part of 'Elijah' at the Birmingham Festival of 1846, singing the music at sight at the grand rehearsal. As a singer of Schubert's Lieder he was without a rival. He died March 28, 1861, and half Vienna followed him to the grave.

His youngest son, JOSEPH, born March 18, 1850, possesses a flexible sonorous baritone, which he cultivated with success under Rokitsky at the Vienna Conservatorium till 1874, when he left. He made his mark as an oratorio singer in the principal towns of Germany and Switzerland. In 1875-83 he was frequently engaged at the Court Theatre of Carlsruhe, and was chamber-singer to the Grand Duke. [In 1885 he married Gisele Koppmayer, an Austrian, pupil of Mme. Marchesi, who was a favourite contralto singer in opera at Hamburg, Berlin, Bayreuth, etc. She and her husband sang together in a concert tour in America (*Musik. Wochenblatt*, 1888, p. 349). A. C.] C. F. P.

STAVE (Lat. *Systema*; Ital. *Sistema*; Germ. *Linien-system*, *System*; Fr. *Portée*; Eng. *Stave*, *Staff*). A series of horizontal lines, so arranged that the signs used for the representation of musical notes may be written upon or between them.

Though the etymology of the term cannot be proved, its derivation from the familiar Saxon root is too obvious to admit of doubt. Its use, as applied to the verses of a Psalm, Canticle, or ditty of any kind, is very ancient, and, as we shall presently show, the music sung to such verses was originally noted down in such close connection with the verbal text that it may fairly be said to form part of it. When a system of lines and spaces was engrafted on the primitive form of notation, the old term was still retained; and we now apply it to this, even more familiarly than to the verse itself. The best proof that this is the true derivation of the term lies in the fact that Morley calls the Stave a Verse, and describes the Verse as consisting of Rules¹ and Spaces. [For the early forms of notes see NOTATION.]

About the year 900 a single horizontal line was drawn across the parchment to serve as a guide to the position of the Neumes written upon, above, or below it. This line, the germ of our present Stave, has exercised more direct influence upon the art of notation than any other invention, either of early or modern date. It was originally drawn in red. All Neumes placed upon it were understood to represent the note F. A Neume written immediately above it represented G; one immediately below it, E. The places of three signs were, therefore,

¹ Rules, i.e. lines. Printers still employ the same term.

definitely fixed; while those written at greater distances above or below the line, though less certain in their signification, were at least more intelligible than they had been under the previous system.

A yellow line was soon afterwards added, at a little distance above the red one. Neumes written on this line represented the note C, and the position of a whole septenary of signs was thus fixed with tolerable clearness; for signs placed exactly half-way between the two lines would naturally represent A, while the positions of D and B above and below the yellow line, and G and E above and below the red one were open to very little doubt in carefully-written MSS. When black lines were used instead of coloured ones the letters F and C were written at the beginning of their respective 'rules'; and because these afforded a key to the Notation they were called *Claves*, or, as we now say, *Clefs*.

Early in the 11th century two more black lines were added to the stave; one above the yellow line, and the other between the yellow and red ones. The upper black line then represented E, and the lower one A; and the combined effect of the whole was to produce a four-lined stave; and when convenience suggested the practice of changing the position of the clefs from one line to another, there remained but little to distinguish the notation of the 12th and 13th century from that now invariably used for plain-song.

[For examples of a stave in which the spaces between the lines were only used, and one in which the lines were used without the spaces, see vol. iii. p. 397.] These collateral inventions soon fell into disuse. The system of alternate lines and spaces was adopted, to the exclusion of all others, in every country in Europe. Henceforth, the only difference lay in the number of lines employed. The natural tendency at first was to multiply them. In early MSS. we constantly find staves of six, eight, twelve, fifteen, and even a still greater number of lines, embracing a compass sufficient for the transcription of an entire vocal score. After a time the difficulty of reading so many lines at once led to the adoption of a more commodious form, consisting of two groups, with four black lines in each, separated by a single red line, on which no notes were written. Staves of this kind are rare; but an example may be seen at fol. 201a of the Chaucer MS. in the British Museum.¹ Finally, these variable forms were relinquished in favour of a fixed standard, which in the 15th and 16th centuries admitted the use of four, five, or six lines only. The stave of four lines was used exclusively for plain-song, and is retained for that purpose to the present day. That of six lines was used for organ Music, and music for the virginals.

¹ Arundel MSS. 248.

[It is not impossible that the six-line stave remained in vogue because paper ruled for lute-music could be employed.] That of five lines was used for all vocal music except plain-song, and, after the invention of printing, for music of every kind.

W. S. R.

STAVENHAGEN, BERNHARD, born Nov. 24, 1862, at Greiz (Reuss), studied with Kiel and Rudorff, and became one of the most beloved if not the favourite of Liszt's own pupils. He received the Mendelssohn prize for pianoforteplying in 1880, and lived till 1885 in Berlin, since when he settled in Weimar, where in 1890 he became Court pianist to the Grand Duke and in 1895 Capellmeister. In 1898 he went to Munich in the latter capacity, and was elected director of the Royal Academy of Music there in 1901, but gave up the post in 1904 and returned to Weimar, where he still lives as teacher, pianist, and conductor. He has composed some piano pieces, of which a minuet is well known. In 1890 Stavenhagen married the singer, Agnes Denis.

H. V. H.

STCHERBATCHEV, NICHOLAS VLADIMIROVICH, pianist and composer, born August 24, 1853. He spent part of his youth in Rome, but on his return to Russia became closely associated with the young Russian School. His compositions, mostly published by Belaiev in Leipzig, are as follows:—

A. Orchestral.—'Serenade,' op. 33; two Idylls.
B. Pianoforte.—'Féeries et Pantomimes,' op. 8 (two books); 'Mosaics,' op. 15; 'Scherzo-Caprice,' op. 17; 'Echos,' op. 18; 'Allegro Appassionato,' op. 22; three Idylls, op. 32; two pieces, op. 28; 'Extempromptu,' op. 29; 'Melancholia,' op. 31; 'The First Snow,' op. 32; 'Barcarolle,' op. 35; 'two Extempromptu,' op. 36; 'Impromptu Vilanelle,' op. 38; 'Valse,' op. 21 (3), op. 27 (2), op. 34 (Valse entracte); Mazurkas, opp. 13, 40, 42; Preludes and Interludes, opp. 20, 35, 37; Etudes, opp. 19, 26, 30.
C. Vocal.—Six songs to words by Count A. Tolstoy, op. 24; six songs to words by Heine.

ANDREW VLADIMIROVICH, born Jan. 29, 1869, in the Government of Poltava. Entered the St. Petersburg Conservatoire in 1887, where he studied under F. Blumenfeld, Liadov, and Rimsky-Korsakov. The composer of a march for orchestra, op. 5, a pianoforte sonata, op. 6, and a considerable number of songs and piano pieces.

R. N.

STEFFANI, AGOSTINO. This very remarkable man was born July 25, 1653, at Castelfranco. Of his parentage nothing is known. He appears to have entered one of the Conservatories early, and become a singing-boy at St. Mark's in Venice, where in 1667 he was heard by a Count von Tattenbach, probably an emissary of the Court of Bavaria. The Count was so delighted with his voice and intelligence, that he carried him off to Munich. He was educated at the expense of the Elector Ferdinand Maria, as appears from a decree² of July 26, 1668, ordering a payment of 150 florins to Count Tattenbach for the board and lodging of the 'Welscher Musikus Augustin Steffani' during the previous year. By another decree of July 9, 1668,

² See Rudhard's *Geschichte der Oper am Hofe zu München*. Nach archivalischen Quellen bearbeitet. Erster Theil, Die Italiänische Oper, 1654-1787.

the young 'Churfürstlicher Kammer- und Hofmusik' had been already apprenticed to Johann Kaspar Kerl to learn to play (*schlagen*) the organ, and to be boarded, for the yearly sum of 432 florins. A further entry of the pay-office shows that the yearly cost of the Hof- und Kammermusik was, for 1669, 903 fl. 12 kr.; for 1670, 997 fl. He remained with Kerl till Oct. 1, 1671, from which day he was boarded and lodged by the Churfürstlicher Kammerdiener Seyler for 156 fl. a year. As Hofmusik, Steffani received 300 fl., in addition to a clothing allowance of 300 fl. a year, by a decree of Jan. 15, 1672. At the commencement of Oct. 1673 he travelled to Rome in order to perfect himself in his art. Here he began to compose assiduously, for there is a small oblong volume of motets in the Fitzwilliam Museum at Cambridge, an original MS., of which there seems no reason to doubt the authenticity. In it we find the following compositions, all dated except one. To speak of them chronologically: the first, dated Nov. 1678, is a 'Laudate Pueri' a 9. The next, dated Dec. 30, 1673, is a splendid 'Laudate Dominum' for 8 canti concertati, divided into two choirs. Again in 1673, with no month given, we have a 'Tribuamus Domino'—one short movement for two choirs of S.S.A.T. In the following year we have a 'Sperate in Deo' for S.S.A.T.B. in three fine movements, the last a fugue. The remaining piece, not dated, is a 'Beatus vir' for S.S.B., with two violins and a bass.

In Rome he appears to have had a long illness, as he received 50 crowns extra for expenses incurred while laid up. Bernabei succeeded Kerl as Capellmeister at Munich in that year. After his return Steffani again took up his position as Kammermusik with a pay of 770 fl. 20 kr., and almost immediately published his first work, 'Psalmodia vespertina volans 8 plenius vocibus concinenda ab August. Steffana in lucem edita aetatis suae anno 19,¹ Monachii, 1674.' This work was a brilliant success for the young composer, and a portion of it was thought worthy of being included by Padre Martini in his *Saggio di Contrappunto*, published just a hundred years later. On March 1, 1675, he was appointed court organist.

But music was not the only study which had occupied his mind; he had studied mathematics, philosophy, and theology with so much success that in 1680 he was ordained a priest with the title of Abbat of Lepsing; and such was the favour shown to him by the new Elector, his old friend Ferdinand Maria having died the year before, that a decree of Nov. 3, 1680, accords to the 'Honourable priest, Court and Chamber musician, and Organist Steffani,' a present of 1200 florins for 'certain reasons and favours' (gewissen Ursachen und Gnaden). Hitherto he

¹ [On this erroneous statement of age see the *Quellen-Lexikon*. It is from the same dedications that we know him to have learnt from Bernabei.]

had confined himself to the composition of motets and other church music, but now appeared his first work for the stage. The title, taken from the contemporary MS., evidently the conducting score, in the Royal Musical Library at Buckingham Palace, in an Italian hand, probably that of his secretary and copyist Gregorio Piva, runs thus:—'Marco Aurelio, Drama posto in Musica da D. Agostino Steffani, Direttore della Musica di Camera di S. A. S. etc. di Baviera, l'anno 1681.' It will be seen that a further step had been gained—he was now Director of Chamber-music. In 1683 appeared some Sonate da Camera for two violins, alto, and bass, and in 1685 a collection of motets entitled 'Sacer Janus Quadrifrons 3 voc. Monachii,' but no trace of these works is to be found. For the Carnival of 1685 he composed the opera 'Solone,' which appears to have been an opera buffa in three acts; the score, however, like all the Munich operas by Steffani with the exception of 'Marco Aurelio,' is lost. He also composed in this year a musical introduction for a tournament, with the title: 'Audacia e Rispetto.' The new Elector Maximilian Emanuel was married at the end of 1685 to the Archduchess Maria Antonia, daughter of Leopold I., and the wedding festivities in Munich in the first days of January 1686 began with the opera 'Servio Tullio,' again by Steffani, with ballets arranged by Rodier, and music to them by Dardespain, the Munich Concertmeister, danced by twelve ladies and gentlemen of the court, with costumes from Paris. The music made its mark, as we shall see hereafter. On Jan. 18, 1687, the birthday of the young Electress, we have an opera—the text of which was by the new Italian secretary Luigi Orlandi, whose wife sang on the stage—called 'Alarico il Balta, cioè l'audace, re dei Gothi,' with ballets composed, arranged, and danced as before. For this opera fresh Italian singers were brought from Italy. Of the value of Steffani's music to it no record is given. In 1688 he composed the opera 'Niobe, regina di Tebe,' probably for the Carnival, the text again by Orlandi. This was his last work for the Court of Munich.

Various reasons have been put forward to account for his leaving a court where he had been so well treated, and where the art of music was held in such esteem, for Munich had not only at this time good singers, a good orchestra, and experienced and intelligent audiences, but had likewise a splendid musical history. The Elector had granted him 750 florins on account of his two operas and for a 'Badekur' in Italy in June 1686. In May 1688 gracious permission was given to him to go again to Italy, in consideration of his twenty-one years' service; his salary was not only paid to the end of June, but from the beginning of July he was given three years' salary as a reward! Not only so, but his debts

were paid by the Court Treasurer out of this, and the balance was sent to him in Venice, where he had gone. The main reason for his deserting Munich was no doubt that on the death of the elder Bernabei at the end of the year 1687 his son, who had come from Italy in 1677 to fill the post of Vice-Capellmeister, was in the early part of 1688 made Capellmeister, thus debarring Steffani from further promotion. Added to this, the Duke of Brunswick, Ernst August, who had been present at the festivities when 'Servio Tullio' was performed, was so delighted with Steffani's music and singing that he had already made him an offer to go to Hanover, and Steffani appears actually to have made use of the leave granted for the Badekur in Italy in 1686 to spend his time in Hanover instead of there. The appointment then of the younger Bernabei to the Munich Capellmeistership must have decided him at once to leave Munich, and from Venice at the end of 1688 or early in 1689 he made his way to Hanover, there to remain and become Capellmeister, and a good deal besides.

If Munich was a pleasant place for a musician of genius, Hanover was not far behind it. It might not have the same glorious musical history; but Steffani found there congenial society, and singers and players of great excellence. The Court of Hanover was renowned for its magnificence and courtesy, which were, however, combined with a friendly simplicity held to be the best in Germany.¹ One of its principal ornaments was the great philosopher Leibniz, who had resided there since 1676, and who, with the Duchess Sophia, had raised the tone of the Court to a very high intellectual standard. There was also the court poet, Abbatte Ortenso Mauro, at once Geheimer Secretär, Hofceremonielmeister, and political agent, who came to Hanover in 1679, and in whom the Duchess placed great confidence. Steffani became the friend of these men. Up to this time the operas at Hanover (chiefly imported from Venice) were given in the small French theatre, but that being deemed too small, a new opera-house was built, which was pronounced to be the most beautiful in all Germany. It created the reputation of its architect Thomas Giusti, and caused him to be called to Berlin and other towns for similar purposes. The new house was opened in 1689 with 'Henrico Leone,' by Mauro and Steffani. The score in Buckingham Palace gives a list of the scenes, machinery, etc., which might astonish even a 20th-century reader. It had a very great success, was given in German in 1696 at Hamburg and in 1697 at Brunswick, and acquired great celebrity. The opera shows marked advance on 'Marco Aurelio.' A remarkable change is found in the instrumentation. There are flutes, hautboys, bassoons, three trumpets and drums, in addition to the

strings, in four parts. There are delightful contrapuntal devices in the scoring, all the wind instruments have obbligato passages, one air a vigorous fagotto obbligato throughout. Chrysander states (*Händel*) that the opera-company in Hanover was divided into two camps, an instrumental (French) and a vocal (Italian), both, however, working harmoniously. The singers must have been of the best if they could execute these difficult arias; the band, too, must have been excellent. The leading violin in the orchestra was Farinelli (uncle of the famous singer), who had been much in France and in Spain. Corelli was a great friend of Concertmeister Farinelli, and during his tour in Germany spent some time at Hanover, where he became acquainted with the Electoral family. The hautboys, too, were particularly good, and Chrysander supposes that Handel wrote his first hautboy concerto for this orchestra.

'Henrico Leone' was followed in the summer of this year by 'La lotta d'Aleide con Achelao,' a divertimento drammatico in one act, a charming work, written probably also by Mauro. It seems to have been performed at the Summer Theatre at Herrenhausen. The next opera was 'La superbia d'Alessandro,' in 1690 (the conducting score gives 1691 as the date), the words by Mauro; a fine work. Many songs have obbligato instrumental parts, especially one in the second act, where two flutes obbligati are sustained by muted violins and alto—a beautiful piece; also one song with harpsichord solo. This opera also found its way to Hamburg and Brunswick in a German translation. 'Orlandogenoso' came out in 1691—another fine work written in conjunction with Mauro. 'Le Rivali concordi' appeared in 1692, written again by Mauro, and afterwards performed at Hamburg. We now come to 'La libertà contenta' (Mauro) in 1693, in which evidence is given of great further progress, for nothing of such importance had hitherto come from his pen. It is full of beauties of all kinds—a fine overture, fine counterpoint, beautiful melodies, very difficult arias, and powerful recitatives. It had the greatest success, and was most highly thought of at Hamburg. The movements are longer and more developed than in his previous works.

It was in the next year that Steffani issued his celebrated pamphlet, entitled *Quanta certezza habbia da suoi Principii la Musica, ed in qual pregio fosse perciò presso gli Antichi*. Amsterdam, 1695. Risposta di D. A. Steffani Abbatte di Lepsing Protonotario della San Sede Apostolica. Ad una lettera del S^{ro}. March^e. A. G. In difesa d'una Proposizione sostenuta da lui in una Assemblée. Hannovera Sett. 1694, 72 pp. in 12. It was translated twice into German: in 1699 by Andreas Werckmeister at Quedlinburg; in 1760 by Jean Laurent Albrecht at Mühlhausen. Steffani ably discusses the

¹ See Chrysander's *Händel*.

question whether music exists only in the imagination, or is grounded on nature and science. In 1695 we have the opera 'I trionfi del Fato, o le glorie d'Enea,' another charming work. It found its way to Hamburg in 1699. An opera in one act, 'Baccanali,' was also composed this year for the small theatre in Hanover. For the Carnival of 1696 the grand opera of 'Brisceide' was composed, the words by Palmieri, Comes Italus. No composer's name is mentioned, and Chrysander thinks it is not by Steffani; but the two scores and collections of Steffani's songs at Buckingham Palace leave little doubt on examination that it is his work, and in his usual manner.

A change was now about to take place in Steffani's circumstances. He was no longer to be the active composer of operas, and capellmeister, but from this time forth was destined to devote his time chiefly to diplomacy, though he never forsook the art of which he was so great an ornament. Ernst August had sent 5000 men to assist the Emperor against the Turks, and some 8000 against the French; his two eldest sons, George (afterwards King of England) and Frederick Augustus, had served in the field, and three others had been killed in the wars. The Emperor as a reward determined, in 1692, to create a ninth Elector, and raise the younger branch of the house of Brunswick-Lüneburg to the Electorate. This was generally deemed just, but many difficulties stood in the way, and during four years the position of Ernst August as Elector became more and more difficult, so that, in 1696, it was determined to send an Envoy Extraordinary round to the various German Courts to smooth matters over, and Ernst August and Leibniz could find no one among the court *personnel* in Hanover so well fitted for the post as Abbate Steffani. With the title of 'Envoyé Extraordinaire' he set out on his mission, and so admirably did he succeed, that at the end of the mission he was not only granted a considerably larger salary than he had hitherto had at Court, but Innocent XI. was induced to raise him in 1706 to the dignity of Bishop (*in partibus infidelium*) of Spiga in Anatolia, Asia Minor—the ancient Cyziens. This was also, perhaps in recognition of Steffani's services, aided by the tolerant Leibniz, in procuring for the Roman Catholics in Hanover the privilege of holding public worship. Steffani was now an accomplished courtier and diplomatist. In the early part of 1698 he was sent to Brussels as Ambassador, and there had his first audience on March 1. In this year the Elector Ernst August died, and Steffani afterwards transferred his services to the Elector Palatine at Düsseldorf, where he became a Privy Councillor as well as the Pope's Protonotarius for North Germany, though at what time this occurred is not known. In 1709 we find Steffani again with two new operas,

one for the Court at Hanover, the other at Düsseldorf. Both are stated in the scores at Buckingham Palace to be by Gregorio Piva—his secretary, whose name he adopted for his compositions after he became a statesman, and this is the earliest date at which it occurs in any of the MSS. of his works, as far as I know. The opera given at Hanover is called 'Enea, or Amor vien dal destino,' in the large copy, but in the conducting score 'Il Turno'—in three acts, and is a very fine work; again an advance on any previous effort. The Düsseldorf opera, 'Tassilone Tragedia in 5 Atti,' is only represented at Buckingham Palace by a vocal score; the overture and all instrumental effects are wanting, only the bass being given to the different pieces; but the singers' names, all Italian, are mentioned. The music is mostly excellent. The movements of both these operas of 1709 are all long, well developed, and broad, and our composer has not failed to march with the times. There remains one more opera to speak of, 'Arminio,' which, according to the full score (one of those brought from Hanover by George I.), was composed for the Court of the Elector Palatine in 1707. Though bearing no composer's name, it is without doubt a composition of Steffani, entirely in his manner and one of his very finest; the instrumental colouring still more full and varied than in any other opera of his. And what further establishes its claim to be considered Steffani's is the fact that the fine air, with fagotto obbligato from 'Henrico Leone,' is introduced with other words, and for a soprano instead of a tenor voice. This opera, and 'Tassilone,' show that the Palatine Court at that time possessed a very fine orchestra, and a splendid company of singers. It is quite possible that Steffani composed more operas than these, and that several may have been written for Düsseldorf which have not come down to us; but what we have, form a splendid series of masterly works that establish him as a composer of the first rank, equal to Lulli, greatly his superior as a contrapuntist, if possibly, and only possibly, inferior to him in dramatic force. In Hamburg his reputation was so great that no music was thought equal to his. There Bach and Handel as young men must have listened to his operas.

Though, however, his operas were his greatest works, they could not attain the same universal popularity as his well-known duets for various voices, with a bass accompaniment. These are mostly in three long movements, some with recitatives and solos, in the cantata form, following Carissimi and Stradella. Of these celebrated duets there are more than a hundred in the British Museum, and in the splendid copy in 3 vols. in Buckingham Palace. The words were mostly by Ortensio Mauro, Avera, Abbate Conti, Conte Francesco Palmieri, etc. The testimony to the great excellence of these

compositions is abundant. Burney says in speaking of these duets, 'Those of the admirable Abbate Steffani were dispersed in MS. throughout Europe.' Mattheson again, 'In these duets Steffani is incomparable to all I know, and deserves to be a model, for such things do not easily become old.' Chrysander also writes, 'These duets are the greatest of their kind.' To the foregoing it is useless to add further commendation. The most renowned singers, Senesino, Strada, and others, delighted in them, and used them constantly for practice in both expressive and florid singing.¹ No copies of these duets are dated, but they were probably all composed after he went to Hanover; and some of them are known to have been written for the Princess Sophia Dorothea.

The Duke of Brunswick, Anton Ulrich, was converted to Romanism in 1710, and we find Steffani going from Düsseldorf to Brunswick to accept in the name of the Pope a piece of ground as a site for a Catholic church. At the time of the Carnival of this year we find him in Venice in company with Baron Kielmansegge, and he there met Handel, whom he induced to visit Hanover on his way to London. Handel testifies to Steffani's great kindness to him while in Hanover; he was anxious, too, that he should become Capellmeister at this Court. About the year 1712 the new church in Brunswick was so far ready that the Pope sent Bishop Steffani to consecrate the building and perform the opening service. Two years later the Elector of Hanover became King of England, but Steffani did not accompany him to London; indeed, we do not meet with his name again till 1724, when the Academy of Ancient Music in London unanimously elected him its Hon. President for life. This Academy, of which Handel was a great supporter, had been instituted by Dr. Pepusch, J. E. Galliard (the only known pupil of Steffani), and other musicians, and had become well known abroad. Many eminent musicians of the Continent were made honorary members, Steffani among the number, who appears to have sent over the following four works for performance—the fine and well-known Madrigal 'Qui diligit Mariam,' for S.S.A.T.B.; another madrigal, called 'La Spagnuola,' 'Al rigor d' un bel semblante,' for two altos and tenor, not so remarkable; and the beautiful madrigal, 'Gettano i Rè dal soglio.' These are generally found in the MS. collections of the time. The fourth piece was the great *Stabat Mater*, composed for S.S.A.T.T.B., accompanied by strings and organo, and undoubtedly one of the finest works of any composer of the period immediately preceding that of the giants Bach and Handel. His great contemporaries Alessandro Scarlatti and Purcell produced nothing finer. No exact dates can

be assigned to these four works, but they all belong to his later manner. In Steffani is to be found the perfection of counterpoint without stiffness, and with that real sign of genius, exhaustless variety. As in Bach, there is marvellous freedom in the movement of the parts, and no hesitation at a good clashing dissonance produced by this freedom. He was an adept too at writing the charming minuets and gavottes which were then so fashionable, and in which his operas abound. At the British Museum there is likewise a glorious 'Confitebor' for three voices with violins and bass in E minor, said to be of the year 1709, with a splendid bass solo ('Sanctum et terribile')—a species of accompanied recitative; the whole work being full of exquisite beauties. No notice of this piece has yet appeared in any life of Steffani. In the library of the Royal College of Music there is a book of 'XII Motteta per celeberrimum Abbatem Stephanum' for three voices with solos and recitatives, but it is only a vocal score, without the symphonies and accompaniments which all undoubtedly had. In another book in the same library, however, we find two of them complete.

Early in 1727 Steffani was once more and for the last time in Italy; and Handel met him at Rome in March, where he was living at the Palace of Cardinal Ottoboni. This latter enthusiast still kept up his Monday performances of music, at which Steffani, now seventy-four years old, occasionally sang. Handel tells us (through Hawkins) that 'he was just loud enough to be heard, but that this defect in his voice was amply recompensed by his manner, in the chasteness and elegance of which he had few equals.' From Hawkins we also learn that 'as to his person he was less than the ordinary size of men, of a tender constitution of body, which he had not a little impaired by intense study and application. His deportment is said to have been grave, but tempered with a sweetness and affability that rendered his conversation very engaging; he was perfectly skilled in all the external forms of polite behaviour, and, which is somewhat unusual, continued to observe and practise them at the age of fourscore.' He was back in Hanover in a short time, and the next year, going to Frankfurt on some public business, died there after a short illness, Feb. 12, 1728.

The last word has not yet been said about this remarkable musician, and it is to be hoped that some of his duets, and perhaps his glorious *Stabat Mater* and *Confitebor*, may still be heard in the concert-room. His career was certainly one of the most extraordinary in musical history. Born of obscure parents, he raised himself by his talents and industry from the position of a poor choir boy, not only to be one of the foremost musicians of his age, but likewise the trusted confidant of princes and the friend of such a man as Leibniz. The only other instance

¹ [Several movements from these duets are included in 'Duetti da Camera,' edited by J. A. Fuller Maitland.]

of an artist having become an ambassador is to be found in the painter Rubens. The materials for this notice have been chiefly gathered from Rudhardt, Hawkins, and Chrysander, the latter having obliged me with some important information hitherto unpublished. [Besides these authorities the following may be consulted: A. Neisser's *Dissertation* on 'Servio Tullio,' 1902; F. W. Woker's article in the *Vereinsschriften* of the Görresgesellschaft, Bonn, 1885-1886. For list of extant works, see the *Quellen-Leikon*.]

W. G. C.

STEFFKINS, THEODORE, or THEODORUS, was a foreign professor of the lute and viol, who lived in London in the latter half of the 17th century. He is commended in Thomas Salmon's *Essay to the Advancement of Music*, 1672. His brother, DIETRICH, was one of the band of Charles I. in 1641, and his two sons, FREDERICK and CHRISTIAN, were famous performers on the viol. They were members of the King's band in 1694, and Christian was living in 1711.

W. H. H.

STEGGALL, CHARLES, Mus.D., born in London, June 3, 1826, was educated in the Royal Academy of Music, from June 1847, principally by Sterndale Bennett. In 1848 he became organist of Christ Church Chapel, Maida Hill; in 1851 a professor at the Royal Academy of Music, and in the same year accumulated the degrees of Mus.B. and Mus.D. at Cambridge. In 1855 he was appointed organist of Christ Church, Lancaster Gate, and in 1864 organist of Lincoln's Inn Chapel. [In 1884 he was elected on the Board of Directors of the Academy, and in 1887 was one of those who carried on the duties of head of the institution between the death of Macfarren and the appointment of Mackenzie. In 1903 he resigned his professorship. He was one of the founders of the Royal College of Organists in 1864, and was examiner for the Mus.D. degree at Cambridge in 1882 and 1883. He was Hon. Sec. to the Bach Society, founded by Bennett, from 1849 to its dissolution in 1870. He died in London, June 7, 1905.] He composed anthems and other church music, and lectured upon music in the metropolis and elsewhere.

W. H. H.

His youngest son, REGINALD STEGGALL, was born in London, April 17, 1867, and was educated at the Royal Academy of Music, where he gained the Balfie Scholarship in 1887, afterwards becoming an Associate, in due course a Fellow, and, in 1895, organ professor. In 1886 he was appointed to the post of organist of St. Anne's Church, Soho, and some years afterwards became his father's assistant at Lincoln's Inn Chapel, being appointed to succeed him in 1905.

He belongs to the more advanced school of young English composers, and first came prominently before the public at a concert organised by Mr. Granville Bantock in 1896 at

the Queen's Hall, when a scena, 'Elaine,' was performed; an 'Ave Maria' was given at another concert of the same kind, and his scena 'Alcestis' was given at the Crystal Palace earlier in the year. A symphony, and a mass, together with many anthems, a Festival Evening Service, and organ pieces, are included among his compositions.

M.

STEIBELT, DANIEL, a musician now almost entirely forgotten, but in his own day so celebrated as a pianoforte-player and composer that many regarded him as the rival of Beethoven, was a native of Berlin, where his father was a maker of harpsichords and pianofortes of considerable skill and repute. The date of his birth is quite uncertain. Most of his biographers state that he was born in 1755 or 1756, but Fétis declares from personal knowledge that he was only about thirty-six years of age in 1801, which would place his birth some eight to ten years later. The details of his early life are as much involved in doubt as the time of his birth. It is, however, certain that his aptitude for music was early manifest, and that in some way it attracted the attention of the Crown Prince of Prussia, afterwards Frederick William II. Kirnberger was then the leading musician of Berlin, and to him the Crown Prince entrusted the instruction of his protégé in the harpsichord and composition. How long Steibelt was a pupil of Kirnberger it is impossible to say, but not a trace of the learned and somewhat pedantic style of his master is to be found in his method either of playing or writing. Indeed the musical world of Berlin, then under the despotism of Frederick the Great,¹ does not present any influences to account for the peculiarities which so strongly marked Steibelt's after-life, though it may be fairly conjectured that in his father's workshops he obtained that familiarity with the mechanism of the pianoforte which he was always ready to turn to the best account. Whatever his musical education may have been, it was interrupted by his joining the army for a while,² and was finally brought to an end, as far as Berlin was concerned, by his departure from that city, an event which perhaps took place as early as 1784.

In what direction he turned his steps seems wholly unknown, but his career as a composer and virtuoso commences with his arrival in Paris at some date between 1787 and 1790. He did not take up his residence there permanently till the last-named year, as he was at Munich in 1788, and in 1789 was giving concerts in Saxony and Hanover, whence he journeyed to Paris by way of Mannheim; but his rivalry with Hermann at Court would appear to suggest that he had been in Paris before the year that was signalised by the taking of the Bastille. However this may be, Steibelt appeared at the French capital

¹ For an interesting account of music in Berlin at this period see Jahn's *Mozart*, ch. 30 (vol. ii. p. 374, etc. in Eng. trans.).

² *A.M.Z.* ii. 622.

as a full-fledged performer and composer, and was not long in proving his superiority to his rival. The reasons for his success are obvious. Though Hermann's technique, which was that of the school of C. P. E. Bach, was considered more correct than that of his opponent, he was, nevertheless, emphatically a player of the old style. Steibelt, as emphatically, belonged to the new. Their different characteristics are clearly brought out in the very curious Sonata for the Pianoforte called 'La Coquette,' composed for Marie Antoinette by the two rivals, each of whom contributed one movement to it. Hermann's movement, the first, is good, solid, rather old-fashioned, *harpsichord* music; Steibelt's movement, the Rondo, by its variety of phrasing and the minutiae of its marks of expression reveals in every line an acquaintance with the resources offered by the pianoforte. The issue of a contest in which the combatants were so unequally matched could not be doubtful, and Steibelt was soon installed as reigning virtuoso. But no musician who aspires to fame in France can neglect the stage, and Steibelt accordingly resolved to essay dramatic composition. One of his patrons, the Vicomte de Ségur, a *littérateur* of some pretensions, who had written for the Opéra a libretto founded on Shakespeare's 'Romeo and Juliet,' entrusted the composition of the music to Steibelt. The score was finished in 1792, but the work was rejected by the Académie. Its authors, nothing daunted, proceeded to alter the piece. The recitatives were suppressed and replaced by prose dialogue, and in this shape the opera was produced at the Théâtre Feydeau on Sept. 10, 1793, with Madame Scio as Juliet. The *Moniteur* of Sept. 23 describes the music as 'learned, but laboured and ugly'—a criticism which, with the music before one, it is impossible to understand. Theatre-goers were of a different opinion, and 'Roméo et Juliette' was a decided success. It was performed with success in Stockholm on Jan. 30, 1815 (and again in 1819), and was revived with great applause in Paris at the Opéra-Comique in 1822. It does not appear that it was ever brought forward on the German stage, but the overture was played in Vienna in 1841. The concert given after Steibelt's death for his son's benefit was closed with the Funeral Chorus from the third act.

The success of this operatic venture completely confirmed Steibelt's position in Paris. His music, though considered difficult, was extremely popular, and as a teacher he counted amongst his pupils the most eminent ladies of the time, including the future Queen of Holland. On his first coming to Paris he had been received with great kindness by Boyer the publisher, who had not only procured for him powerful patronage but even took him into his own house. His services were ill rewarded. Steibelt had already published some Sonatas for the Pianoforte and

Violin (opp. 1 and 2) at Munich. He now added to them a violoncello *ad libitum* part, which merely doubled the bass of the pianoforte part, and sold them to Boyer as new works. The fraud seems to have been discovered about 1796, and though Steibelt made reparation by presenting to the aggrieved publisher his Pianoforte Concertos, Nos. 1 and 2, this transaction, combined with other irregularities, so injured his reputation that he felt it desirable to leave Paris, at any rate for a time. England attracted his attention, and, journeying by way of Holland, he reached London about the close of 1796.¹

By this proceeding Steibelt challenged comparisons quite as dangerous as those which he had recently risked by bringing out an opera in Paris. Pianoforte music had originated in London a quarter of a century before, and at Steibelt's arrival no fewer than three players and composers of the first magnitude were resident there, Clementi, Dussek, and Cramer. Few particulars of Steibelt's life in London have been recorded. His first public performance seems to have been at Salomon's Benefit Concert on May 1, 1797, and a fortnight later (May 15) he played a pianoforte concerto of his own at an opera concert. Not long after this he wrote the Pianoforte Concerto in E (No. 3), containing the 'Storm Rondo.' Whatever may be thought of the merits of this work now, its popularity at the beginning of the 19th century was enormous, and far exceeded that accorded to any other of Steibelt's compositions. It is not too much to say that it was played in every drawing-room in England; indeed, the notorious 'Battle of Prague' alone could compete with it in popular favour. It was, in all probability, first performed in public at Salomon's concert on March 19, 1798. At the close of the same year (Dec. 11) its author again came forward as a composer for the stage, and again met with a favourable reception. His work on this occasion was an English opera, or, as it was described in the Covent Garden play-bill, 'a new grand Heroic Romance, in three acts, called Albert and Adelaide; or the Victim of Constancy.' It must have been an extraordinary medley. The first two acts were a translation from the German of Schoerer, who had taken them from the French, and the third act was added from another French play. The music was only in part original, and was eked out by the insertion of a Quintet from 'Lodoiska' and the like expedients. Even the 'original' music was not all written by Steibelt, as Attwood contributed some of it.² Yet, after all, the most curious part of this curious production must have been

¹ According to Fétis, Steibelt did not leave Paris till 1798; but Messrs. Broadwood & Sons have records in their possession which prove that he was established in London by Jan. 2, 1797. This information is due to the kindness of Mr. A. J. Hipkins.

² This information is derived from an advertisement of Longman, Clementi & Co. in the *Morning Chronicle* of Jan. 22, 1799. These pastiches were common enough then, and until the end of the first quarter of the 19th century.

the Overture, which was 'enlivened by a pantomime'! Such as it was, however, the piece proved sufficiently attractive to keep the boards for some time, and the Overture, arranged for the pianoforte, was published in France, and sold in Germany. As teacher and performer Steibelt appears to have been as fully employed during his stay of three years or so in London as he had been previously in Paris. Whether he was as much liked by his brother artists as by the amateurs seems very problematical; at any rate his music is conspicuous by its absence in the concert programmes of the time. Two other circumstances of interest connected with Steibelt's visit to England have been preserved. The first of these is the fact that he conceived a decided predilection for English pianofortes, always using them in preference to any others: the second is his marriage with a young Englishwoman, described as possessed of considerable personal attractions and as a good player on the pianoforte and tambourine. The last-named accomplishment led her husband to add a tambourine accompaniment to many of his subsequent pieces.

Steibelt now resolved on visiting his native country, from which he had been absent, according to some authorities, as much as fifteen years. He reached Hamburg in September or October 1799, but made no great stay there. His next stopping-place was Dresden, where he met with a very enthusiastic reception. Besides several more or less private performances, he gave a concert of his own on Feb. 4, 1800, with the greatest success. Almost immediately after this he went to Prague. His concert in the Bohemian capital attracted a large audience of the upper classes and brought him no less than 1800 gulden; but his playing made little impression, and he went on forthwith to Berlin.¹ Before the end of April he had given two performances in his native city. It was not very likely that his style would please audiences who still held to the traditions of the school of Bach, and the main result of his visit seems to have been to give great offence to his brother artists. From the capital of Prussia he turned to the capital of Austria, then the metropolis of the musical world, where he arrived about the middle of May. We are told that his reputation was such as to cause some anxiety even to Beethoven's friends. If such was the case they were speedily relieved. At the first meeting a sort of armed truce was observed; but at the second, Steibelt was rash enough to issue a distinct challenge. Beethoven was not the man to decline such a contest, and his victory was so decided that his rival refused to meet him again. [See BEETHOVEN, vol. i. pp. 223a, 234b.] This adventure was not likely to contribute to

Steibelt's success at Vienna, and a concert that he gave at the Augarten-Saal was rather thinly attended. His German tour as a whole was only partially successful, and Steibelt determined to return to the more congenial atmosphere of Paris. He arrived there in August 1800, carrying with him the score of Haydn's 'Creation.' Pleyel, Haydn's favourite pupil, had been despatched to request the veteran composer to come and conduct his own work. Pleyel, however, was unable to reach Vienna [PLEYEL, vol. iii. p. 773b], and the field was thus left open to Steibelt. He made the most of his opportunities. Not content with obtaining 4000 francs from Erard for himself and his assistant, M. de Ségur, as the price of the translation adapted to the music, 3600 francs for himself, and 2400 francs for his fellow-translator from the administration of the Opéra, where the work was to be performed, he transposed the part of Adam to suit the tenor Garat, and in many places even attempted to improve Haydn's music by additions and alterations of his own. In spite of these drawbacks, the performance, which took place on Christmas Eve, 1800, proved a decided success. Public curiosity was much excited; a fortnight before the performance not a box was to be had; an eager crowd surrounded the Opera-House at nine in the morning; at the end of the first part a subscription was started to strike a medal in honour of the composer (nay, so much was the work on every one's lips that one of the vaudeville theatres produced a parody of it three days later called 'La récréation du monde'). Rey directed the performance and Steibelt presided at the pianoforte. The adaptation of the words seems to have been fairly performed; at the alterations made in the score competent judges were, naturally enough, extremely indignant. Moreover, the circumstances of his departure some four or five years before had not been forgotten, and thus, in spite of the éclat of the 'Creation,' Steibelt did not feel very comfortable in Paris. Even the success of his ballet 'Le Retour de Zéphyr' at the Opéra, on March 3, 1802, did not reconcile him to his position, and he embraced the opportunity afforded by the conclusion of the Treaty of Amiens on the 22nd of the same month, and returned to London. [About this time he entered into partnership with Mlle. Erard in a music-publishing business in Paris; in 1805 he gave two concerts in Brussels.]

The next six years of his life, about equally divided between London and Paris, were among the busiest of his busy career. His popularity in London was as great as ever; he lived in the most fashionable part of the town, and was received with applause wherever he went. For the King's Theatre in the Haymarket he wrote two ballets, 'Le Jugement du berger Paris' in 3 acts (produced May 24, 1804), and 'La belle

¹ All authorities seem to place the visit to Berlin between his concert at Prague and his arrival at Vienna. Otherwise, it would be natural to conjecture from the dates that he went to Berlin before going to Dresden.

Laitière' (produced Jan. 26, 1805). It seems very characteristic of the composer that his work was not ready on either occasion. In the former case several airs had to be written at a very short notice by Winter, who was also responsible for the scoring of the second act;¹ in the latter case an apology was circulated for the omission of the *dénouement* of the piece, 'Mr. Steibelt not having finished that part of the music.'² Both ballets were, nevertheless, received with great favour, the march in the first act of 'Le Jugement' and the pastoral scene in the second act of 'La belle Laitière' obtaining special applause. He also played his Pianoforte Concerto No. 5 ('à la Chasse,' op. 64) at the Opera concerts, apparently in the summer of 1802, with great success. After his return to Paris Steibelt followed up his dramatic achievements in England with an Intermezzo, 'La Fête de Mars,' composed in celebration of the Austerlitz campaign, and performed at the Opéra on March 4, 1806. Encouraged by these successes he again tried his hand on a larger work, 'La Princesse de Babylone,' an opera in three acts. This was accepted by the Académie, and was in active preparation when the importunity of his creditors compelled the composer to leave Paris suddenly in the autumn of 1808. But his energies were by no means confined to writing for the stage. Several of his chief sonatas date from these years. Still more important are the two Concertos in E \flat (Nos. 4 and 5) for the pianoforte, and the 'Méthode' for that instrument published in French, German, and Spanish, in which he claims to have invented the signs for the use of the Pedals adopted by Clementi, Dussek, and Cramer. [See SORDINO, *ante*, p. 622b.] Above all, it was on his return to Paris in 1805 that he published his *Étude*—a collection of fifty studies in two books,—undoubtedly the best of his pianoforte works. In the midst of all this occupation he found time to meditate further travels. Russia, a country that in the previous century had attracted Galuppi, Paisiello, Sarti, Cimarosa, and Clementi, had just furnished an asylum to Boieldieu and a home to Field, was then a sort of Promised Land to French musicians, and it is not strange that Steibelt should have been more than willing to go there, when he received in 1808 the offer of a very advantageous appointment from the Emperor Alexander. Owing to causes already mentioned he left Paris for St. Petersburg in October 1808. His journey was not, however, very speedy when he felt himself out of the reach of his creditors. He stopped at Frankfort to give a great concert on Nov. 2,³ and at Leipzig made a stay of some weeks and repeated the programme of the Frankfort concert. During his sojourn in Leipzig he put forth (Nov. 24, 1808) a notice in which he complains that some German publishers had

issued very faulty editions of his works, even going so far as to annex his name to compositions by other people, and announces his intention of having all his future works published by Breitkopf & Härtel, an intention that was not very consistently carried out. Even after leaving Leipzig he lingered at Breslau and Warsaw to give concerts, so that he could hardly have reached St. Petersburg till the beginning of the spring of 1809.

Here, at last, his wanderings came to an end. He was appointed, it is not very clear when, director of the Opéra Français, and when Boieldieu left, at the close of 1810, Steibelt received the title of 'Maître de Chapelle' to the Emperor in his place. It was, however, a title to which no emolument was attached, and which in no way relieved its possessor from professional duties. In managing and writing for the Opera, and in teaching and composing for the pianoforte, the remaining years of Steibelt's life were spent. About the year 1814 he ceased to play in public, and did not appear again for six years, when the production of his Eighth Pianoforte Concerto induced him to come forward once more as a performer on March 16, 1820. Meanwhile his pen was not idle. His early years at St. Petersburg were marked by the ballets 'La Fête de l'Empereur' in 1809, and 'Der blöde Ritter' (before the end of 1812); and the three Concertos for pianoforte, Nos. 6, 7, and 8, appear to belong to the period of his abstention from playing in public. For the theatre he wrote two operas, each in three acts, 'Cendrillon'⁴ and 'Sargines'; a third, 'Le Jugement de Midas,' he did not live to finish. He also spent some time in revising 'Roméo et Juliette.' In the midst of these avocations he was seized with a painful disease, of which, after lingering some time, he died on Sept. 20, 1823. A number of his friends combined to honour him with a quasi-public funeral, and the military governor of St. Petersburg, Count Milorodowitsch, organised a subscription-concert for the benefit of his family, who were left in very straitened circumstances.

Comparatively little has been recorded of Steibelt's personal character, but the traits preserved are, to say the least of it, far from prepossessing. Almost the only occurrence that presents him in a pleasing light is his death-bed dedication of the revised score of 'Roméo et Juliette' to the King of Prussia, in token of gratitude for the kindnesses received from that monarch's father. He appears to have been perfectly eaten up with vanity, which exhibited itself unceasingly in arrogance, incivility, and affectation. His respect for his art, never too great, was destroyed by the quantity of worthless music that he wrote hastily to meet temporary difficulties, and he

¹ *Morning Chronicle*, May 25, 1804.

² *Ibid.* Jan. 28, 1805.

³ The correspondent of the *A.M.Z.* (xi. 170) oddly describes him as 'Steibelt of London.'

⁴ It is worth noting that some authorities declare this was written for Paris. This opera has been considered his greatest work.

not unfrequently stooped to expedients still more unworthy. One of these has been already mentioned, but it was not the only one. A device that seems to have been specially common was to add a violin part to a published set of pianoforte sonatas and then bring out the result as an entirely new work.

Most of his numerous pianoforte sonatas have no slow movement at all, consisting merely of an Allegro and a Rondo. When an Adagio or Andante is interpolated, it is either an insignificant trifle of some thirty or forty bars in length, or else a popular melody, such as 'If a body meet a body,' 'Twas within a mile of Edinbro' town,' or the like. He does not seem to have ever realised the powers of the pianoforte for an Adagio, and when a violin part is added, as is often the case in his sonatas, he almost invariably assigns the melody to the latter instrument and accompanies it with a *tremolo* on the pianoforte. His Allegros and Rondos, on the contrary, particularly the former, are often of remarkable merit, and many of his sonatas, such as that dedicated to Madame Bonaparte (in E \flat , op. 45), are really fine and original compositions. Yet, even at his best, a want of sustained power makes itself felt. Though the absence of records as to his early life makes it probable that his musical training was not sacrificed to the profitable speculation of exhibiting a youthful prodigy, his constructive skill was never developed. All his music sounds like a clever improvisation that happens to have been committed to paper. Whenever a new idea occurs to the writer it is straightway thrust in, and when no fresh idea presents itself one of the old ones is repeated. Hence it is that his music is now totally forgotten, for, whatever the opinion of contemporaries may be, posterity has invariably consigned to oblivion all music, no matter what other qualities it may possess, that is deficient in design.¹ His contemporaries pronounced the 'Étude' his best work, and time has confirmed their opinion. It has been often republished, and may indeed be said to be the only work of his that still lives. To a modern pianist one of the most striking features of the collection is the fact that several of the pieces (e.g. Nos. 3 and 8) anticipate in a very noteworthy manner the style made popular by Mendelssohn in his 'Songs without Words.' The vast mass of *Airs with variations*, *Fantasias*, *Descriptive Pieces*, *Potpourris*, *Divertissements*, *Bacchanals*, and the like, that had a great sale in their day, are now deservedly forgotten. In Germany his reputation was comparatively *nil*. His pianoforte works, however, good and bad, have all the great merit of feasibility, and invariably lie well under the hand.

For the orchestra and other instruments Steibelt wrote comparatively little—wisely, in

the judgment of one of his biographers.² Unfortunately, the scores of many of his operatic works, especially those written for St. Petersburg, are inaccessible and perhaps lost. It cannot, however, be said that an examination of the score of 'Roméo et Juliette' quite bears out the sentence just quoted. We are told that an even division of the interest of the music between the various instruments is one great mark of skilful orchestral writing. If this be so, Steibelt's opera is in one respect skilfully written, for almost every instrument in the orchestra comes to the front in turn. More than this, the composer uses the forces at his command with power and freedom. The trombones are introduced to an extent then unusual, though not excessive. Many of the resources of modern scoring are to be found, especially the employment of wood-wind and strings in responsive groups. The main complaint that can be sustained against the work is that the concerted pieces are unduly protracted and impede the action—this is certainly the case with the Trio in the first act. It should, moreover, be observed that when Steibelt writes for the pianoforte and other instruments, as in his quintets, the pianoforte is not allowed to monopolise the interest. His concertos are formed on the orthodox Mozartean model, and it must be added that they contain, especially in their first movements, some excellent writing. 'The instrumentation of the first movement is quite exceptionally beautiful' was the opinion of one who listened to the performance of his Eighth Concerto in London,³ and even when the work as a whole is weak, as in the Sixth Concerto, the instrumentation is not deficient in skill and novelty.

Steibelt's originality as a composer was questioned in his own day. It was said that his famous 'Storm Rondo' was a feeble copy of a work for the organ by the Abbé Vogler, a statement on which the thoroughly *pianoforte* character of Steibelt's music throws considerable doubt. His enemies also averred that 'Roméo et Juliette' was a mere plagiarism from Georg Benda's opera of the same name—an allegation that is certainly unfounded. More serious objection may be taken to his Sixth Pianoforte Concerto, 'Le Voyage au Mont St. Bernard,' in which not only the general idea, but even the most striking details—the hymn of the monks, the tolling of the convent bell, and the national music of the Savoyard with accompaniment of triangles—are borrowed from Cherubini's opera of 'Elisa, ou le Voyage au Mont Bernard.' It is, in fact, as it has been aptly described, 'the work, not of an architect, but of a decorator.' On the other hand, Steibelt must be credited with some contributions to musical progress. Modulation he used with a freedom unknown before him. The following passage,

¹ Mme. Arabella Goddard, among her numerous revivals, included Steibelt's Sonata in B \flat , op. 45, and some Studies.

² *A.M.S.* xxv, p. 725.

³ *Ibid.* xxiv, No. 25.

for instance, from the Andante of the first Sonata, in op. 37,

was an unheard-of thing in 1799. Of course, nothing is easier than to carry such innovations to excess, and he may be fairly said to have overstepped the line when in the 'working-out' of his Sonata for pianoforte and violin in E minor, op. 32, he introduces the second subject in E \flat major, changing the signature for fifty-six bars. Many other instances of such boldness are to be found.

The list of his works which follows has been compiled with considerable trouble. Not only had Steibelt a careless and, it is to be feared, dishonest habit, of publishing different works under the same opus number, and the same or a slightly altered work under different numbers, but, according to his own protest already mentioned, works were published under his name with which he had nothing to do. In such circumstances the task of drawing up a complete and accurate list is well-nigh hopeless, and this catalogue, though compiled with all the care possible, does not profess to be more than a contribution towards a complete and exact list. An asterisk attached to a work means that it certainly contains one sonata (or the number given) and may contain more. A date has been added in some cases, where it seemed likely to be of any value.

110. Fantasia (Battle of Neerwinde), FF. (1792).

WORKS WITHOUT OPUS-NUMBERS

I. VOCAL AND ORCHESTRAL.

Six Operas—'Roméo et Juliette', in 3 acts; produced at Théâtre Feytaud, Sept. 10, 1783. | 'Albert and Adelaide', in 3 acts, an English opera, not wholly original, produced at Covent Garden, Dec. 11, 1798. | 'La Princesse de Babylone', in 3 acts. | 'Cendrillon', in 3 acts. | 'Sargines', in three acts. | 'Le Jugement de Midras', unfinished, but apparently performed.

Five Ballets—'Le Retour de Zéphire' (Paris Opéra, March 3, 1802). | 'Le Jugement du berger Paris' (King's Theatre, London, May 24, 1804).¹⁰ | 'La belle Laitière', ou 'Blanche, Reine de Castille' (King's Theatre, Jan. 26, 1805). | 'La Fête de l'Empereur' (St. Petersburg, 1803). | 'Der blinde Bitter' (St. Petersburg, before 1812); and an *Intermezzo*, 'La Fête de Mars' (Paris Opéra, March 4, 1806).

Vocal Music—The 20 Songs of Estelle, with acc. for FF. or Harp.²⁰ | 30 Songs with acc. for FF. or Harp. in 5 vols., each of 6 songs.

Music for Orchestra—Overture on Symphonie (1798). | Waltzes for Orch. | Grand Concerto for Harp, with Orch. acc. | Potpourri, arranged as Concerto, with acc. for Orch. | 6 Concertos for FF. and Orch., viz.—

- No. 1. In C (1796).
2. In E min. with acc. for Vin. or Full Orch. ad lib. (1796).
3. In E ('The Storm'). Op. 33 or 35 (1798-99).
4. In Eb.
5. In Eb ('à la Chasse'). Op. 64 (1802)
6. In G min. ('Le Voyage au Mont St. Bernard' (about 1816).
7. In E min. (Grand Military Concerto, 'dans le Genre des Grecs' (with 2 Orchestras) (before 1817).
8. In Eb (with Bachmanian Rondo, acc. by Chorons). (Produced at St. Petersburg, March 15, 1806, and played by Neate at the London Philharmonic Concert of March 25, 1822.)

2. PIANOFORTE.

Fantasias. Of these there are some 30, part with variations, besides those which have opus-numbers. A vast quantity of Rondos, Airs with variations, Potpourris, and specimens of Programme Music exist.

3. MISCELLANEOUS.

I. Amongst the higher class of music that falls under this head may be noticed:—

Méthode de FF. contenant les principes nécessaires pour bien toucher de cet instrument, des gammes dans tous les tons, des exercices pour les doubles cadences, 12 petites leçons, 6 sonates d'une difficulté graduelle, et des grands exercices, le tout doigté, et enfin une instruction sur la manière de se servir des pédales, 1805. | 12 Sonatas, FF. (4 hands)—the first 6 in F, G, C, Bb, F. | 6 Sonatas for Harp. | 3 Duets, FF. and Harp. | 6 Duets or Sonatas, 2 FFs. or FF. and Harp. | 6 Sonatas for Harp, with acc. for Vin. and Vcello. | 6 Sonates périodiques (one with Vin. or Flute ad lib.). FF. | 3 Preludes. | 12 Sonatinas in 2 Books—Bk. 1. C, Bb, G, D, Eb, A; Bk. 2. C, G, F, D, Bb, Eb; FF. | 3 Sonatas (for beginners). FF. | Sonata for Harp with Vin. ad lib. | Élégie (on the death of Marshal Prince Soult), FF.; D min. (1818). | 2 Airs by Brahms ('The beautiful maid' and 'Never think of meeting sorrow') in Reeve's opera 'The Cabinet' arranged as a Sonata, FF.; Bb. | La Chasse, Sonata, FF., with Vin. ad lib.; D. | Sonata, FF., with Vin.; C min. | Overture and Rondo, FF. | Overture and Polonaise, FF.

II. The following are among the chief of his lighter works:—12 Bachianas, FF. (with Tambourine ad lib.). | 2 Books of Serenades, FF. | 12 Capriccios, FF. | Turkish March, FF. | Marche de Peterhof, 1811, FF. | Triumphal March on the entry of Alex. I. and Fred. Will. II. into Paris, 1814, FF. | Le Retour de Cavallerie Russe à St. Petersburg le 14 Oct. 1814, pièce militaire, FF. | Le Départ, Impromptu, FF.; C. | Caprice on 'Non più andrai', FF. (1816). | 6 Nouvelles Waltzes à trois mains (the 6th Waltz is a parody of the finale of the 'Vestale'), FF. | Polonaise, FF.; D. | Turkish Rondo for Harp, with Vin. and Tambourine ad lib. | Air ('Enfant chéri' with var. FF. and Harp. | Favourite Rondo for Guitar and Flute or Vin.; D.

In the third book of 'Pandaemon Music' for the FF., published by N. Corri of Edinburgh, the first number is 'Air from Blaise et Babst by Steibelt'; but no single item of information about 'Blaise et Babst' is forthcoming, except that it does not seem to have been a piece brought out in London.

J. H. M.

STEIGLEDER, HANS ULRICH, came of an organist family settled at Stuttgart. The date of his birth is given as 1580. After serving as organist at Lindau on the Bodensee, he was appointed in 1617 Stifts-Organist at Stuttgart, in which capacity he had also to serve as musician generally to the Court of Würtemberg. He died 1635. For the organ he published two works, the first of which is so far remarkable as being the first specimen in Germany of copper-plate engraving for organ or clavier music. As the title informs us, the

¹⁹ The original score of this work came into the possession of Moscheles, and was sold by him on leaving London in 1847.

²⁰ Some authorities declare that Steibelt only wrote five of this set of 20 songs.

engraving was by his own hands, 'Ricercar Tabulatura, Organis et Organoedis unice inserviens et maxime conduens adornata a J.U.S. . . ejusdemque Autoris sumptibus et manibus propriis Aeri Cupreo insculpta et excusa. Anno 1624.' Although mentioned by Gerber, this work was unknown to modern musicians, until a copy sent from the Royal Library at Stuttgart was shown at the Vienna Musical Exhibition of 1892. The engraving is said to be rather coarsely done. Some account of the music is given in Seiffert, *Geschichte der Klaviermusik*, Bd. I. p. 105. It consists of Ricercari of the earlier Italian fugal type. The other published work of Steigleder is entitled, 'Tabulatur-Buch darinnen dass Vater Unser auf 2, 3 und 4 Stimmen componirt und vierzig mal variirt wüirdt . . . auf Orgeln und allen andern Instrumenten ordentlich zu appliciren . . . 1627.' This work consists of forty Bearbeitungen or Variations on the melody of the 'Vater Unser im Himmelreich,' which show the influence of the newer technique of the English-Dutch Variation School of Sweelinck, as well as of the South German toccata style of George Muffat. Two specimens are given in Ritter, *Geschichte des Orgelspiels*, Nos. 87 and 88.

J. R. M.

STEIN, a family of pianoforte-makers and players.

1. JOHANN ANDREAS, the founder of German pianoforte-making, was born at Heidesheim in the Palatinate in 1728. Nothing is known of his early life, but he appears to have been in Paris in 1758, and to have remained there for some years. We may conclude that he was engaged in organ-building and harpsichord-making, since he was not only a good musician, but a proficient in both handicrafts, before he turned to pianoforte-making. After Paris we find him at Augsburg, organist of the Barfüsserkirche, the famous organ of which he built, as well as that of the Kreuzkirche. When the article PIANOFORTE was written, special inquiries were made in Vienna and elsewhere, to discover any pianofortes remaining of Stein's make, but without success. [Several examples of Stein's pianoforte, exhibited at Vienna in 1892, are now in the collection of Mr. Steinert of New Haven, Conn., U.S.A.] These inquiries, however, led to the discovery of a grand piano, which was secured by M. Victor Mahillon, of the Museum of the Conservatoire, Brussels. It is inscribed

Jean André Stein
Facteur d'orgues et des Clavecins
Organiste à l'Eglise des Minorites
Augsbourg 1780.¹

The action of this bichord grand piano is the same as that in vol. iii. p. 725, Fig. 10 of this Dictionary, which was copied from a scarce pamphlet preserved in the Library of the

¹ The last figure is indistinct, and M. Mahillon thinks that it might be 5 or 6 instead of 0.

Gesellschaft der Musikfreunde at Vienna. The wedge damper is Cristofori's; the escapement and other parts of the action differ entirely from that maker's and from Gottfried Silbermann's as preserved in three instruments at Potsdam, in which the Florentine maker Cristofori is closely followed. This instrument has also the *genouillière* or knee-pedal for raising the dampers, which preceded the foot-pedal. [See SORDINO.] The *genouillière* and Stein's escapement are described by Mozart with great *gusto* in a letter addressed to his mother, in October 1777, only a very few years before M. Mahillon's piano was made. What action was used by Spaeth of Ratisbon, also referred to by Mozart, we do not know, but M. Mahillon's discovery at Brussels of a square piano, with the rudiments of Stein's action—that is, the same centred percussion without the hopper escapement—leads directly to the conclusion that this simple action, clumsy as Mozart found it without the escapement, was in common use before Stein brought his inventive genius to bear upon its improvement.

Welcker von Gontershausen (*Der Clavierbau*, Frankfurt, 1870, p. 173) gives a drawing of this action without hopper escapement, attributing it to Silbermann; but, as far as we can see, without proof. Many of the early German pianos have neither date nor inscription, which makes the attribution to a maker difficult. We are disposed to think that Silbermann would not have abandoned the good action of Cristofori, which he knew how to finish well, for a crude tentative mechanism; we therefore conclude that the Seven Years' War having entirely stamped out Saxon pianoforte-making, a new era began with the restoration of peace, and that the merit of founding that German pianoforte-making which was so long identified with the School of Vienna, belongs to Stein, whose inventive talent and artistic devotion were displayed in the good instruments he made, which by 1790 at latest, were adopted as models both in North and South Germany, as the two grand pianos formerly belonging to Queen Louise, made by Huhn, '*Organ-buider*,' of Berlin,² and preserved in memory of her at Potsdam, unmistakably show.

Gerber, in his *Lexicon*, has preserved a list of numerous inventions by Stein [of one, the '*Melodica*,' the inventor published an account in 1772], of which none are now of value save the escapement and the keyboard shifting by means of a pedal. He introduced the latter in his '*Saitenharmonica*' in 1789, carrying the hammers from three strings to one, which he spaced rather away from the other two unisons. This '*una corda*' he named '*Spinnetchen*.'

² One of these instruments, and apparently the older one, bears no name outside, but internal examination shows that the maker was the same who made the 1780 one; both closely resemble Mozart's piano by Walther, at Salzburg, and the original model by Stein of 1780.

A. W. Thayer¹ unearthed a record of Pastor Junker, showing that Beethoven in 1791, when residing at Bonn, always used an instrument of Stein's.

Stein died in 1792, leaving two sons, Matthäus Andreas and Friedrich (see below), and a daughter, Maria Anna, known as NANNETTE, who in 1794 married Streicher, and was really the most prominent of the group.

Though Streicher ultimately succeeded to the business, which had been removed from Augsburg to Vienna, his name does not appear for several years in connection with it. [See footnote to PIANOFORTE, vol. iii. p. 725a, note 2.] The firm as late as 1801 was 'Geschwister Stein'; subsequently 'Nannette Stein' only, which appears as the maker's name on a grand pianoforte with six pedals, existing (1882) in Windsor Castle. For the continuation of the Stein business see STREICHER.

A. J. H.

2. MARIA ANNA, or NANNETTE STEIN, was born Jan. 2, 1769, at Augsburg. When barely eight she played to Mozart on his visit to Augsburg in 1777, and, in spite of the bad habits she had contracted, he said of her 'She may do yet, for she has genius' (Jahn, i. 368). Her talent and capacity were so obvious that her father early initiated her into the details of his business, and on his death, Feb. 29, 1792, she carried it on, in conjunction with her brother Matthäus Andreas, with a decision and energy almost masculine. In 1793 she married Johann Andreas STREICHER, an excellent pianist and teacher from Stuttgart, and then she, her husband, and mother, moved to Vienna. The new firm of 'Nannette and Andreas Stein' (constituted by Imperial decree Jan. 17, 1794) established itself in the 'Red Rose,' No. 301 in the Landstrasse suburb. In 1812 the factory was removed to premises of their own, which had been rebuilt and enlarged some years before, No. 27 in the Ungargasse. In 1802 the brother and sister dissolved partnership, each setting up for themselves, as 'Matthäus Andreas Stein,' and 'Nannette Streicher, geborene Stein.' Streicher, who had hitherto managed only the commercial part of the business, now took his full share of the work. Both firms endeavoured to perfect their instruments in every possible way,² while still adhering to the traditions of their father, and Stein of Vienna became as celebrated as Stein of Augsburg had been. In 1823 the Streichers took into partnership their son Johann Baptist (born in Vienna, 1796). Nannette Streicher was at once an energetic and capable woman of business, a pianist of remarkable excellence, a person of great general cultivation, and a model wife and mother. Her name is closely connected with that of Beethoven. It is well known that she

did much to help him in his domestic arrangements, lightened the burden of his housekeeping, and even looked after his bodily health. Thayer, in his *Beethoven* (iii. 239), gives us a striking picture of their relationship. [See also vol. i. of this Dictionary, pp. 247, 248.] Nannette Streicher died Jan. 10, 1838, and was followed by her husband on May 25 of the same year. The business was carried on successfully by their son, J. B. Streicher, and his son, Emil. Her brother,

3. MATTHÄUS ANDREAS STEIN, was born at Augsburg, Dec. 12, 1776, accompanied his sister to Vienna, set up for himself in 1802, married Nov. 12, 1796, and died May 6, 1842. His son,

4. KARL ANDREAS, also a pianoforte-maker and composer, was born in Vienna, Sept. 4, 1797, early showed talent for music, and became an excellent pianist and teacher. He was a pupil of Förster in harmony and composition, and published a considerable number of works principally for his instrument. He also left in MS., among others, two PF. concertos with orchestra, two orchestral overtures, and a comic opera 'Die goldene Gans,' words by Langbein. He appeared several times in public, but latterly devoted himself entirely to the factory, in the working of which his father had early initiated him. In 1829 a patent was granted to him. Karl Andreas travelled much, and his pianos were appreciated abroad, as well as by the first artists of his own country. In 1844 he was appointed Court pianoforte-maker. His book 'on the playing, tuning, and preservation of Stein pianofortes,'³ contains valuable matter. He died August 28, 1863.

C. F. P.

5. His uncle, FRIEDRICH, was born at Augsburg, May 26, 1784, and at the age of ten went to Vienna, and studied counterpoint and composition with Albrechtsberger. He became one of the first pianoforte-players of the capital, and was considered to be a very promising composer. He appeared rather frequently in the Angarten and Burgtheater concerts as a player of concertos, especially those of Mozart. Reichardt (April 1, 1809) calls him: 'A performer of great power and genius. . . . A rare power, combined with the deepest feeling, characterised his performance. He played some of Beethoven's most difficult pieces, and variations of his own composition, full of invention and deep sentiment, and of monstrous difficulty. Since then I have heard him at home on his magnificent Streicher pianoforte, and am confirmed in my opinion of his assiduous study and great talents.' These eulogies are borne out by other contemporary notices.

Friedrich Stein is the subject of Ries's anecdote (*Notizen*, p. 115). Beethoven had played his Concerto in G at his own concert, Dec. 22, 1808 (see vol. i. p. 244), with astonishing spirit and

¹ *Beethoven*, i. 209-215.

² From this period dates the so-called 'Viennese mechanism,' the principle of which was really the same as that of the Augsburg planus.

³ *Kurze Bemerkungen u. d. Spielen, Stimmen, u. Erhalten d. F. P.*, etc., Wien, 1801.

speed, and immediately after called upon Ries to play it in public, with only five days for its study. Ries naturally shirked such a task, preferring to play the C minor one instead. At this his master was offended, and turned to Stein, who accepted the task, but was unable to accomplish it, and played the C minor instead, not satisfactorily.

Stein was an industrious composer, but few of his vocal compositions reached the stage. He left three operettas and a ballet, of which only one — 'Die Fée Radiante' — came to public performance. Also a set of Songs, a Violin Concerto, a Grand Sonata for the PF., and a PF. Trio. He also arranged Beethoven's Fourth and Sixth Symphonies for two PF.s. A. W. T.

STEINBACH, EMIL, born Nov. 14, 1849, at Lengenrieden in Baden, studied at the Leipzig Conservatorium 1867-69, and in 1877 became conductor of the Town Band, and in 1898 Director of the Town Theatre of Mainz. He has composed much chamber and orchestral music and many songs.

FRITZ, born June 17, 1855, at Grünsfeld in Baden, brother of the above, whose pupil he was till he went to the Leipzig Conservatorium in 1873. In 1880 he became second Capellmeister at Mainz till 1886, when he was summoned by the Grand Duke of Meiningen to the post of conductor of his celebrated orchestra, and later on became his general music-director. In 1902 he visited England with the whole of the Meiningen orchestra, and made one of the greatest sensations that has been caused by any musical performances within recent years in this country, his renderings of Bach and Brahms being specially appreciated. All the four symphonies of Brahms were included in his programmes. In 1902 he succeeded Willner as Town Capellmeister and Director of the Conservatorium at Cologne. He is also well known as a composer, chiefly through his septet (op. 7) and a violoncello sonata. H. V. H.

STEINWAY & SONS, an eminent firm of pianoforte-makers in New York, distinguished by the merit of their instruments and by their commercial enterprise, which, in comparatively few years, have placed their firm in equal rank with those famous older makers in Europe whose achievements in the improvement and development of the instrument have become historical.

Henry Engelhard Steinway (originally STEINWEG, see below) was born Feb. 15, 1797, at Wolfshagen, in the Duchy of Brunswick. The youngest of a family of twelve, at the early age of fifteen he was the sole survivor of his family. From the age of seventeen to twenty-one he served in the army, and during that time his natural taste for music led him to learn the zither. On his discharge, which was honourably obtained, from the army, he thought of becoming a cabinet-maker, but was too old to serve the five years' apprenticeship and five years as

journeyman which the guild required prior to his becoming a master. He therefore went for a year to an irregular master, and then turned to organ-building, which was free from the narrow limits of a guild. Circumstances, however, allowed him in 1825 to marry and settle as a cabinet-maker at Seesen, near the Harz Mountains, where he had been already working; and in that year (Nov. 25) his eldest son Theodore was born. Steinway in a few years turned his attention to piano-making, and in 1839 exhibited a grand and two square pianos at the State Fair of Brunswick. Seesen being in Hanoverian territory, the foundation of the Prussian 'Zollverein' in 1845 brought Steinway's hitherto flourishing business to a standstill, and the revolution of 1848 destroyed it entirely. The course of events now induced Steinway to leave Germany, and in April 1849 he emigrated to New York, whither his family, with the exception of Theodore, the eldest son, followed him the next year. For three years the father and the three sons, Charles, Henry, and William, worked in different New York piano factories. In March 1853 they agreed to unite and start in business on their own account, and the firm of 'Steinway & Sons' was established. In 1855 they exhibited a square piano in which the American iron frame principle of a single casting was combined with a cross or over-strung scale, forming the foundation of the so-called 'Steinway system,' which, as applied to grand pianos, attracted great attention in the London International Exhibition of 1862. Both Charles and Henry Steinway dying in 1865, Theodore, the eldest son, disposed of his business in Brunswick and became a partner of the New York firm. Their spacious concert-room there was built and opened in 1866. About this time the Steinways began to make upright pianos, and their instruments of all kinds shown at Paris, in the Universal Exhibition of 1867, not only gained them success, but became models for Germany, to the great improvement of the German make and trade. Henry Steinway, the father, died in 1871. In 1875 the firm opened a branch in London, to which a concert-room is attached, and in 1880 another branch establishment at Hamburg. A. J. H. [The first grand piano was made by Steinway & Sons in April 1856, the upright in April 1862. In May 1876 the firm was incorporated with a capital of \$1,500,000, William Steinway being elected president; the capital stock was increased to \$2,000,000 in 1891. William Steinway, born March 5, 1835, at Seesen, remained its financial head and prime factor in its development until his death on Nov. 20, 1896. C. F. Theodore Steinway, born in Seesen, Nov. 6, 1825, died March 6, 1889, at Brunswick, was the scientific constructor to whom were due many of the inventions which gave the Steinway pianos their high position. The officers of the

corporation in 1907 are Charles H. Steinway (son of Henry Steinway, born June 3, 1857), president; Frederick T. Steinway (son of Henry Steinway, born Feb. 9, 1860), vice-president; Nahum Stetson, secretary; Friedrich Reidemeister, treasurer. These gentlemen, together with Henry Ziegler (grandson of the founder of the house, born Oct. 30, 1857), constructor, form the Board of Directors. Among the junior members of the house are two sons of William Steinway, Theodors E. and William R. Steinway. Nahum Stetson entered the service of the corporation as salesman in 1876; Mr. Reidemeister has been in the service of the house since 1891. H. E. K.

STEINWEG, the original of STEINWAY (Grotian, Helfferich, Schulz, TH. STEINWEGS NACHFOLGER). This firm of pianoforte-makers in Brunswick succeeded, as the style implies, to Mr. Theodor Steinweg or Steinway, when he retired, in 1865, from the business founded by his father, to join the New York firm of Steinway & Sons, of which, being the eldest brother, he became the senior partner. Soon after the Steinway system of construction was brought out in America, he introduced it in Germany, and in the season of 1860-61 his concert instruments, made on that principle, were publicly used. His successors in Brunswick have maintained the good reputation he founded for these instruments, which are favoured with the preference of some eminent pianists; notably of Madame Schumann, who from 1870 used them exclusively in Germany for her public performances. Although the present firm preserve the Steinway model in the main, they claim to have made deviations and alterations, particularly in the action, that give the instruments of 'Th. Steinwegs Nachfolger' their own cachet. A. J. H.

STENHOUSE, WILLIAM, a writer on Scottish music, was born in Roxburghshire, in 1773, and died Nov. 10, 1827. He was an accountant in Edinburgh, and before 1817 conceived the idea of annotating Johnson's *Scots Musical Museum*, with historical references regarding both words and music. He contributed specimens of these notes to *Blackwood's Magazine* for July 1817. For a republication of the *Scots Musical Museum*, Stenhouse's notes were printed in 1820, but laid aside for a considerable period, being ultimately published in 1839 and again in 1853. Stenhouse's work has been a bone of contention among musical antiquaries since its publication.

There is undoubtedly a vast mass of interesting and trustworthy information in the notes, together with many careless and slipshod references which have caused the whole work to be condemned.

Stenhouse edited the musical portion of James Hogg's *Jacobite Relics*, 1819-21. F. K.

STEPHENS, CATHERINE, born in London,

Sept. 18, 1794 [the daughter of Edward Stephens, a carver and gilder in Park Street], having given early indications of aptitude for music, was in 1807 placed under the instruction of Gesualdo Lanza, whose pupil she remained for five years. Early in 1812 she appeared in subordinate parts at the Pantheon as a member of an Italian Opera Company. Soon afterwards her father, dissatisfied with the apparently small progress she made under Lanza, placed her under the tuition of Thomas Welsh. On Sept. 23, 1813, she appeared anonymously at Covent Garden as Mandane in 'Artaxerxes' with decided success. She repeated the part on Sept. 28, as 'Miss Stevens,' and on Sept. 30, under her proper name. On Oct. 22, she sang Polly in 'The Beggar's Opera,' Rosetta in 'Love in a Village,' and afterwards Clara in 'The Duenna,' in each gaining ground in public favour. In March 1814 she was engaged at the Concert of Antient Music, and later in the year she sang at the festivals at Norwich and Birmingham. [She sang in Edinburgh in 1814, and at Dublin in 1816, 1821, and 1825. *Dict. of Nat. Biog.*] She continued at Covent Garden from 1813 until 1822, when she broke with the managers on a question of terms and transferred her services to Drury Lane. She occupied the principal position on the English operatic stage, at the first concerts, and the festivals, until 1835, when she retired into private life. Her voice was a pure soprano, rich, full, and powerful, and of extensive compass, and her execution neat, although not very remarkable for brilliancy. She somewhat lacked dramatic instinct and power, and her enunciation was very bad, but she excelled in the expression of quiet devotional feeling and simple pathos. In such songs as Handel's 'Angels, ever bright and fair,' and 'If guiltless blood,' and in ballads like 'Auld Robin Gray,' and 'Savourneen Deelish,' she captivated every hearer. On April 19, 1838, she was married to the widowed octogenarian Earl of Essex in his house No. 9 Belgrave Square,¹ and on April 23, 1839, became his widow. She survived him for nearly forty-three years, dying in the house in which she was married, Feb. 22, 1882. [A portrait by John Jackson is in the National Portrait Gallery.] W. H. H.

STEPHENS, CHARLES EDWARD, nephew of the preceding, was born in Edgware Road, March 18, 1821. Displaying early tokens of musical organisation, he was placed under

¹ In the Parish Register of St. George's, Hanover Square, the marriage was originally entered as having been celebrated in 'the Parish Church.' These last three words were, however, subsequently crossed (in two places) with a sharp instrument, and '9 Belgrave Square' written upon the erasures, but without any note, or authentication of the alteration being made in the Register. The original entry is proved by the words 'the Parish Church' remaining unaltered in the certified copy of the Register at Somerset House, until March 1882, when the discrepancy was pointed out by the present writer, and measures taken for its correction. It is to be hoped that this is a solitary instance of so flagrant a violation of the directions of the Act of Parliament as to the mode in which erroneous entries in Registers are to be rectified.

Cipriani Potter for pianoforte, J. A. Hamilton for harmony, counterpoint, and composition, and Henry Blagrove for the violin. In 1843 he was elected organist of St. Mark's, Myddelton Square, and subsequently held the same office at Holy Trinity, Paddington, 1846; St. John's, Hampstead, 1856; St. Mark's, St. John's Wood, 1862-63; St. Clement Danes, 1864-69, and St. Saviour's, Paddington, 1872-75. In 1850 he was elected an associate, and in 1857 a member of the Philharmonic Society, of which he was repeatedly chosen a director. In 1865 he was elected a Fellow of the College of Organists, in 1870 an honorary member of the Royal Academy of Music, and in 1877 a licentiate, *honoris causa*, of Trinity College, London. His first important composition was a trio for pianoforte, violin, and violoncello, produced at the Society of British Musicians, himself performing the pianoforte part; his works also include several concert overtures of merit, No. 4 of which, 'A Dream of Happiness,' was played at the Crystal Palace, Nov. 13, 1875. He also composed many works for pianoforte and organ, and much vocal music, comprising anthems and services, songs, ballads, part-songs, etc. His part-song, 'Come, fill yeright merrily,' gained the prize given by Mr. Henry Leslie's Choir in 1858, and in April 1879 he was awarded both the first and second prizes given by Trinity College, London, for the best string quartet. [His symphony in G minor was performed at the Philharmonic Concert in March 1891. He died in London, July 13, 1892, and was buried at Kensal Green.] W. H. H.

STEPHENS, JOHN, Mus.D., educated as a chorister in Gloucester Cathedral, in 1746 succeeded Edward Thomson as organist of Salisbury Cathedral. He graduated as Mus.D. at Cambridge in 1763, conducted the Gloucester Festival in 1766, and died Dec. 15, 1780. A volume of 'Cathedral Music' by him, edited by Highmore Skeats, was published in 1805. W. H. H.

STERKEL, JOHANN FRANZ XAVER (Abbé Sterkel), born at Würzburg, Dec. 3, 1750, was a distinguished amateur. Though music formed a part of his education it was only a part. He went through his college course at Würzburg University, took orders and became vicar and organist of Neumünster. In 1778 he was called to the Court of the Elector of Mainz at Aschaffenburg as chaplain and pianist. Next year the Elector sent him on a journey through Italy; success attended him everywhere, and at Naples he brought out an opera, 'Farnace,' in 1780, with éclat. In 1781 he returned to Mainz and was promoted to a canonry. All this time he was composing as well as playing in all departments of music. He wrote about this date some German songs which were great favourites, and he formed some excellent pupils—among composers Hofmann and Zulehner, among singers Grünbaum and Kirschbaum. In September

1791 occurred the great musical event of Sterkel's life, though he probably did not know its significance—his meeting with Beethoven, then a youth of twenty. Beethoven came to Aschaffenburg with the band of the Elector of Bonn, and was taken by Ries and Simrock to call on the great player, whose reputation was something like that of Liszt in after years. Sterkel was the first great executant that Beethoven had heard, and the extreme refinement and finish of his style evidently struck him much. He watched him with the closest attention, and not unnaturally declined to play in his turn, till Sterkel induced him to do so by speaking of his twenty-four variations on Righini's 'Venni Amore.' They had been published only a few months previously, and Sterkel declared that they were so hard that he did not believe even the composer could play them. Beethoven played what he could recollect, and improvised others fully equalling the originals in difficulty—but the curious thing was that he adopted Sterkel's delicate style all through. They do not appear to have met again. In 1793 Sterkel succeeded Righini as Capellmeister to the Elector, and this threw him still more into serious composition; but the French war forced the Elector to leave Mainz, and his Capellmeister returned to Würzburg. In 1805 he became Capellmeister at Ratisbon, where all his old energy revived, and he taught and composed with the greatest vigour and success. The war of 1813 at length drove him back from Ratisbon to Würzburg, and there he died Oct. 21, 1817.

The list of Sterkel's published compositions is immense. [See the *Quellen-Lexikon*.] It embraces 10 symphonies; 2 overtures; a string quintet; a quartet for PF. and strings; 6 string trios; 6 do. duos; 6 PF. concertos; a very large number of sonatas for PF. both for two and four hands; variations, and minor pieces; 10 collections of songs for voice and PF.; Italian canzonets, duets, etc. The number of editions which some of these went through shows how widely popular Sterkel was in his day. [A Mass, and a Te Deum are in MS.] G.

STERLING, ANTOINETTE, born Jan. 23, 1850 (?), at Sterlingville, in the State of New York. She possessed, even in childhood, a voice of extraordinary range, which afterwards settled into a contralto of great richness and volume, with a compass from *eb* to *f*". Her first serious study of singing began in 1867 in New York under Signor Abella, better known as the husband of Mme. d'Angri. She came to England in 1868 and remained a few months, singing chiefly in the provinces, *en route* for Germany. There she was first a pupil of Mme. Marchesi at Cologne, then of Pauline Viardot at Baden-Baden, and lastly of Manuel Garcia in London. She returned to America in 1871, and soon took a high position as a concert-singer. On May

13, 1873, she took leave of her native country in a concert at the Irving Hall, Boston, arrived in England, and made her first appearance on Nov. 5 at the Covent Garden Promenade Concert, under the conductorship of Sir Julius Benedict. At the Crystal Palace she first sang on Dec. 6, and shortly after appeared at the Saturday Popular, Feb. 21, 1874, Sacred Harmonic, Philharmonic, Albert Hall, and London Ballad Concerts. At Gloucester, in the following September, she sang at the Festival. She was married on Easter Sunday 1875, at the Savoy Chapel, to Mr. John MacKinlay; and from that time, excepting a few months in the same year, when she sang in America in a series of forty concerts under Theodore Thomas, resided in London, and was one of the most popular singers there. She was not unknown in classical music. On her first arrival here she sang the Cradle Song from Bach's Christmas Oratorio with much effect, and her repertory contained songs of Mendelssohn and Schumann. But she was essentially a ballad singer. Her voice was one of great beauty and attractiveness; but it was her earnestness and intention, the force which she threw into the story—especially if it was weird or grim, such as 'The three fishers,' 'The sands of Dee,' or 'The three ravens'—and the distinctness with which she declaimed the words, that formed the real secret of her success. [She died at Hampstead, Jan. 9, 1904, and was cremated at the Golder's Green Crematorium. Her son, Mr. Sterling MacKinlay, a baritone singer, published a memoir in 1906.] G.

STERN, JULIUS, was born at Breslau, August 8, 1820, but removed at an early age to Berlin, where he learned music under Maurer, Ganz, and Rungenhagen, at the Singakademie and the Royal Academy of Arts and soon began to compose. 'Please enquire about Mr. Julius Stern of Berlin,' says Mendelssohn,¹ 'who has sent me a book of songs with a kind note. From the first glance I think they show talent, but I have not seen or heard anything else about him.' In 1843 he received a travelling scholarship from the King, which led him, first to Dresden for the special study of singing, and then to Paris, where he soon became known as conductor of the German 'Gesangverein.' Here he performed the 'Antigone,' first in the studio of Henry Lehmann the painter,² and then at the Odéon Theatre, which drew from Mendelssohn a very characteristic letter (May 27, 1844). In 1846 he returned to Berlin, and in 1847 founded the well-known Singing Society which bore his name. The first performance of 'Elijah' in Oct. 1847 gave a specimen of the powers of the new Association, and the level has since been fully maintained by performances of a very wide range of works both ancient and modern. In 1872 the Society celebrated its

¹ Mendelssohn Family, II. 57.

² *Ibid.* p. 295.

25th anniversary, amid an enthusiasm which conclusively showed how wide and deep was the public feeling. In 1874 ill-health obliged Stern to retire from the conductorship, and he was succeeded by STOCKHAUSEN, who was succeeded in 1878 by MAX BRUCH (till 1880), Emil RUDORFF (1880-90), Fr. GERNSHEIM (1890-1904), and Oskar Fried (1904 to the present time).

Meantime, in 1850, with Kullak and Marx, he had founded his Conservatorium, which, notwithstanding the defection of his two colleagues, still flourishes and has educated many good musicians. From 1869 to 1871 he conducted the Berlin 'Sinfonie-Capelle,' and at Christmas 1873 undertook the Reichshall Concerts, which, however, were not commercially successful, and only lasted for two seasons. He then confined himself to his Conservatorium till his death, Feb. 27, 1883. Stern has published many vocal pieces and arrangements, but his most enduring work will probably be his edition of Exercises by Vaccaj (Bote & Bock), Crescentini (Peters), etc. He was made a 'Königliche Musikdirector' in 1849, and 'Königliche Professor' in 1860. G.

STERN, LEOPOLD LAWRENCE, violoncellist, born at Brighton, April 5, 1862. He belonged to a musical family, his father being a German violinist and his mother (*née* Annie Lawrence) an English pianist. From his early youth he showed strong musical leanings, and as a boy played the drum in the 'Brighton Symphony Society,' of which his father was the conductor. In 1877 he became a student at the South Kensington School of Chemistry, keeping up his music meanwhile, and eventually began the violoncello under Hugo Daubert. In 1880 he accepted a business appointment at Thornliebank near Glasgow; but three years later he finally abandoned chemistry in favour of music and, returning to London, entered the Royal Academy of Music, studying the violoncello first under Signor Pezze and then under Piatti, and subsequently visiting Leipzig in order to take lessons from Julius Klengel and Davidov. Returning to England in 1886, he played both in London and the Provinces, accompanied Patti on one of her tours, and later on played in concerts with Sauret and Paderewski. In Paris he played with Godard and Massenet. In 1895 he visited Prague, where, being favourably impressed by his playing, Dvořák selected him to bring out his Violoncello Concerto, and came himself to London to conduct in person the first public performance of the same, which took place at the Philharmonic Concert in March 1896, when Stern achieved his greatest success. He subsequently played it at Prague, the Leipzig Gewandhaus, and the Berlin Philharmonic.

In 1897 and 1898 Stern toured through the United States and Canada, and henceforth appeared but rarely before an English audience.

Of somewhat delicate health, the strain of public playing slowly undermined his constitution, and finally compelled him in 1893 to abandon an American tour and return to London, where, after a lingering illness, he died at the early age of forty-two on Sept. 10, 1904.

Stern was twice married: firstly, in 1891, to Nettie Carpenter, a violinist of some distinction; and secondly, in 1898, to Suzanne Adams, the accomplished operatic singer.

In his early years Leo Stern played upon a violoncello by Guidantus, later on the 'General Kyde' Stradivari (an instrument of large proportions), and finally on the 'Baudiot' Stradivari. W. W. C.

STEVENS, RICHARD JOHN SAMUEL, born in London, March 27, 1757, was educated in St. Paul's Cathedral choir under William Savage. He distinguished himself as a glee composer, and obtained prizes from the Catch Club for his glees, 'See, what horrid tempests rise,' 1782, and 'It was a lover and his lass,' 1786. He was appointed organist of the Temple Church, 1786, organist of the Charter House, 1796 (retaining his appointment at the Temple), and on March 17, 1801, was elected Professor of Music in Gresham College. He published three sets of glees, three harpsichord sonatas (op. 1), and songs. Nine glees and a catch by him are included in Warren's collections. Among his best glees may be mentioned 'Ye spotted snakes,' 'Blow, blow, thou winter wind,' 'Crabbed age and youth,' 'Sigh no more, ladies,' 'The cloud-capt towers,' 'From Oberon in fairy land,' all of which still retain their popularity with lovers of that class of composition. He edited 'Sacred Music for one, two, three and four voices, from the works of the most esteemed composers, Italian and English,' an excellent collection in 3 vols. fol. He died Sept. 23, 1837. [He left a valuable collection of music to the Royal Academy of Music.] W. H. H.

STEVENSON, SIR JOHN ANDREW, Knight, Mus.D., son of John Stevenson, a violinist in the State Band in Dublin, was born in Dublin about 1762. In 1771 he was admitted a chorister of Christ Church Cathedral, Dublin, and in 1775-80 was in the choir of St. Patrick's Cathedral. He became a vicar-choral of St. Patrick's in 1783 and of Christ Church in 1800. He composed new music to O'Keeffe's farces, 'The Son-in-Law' (1781), 'The Dead Alive' (1781), and 'The Agreeable Surprise' (1782), to enable them to be performed in Dublin, and also composed for the Irish stage some of the music of 'The Contract,' 1782; 'Love in a blaze,' 1799; 'The Patriot,' 1810; 'The Burning of Moscow,' and 'Bedouins,' 1801. He obtained his honorary Mus.D. degree at Dublin in 1791, and his knighthood from the Lord-Lieutenant (Lord Hardwicke) in 1803. [In 1814 he was appointed the first organist and musical director at the Castle Chapel.] He composed some

Services and Anthems (a collection of which he published, with his portrait prefixed, in 1825), 'Thanksgiving' (Dublin Musical Festival, Sept. 1831), an oratorio, and numerous glees, duets, canzonets, songs, etc. But the work by which he is best known is the symphonies and accompaniments to the collection of Irish Melodies, the words for which were written by Thomas Moore. He died at Headfort House, while on a visit to his daughter, the Marchioness of Headfort, Sept. 14, 1833. [A monument was erected to his memory in St. Patrick's Cathedral. A biographical sketch, by John Bumpus, appeared in 1893.] W. H. H.; additions and corrections by W. H. G. F.

STEWART, NEIL. One of the early Edinburgh music-publishers. In 1759 he was at the sign of the 'Violin and German Flute' in the Exchange, but before 1761 he had removed to a shop, 'opposite the Head of Blackfriar's Wynd,' which had probably been Bremner's place of business. He again removed to the Exchange, and then to Miln's Square (now demolished), facing the Tron Church. Afterwards the business was in Parliament Square, and finally in South Bridge Street. The stock-in-trade and plates were sold off by auction in 1805. Originally founded by the elder Neil Stewart, the business afterwards developed into a partnership as 'Neil Stewart & Company,' and finally belonged to Neil and Malcolm Stewart, the two sons.

The Stewart publications comprise a great bulk of important works of Scottish music, and include republications of M'Gibbon; collections of reels and country dances; marches and minuets; M'Glashan's works; Scots Songs; and great quantities of interesting music sheets. F. K.

STEWART, SIR ROBERT PRESCOTT, Knight, Mus.D., son of Charles Frederick Stewart, librarian of the King's Inns, Dublin, was born in Dublin, Dec. 16, 1825. He was educated as a chorister of Christ Church Cathedral, Dublin, of which he was appointed organist in 1844, in which year he was also appointed organist of Trinity College, Dublin. In 1846 he became conductor of the University of Dublin Choral Society, the members of which defrayed the expenses of the performance of his music for degrees of Mus.B. and Mus.D. which took place in 1851, besides presenting him with his graduate's robes and a jewelled bâton. In 1852 he became a vicar-choral of St. Patrick's Cathedral, and in 1861 was appointed Professor of Music in the University of Dublin. For the great Peace Festival held at Boston in America, in 1872, he composed a fantasia on Irish airs for orchestra, organ, and chorus, but declined the invitation to represent Ireland there. On this occasion he received knighthood from the Lord-Lieutenant (Earl Spencer) [and became Professor of Theory in the Royal Irish Academy of Music]. In 1873 he was

appointed conductor of the Dublin Philharmonic. He died in Dublin, March 24, 1894. Amongst Sir Robert Stewart's many compositions, his glees deserve particular mention. In this branch of his art he won numerous prizes and well-merited renown. His more important works include an ode for the opening of the Cork Exhibition of 1852; 'Ode on Shakespeare,' produced at the Birmingham Festival, 1870; and two Cantatas, 'A Winter Night's Wake' and 'The Eve of S. John.' He edited the Irish 'Church Hymnal' (1876).

Sir Robert Stewart enjoyed a high reputation as an organist and extemporiser; his playing at the Great Exhibition of 1851 and at that of Manchester in 1857 excited general admiration. As occupant of the Dublin Chair of Music, his excellent lectures and writings on music bore evidence to his wide culture and literary skill, as well as to his high musical attainments. [He was the first to require candidates for the musical degrees to pass a literary test, and the good example was afterwards followed at Cambridge. A portrait by Sir T. A. Jones is in the Royal Irish Academy of Music, and his statue is on Leinster Lawn, Dublin. A biography by Olinthus John Vignoles appeared in 1898, and Dr. Culwick's *The Works of Sir R. P. Stewart*, with a catalogue of his compositions (Dublin, 1902), may be consulted.] His musical memory was remarkable. W. H. H.

STIASTNÝ, BERNARD WENZEL, violoncellist, was born at Prague in 1770. Little is known of him except that he was a member of the Prague orchestra, studied with Seegr and was probably professor at the Conservatorium, to which he dedicated his work on the violoncello. It is remarkable for what may be almost called a treatise on the accompaniment of recitative as it was then practised.

STIASTNÝ, JOHANN, brother of the above, was born at Prague in 1774. We know scarcely anything of his career except that he was in the orchestra at Prague in 1800-20. He seems to have studied harmony and the violoncello at Prague, under his brother, but he must have soon left that city, as he is described on the title of his op. 3 as 'Violoncelle de S. A. R. le Grand Duc de Frankfort.' According to Fétis he was musical director at Nuremberg in 1820, and from thence went to Mannheim. He is known to have been in London, and he dedicated two of his finest compositions to Lindley and Cressdill, as well as his three duets, op. 8, to Sir W. Curtis. His last and perhaps finest work was published and probably written in London. He was also in Paris, where he arranged his op. 11 for violoncello and piano, and he dedicated his op. 3 to the pupils of the Conservatoire. There exists a beautiful French edition of his six grand duets, op. 1, and also of his two sonatas, op. 2, the latter in score. Though the list of his works only amounts to thirteen in number,

the originality and purity of them all entitle him to rank among the very first writers for the instrument. A list of his works follows:—

- Op.
1. Six grand duets for two viollos, dedicated to his brother.
2. Two sonatas for vello solo with accompaniment for a second vello.
3. Divertissement for vello solo with accompaniments for tenor and second vello.
4. Twelve 'Petites pièces pour violoncelle et basse à l'usage de com-ménants.'
5. Six pièces faciles for vello and bass.
6. Three grand duets for two viollos.
7. Concertino for vello with accompaniments for flute, two tenors, vello and contrabass, dedicated to Lindley.
8. Three duets for two viollos.
9. Six pièces faciles for vello and bass.
10. Andante with variations for vello solo with accompaniments for flute, two violins, tenor, and vello, dedicated to Cressdill.
11. Six solos for vello and bass.
12. Theme with variations and rondo with quartet accompaniment.
13. Grand trio for vello solo with accompaniment for tenor and second vello, published in London by Welsh & Hawes, but unknown on the Continent. G. H.

STICCADO-PASTROLE. An early name for a kind of wooden dulcimer formed of a graduated series of rods which being struck give forth musical sounds. (See XYLOPHONE.) A trade card, in date about 1770, advertises that 'G. Smart, Sticcado-Pastrole maker, from Mr. Bremner's music-shop . . . continues to make the above instruments with improvements.' The above G. Smart was afterwards a music-publisher, and was the father of Sir George Smart the musician. F. K.

STICH, JOHANN WENZEL, known as PUNTO, eminent horn-player, born about 1755 in Bohemia, was taught music and the French-horn by Matiegka and Hampel of Dresden, at the expense of Count Thun. On his return to the Count's household he considered himself ill-treated, and ran away with some of his comrades. To avoid recognition he Italianised his name to Punto, and travelled in Germany and France, settling for a time in Würzburg, Treves, Coblenz, Paris, etc., and attracting considerable attention. In Paris he made the acquaintance of Mozart, who composed for him a Sinfonie concertante for flute, oboe, horn, and bassoon, never played and now unfortunately lost. 'Punto plays magnificently' (*bläst magnifiqué*), writes Mozart to his father. In 1788 he was engaged by Mara (with Graff, Fischer, and Florio) for her concerts at the Pantheon, London. In Vienna, Beethoven composed his sonata for PF. and horn (op. 17) for him, and they played it together without rehearsal, at Punto's concert, April 18, 1800. It was received enthusiastically, and at once encoored. After this Punto made another tour with Dussek, returned to Prague and gave a concert at the theatre there in 1801. He died after a long illness, Feb. 16, 1803, and his epitaph runs

Omne tulit punctum Punto. cui Musa Bohema
Ut plausit vivo, sic morienti gemit.

His compositions were published in Paris by Sieber, Nadermann, Cochet, Imbault, Le Duc, and Pleyel. C. F. P.

STICKER. A light wooden rod used in organ action for conveying motion by a pushing movement. (See TRACKER.) T. E.

STIEHL, HEINRICH, born at Lübeck, August 5, 1829, second son of J. D. Stiehl (1800-73), an esteemed organist there. He studied at Lübeck and Weimar, and at Leipzig under Moscheles, Gade, and Hauptmann. In 1853 he settled in St. Petersburg as organist to the St. Peter's Church, and Director of the Singakademie. In 1867 he moved to Vienna, and after staying there two years went on to Italy. In 1872 and 1873 he was in London, and from Oct. 1874 to 1877 resided in Belfast as conductor of the Philharmonic Society and founder of the Cecilia Society there. He then returned to England, settling as a teacher at Hastings, and in 1880 was called to Reval in Russia, where he held a leading position as professor of music, organist, and conductor of the Musical Society of the town. He gave an excellent performance of Bach's 'Matthew-Passion' (the first in Russia) on March 17, 1883, and repeated it at St. Petersburg, April 6. He died at Reval, May 1, 1886.

Stiehl's compositions are numerous. They include two operas, 'Der Schatzgräber,' and 'Jeryund Bätely.' A little orchestral piece called 'The Vision' was produced at the Crystal Palace, April 12, 1873, and was much applauded for its delicate fanciful character. A 'Hexentanz,' 'Ungarisch,' Waltzes, and a Gavotte are also well known in Germany. He published three PF. Trios, a sonata for PF. and Vcello, Sonata quasi Fantasia for PF. solo, and many other works, the latest being a string quartet, op. 172. G.

STIMME (Germ.), is used both for the human voice and for the individual parts in polyphonic composition or concerted music, whether vocal or instrumental.

STIMMFÜHRUNG (Germ.), PART-WRITING, which see.

STIMPSON, JAMES, a well-known Birmingham musician, born at Lincoln, Feb. 29, 1820, son of a lay vicar of the cathedral, who removed to Durham in 1822, where James became a chorister in 1827. In February 1834 he was articulated to Mr. Ingham, organist of Carlisle Cathedral; in June 1836 was appointed organist of St. Andrew's, Newcastle; and in June 1841, on Ingham's death, was made organist of Carlisle.

In February 1842 James Stimpson was unanimously chosen organist at the Town Hall and St. Paul's, Birmingham, out of many competitors, and in the following year justified the choice by founding the Festival Choral Society and its Benevolent Fund, in connection with the Triennial Festivals. He continued organist and chorus-master to the Society until 1855. His activity, however, did not stop here. In 1844 he was instrumental in starting the weekly Monday Evening Concerts, of which, in 1859, he took the entire responsibility, to relinquish them only after heavy losses in 1867.

In 1845 Mr. Stimpson had the satisfaction of having the pedals of the Town Hall organ increased from 2 to 2½ octaves, so that he was able to perform the works of J. S. Bach un mutilated. From his weekly recitals in the Town Hall, given throughout the year to audiences varying from 600 to 1000, many a young amateur has derived his first taste for classical music. He was permanent organist of the Birmingham festivals, and Mendelssohn's last visit there was to conduct 'Elijah' for Mr. Stimpson's benefit, April 25, 1847. He introduced Sims Reeves and Charles Hallé to Birmingham, and laboured from 1849 until 1868, in many ways, in the service of good music, gaining thereby the gratitude and respect of his fellow-townsmen. He was for many years Professor of Music at the Blind Institution. He died at Birmingham, Oct. 4, 1886.

D'Almaine published in 1850 'The Organists' Standard Library,' edited by Mr. Stimpson, consisting principally of pieces hitherto unpublished in this country. His other publications consist mostly of arrangements and a manual of theory published by Rudall, Carte & Co. G.

STIRLING, ELIZABETH, an eminent English organist and composer; born at Greenwich, Feb. 26, 1819; learned the organ and piano from W. B. Wilson and Edward Holmes, and harmony from J. A. Hamilton and G. A. Macfarren. She attained a remarkable degree of execution on the organ pedals, as may be inferred from her first public performance, given at St. Katherine's Church, Regent's Park, when, out of fourteen numbers, the programme contained five pedal fugues and preludes, three pedal trios, and other pieces, by J. S. Bach. In Nov. 1839 she was elected organist of All Saints', Poplar, which she retained till Sept. 1858, when she gained the same post at St. Andrew's Undershaft, by competition. This she resigned in 1880. In 1856 she submitted an exercise (Ps. cxxx. for five voices and orchestra) for the degree of Mus. B. Oxon.; but though accepted it was not performed, owing to the want of power to grant a degree to a lady. She published some original pedal fugues and slow movements, and other pieces for her instrument, as well as arrangements from the works of Handel, Bach, and Mozart. Also songs and duets, and many part-songs for four voices, of which a well-established favourite is 'All among the barley.' In 1863 she married Mr. F. A. Bridge, and died in London, March 25, 1895. G.

STOBAEUS, JOHANN, was born July 6, 1580, at Grandenz, a town in West Prussia on the river Vistula. In 1595 he was sent, for his further education, to Königsberg, where also from 1600 he attended the University. In 1599 he became the pupil in music of Johann Eccard, then Ducal Capellmeister at Königsberg. In 1601 Stobaenus was bass-singer in the Ducal Chapel, and in 1602 was appointed

Cantor at the Domkirche and the School in connection therewith. In 1626 he received the appointment of Capellmeister to the Elector of Brandenburg at Königsberg, which he retained till his death on Sept. 11, 1646. Stobaens followed Eccard in the contrapuntal setting of the Chorale-tunes for voices alone, in a style midway between that of the motet proper, and that of mere note-for-note harmony. In 1634 he published 'Geistliche Lieder auf gewöhnliche Preussische Kirchen-Melodeyen durchaus gerichtet und mit fünf Stimmen componirt.' This work contains 102 settings of 5 of the Chorale-Tunes, half of them by Eccard, the remainder by Stobaens. In 1642 and 1644 appeared two parts of 'Preussische Fest-lieder mit 5, 6, 8 Stimmen,' 27 by Eccard, 21 by Stobaens. In this work the tunes, as well as the settings, are by the composers. It has been reproduced in modern score by Teschner. An earlier publication of Stobaens is his 'Cantiones Sacrae 5, 6, 7, 8, and 10 vocibus item aliquot Magnificat 5 et 6 vocibus adornatae,' Frankfurt, 1624. The Königsberg Library also contains a large number of occasional compositions by Stobaens, sacred and secular. J. R. M.

STOCK, FRIEDRICH WILHELM AUGUST, violinist, composer, and conductor of the Theodore Thomas Orchestra in Chicago, U.S.A., was born in Yülich, Germany, on Nov. 11, 1872, the son of a bandmaster in the German army. Under him he began his musical studies, entered the Cologne Conservatory at fourteen years of age, was graduated as a violinist, and then took up seriously the study of theory and composition under Engelbert Humperdinck, Heinrich Zöllner, Gustav Jensen, and Franz Willner. In 1895 he went to America to become a member of the Chicago Symphony Orchestra, and in 1899 was appointed assistant to Theodore Thomas (*q.v.*), then conductor of that organisation. In 1903 he conducted the concerts given by the orchestra outside the city of Chicago, and on the death of Mr. Thomas in January 1905, he succeeded him in the conductorship. Mr. Stock has written a considerable number of works in the larger forms,—overtures, symphonic poems, a set of symphonic variations which have been repeatedly played in Chicago, and were brought forward by Franz Kneisel (*q.v.*) at the festival of 1906 in Worcester; Mr. Kneisel has also taken into his repertory of chamber-music a string quartet of marked originality and strength. In harmonisation and orchestration Mr. Stock belongs to the latter-day German school of vivid colourists. H. E. K.

STOCK AND HORN, a rude musical instrument mentioned by early writers as being in use among the Scottish peasantry. It appears to have been identical with or similar to the Pibcorn (see vol. iii. p. 739). The instrument is figured in a vignette in Ritson's *Scottish Songs*, 1794, also on the frontispiece to the editions of Ramsay's

Gentle Shepherd, illustrated by David Allan, 1788 and 1808. It was then almost obsolete,

for Robert Burns, the poet, had much difficulty in obtaining one. It appears to have been made in divers forms, with either a wooden or a bone stock, the horn being that of a cow. Burns, in a letter to George Thomson, Nov. 19, 1794, thus describes it: 'Tell my friend Allan . . . that I much suspect he has in his plates mistaken the figure of the stock and horn. I have at last gotten one; but it is a very rude instru-

ment. It is composed of three parts, the stock, which is the hinder thigh bone of a sheep . . . the horn which is a common Highland cow's horn cut off at the smaller end until the aperture be large enough to admit the stock to be pushed up through the horn, until it be held by the thicker end of the thigh bone; and lastly, an oaten reed exactly cut and notched like that which you see every shepherd-boy have, when the corn stems are green and full grown. The reed is not made fast in the bone, but is held by the lips, and plays loose on the smaller end of the stock; while the stock with the horn hanging on its larger end, is held by the hand in playing. The stock has six or seven ventages on the upper side, and one back ventage, like the common flute. This of mine was made by a man from the braes of Athole, and is exactly what the shepherds are wont to use in that country. However, either it is not quite properly bored in the holes, or else we have not the art of blowing it rightly, for we can make little of it.'

The illustration given is the Stock and Horn as depicted by David Allan. F. K.

STOCK EXCHANGE ORCHESTRAL AND CHORAL SOCIETY, THE. The Orchestral Society was founded in Nov. 1883, and gave its first concert on March 5, 1885. On Dec. 18, 1885, the first subscription concert was given at Prince's Hall; and continuously from that date the Society has given a series of concerts in each season at St. James's and Queen's Hall. The Male Voice Choir was established in Oct. 1886, and gave its first concert in Feb. 1887. The choir made its first appearance with the orchestra in May 1888, and since has always been a regular feature at the concerts. In Oct. 1899 the orchestra and choir amalgamated under the present title. One of the objects of the Society is the production of new works by native composers, and the committee is prepared to consider original choral and orchestral compositions when submitted to them. Mr. George Kitchin, an amateur, was honorary conductor of both orchestra and choir from their foundation until his retirement in 1897. Mr. Arthur W. Payne has

conducted the orchestra from Oct. 1897 to the present date, and Mr. Munro Davison the choir from Oct. 1898.

The subscription for members of the orchestra or of the choir and for subscribers is from £1 : 1s. upwards. Membership of the Society is not restricted to the Stock Exchange, though members of that body take precedence in all vacancies occurring in the orchestra and choir. The orchestra numbers 130, and the Male Voice Choir 60 members. Three subscription concerts, at least, are always given in each season. S. J. S.

STOCKFLÖTE. (See CZAKAN, vol. i. p. 649.)

STOCKHAUSEN, MADAME, was born Margarete Schmuck, at Gebweiler in 1803, and trained in Paris as a concert-singer by Cartruffo. She became the wife of the harpist and composer Franz Stockhausen (1792-1868), and the mother of the singer Julius Stockhausen. Husband and wife travelled, giving not very remunerative concerts in Switzerland (1825). Paris was visited later, but Mme. Stockhausen's greatest successes attended her in England, where she was induced to return almost every year from 1828 to 1840, singing at some of the concerts of the Philharmonic and Vocal Societies, and also taking part in the principal private and benefit concerts. She had little or no dramatic feeling, but as she gained in power she grew in public favour, and came to be recognised as a true musician and an accomplished singer. She was frequently engaged at provincial festivals, and her delivery of the music of Mary in Spohr's 'Calvary' evoked special praise among her oratorio parts.

A few years after her farewell appearance in London, a home was made in Colmar, whither the Stockhausens retired to devote themselves to the education of their six children. Up to 1849 Mme. Stockhausen was heard with her son at local concerts; she left Alsace only occasionally to appear in public, and in her last visit to Paris (1849) her singing showed a great falling off. She died Oct. 6, 1877, nearly ten years after her husband, much regretted by her many friends.

L. M. M.

STOCKHAUSEN, JULIUS, son of the foregoing, one of the most remarkable singers of his time, was born at Paris, July 22, 1826. His gifts showed themselves early, and his mother was accustomed to say that he could sing before he could speak. He and his younger brother Edward (who died early) accompanied their parents on a concert tour to England, and learnt there to sing Bishop's duet, 'Where are you going, sweet sister Fay?' In 1833 Julius was placed at a school at Gebweiler in Alsace, where he remained till 1840, with a view to the clerical profession. But such intentions were dispelled by the violent turn for music which asserted itself after a concert at Basle in 1842, at which Mme. Stockhausen made her last appearance. He took a prominent part in

the concerts at Gebweiler as singer, accompanist, violin-player, and even drummer. In 1844 he moved to the seminary of Strasburg, and there his performances on the violoncello and organ sealed his fate as a priest. In 1845 and 1846 he visited Paris with his father, took lessons in the piano from Charles Hallé and Stamaty, and in singing from Manuel Garcia, and entered thoroughly into the abundant musical life of the French capital, to the great advantage of his musical education. His devotion to the profession of music was, however, not absolutely decided till 1848, when, at the invitation of Ernst Reiter, the conductor, he suddenly took the part of Elijah in a performance of that oratorio at Basle. His success decided his future course, and he at once threw himself energetically into the art, and for the next few years travelled in all directions, singing at innumerable concerts Schubert's 'Schöne Müllerin' and other songs. In 1849 he came to England, renewed his lessons with Garcia and sang at various concerts. In 1851 he returned, and sang three times at the Philharmonic, April 7, in the Choral Symphony, April 28, in two trios, and June 9 in a scena from Boieldieu's 'Chaperon Rouge.' Taste in England was not then sufficiently advanced to call for the Lieder just mentioned. To these, at the instance, of Schröder-Devrient, he shortly added Schumann's 'Dichterliebe' and others. His first appearance on the stage seems to have been at Mannheim in 1852-53, and he joined the Opéra-Comique at Paris in 1857-59, taking such parts as the Seneschal in 'Jean de Paris.' At this time he became intimate with Ary Scheffer; and with Mme. Viardot, Berlioz, Duprez, Saint-Saëns, and others, formed one of the circle by whom much German music was performed in the studio of the great painter.

1859 to 1862 were occupied in more concert tours, and it was during this time at Leipzig and Cologne that he first attempted Schumann's 'Faust' music. In 1862 he came to an anchor at Hamburg as Director of the Philharmonic Concerts and of the Singakademie, a position which he retained till 1869, when he was made Kammer-singer to the King of Württemberg at Stuttgart with a salary of 2000 gulden, residing at Canstatt. During all this time he took many concert tours, especially with Mme. Schumann, Joachim, and Brahms. In the latter part of 1870 he brought over his pupil Sophie Löwe to England, sang at the Popular Concerts, and remained till late in 1871. He once more sang at the Philharmonic, and appeared at the Crystal Palace, and the Monday Populars, where he introduced several fine unknown Lieder of Schubert. He and Frä. Löwe reappeared here the next winter, and remained till the end of the summer season of 1872.

In 1874 he moved from Stuttgart to Berlin, and took the direction of the Vocal Society

founded by Stern (Sternsches Gesangverein), which under his genial and able direction rose to the highest point of excellence. In the four years that he conducted it there were no less than twenty-eight performances of great works, including Beethoven's Mass in D, Mozart's Requiem, Bach's Matthew-Passion, Schumann's 'Faust' music (complete), and 'Paradise and the Peri,' Brahms's Requiem, etc. In 1878 he again changed his residence, this time to Frankfurt, to take the department of singing in the Conservatorium founded by Dr. Hoch, and presided over by Raff. This post, however, he soon gave up, and retired to his house at Frankfurt, teaching the many private pupils who resorted to him there. After the death of Raff in 1882 he returned to the Conservatorium. In 1886-87 he published his *Method of Singing* (translated by Mme. Sophie Löwe, new edition, 1907). He died Sept. 22, 1906.

Stockhausen's singing in his best days must have been wonderful. Even to those who, like the writer, only heard him after he had passed his zenith, it is a thing never to be forgotten. Perhaps the maturity of the taste and expression made up for a little falling off in the voice. His delivery of opera and oratorio music—his favourite pieces from 'Enryanthe,' 'Jean de Paris,' 'Le Chaperon rouge,' and 'Le Philtre'; or the part of Elijah, or certain special airs of Bach—was superb in taste, feeling, and execution; but it was the Lieder of Schubert and Schumann that most peculiarly suited him, and these he delivered in a truly remarkable way. The rich beauty of the voice, the nobility of the style, the perfect phrasing, the intimate sympathy, and, not least, the intelligible way in which the words were given—in itself one of his greatest claims to distinction—all combined to make his singing of songs a wonderful event. Those who have heard him sing Schubert's 'Nachtstück,' 'The Wanderer,' 'Memnon,' or the Harper's songs; or Schumann's 'Frühlingsnacht,' or 'Fluthenreicher Ebro,' or the 'Löwenbraut,' will corroborate all that has just been said. But perhaps his highest achievement was the part of Dr. Marianus in the third part of Schumann's 'Faust,' in which his delivery of the scene beginning 'Hier ist die Aussicht frei,' with just as much of acting as the concert-room will admit—and no more—was one of the most touching and remarkable things ever witnessed. G.

STOCKHORN. A reed instrument on the principle of the bagpipe practice-chanter, but with two parallel cylindrical tubes and independent reeds. These tubes were pierced in a single block of wood, furnished with a horn bell-mouth at one end, and the reeds were sounded by means of a cap or covering-piece placed between the lips, in the same manner as the mouth-piece of the flageolet.

An interesting example in the Museum of

Scottish Antiquities, Edinburgh, has fourteen finger-holes, and two thumb-holes at the back, arranged in pairs, so that each finger closes or opens two holes at once. The total length of this instrument is about twenty-two inches, with a bell-mouth expanding to 2½ inches, and its scale is from *f* to *g'*. The object of the double bore appears to have been the production of a strong beating tone from mistuned consonances as is common in certain native Egyptian instruments at the present day. D. J. B.

STODART. A family of eminent pianoforte-makers, whose business was founded in Wardour Street, Soho, about the year 1776, by Robert Stodart. It is said he had been in the Royal Horse Guards, to be a private in which corps involved at that time the payment of £100, an amount that must now be estimated by the then higher value of money. Having little duty and much leisure, Stodart became a pupil of John Broadwood to learn pianoforte-making, and in the books of Broadwood's firm appears, during the year 1775, to have taken his share in tuning for customers. It was while he was under Broadwood that he had the privilege, enjoyed by them as friends, of assisting Americus Backers in the invention of the new movement for the grand pianoforte since generally known as the 'English' action. After Backers's death, Stodart, now upon his own account, entered upon grand pianoforte making with energy and ability, and soon made a considerable reputation. The pianoforte was at that time hardly emancipated from the harpsichord, and there were frequent endeavours to combine both principles in one instrument. An endeavour of this nature was patented by Stodart in 1777, which is otherwise remarkable by the first mention of the word 'grand' in connection with a pianoforte. In it he worked his crow-quill registers, and also a swell, by means of pedals.

We find the business in 1795 removed to Golden Square, William Stodart in that year taking out, from that address, a patent for an 'Upright Grand.' This was the horizontal grand turned up vertically in the same way the upright harpsichord had been. The giraffe-like upright grand was then coming into fashion, and the speciality of Stodart's patent was to introduce one in the form of a bookcase. Of the highest importance was the patent of James Thom and William Allen, who were in Stodart's employ, a compensating framing of metal tubes and plates at once secured by Stodart's firm. This meritorious invention, which was really Allen's, was brought out in 1820, and paved the way to the general introduction of iron in pianofortes as a resisting power. [See *PIANOFORTE* and the writer's *Pianoforte Primer*, p. 16.] When Malcolm Stodart, who had shown great promise, died, the interest of the survivors ceased, and the business, which had been declining, came, in 1861, to an end. A. J. H.

STOKES, CHARLES. This excellent musician was born in 1784, and received his first instructions as a chorister in St. Paul's Cathedral. He was afterwards a pupil of Webbe, the glee composer, who was his godfather—and of other masters; but he was most indebted for his musical knowledge to Samuel Wesley, with whom he was long and intimately acquainted. He officiated for several years as assistant-organist to Calcott, at St. Paul's, Covent Garden, and Bartleman at Croydon; but he latterly preferred the quiet pursuit of his own studies, in domestic retirement, to the exertion and fatigue of public engagements. Yet his musical acquirements were of the highest order. Vincent Novello speaks of him as a most able teacher, an excellent organist, a delightful pianoforte-player, a refined and tasteful composer, and one of the most profound musical theorists then living. His name was little known, and his published music was almost confined to the pieces printed in Novello's 'Select Organ Pieces' (from which this notice is derived). That collection contains ten pieces by Stokes, full of quiet feeling, and real, though somewhat antiquated, musicianship. Novello also published an Anthem of his, 'I will lay me down in peace.' He died in London, April 14, 1839. G.

STOLTZ, ROSINE, celebrated French singer, whose chequered life has afforded materials for more than one romance, was born in Paris, Feb. 13, 1815. According to Fétis her real name was Victorine Noeh, but she entered Ramier's class in Choron's school in 1826 as Rose Niva. She became a chorus-singer at one of the theatres after the Revolution of 1830, and in 1832 made a very modest début at Brussels. In 1833 she sang at Lille under the name of Rosine Stoltz. Her knowledge of music was deficient, and she never became a perfect singer, but nevertheless made a considerable mark in lyric tragedy. The first time she displayed her powers was when acting with A. Nourrit as Rachel in 'La Juive' at Brussels in 1836. She reappeared in the part at the Opéra in Paris, August 25, 1837. Though inferior to Mlle. Falcon, who had created the rôle, the public was interested by a talent so original and full of fire, though so unequal, and Mme. Stoltz became a favourite from the day she appeared in parts written expressly for her. Indeed throughout Léon Pillet's management (1841 to 1847) she reigned without a rival. She created the following mezzo-soprano parts: Lazarillo in Marliani's 'Xacarilla' (1839); Léonore in 'La Favorite' (1840); Agathe in 'Der Freischütz' (1841); Catarina in 'La Reine de Chypre' (1841); Odette in 'Charles VI.' (1843); Zaida in Donizetti's 'Dom Sébastien' (1843); Beppo in Halévy's 'Lazzarone,' Desdemona in 'Otello,' and 'Marie Stuart' in Niedermeyer's opera (1844); Estrelle in Balfe's 'Etoiles de Séville' (1845); David in Mermet's opera of

that name, and Marie in Rossini's pasticcio 'Robert Bruce' (1846). The last three were failures, and in 1849 she left Paris, but appeared for some time longer in the provinces and abroad. Then no more was heard of her excepting the fact of her successive marriages to a Baron and two foreign princes. Schoen published in her name six melodies for voice and PF. in 1870.

Among the works based on the life of Rosine Stoltz may be mentioned Sudo's *Histoire d'une cantatrice de l'Opéra*; Lamer's *Mme. Rosine Stoltz* (Paris, 1847, 16mo); Cantinjou's *Les Adieux de Mme. Stoltz* (Paris, 1847, 18mo), and Mlle. Eugénie Pérignon's *Rosine Stoltz* (Paris, 1847, 8vo). G. C.

STOLTZER, THOMAS, a musician of the earlier part of the 16th century, born at Schweidnitz in Silesia, which was then part of the independent kingdom of Bohemia. He became Capellmeister at Ofen or Buda to King Louis, who reigned over both Hungary and Bohemia from 1517 to 1526. Fétis gives the date of Stoltzer's death as August 29, 1526, but although the fact has not been noticed by musical historians, it is somewhat significant that this is merely the date of the Battle of Mohacs, at which King Louis with the flower of the Hungarian nobility fell in fighting against the Turks. But there is no evidence that Stoltzer was with King Louis on this occasion, or that his life came to an end with the taking of Buda shortly afterwards by the Turks. It is very probable that he was still alive between 1536 and 1544, when the greater part of his works appeared in the Collections of the time. A letter of his, addressed to Duke Albert of Prussia, dated Feb. 23, 1526, is extant, which seems to refer to some offer made to him from the Duke to become his Capellmeister at Königsberg. He sent to the Duke an elaborate composition of the 37th Psalm in Luther's German Prose version in seven divisions ('motettisch gesetzt') for three to seven voices. There are four other Psalms of the same kind which, with the one above mentioned, Otto Kade considers to represent the high-water mark of Stoltzer's abilities as a composer. The MSS. of these are now in the Royal Library at Dresden, for which Kade negotiated their purchase in 1858, and one of them, Psalm xii., 'Hilf, Herr, die Heiligen sind abgenommen,' he has since published in score in the *Beilagen* to Ambros's *Geschichte*. Ambros gives considerable praise to the Latin Psalms and Motets of Stoltzer, which appeared in the various collections 1538 to 1545 and 1569. This praise he largely qualifies in the case of the thirty-nine settings a 4-5 of Latin Church Hymns, which constitute Stoltzer's contribution to Rhau's 'Hymni Sacri' of 1542. These latter he considers somewhat heavy, though showing solid workmanship. Other German works of Stoltzer are seven settings of Geistliche Gesänge and ten of Weltliche Lieder

in the collections of Schöffner, 1536, Forster, 1539, and Ott, 1544. One of the secular songs, 'Entlaubet ist der Walde,' deserves mention, because the tune in Stoltzer's tenor was afterwards adopted as the Choral-tune for the Hymn 'Ich dank dir, lieber Herr.' The tune itself is said to have been known about 1452, and it also appears in Hans Gerle's Lautenbuch of 1532. Harmonised by Bach, it forms the conclusion of his Cantata, 'Wer da glaubet und getauft wird.' It is given with Stoltzer's own harmony in Schöberlein's *Schatz*, Bd. iii. n. 443. One of the Geistliche Gesänge also deserves mention, 'König, ein Herr ob alle Reich,' because the first words of the three verses form the acrostic 'König Ludwig' (King Louis of Hungary), and the hymn itself first appears in company with the better-known 'Mag ich Unglück nicht widerstehn,' which also forms the acrostic 'Maria,' for Queen Maria, the wife of Louis, and daughter of the Emperor Charles V. A large number of Latin Motets by Stoltzer exist in MS. in the Library at Zwickau. J. R. M.

STONARD, WILLIAM, Mus.B. Oxon. 1608, was organist of Christ Church Cathedral, Oxford. Some of his compositions are preserved in the Music School, Oxford, and an Evening Service in C in the Tudway Collection (Harl. MS. 7337). The latter is printed in the publications of the Motet Society, vol. ii. p. 78. The words of some of his anthems are in Clifford's Collection. He died in 1630. W. H. H.

STOPPED PIPE. An organ pipe, the upper end of which is closed by a wooden plug, or cap of metal. The pitch of a stopped pipe is one octave lower (roughly speaking) than that of an open pipe of the same length; it is usual, therefore, in a specification, to state the pitch of a stopped pipe instead of its length; thus, 'Open Diapason 16 ft.,' 'Bourdon 16 ft.-tone,' etc. By the former it is understood that the longest pipe is 16 ft. long; by the latter that the longest pipe (though only 8 ft. in length) gives the same note as an open pipe of 16 ft. For the acoustic law which governs the pitch of closed pipes, see PIPES, VIBRATION OF AIR IN, vol. iii. pp. 752-754. J. S.

STOPPING is the term used for the action of the fingers of the left hand in playing instruments with strings stretched over a fingerboard, in order to produce the intermediate sounds lying between the notes sounded by the 'open' strings. When a higher note than the fundamental sound of the string is required, the vibrating part of the string must be shortened by stopping the vibration at a certain point between nut and bridge, i.e. by using one of the fingers of the left hand as an artificial nut or stopping-point. The nearer this point is to the bridge, the shorter the vibrating part of the strings, and the higher in pitch therefore the sound produced. A correct intonation or playing in perfect tune obviously depends entirely on exactness of

stopping. See also under DOUBLE STOPS and HARMONICS. P. D.

For stopping as applied to brass instruments, see HORN.

STOPS (HARPSICHORD). Like the organ, the harpsichord had stops, by which, with double keyboard, contrasts as well as changes could be made. The principle, borrowed from the organ, was the simple movement of each rack of jacks forming a register, so that the quills of the jacks might or might not touch the strings. The earliest notice of stops to a keyed stringed instrument appears in the Privy Purse Expenses of Henry VIII., April 1530, published by Sir N. Harris Nicholas in 1827 (Rimbault, *History of the Pianoforte*, 1860, p. 33). The item mentions 'ii payer of Virginals in one coffer with iiii stoppes.' The term 'Virginals' in England under the Tudors and up to the Commonwealth, had, like 'Clavier' in German, the general signification of any keyed stringed instrument. [See VIRGINAL.] We therefore interpret this quotation as a double harpsichord, in one case, with four stops. If this be so, we must perforce limit Hans Ruckers's invention to the 'ottava,' the octave string [see RUCKERS], withdrawing from him the double keyboard and stops. In all unaltered Ruckers harpsichords, we find the registers made as in the old Positive organs,¹ by the prolongation of the racks as rails or slides, so as to pass through and project beyond the right-hand or treble side of the case. Each rail-end has a short loop of cord to pull it by. The late Miss Twining's Andries Ruckers of 1640 (*ante*, p. 188, No. 74), and the Countess of Dudley's Hans Ruckers the younger of 1642 (*ante*, p. 187, No. 41) have only this simple arrangement. But subsequently, to be nearer the hands, the registers were shifted by iron crank levers, and manipulated by brass knobs divided into two groups on either side of the nameboard, and immediately above the keys. The older instruments were often altered and modernised by the addition of this contrivance. The two unison stops were placed to the player's right hand, and as the reversed position of the quills when acting upon the strings required, could be brought into play by squeezing the two brass knobs together, or made silent by pushing them apart. The ottava was placed to the player's left hand, with the Lute and Harp stops, which were of later introduction, and require separate description.

The Lute, a *timbre* or colour stop, doubtless arose from observation of the power which lute-players, like viol- and guitar-players, had of changing the quality of the tone by touching the strings closer to the bridge. Perhaps the earliest reference to an attempt to imitate these instruments on the harpsichord has been found

¹ See the organ depicted in 'Music,' attributed to Melozzo da Forlì (1438-94), in the National Gallery, London.

by Count L. F. Valdrighi, of Modena, in a letter in the Este records dated March 3, 1595, by Giacomo Alsise, horn-maker of Padua, who says: 'I have let Messer Alessandro see and hear . . . one of my quill instruments (da penna), of new invention, that with two unisons (due mani di corde) forms three changes of sound.' The passage is obscure, but if, as is probable, two jacks touched one string in Alsise's instrument, one must touch nearer the bridge than the other, and produce a different quality of sound. This might seem far-fetched were not Lady Dudley's Antwerp harpsichord of 1642 actually so made. Here are four certainly original changes, with three strings, two unisons and an octave, and the different quality is sought for upon the octave string. A few years later, and in England, Thomas Mace (*Musick's Monument*, 1676) speaks of the 'Theorboe' stop, which may have been only another name for the Lute stop. Certainly in England in the next century the use of the Lute stop, with its fascinating oboe quality, was universal,¹ and it was frequently added to old harpsichords.

The second fancy stop, the 'Harp,' was contrived to push small pieces of firm leather against the second unison.² We have unquestionable authority for this in a double harpsichord of Shudi's, of 1771, that has never been disturbed. From the material being leather, this is often called the 'buff' stop, and a single harpsichord, now at Torquay, inscribed 'Longman & Broderip,' but bearing inside the real maker's name, 'Culliford,' and date 1775, which has all the stops named, has this one marked 'Silent.' The earliest mention of the Harp stop (as 'Welch harp') is in a patent taken out by Roger Plenius in 1745. The combination of the Lute stop by the first unison on the upper keyboard, and the second unison, which could be muted by the Harp stop on the lower, was effected by a pedal for the left foot. But to allow this pedal to be used, a stop placed inside the case, at the bass end of the keyboards, away from the other stops, had to be pushed back. Culliford's harpsichord gives the name for this pedal stop, the 'Machine,' derived from the ironwork of the pedal movement placed outside the case, and usually concealed by a box covering. The alternation of Lute and Harp with the normal registers of the upper and lower keyboards, is the most pleasing colour effect of the harpsichord. In Kirkman's harpsichord we find the Lute muted, without knowing for certain if this was the original plan. This muting has the high authority of the late Carl Engel, who transferred Messrs. Kirkman's description of the stops from the *Catalogue of the Special*

Exhibition at South Kensington, 1872, to his admirable *General Catalogue of Musical Instruments in the Museum, 1874*, p. 352.

The right-foot pedal is for the Swell. [See SWELL (HARPSICHORD).] Mace attributes the invention of the harpsichord pedal to John Hayward, a 'harpsichon' maker. Kirkman and Shudi did not place their fancy stops alike. Kirkman's arrangement (and Culliford's), proceeding from the bass, was Harp, Lute, Octave; Shudi's was Lute, Octave, Harp. In all, the Lute, Octave, and first Unison move to the right; the Harp and second Unison to the left. Shudi marked this on Frederick the Great's harpsichords, still preserved at Potsdam, with arrows and the English words 'ring' and 'dumb'; the Machine stop, 'open,' 'shut.' The Germans do not appear at that time to have cared for the varieties in the harpsichord given by stops. C. P. E. Bach makes no remarks in his *Versuch* about them. He merely says (1753, p. 131) that on a Flügel with more than one keyboard, the player has the forte and piano; that is to say, the lower and upper keyboards make those changes.³ [See *Pianoforte Primer*, p. 86.] A. J. H.

STOPS (ORGAN). This word is used in two senses—for the handles or draw-stops which are placed near the organ-player, and by which he can shut off or draw on the various registers; and for the registers themselves. Thus we speak of a 'stop' being half-out, meaning the actual handle communicating with the sliders, and at the same time we speak of 'an organ having twenty stops,' meaning twenty registers. The latter use of the word has caused the appearance of a new expression, namely, 'sounding stops' or stops acting on pipes, as opposed to couplers and other accessory movements governed also by a stop-handle. When the pipes governed by a stop do not go through the whole compass, it is said to be a 'short-stop,' 'incomplete stop,' or 'half-stop.' When a complete row of pipes is acted upon by means of two stops, treble and bass, it is called a 'divided stop.' [See ORGAN, vol. iii. p. 546.] J. S.

STORACE, ANN (otherwise ANNA) SELINA, daughter of Stefano Storace (originally Sorace), an eminent Italian contrabassist who had settled in England [and who lived and taught in Dublin in 1750-56], was born in London in 1766. She was first instructed in music by her father, and when only eight years old appeared as a singer at the Haymarket Theatre, in a concert given by Evans, the harper, April 15, 1774. She was afterwards a pupil of Rauzzini, and in 1777 sang in the oratorios at Covent Garden and at Hereford Festival. On April 27, 1778, she had a benefit concert at the Tottenham Street Rooms (subsequently

¹ Queen Charlotte's Shudi harpsichord at Windsor Castle has an original Lute stop, and the date is 1740. This instrument, long at Kew Palace, was probably made for Frederick, Prince of Wales, George the Third's father.

² Shudi put a spring on the second unison slide, so that it could not be pushed off without moving a rail outside the case, next the 'Machine.'

³ In the posthumous second edition, 1797, he recommends Hohlfeld's pedal, which appears to have been a sostenente, for a dynamic change.

the Prince of Wales's Theatre—now the Scala), 'to enable her to pursue her studies, as she intends to go to Italy in the course of the ensuing summer.' She accordingly repaired to Venice, where she became a pupil of the Conservatorio dell' Ospedaletto, under Sacchini. In 1780 she appeared at La Pergola, Florence, with great success. [See Michael Kelly's *Reminiscences* and the *Dict. of Nat. Biog.*] In 1781 she sang at Parma, and in 1782 at La Scala, Milan. In 1784 she was engaged at the Imperial Theatre, Vienna, at a salary equal to £500 sterling for the season, a then unprecedented sum. During her stay in the Austrian capital two important events in her career happened, (1) her appearance on May 1, 1786, as the original Susanna in Mozart's 'Nozze di Figaro,' and (2) her ill-starred marriage with Fisher the violinist. [See FISHER, JOHN ABRAHAM.] She returned to England in March 1787, and appeared at the King's Theatre, March 24, as Gelinda, in Paisiello's 'Gli Schiavi per amore,' and afterwards in other comic operas, but she soon abandoned the Italian for the English stage, on which she made her first appearance at Drury Lane, Nov. 24, 1789, in her brother's opera, 'The Haunted Tower,' and for several years afterwards sustained, with the greatest success, a variety of characters in comic opera. In 1791 she sang at the Handel Festival in Westminster Abbey, and in 1792 at Hereford Festival. [She formed an intimacy with Braham, and toured with him on the Continent.] In 1801 she was engaged at Covent Garden, where she continued to perform till May 30, 1808, when she took her leave of the public in the opera of 'The Cabinet.' She lived at Dulwich until her death, August 24, 1817, and was buried at St. Mary's, Lambeth. She accumulated a considerable fortune, and by her will, dated August 10, 1797 (twenty years before her death), bequeathed upwards of £11,000 in pecuniary legacies alone, including two munificent gifts of £1000 each to the old Musical Fund (Royal Society of Musicians) and New Musical Fund. This will was proved Oct. 11, 1817, the personalty being sworn under £50,000. It was said in 1820 that after payment of all the legacies, there remained but little short of £40,000 for her cousin, Miss Trusler, the residuary legatee. Her studious concealment, after her return to England, of her marriage, is evidenced by her having made her will in her maiden name and avoided any description in it of her quality or condition, and also by the fact that her executor, in proving the will, describes her as a spinster. [A miniature of her is in the Soane Museum.] W. H. H.

STORACE, STEPHEN, brother of the preceding, was born in London, Jan. 4, 1763. His early taste for music was cultivated by his father, so that when ten years old he was able

to perform the most difficult violin music of Tartini and Giardini—the Paganinis of the day—with correctness and steadiness. When twelve years old he was placed in the Conservatorio of St. Onofrio at Naples, where he studied the harpsichord, violin, and composition. On his sister's arrival in Italy, a few years later, he joined her and visited with her the principal cities of that country, and eventually went to Vienna, where he produced his two operas, 'Gli Sposi malcontenti' (June 1, 1785) and 'Gli Equivoci,' the subject taken from Shakespeare's 'Comedy of Errors,' Dec. 27, 1786. He gained great advantage whilst there from his association with Mozart. [He wrote, no doubt, during his Viennese period, two quintets and a sestet. Many amusing stories of Storace and his sister are told in Michael Kelly's *Reminiscences.*] In March 1787 he returned to England and was engaged to superintend the production of the opera in which his sister appeared at the King's Theatre, but soon became disgusted with the prevalent petty jealousies and intrigues, and retired for a time to Bath, where he devoted his attention to drawing, for which he had considerable talent. He returned to his musical pursuits in the ensuing year, and on Oct. 25, 1788, produced at Drury Lane the musical farce of 'The Doctor and the Apothecary,' adapting some of the well-known 'Doctor und der Apotheker' of Dittersdorf. On Nov. 24, 1789, he brought out his three-act opera, 'The Haunted Tower,' the success of which was unbounded; it was performed fifty nights in the first season and kept its place upon the stage for nearly half a century. On April 16, 1790, he produced his charming little opera, 'No Song no Supper,' in which he introduced some of the music of 'Gli Equivoci.' [In the same year he wrote music for 'La Cameriera Astuta.' Jan. 1, 1791, witnessed the production of the opera, 'The Siege of Belgrade,' in which he introduced much of the music of Martini's 'La Cosa rara.' This also long continued an established favourite. On May 3, in the same year, he produced the 'Cave of Trophonius,' an adaptation of Salieri's 'La Grotta di Trofonio,' with some additional music by himself, but with no success. He fared better when, on Nov. 20, 1792, he brought out 'The Pirates,' in which he incorporated several pieces from 'Gli Equivoci.' The finale to the first act is regarded as his masterpiece. In the same year he produced his opera, 'Dido, Queen of Carthage,' which met with but small success, notwithstanding that the heroine was undertaken by Mara. 'The Prize,' musical entertainment, first performed on his sister's benefit night, March 11, 1793; 'My Grandmother,' musical farce, produced Dec. 16, 1793; 'Lodoiska,' musical romance, the music partly adapted from Cherubini and Kreutzer, and partly composed by himself, performed June 9,

1794; 'The Glorious First of June,' occasional piece, produced July 2, 1794; the ballet of 'Venus and Adonis' (1794), and the 'Cherokee,' comic opera, Dec. 20, 1794, were all well received, as was also 'The Three and the Deuce,' musical drama, performed Sept. 2, 1795. On March 12, 1796, Colman's 'Iron Chest,' with Storace's music, was performed for the first time, and although the play, owing to accidental circumstances, failed to produce an immediately favourable impression, the music was rapturously received. But few, however, if any, of the gratified and applauding auditors knew or thought that anxiety for the success of that music had impelled its composer to a course which had laid him upon his deathbed. He was then recovering from a severe attack of gout and fever; yet urged by a sense of duty, he determined, despite the entreaties of his family, to attend the first rehearsal. The consequence was fatal; he took cold, the gout attacked his stomach, and on March 19,¹ he expired, at the early age of thirty-three years.

At the time of his death he had an opera, 'Mahmoud, or The Prince of Persia,' in preparation for Braham's début in London. This work was left incomplete, but, by the assistance of Kelly, and the selection of some music by the composer's sister, A. S. Storace, it was fitted for performance and produced for the benefit of his widow (a daughter of John Hall the engraver) and his children, April 30, 1796, was well received, and performed many times. Storace's melodies are thoroughly English in character, whilst in his instrumentation the influence of Mozart and the Italian composers is evident. He was almost the first English composer who introduced into his works the modern finale, in which the business of the scene is carried on by concerted music.² Some fine examples occur in his works. There is reason for believing that his early death delayed for many years the advance in that direction which might otherwise have been made. W. H. H.

STORNELLO. 'A short poem, in lines of eleven syllables each: it is peculiar to, and liked by the people in Tuscany, who extemporise it with elegant simplicity.' This is the definition of Stornello we find in Mons. Tommaseo's Dictionary, and, in this matter at least, we are not aware of any greater authority. The 'Vocabolario degli Accademici della Crusca,' the stronghold of the purity of the Italian language, does not contain the word; this fact added to the other, not less significant, that neither Crescimbeni, nor Quadrio, nor Tiraboschi, mention the word in their elaborate works, inclines us to believe that the word *Stornello* has not the definite meaning that, for instance, *Sonnetto* has, but is merely a name given in some parts of Italy to very short poems, more with regard

to their purport than their form. Tommaseo again, somewhere else, speaking of Tonio and Beatrice, two peasants who sang and recited popular songs and popular poems to him, says: 'Tonio makes a difference between *Rispetti* and *Ramanzetti*; the latter are composed of only three lines, the former of eight or ten. And those that Tonio called *Ramanzetti* Beatrice called *Strambotti*, as Matteo Spinello and King Manfredi did; and in the territory of Pistoja and in Florence they are distinguished by the name of *Stornelli*.' Although in the true popular songs of Italy there is a great freedom in the number of lines and rules of rhyming, the two Stornelli we subjoin may be taken as fair examples of this kind of poem.³

(1) Tutta la notte in sogno mi venite;
Ditemi, bella mia, perchè lo fate?
E chi viene da voi quando dormite?

(2) Fiori di pepe.
So giro intorno a voi come fa l'ape
Che gira intorno al fiore della siepe.

The first line may contain either five or eleven syllables; the other two are of eleven syllables each. The first line rhymes with the third, *i.e.* the two have the last syllable, and the vowel of the last syllable but one, alike; the intermediate line, while corresponding in its last syllable with the last syllable of the other two lines, changes the vowel of the accented one. [In the second form given above, the verse begins with the name of a flower. A Stornello is embodied in Browning's 'Fra Lippo Lippi,' and Lola, in 'Cavalleria Rusticana,' sings one.]

The etymology of 'Stornello' is very uncertain; Tommaseo, however, has some ground for asserting that it is a corruption of 'Ritornello,' or 'refrain.' G. M.

STRADA DEL PÒ, ANNA. An Italian soprano, brought from Italy by Handel in 1729, with Bernacchi, Merighi, Fabri, and others, for the opera in the Haymarket. She appeared there in 'Lotario,' Dec. 2, 1729; in 'Partenope,' Feb. 24, 1730; 'Poro,' Feb. 2, 1731; 'Ezio,' Jan. 15, 1732; 'Sosarme,' Feb. 19, 1732; in 'Acis and Galatea,' June 10, 1732; and in 'Orlando,' Jan. 23, 1733. She was the only one of Handel's company who did not desert him for the rival new opera in Lincoln's Inn in the end of 1733, and she remained faithful to him till her departure from this country in June 1738, when a quarrel with Heidegger, the manager, put an end to her connection with England. In the interval between 1733 and the last-named date she took part in Handel's 'Ariodante,' 'Alcina,' 'Atalanta,' 'Arminio,' 'Giustino,' 'Berenice'; also in 'Athaliah' and 'Alexander's Feast.'

Even on her arrival, though, according to Handel,⁴ 'a coarse singer with a fine voice,'

¹ The day of his death is given on his monument as the 16th.

² Dibdin had foreshadowed it in his 'Quaker.'

³ From Tigris's 'Canto Popolare Toscani' (Florence, 1869).

⁴ Burney's *History*, iv. 342. The above information is compiled from the same volume, pp. 339-427.

Strada must have had some brilliant execution, for the first air which she sang on those boards contains no less than thirty opportunities to display her shake. Coming after Cuzzoni and Faustina, and having so little to recommend her to the eye that she was nicknamed the 'pig,' it took her some time to get into favour. But Handel took pains with her, wrote for her, and advised her, and at length rendered her equal to the first singers of the Continent. G.

STRADELLA, ALESSANDRO, an Italian composer of the 17th century. The earliest and only detailed account of him is given by Bonnet-Bourdelot, in his *Histoire de la musique et de ses effets*, Paris, 1715. This is the source of the romantic story of his eloping with the mistress of a Venetian nobleman, of the attempt to murder the composer, of the effect of Stradella's music upon the assassins, and of the ultimate success of the nobleman's plot 'about the year 1670'; there seems no good reason to believe the story, which occurs in a book that is untrustworthy in many particulars. The narrative failed to obtain credence from M. Richard¹ or M. Catelani,² whose researches, however, have not led to any positive result.

The place of Stradella's birth is unknown. Wanley³ thinks he was a Venetian, while Burney⁴ states he was a Neapolitan, apparently for no other reason than that he sends Stradella and Ortensia, *en route* for Rome, to Naples, which, he adds, was 'the place of Stradella's nativity.' Fétis,⁵ evidently on Burney's statement, but without quoting his authority, describes him as born at Naples about 1645, and the assertion is now an accepted statement.⁶ The dates both of his birth and death are in fact unknown. But though we reject the story of his murder at Genoa, it is not impossible that he ended his life there, since the composition, which we may presume to have been his last, is dated from thence.

The date of his death was probably about 1681, since there exists in the Biblioteca Palatina di Modena, a cantata, 'Il Barcheggio,'⁷ written for the wedding of Carlo Spinola and Paola Brignole, at Genoa, July 6, 1681. The poem contains numerous allusions to it, and the names of both bride and bridegroom; no mistake is possible as to the real

date of the composition, and thus the dates 1670 and 1678, given by Bourdelot and Burney respectively for his death, are evidently wrong.⁸

The statements that besides being a composer Stradella was a singer,⁹ 'an exquisite performer on the harp,'¹⁰ 'a great performer on the violin,'¹¹ 'excelled in an extraordinary hand, so as to have been accounted the best organist in Italy,'¹² 'was a Latin and perhaps also an Italian poet,'¹³ are all more or less gratuitous, and except composing, it cannot be proved that he possessed any of these qualifications. His name is never met with in any of the best treatises of Italian literature, either as a Latin or an Italian poet,¹⁴ and with respect to his skill on the organ, we have been unable to find anything to justify Wanley's assertion, beyond a short Sonata in D for two violins and basso continuo per l'Organo.¹⁵ As to the statements in the *Penny Cyclopædia*, that 'Stradella was not handsome, but remarkable for the symmetry of his form, his wit and polished manners,' and in Wanley's catalogue, that 'he was a comely person and of an amorous nature,' I can do no more than submit them to the reader, as striking instances of the way in which mythical statements gather round a central figure.

Nothing can be positively asserted as to his having been married to Ortensia after the attempted murder at Turin, because the archives of S. Giovanni di Torino, the parish of the court, have been destroyed by fire.

Where or with whom Stradella studied is entirely unknown. In the archives of the Royal Conservatorio di Musica in Naples, where all the documents formerly belonging to the superseded Conservatori are most carefully kept, his name does not occur; nor is it mentioned in Lichtenhal's catalogue.¹⁶ None of his numerous operas are known to have

⁸ Burney's mistake is easily explicable, because, when he wrote, 'Il Barcheggio' had not yet been discovered, and he was in possession of a libretto 'La forza dell'amor paterno,' Genoa, 1678, dedicated to Signora Teresa Raggi Soali by Alessandro Stradella, the dedication apparently written by Stradella himself. The fact that the oratorio 'S. Giovanni Battista'—supposed to be that which saved its author's life in Rome—bears the date 'Rome, 1678' and the fact that Bourdelot's account implies a period of two years between Stradella's singing in Rome and his murder in Genoa, induced Burney to believe that Stradella might have met his death in Genoa while attending the rehearsals of his new opera. However, that libretto was seen by Burney only, and has since disappeared.

⁷ On the first page of the score is written: 'Il Barcheggio, del Sig. Alessandro Stradella 1681. L'ultima delle sue sinfonie.' After the overture, and before the duet with which the scene opens, at the top of the page is written 'Invenzione per un Barcheggio, 1681, 16 Giugno. L'ultima composizione del Sig. Alessandro Stradella.' This is a cantata for soprano, tenor, and bass, in two parts. Each part is preceded by an overture. The score is for two violins, cornet or trumpet, and bass: a trombone di rinforzo at times with the bass.

been performed in his lifetime,¹ with the exception of 'Il Trespole.'²

Stradella as a composer is known to modern audiences by the Aria di Chiesa, 'Pietà, Signore!' attributed to him. It is enough to say that no musician, even though but slightly acquainted with the works that are indisputably by Stradella, will attribute it to him. The composer of that beautiful composition is almost certainly Rossini. The words are taken from the second stanza of Arsenio's aria in Alessandro Scarlatti's oratorio 'Santa Teodosia,' two copies of which are in the Biblioteca Palatina of Modena, and bear the signature 'A. S.'

Stradella's name has lately been invested with fresh interest on account of a Serenata attributed to him, in which the subjects of many of the pieces in 'Israel in Egypt' exist in a more or less crude form. [See vol. ii. pp. 286b, 514b.] A copy of this, formerly belonging to Dr. Gauntlett, is in the Library of the Royal College of Music, London, and another (older) in that of the Conservatoire, Paris; the original is not known. For a review of the work, by Prof. Prout, see *Monthly Musical Record*, Dec. 1, 1871.

Burney (iv. 105) gives an analysis of his Oratorio di S. Gio. Battista, and mentions a MS. of his opera 'La Forza dell' Amor paterno,' dated Genoa, 1678.

There are 148 of Stradella's compositions at Modena: amongst them six oratorios and six dramas. The library of S. Marco in Venice possesses a collection of 'Canti a voce sola dell' insigne A. Stradella, legate alla Biblioteca S. Marco di Venezia dalla nobile famiglia Contarini.' Some of his compositions are also at the Conservatorio at Naples, and some in that at Paris. Many are in the British Museum. (See the *Quellen-Lexikon*.) The Christ Church Library, Oxford, contains one motet for two voices, and eight cantatas for one and two voices. G. M.

STRADELLA. 1. French lyric drama, music by Flotow. Produced at the Palais Royal theatre, Paris, Feb. 1837. Then recomposed, as a Grand Opera, and produced at Hamburg, Dec. 30, 1844, as 'Alessandro Stradella.' In English (altered by Bunn) as 'Stradella,' at Drury Lane, June 6, 1846. 2. Opera in five acts, by Niedermeyer; produced at the Académie, March 3, 1837. G.

STRADIVARI, ANTONIO, 'brought the violin to the highest perfection and left to Cremona an imperishable name as master of his craft.' Thus the inscription now affixed by the municipality of Cremona to the house in the Piazza Roma where the great violin-maker passed the

most successful years of his life, and where he died on Dec. 18, 1737.

It should be stated at once that the history, that is to say, the whole of the facts available as the reward of untiring effort and affectionate research, concerning the family of the great 'Stradivarius,' as well as his own personality and work, have been amassed in the monumental study which has been, it may be said, the life-work of the sons of William Ebsworth Hill—*Antonio Stradivari, his Life and Work (1644-1737)*, by W. Henry Hill, Arthur F. Hill, F.S.A. and Alfred Hill (London, 1902). Beyond what is collected in this volume there is, probably, nothing more to be discovered or discussed. To this work the writer acknowledges his great indebtedness.

Regarding the etymology of the name Mr. E. J. Payne, in the first edition of the Dictionary, pronounced it to be derived from 'the plural form of "Stradivare," a Lombard variety of "Stradiere," a tollman or douanier, a feudal official who was posted on the Strada (or high road) for the purpose of exacting dues from passengers'; while Signor Mandelli, quoting from the catalogue of ancient rolls of the community of Cremona, compiled by the Piedmontese professor, Astegiano, to the year 1300, and printed at Turin in 1899, states that: 'The form of the name "de Stradaverta" as used in 1298 is derived from "Strada Averta" of the Cremonese dialect; in Italian "Strada Aperta." A further outcome of Signor Mandelli's researches is the remarkable genealogy of the Stradivari family which he has traced down to 1883. Beginning with Giulio Cesare Stradivari of the parish of S. Michele Vecchio, who married Doralice Milani, a widow of the cathedral parish, on April 10, 1600, we find Antonio Stradivari's father recorded in the register-entry of the son born to them two years later and christened Alessandro, on Jan. 15 in the same church. Later we find this same Alessandro, son of Giulio Cesare Stradivari, entering into the bonds of matrimony with Anna, daughter of Leonardo Moroni, on August 30, 1622, which fact is duly recorded in the marriage register of the parish of S. Prospero. Three children are recorded to have been born of this union: Giuseppe Giulio Cesare, born March 1623; Carlo Felice, born Sept. 1626; Giovanni Battista, born Oct. 1628. After the birth of the last-mentioned child documentary evidence concerning the family ceases entirely, and no effort has yet dissipated the obscurity which enshrouds the birth of Antonio Stradivari. Every record relating to the subject has, it would seem, been destroyed, or lost, and the only available explanation of this singular deficiency has been furnished by the wars and famine which visited Cremona in 1628, the year Giovanni Battista was born, and again in 1629. Again in 1630 the inhabitants were further harassed by the ravages of

¹ The following is the list of books in which the names of Stradella's operas should have been mentioned, if any of them had been performed. Leone Allacci, *Drammaturgia*. Gruppo, *Catalogo di tutti i drammi per musica*. Bonfini, *Le glorie della Poesia e della Musica*. C. F. Menestrier, *Des représentations en musique ancienne et moderne*, Paris, 1681. Pietro Napoli Signorelli, *Storia critica de teatri antichi e moderni*. Ditto, *Discorso storico critico da servire di lume alla storia dei teatri*.

² Performed at Bologna, 1679, and at Modena, 1686.

a plague which caused innumerable deaths, and compelled all those who could do so, to leave the city. It is further recorded that Hieronymus Amati, his wife and his daughters, succumbed to the disease; but there is no indication that Alessandro Stradivari and his family were still at Cremona at the time, and Mandelli has perhaps rightly interpreted the complete lack of documentary evidence regarding the date and place of Antonio Stradivari's birth, to signify that his parents had fled to some haven of refuge where in the fulness of time Antonio first saw the light. The names of the three children above mentioned are the only entries to be found in the birth registers relating to children born in wedlock to Alessandro Stradivari, and the only direct allusion to the relationship existing between Antonio and Alessandro Stradivari is furnished by the contract for the purchase of his house wherein he signs himself 'Antonio Stradivari, son of the late Alessandro.'

The earliest authentic evidence of Antonio Stradivari's residence in Cremona has been supplied by a violin—dated 1666—recorded by Alfred Hill, in whose hands it has been. The original label in this instrument runs as follows: 'Antonius Stradiuarius Cremonensis Alumnus Nicolai Amati, Faciebat Anno 1666,' followed by the familiar Maltese cross and the initials A. S. enclosed within a double circle. He was then—as will be gathered later—twenty-two years of age and, it may be assumed, had probably served an apprenticeship to Nicolo Amati for the seven or eight preceding years. It is quite possible that he began to insert his own labels some years before 1666, but this date may be said to have marked the later limit of his pupilage; in any case it proved his competence to claim the authorship of his own instruments, and the labels found in his violins of the following year bear no allusion to Nicolo Amati, nor is there any further reference to his master on the labels of any of his later instruments. Following the same lines of deduction, the year in which Antonio Stradivari was born has been generally accepted as 1644, by reason of his custom of adding his age to his labels during the latter part of his life. It would seem as though the venerable maker, with a pardonable pride, desired to impress his contemporaries, as well as succeeding generations, with his unflinching vigour and skill by recording his age within his instruments. In 1732 he states himself to be '89,' in 1736, '92' and in 1737, '93.' Another noticeable feature of these labels is the alteration in the spelling of his name. About the year 1730 he seems to have discarded the first orthography, i.e. 'Antonius Stradiuarius,' and replaced the u with a roman v. The origin of this change may have been a chance misprint which commended itself to him; but it was certainly not due to any orthographical views on the part of the Stradi-

vari family, for his son, Omobono, still continued to employ the earlier, while Francesco adopted the later spelling.

Accepting the year of Antonio Stradivari's birth as 1644, we find that he was twenty-three years of age when he married Francesca Fera-boschi in 1667. This lady was the widow of Giovanni Giacomo Capra, who had committed suicide in the Piazza S. Agata, Cremona, three years previously, and was Stradivari's senior by a few years. After the union Stradivari and his wife settled in a house known as the Casa del Pescatore, which was situated in his wife's parish of S. Matteo; and a year after the marriage the Cremona census reports record that a daughter, christened Giulia Maria, had been born to them. Until 1680 Stradivari continued to live at the Casa del Pescatore, where his family was increased by the birth of a second daughter, Catterina, born March 25, 1674 (died June 17, 1748), and four sons: Francesco, born Feb. 6, 1670—who only lived a week; Francesco, born Feb. 1, 1671 (died May 11, 1743); Alessandro, born May 25, 1677 (died June 26, 1732); Omobono, born Nov. 14, 1679 (died June 8, 1742). The year following the birth of Omobono Stradivari and his family removed to the house he had purchased in the Piazza San Domenico of a Cremonese family named Picenardi. According to the deed of sale, first brought to light by Signor Lombardini (*Antonio Stradivari e la celebre scuola Cremonese*, 1872), and now preserved in the National Archives of Cremona, Stradivari paid 7000 imperial lire (about £840) for his new home. 2000 lire of this amount he paid in cash, 4990 he agreed to pay within four years, and the balance of ten lire was foregone by the vendors provided he paid the canons of the Cathedral the yearly tithe of six imperial sols. Until his death Stradivari resided in this house, known in his day as No. 2 Piazza San Domenico, but since 1870 as No. 1 Piazza Roma, and for nine years after his demise the remaining members of his family lived there. In 1746 it was let to Stradivari's pupil, Carlo Bergonzi, who occupied the house until 1758. In the following year it was tenanted by Giacomo Caraffe, and until 1777 by Giuseppe Paleari and others; but in that year Stradivari's grandson, named Antonio after him, sold the house to Signor Giovanni Ancina. During these years the building escaped alteration, but in 1888 the proprietor of the adjoining *café* purchased it and carried out such extensive alterations that little of the original form of the structure now remains.

Eighteen years of domestic tranquillity followed the establishment of the Stradivari family—which included Susanna Capra, his wife's only daughter by her first husband—in their new abode, until May 25, 1698, when a break was caused in the home-circle by the death of the

violin-maker's wife, Francesca Feraboschi. She was buried with conspicuous honours in a tomb situated in the choir of the church of St. Domenico, and fifteen months after her death Stradivari consoled himself, becoming united in August 1699 to Signora Antonia Maria Zambelli, daughter of Antonia Zambelli, of the parish of S. Donato. This second marriage was blessed with five children: one daughter—named after the first wife—Francesca Maria, born Sept. 19, 1700 (died Feb. 11, 1720); Giovanni Battista Giuseppe, born Nov. 6, 1701 (died July 8, 1702); Giovanni Battista Martino, born Nov. 11, 1703 (died Nov. 1, 1727); Giuseppe, who became a priest, born Oct. 27, 1704 (died Dec. 2, 1781); Paolo Bartolomeo, born Jan. 26, 1708, who was a cloth-merchant (died Oct. 14, 1776). The last named, together with Stradivari's first child, Ginlia Maria (by his first wife), were apparently the only members of his family who married.

Immersed in the absorbing interest of his work, it may be safely said that the years passed swiftly over Stradivari's head, so that, notwithstanding the loss of several of his children, the thought of purchasing a family vault did not occur to him until eight years before his own death. It was in 1729 that he is recorded to have purchased, from the heirs of Francesco Villani, the burial-place and tombstone belonging to that noble family. The exact locality of this vault has been entirely lost since the total destruction of the church of S. Domenico and its chapel—named after the Blessed Virgin of the Rosary—which contained the Villani, afterwards the Stradivari tomb. No funds for the restoration of this handsome church were available, and it gradually fell into such a state of decay that the city authorities had the building demolished in 1869, converting the site into the existing public garden. Here a commemorative inscription on one of the decorative vases in the grounds perpetuates the memory of the church of S. Domenico, but the fact that it was the last resting-place of the illustrious violin-maker is not alluded to. The Villani tombstone, however, from which the coat-of-arms and family inscriptions were so imperfectly effaced that they are still visible under Stradivari's name, is now preserved in the Municipal Museum, and the Parish Register of S. Matteo records that Stradivari's second wife was interred in the Villani vault on March 4, 1737. She was the first member of the family to be buried there, and nine months later she was followed by her husband, who was laid to rest on Dec. 19, 1737. The following members of his family were also interred in the same vault: Omobono Stradivari, June 9, 1742; Francesco Stradivari, May 13, 1743; Paolo Bartolomeo Stradivari, Oct. 15, 1776; Giuseppe Antonio Stradivari, Dec. 3, 1781; Catarina Stradivari (spinster), June 18, 1784.

Little or nothing is known concerning the disposition of Stradivari's property after his death. The census returns reveal that his family continued to reside in the Piazza Roma house until 1746. Possibly his sons and daughters divided their father's possessions amicably among themselves, and we may presume that the privilege of using his workshop and tools fell to the share of Francesco and Omobono, who survived their father for five and six years respectively. After the departure of Stradivari's son Paolo Bartolomeo, with his wife Elena Templari and their four children, in 1746, the new tenant, Bergonzi, presumably became the owner of Stradivari's tools and violin-making appurtenances; but during the thirty-nine years or so which elapsed between Stradivari's death and the sale of his designs, moulds, etc., by his descendants to Count Cozio di Salabue, many of these interesting relics necessarily became scattered abroad and passed into different hands. With the exception of his callipers, the great Cremona maker's tools were not included in the Count's collection, which now belongs to the Marchese Dalla Valle in Turin. There are sixteen moulds for violins, and three for violas, in this collection, besides various drawings and designs for the minutest details of his art, which are of great interest. M. Vuillaume, it is said, also preserved some of Stradivari's moulds, and these were presented by him to the Musée of the Paris Conservatoire, whilst the French luthier, M. Chanot-Chardon, owns a set of small planes said to have belonged to Stradivari.

As no genuine portrait of the great Cremona maker exists, we still have to rely on the verbal description of Stradivari handed down to us by Polledro from his master Pugnani, for an idea of his personal appearance. According to M. Fétis (*Biog. des Mus.*), on whose authority we have the account, Polledro, formerly first violin at the court of Turin (died 1822), records that his master, Pugnani, knew Stradivari during the latter part of his life, and delighted in talking about him. He described him as tall and thin. As a rule his head was covered with a white woollen cap in the winter, and a white cotton cap in the summer; over his clothes he wore an apron of white leather, and, as he rarely ceased from work, his costume varied seldom. M. Fétis also recounts that Stradivari's untiring industry and his frugal habits brought him to an old age of such easy circumstances that his affluence became a standard of comparison to the people of Cremona, who adopted the phrase *Ricco come Stradivari*.

In the opinion of Messrs. Hill, Stradivari was undoubtedly an apprentice in Nicolo Amati's workshop, but they unhesitatingly repudiate the idea that Stradivari assisted Amati in the construction of his later instruments, and this on the grounds that there is no indication of any such help to be found in the latter's work.

The explanation of this is possibly to be found in the fact that Stradivari's superior gifts placed him in a high position of trust, freed him from many of the duties exacted from his comrades, and gave him the privilege of making his own instruments and using his own labels. The question must still be somewhat a matter of surmise, but the above conclusion is certainly strengthened by the excellent violins which issued from Stradivari's hands whilst apparently he still worked in the studio of the great Amati. Again, the termination of Stradivari's apprenticeship can only be approximately stated to have taken place a couple of years before he purchased his house in the Piazza Roma in 1680. Already in 1666—and possibly as early as 1660—Stradivari was making violins in which he affixed his own labels. These early violins are particularly noticeable for their poor material, thick yellow varnish, solid build, and their proportions, which follow those of Amati's smaller pattern, *i.e.* about $13\frac{7}{8}$ long; $7\frac{1}{8}$ width of lower bouts; $6\frac{3}{4}$ width of upper bouts; $1\frac{3}{8}$ lower ribs; $1\frac{1}{4}$ upper ribs. With one or two exceptions, notably the ornamented violin known as the 'Hellier' Strad (1679), which tends towards the grand Amati in measurement, and is remarkably heavy in style of work, Stradivari adhered to the small model until 1684, after which date he definitely turned his attention to larger-built instruments. There is little doubt that by this time he had gained some *prestige* as a maker, and this, combined with the loss of his master's living influence, gave freedom to and further awakened his inventive faculties. Until 1684 he merely proved himself to be an uncommonly skilled craftsman, but the years which intervened between 1684 and 1700 marked the progress of those experiments which were to culminate in the uttermost perfection of form and balance. It must be observed, however, that notwithstanding the changes which took place in Stradivari's work during this period—generally alluded to as the 'Amatisé period'—the perfect poise and equilibrium, so characteristic of his later work, is to some extent lacking. That Nicolo Amati's precepts still strongly influenced him is proved by his first innovation, which consisted in adopting a standard of length, varying from 14 inches to $14\frac{1}{8}$ inches, and proportions similar to those of the 'grand' Amati. In some instances he flattened the model, in others arched it almost to a central point, more generally he adhered entirely to the Amati model, though the solidity of his edges always remained the same. The scrolls also, during these years, evidence the master's indecision by the deviating vigour and occasional feebleness. A marked alteration in the detail of his work took place in 1688, when Stradivari first outlined the curves of the scroll in black, and also similarly accentuated the centre-line

or back rib of the scroll. This original idea was one which evidently commended itself to him and to his patrons as, with but few exceptions, he continued to place it on his scrolls until the end of his life. Briefly to summarise this early period, we may say that, between 1684 and 1690, Stradivari principally strove to avoid the defects of others, while seeking new paths for himself; but in the meantime the beauty, accuracy, and finish of his work was gaining steadily every year. The cutting of his *ff* holes, the carving of his scrolls, the exquisite precision of the purfling, all prove the complete dexterity with which he handled his knife. Then, as a crowning point to this perfect craftsmanship a new set of proportions suddenly suggested themselves to his maturing brain, and we find him in 1690 creating the 'Long Strad.' The abrupt appearance of this complete innovation is not easy to account for, but the growing demand for strongly toned instruments for use in the churches doubtless influenced Stradivari in the first place, and as the authors of *Gio. Paolo Maggini, his Life and Work* (Hill & Sons) state, the form and proportions were suggested by a Maggini violin which came under his notice. This search for power in Stradivari's work is observable from the moment that he threw off the yoke of the 'small' Amati pattern. He gradually increased his breadths year by year, and even contemporaneously with the 'Long Strad,' he made violins in 1691 and 1692 of still larger proportions, by combining extreme breadth with the utmost length of the long pattern. The dimensions of a typical 'Long Strad' of 1690 will be found recorded in Messrs. Hills' Appendix to their work already mentioned.

During the years following 1684 the varnish upon Stradivari's violins became gradually deeper in colour, and, as on the 'Long Strads,' it is of a rich hue of amber and light red. Until 1698 Stradivari adopted the 'long pattern' almost entirely, then came a return to the proportions which preceded the year 1690, and we get violins of about 14 inches in length, with widths similar to those of the 'Long Strad,' but with outlines more curved, corners longer, body fuller, and a whole of more harmonious appearance. It is interesting to note before leaving this period that the backs of the 'Long Strads' are nearly always cut in one piece; that the model is rather flat, but sloping gracefully from the centre to the purfling; that the *ff* holes, to fall in with the general design, are set rather upright, nearer together, and more open; the pine is fine grained, the mitres square, and the exquisitely carved scrolls are proportionately long.

With the year 1700 dawned the finest decade of the great Cremona master's greatest period. Slowly but surely he discarded the Amati tradition which had again asserted itself in 1698 and continued to a certain extent until

about 1702. We find him still adhering to the 14-inch length, but broadening, developing, and arching the model, until it assumes an unsurpassable grandeur and symmetry. His years of experiment have resulted in a neatly compact instrument, with light edges, accurate corners, round arching, broadly treated but exquisitely graceful sound-holes and scroll, and a varnish soft in texture, which shaded deliciously from orange to red. From 1703 until about 1709, the year of those famous violins 'La Pucelle' and the 'Viotti,' Stradivari seems to have settled upon certain points of construction, from which he rarely departed afterwards. A slight variation of curve is observable, but the main features and general dimensions agree with one another. Then followed years of indecision, in which no consistency of plan is to be traced, and until the end of his career, some minute changes of thickness, width, or length, characterise his work. Yet, in spite of these diversities, the years following 1710 undoubtedly mark the production of some of his finest instruments. In 1711 he made the fine violin known as the 'Parke'; in 1713, the 'Boissier' belonging to Sarasate; in 1714 the 'Dolphin'; in 1715 the 'Gillot' and the 'Alard,' which experts look upon as the master's finest creation; and in 1716 came the 'Messiah.' These years also mark the production of some of his grandest violoncellos, such as the 'Duport,' 1711; the 'Batta,' 1714; and—the most superb of all—the 'Piatti' in 1720. All of these are instruments of smaller proportions (about 29½ inches long) than those he made anterior to the years following 1700, which kept to the dimensions of his contemporaries. That Stradivari did not occupy himself with the proportions of the violoncello, as he did with those of the violin, is hardly to be wondered at, seeing that the capacities of the violoncello were hardly understood in his day. It was not until the latter years of his life that such artists as Franciscello employed it as a solo instrument, and Stradivari—with his usual quick responsiveness to the demands of artistic appreciation—gradually modified the proportions of his instruments from about 31½ inches to about 29½ inches in length, as the progressing technique of the contemporary *virtuosi* exacted a diminution in size.

His violas bear a more distinctive stamp of his creative genius than do his violoncellos. The changes so apparent in his violins are quite as evident in these larger instruments, and the models marked 'TV' and 'CV' preserved in the Dalla Valle collection evidence that he made these in two sizes, *i.e.* 'Tenor Viola' and 'Contralto Viola.' Before 1690 the influence of the Brescian school, and of the Amatis, still ruled the proportions of his violas, but after that year he adopted a smaller model—about 16½ in length—and to this he mainly adhered. These three members of the string quartet seem

to have occupied Stradivari's attention almost exclusively. No authentic double basses or any designs for the same have as yet come to light, and with the exceptions of the remains of a viola-da-gamba, a kit,—now in the Musée of the Paris Conservatoire,—two handsome guitars, dating from the early years of his career, and the head of a third, it may be said with truth that Stradivari's fame rests entirely upon his violins, violas, and violoncellos. His principles of construction are analysed in detail in the work already quoted.

Stradivari's methods have been preserved from century to century, until they have become the fundamental basis of the art of violin-making. No detail of his work was too unimportant for the master's vigilant observation. That he personally designed the pegs, finger-boards, tail-pieces, inlaid patterns, bridges, and even the minutest details of his violin cases, is attested to by the numerous drawings of these in the Dalla Valle collection, while the several sketches for bow-tips and nuts reveal the interesting fact that he also made bows. His material, as already stated, was not always of the finest, owing to the restriction of limited funds during the early part of his career. However, it may be said that in the classification of the relative importance of the various factors required to make a perfect violin, material and dimensions are subservient to varnish, and it was in the application of this that Stradivari surpassed his contemporaries, rather than in the discovery of any new compound for the same. Generally speaking, the so-called 'Lost Cremona Varnish' was, in the writer's opinion, no secret in Stradivari's lifetime, but the common property of the luthiers of the day who compounded it from the materials used by the great painters of the epoch. Space will not admit of our discussing the many theories put forth regarding the component parts which constituted this varnish. Suffice it to state here, that in the opinion of the writer—an opinion which, it must be said, is controverted with some skill by Messrs. Hill—the late Charles Reade's hypothesis of an oil varnish over a spirit varnish is the most fundamentally correct solution of Stradivari's varnishing (vide *Readiana* and the *Pall Mall Gazette*, Letters, 1872). The exigencies of time-limits which have brought a demand for quick-drying varnishes in modern times sounded the death-knell of the brilliant, tender, transparent varnish of the Cremona School, so that the world has been forced to acknowledge that it is now a mere memory. Stradivari's own recipe was inscribed on the fly-leaf of a family Bible, but his descendant Giacomo Stradivari destroyed this, though it is said that he kept a copy of it which he carefully preserved for any future members of the family who might adopt the

profession of their illustrious ancestor Antonio Stradivari.

Synopsis of the most Noticeable Violins, etc., made by Antonio Stradivari.—According to Messrs. Hills' careful calculations Stradivari made 1116 instruments between the years 1666 and 1737; of these, 540 violins, twelve violas, and fifty violoncellos are actually known to them to-day, whilst they have traces (unconfirmed) of over one hundred more. The earliest dated instruments seen by them are of the years 1666, 1667, and 1669. Count Cozio di Salabue states, however, that Stradivari was working and inserting his own labels in 1659. The following are the names of some of Stradivari's most noticeable violins: The 'Hellier,' 1679; the 'Sellière,' made between 1666 and 1680; the 'Tuscan,' 1690 (see MOSEL); the 'Betts,' 1704; the 'Ernst,' 1709 (presented to Lady Hallé by Earl Dudley and others); 'La Pucelle,' 1709; the 'Viotti,' 1709; the 'Vieuxtemps,' 1710; the 'Parke,' 1711; the 'Boissier,' 1713; the 'Dolphin,' 1714 (so named from its iridescent varnish); the 'Gillot,' 1715; the 'Alard,' 1715; the 'Cessol,' 1716; the 'Messie,' 1716 (preserved in Count Cozio di Salabue's collection for fifty years without being played on; hidden by Luigi Tarisio for thirty years in an isolated farm near the village of Fontenato, Italy; purchased by Vuillaume when Tarisio died in 1854; preserved by him in a glass case in his shop; sold to Mr. E. Crawford, an enthusiastic musical amateur, for £2000, and now the property of Messrs. William Hill). The 'Sasserno,' 1717; the 'Maurin,' 1718; the 'Lauterbach,' 1719; the 'Blunt,' 1721; the 'Sarasate,' 1724; the 'Rode,' 1722; the 'Dourbroucq,' 1727; the 'Kiesewetter,' 1731; the 'Habeneck,' 1736; the 'Muntz,' 1736 (both of these show the shaky hand of the veteran master).

Violas: The 'Tuscan,' 1690, preserved in the Municipal Institute, Florence—it bears Stradivari's monogram stamped on the mortice of the neck, the original finger-board, tail-piece, tail-nut, and bridge; two violas, 1696, belonging to the quintet of inlaid instruments for some years owned by King Philip IV. of Spain; the 'Archinto,' 1696 (named after Count Archinto who owned a Quartet of Strade); the 'Macdonald,' 1701; Paganini's viola, 1731, which inspired Berlioz to write his symphony 'Harold in Italy.'

Violoncellos: The 'Archinto,' 1689; the 'Tuscan,' 1690; the 'Aylesford,' 1696; the 'Cristiani,' 1700; the 'Servais,' 1701; the 'Gore-Booth,' 1710; the 'Duport,' 1711; the 'Adam,' 1713; the 'Batta,' 1714; the 'Piatti,' 1720; the 'Baudiot,' and 'Gallay,' 1725, comprise some of the finest instruments made by Stradivari (see also QUARTETS OF INSTRUMENTS).

E. H.-A.

STRADIVARI, FRANCESCO and OMOBONO, sons of the above by his first wife, née Francesca Feraboschi. Francesco was born at Cremona on Feb. 1, 1671; died May 11, 1743; and Omobono was also born at Cremona on Nov. 14, 1679; died June 8, 1742. Both were interred in the Villani vault. They were the only members of Stradivari's family who embraced their father's profession, and although their work is not without merit, their brilliant and long-lived father entirely eclipsed them. During the latter years of Stradivari's life there is little doubt that they assisted him, probably in conjunction with Carlo Bergonzi, in constructing his violins. This would account for those specimens of the great master's work that frequently give rise to controversy. But for the hand of the vandal these 'doubtful' instruments would bear the label 'sotto la disciplina d' Antonio Stradivari,' by which inscription he distinguished the instruments made in co-operation with his sons. These tickets have, however, in almost every case, been removed, and fresh

ones, bearing Antonio Stradivari's name alone, inserted. Of the two brothers, Francesco was the better *luthier*. His work is not without originality, the outline of his *ff* holes in particular differing greatly from that of his father. A picture of one of his violas is included in Mr. George Hart's *The Violin*. E. H. A.

STRAIGHT & SKILLERN, a firm of London music-publishers. Thomas Straight and Thomas Skillern were established in Great Russell Street, Covent Garden, and issued a set of Country Dances for 1768. On the death of James Oswald about 1769, they appear to have taken over his business at 17 St. Martin's Lane, and to have reissued some of the Oswald publications, in some instances in conjunction with William Randall. About 1777 or 1778, Thomas Straight either died or gave up business, and Skillern was left alone at 17 St. Martin's Lane, where he remained until about 1799 or 1800, at which time his death occurred, his plates and stock-in-trade being bought by Preston. Skillern's son (presumably) now went into partnership with Challoner (evidently Neville Butler Challoner, the harpist) at 25 Greek Street; they afterwards, *circa* 1815, were near the corner of Regent Street and Oxford Street.

Thomas Straight, jun., after his father's death, set up a music-business at 138 St. Martin's Lane, removing about 1796, and apparently devoting himself to music-engraving solely, at 7 Lambeth Walk. Another address of the same or another Straight is 4 Green Street, Leicester Square. F. K.

STRAKOSCH, MAURICE and MAX, brothers well known in the United States as *entrepreneurs* of operatic and concert ventures.

Maurice Strakosch, the elder of the two, was born at Lemberg in Moravia in 1825 (*Baker's Dict.*), or 1823 (*Mus. World*). He studied at the Vienna Conservatorium, and from 1845 to 1860 lived in the United States, first as a teacher and then as an impresario. After Rossini's death he gave performances of the 'Messe Solennelle' at the Salle Ventadour, Paris, where he organised a successful opera season in 1873-74. He was European agent for his sister-in-law, Mme. Patti, from her début in 1859 until her marriage, and also for many other distinguished singers. He joined his brother in management of the Apollo Theatre in Rome in 1884-85. In 1887 he published a volume of memoirs, and died suddenly, Oct. 9, of the same year. His younger brother, MAX, remained in America, when Maurice went to Europe, and managed in his stead. He directed many successful enterprises of Italian opera, managed the Apollo Theatre, in Rome, with his brother in 1884-85, and died in New York, March 17, 1892. A. C.

STRALOECH MS., a famous MS. collection of airs written in lute tablature, for Robert Gordon of Straloch, and dated 1627 and 1629. The MS. was in small oblong octavo of ninety-two leaves, and was entitled, 'An playing Booke

for the Lute. Where in ar contained many cyrrents and other mysvcal things. . . . At Aberdeen. Notted and Collected by Robert Gordon [Sir Robert Gordon of Straloch]. In the year of our Lord 1627. In Februarie.' On the back of the title was a sketch of a person playing on the lute.

It was given, in 1781, by Dr. George Skene of Aberdeen, to Dr. Burney, who does not appear to have mentioned it or to have made any use of it. It afterwards came into the possession of Mr. James Chalmers of London, at the sale of whose effects it disappeared. In 1839 it was lent to George Farquhar Graham, who made some extracts from it. Graham's original transcript was in the library of the late T. W. Taphouse of Oxford, and was sold in 1905. A fair copy was made by Graham, and deposited in the Advocates' Library, Edinburgh; other copies, too, have been made from the original transcript, one by the present writer. Though the Straloch appears to be the earliest MS. containing Scottish airs, yet the list of contents (see *Gentleman's Magazine*, February 1823) shows how small a proportion they bear to the English and foreign airs. F. K.

STRANIERA, LA (The Stranger). Italian opera in two acts; libretto by Romani, music by Bellini. Produced at the Scala, Milan, Feb. 14, 1829. In London at the King's Theatre, June 23, 1832, for Tamburini's début. G.

STRATHSPEY, a Scottish dance, closely allied to the Reel, derives its name from the strath or valley of the Spey, in the North of Scotland, where it appears to have first been danced. The word does not appear in connection with music till late in the 18th century, but much earlier than that tunes are found suited for the style. Though slower in time than the Reel, the Strathspey calls for more exertion. The former is a gliding dance, while the Strathspey abounds in those jerky motions which call every muscle into play. Thus the music of the Reel is composed of a series of passages of equal quavers, while the Strathspey consists of dotted notes and semiquavers. The latter frequently precede the long note, and this peculiarity has received the name of the 'Scotch snap.' That the two words were formerly almost synonymous, is shown by a volume which is still of the highest authority and of which the title-page runs thus—'A Collection of Strathspeys or Old Highland Reells, with a Bass for the Violoncello, Harpsichord, or Piano-forte. By Angus Cumming, at Granton. Strathspey. 1780.' The word Strathspey is here printed in very large letters, while 'Old Highland Reells' are in the smallest. Moreover, throughout the volume, the word Strathspey is not once used, but always *Reell So-and-so*. No. 5, for example, though clearly a Strathspey, is entitled 'Acharnae Reell.' Reels, and the dance music of Scotland generally, have been

already noticed. (See REEL and SCOTTISH MUSIC.) Something, however, may be said in regard to Strathspeys specially. One point of difference between them and the Reel is in the *tempi* of the two ; in the Reel $\text{♩} = 126$ Maelzel, in the Strathspey $\text{♩} = 94$. Another is the smoothness of the notes in the Reel as compared with the broken notes of the Strathspey.

REEL. *Clydeside Lasses.*

It will be seen that in the above all is written in smooth notes, while the Strathspey consists almost entirely of broken ones.

STRATHSPEY. *Tullochgorum.*

With the Reels and Strathspeys of Scotland the name of Gow is indissolubly associated. Niel Gow, the founder of the family, was a man of strong original genius and admittedly the greatest player on the fiddle of Scottish dance-music. In a short notice of him (published in the *Scots Magazine*, 1809), Dr. M'Knight, who had frequently heard him play, and who was himself a famous fiddler, thus describes his style of execution : 'His bow-hand as a suitable instrument of his genius was uncommonly powerful ; and when the note produced by the *up-bow* was often feeble and indistinct in other hands, it was struck in his playing with a strength and certainty which never failed to surprise and delight skilful hearers. . . . We may add the effect of the *sudden shout* with which he frequently accompanied his playing in the quick tunes, and which seemed instantly to *electrify* the dancers, inspiring them with new life and energy, and rousing the spirits of the most inanimate.'

Burns wrote some of his finest verses to Strathspeys. Thus in 'Rothiemurchus' Rant,' the first part of the tune is almost note for note that of the Strathspey ; the second part has been altered so as to make the music more vocal in its character, the original being strictly instrumental music, with difficulties which the voice could not well overcome.

Another fine specimen is 'Green grow the Rashies O' ; an early version of this tune is in the STRALOECH MS. It was styled 'a daunce' then, as it was later, but has none of the dotted notes so characteristic of the Strathspey. In the 'Collection of Original Scotch Tunes,' published by H. Playford, 1700, there are a few Reel tunes in addition to the large number of Scotch measures which it contains. One called 'Cronstoune' is a very good specimen of the Reel, whether quick or slow. Another entitled 'The Birks of Plunketty' is a good Strathspey, but

has been written down in 3-4 time by some one who did not understand the measure. Another, 'The Cummers (Commères) of Largo,' is styled a Reel ; being in 9-8 time we should now term it a Jig.

Many other specimens could be given, but the above may suffice for our present purpose. T. L. S.

STRAUS, LUDWIG, an excellent violin-player, was born at Pressburg, March 28, 1835 ; entered the Vienna Conservatorium in 1843, and remained there till the revolution in 1848 ; was pupil of Böhm for the violin, and Preyer and Nottebohm for counterpoint ; made his first appearance (at the same time with Fräulein Csillag) in a concert at the hall of the Musikverein, Vienna, in June 1850. During the next few years he made various public appearances, besides playing in the private concerts of several patrons of music, especially Ober-Finanzrath Baron von Heintl, at whose réunions he played second fiddle to Mayseder for three years. At the Mozart Centenary Festival in 1856 he met Liszt, and like many other young artists benefited by his kindness. Straus's first concert tour was made in 1855, and extended as far as Venice and Florence. In 1857 he made the acquaintance of Piatti, with whom he took a second tour through Germany and Sweden. In 1860 he was appointed concertmeister of the theatre (till 1862) and of the Museum-concerts in Frankfort (till 1864), giving also quartet concerts, and leading the subscription concerts in the neighbouring towns. In 1860 he first visited England, played at the Musical Union, June 5, etc., and at the Monday Popular Concert of June 18. In 1861 he returned, and appeared twice at the Philharmonic, April 29 and June 24.

In 1864 he took up his residence in England, settling after a time in Manchester, where he was leader of Hallé's orchestra. But he often visited London, to take either first fiddle or viola in the Popular Concerts, or to play solos at the Crystal Palace or the Philharmonic ; during his residence in England he played at Dresden, Vienna, etc. Straus was a member of the Queen's private band, and 'Solo Violinist' to Queen Victoria. [In 1888 he resigned the leadership of the Hallé orchestra, and settled altogether in London. In 1893 he gave up all active work, being crippled with arthritis ; he went to live at Cambridge, where, a short time after his retirement, his many friends and admirers presented him with a fine Stradivarius violin. He died there Oct. 23 (not 15th as Riemann states), 1899, retaining to the last his wide interest in the best music, and endearing himself to a large circle of friends by his modesty, artistic integrity, and splendid musicianship.] G.

STRAUSS, JOHANN, composer of dance-music of world-wide celebrity, born in Vienna, March

14, 1804. As a child he showed talent for music, and a love for the violin, but his parents, small innkeepers, apprenticed him to a book-binder, from whom he ran away. A friend met him, took him back, and persuaded the parents to entrust him with the boy's education as a musician. With the son of this benefactor the little Strauss learnt the violin from Polyschansky, afterwards studying harmony and instrumentation with Seyfried. He soon played the viola in string-quartets at private houses, and at fifteen entered Pamer's orchestra at the 'Sperl,' a favourite place of amusement in the Leopoldstadt. At that time the excellent playing of Lanner and the brothers Drabaneck was exciting attention; Strauss offered himself, and was accepted as fourth in the little band. Soon, however, their numbers had to be increased to meet their numerous engagements, and Strauss acted as deputy-conductor till 1825, when he and Lanner parted. In the Carnival of 1826 Strauss and his little orchestra of fourteen performers appeared in the hall of the 'Swan' in the Rossau suburb, and took the hearts of the people by storm. His op. 1, the 'Täuberl-Walzer' (Haslinger), was speedily followed by others, the most successful being the 'Kattenbrücken-Walzer,' called after the Hall of that name. Strauss was next invited to return with his now enlarged orchestra to the 'Sperl,' and with such success as to induce the proprietor, Scherzer, to engage him for six years, which virtually founded the reputation of the 'Sperl' and its orchestral conductor. Meantime Strauss was appointed Capellmeister of the first Bürger-regiment, and entrusted with the music at the court fêtes and balls. As his band was daily in request at several places at once, he increased the number to over 200, from which he formed a select body for playing at concerts, in music of the highest class. He now began to make tours in the provinces and abroad, visiting Pesth in 1833; Berlin, Leipzig, and Dresden in 1834; West Germany in 1835; and North Germany, Holland, Belgium, and the Rhine, in 1836. His next tour began in Oct. 1837, and embraced Strasburg, Paris, Rouen, Havre, Belgium, London, and the larger towns of Great Britain; he then returned to Belgium, and back to England and Scotland. His success in Paris was unprecedented, notwithstanding the formidable rivalry of Musard and Dufresne, with the former of whom he wisely joined for a series of thirty concerts. A disagreeable intrigue nearly made him throw up the journey to England, but it was only there that his profits at all remunerated him for his enormous expenses. In London he played at seventy-two concerts, and at innumerable balls and fêtes given in honour of the Queen's coronation (June 28, 1838). On his second visit he had great difficulty in keeping his band from dispersing, so weary were they of continual travelling.

He managed, however, to go again to Birmingham, Liverpool, and Dublin, besides visiting Reading, Cheltenham, Worcester, Leicester, Derby, Nottingham, and Sheffield. At Sheffield his receipts were small, and at Halifax still less, but when the amateurs of both places discovered the kind of musician they had been neglecting, a deputation was sent with post-horses to Leeds to bring him back again. He was taken ill at Derby, and only reached Vienna with great difficulty in Dec. 1838. His first reappearance at the 'Sperl' was quite a popular fête. On May 5, 1840, he conducted for the first time in the Imperial Volksgarten, which was crowded whenever his band performed. Strauss now introduced the quadrille, which he had studied in Paris, in place of the galop. His first work of the kind was the 'Wiener Carneval-Quadrille' (op. 124). Henceforward, except waltzes—among which the 'Donaulieder' (op. 127) are still played—he composed only quadrilles, polkas, and marches, including the favourite 'Radetzky-March.' On April 16, 1843, he and the band of his old Bürger-regiment accompanied the body of his old colleague Lanner to the grave. An excursion to Olmütz, Troppau, etc., in the autumn of 1844, was succeeded in the next autumn by one to Dresden, Magdeburg, and Berlin, where he was immensely fêted. The king appeared in person at Kroll's Garden, and invited Strauss to play at the palace. The Prince of Prussia, afterwards the Emperor William I., ordered a performance at Kroll's by more than 200 bandsmen, conducted by the Capellmeister General Wipprecht, before Strauss and his orchestra, when the royal princes, the generals, and the pick of the nobility, attended. On his departure a grand torchlight procession and serenade were given in his honour. On his return to Vienna he was made conductor of the court balls. In the autumn of 1846 he went to Silesia, and the year following again to Berlin and Hamburg, where he revenged himself for some slights caused by professional jealousy by giving a concert for the poor. He returned to Vienna by Hanover, Magdeburg, and Berlin. During the stormy days of March 1848 he did homage to the spirit of the times in the titles of his pieces, but Strauss was at heart a Viennese of the olden time, a fact which caused him much unpleasantness on his next tour, in 1849, by Munich, Stuttgart, Frankfurt, and the Rhine, Brussels, and England. He stayed in London and the provinces from April to July. After a brilliant farewell-concert he was accompanied down the Thames by a fleet of boats, one of which contained a band playing the popular air, 'So leb' denn wohl du stilles Haus,' from Raimund's 'Verschwender.' In the midst of this gay scene poor Strauss was oppressed with a presentiment that he should never revisit London. Shortly after his return to Vienna he was taken ill with scarlet fever,

to which he succumbed on the fourth day, Sept. 25, 1849. With him departed a feature of Viennese life, and that the people themselves felt this was shown by the vast concourse at his funeral. A Requiem was performed in his honour on Oct. 11 by his own band, and the Männergesangsverein of Vienna, the solos being sung by Mesdames Hasselt and Ernst, Aloys Ander and Staudigl, all from the court opera. Strauss married, in 1824, Anna Streim, daughter of an innkeeper, who bore him five children, Johann, Joseph, Eduard, Anna, and Therese. They separated after eighteen years, on the ground of incompatibility of temper. There are numerous portraits from which an idea can be gathered of Strauss's personal appearance. Though small he was well made and distinguished-looking, with a singularly formed head. His dress was always neat and well chosen. Though lively in company he was naturally rather silent. From the moment he took his violin in his hand he became another man, his whole being seeming to expand with the sounds he drew from it.

As an artist he furnished many pleasant hours to thousands, and high and low combined to do him honour, while great masters like Mendelssohn, Meyerbeer, and Cherubini, acknowledged his talent. He raised dance-music to a higher level than it had ever reached before, and invested his copious melodies with all the charm of brilliant instrumentation. Full of fire, life, and boisterous merriment, they contrasted well with Lanner's softer and more sentimental airs, and must be judged by a totally different standard from that of mere dance-music. As a conductor it was his constant endeavour to mingle classical names in his programmes, and thus to exercise an elevating influence on the masses. His works, published almost entirely by Haslinger, number 251, and comprise 152 waltzes, 24 galops, 6 cotillons and contredances, 32 quadrilles, 13 polkas, and 18 marches, including some without opus-numbers. The bulk of these have made, so to speak, the tour of the world; each new waltz was in its way an event, not only in Vienna, but wherever the first printed copies penetrated. Innumerable pens, including those of poets, celebrated his works, and the stage itself took part in the general homage, 'Strauss and Lanner' being the title of a one-act comedy by Töpfer, and a three-act piece by Anton Langer. [His complete works were published in 1889 by Breitkopf & Härtel, in seven volumes.]

Of his three sons, the eldest, JOHANN, scarcely less gifted than his father, was born in Vienna, Oct. 25, 1825. In accordance with the father's wish that none of his sons should adopt his own line of life, Johann, after finishing his education at the Gymnasium and Polytechnic Institute, became a clerk in the savings bank, although he had, with his mother's help, long taken lessons in secret on the violin, and even studied composition with Drechsler. When only six

he composed, at Salmansdorf near Vienna, where the family used to spend the summer, his first waltz, which was performed on his fiftieth birthday as 'Erster Gedanke.' The constraint put upon him became at length unbearable, and on Oct. 15, 1844, he first appeared as a conductor at Dommayer's, at Hietzing, playing compositions of his own, and his father's 'Loreley Walzer.' His success on that occasion decided his future career. After his father's death he incorporated the two bands, and made a tour to the country towns of Austria, Warsaw, and the more important towns of Germany. He also undertook for ten years the direction of the summer concerts in the Petropaulowski Park at St. Petersburg. On August 28, 1862, he married the popular singer Henriette ('Jetty') Treffz, and in 1863 became conductor of the court balls. This post he resigned after his brilliant success on the stage, but he had in the meantime composed nearly 400 waltzes, of as high a type as those of his father. His music is penetrated with Viennese gaiety and spirit, and has made its way into all countries. The waltz, 'An der schönen blauen Donau' (op. 314), became a kind of musical watchword in Vienna, and was played on all festive occasions. ['Tausend und eine Nacht,' 'Man lebt nur einmal,' 'Wiener Blut,' and 'Künstlerleben' are among the most famous.] Besides Russia, Strauss visited Paris (during the Exhibition of 1867), London, New York, Boston, and the larger towns of Italy. The Theatre 'an der Wien' was the scene of his triumphs as a composer of operettas, which rapidly spread to all the theatres, large and small. 'Indigo und die vierzig Räuber' (his first, 1871), 'Der Karneval in Rom' (1873), 'Die Fledermaus' (1874), 'Cagliostro' (1875), 'Prinz Methusalem' (1877), 'Blindekuh' (1878), 'Das Spitzentuch der Königin' (1880), 'Der lustige Krieg' (1881), 'Eine Nacht in Venedig' (1883), 'Der Ziegenbaron' (1885), 'Simplicius' (1887), 'Ritter Pasman' (1892), 'Fürstin Ninetta' (1893), 'Jabuka' (1894), 'Waldmeister' (1895), and 'Die Göttin der Vernunft' (1897), all published by Spina, were soon known all over the world, and were sung everywhere. Posthumously produced were a ballet 'Aschenbrödel' and an orchestral piece 'Traumbilder.' He died in Vienna, June 3, 1899. A biography by R. von Procházka is in Reimann's series of *Berühmte Musiker*. (See Reimann's *Lexikon*.) After the death of his wife on April 8, 1878, he married another dramatic singer, Angelica Dittrich.

His next brother, JOSEPH, born August 22, 1827, in Vienna, was also obliged to accommodate himself to his father's wishes, and became an architect. He had, however, studied music in secret, and during an illness of his brother's in 1853 he conducted for him with a bâton, as he did not learn the violin till later. He next collected a band, began to compose,

and published in rapid succession 283 works (Haslinger and Spina) not less popular than those of his brother. He had always been delicate, and the excitement incidental to his calling increased the mischief year by year. A visit to Warsaw in 1870, against the wish of his friends, was very disastrous. Some Russian officers, having sent for him in the middle of the night to play for them, so shamefully ill-treated him for his refusal that he had to take to his bed. Under the devoted nursing of his wife (married in 1857) he rallied sufficiently to return to Vienna, but sank a few days afterwards, July 22, 1870.

The youngest of his brothers, EDUARD, was born at Vienna, Feb. 14, 1835, and educated at the Schotten and Akademien Gymnasiums. His father having died before he grew up he devoted himself entirely to music, learnt the harp, and studied composition with Preyer. In 1862 he made his first appearance as a conductor in the Dianasaal, and was well received for his father's sake. In 1865 he took his brother Johann's place at the concerts in St. Petersburg, and in 1870 became conductor of the court balls. He and his band have made repeated tours to Dresden, Leipzig, Breslau, Berlin, Hamburg, Frankfort, etc. He appeared regularly in Vienna on fixed days at the Volksgarten, and in the winter in the large hall of the Musikverein, when his programmes were always attractive. He composed over 200 pieces of dance-music, published by Haslinger, and latterly, with few exceptions, by Spina (Schreiber). Eduard Strauss married in 1863. [In 1885 his orchestra was engaged at the Inventions Exhibition in London, when the daily concerts created a furore. He came also a few years later and played at the Imperial Institute.] C. F. P.

STRAUSS, RICHARD, was born June 11, 1864, at Munich, where his father, Franz Strauss (born Feb. 26, 1822), was first horn-player in the Court orchestra. The boy began to play the piano at four years old, and tried his hand at composition from the age of six onwards. In his schooldays he had lessons on piano and violin, and while at the Gymnasium (1874-1882) studied composition seriously with the Court Capellmeister, F. W. Meyer. At school concerts were performed a couple of choral works, in 1880 three of his songs were sung in public, and the Walter Quartet played his string quartet in A in 1881, in which year Hermann Levi performed a symphony in D minor in four movements. Most of these childish and student efforts are still unpublished. In 1882-83 Strauss was at the University. An unpublished overture in C minor was played under Radecke in Berlin, and a serenade for wind instruments at Meiningen under Bülow. Theodore Thomas performed his symphony in F minor, op. 12, for the first time, in New York,

in Dec. 1884; and in 1885, on the occasion of a visit of the Meiningen orchestra to Munich, Bülow made him conduct his suite for thirteen wind instruments (still unpublished), and he came so successfully through the ordeal that he was appointed in 1885 to succeed Bülow as sole conductor. He had gone to Meiningen to profit by Bülow's hints on conducting, and while there he appeared as a pianist in the solo part of Mozart's concerto in C minor. If Bülow fired him with his own ardent admiration for Brahms, to Alexander Ritter belongs the responsibility of having turned the young composer's ideas into the direction of the more advanced music, in which he was destined to make such a mark. In April 1885 he resigned the post of conductor, and travelled in Italy for a couple of months. In August he was appointed as third Capellmeister at Munich under Levi. In 1889 he became assistant to Lassen at Weimar as Court Capellmeister; in 1892 he had a dangerous illness caused by overwork, and went on a journey to Greece and Egypt on his recovery; he returned with the completed opera of 'Guntram,' which was produced at Weimar on May 12, 1894. Later in the year he married Fräulein Pauline de Ahna, a young singer who had created the principal part in his opera; in the same year he became Court Capellmeister at Munich, and in 1899 a similar position was conferred upon him at Berlin. In 1896-98 he undertook extensive tours in different parts of Europe, with the object of making known his maturer works; he visited London in 1897, and in June 1903 a 'Strauss Festival' was given in St. James's Hall, with the Amsterdam Orchestra. The composer showed himself a superlatively fine conductor, one to whom every detail of orchestral resources was perfectly clear, and who possessed the power of getting exactly what he wanted from his band. Such are, in brief, the main facts of the career of one who has, more effectually than any man since Wagner, divided the musical world into two camps.

The process of his artistic development is very curious, for he began as a follower of the classical ideals, and many of his earlier compositions show the influence of Brahms. In a minute analysis of his work by Gustav Brecher (Leipzig, 1900) no fewer than six periods are recognised in his work, and as that division only goes down to 'Heldenleben' we are probably justified in assuming a new period for each of the most important subsequent compositions. But only the earlier stages can be taken as authoritatively analysed. According to this, opp. 1-11 represent the growth of his technical skill in absolute music along the classical lines. It cannot be said that the violoncello sonata or the horn concerto contains anything that is very striking in the way of original thought or beautiful ideas, and even the songs of the same

period have not attained the same popularity as the composer's later lyrics, if we except 'Allerseelen,' the last of op. 10. In the next period (opp. 12-19) the gradual transition from the classical to the modern ideal seems to be traced in the pictorial mood of the symphonic fantasia 'Aus Italien,' which of course is frankly landscape-painting in music. The violin sonata is still absolute music, and is a favourable specimen of the composer's early works. When 'Aus Italien' was first given in London, at one of Henschel's Symphony Concerts, some disappointment was felt at the work not being played in its entirety; it only transpired later that the finale, being based on a tune which Strauss no doubt imagined to be a genuine folk-song, was scarcely suitable to be played before an audience already sated with the air, and fully aware that Signor Denza was its author. The third period embraces little beside 'Macbeth' (op. 23) and 'Don Juan' (op. 20), the latter written after the former, though provided with an earlier opus-number. This, in the opinion of those best able to judge, represents, with 'Tod und Verklärung,' the composer's highest point so far; both are sincerely felt, and there is a famous theme in 'Don Juan' which has a distinction all too rare in the later works. 'Tod und Verklärung,' op. 24, and the opera, 'Guntram,' op. 25, make up the fourth period, for reasons which may be clear to those who have seen the opera on the stage. There is much of Liszt's influence in the symphonic poem, and probably a good deal of Wagner's in the opera. At this point the composer seems to have fully realised the fact that his eccentricities of style were a great attraction to the public, and to have considered it his duty to startle his hearers with some new piece of independence (not to say impertinence) with each successive production. The first work of the fifth period, 'Till Eulenspiegel's lustige Streiche,' op. 28, is a brilliant grotesque; and its real, if rather gruesome, humour more than excuses the realistic details, such as that of the twitching limbs of the knave after he is hung. As a philosophical treatise, 'Also sprach Zarathustra' may be a valuable addition to the literature of the subject, and it may be a commentary on, or a confutation of, the Nietzschean doctrines that suggested it; but here we reach the vexed question of what is permissible or possible to express in terms of mere music; and the flat contradiction of one key by another at the close is a bold step in the direction of Strauss's new ideal. In that ideal it would appear that musical beauty has no kind of place; as neither music nor mere noise is competent of itself to inform the hearers of the subject that is being illustrated, there is from henceforth the absolute necessity for elucidatory pamphlets on the subject of each composition, and the composer's aim is apparently to do

nothing more than to follow the verbal suggestions of the programme, mostly by means of his wonderful command of orchestral devices of all kinds. He is a master of the art of scoring, but though he has gone far beyond Wagner in the quantity of instruments he employs, there is this great difference, that while Wagner puts no single touch into his score that has not its place in the general audible scheme, Strauss allows very many of his effects to be entirely lost even by the most attentive ear. In many places throughout his works elaborate harp-passage are seen in the score, and the listener may watch the persevering exertions of the harpists in the orchestra; but the notes that are played on these instruments might as well be left out for any effect they produce upon the ears of the audience. The set of orchestral variations, called 'Don Quixote,' op. 35, with which the sixth period begins, is famous for the extremely realistic bleating of sheep that is produced by orchestral means that are almost legitimate, but the introduction of a theatrical 'wind-machine' to give the effect of wind suggests that a real flock of sheep might as well be used for the effect just referred to. With each successive work, the inevitable discussion on the legitimacy of the means employed and the composer's meaning has given fine opportunity to journalists and others, both admirers and detractors, to bring themselves into public notice; but each discussion has been forgotten as soon as the next work has appeared, so that there is some danger of forgetting the successive blows that the composer has administered to the old ideals of beauty, grace, and fitness. 'Ein Heldenleben,' op. 40, for example, has almost passed into the class of the things that are forgotten, since the writers on music have had the 'Sinfonia Domestica' to quarrel about; and in both of these works the use of the explanatory pamphlet has been newly demonstrated. For as it is never stated in so many words that the pamphlet is written by authority of the composer, one class of his admirers can always say that the explanation is far-fetched and goes beyond the composer's intentions, while the others can quote it as an authoritative explanation of the meaning of the work. It was hotly denied, for example, that 'Ein Heldenleben' was a piece of not too modest autobiography, and in the 'Sinfonia Domestica' the usually accepted theory of the baby's toilet was ascribed by European commentators to the wicked ingenuity of the American critics (the work having been first performed in the United States). But in the scores of both works, scores which can hardly lack the composer's sanction, are clear indications that the accepted explanations are right in both cases. In the former, quotations from Strauss's own earlier works are introduced and

RICHARD STRAUSS

combined with a good deal of skill of a certain kind ; and in the latter printed words occur in the score, which identify the two trumpets with aunts who remark 'Ganz der Papa !' and the third trombone with uncles who similarly detect a likeness to the mother. It does not greatly matter, after all, what is the exact topic of any of the symphonic poems, for the ultimate verdict on them must necessarily be based on their merits as music, since they are for choice expressed in terms of music. In this aspect the question is, not 'What poetical or prosaic idea does the music illustrate?' but 'Is the frequent harshness and the conspicuous and constant lack of grace in the bulk of the work compensated by any idea of such beauty that the hearer can feel he has not wasted his time?' About the middle of the 'Domestic Symphony' there is a section that is sonorous and more melodious than the rest ; and as many people find it pleasant to listen to, no more need be said ; although it may perhaps be pointed out that the fondness of various distinguished conductors for these extraordinary works is admittedly caused by the interest that must always attach to a task that is especially difficult of accomplishment.

For the present it would seem as if the composer's wish to startle the frequenters of concerts were in abeyance, and he has turned his attention to the possibly harder work of shocking continental opera-goers. As his forthcoming opera, 'Elektra,' has been stated, on good authority, to contain points that will offend, or at least surprise, the most hardened admirers of 'Salomé,' there is no injustice in mentioning this as the primary object of the compositions. In the earlier one-act opera, 'Fenestrnot' (produced in Dresden in Nov. 1901), the dramatic suggestion of the libretto was followed with admirable exactitude, and the central situation lent itself to an instrumental interlude that could be considered as agreeably 'risky,' though it was musically far more conventionally melodious than any of the instrumental compositions of the same period. The author's passion for notoriety is no doubt responsible in great measure for his choice of Oscar Wilde's 'Salomé' as the subject of an opera, but in the work as produced at Dresden, Dec. 9, 1905, and as performed on all the principal stages of Germany within a short time (six special performances were given in Paris in the following year), the expected shock came from the drama rather than from the music. For music itself cannot be prostituted to base uses, though various qualities incidental to music may be turned to the purposes of pornography. There is plenty of passion in the work, and there is no doubt that on the average hearer it produces a sense of nausea ; but it would be going too far to say that any of the music by

itself would have a morally harmful influence on any one. The overture to 'Tannhäuser' and the second act of 'Tristan' still remain as the most vivid musical illustrations in existence of the sexual passions. The famous 'Dance of the Seven Veils' is oddly lacking in musical attraction, but this may arise from the fact that a good chance has been lost, since the oriental dances, of which this is meant as a specimen, gain their power over the hearers' senses by their monotony of rhythm, while this dance-music halts in a kind of compromise with the ballet-music of more conventional opera. The ill-timed realism of the orchestration at the moment when the Baptist's head is cut off is thoroughly characteristic of the composer of 'Till Eulenspiegel' ; and that he should not see the incongruity of introducing such a touch at such a moment speaks of the same want of the finer perceptions which years before led him to accept 'Funiculi, funicula' as a real Italian folk-song.

It is of course too soon to guess what Strauss's position among the musicians of the world may ultimately be ; while he is still young enough to admit that his main object is to shock and startle, he is not too old to change his convictions, as he has already changed them once before. There is a theory that in his later works he is merely laughing at those who profess an unbounded admiration for all he does, but this seems hardly credible, particularly in the face of some of his lyrical work, which, in spite of various rather dull choral works, like the 'Stürmlied,' 'Taillefer,' some male choruses, two anthems, etc., reach a very high level of beauty in the songs of all the various periods. The lovely 'Ständchen' from op. 17 ; the splendid 'Heimliche Anforderung' from op. 27, with its irresistible swing ; 'Morgen' from the same set, a really expressive song ; the picturesque 'Traum durch die Dämmerung' from op. 29 ; 'Ich trage meine Minne' from op. 32 ; and the characteristic 'Lied des Steinklopfers' from op. 49, are things that appeal to every one by their musical worth and their fitness for the way in which the feeling of the words is followed. The more ambitious 'Gesang der Apollopriesterin' and other songs with orchestral accompaniment are less remarkable, and in the incidental music to Tennyson's 'Enoch Arden' there is not much to divert the hearer's attention from the poem.

A list of Strauss's compositions is appended :—

- Op.
1. Festival March for orchestra.
2. String Quartet in A.
3. Five pieces for PF. solo.
5. FF. Sonata in E minor.
6. Sonata for PF. and Viollo.
7. Serenade for wind instruments.
8. Violin Concerto.
9. Stimmungsbilder, five pieces for PF.
10. Eight Songs.
11. Concerto for French Horn.
12. Symphony in F minor.
13. Quartet for PF. and strings.
14. Wanderers Stürmlied for 6-part choir with orchestra.
15. Five Songs.

- Op.
 16. Aus Italien, Symphonic Fantasia.
 17. Six Songs.
 18. Sonata, vln. and PF. in E-flat.
 19. Six Songs ('Lotosblüthen').
 20. Don Juan, tone-poem for orchestra.
 21. Five Songs ('Schlichte Weisen').
 22. Four Songs ('Mädchenblumen').
 23. Macbeth, tone-poem for orchestra.
 24. Tod und Verklärung, tone-poem for orchestra.
 25. Guntram, opera in three acts.
 26. Two Songs.
 27. Four Songs.
 28. Till Eulenspiegel's lustige Streiche, tone-poem for orchestra.
 29. Three Songs.
 30. Also sprach Zarathustra, tone-poem for orchestra.
 31. Four Songs.
 32. Five Songs.
 33. Four Songs, with orchestral accompaniment.
 34. Two anthems for 18-part chorus.
 35. Don Quixote. Fantastic variations for orchestra.
 36. Four Songs.
 37. Six Songs.
 38. Enoch Arden, melodrama (music for recitation).
 39. Five Songs.
 40. Ein Heldenleben, tone-poem for orchestra.
 41. Five Songs.
 42. Two male choruses.
 43. Three Songs.
 44. Two 'grössere Gesänge' for deep voice, with orchestral accompaniment.
 45. Three choruses for male voices.
 46. Five Songs.
 47. Five Songs.
 48. Five Songs.
 49. Eight Songs.
 50. Feuersnot, opera in one act.
 51. Das Tbal, for bass voice and orchestra.
 52. Talleifer, choral ballad with solos, orchestral accompaniment.
 53. Symphonie (sic) Domestica, for orchestra.
 54. Opera, Salomé, in one act.

WITHOUT OPUS-NUMBERS.

(See also above for early unpublished works.)

Burleske for piano and orchestra.
 Soldatenlied for male chorus.

M.

STREET, JOSIAH. A Yorkshire musician, who issued 'A Book containing great variety of Anthems in two, three, and four parts.' London, second edition, 1746. This was published by Joseph Lord of Wakefield. A previous edition is stated to be *circa* 1729, but this is probably too early. A later one is dated 1785.

F. K.

STREICHER, JOHANN ANDREAS, a professor of music in Vienna, and, by marriage with Nannette Stein, the founder of the pianoforte-making firm in that city, derived from Stein of Augsburg, that was to become in course of time the famous house of Streicher und Sohn. J. A. Streicher was born at Stuttgart, Dec. 13, 1761; he was a man of education and great intelligence, and was, moreover, distinguished by his friendship with Schiller. He brought up his son, JOHANN BAPTIST, who was born Jan. 3, 1796, to the business, and long before his death, which took place May 25, 1833, resigned it to the son's complete control. Johann Baptist maintained the excellent traditions of his worthy predecessors; and when he died, March 28, 1871, left his son Emil the proprietor of this historical business, the services of which in the improvement of pianoforte construction are duly recognised in the articles PIANOFORTE and STEIN. Ernst Pauer was a grandson of J. A. Streicher and Nannette Stein, and a great-grandson of the object of Mozart's admiration, J. A. Stein of Augsburg. [See PAUER.] A. J. H.

STREICHINSTRUMENTEN (Germ.).
 Stringed Instruments, or STRINGS.

STRETTO (Ital.), literally 'close' or 'narrow';

(Germ. *Engführung*). A term used in two ways. 1. In Fugue it designates the following of response to subject at a *closer* interval of time than at first. This device is usually employed towards the end of a fugue, so as to give some impression of climax. But there are plenty of exceptions to that custom; e.g.

BACH 48, No. 1.

which occurs close to the beginning. Some subjects will bear more than one stretto, in which case the closer naturally comes last; e.g.

from the 'Amen' chorus of Handel's 'Messiah.' (The inner parts are omitted for the sake of clearness.) Still more remarkable instances will be found in the fugue of Bach's harpsichord Toccata in D minor. [When several strettos occur in a fugue, the last is usually called the *Stretto maestrale*.]

2. The second use of the word occurs more especially in Italian opera, when towards the end of a piece the time is quickened, bringing the accents closer together. Thus the title might be, and sometimes is, applied to the last *prestissimo* of the Choral Symphony. It is sometimes used, but quite wrongly, as a direction equivalent to *accelerando*, instead of in its proper sense of *più mosso*.

F. C.

STRICT COUNTERPOINT (Lat. *Contrapunctus proprius, vel severus*; Ital. *Contrapunto severo*; *Contrappunto alla Cappella*; Germ. *Strenger Satz, Kapellstyl*; Fr. *Contrepoint sévère*). The art of writing in parts for two or more voices without the employment of unprepared discords.

The term is not very well chosen. The laws of free part-writing are quite as severe as those of the so-called strict style. But the conventional application of the term 'strict' to the method which forbids the direct percussion of a fundamental dissonance, and 'free' to that which permits it, has so long been generally accepted, that it would be impossible now to introduce a more exact form of terminology.

The laws of Strict Counterpoint are not open, like those of Harmony, to scientific discussion;

for Counterpoint is not a science but an art. It is true that its most important rules, when tested by the principles of natural science, are found to coincide with them in all essential particulars; and to this circumstance alone are they indebted for their unassailable position and promise of future security. Their mathematical accuracy fails, however, to account for their universal acceptance as a code of artistic regulations. Their authority for this rests solely upon the praxis of the great masters of the polyphonic schools; which praxis was from first to last purely empirical. The refined taste and musical instinct of Josquin des Prés, Willaert, Byrd, Tallis, Palestrina, and their contemporaries, rebelled against the hideous combinations demanded by the rules of *Diaphonia* and *Organum*,¹ and substituted for them the purest and most harmonious progressions that art, aided by a cultivated ear, could produce; but in their search for these they were guided by no acoustic theory. They simply wrote what they felt; and because the instincts of true genius can never err, that which they felt was uniformly good and true and logical, and based unconsciously upon a foundation firm enough to stand the test of modern mathematical analysis. The leaders of the monodic school rejected the teaching of these great masters; and in their insane desire for progress, invented new forms of cacophony not a whit less rude than those practised by the *Diaphonists* of the 13th century. All Italy followed their baneful example, and for a time relapsed into chaos. But German musicians, unwilling to destroy the old landmarks, retained, in their full force, the time-honoured laws relating to the use of Perfect and Imperfect Concoords, Syncopations, and Notes of Regular and Irregular Transition, while they extended the system by promulgating new regulations for the government of Fundamental Discords introduced without the customary forms of preparation; and because such discords had never before been sanctioned this new method of part-writing was called 'free,' though its rules were really more numerous than those of the older one.

It was not until some considerable time after the invention of printing that the laws of Strict Counterpoint were given to the world in the form of a systematic code. Franchinus Gafurius, in his *Practica Musica* published at Milan in 1496, gave a tolerably intelligible epitome of certain rules which at that period were supposed to embody all the information that it was necessary for the student to acquire. The *Musice activæ Micrologus* of Ornithoparcus, printed at Leipzig in 1516, set forth the same laws in clearer language. The *Toscanello in Musica* of Pietro Aron, printed at Venice in 1523, and the *Dodecachordon* of

Glareanus (1547), were illustrated by examples of great value to the tyro, whose labours were still further assisted by the appearance of Zarlino's *Istitutioni harmoniche* in 1558, and Zacconi's *Prattica di Musica* in 1596. In 1597 Thomas Morley published his *Plaine and easie Introduction to Practicall Musick*—the earliest treatise of importance in the English language; and in 1609 John Donland printed an English paraphrase of the *Micrologus* of Ornithoparcus. These works set forth, with gradually increasing clearness, the regulations which in the 15th century had been transmitted from teacher to pupil by tradition only. The compositions of the great polyphonic masters formed a living commentary upon the collective rules; and with an endless succession of such works within his reach the student of the period ran little risk of being led astray. But when the line of polyphonic composers came to an end, the verbal treatises, no longer illustrated by living examples, lost so much of their value that the rules were in danger of serious misconstruction, and would probably have been to a great extent forgotten, had not Fux, in his *Gradus ad Parnassum*, published at Vienna in 1725, set them forth with a systematic clearness, which, exhausting the subject, left nothing more to be desired. This invaluable treatise, founded entirely on the practice of the great masters, played so important a part in the education of the three greatest composers of the school of Vienna, Haydn, Mozart, and Beethoven, that it is impossible to overestimate its influence upon their method of part-writing. So clear are its examples, and so reasonable its arguments, that it has formed the basis of all the best treatises of later date, of which two only—Albrechtsberger's *Gründliche Anweisung zur Composition* (Leipzig, 1790), and Cherubini's *Cours de Contrepoint et de la Fugue* (Paris, 1835)—are of any real importance. These two, however, are especially valuable; not, indeed, as substitutes for the 'Gradus,' but as commentaries upon it. For Fux treats only of strict counterpoint, and writes all his examples in the old ecclesiastical modes; but Albrechtsberger deals both with the strict and the free styles, while Cherubini accommodates the laws of the strict style to the tonality of the modern scale, with such consummate skill, that they bear all the appearance of having been originally enacted in connection with it; thus solving for the modern student a very difficult problem, which Haydn, Mozart, and Beethoven were left to work out for themselves.

In most important particulars these three great teachers follow the same general plan. All write their examples on *Canti fermi*, consisting entirely of semibreves; all make their *Canti fermi* close by descending one degree upon the tonic or the final of the mode; and all agree in dividing their exercises into five

¹ See *DIAPHONIA*; *ORGANUM*; *POLYPHONIA*.

distinct classes, now known as the Five Orders of Counterpoint, the rules for which may be thus epitomised:—

GENERAL LAWS. The early Contrapuntists insist strongly upon the observance of the four following 'Cardinal Rules' (*Regulæ cardinales*).

I. One Perfect Concord may proceed to another in contrary or oblique motion, but not in similar motion.

II. A Perfect Concord may proceed to an Imperfect Concord in all the three kinds of motion.

III. An Imperfect Concord may proceed to a Perfect Concord in contrary or oblique motion, but not in similar motion.

IV. One Imperfect Concord may proceed to another in all the three kinds of motion.

The intention of these rules is to prevent the possibility of Consecutive or Hidden Fifths, Octaves, and Unisons.

FIRST ORDER (Note against note). One semibreve must be written, in each part, against each semibreve in the Canto fermo. All progressions must be purely diatonic; the employment of chromatic intervals being utterly prohibited, both in harmony and in melody, in this and all the succeeding Orders. No discords of any kind are admissible. In two parts the only permitted intervals are the three Perfect, and the four Imperfect Consonances; *i.e.* the Unison, Octave, and Perfect Fifth;¹ and the Major and Minor Thirds and Sixths. In three or more parts the only harmonies permitted are the Major and Minor Common Chords, and the chord of the Sixth. The chord of the 6-4 and the Augmented and Diminished Triads are prohibited; but the First Inversion of the Diminished Triad is admissible, because none of its intervals are in dissonance with the bass. In three parts each chord should, if possible, consist of a Root, Third, and Fifth; or a Bass-note, Third, and Sixth. In four parts the Octave should be added. But in cases of necessity any interval may be doubled or omitted. The separate parts may proceed either in conjunct movement, by Major or Minor Seconds; or disjunctly by leaps of a Major or Minor Third, a Perfect Fourth, a Perfect Fifth, a Minor Sixth, or an Octave. All other leaps, including that of the Major Sixth, are absolutely prohibited. The first semibreve, in two-part counterpoint, must be accompanied by a Perfect Concord; in three or more parts, one part at least must form a Perfect Concord with the bass. In the remaining semibreves, Imperfect Consonances are to be preferred in two parts.

In this, and all other Orders of Counterpoint, the parts may cross each other to any extent.

¹ In Counterpoint the Perfect Fourth, when used alone, or reckoned from the Bass-note, is held to lie, and treated as a Discord. When it occurs among the upper notes of a chord, the bass taking no share in its formation, it is treated as a Perfect Concord. The same rule applies to the Augmented Fourth (Tritonus) and the Diminished Fifth (Quinta falsa).

Consecutive Fifths, Octaves, and Unisons, in similar motion, are forbidden in any number of parts. In four or more parts Consecutive Fifths are permitted in contrary motion, but only as a last resource.² This licence, however, does not extend to Consecutive Octaves, which were far more carefully avoided by the great masters than Consecutive Fifths, even in contrary motion. But Consecutive Fifths and Octaves are only forbidden when they occur between the same two parts. When produced by different parts, or by making the parts cross each other, they are perfectly lawful. Hidden Fifths and Octaves are as strictly forbidden in two parts as real Consecutives; but in four or more parts, as at (d) in Ex. 3, the great masters never troubled themselves to avoid them.³

The False Relation of the Tritonus (Augmented Fourth) is strictly forbidden in two parts; but permitted in three or more. That of the Octave is forbidden, even in eight parts.

In two parts, the Unison is forbidden, except in the first and last notes. The Octave is permitted in oblique motion, and in contrary motion also, provided it be approached by separation—*i.e.* by the mutual divergence of the parts which produce it; as at (e) in Ex. 2. Its employment by approximation—*i.e.* by the convergence of the parts, as at (b) in Ex. 2—is only permitted in the final cadence.⁴

In two-part Counterpoint of this order it is forbidden to take more than three Thirds or Sixths in succession, unless the parts be made to cross each other.

The final Cadence is formed, either by a Major Sixth followed by an Octave, as at (e), in Ex. 2; or by a Minor Third followed by an Octave, or a Unison, as at (a) in Ex. 1. In two parts, these intervals will complete the necessary formula. In more than two parts the same intervals must be given to the Canto fermo and one other part, while the other parts fill up the harmony, in accordance with the laws already laid down, as at (e) in Ex. 3. If the last chord be not naturally Major, it must be made so by an accidental Sharp or Natural.⁵

Ex. 1.
Canto fermo.

Ex. 2.

² It will be seen that in this particular the strict style is more indulgent than the free. Palestrina constantly availed himself of the licence, especially when writing for equal voices.

³ See HIDDEN FIFTHS AND OCTAVES, vol. II, pp. 396, 397.

⁴ The earlier writers on Counterpoint insist very strongly on the observance of this rule; and extend its action, with even greater severity, to the unison in the few cases in which the employment of this interval is permitted. Fux (pp. 83, 84) is inclined to treat it with indulgence, provided the converging parts proceed in conjunct movement, but only on this condition. Albrechtsberger forbids the progression in two parts, but sanctions it in three. Cherubini makes no mention of the rule.

⁵ For examples of Cadences in all the Ecclesiastical Modes, see MUSICA FICTA, vol. III, pp. 330-333.

Ex. 3.

Canto fermo. 8 6 6 6 8 8
Minims. 3 3 3 3 2 2

SECOND ORDER (Two notes against one). In this order two minims must be written in one of the parts against each semibreve in the Canto fermo, except the last, unless the exercise should be in triple time, in which case three minims must be written against each semibreve.¹ The other parts must all move in semibreves. In the part which contains the minims the same note may not be struck twice in succession. The first bar should begin with a minim rest, followed by a minim in Perfect Concord. In the remaining bars the first minim must always be a Concord, Perfect or Imperfect. The second minim may be either a Concord or a Discord. If a Concord, it may proceed either in conjunct or disjunct movement.—Ex. 4 (*g*). If a Discord, it must be both approached and quitted in conjunct movement, and lie between two Concorde. In other words it must be treated as a Passing Note.—Ex. 4 (*f*). The part which contains the minims is not permitted to make the leap of a Major Sixth in any circumstances; and not even that of a Minor Sixth, except as a last resource in cases of extreme difficulty.² Consecutive Fifths and Octaves between the first Minims of two successive bars are strictly forbidden. Between the second Minims they are tolerated, but only for the purpose of escaping from a great difficulty.

Except in the first and last bars the Unison is forbidden on the Thesis or accented part of the measure; but permitted on the Arsis or unaccented beat. The Octave on the Arsis may be used with discretion; but the Octave on the Thesis (Ital. *Ottava battuta*; Germ. *Streich-Octav*) is only permitted when approached, as in the First Order, either in oblique motion or by separation. Its employment by approximation, as in Ex. 4, bar 5, is permitted only in the final cadence.³

In these and all other cases the first minims of the bar are subject to the same laws as the semibreves of the First Order; and the more closely these laws are observed, the better the Counterpoint will be. If the elimination of the second minim in every bar, except the first, and the last but one, should produce good Counterpoint of the First Order, no stronger proof of excellence can be desired.

The Cadence is treated like that of the First

Order; one of the sounds necessary to form the characteristic intervals being assigned to the Canto fermo, and the other, either to the part which contains the minims—Ex. 4 (*h*); Ex. 5 (*i*)—or to some other part written in semibreves.

Ex. 5.

Canto fermo. 6 6 6 6 6 6 8
Minims. 3 3 3 3 3 3 5

THIRD ORDER (Four notes against one). In this Order four crotchets must be written, in one of the parts, against each semibreve in the Canto fermo, except the last; the other parts moving in semibreves. The first bar should begin with a crotchet rest, followed by three crotchets, the first of which must form a Perfect Concord with the Canto fermo. The first crotchet in the succeeding bars is subject to the same laws as the first minim in the Second Order. The three remaining crotchets may form either Concorde or Discords, provided that, in the latter case, they proceed in conjunct movement, and lie between two Concorde; in which respect they must be treated like the unaccented minims in the Second Order.

When the second crotchet forms a Discord with the Canto fermo, in a descending passage, it may, by licence, fall a Third, and then ascend to the necessary Concord, as at (*j*) in Ex. 6, and (*l*) in Ex. 7. This very beautiful progression, though forbidden by Cherubini, is sanctioned by the universal practice of the great masters of the 16th century.⁴

The employment of the Tritonus or the False Fifth, as an interval of Melody, is forbidden, not only by leap, but even when the intervening sounds are filled in; thus, the progressions, F, G, A, B, and B, C, D, E, F, are as contrary to rule as F, B, or B, F. This law, however, is only enforced when the dissonant sounds form the limits of the passage; F, G, A, B, C, is therefore perfectly lawful. Consecutive Fifths, Octaves, and Unisons are forbidden between the first and third crotchets in the bar; between the first or third crotchets of two successive bars; and, of course, between the last crotchet of one bar, and the first of the next.

The Cadence will be formed by the Canto fermo either in conjunction with the part containing the crotchets, or with one of the parts written in semibreves, on the same principle as

¹ See Fux, p. 63.

² See Cherubini, p. 146 of Mrs. Cowden Clarke's translation. (Novello & Co.).

³ See footnote 4 on previous page.

⁴ Fux, p. 65.

that recommended in the Second Order. Ex. 6 (*k*); Ex. 7 (*m*).

FOURTH ORDER (With Syncopations). In this Order one part must be written in syncopated notes; while the others accompany the Canto fermo in semibreves.

The first bar must begin with a minim rest, followed by a minim in Perfect Concord with the Canto fermo; which minim must be tied to the first minim in the following bar, which must always form a Concord with the lowest part Ex. 9 (*r*).

The remaining bars (except the last) will each contain two minims; the first of which must be tied to the second minim of the preceding bar; and the second to the first minim of the bar which follows. The tied minims, now known as Syncopations, were formerly called Ligatures.

The second or unaccented minim must always form a Concord with the Canto fermo.

The tied or accented minim may form either a Concord or a Discord with the Canto fermo. In the first case—Ex. 8 (*o*); Ex. 9 (*s*)—it may proceed upwards or downwards, either in conjunct or disjunct movement. In the second—Ex. 8 (*n*); Ex. 9 (*r*)—it must descend one degree upon a Concord, which forms its natural resolution, and may also serve to prepare a Discord in the succeeding bar, as at (*p*) in Ex. 8. In no case but that of the Ninth is it allowable to let the note into which the Discord is about to resolve be heard simultaneously with the discord itself in any other part than the Bass.

Consecutive Fifths, Octaves, and Unisons are strictly forbidden between the unaccented minims of two successive bars, which must here be guarded as strictly as the accented minims of the Second Order. Indeed, the most severe test that can be applied to this kind of Counterpoint is the excision of the first minim of every bar. If this operation should produce good Counterpoint of the First Order, nothing more can be desired.

All the diatonic discords may be used by Syncopation. But a succession of Ninths, resolving into Octaves, or of Sixths, followed by Fifths, is forbidden; because in these cases the excision of the accented minims would produce progressions of real Fifths and Octaves.

The Cadence, formed always by the Canto fermo and the part containing the Syncopations,

will consist, either of a suspended Seventh, resolving into a Major Sixth, and followed by an Octave—Ex. 8 (*q*); Ex. 9 (*t*); or, should the Canto fermo be placed above the Syncopations of a suspended Second, resolving into a Minor Third and followed by a Unison or Octave. This Cadence was called by the old masters the Diminished Cadence, and was used at the close of almost every polyphonic composition.

FIFTH ORDER (Florid Counterpoint). In this Order one part will contain a judicious mixture of all the preceding Orders; while the other parts accompany the Canto fermo in consonant semibreves.

Dotted notes, though forbidden in all other Orders, may here be introduced into the Florid part with excellent effect; and Quavers also, if used sparingly, and with discretion, as at Ex. 10 (*v*). Tied notes are permitted, on condition that the length of the second note does not exceed that of the first. In modern passages it is sometimes convenient to use a tied note instead of a dotted one.

By a licence analogous to that mentioned with regard to the Third Order, a syncopated Discord, suspended by a tied crotchet, may descend a Third or a Fifth, and afterwards re-ascend to its resolution,¹ as at (*x*), in Ex. 11; or it may ascend a Fourth or a Second, and then re-descend to the necessary Concord, as at (*v*) in Ex. 10.

A minim, preceded in the same bar by two crotchets, should always be tied to a minim, or crotchet in the succeeding bar.² Ex. 10 (*v*).

The Diminished Cadence—Ex. 10 (*w*)—is used in this Order as well as in the Fourth with many graceful modifications, rendered possible, as in Ex. 11 (*z*), by the employment of dotted and tied notes.³ These modifications form part of a long list of licences, peculiar to the Fifth Order, and greatly conducing to its beauty, as in Ex. 11 (*y*), though, unfortunately, too numerous for detailed notice in our present article.

¹ See Fux, p. 76.

² *Ibid.* p. 80.

³ *Ibid.* p. 76.

Ex. 11.

Canto fermo.

Students who have mastered all the difficulties of the Five Orders are recommended by Fux and his successors to employ two or more Orders simultaneously, in place of filling in the free parts with semibreves, and to follow up this exercise by employing the Fifth Order in all the parts except that which contains the Canto fermo.

It will be readily understood that the rules we have here endeavoured to epitomise form but a very small proportion of those laid down by Fux and his successors for the student's guidance; more especially with regard to the Five Orders of Counterpoint in two parts, the laws of which are excessively severe. We have, in fact, confined ourselves for the most part to the regulations which serve most clearly to distinguish the Strict Style of the 16th century from the Free Part-writing of the 18th and 19th. The true value of these rules lies in the unvarying purity of the harmony produced by their observance. Obedience to their provisions renders harshness of effect impossible. It was for this reason that they were so diligently studied by the great masters of the school of Vienna; and after them by Mendelssohn and the composers of the later period. It is true that these composers, one and all, have written exclusively in the Free Style. But we have already explained that the laws of the Free Style are not antagonistic to those of Strict Counterpoint. In their treatment of Consonant Harmonies, of Suspensions, and of Passing Notes, the laws of the two styles, as set forth in the works of the great classical writers, are absolutely identical. It is only when dealing with Chromatic Progressions, Appoggiaturas, and Unprepared Discords generally, that the Free Style supplements the older code with new enactments. And since these new enactments concern progressions altogether unknown to the Contrapuntists of the 16th century, they cannot be fairly said to oppose the earlier system. Except when entering upon new ground they neither increase nor diminish the severity of the ancient method. On the contrary, it is a well-known fact that the greatest writers in the Free Style, and the most fearless, are those who have worked hardest at Strict Counterpoint. Hence Beethoven's *bon mot* concerning the necessity for learning rules in order that one might know how to break them, so often misquoted in defence of those who break them through ignor-

ance. Hence Mendelssohn's microscopic attention to the minutest details in the lessons he gave in Free Part-writing; and Hauptmann's determined insistence on rules, which, though mentioned by Fux, are unnoticed by Cherubini. All these accomplished musicians used Strict Counterpoint as a stepping-stone to the Free Style; and if we would know how much the process profited them, we have only to examine Mozart's 'Zauberflöte,' Beethoven's Seventh Symphony, and Mendelssohn's 'St. Paul.' [See also the article COUNTERPOINT, vol. i. pp. 613-623.] W. S. R.

STRIGGIO, ALESSANDRO, gentleman of Mantua, was born there about 1535. In the judgment of his contemporaries he was a cultivated musician, an organist of renown, a fine lutenist and viola-player. Bartoli (*Ragionamenti accademici*, 1567, p. 37b) writes that Striggio was most excellent in playing of the viola 'e far sentir in essa quatro parti a un tratto con tanta leggiadria e con tanta musica, che fa stupire gli ascoltanti,' adding that his compositions were as musical and as good as any to be heard at that time; and Garzoni (*La piazza universale*, Venetia, 1585, p. 450) mentions among famous players of various instruments 'il Striggio passato nel lauto.' From about 1560 Striggio was at Florence, attached to the Court of Cosmo de Medici, who died 1574; on the title-pages of Striggio's works published in 1560, 1565-66, and 1569, he is described as 'gentiluomo mantovano. Servitore dell' illustrissimo et eccellentissimo Cosmo de Medici, Duca di Firenze e di Siena,' but from 1570 to 1585, he is merely 'gentilhuomo mantovano' and probably was living in Mantua at this later period. He was certainly there in 1574, the bearer of a letter dated Sept. 1, 1574, in which the Emperor Maximilian II. recommends Striggio, 'a man eminent in the art of music,' to the good offices of the Duke Guglielmo of Mantua, with the result that Striggio was released from a dragging lawsuit in which he had been involved. He died in Mantua soon after, Sept. 22, 1587.

Striggio was one of the first to compose music for the Intermedii in representations at Court festivities. An interesting example and one of the earliest is *La Cofanaria, Comedia di Francesco d'Ambrà, con gl' intermedii di G. B. Cini*. Firenze, 1566, written on the occasion of the marriage of Francesco de Medici with Johanna of Austria. Striggio set the first, second, and fifth intermedio to music. A copy of this work is in the British Museum; on p. 16 a description of the music is given with a list of the instruments required, including:—

- 4 Gravicembali doppi.
- 4 Viole d' arco.
- 2 Tromboni.
- 2 Tenori di Flauto.
- 1 Cornetto mute.
- 1 Traversa.
- 2 Leuti, a Doizains, a Stortina, and a Ribecchino.

In the *Dialoghi di Massimo Troiano* (Venetia,

¹ Licence. Fifths saved by a tied crotchet, on the authority of Palestrina. At bar 5 the tenor crosses below the bass.

1569), recounting the principal events in the festivities celebrated at the wedding of Wilhelm VI. of Bavaria and Renata di Loreno, mention is made (Lib. 3, p. 147) of a motet in 40 parts composed by Striggio, 'il quale fu degno d'ogni honore e laude'; it was written for 8 tromboni, 8 viole da arco, 8 flauti grossi, uno strumento da penna, and ua linto grosso, the rest of the parts being supplied by voices, and was twice performed before large audiences.

In a little book published at Florence in 1579, *Feste nelle nozze del sereniss. Don Francesco Medici, e della sereniss. Sig. Bianca Capello, da Raffaello Gualtierotti*, p. 20, there is an allusion to the 'diverse musiche, con molte voci ed infiniti strumenti' composed by Striggio, that most excellent musician. He was also responsible for music to the first, second, and fifth intermedio in the Commedia written for the wedding of Cesare d'Este and Virginia de Medici at Florence (Bastiano de' Rossi, *Descrizione*. Firenze, 1585).

Striggio also composed a great many madrigals; Morley in his *Plaine and easie Introduction*, 1597, p. 35, gives illustrations of various proportions in 'measured' music from Striggio's madrigal 'All' acqua sagra' for six voices, and also includes Striggio's name in the list of 'practitioners the moste parte of whose works we have diligently perused, for finding the true use of the moods.' Burney scored several of the madrigals; one, 'Invidioso amor' for five voices, from the 'Seconde libro de la muse,' 1559, is in the British Museum, Add. MS. 11,583; and another, 'Gravi pene' from 'Madrigali a 4 voci di Cipriano e Annibale,' 1575, is in the Add. MS. 11,588. Another of his madrigals, 'Chi fara fed' al cielo' for four voices, afterwards used by Peter Philips as a theme for a fantasia (in the Fitzwilliam Virginal Book, i. 312), is to be found rather unexpectedly in a rare book published at Frankfort in 1615, called *Les raisons des forces mouvantes avec diverses machines*, etc., par Salomon De Caus; in the account of 'La roue musicale (un orgue mécanique)' it is the 'pièce de musique qui est posée sur ladite roue,' and the music, the four parts scored, is reproduced on the back of plate 38.

The following works by Striggio were published, some during his lifetime, others after his death by his son Alessandro:—

Di Alessandro Striggio, gentil'huomo mantovano, servitore del' Illustriss. et eccellentiss. Cosmo de Medici, Duca di Firenze et di Siena. Il primo libro de madrigali a sei voci. (The earliest edition of this book is not known, it was reprinted in Venice by Antonio Gardano in 1560, 1565, 1569; and later editions were published there by Francesco Rampazetto in 1566, by Girolamo Scotto and his successors in 1566, 1576, and 1585, and by Angelo Gardano in 1579 and 1582.)

Il secondo libro de madrigali a sei voci. (This was also reprinted in Venice, by Girolamo Scotto and his successors in 1571, 1573, 1579, and 1582, and by Angelo Gardano in 1592; the earliest edition is unknown.)

Di Alessandro Striggio, gentil'huomo mantovano, servitore, etc. Il primo libro de madrigali a cinque voci. (Of this work again only reprints are known, by Antonio Gardano in 1560 and in 1569, by Scotto in 1560, 1566, and 1585, and by Fr. Rampazetto, circa 1566.)

Il secondo libro de madrigali a cinque voci di M. Alessandro Striggio, gentil'huomo mantovano, nuovamente poeti in luce. In Vinegia appresso Girolamo Scotto, 1570.

(It was reissued by Scotto in 1571, 1573, 1579, and 1582.)

Il terzo libro de madrigali a cinque voci del Sig. Alessandro Striggio, etc., Venetia. Angelo Gardano, 1596.

(Dedicated to the Duke of Mantua by Striggio's son Alessandro, who in alluding to his father, writes of this work 'd'uno che nacque suo suddito e viasse alcun tempo servitore della felice memoria del sereniss. Sig. suo Padre, che sia in gloria, e morì finalmente servendo l'A.V.')

Il quarto libro de madrigali a cinque voci, etc. Venetia. Angelo Gardano, 1596.

Il quinto libro de madrigali a 5 voci, etc. Venetia. Angelo Gardano, 1597.

(Both books edited by Striggio's son.)

Il cicalamento delle donne al huato et la caccia di Alessandro Striggio, con un lamento di Didone ad Bnea per la sua partenza di Cipriano Reo, a 4, 5, 6 e 7 voci. Di none posto in luce per Giulio Benagionta da San Genesi, musico della illuss. Signoria di Venezia fu 6. Marco, Vinegia. Girolamo Scotto, 1567.

(Reprinted in 1568, and again in 1584, with a slightly different title.)

Il Cicalamento delle donne al huato et la caccia di Alessandro Striggio a 4, 5, 6 e 7 voci, con il gioco di primiera a cinque voci del medesimo, nuovamente agionto.

(There is a manuscript copy in five part-books in Ch. Ch. Library, Oxford.)

Other MSS. are to be found in the libraries at

Berlin.—MS. Z. 28, date 1599, a score of 'Faciens tuam' ('Nasce la pena') for six voices; the same composition in MS. Z. 32, a 16th-century late-book. (Eitner.)

Bologna.—A. 1615 MS. contains four madrigals for six voices in score. (Gasparini's Cat.)

Brieg.—Imperfect copies of 'Nasce la pena.' (Kuhn's Cat.)

Brussels.—Madrigals in MS. 2239. (Fétis, *Bibl. Royale*.)

Liegnitz.—Eight madrigals for six voices. (Pfaudel's Cat.)

Milan.—Conservatoire.—A mass for four voices and a mass for

five voices. (Canal.)

Modena.—Bibl. palatina. A canzone with late accompaniment.

Munich.—MS. 918, dated 1628, 'Ad nitida.' ('Chi fara') for five,

'Nascentur con dolore.' ('Nasce la pena mia') for six,

'Quae mulier.' ('All' apparir') for eight voices.

(Mayer's Cat.)

Proke Library.—In MS. 774 and 75, thirteen madrigals. (Eitner.)

Royal College of Music.—In MS. 1881, four part-books of 17th century, 'Love hath proclaimed' for six voices. A

late piece in MS. 1564.

Uppsala.—MS. J. mus. 108, a piece in organ tablature.

Zwickau.—MS. 735, dated 1597, 'Ecce beatum Isaac' a 40 vocibus

in 4 chori, Bassone canato dalle parte più basse del

40 persone. Chorus I. eight voices; Chorus II. ten

voices; Chorus III. sixteen voices; Chorus IV. six

voices. (Vollhardt's Cat.)

About 41 of Striggio's compositions were also published at Venice in collected works, ranging from the year 1559 to 1626. Five of his madrigals are in Torchi, *Arte musicale in Italia*, vol. i. C. 8.

STRIKING REED. A beating reed. One in which the vibrator or tongue strikes the face of the reed. (See REED and REEDSTOP.) T. E.

STRINASACCHI, REGINA, a distinguished violin-player, born at Ostiglia near Mantua in 1764, and educated at the Conservatorio della Pietà in Venice, and in Paris. From 1780 to 1783 she travelled through Italy, and won great admiration by her playing, her good looks, and her attractive manners. She next went to Vienna, and gave two concerts at the National Court Theatre in the Burg on March 29 and April 24, 1784. For the second of these Mozart composed a sonata in B \flat (Köchel 454), of which he wrote out the violin-part complete, but played the accompaniment himself from a few memoranda which he had dashed down on the PF. staves.¹ The Emperor Joseph, noticing from his box above the blank look of the paper on the desk, sent for Mozart and obliged him to confess the true state of the case. 'Strinasacchi plays with much taste and feeling,' writes Mozart to his father, who quite agreed with him after hearing her at Salzburg. 'Even in symphonies,' Leopold writes to his daughter, 'she always plays with expression, and nobody could play an Adagio more touchingly or with more feeling than she; her whole heart and soul is in the

¹ This interesting MS. is now in the possession of Mr. F. G. Kurtz of Liverpool. Mozart filled in the complete accompaniment afterwards in an ink of slightly different colour from that which he first employed, so that the state of the MS. at the first performance can be readily seen.

melody she is executing, and her tone is both delicate and powerful.' In Vienna she learnt to appreciate the gaiety of Haydn's music, so congenial to her own character. She played his quartets before the Court at Ludwigslust, and also at Frau von Ranzow's, with peculiar naïveté and humour, and was much applauded for her delicate and expressive rendering of a solo in one of them. She is also said to have been an excellent guitar-player. She married Johann Conrad Schlick, a distinguished violoncellist in the ducal chapel at Gotha. The two travelled together, playing duets for violin and violoncello. Schlick died at Gotha in 1825, two years after the death of his wife. C. F. P.

STRING (Fr. *Corde*; Ital. *Corda*; Germ. *Saite*). A slender length of gut, silk, or wire, stretched over raised supports called bridges, between which it is free to vibrate. When weighted to resist the drawing power or tension, the rapidity of its transverse vibrations depends upon the tension, the length, and the specific gravity of the material; and in exact ratio with this rapidity the ear is sensible of the difference of musical pitch. From the 6th century B.C. the monochord or single string, stretched over a sound-board and measured by movable bridges, has been the canon of musical intervals, the relative scale pitch. The string by itself would give but a faint tone in the surrounding air, and a sound-board is necessary to reinforce the tone, and make it sufficiently audible.

Of the materials employed for strings, silk has been much used in the East, but in European instruments gut and wire have had the constant preference. Gut (χορδή in Greek, whence the familiar 'chord') was the musical string of the Egyptians, Greeks, and Romans; wire was practically unknown to them, since wire-drawing was invented only about A.D. 1350, synchronising with the probable invention of keyed instruments with strings, such as the clavichord, harpsichord, or virginal. From that epoch gut and wire have held divided rule, as they do in our own day in the violin and the piano. The general name for gut strings is catgut,¹ but it is really made from the intestines of sheep and goats, chiefly the former; the best and strongest being of lamb's gut when the lamb is of a certain age and development, whence it comes that September is the month for fiddle-string making; particularly for first (or E) fiddle-strings, which are the smallest though they have to bear the greatest strain of the four. According to Mr. Hart (*The Violin*, London, 1875) the best catgut strings are the Italian (*Roman par excellence*); next rank the German, then the French; last of all, the English. The author attributes the superior quality of the Italian to climate, an important part of the process of manufacture being, in Italy, carried on in the open air, which is

naturally not always practicable in England. For the deeper-toned strings the gut is overlapped with silver, copper, or mixed metal. According to J. Rousseau (*Traité de la Viole*, 1687) this loading of the string was introduced in France by Sainte Colombe about A.D. 1675. The tension of the four strings of a violin was stated by Tartini, in 1734, to be 63 lb. Mr. Hart, for the English high pitch [happily now discredited] estimates it at about 90 lb.

Wire strings were originally of latten or brass, with which psalteries and dulcimers were strung. As late as the first half of the 18th century, clavichords were generally strung with brass wire only; pianofortes retained a batch of brass strings until about 1830. Steel wire, as the special iron music-wire was called, was, however, very early introduced, for Virdung (*Musica getutscht und ausgezogen*, A.D. 1511) expressly states that the trebles of clavichords were then strung with steel. Early in the 19th century Nuremberg steel was in great request, but about 1820 the Berlin wire gained the preference. The iron of both came from the Harz Mountains. About 1834 Webster of Birmingham brought out cast steel for music wire, and gave piano strings a breaking weight of about one-third more than the German. But in 1850 Miller of Vienna was able to contend for the first place, and in the following year actually gained it at the Great Exhibition, for cast steel wire-drawing. After that, Pöhlmann of Nuremberg came forward and was considered by some experts to have surpassed Miller.² Webster's firm has not been idle during a competition to the results of which the present power of the pianoforte to stand in tune owes so much. A trial made under direction of the writer gives for average breaking weight of 24 inches, of No. 17½ wire, Pöhlmann's 297 lb., Miller's 275 lb., Webster and Horsfall 257 lb., all nearly doubling the tension required for use. It is not, therefore, with surprise that we accept the eminent authority of Dr. William Pole, who regarded cast steel music-wire as the strongest elastic material that exists. The earliest covered piano strings, about a hundred years ago, spun in long interstices of brass over steel, have in time become close spun in single, double, and even treble overlayings of copper, or mixed metal composed of spelter and copper, gaining in the largest strings a diameter of 0.21 of an inch, and considerable power of strain. The greatest tension of a string recorded by Messrs. Broadwood in the technical part of their Exhibition book of 1862 is 315 lb. — for the *highest* single string of a Concert Grand. They give the whole tension at that time for Philharmonic pitch (viz. A 454, C 540 double vibrations per second) of two of their

² Unpublished correspondence of Theobald Böhm, the flautist, shows that Pöhlmann was indebted to him for improving his manufacture.

¹ The origin of the term catgut has not yet been traced. G.

Concert Grands, as well as the tension of each separate note. The first of the two is 34,670 lb. (15 tons 9 cwt. etc.); the other, a longer scale, 37,160 lb. (16 tons 11 cwt. etc.). In later years tension was much increased, but not sufficiently so to account for the much higher totals or for the breaking-weights of wire recorded in Mendel's *Lexikon*. [See the writer's *History of the Pianoforte*, pp. 39, 83, 86.] A. J. H.

STRING. The terms 'Strings,' 'Stringed instruments,' 'String-quartet,' 'String-trio,' have come to be applied in England to instruments of the violin tribe only, the terms answering to the German *Streichquartett*, *Streichinstrumente*. The term is understood to exclude strings that are not bowed, such as the harp and piano. Thus a quartet for four stringed instruments, usually two violins, viola, and violoncello, is called a String-quartet, to distinguish it from a pianoforte quartet—that is, for piano and three other instruments; or for any other combination of four, such as a quartet for four horns, four flutes, etc. G.

STRINGENDO, 'forcing, compelling'; pressing or hastening the time. This word conveys, besides the idea of simple acceleration of pace, that of growing excitement, working up to some climax. M.

STRING-PLATE (Fr. *Sommier en fer*; Ital. *Cordiera*; Germ. *Anhängeplatte*, *Metallner Saitenhalter*). The iron plate on the hitch-pin block of pianofortes to which the further ends of the strings are now attached. It forms with the tension bars the metal framing of the instrument; the wooden framing being a bracing more or less complete of wooden beams, in connection with the wrest-plank, which is also of wood, and sometimes covered with metal. [See **WREST-PLANK** and *History of the Pianoforte*, pp. 13, 15, 16.] The service of the string-plate is one of weight; it bears an important share in resisting the continual draught of the strings. It was invented, rather with the idea of compensation than resistance, by William Allen, a tuner in Stodart's employ, and was patented by James Thom and Allen in January 1820. A rigid string-plate was introduced by James and Thomas Broadwood in the following year; it was the invention of one of their workmen, Samuel Herve. The single casting for string-plate and general resistance was the idea of Alpheus Babcock, of Boston, U.S., 1825; and was meritoriously improved and rendered practicable by Conrad Meyer of Philadelphia, U.S., in 1833. The important systems of construction that have arisen from the use of iron in string-plates and bars are described under **PIANOFORTE**. A. J. H.

STROGERS, NICHOLAS, an organist in the reign of James I., composer of a Morning and Evening Service printed by Barnard. Two anthems by him, 'Domine non est exaltatum'

and 'O God be merciful,' are in the Library of Peterhouse, Cambridge. An organ part of the latter is in the library of Ely Cathedral. In Christchurch, Oxford, are two entire Services (A minor, D minor), two Motets, and Fancies. [A Fantasia for virginal is in the Fitzwilliam Virginal Book (i. 357), and a piece in Benjamin Cosyn's book is possibly the same. A piece for lute is in Brit. Mus. Eg. MS. 2046.] W. H. H.

STROHMEYER, CARL, a bass singer, a Kammersänger at Weimar, who sang in a festival at Frankenhausen in June 1810, and is mentioned by Spohr for the extraordinary compass of his voice from D to g' (see Spohr's *Selbstbiographie*, i. 142). He was born in the Stollberg district in 1780, and was employed successively at Gotha and at Weimar, at which latter place he died, Nov. 11, 1845. G.

STROLLING PLAYERS' AMATEUR ORCHESTRAL SOCIETY, THE, was founded in 1882 by Mr. Norfolk Megone, who gave up his position as conductor of the School of Mines Orchestra to fulfil the duties of honorary conductor. He remained at the head of the Society's operations for a space of twenty years, being succeeded in 1902 by Mr. William Shakespeare, who conducted the concert till 1905, when Mr. Joseph Ivimey was appointed. The first concert was given Dec. 13, 1882, at the School of Dramatic Art, Argyll Street, London. Soon afterwards St. James's Hall was used for the 'Ladies' Concerts,' the smoking concerts being held in St. Andrew's Hall, Newman Street. Now the concerts of both kinds are given in the Queen's Hall. The President is H.R.H. the Duke of Connaught, and the Hon. Secretary is Mr. W. E. Garstin. The annual subscription for members (i.e. non-performing members) and for orchestral members alike is two guineas. M.

STRONG, GEORGE TEMPLETON, an American composer whose career has been made chiefly in Europe, was born in New York City, May 26, 1856. Both of his parents were musical. His mother was a good pianist and sang agreeably, and his father, G. T. Strong, a lawyer associated with the corporation of Trinity Church and a trustee of Columbia College, was an amateur organist, and for four years was president of the Philharmonic Society of New York (see **SYMPHONY CONCERTS OF THE U.S.**). Naturally the classics were the lad's daily artistic food. He began the study of the pianoforte and violin at an early age, and made essays in composition when he was thirteen years old. A strong predilection for the oboe led him to abandon pianoforte and violin for that instrument, on which he became a professional performer, when a disagreement between himself and his father on the choice of a career cost him the protection of the parental roof. In 1879 he went to Leipzig, where he entered the Conservatorium, abandoned the oboe in favour of the viola, studied harmony with Richard Hofmann, counterpoint

and fugue with Jadassohn, and horn with Gumbert of the Gewandhaus orchestra. In Leipzig he belonged to the coterie of Liszt champions of which men like Siloti, Friedheim, Dayas, and Krause were members, and frequently visited that master in Weimar. From 1886 to 1889 he lived in Wiesbaden, associating much with his friend and fellow-countryman MacDowell, and falling under the influence of Raff. He then took up a residence in Vevey, Switzerland, where he still lives, having spent one year (1891-92) in the United States as teacher at the New England Conservatory of Music in Boston. In Vevey he turned his thoughts for a time to water-colour painting, and founded the *Société Vaudoise des Aquarellistes*, having become discouraged by the failure of American composers to find recognition in their native land. Of Mr. Strong's published pieces the most important are two for soli, male chorus, and orchestra: 'Wie ein fahrender Hornist sich ein Land erblies,' op. 26, and 'Die verlassene Mühle,' op. 30, and a symphony entitled 'Sinttram,' based on de la Motte Fouqué's romance of that name and Dürer's famous print 'Ritter, Tod und Teufel.' A symphonic poem 'Undine' and a symphony 'In den Bergen' have been successfully played at home and abroad. A considerable number of chamber music-pieces, two 'American Sketches' for violin solo and orchestra, a short dramatic cantata, arrangements for four hands pianoforte of some of Bach's organ works, songs, instrumental solos, etc., remain in manuscript. H. E. K.

STROUD, CHARLES, born about 1705, was educated as a chorister of the Chapel Royal under Dr. Croft. After quitting the choir he officiated as deputy organist for his instructor and became organist of Whitehall Chapel. He died April 26, 1726, and was buried in the west cloister of Westminster Abbey. He is known as a composer by his beautiful anthem, 'Hear my prayer, O God,' included in Page's 'Harmonia Sacra.' W. H. H.

STRUNGK, DELPHIN, was born 1601, and died 1694 at Brunswick. He was a capable organist, and held posts successively at the Wolfenbüttel Hauptkirche, 1630-32; at Celle, and at the church of St. Martin, Brunswick. In a complimentary dedication to the Burgo-master of Brunswick of his work on music published in 1652, Conrad Matthaei alludes to 'der sehr berühmte Organist, Herr Delphin Strungk' (Vogel, *Handschr. zu Wolfenbüttel*, 1890, p. 182).

Strungk composed music for the organ—an example is printed in Ritter's *Geschichte des Orgelspiels*, 1884, ii. 207, a Choralvorspiel in 4-part writing 'Lass mich dein sein'; Dr. Max Seiffert published two more. In a Lüneburg MS. there are six of these organ arrangements (Prof. Junghans, *Buch als Schuler*, 1870); other compositions for voices with instruments,

as well as a Choralvorspiel, are in MS. in Berlin. In the Wolfenbüttel Library is an autograph MS. of music for five voice and eight instrumental parts, composed in June 1671, 'Musikalischer Glückwünschender Zuruff (Kommt und sehet die Werke des Herrn) als . . . Rudolphus Augustus, Herzog zu Braunschweig und Lüneburg in der Erbhuldigungsstadt Braunschweig den Gottesdienst in der Kirchen zum Brüdern erstesmahls beigewohnt.' His son,

NICOLAS ADAM STRUNGK, or STRUNCK, was born at Celle in November 1640. He studied music with his father, Delphin Strungk, and at the age of twelve was acting as organist at the Magnuskirche, Brunswick. Later he entered Helmstadt University, and worked there for some years, taking violin lessons in the vacations from Schnittelbach of Lübeck. In 1660 he was appointed first violin in the Wolfenbüttel Hofkapelle, but changed subsequently to a similar post at Celle, with a yearly salary of 200 thalers. In 1665 he joined the Hofkapelle of the Elector Johann Friedrich of Hanover.

About this time he paid his first visit to Vienna, and played the violin before the Emperor Leopold I. In 1678 he was appointed director of music in Hamburg, where a great effort was being made to foster German musical talent, so long overshadowed by Italian influences. There he wrote and produced many operas: 'Der glückselig-steigende Sejanus,' and 'Der unglücklich-fallende Sejanus' in 1678, the German libretto by Christ. Richter being adapted from the Italian of Nicola Minato; 'Esther,' 'Die drei Töchter Cecrops,' 'Doris,' and 'Alceste' in 1680; 'Theseus,' 'Semiramis,' and 'Floretto' in 1683.

Friedrich Wilhelm of Brandenburg, when visiting Hamburg, tried to secure Strungk's services as capellmeister, but this was not allowed, Hanover having a prior claim. The Elector Ernst August appointed Strungk chamber organist, and presented him to a canonry at Einbeck, and eventually Strungk accompanied him to Italy and remained there some time. It was at Rome that the meeting between Strungk and Corelli took place, so graphically described by Hawkins (ed. 1875, vol. ii. p. 676). Strungk again visited Vienna, this time playing on the clavier before the Emperor with much success. From 1682 to 1686 he remained a member of the Hanover Hofkapelle, but on Jan. 26, 1688, Johann Georg II. of Saxony appointed him Kammerorganist and Vice-capellmeister to the Dresden Hofkapelle, with a salary of 500 thaler. He was the successor of Carlo Pallavicini, who died on Jan. 29, leaving an unfinished opera which Strungk was asked to complete. The libretto was by Pallavicini's son Stefano. Strungk apparently contributed the music to the third act, and the opera, 'L'Antiope,' was performed four times in Feb. 1689, at Dresden. Strungk seems to have suffered at Dresden from

the usual friction between the Italian and German musicians, although the Germans were gradually gaining the upper hand, for on March 30, 1688, Elector Johann Georg III. was appealed to because the Italians refused to join in any performance of Strungk's compositions, and would only acknowledge his authority when Bernhard the capellmeister was absent through illness. This resulted in the dismissal of the ringleader Fedeli in the following September. Bernhard died on Nov. 14, 1692, and was succeeded by Strungk, who composed some music in his memory.

On June 13, 1692, Strungk obtained permission from Johann Georg IV. of Saxony to found an opera-house in Leipzig. With the aid of two associates, Glaser and Sartorio, an architect, the work was put in hand in March 1693, and a theatre of wood was erected in the Brühl, at a cost of 10,000 thaler. It was opened on May 8, 1693, with Strungk's opera 'Alceste'; the German libretto by Paul Thiemeich was adapted from the original Italian of Aurelio Aureli. A contemporary chronicle narrates that pictured announcements were suspended in the streets of Leipzig, giving a description of the opera, and the time of its performance (*Leipzigerisches Geschicht-Buch*, 1714, p. 883). Johann Georg IV. came from Dresden to be present at the opening performance. In 1693 Strungk's opera 'Nero' was also given, and his 'Agrippina' in 1699. Strungk was financially much embarrassed by his Leipzig undertaking, although he retained his Dresden post and salary until 1697, when he retired with a pension. He died Sept. 23, 1700, at Dresden. His daughters Philippine and Elisabeth were two of the principal singers in the Leipzig theatre from 1705 to 1709.

Very little of Strungk's music is known at the present day, and it nearly all remains in MS. He composed a 'Ricercar auf den Tod seiner Mutter, verfertigt zu Venedig am 20. Dec. 1685,' also 'Die Auferstehung Jesu,' first performed on April 21, 1688; and he published at Dresden in 1691 'Musikalische Uebung auf der Violin oder Viola da gamba, so wohl zur Ehre Gottes als menschlicher Ergötzlichkeit bestehend, in etlichen Sonaten über die Festgesänge, dann auch etliche Ocaconen mit zwei Violinen.' A selection of his opera airs was published in Hamburg, 1684, 'Ein hundert auserlesene Arien zweyer Hamburgischen Operen, Semiramis und Esther. Mit beigefügten Ritornellen.' A MS. copy is in the Königsberg Library as well as some MS. Choralvorspiele also attributed to Strungk, although they may be the work of his father, Delphin Strungk (see Müller's Cat.). MS. copies of a sonata for two violins and viola da gamba, and a sonata for six strings, are in the Upsala Library. Various MSS. are also in the Berlin and Dresden Libraries, and in the Wolfenbüttel Library, MS. 253 'Les Aires avec les Flauts douces pour son Altesse Serenissime

monseigneur le Prince Ludwig Rudolf, Duc de Bruns. et Lüneberg,' containing ten numbers, chiefly dances. C. S.

STUDIES. See ÉTUDES.

STÜCK (Ger. 'Piece').

SUB. The Latin preposition 'under' is used in connection with the organ, and denotes the octave below, as 'Sub Bass,' 'Sub Octave couples,' etc. [See COUPLER.]

SUBDIAPENTE. A polyglot word, part Latin, part Greek, to signify a fifth below, just as 'Epidiapente' signified a fifth above. A 'Canon in Subdiapente' was a canon in which the answer was a fifth below the lead. Similarly 'Subdiatessaron' is a fourth below, and 'Epidiatessaron' a fourth above. G.

SUBDOMINANT. The fourth note of the scale upwards. The note below the dominant, as F in the key of C. The radical bass of the penultimate chord in the Plagal cadence. When groups of movements are balanced together in threes the central one is most frequently in the key of the subdominant, as in sonatas of three movements, the minuet and trio form, marches, valse, etc. In the actual body of a large movement in forms of the sonata order, the key of the subdominant is not antithetically acceptable, and examples of its occurrence in modern music as the key of the second section or second subject are extremely rare, and evidently not well advised. But in dependence on the tonic key it is one of the most important of harmonic centres, and digressions in that direction are very common in modern music. C. H. H. P.

SUBJECT. The theme, or leading idea, on which a musical composition is based. A piece of music can no more be composed without a Subject than a sermon can be preached without a text. Rich harmonies and graceful passages may be strung together in any number; but if they be not suggested by a leading thought, they will mean nothing. The 'leading thought' is the Subject; and the merit of the composition based upon that Subject will depend, in the first place, upon the worthiness of the idea, and in the second, upon the skill with which the composer discourses upon it.

Subjects may be divided into as many classes as there are classes of composition; for every definite art-form is based upon a Subject in harmony with its own peculiar character.

1. The earliest known form of Subject is the ecclesiastical *Cantus firmus*.¹ The most important varieties of this are the plain-song melodies of the antiphon² and those of the hymn.³ The former admits of no rhythmic ictus beyond that demanded by the just delivery of the words to which it is set. The latter fell, even in very early times, into a more symmetrical vein suggested by the symmetry of the verse or prose, cultivated by the great mediæval

¹ See PLAIN-SONG.

² See ANTIPHON.

³ See HYMN.

hymnologists, though it was not until the close of the 15th, or beginning of the 16th century that it developed itself in Germany into the perfectly rhythmic and metrically regular melody of the Choral.¹

Upon a phrase of this plain-song the inventors of harmony discoursed at will; in other words, they treated it as a Subject. Composers of the 11th century discoursed upon it by singing a second part against the given Subject, in plain counterpoint—note against note.² They sang this part extempore; and, because it was sung by a second voice, it was called *Discantus*—the literal meaning of which is, a song sung by two voices. See *DISCANT*.

When extempore *discant* gave place to written counterpoint, the *Cantus firmus* was still retained, and sung by the tenor in long sustained notes, while other voices discoursed upon it, no longer note against note, but, as art progressed, in passages of imitation, sometimes formed from the actual notes of the *Canto fermo*, sometimes so contrived as to contrast with it, in pure harmony, but with unlimited variety of rhythm.³ And this arrangement brought two classes of theme into simultaneous use—the plain-song basis of the whole, and the point of imitation: the first of which was technically distinguished as the *Canto fermo*, while the last, in process of time, approached very nearly to the true Subject of the modern schools. The two forms are very clearly shown in Palestrina's 'Missa Ecce Sacerdos magnus,'⁴ in which the long notes of the *Canto fermo* never fail to present themselves in one or other of the vocal parts, however elaborate may be the imitations carried on in the rest.

II. By a process not uncommon in the development of specific art-forms, the long-drawn notes of the *Canto fermo*, after giving birth to a more vivacious form of Subject, fell gradually into disuse,—appearing, if at all, by diminution, or double diminution, in notes as short as those formerly used for points of imitation. In this manner the ancient *Canto fermo* became a Subject properly so called; and, as a Subject, was made the groundwork of a regular fugue. This process of development is strikingly exemplified in Palestrina's 'Missa L'Homme armé,' in some of the movements of which the quaint old melody is treated, in Longs and Larges, as a *Canto fermo*, while in others it is written in Semibreves and Minims, as a fugal Subject.⁵

We do not mean to imply that Palestrina invented this mode of treatment; but only that he availed himself of all the good things that had been used by his predecessors. The laws of fugue were established more than a century before his time. Not the laws of what we now call fugue; but those of the Real Fugue of the

Middle Ages—a form of composition which differs very materially from that brought to perfection by the great masters of the 18th century. Real Fugue was of two kinds—Limited, and Free.⁶ In Limited Real Fugue, the imitation was carried on from the beginning to the end of the composition, forming what we now call Canon. In Free Real Fugue it was not continued beyond the duration of the Subject itself. In the former case the theme of the composition was called a *Guida*—that is, a Subject which serves as a 'guide' to the other parts, which imitate it, note for note, throughout. In Free Real Fugue the theme was called *Subiectum*, *Propositio*, or *Dux*: *Soggetto*, *Proposta*, or, if very short, *Attacco*; *Führer*, *Aufgabe*, or *Hauptsatz*. The early English writers called it *Point*; but this word is now applied, like the Italian *Attacco*, to little passages of imitation only, and the leading idea of the fugue is simply called the Subject.

The Subject of the Real Fugue—except in the Limited species—was always very short, frequently consisting of no more than three or four notes, after the statement of which the part was free to move in any direction it pleased. But the treatment of these few notes was very strict. Every interval proposed by the leading part was answered by the same interval in every other part. The Answer, therefore, corresponded exactly with the Subject either in the fifth, or fourth, above, or below; and it was necessary that its solmisation should also correspond with that of the Subject in another hexachord.⁷ But the Subject and the Answer had each a distinguishing name. The Theme and its Reply were called, in various languages, *Dux* and *Comes*, *Propositio* and *Responsum*, or *Antecedens* and *Consequens*; *Proposta* and *Risposta*, or *Antecedente* and *Consequenza*; *Führer* and *Gefährte*, or *Antwort*; *Demande* and *Réponse*. In English, Subject and Answer; or, more rarely, Antecedent and Consequent.

III. So long as the Ecclesiastical Modes remained in use, Real Fugue was the only species possible; but, as these were gradually replaced by our modern system of tonality, composers invented a new kind of Fugue, formed upon a Subject the character of which differed entirely from that used by the older masters. This form of composition is now called Tonal Fugue.⁸ It is generally described as differing from Real Fugue chiefly in the construction of the answer. Undoubtedly this definition disposes of its most essential characteristic. But there are other differences between the two forms which cannot be thus lightly passed over. So far as the answer is concerned, it is enough to say that its intervals do not furnish an exact reproduction of those of the Subject; being governed, as to their arrangement, by laws which scarcely fall within the scope of our present article. The

Subject, on the other hand, presents so many varieties of form and expression, that it cannot be too carefully considered. In the hands of the great masters it presents an epitome of the entire Fugue, into which nothing is admissible which is not in some way suggested by it; and, in order that it may serve this comprehensive purpose, it must needs be very carefully constructed. The Subjects employed by the great fuguists are always found to be capable of suggesting a logical Answer, and one or more good Counter-subjects;¹ of being conveniently and neatly broken into fragments, for purposes of collateral discussion; of intertwining their various members among the involutions of an ingenious Stretto; and of lending themselves to a hundred other devices, which are so intimately connected with the conduct of the Fugue itself, that the necessary qualities of the Subject will be better understood by reference to our general article on TONAL FUGUE (vol. ii. p. 122 *et seq.*), than by separate description here.

IV. We have shown how the fathers of composition treated the *Canto fermo*; how their immediate successors enveloped it in a network of ingenious points of imitation; how, by fusing the points of imitation, and the *Canto fermo* which suggested them, into a homogeneous theme, the polyphonic composers gave birth to that important factor in composition which we call a Subject; and how that Subject was treated by the great fuguists of the 18th century. We have now to see how these fuguists revived the *Canto fermo*, and employed it simultaneously with the newer Subject. Not that there was ever a period when it fell into absolute desuetude; but it was once so little used, that the term, revived, may be very fairly applied to the treatment it experienced from Handel and Bach, and their great contemporaries.

And now we must be very careful to remember clearly the process by which the Subject grew out of the *Canto fermo*. The German composer of the 18th century learned the melody of the chorale in his cradle, and used it constantly: treating 'Kommt Menschenkinder, rühmt, und preist,' and 'Nun ruhen alle Wälder,' as Palestrina treated 'Ecce Sacerdos magnus,' and 'L'Homme armé.' Sometimes he converted the traditional melody into a regular Subject, as in the 'Osanna' of the last-named mass. Sometimes he retained the long notes, enriching them with a florid counterpoint, as in the 'Kyrie.' In the first instance, there was no doubt about the nomenclature; the term Subject was applied to the choral melody as a matter of course. In the other case there was a choice. When the melody of the chorale was made to pass through the regular process of Fugal Exposition, and a new contrapuntal melody contrasted with it in shorter notes, the former was called the Subject, and the latter

the Counter-subject. When the counterpoint furnished the exposition, and the chorale was occasionally heard against it, in long sustained notes, the first was called the Subject, and the second the *Canto fermo*. Seb. Bach has left us innumerable examples of both methods of treatment, in his 'Choral-Vorspiele,' 'Kirchen-Cantaten,' and other works. Perhaps the grandest example is the opening movement of the 'Credo' of the Mass in B minor, in which the plain-song intonation, 'Credo in unum Deum,' is developed into a regular Fugue by the voices, while an uninterrupted counterpoint of crotchets is played by the instrumental bass. In neither of these cases would it be easy to misapply the words Subject, Counter-subject, or *Canto fermo*; but the correct terminology is not always so clearly apparent. In the year 1747 Bach was invited to Potsdam by Frederick the Great, who gave him a Subject for the purpose of testing his powers of improvisation. We may be sure that the great fuguist did full justice to this at the moment; but, not contented with extemporising upon it, he paid the royal amateur the compliment of working it up at home in a series of movements which he afterwards presented to King Frederick, under the title of 'Musikalisches Opfer.' In working this out he calls the theme, in one place, 'Il Soggetto Reale'; and, in another, 'Thema regium.' It is quite clear that in these cases he attached the same signification to the terms Thema and Soggetto, and applied both to the principal Subject, treating the violin and flute passages in the sonata, and the florid motivo in the canon, as Counter-subjects. But in another work, founded on a theme by Legrenzi, he applies the term 'Thema' to the principal motivo, and 'Subjectum' to the subordinate one.² We must suppose, therefore, that the two terms were in Bach's time, to a certain extent, interchangeable.

Handel, though he did occasionally use the *Canto fermo* as Bach used it, produced his best effects in quite a different way. In the 'Funeral Anthem' he treats the Chorale, 'Herr Jesu Christ,' first as a *Canto fermo* and then, in shorter notes, as a regularly-worked Subject. 'As from the power of sacred lays' is founded upon a chorale, sung in plain counterpoint by all the voices; it therefore stands as the Subject of the movement, while the Counter-subject is entirely confined to the instrumental accompaniment. In 'O God, who from the suckling's mouth,' in the 'Foundling Anthem,' the melody of 'Aus tiefer Noth' is treated as an orthodox *Canto fermo*. But this was not Handel's usual practice. His *Canti fermi* are more frequently confined to a few notes only of Plain-song, sung

² 'Thema Legrenzianum pedaliter elaboratum cum subjecto.' The original MS. of this work has disappeared. Messrs. Peters, of Leipzig, have published it in Cähler 4 of their edition of the Organ Works, on the authority of a copy by Andreas Bach; [and it is given, but without the title quoted, in the B.-G. edition, xxxviii. p. 94].

¹ See COUNTER-SUBJECT.

slowly, to give weight to the regularly-developed Subject, as in 'Sing ye to the Lord,' the 'Hallelujah Chorus,' the last chorus in the 'Utrecht Te Deum,' the second in the 'Jubilate,' the second Chandos Anthem, 'Let God arise,' the last chorus in 'Esther,' and other places too numerous to mention.¹

The use of the long-drawn *Canto fermo* is fast becoming a lost art; yet the effect with which Mendelssohn has introduced 'Wir glauben all' an einen Gott,' in combination with the primary Subject of 'But our God abideth in Heaven,' in 'St. Paul,' has not often been surpassed. Mozart also has left us a magnificent instance, in the last finale of 'Die Zauberflöte,' where he has enveloped the Chorale, 'Ach Gott vom Himmel sieh darein,' in an incomparable network of instrumental counterpoint; and Meyerbeer has introduced two clever and highly effective imitations of the real thing in 'Les Huguenots,' at the 'Litanies' and the 'Conjunction.'

V. The similarity of the *Canti fermi*, and even of the true Subjects, used by great composers, and handed on from generation to generation, has given rise to much ingenious speculation. 1. A remarkable instance of this is a passage of slow notes, rising from the tonic to the subdominant, and then descending towards the note from whence it started. This passage is constantly found in old ecclesiastical melodies; and among others, in that of the hymn 'Aeterna Christi munera.' Zarlino used it as a theme for his examples in counterpoint. In Morley's *Plaine and easie Introduction*, Philomathes gives it to Polymathes, as a Point 'familiar enough, and easie to bee maintained'—i.e. developed; while the 'Master' calls it 'a most common Point,' which 'though it were given to all the Musicians of the world, they might compose vpon it, and not one of their Compositions bee like vnto that of another.' Byrd used it in 'NON NOBIS'; Palestrina, in the first 'Agnus Dei' of his 'Missa brevis'; Bach, in the 'Gratias agimus' and 'Dona' of his Mass in B minor; Handel, in 'Sing ye to the Lord,' the 'Hallelujah Chorus,' the last Chorus in the 'Utrecht Te Deum,' the Chamber Duet, 'Tacet, ohimè!' and many other places; Steffani, in his Duet, 'Tengo per infallibile'; Perti, in a Fuga a 8, 'Ut nos possimus'; Mendelssohn, in 'Not only unto him,' from 'St. Paul'; and Beethoven, in the Trio of the Ninth Symphony. The truth is, the passage is simply a fragment of the scale, which is as much the common property of musicians, whether fuguists or composers of the later schools, as the alphabet is the common property of poets.

2. Another Subject, scarcely less universal in its application, embraces a more extended portion of the scale. Bach uses this in the 'Christmas Oratorio'; Handel, in the 'Hail-

stone Chorus'; in a remarkable Concerto for two Orchestras, of which the only known copy is the original Autograph at Buckingham Palace; in 'Worthy is the Lamb'; in 'When his loud voice,' and in many other places. Mozart used it, in a form all but identical with Handel's, and also in the inverted form, in the Jupiter Symphony. Beethoven used it in his first symphony; in his pianoforte sonata, op. 31, No. 1; and in the inverted form, in his symphony in C minor; Schumann, in his string quartet, No. 1, and his PF. quartet, op. 47; and Brahms, in the finale to his symphony in C minor.

3. These examples deal only with the scale.

But there are certain progressions which are as much common property as the scale itself; just as there are certain combinations of letters which are as much common property as the alphabet. First among these stand the leaps of fifths or fourths, with which countless Subjects begin; and scarcely less common are the sequences of ascending fourths, and descending fifths, which we so frequently find associated with them; as in Bach's fugue in E♭—No. 31 of the '48'; Mozart's overture to 'Die Zauberflöte,' and a hundred other cases.

4. Closely allied to these sequences of fourths and fifths is a form in which a descending third is followed by an ascending fourth. This was used for a Canon by Turini in the 17th century; in Handel's second hautboy concerto and third organ fugue; Morley's canzonet, 'Cruel, you pull away too soon'; Purcell's 'Full fathom five'; and numerous other cases, including a subject given to Mendelssohn for improvisation at Rome, Nov. 23, 1830.

5. A Subject, characterised by the prominent use of a diminished seventh, and familiar as that of 'And with His stripes,' is also a very common one. Handel himself constantly used it as a theme for improvisation; and other composers have used it also—notably Mozart, in the Kyrie of the 'Requiem'; see (a).

6. The Intonation and Reciting-Note of the second Gregorian Tone—used either with or without the first note of the Mediation—may also be found in an infinity of Subjects, both ancient and modern, including that of Bach's Fugue in E, No. 33, and the Finale of the Jupiter Symphony; see (b).

The number of Subjects thus traceable from one composer to another is so great that it would be impossible to give even a list of them. The treatment may be original, though the Subject has been used a thousand times; and

¹ A learned modern critic finds fault with Burney for calling the *Canto fermo* in 'Sing ye to the Lord' a Counter-subject, but falls into the same error himself in describing the Utrecht 'Jubilate.'

these constantly-recurring Subjects are founded upon progressions which, more than any others, suggest new Counter-subjects in infinite variety.

VI. The Subject of Canon differs from that of Fugue, in that it is continuous. The Subject is as long as the Canon itself. Hence it is called the *Guida* or Guide; each note in the leading part directing those that are to be sung by all the other voices in turn. Subjects of this kind will be found in vol. iii. pp. 77-8, 385a, 388-9, and other places; and many more may be seen in the pages of Burney and Hawkins. Examples of the method of fitting these Subjects together will be found in vol. i. pp. 455b, and in vol. iii. pp. 77-8. The number of passages that can be made to fit together in Canon is so limited, that the same notes have been used over and over again by writers of all ages. A remarkable instance of this is afforded by 'Non nobis.' We have seen how many composers have chosen this as a Fugal Subject; and an account of it, with some solutions in Canon not generally known, will be found at vol. iii. p. 388b. It must not, however, be supposed that the older composers alone were able to produce fine Canons. Haydn thoroughly understood the art of writing them [see vol. ii. p. 307b]; and so graceful are Mozart's that their Subjects might very easily be mistaken for those of an ordinary part-song.¹

VII. Closely allied to the Subject of the Canon is that of the 'Rota' or Round. In this, and in its comic analogue the Catch, the Guida is followed by every voice in turn; for which reason the composition was formerly written on a single stave. It will be found so written in a *facsimile* of the oldest example we possess, in the article SUMER IS ICOMEN IN; and it is virtually so written even at the present day; though, in modern copies, the Guida is *doubled back*, so to speak, each time a new voice enters, so as to give the outward appearance of a score. That it is not really a score is evident, from the fact that there is not a separate part for each voice; but there is a substantial difference between this and the Canon, though the subject of both is called a Guida. In the Canon, the Subject forms the whole composition. In the Round, it continues only until the entrance of the second voice, the latter sections of the Guida representing Counter-subjects only, and continuing to furnish new Counter-subjects as often as new voices enter.

It is remarkable that this, the oldest form of secular part-writing in existence, should not only have been invented in England, but should still be more highly esteemed in England than in any other country—for it is only in England that the art of singing a round is practised with success, and the success with which we practise it dates from the time of the Plantagenets.²

VIII. In turning from the learned complexi-

ties of Fugue and Canon, to the simple Subject of the Dance-tune, we are not, as might be supposed, retracing our steps, but following the line traced out for us by the natural development of art. When instrumental music first began to attract attention, the Fugue was regarded as the embodiment of its highest expression. Lulli ended his overtures with a Fugue; but as time progressed this form of finale was superseded by that of the Dance-tune. The most common types were those of the Minuet, the Gavotte, the Bourrée, the Courante, the Chaconne, the Sarabande, the Giga, and the closely allied tunes of the Allemande, the Ritornello, the Air, and the March. They originally consisted, for the most part, of two short strains, the first of which stated the Subject, while the second developed it according to its means. It was *de rigueur* that the Minuet should be written in triple time, and that each phrase of its Subject should begin with the down-beat of the bar—though, in later times, most Minuets began with the third beat; that the Gavotte should be in *Alla breve* time, beginning at the half-bar; that the Bourrée should be in common time, beginning on the fourth beat; that the Allemande should be in common, and the Giga in compound common time, each beginning, as a general rule, with a single short note; and so with the rest. It was indispensable that the first strain, representing the Subject, should be complete in itself, though it did not always end in the key in which it began. The development of the Subject in the second strain usually consisted in the prolongation of the melody by means of phrases, which, in the finer examples, were directly derived from itself: sometimes carrying a characteristic figure through two or more closely-related keys; sometimes returning, after this process, to the initial strain, and thus completing the symmetry of the movement in accordance with principles of the deepest artistic significance. The most highly-developed forms were those of the Courante and Allemande. In these, the first strain, if in the major mode, almost invariably modulated to the dominant for the purpose of proceeding to a formal close in that key; if in the minor mode, it proceeded, in like manner, to the relative major. The second strain then started with a tolerably exact reproduction of the initial Subject in the new key, or some other closely related to it; and the reprise terminated with the transposition to the original key of that portion of the first strain which had first appeared in the dominant or relative major. In these forms the share of interest allotted to the process of development was very small indeed, compared with that absorbed by the Subject itself; inasmuch that, in many very fine examples, the entire movement consisted of little more than a Subject artfully extended by the articulation of two members of not very unequal proportions.

¹ See a large collection of examples in Merrick's English Translation of Albrechtsberger, vol. ii. pp. 415-432.

² See *ROUND*; *SUMER IS ICOMEN IN*.

IX. Very different from this was the next manifestation of progressive power. Taking the lines of the Allemande as the limit of the general contour, the first experimenters in 'Sonata-form' (see SONATA) used a primary Subject, of comparatively limited dimensions, as the foundation of a movement of greater length and higher development than any previously attempted. For this form a good Subject was of paramount importance; but its office was that of a text, and nothing more; the real interest of the movement lay in the completeness of its treatment. The essential features of the most beautiful form that the art has yet shown have been treated in the articles FORM, SONATA.

There remains another class of Subjects to which we have as yet made no allusion, but which, nevertheless, plays a very important part in the economy of musical composition. We allude to the Subjects of dramatic movements, both vocal and instrumental. It is obvious that in Subjects of this kind the most important element is the peculiar form of dramatic expression necessary for each individual theme. And because the varieties of dramatic expression are practically innumerable, it is impossible to fix any limit to the varieties of form into which such Subjects may be consistently cast. At certain epochs in the history of the lyric drama consistency has undoubtedly been violated, and legitimate artistic progress seriously hindered by contracted views on this point. In the days of Hasse, for instance, a persistent determination to cast all Melodies, of whatever character, into the same stereotyped form, led to the petrification of all natural expression in the most unnatural of all mechanical contrivances—the so-called 'Concert-Opera.' Against this perversion of dramatic truth all true artists conscientiously rebelled. Gluck, with a larger orchestra and stronger chorus at command, returned to the principles set forth by Peri and Caccini in the year 1600. Mozart invented Subjects, faultlessly proportioned, yet always exactly suited to the character of the dramatic situation, and the peculiar form of passion needed for its expression. These Subjects he wrought into movements, the symmetry of which equalled that of his most finished concertos and symphonies, while their freedom of development and elaborate construction not only interposed no hindrance to the most perfect scenic propriety, but, on the contrary, carried on the action of the drama with a power which has long been the despair of his most ambitious imitators. Moreover, in his greatest work, 'Il Don Giovanni,' he used the peculiar form of Subject now known as the 'Leading Theme' with unapproachable effect; entrusting to it the responsibility of bringing out the point of deepest interest in the Drama—a duty which it performs with a success too well known to need even a passing comment.

In 'Der Freischütz,' Weber followed up this idea with great effect; inventing, among other striking Subjects, two constantly-recurring themes, which, applied to the heroine of the piece and the Demon, invest the scenes in which they appear with special interest.

[In the later works of Wagner the use of the Leitmotiv or Leading Subject was developed to the greatest possible extent, and almost all dramatic music since his day illustrates the principle he brought to such perfection. Not merely the characters and the external, tangible objects of the drama were identified with special musical phrases, but the inner dramatic factors, the 'motives' in the non-musical sense, were provided with themes, and in the finest instances, as throughout 'Tristan,' 'Die Meistersinger,' or 'Parsifal,' the themes are not arbitrarily associated with the elements of the play, but are inherently eloquent, so that the hearer who is not acquainted with the labels tacked on to the various themes feels unconsciously how greatly they enhance the appeal of the drama.]

The different forms of Subject thus rapidly touched upon constitute but a very small proportion of those in actual use; but we trust that we have said enough to enable the student to judge for himself as to the characteristics of any others with which he may meet, during the course of his researches, and the more so, since many Subjects of importance are described in the articles on the special forms of composition to which they belong.

W. S. R.

SUBMEDIANT. The sixth note of the scale rising upwards. The note next above the dominant, as A in the key of C. The submediant of any major scale is chiefly brought into prominence as the tonic of its relative minor. C. H. H. P.

SUBSIDIARY, in a symphonic work, is a theme of inferior importance, not strictly forming part of either first or second subject, but subordinate to one or the other. The spaces between the two subjects, which in the early days before Beethoven were filled up by 'padding' in the shape of formal passages and modulations, are now, in obedience to his admirable practice, occupied by distinct ideas, usually of small scope, but of definite purport. [See vol. i. p. 263.] The 'Eroica' Symphony affords early and striking examples of subsidiary subjects in various positions. Thus, on the usual dominant passage preceding the second subject appears the plaintive melody:—

which becomes of so much importance in the second part. And the same title belongs also to the fresh subject which appears transiently during the 'working-out' with so much effect:—

Equally noticeable is the phrase in a similar situation in the fourth Symphony :—

while the melody which Schubert interpolated as an afterthought in the Scherzo of his great C major Symphony is too well known to require quotation.

These two last, however, are not worked, and can therefore hardly be classed as 'themes,' but are more of the nature of 'episodes.'

In some cases a Subsidiary acquires so much importance in the working out as to rank as a third subject. The Italian Symphony of Mendelssohn supplies a type of this. The subject—

which appears shortly after the double bar in the first movement, though properly speaking merely a Subsidiary, is so insisted upon and elaborated in the working-out and coda as to rival the first subject itself in importance. F. C.

SUCCENTOR, *i.e.* Sub-cantor. A cathedral officer, deputy to the Precentor. His duty is to supply his principal's place during absence, in the regulation of the service, and other duties of the Precentor. C.

SUCH, HENRY, violinist, son of Edwin C. Such, Mus.B., was born in London on March 31, 1872. Commenced studying at the age of six, and made his first public appearance when eight years old. Following the advice of Joachim he entered the Hochschule at Berlin in 1885, remaining there till 1892, in which year his first public appearance in Berlin was successfully made. After touring in Germany he studied during 1895-96 with Wilhelmj, and again travelled in Holland and Scandinavia. He then visited Vienna, meeting and playing with Brahms, and in 1896 made two public appearances with Richter conducting. Settled in London in 1898, and was appointed Professor at the Guildhall School of music. He has a large repertory and an excellent technique. His violin is one of the Stradivari instruments formerly possessed by Paganini. W. W. C.

SUCH, PERCY FREDERICK, brother of the above, was born in London on June 27, 1878. In 1887 went to Berlin and commenced studying the violoncello under Herr Otto Ludemann, pupil of Professor Hausmann, who accepted him as private pupil in 1889, and continued to give him lessons when he joined the Hochschule

in 1892. In the latter institution he remained until 1898, having the advantage of lessons in ensemble-playing from Joachim. His first public appearance in Berlin was with the Philharmonic Orchestra in 1898. Besides playing as soloist, he assisted the Joachim Quartet as second violoncello at many concerts in Germany and Holland, including the Beethoven Festival at Bonn in 1899. Appeared in London first at St. James's Hall with the Joachim Quartet in 1901, and followed with a series of recitals. Held the post of principal violoncello during the two final seasons of the Popular Concerts. His training and purity of style fit him especially for the performance of chamber music. He plays upon an exceptionally fine Gagliano violoncello. W. W. C.

SUCHER, JOSEF, born at Döbör, Eisenburg, Hungary, Nov. 23, 1844, was brought up in the Löwenburg Convict at Vienna, as a chorister in the Hofkapelle, which he joined on the same day with Hans Richter, the conductor. On completing his course at the Convict he began to study law, but soon threw it aside, worked at counterpoint with Sechter, and adopted music as his profession. Beginning as sub-conductor of a Singing Society in Vienna, he advanced to be 'Repetitor' of the solo singers at the Imperial Court Opera, and conductor at the Comic Opera, and in 1876 went to Leipzig as conductor of the City Theatre. In the following year he married Fräulein Rosa Hasselbeck, the then prima donna of the same house. She was born Feb. 23, 1849, at Velburg in the Upper Palatinate (Brookhaus's *Lexikon*; but Riemann gives the year of birth as 1845), and is the daughter of one musician and the niece of another. Her first engagement was at Trèves. Thence she went to Königsberg and thence to Berlin and Danzig, where she was engaged by her future husband for Leipzig. From Leipzig in 1879 husband and wife went to Hamburg, where they settled as conductor and prima donna, and where the latter attracted immediate attention by her performance of Chryssa in Rubinstein's 'Nero.' They visited England in 1882, and Mme. Sucher proved her eminent qualities both as a singer and an actress by the extraordinary range of parts in which she appeared at the German opera at Drury Lane. She made her début as Elsa on May 18, and besides singing as Elizabeth and Senta, she sang Eva on May 30, and Isolde on June 20, on the respective productions in England of 'Die Meistersinger' and 'Tristan,' and as Euryanthe on the revival of that opera. Her husband produced a 'Scene' or Cantata entitled 'Wald-fräulein' ('The Wood Maiden') for soli, chorus, and orchestra, at the Richter Concert of June 5. Composition is no novelty to Herr Sucher; even in his chorister days we hear of songs, masses, cantatas, and overtures, one of which, to an opera called 'Ilse,' was brought forward

at a concert in Vienna in 1873. One of his best-known published works is a Liedercyclus entitled 'Ruheort.' Frau Sucher gained great renown by her singing of Isolde at Bayreuth in 1886. In 1888 her husband was appointed to the post of conductor at the Hofoper at Berlin; [he retired in 1899, and died April 4, 1908]. G. [Fran Sucher, after successful performances of Kundry and Eva at Bayreuth in 1888, became a prima donna at Berlin, where she remained until 1898, as a noted Wagner singer. On leave of absence, she gave 'Gastspiele' at Bayreuth and other cities of Germany, and in 1892 sang both at Covent Garden and Drury Lane as Brünnhilde in 'Siegfried,' and once as Isolde, and was warmly received. She would have played Isolde again but for a peremptory recall to Berlin, where her services were urgently required. On Nov. 3, 1903, she took a final farewell of the stage at Berlin as Sieglinde. A. C.]

SÜSSMAYER,¹ FRANZ XAVER, composer and Capellmeister, born 1766 at Steyer in Upper Austria, and educated at the monastery of Kremsmünster, where he attempted composition in several branches. [Some MS. operas still existing at Kremsmünster are mentioned in the *Quellen-Lexikon*.] At Vienna he had instruction from Salieri and Mozart. With the latter he formed the closest attachment, becoming, to use Seyfried's expression, 'the inseparable companion of the immortal Amphion.' Jahn details the work he did for the 'Clemenza di Tito' on its production at Prague, whither he accompanied Mozart. Süßmayer was at the composer's bed-side the evening before Mozart's death, while the latter tried to give him the necessary instructions for completing his Requiem, a task for which he was peculiarly fitted by his knack of imitating Mozart's handwriting. Jahn has stated in detail (ii. 172) how much of that work is in all probability Süßmayer's. [See vol. iii. p. 308.]

As a composer Süßmayer's name (as 'pupil of Salieri and Mozart') first appears at Schikaneder's Theatre, where his opera, 'Moses,' was brought out May 4, 1792, revived in 1796, and again in concert-form in 1800. This was followed by 'L' Incanto superato,' a 'musicocomantic fable' (Burgtheater, 1793), and by 'Der Spiegel von Arkadien' (Schikaneder's Theatre, 1794), libretto by Schikaneder, which became a favourite, and was eulogised by the *Wiener Zeitung*. He became in 1794 composer, and in 1795 Capellmeister, to the Kärnthner Court Theatre, where he produced successively 'Die edle Rache' (1795), 'Die Freiwilligen' (1796), 'Der Wildfang' (1797), 'Der Marktschreier' and 'Soliman der Zweite' (1799), 'Gulnare' (1800), and 'Phasma' (1801). His patriotic cantata, 'Der Retter in Gefahr,' was performed at an entertainment to the Vienna volunteers in the large Redouten-

saal at a time of threatened war (1796), and several times repeated in the same building, and by the Tonkünstler Societät. Süßmayer also composed two operas for Prague. Several of the above works were printed, some only in part, while others—masses, and smaller church-works, instrumental pieces, etc.—exist only in MS. Though wanting in depth and originality his works are melodious, and have a certain popular character peculiar to himself. He might perhaps have risen to a higher flight had he not been overtaken by death after a long illness, Sept. 17 (or 16, according to Thayer), 1803. Prince Esterhazy bought his entire MSS. from his widow.

C. F. P.

SUITE. In the period between the latter part of the 16th and the beginning of the 18th century the most conspicuous feature of universal instrumental music is the profusion of dance tunes. All the most civilised nations of that time took equal pleasure in them; and partly owing to the itinerant musicians who traversed divers countries, and partly to the wars which brought representatives of different nationalities into frequent contact, both friendly and hostile, the various characteristic types were spread from one land to another, were adopted universally by composers, irrespective of nationality, and were so acclimatised as to become in many cases as characteristic of and as popular in the countries of their adoption as in that of their origin. This is sufficiently illustrated in Morley's well-known *Plaine and easie Introduction*, 1597. For when he comes to treat of dance-music, the first things he takes notice of are Pavans and Galliards, Almanes and Brances; of which the first two are of Italian origin, the third probably Suiabian, and the last French. The first two were not only in common use for dancing purposes in Queen Elizabeth's time, but were adopted by the great composers of the day and a little later as a favourite basis for instrumental pieces, which were intended as much for private enjoyment as music as for accompaniments to dances; and they are found plentifully scattered in such collections as the Fitzwilliam Virginal Book and 'Parthenia,' among sets of variations, preludes, and fantasias. A large proportion of such dances were naturally taken singly, but composers early perceived the advantage of contrasting one with another. Thus Morley, in the same part of the work just mentioned, speaks of the desirableness of alternating Pavans and Galliards; since the first was 'a kind of staid musick ordained for grave dancing,' and the latter 'a lighter and more stirring kind of dancing'; and he further describes more obscurely the contrast arising from the 4-time and 3-time which subsists between them. Spitta, in his *Life of Bach* (i. 681, Engl. trans. ii. 73), mentions the same contrast as popular in Germany a little later, and refers to the publication of thirty

¹ He signs himself on a symphony SÜSSMAYR.

Paduans and Gaillards by Johann Ghro of Dresden in 1604. In such a manner originated the idea of joining different dance-tunes together to make an artistic balance and contrast, and in this lies the germ of the Suite; in which, by selecting dances of various nationalities, and disposing them in the order which displayed their relative bearings on one another to the best advantage, composers established the first secular instrumental cyclic art-form.

It is not possible, for want of materials, to trace fully the process of selection. The Pavans and Galliards dropped out of fashion very early, and Allemandes and Courantes came in, and soon became a sort of established nucleus, to which was sometimes appended a Sarabande, or even several other dance movements, and a Prelude. Indeed, when the principle of grouping movements together was once accepted, the speculations of composers in that line seem to have been only limited by their knowledge of dance-forms. It was in fact by experimenting with various methods of grouping that the most satisfactory succession was arrived at; and thus many of the earlier suites contain a greater profusion and variety than is found in those of the maturer period. In Purcell's suites, for instance, which date from the last ten or twenty years of the 17th century, besides the Allemande and Courante, which occupy just the very position in which they are found in the Suites of Bach and Handel, in one case the group also comprises a Sarabande, Cebell, Minuet, Riggadoon, Intrade, and March; while another contains a Trumpet tune and a Chacone, and another a Hornpipe. One of the most curious features in them is the absence of the Jig, which in the mature suite-form was the only one admitted of English origin. The opening with a Prelude is almost invariable; and this is not astonishing, since this kind of movement (which can hardly be described as a 'form') was as familiar as the dances, from having been so often attempted by the early instrumental composers, such as Byrd, Orlando Gibbons, Bull, and Blow among Englishmen. The order of four movements which served as the nucleus in the large proportion of suites of the mature period is also occasionally, by accident, found very early; as for instance in one of the Suites of Froberger, which Nottebohm says was written in 1649; and another by Lully, which was probably written early in the second half of the same century.

These groups had, however, as yet no uniform distinctive title. In England, in common with other combinations of divisions or movements, they were generally called *Lessons*, or *Suites of Lessons*, and continued to be so called till after Handel's time. In Italy similar groups were called *Sonate da Camera*; in Germany they were called *Parties* or *Partitas*, as in the *Clavierübung* of Kuhnau published in 1689, and the

set of six by Johann Krieger¹ published in 1697; and in France they were as yet commonly known as *Ordres*. Thus the fact evidently existed universally for some time before the name by which it is now known came into general use.

The composers of different countries illustrated in different degrees the tendency towards consolidation which is inevitable in an art-form. The steps taken by the Italians appear to be particularly important as illustrating the distinct tendencies of the Suite and the Sonata. Corelli's earlier *Sonate da Camera* are scarcely distinguishable from the suite type, as they consist of a string of dance-tunes preceded by a prelude. The later sonatas or solos of his *Opera Quinta*, however, represent different types. Some still consist of dance-tunes, but many also show a fair proportion of movements of more abstract nature; and in several the dance element is, in name at least, quite absent. These are indeed a sort of combination of the church and chamber sonata into a secular form, adding a canzona or free fugal movement in the place of the allemande, and transmuting the other dance types into movements with general qualities analogous to the earlier sonatas. Where this abstract character prevailed, the type approached more distinctly to that of the modern sonata; and where the uniformity of a dance rhythm prevailed throughout, it approached more nearly to the suite type. In these cases the arrangement had already ceased to be a mere crude experiment in antithesis, such as the early balance of galliard and pavan, and attained to the dignity of a complete art-form. With the Italians the remarkable distinction of their² violin school led to the greater cultivation of the Violin Sonata, which though retaining a few dance-forms, differed markedly in their distribution, and even in the structure of the movements. In both France and Germany more attention seems to have been paid to the clavier, and with it to the suite form. The former country very early showed many proofs of appreciation of its principles; as an instance, the suite by Lully in E minor, mentioned above, has the complete series of allemande, sarabande, courante, minuet, and gigue. But a little later, theatrical influences seem to have come into play, and Rameau and Couperin, though in many cases adopting the same nucleus to start with, added to it a profusion of rondeaus and other short movements called by various eccentric names. In one of Couperin's *Ordres* the number of little pieces amounts to no less than twenty-three; and in such a case it is clear that a sense of form or complete balance in the whole can hardly have been even aimed at. The movements are strung together in the same key, according to the recognised rule, as a series of agreeable ballet pieces, and the titles point to their belonging to quite a different order of art from that illustrated

¹ See *Musical Times*, 1901, p. 163.

² See SONATA.

by the suite in its maturity. In fact their kinship must be attributed mainly to the order of programme music. Thus in the tenth *Ordre* of Couperin, the first number is called 'La Triomphante' and also 'Bruit de Guerre.' In the eleventh *Ordre* a series of pieces represents 'Les Fastes de la grande et ancienne Mxnstrndxse,' in five acts, the fourth of which is 'Les Invalides,' etc., in which the right hand is made to represent 'Les Disloqués' and the left 'Les Boiteux,' and the last is 'Désordre et déroute de toute la troupe : causés par les Yvrognes, les Singes, et les Ours.'

In Germany, composers kept their faces more steadfastly set in the direction of purer art-form, and the prevalence of uniformity in their distribution of movements soon became remarkable. Kuhnau's examples have been already referred to, and an example given in Pauer's 'Alte Clavier Musik' illustrates the usual order absolutely. Spitta mentions that the famous organist Buxtehude made a complete suite out of variations on the choral 'Auf meinem lieben Gott' in the form of sarabande, courante, and gigue. Twelve sets of 'Pièces de Clavecin' by Mattheson, which were published in London as early as 1714, two years before Couperin's first set, are remarkably regular. The first, in D minor, has a prelude, allemande and double, courante and double, sarabande, and gigue. The second begins with a toccatina, the fifth with a fantasia, the ninth with a 'Boutade,' and the tenth with a 'Symphonie,' but in other respects most of them follow the same outlines of general distribution. The 'Six Suits of Lessons' of the Dutchman Johann Loeillet, published a little earlier still, are equally precise. From these facts it is quite clear that by the beginning of the 18th century certain definite principles of grouping the movements were generally known and accepted; and that a nucleus, consisting of allemande, courante, sarabande, and gigue, had become the accepted type of the art-form.

The differences between the structure of suite movements and sonata movements have already been traced in the article SONATA. It remains here only to summarise, with more special reference to the suite. While sonata movements constantly increased in complexity, suite movements remained almost stationary. They were based upon the persistence of the uniform type of a dance rhythm, throughout the whole of each several movement. Hence the ground principles of subject in sonata and suite are altogether different. In the former the subjects are concrete, and stand out in a marked manner both in contrast to one another and to their immediate context; and it is a vital point in the form that they shall be fully and clearly recapitulated. In the suite, on the other hand, the subject does not stand out at all prominently from its context, but is only a well-marked presentation of the type of motion and rhythm which is to

prevail throughout the movement. To this there is no contrasting subject or episode, and definite recapitulation is no part of the scheme at all. In a few cases—which must be regarded as accidents in relation to the logical principles of the form—the opening bars happen to be sufficiently marked to have something of the character of a sonata subject; and in such cases it may also happen that they are repeated with sufficient simplicity to have the effect of recapitulation. But nevertheless it must be maintained that this is not part of the principle of construction. And with reference to this point it is well to remember that composers did not attain the ultimate distinct outlines of sonata and suite with a definite purpose and plan before them; but that in working with particular materials they were led almost unconsciously to differentiate the two forms. The plan is found to exist when the work is done; but it is not theoretically propounded and then worked up to. It is not therefore a matter for surprise that in early times some points in the development of abstract form of the sonata kind were worked out in dance movements of the suite type, and applied and extended afterwards in works which had more distinctly the sonata character. Nevertheless the sonata is not an outgrowth from the suite; but, inasmuch as both were descended from a kindred stock, before the distinctions had become well defined, it is natural that many works should have continued to exhibit suggestions and traits of both sides promiscuously. On the whole, however, it is remarkable how soon the distinct types came to be generally maintained; and from the number of instances which conform, the system can be fairly deduced.

The most marked external point is the uniformity of key. In Corelli's earlier *Sonate da Camera*, which in general are decided suites, the one exception which marks a sonata tendency is that the slow dance is often in a different key from the rest of the movements. In later suites of all sorts the uniformity of key throughout is almost universal. In the whole of Bach's the only exceptions are the second minuet of the fourth *English Suite*, and the second gavotte in that known as the 'Overture in French Style.'¹ Hence the contrast is purely one of character between the several movements; and this is emphasised by the absence of any marked contrast of key or subject in the movements themselves. They are almost invariably constructed upon the simple principle of balanced halves, each representing the same material in different phases, and each strengthened by repetition. The first half sets out from the tonic key, and without any marked pause or division modulates so as to settle into the key of the dominant or relative major, and closes in that key. The second half begins afresh from that point, and proceeding in most cases by way of the key of

¹ 'Overture à la manière Française.'

the subdominant, settles well back again into the original key and concludes. The only break therefore is in the middle; and the two halves are made purposely to balance one another, as far as may be, without definite recapitulation. In a few movements, such especially as sarabandes and intermezzi, the second half is somewhat extended to admit of a little development and free modulation, but the general principles in the average number of cases are the same, namely, to diffuse the character of the principal figures and features throughout, rather than to concentrate the interest of the subject in definite parts of the movement. In order, however, to strengthen the effect of balance between the two halves, certain devices are common and characteristic, especially with regard to the beginnings and endings of each half. Thus though composers do not seem to have aimed at recapitulation, there is frequently a clear relation between the opening bars of each half. This often amounts to no more than a subtle equivalence in the distribution of the group of rhythms in the bar, or a very loose transcript of its melodic features. But in some cases, most especially in Bach, the opening bars of the latter half present a free inversion of the beginning of the first half, or a sort of free shuffling of the parts approximating to double counterpoint. The first mode is clearly illustrated by the Courante of the third Partita in A minor as follows:—

The Allemande of the fourth Suite Anglaise supplies a remarkable example of free inversion of figures and parts at the same time:—

The other point, of even more common occurrence, is the correspondence of the ends of each half, which prevails particularly in *allemandes*, *courantes*, and *giges*. A very fine and full example is supplied by the *Allemande* of Bach's first *Suite Anglaise*; the *Courante* of his second *Suite Française* supplies another of some length; and among works of other composers the *Allemande* of Lully's *Suite* in E minor, the *Courante* of Mattheson's *Suite* No. 5 in C minor, the *Courante* of Handel's fourth *Suite*, the *Gigue* of his eighth *Suite*, and most of his *Allemandes*, are instances to the point. In the particular manner of the *suite* movements both these devices are exceedingly effective as emphasising the balance of halves, and in the finest movements the balance of material and modulation is carefully distributed for the same end. Thus much of form applies more or less to all the movements which are based on dance rhythms, or developed on that principle.

Each of the movements has also severally distinct characteristics, upon which the form of the *suite* as a whole is mainly based. For the better understanding of this it will be best to take the group which forms the average nucleus or so-called canon of the *Suite*. In the severest simplicity of the form the *Allemande* comes first, as in all Bach's French *Snites*, in some of Couperin's, and many by earlier composers. The origin of the movement is obscure, and it is maintained that it is not based upon any dance, since the *Allemande* of Suabian origin, said to be the only dance-form of that name known, is quite distinct from it. However that may be, its constitution, which is most important, consists mainly of moderately slow 4-time, with regular smooth motion—most frequently of semiquavers—distributed in a figurate manner between the various parts, and its character has been generally regarded as appropriately quiet and sober; which Mattheson described as the '*Ruhe des Anfangs*.' To this the *Courante*, which almost invariably follows it in the mature *suite*, is supposed and intended to supply a contrast, but it cannot be maintained that it always does so successfully. The character of this movement varies considerably, owing chiefly to the fact that there are two decidedly distinct forms derived from different sources. The one of Italian origin which is found most frequently in Corelli's *Sonatas*, in most of Handel's, in some but not all of Purcell's *Suites*, and in Bach's fifth and sixth French *Suites*, and fifth *Partita*, is in 3-4 time, of quick, light, and direct movement, full of rapid passages of simple character, with simpler rhythm, and free from complication. This in general supplies in an obvious sense a fair contrast to the *Allemande*. The other *Courante*, of French origin, is nominally in 3-2 time, but its characteristic is a peculiar intermixture of 3-2 and 6-4, which is supposed to produce a stronger

antithesis to the smooth motion of the Allemande. In the original dance it is said that this characteristic was chiefly confined to the last bars of each half, but in mature suite movements it was elaborately worked into the body of the movement with very curious effect. The quality is shown as early as Kuhnau, but more frequently in Couperin's Suites, from whom it is said Bach adopted it. The following example from Couperin's third Suite is characteristic :—

It is possible that Bach adopted this form as affording opportunities for rhythmic experiments; he certainly carried it to great lengths, such as giving the right hand a passage in 3-2 and the left in 6-4 :—

but the result is not on the whole very successful. In most cases the French Courantes are the least interesting movement of his Suites, and as contrasts to the Allemande do not compare favourably with the Italian Courante. As an element of contrast the crossing of the time is rather theoretical than real, and the necessity of keeping the time moderate in order to make it intelligible brings the strong beats and the average quickness of the shortest notes, as well as the full spread of the bar, too near to those of the Allemande; and in the general effect of the Suite these externals tell more strongly than the abstract restlessness of crossing rhythms. It is possible, however, that the French Courante has one advantage over the Italian: that inasmuch as the latter has more stability in itself, it calls less for a succeeding movement, and presents less perfectly the aspect of a link in the chain than of a movement which might as well stand alone. There is a slight touch of uneasiness about the French Courante which, as a step towards the Sarabande, is very appropriate. In this latter movement, which is of Spanish or possibly Moorish origin, rhythmic principle is very pronounced, and at the same time simple.

Its external aspect is chiefly the strong emphasis on the second beat of a bar of three in slow time, as is clearly illustrated in Handel's Sarabande in the G minor Suite, in his 'Lascia ch'io pianga,' and in the Sarabande of Bach's F major Suite Anglaise. This is an obvious source of contrast with both the preceding members of the suite, since in both Allemande and Courante there is no pronounced and persistent rhythm, and the pace, though not necessarily quick, scarcely ever comes within the range of motion or style characteristic of definitely slow movements. There is also a further and equally important element of contrast. The first two numbers are characterised in a considerable proportion of instances by a similar free motion of parts. The process of carrying on the figures is sometimes knit by a kind of free imitation, but, however desirable it may be theoretically to regard them so, they cannot fairly be described as movements of imitation. The process is rather that of free figuration of two or three parts, giving in general a contrapuntal effect to the whole. In the Sarabande the peculiar rhythmic character puts both systematic imitation and regular contrapuntal motion equally out of the question. Consequently as a rule a more decidedly harmonic style obtains; the chords are fuller, and move more simultaneously as blocks of harmony. The character of the finest examples is necessarily very pliable, and varies between free melody with simple accompanying harmony, such as those in Bach's Suites Anglaises in F and D minor, Handel's Suites in G minor and E minor; examples in which the prominent melodic features are distributed successively without regularity between the parts, as in those in the Suites Anglaises in G minor and A minor, the Suite Française in B minor, the Partita in B \flat , and several of Couperin's; and a few examples in which a figure or characteristic mode of motion is made to prevail almost throughout, as in the Suite Française in E \flat . The general effect of the sarabandes is noble and serious, and the music is more concentrated than in any other member of the group of movements. It is thus in various respects the central point of the suite :—in position; in musical interest, and unique quality; and in the fact, as observed and curiously commented on by Nottebohm, that the preceding movements generally tend to the solidity and the succeeding movements to lightness and gaiety. The order is in this respect somewhat similar to that of average sonatas, and seems to be the art-exposition of the same ideas of form from the point of view of the musical sense, though differently carried out as far as the actual manner and material of the movements are concerned.

In the most concise examples of the Suite the Sarabande is followed by the final Gigue; but it is so common with all the most notable writers of suites to interpolate other movements,

that it may be well to notice them first. These appear to have been called by the older writers *Galanterien*, and more lately *Intermezzi*; and seem to have been regarded as a sort of concession to popular taste. But in any way they answer the purposes of form exceedingly well. A very great variety of dances is introduced at this point. The most familiar are the *Gavottes*, *Bourrées*, *Minuets*, and *Passepieds*. But besides these the most distinguished writers introduced *Loures*, *Polonaises*, movements called *Arias*, and other less familiar forms. Their character on the average is especially light and simple, and in the dance numbers it is remarkable that they always preserve their dance character more decidedly and obviously than any other member of the group. It is not possible to describe them all in detail, as they are too numerous, but their aspect in the group is for the most part similar, and is analogous to that of the *Scherzo* or *Minuet* and *Trio* in the modern sonata. They evidently strengthen the balance on either side of the *sarabande* both in quality and amount. In many cases there is a considerable group of them, and in these cases it is that the *Aria* is sometimes introduced. This movement has little connection with the modern piece of the same name, as it is generally a short movement in the same balanced form as the other movements, but free from the dance basis and rule of time. It is generally moderately slow, and sometimes consistently melodious, as in *Mattheson's Suite in A*; but often it is little more than a string of figures, without even melody of much importance. The group of *Intermezzi* is generally contrasted with the *Sarabande* and the *Gigue* either by a square time or by the interchange of moderate movement, such as that of the *Minuet*; and the conciseness and distinctness of the type is always sufficient to make the relations on both sides perfectly clear.

The *Gigue* which concludes the series is theoretically, and in most cases actually, of light and rapid style. It is usually based on some rhythmic combination of 3 feet, but even this is not invariable. The balance is in favour of 12-8 time; but 6-8 is also common, and 12-16 and 3-8 not unfrequent; while a few are in some form of common time, as the slow *Gigue* in the first French *Suite* of *Bach*, and the remarkable example in his last *Partita* in *E minor*. The old fancy for concluding a work with a *fugue* is illustrated by the common occurrence of *fugal* treatment in this member alone of the regular group of the true suite series. The treatment is met with in all directions; in *Kuhnau*, *Mattheson*, *Handel*, *Couperin*, as well as *Bach*. The method of application is commonly to begin and carry out a free sort of *fugue* in the first half, concluding like the other movements in the dominant key; and to take up the same subject freely '*al rovescio*' or by contrary motion in the second half, with regular

answer as in a fresh *fughetta*, and carry it out on that basis with the usual direction of modulation, concluding in the original key. Thus the *fugal* treatment is an accessory to the usual form of the suite movement, which is here as regularly and invariably maintained as in the other members of the group.

The most important accessory which is commonly added to this nucleus is the *Prelude*. It appears in a variety of forms, and under a great variety of names. (It is worth noticing that all six introductory movements of *Bach's Partitas* have different titles.) The chief point which is most obvious in relation to the other movements is that their characteristic form of nearly equal halves is systematically avoided; in fact any other form seems to have been taken in preference. In many important examples it is the longest and most elaborate movement of all. In some it is a sort of *rhapsody* or irregular group of *arpeggios* and other figures based on simple series of chords. *Bach* commonly developed it on the same broad outlines as some of his largest sonata movements, and the first and last of the Italian *Concerto*—that is, the distinct balancing section of clear musical character and full close at the beginning and end of the movement, and the long passage of development and modulation in the middle, sometimes embracing new figures. This is illustrated by the *Preludes* to the *Suites Anglaises* in *A minor*, *G minor*, *F* and *E minor*. In other examples the treatment is *fugal*, or contains a complete *fugue* along with other matter of more *rhapsodical* cast, as in the *Toccata* of the *Partita* in *E minor*; or yet again it is in the form of a *Fantasia*, or of the *Overture* as then understood. The effect is certainly to add breadth and stability to the group in no mean degree, and the contrast with the rest of the movements is in every respect unmistakable. This completes the general outline of the *Suite* in its finest and most consistently complete form, as illustrated in *Bach's Suites Anglaises*, which must be regarded as the culminating point of the *Suite* as an art-form.

In the matter of actual distribution of movements there are plenty of examples of experiments, even in the time when the usual nucleus had come to be generally recognised; in fact, there is hardly any large collection of suites which does not present some exceptions to the rules. *Bach's* departures from the usual outlines are chiefly in the earliest examples, such as the *Partitas*, in one of which he concludes with a *rondo* and a *caprice*. The '*Ouverture à la manière Française*,' for *Clavier*, is in appearance a *Suite*, but it is clear that *Bach* had not only the *Clavier Suite* type in his mind in laying out its plan, but also the freer distribution of numbers in the so-called French *Overture* said to date from *Lully*. In this

there is no Allemande; the Sarabande has Intermezzi on both sides of it, and it concludes with an 'Echo' after the Gigue. The works of his which are now commonly known as Orchestral Suites must be put in the same category. For the inference suggested by Dehn's trustworthy observations on the MSS. is that Bach regarded them as Overtures, and that the name Suite was added by some one else afterwards. They depart from the average order of the Clavier Suite even more conspicuously than the above-mentioned work. In his later compositions for Clavier, as has been already remarked, he was very strict. Handel's Suites on the other hand are conspicuous departures from the usual order. They are, in fact, for the most part hybrids, and very few have the genuine suite character as a whole. The introduction of airs with variations, and of fugues, in the body of the work, takes them out of the category of strict interdependent art forms, and makes them appear rather as casual strings of movements, which are often as fit to be taken alone or in different groups as in the group into which he has thrown them. Moreover they illustrate somewhat, as Nottebohm has also observed, the peculiar position which Handel occupied in art, as not pure German only, but also as representative of some of the finest traits of the Italian branch of the art. The tendency of the Italians after Corelli was towards the Violin Sonata, a distinct branch from the original stem, and to this order some of Handel's Suites tend to approximate. It was chiefly by thorough Germans that the suite-form was developed in its austere simplicity; and in that condition and in relation to their keyed instruments it seems that the usual group is the most satisfactory that has been devised.

It is obvious that the Suite as an art-form is far more elementary and inexpansive than the Sonata. In fact it attained its maturity long before the complete development of the latter form; and not a little of the interest which attaches to it is derived from that and collateral facts. It was the first instrumental form in which several movements were combined into a complete whole. It was the first in which the ecclesiastical influences which had been so powerful in all high-class music were completely supplanted by a secular type of equally high artistic value. Lastly, it was the highest representative instrumental form of the contrapuntal period, as the Sonata is the highest of the harmonic period. It was brought to perfection when the modern sonata was still in its infancy, and before those ideas of key and of the relations of harmonies which lie at the root of sonata-form had become tangible realities to men's minds. In some respects the complete plan has the aspect of formalism and rigidity. The uniformity of key is sometimes taken

exception to, and the sameness of structural principle in each movement is also undoubtedly somewhat of a drawback; but it must be remembered that the form is a representative product of a peculiar artistic period, and devised for a particular keyed instrument, and for minds as yet unaccustomed to the varied elaboration of the sonata. The results are remarkable and valuable in a high degree; and though this may be chiefly owing to the exceptional powers of the composers who made use of the form, it is possible that as a pattern for the combination of small pieces it may still be worthy of regard. In fact the combination of short lyrical movements such as are characteristic of modern times has strong points of analogy with it. Moreover, since it is obviously possible to introduce modifications of some of the details which were too rigid in the early scheme without destroying the general principles of the form, it seems that genuine and valuable musical results may still be obtained by grafting characteristics of modern treatment and expression upon the old stock. There already exist several experiments of this kind by modern composers of mark; and the Suites for orchestra, piano-forte, violoncello, or violin, by Lachner, Raff, Bargiel, Saint-Saëns, Tchaikovsky, Ries, and Cowen, are not by any means among their least successful efforts.

C. H. H. P.

SUK, JOSEF. See BOHEMIAN STRING QUARTET.

SULLIVAN, SIR ARTHUR SEYMOUR, was born in London,¹ May 13, 1842. His father, a native of County Cork, was a bandmaster, and chief professor of the clarinet at Kneller Hall; he was thus born amongst music. His first systematic instruction was received from the Rev. Thomas Helmore, Master of the Children of the Chapel Royal, which he entered April 12, 1854, and left on the change of his voice, June 22, 1857. While at the Chapel Royal he wrote many anthems and small pieces. One of them, 'O Israel,' a 'sacred song,' was published by Novello in 1855. In 1856 the Mendelssohn Scholarship was brought into active existence, and in July of that year Sullivan was elected the first scholar. Without leaving the Chapel Royal he began to study at the Royal Academy of Music under Goss and Sterndale Bennett, and remained there till his departure for Leipzig in the autumn of 1858. An overture 'of considerable merit' is mentioned² at this time as having been played at one of the private concerts of the Academy. At Leipzig he entered the Conservatorium under Plaidy, Hauptmann, Richter, Julius Rietz, and Moscheles, and remained there in company with Walter Bache, John F. Barnett, Franklin Taylor, and Carl Rosa, till the end of 1861.

¹ A photograph of the house in Lambeth is given in the *Musical Times* for 1901, p. 241. In the same volume many anecdotes of the composer's youth are related.

² *Athenaeum*, July 24, 1858.

He then returned to London, bringing with him his music to Shakespeare's 'Tempest' (op. 1 *a*, dedicated to Sir George Smart), which was produced at the Crystal Palace, April 5, 1862, and repeated on the 12th of the same month.

This beautiful composition made a great sensation in musical circles, and launched him into London musical society. Two very graceful pianoforte pieces, entitled 'Thoughts,' were among his earliest publications. The arrival of the Princess of Wales in March 1863, produced a song, 'Bride from the North,' and a Procession March and Trio in E♭; and a song entitled 'I heard the Nightingale' was published April 28 of the same year. But his next work of importance was a cantata called 'Kenilworth,' words by the late H. F. Chorley, written for the Birmingham Festival of 1864, and produced there. It contains a fine duet, for soprano and tenor, to Shakespeare's words, 'On such a night as this.' His music to the ballet of 'L'Île enchantée' was produced at Covent Garden, May 16, 1864.

At this date he lost much time over an opera called 'The Sapphire Necklace,' also by Chorley; the undramatic character of the libretto of which prevented its representation. The music was used up in other works. In March 1866 Sullivan produced a Symphony in E at the Crystal Palace, which has been often played subsequently, there and at the Philharmonic, etc. In the same year he expressed his grief for the loss of his father in an overture entitled 'In Memoriam,' which was produced (Oct. 30) at the Norwich Festival of that year. A concerto for violoncello and orchestra was played by Piatti at the Crystal Palace on Nov. 24. This was followed by an overture, 'Marmion,' commissioned by the Philharmonic Society, and produced by them June 3, 1867. In the autumn of that year he accompanied his friend the Editor of this Dictionary [Sir George Grove] to Vienna, in search of the Schubert MSS., which have since become so well known. At the same time his symphony was played at the Gewandhaus at Leipzig. In 1869 he composed a short oratorio on the story of the 'Prodigal Son,' for the Worcester Festival, where it was produced on Sept. 8. In 1870 he again contributed a work to the Birmingham Festival, the 'Overture di Ballo' (in E♭), which, while couched throughout in dance-rhythms, is constructed in perfectly classical form. To continue the list of his commissioned works: in 1871, in company with Gounod, Hiller, and Pinsuti, he wrote a piece for the opening of the 'Annual International Exhibition' at the Albert Hall, on May 1—a cantata by Tom Taylor called 'On Shore and Sea,' for solo, chorus, and orchestra. On the recovery of the Prince of Wales from illness, he composed, at the call of the

Crystal Palace Company, a Festival Te Deum, for soprano solo, orchestra, and chorus, which was performed there May 1, 1872. At this time he was closely engaged in editing the collection of 'Church Hymns with Tunes' for the Christian Knowledge Society, for which he wrote twenty-one original tunes. In 1873 he made a third appearance at Birmingham, this time with the leading feature of the Festival, an oratorio entitled 'The Light of the World,' the words selected from the Bible by himself. The success of this work at Birmingham was great, and it has often since been performed. Sullivan succeeded Sir Michael Costa as conductor of the Leeds Festival of 1880, and wrote for it 'The Martyr of Antioch,' to words selected from Milman's play of that name. The work lies between an oratorio and a cantata, and was enthusiastically received. He conducted the Leeds Festivals from 1883 to 1898, composing for the latter 'The Golden Legend,' to words selected by Joseph Bennett from Longfellow's poem.

We will now go back to those works which have made Sullivan's name most widely known, not only in Europe but in Australia and America—his comic operettas, and his songs. 'Cox and Box, a new Triumvirate,' was an adaptation by F. C. Burnand of Madison Morton's well-known farce, made still more comic by the interpolations, and set by Sullivan with a brightness and a drollery which at once put him in the highest rank as a comic composer.¹ It was first heard at Moray Lodge (Mr. Arthur J. Lewis's) on April 27, 1867, and produced in public at the Adelphi a fortnight after, on May 11. The vein thus struck was not at first very rapidly worked. 'The Contrabandista' (2 acts, words by Burnand)² followed at St. George's Opera House on Dec. 18, 1867; but then there was a pause. 'Thespis, or the Gods grown old; an operative extravaganza,' by Gilbert (Gaiety, Dec. 26, 1871), and 'The Zoo, an original musical folly,' by B. Rowe (St. James's, June 5, 1875), though full of fun and animation, were neither of them sufficient to take the public. 'Trial by Jury, an extravaganza'—and a very extravagant one too—words by W. S. Gilbert, produced at the Royalty, March 25, 1875, had a great success, and many representations, owing in part to the very humorous conception of the character of the Judge by Sullivan's brother Frederick. But none of these can be said to have taken a real hold on the public. 'The Sorcerer, an original modern comic opera,' by W. S. Gilbert, which first established the popularity of its composer, was a new departure, a piece of larger dimensions and more substance than any of its predecessors. It was produced at the Opéra-Comique, Strand, Nov. 17, 1877, and ran uninterruptedly for 175 nights. The

¹ See *Times* of May 13, 1867.

² This opera was written, composed, and produced in the extraordinarily short space of sixteen days.

company formed for this piece by D'Oyly Carte, including that admirable artist George Grossmith, was maintained in the next, 'H.M.S. Pinafore,' produced at the same house, May 25, 1878. This not only ran in London for 700 consecutive nights (besides an unauthorised series of performances at another theatre), but had an extraordinary vogue in the provinces, and was adopted in the United States to a degree exceeding all previous record. To protect their interests there, Sullivan and Gilbert visited the United States in 1879, and remained for several months. An attempt to bring out the piece at Berlin as 'Amor am Bord'¹ failed, owing to the impossibility of anything like political caricature in Germany. But it was published by Litolf in 1882. The vein of droll satire on current topics adopted in the last two pieces was fully kept up in 'The Pirates of Penzance' (April 3, 1880), and 'Patience, an æsthetic opera' (April 25, 1881), during the run of which the company moved to the Savoy Theatre built especially for these operas, and opened on Oct. 10, 1881. 'Iolanthe' was brought out on Nov. 25, 1882, 'Princess Ida' on Jan. 5, 1884, and the most successful of the whole series, 'The Mikado,' on March 14, 1885. 'Ruddigore' followed it on Jan. 22, 1887, 'The Yeomen of the Guard' on Oct. 3, 1888, and 'The Gondoliers' on Dec. 7, 1889. Up to this time the happy partnership formed between Sullivan, Gilbert, and D'Oyly Carte had remained unbroken, and uniform favour crowned their successive undertakings, the run of each opera only ceasing with the production of its successor. From the time of the rupture, the management relied on revivals of the repertory that had been formed, and upon attempts by others to carry on what were called the 'Savoy traditions.' Sullivan himself contributed 'Haddon Hall' to a libretto by Sydney Grundy, and it was produced on Sept. 24, 1892. The reconciliation of the Savoy differences was a matter of national rejoicing, and on Oct. 7, 1893, the next Gilbert and Sullivan opera was seen, called 'Utopia Limited'; for the next production, a revival of the 'Contrabandista'—to a libretto of Burnand's—with various modifications of the original, was given as 'The Chieftain,' on Dec. 12, 1894. On March 7, 1896, 'The Grand Duke,' a new Gilbert and Sullivan piece, was produced, but after a revival of 'The Gondoliers,' the continuance of the famous collaboration was once more broken, and 'The Beauty Stone,' to a libretto by Messrs. Comyns Carr and A. W. Pinero, was produced on May 28, 1898. With the production of 'The Rose of Persia,' to a libretto by Captain Basil Hood, on Nov. 29, 1899, a new period of success seemed to have been begun, and the reception of the work by the public was almost as great as that given for so many years to the two collaborators. 'The

Emerald Isle,' by the same librettist, was brought out on April 27, 1901, some months after the composer's death; the music was finished by Edward German, who in 'Merrie England' and 'A Princess of Kensington' made an excellent effort to continue the *genre*. For one reason or another it was found impossible to keep the vogue the theatre had so long enjoyed; but in these latter days, now that the fashion of the rule of the so-called 'musical comedy' seems a little on the wane, the more educated portions of the public have shown a decided inclination to return to the Savoy form of entertainment; and, while all over the country the popularity of the Gilbert and Sullivan operas has never decreased, the curious prohibition of 'The Mikado,' and the still more curious withdrawal of that prohibition, have placed the work higher in popular favour than it ever was before. It was generally felt that Sullivan was devoting himself too exclusively to the light music in which he was so accomplished a master; and in the first edition of this Dictionary Sir George Grove expressed the hope that he would 'apply his gifts to the production of a serious opera on some subject of abiding human or national interest.' When a new theatre was built at Cambridge Circus by D'Oyly Carte, for the special purpose of realising this hope, public interest and encouragement reached an extraordinary intensity; and 'The Royal English Opera House' was opened on Jan. 31, 1891, with the grand opera 'Ivanhoe,' in three acts, to a libretto by Julian Sturgis. Everything was done to ensure the success of the important undertaking, which, had the scheme been a little bolder and more widely based, would no doubt have reached the permanent success at which it aimed. Various circumstances contributed to the ultimate failure of the scheme, and to the establishment of the 'Palace Theatre of Varieties' in its stead. The composer had apparently found it difficult to throw over all the Savoy traditions at once, and accordingly he interspersed, with scenes in which real dramatic interest was displayed, some which were in a flimsy style, quite incongruous with the rest. The impression at the time was that unless a piece ran for at least one hundred nights consecutively, it could not rank as a success, and in order to secure this long run, and in view of the impossibility of any singers repeating trying parts for six or seven performances per week, two casts of principal singers were engaged; but it was impossible to foresee which representatives would appear on any given night, and as the seats had to be booked long beforehand, the admirers of the composer at last got tired of the uncertainty and withdrew their patronage from the undertaking. Another mistake was made, for although rumours were heard of various new English operas being prepared to take the place of 'Ivanhoe,' none

¹ Arranged for the German stage by Ernst Dohna.

was ready when its popularity was over, and Messenger's pretty 'Basoche' was produced; at the close of the run of this piece, the theatre was transformed into a music-hall. Sullivan wrote a good many sets of incidental music to plays, beside 'The Tempest,' with which his first recognition had been obtained. 'The Merchant of Venice,' at the Prince's Theatre, Manchester, 1871; 'The Merry Wives of Windsor,' Gaity Theatre, 1874; 'Henry VIII.,' Manchester, 1878; 'Macbeth,' Lyceum Theatre, 1888; Tennyson's 'Foresters,' 1892 (first produced in America, and afterwards at Daly's Theatre); and Comyns Carr's 'King Arthur,' Lyceum Theatre, 1894, are the most important of these compositions. The Diamond Jubilee of Queen Victoria was celebrated by Sullivan in two compositions: the ballet, 'Victoria and Merrie England,' produced at the Alhambra, May 25, 1897, in which a danced fugue was the best and most interesting number; and a 'Festival Te Deum,' given at the Chester Festival of 1897. The opening of the Imperial Institute in 1893 suggested a March, and various public events of the same kind were celebrated by compositions, for in some sort Sullivan ranked as a poet laureate of music.] Such unprecedented recognition speaks for itself. But it is higher praise to say, with a leading critic, that 'while Mr. Sullivan's music is as comic and lively as anything by Offenbach, it has the extra advantage of being the work of a cultivated musician, who would scorn to write ungrammatically even if he could.'

Sullivan's songs were in their day as well known as his operettas. They are almost always of a tender or sentimental cast; and some of them, such as 'Sweet day so cool, so calm, so bright'; the 'Arabian Love Song,' by Shelley; 'O fair dove, O fond dove,' by Jean Ingelow; the Shakespeare Songs and the Song-cycle of 'The Window,' written for the purpose by Tennyson, stand in a very high rank. None of these, however, have attained the popularity of others, which, though slighter than those just named, and more in the ballad style, have hit the public taste to a remarkable degree. Such are 'Will he come?' and 'The Lost Chord,' 'O ma charmante' (V. Hugo); 'The Distant Shore' and 'Sweethearts' (both by W. S. Gilbert), etc. [His last composition, in the shape of a single song, was 'The Absent-Minded Beggar' to words by Kipling; this served its purpose of obtaining substantial aid for charities consequent upon the Boer War.]

The same tunefulness and appropriateness that have made his songs such favourites also distinguish his numerous Anthems. Here the excellent training of the Chapel Royal shows itself without disguise, in the easy flow of the voices, the display of excellent, and even learned, counterpoint, when demanded by words or subject, and the frequent examples throughout of

that melodious style and independent treatment that marks the anthems of certain periods of the old English school. His part-songs, like his anthems, are flowing and spirited, and always appropriate to the words. There are two sets: one sacred, dedicated to his friend Franklin Taylor, and one secular, of which 'O hush thee, my babe' has long been an established favourite.

His Hymn-tunes are numerous—56 in all—and some of them, such as 'Onward, Christian Soldiers,' have become great favourites. The whole were republished in a volume by Novello in 1902.

If his vocal works have gained Sir Arthur Sullivan the applause of the public, it is in his orchestral music that his name will live among musicians. His music to 'The Tempest' and 'The Merchant of Venice,' his oratorios, his Overture di Ballo, and, still more, his Symphony in E—unfortunately his only work in this department—show what remarkable gifts he had for the orchestra. Form and symmetry he seemed to possess by instinct; rhythm and melody clothe everything he touched; the music shows not only sympathetic genius, but sense, judgment, proportion, and a complete absence of pedantry and pretension; while the orchestration is distinguished by a happy and original beauty hardly surpassed by the greatest masters.

During the early part of his career Sullivan was organist of St. Michael's Church, Chester Square. After this, in 1867, he undertook the direction of the music at St. Peter's, Cranley Gardens, for which many of his anthems were composed, and where he remained till 1871. He was musical adviser to the Royal Aquarium Company from its incorporation in July 1874 down to May 1876, organised the admirable band with which it started, and himself conducted its performances. For the seasons 1878 and 1879 he conducted the Promenade Concerts at Covent Garden for Messrs. Gatti; and for those of 1875-1876, and 1876-77, the Glasgow Festivals. He was Principal of the National Training School at South Kensington from 1876 to 1881, when his engagements compelled him to resign in favour of Dr. Stainer, and he was a member of the Council of the Royal College of Music. He received the Honorary Degree of Doctor of Music from the University of Cambridge in 1876, and Oxford, 1879. In 1878 he acted as British Commissioner for Music at the International Exhibition at Paris, and was decorated with the *Légion d'honneur*. He also bore the Order of Saxe-Coburg and Gotha, and on May 22, 1883, was knighted by Queen Victoria.

[At the Leeds Festival of 1898 it was evident that he was in failing health, but he accomplished the difficult task of conducting the performances, although suffering much pain. He died in London, Nov. 22, 1900, and was buried in St. Paul's Cathedral on the 27th. A preliminary funeral service was held in the Chapel Royal.

Besides the compositions already enumerated, Sullivan's list of works includes thirteen anthems, six sacred part-songs, three carols, arrangements, sacred songs, etc. (See *Musical Times*, 1901, p. 24.) In 1868 nine part-songs, an ode for baritone and orchestra, 'I wish to tune,' were composed. The popular 'The long day closes' is among the former. Songs to the number of about seventy were published in his earlier years, most of them before the vogue of the Savoy operas began. Among instrumental works are to be mentioned, beside the symphony, the concerto, and the marches already referred to, a 'Duo concertante' for piano and violoncello, and nine short pieces for piano solo, dating from about 1862 to 1867.

The penalty of excessive contemporary popularity has been paid since Sullivan's death, for although that event came like a national disaster, his more important compositions have been almost entirely neglected from that time. Even the beautiful 'Golden Legend,' which enjoyed enormous popularity for many years, has been only heard comparatively seldom of late years. It is quite probable that the pendulum will swing back some day and a new period of popularity begin.] G.

SUL PONTICELLO. See vol. iii. p. 790.

SULZER, SALOMON, Precentor of the Jews' synagogue in Vienna, and reformer of their musical service, was born March 30, 1804, at Hohenems in Vorarlberg. The name was derived from Sulz in Württemberg, the ancient residence of the family. When only thirteen he was made cantor of the synagogue at his native village by the Emperor Franz I., and in 1825 was called to Vienna to conduct the music at the newly built synagogue there. There he took lessons in composition from Seyfried, and set himself earnestly to reform the service by reducing the old melodies to rhythm and harmonising them. His collection of Jewish hymns, under the name of 'Schir Zion' (the Harp of Zion), was used all over Germany, Italy, and even America; but it was not till 1838 that he could succeed in publishing it. It contains a setting of the 92nd Psalm (in Moses Mendelssohn's version) by Schubert, for baritone solo, and four men's voices, made in July 1828, the autograph of which is in possession of the synagogue (Nottebohm's *Catalogue*, p. 229). In 1842 a second edition appeared, and in 1865 a second volume. A collection of home and school songs, entitled 'Dudaim' (Mandrakes), appears to be still in MS. In 1866 a fête was held in his honour and a silver laurel presented to him with the inscription 'The Artists of Vienna to the Artist Sulzer.' From 1844 to 1847 he was Professor of Singing at the Vienna Conservatorium. He was a Ritter of the Order of Franz Joseph (1868), and carried the medals of various societies. His voice, a baritone, is said to have been magnificent, and

he was greatly esteemed and beloved inside and outside of his own community. He died in Vienna, Jan. 18, 1890. G.

SUMER IS ICUMEN IN (Latin words, *Perspicie Xp̄icola = Christicola*). A 'Rota' or Round of great antiquity, the original MS. of which is preserved in vol. 978 of the Harleian collection, in the British Museum.

So important are the questions raised by this document, in connection not only with the history of the English School, but with that of Mediæval Music in all other European countries, that we cannot too earnestly recommend them to the consideration of all who are interested in tracing the development of our present system to its earliest sources. The accompanying facsimile is reduced by photography from $7\frac{1}{2} \times 5\frac{1}{2}$ in., to $6\frac{1}{2} \times 4\frac{1}{2}$, and we add (pp. 750-51) a solution of the Canon, in modern notation, but otherwise scored in exact accordance with the Latin directions appended to the original MS. The only characters employed in the original are, the C clef; the *B rotundum* (=B♭); square black-tailed notes, sometimes perfect by position, and sometimes imperfect; one square black note without a tail; and black lozenge-shaped notes, also without tails; except in one solitary case which we can scarcely conceive to be accidental—the first of the three notes sung to the word 'in.' These are replaced, in the reduction, by the G clef for the four upper parts, and the F clef for the two lower ones, forming the *Pes*; by dotted semibreves for the tailed notes, when perfect, and semibreves without dots for those that are imperfect; by a semibreve without a dot for the single untailed square note; by minims for the untailed lozenge-shaped notes; and by a dotted minim, followed by a crotchet, for the solitary lozenge-shaped note with a tail. For the time-signature, we have used the circle, and the figure 3, indicative of Perfect Time, in combination with the Lesser Prolation—a form closely corresponding with the signature 3-2 in modern music.

We have thought it necessary to print the solution of the Canon *in extenso*, because, to the best of our belief, no correct Score has hitherto [*i.e.* in 1883] been published. Hawkins clearly misunderstood the two Ligatures in the *Pes*, and misprinted the passage, at every repetition. Burney corrected this mistake; but both historians have given an erroneous adaptation of the text to the notes, in bars 41 *et seq.*¹ at the words 'Wel singes thu cuccu ne swik thu nauer nu'; and both, in bar 40, have systematically misprinted the note sung to the second syllable of 'cuccu,' giving G instead of A every time it occurs. It is true that in certain bars G agrees better than A with Hawkins's misprinted *Pes*, but with Burney's correct *Pes*, it makes a horrible discord.

¹ The references are to our own score, the bars in which are numbered for the reader's convenience.

With the facsimile and its solution before them, our readers will be able to criticise the opinions hazarded, from time to time, on the antiquity of the Rota; with opinions we shall now proceed to consider in detail.

The MS. was first described by Mr. Wanley, the famous antiquary, who, acting in the capacity of Librarian to the Earl of Oxford, wrote an account of it in his *Catalogue of the Harleian MSS.* about the year 1709; assigning to it no positive date, but pronouncing it to be by far the oldest example of the kind he had ever met with¹—an assertion which must be received with all respect, since Mr. Wanley was not only a learned antiquary, but an accomplished musician.

In the year 1770 Sir John Hawkins mentioned the Rota in the first volume of his *History of Music*, illustrating his description by a copy of the *Guida*, in the original square black notes, followed by a not very correct solution of the canon, scored for six voices, including those which sing the Pes. Hawkins imagines the term 'Rota' to apply to the Latin rather than the English² words; and refers the MS. to 'about the middle of the 15th century, on the ground that the Music is of the kind called *Cantus figuratus*, which appears to have been the invention of John of Dunstable, who wrote on the *Cantus mensurabilis*, and died in 1455.' This statement, however, involves an anachronism which renders Hawkins's opinion as to the date of the MS. absolutely worthless.

Dr. Burney, in the second volume of his *History*, described the composition as not being much later than the 13th or 14th century, printed a copy of the Canon in the original mediæval Notation, and subjoined a complete score, more correct than that supplied by Hawkins, yet not altogether free from errors.

Ritson referred the MS. to the middle of the 13th century; and fancied—not without reason—that neither Hawkins nor Burney cared to risk their reputation by mentioning a date which could scarcely fail to cause adverse criticism.

In 1819 Dr. Busby reprinted the Rota, following Burney's version of the score, note for note, including its errors, and referring the MS. to the 15th century.³

In April 1862 Sir Frederick Madden wrote some memoranda on the fly-leaf of the volume, referring the entire MS., 'except some writing on ff. 15-17' (with which we are not concerned), to the 13th century; and stating his belief that 'the earlier portion of this volume [*i.e.* that which contains the Rota] was written in the Abbey of Reading, about the year 1240. Compare the *Obits* in the Calendars with those in the Calendar

of the Cartulary of Reading in the MS. Cott. Vesp. E.V.—F.M. April 1892.'

In 1855 Mr. William Chappell described the MS. minutely in his *Popular Music of the Olden Time*, illustrating his remarks by a facsimile of the MS. printed in the original colours.⁴ The author took an intense interest in this most valuable MS.; and, after much laborious research, collected evidence enough to lead him to the belief that it was written at the Abbey of Reading, by a monk named John of Fornsete, about the year 1226, or quite certainly not more than ten years later. For the grounds on which he bases this conclusion we must refer our readers to his own writings on the subject. One of his discoveries, however, is so important that we cannot pass it over without special notice. The volume which contains the Rota contains also a number of satirical poems, written in rhymed Latin by Gualterus Mahap (Walter Mapes, Archdeacon of Oxford).⁵ Among these is a Satire entitled *Apud avaros*,⁶ bristling with puns, one of which closely concerns our present subject, and helps, in no small degree, to establish the antiquity of the Rota. The Poet counsels his readers as to the best course to be pursued by those who wish to 'move' the Roman Law-Courts. After numerous directions, each enforced by a pun, he writes as follows:—

Commisso notario munera suffunde,
Statim causae subtrahet, quando, cur, et unde,
Et formas subjiciet canones rotundae.⁷
Apud avaros, 69-71.

Now, the significance of this venerable pun, as a proof of the antiquity of the Rota, is very remarkable. In a poem, transcribed, as Sir Frederick Madden assures us, long before the middle of the 13th century, Walter Mapes, an English ecclesiastic, speaks of 'subjecting Canons to the form of (the) Round,' with a homely *naïveté* which proves that his readers must have been too familiar with both Round and Canon, to stand in any danger of mistaking the drift of the allusion. This form of music, then, must have been *common*, in England, before the middle of the 13th century. Walter Mapes bears witness to the fact that the first English school, as represented by the Rota, is at least a century and a half older than the first Flemish school as represented by the works of Dufay, and we are indebted to Chappell for the discovery of the *jeu d'esprit* in which the circumstance is recorded.

Turning from English to Continental critics, we first find the Rota introduced to the German musical world by Forkel, who, in the year 1788, described it in his *Allgemeine Geschichte der Musik*; reproducing Burney's copy of the *Guida*,

⁴ *Popular Music of the Olden Time*, 2 vols. (London, 1855-59).

⁵ See Wanley's remarks, in the *Catalogue of the Harl. MSS.*

⁶ Harl. MSS. 978, fol. 85a (formerly numbered 83a, and 108a).

⁷ When thou art sent to the Notary pour in thy gifts.

He will then at once extricate thee from the cause, when, why,

or whencever it may have arisen
And will subject the Canons to the form of the Round.

¹ See *Catalogue of the Harleian MSS.* (vol. i. No. 978), in the Library of the British Museum.

² On this point, he gives the authority of Du Cange, who says that the term 'Rota' was anciently applied to certain hymns.

³ *A General History of Music*, vol. i. pp. 385-401 (London, 1819).

† Burney and Hawkins have both mistaken this note for G. It is quite certainly A in the original MS. In the four bars which follow, the words and music are incorrectly fitted together in all previous editions.

* Anciently, each voice ceased at the end of the *Guida*, which is here denoted by the sign *. The present custom is for all the voices to continue until they reach a point at which they may all conveniently close together, as indicated by the pause.

in the old black square-headed notation (*Gros-Fa*), and also his modernised score, in semibreves and minims, accompanying these by Wanley's remarks, copied from the Harleian Catalogue. To this he added a corollary of his own to the effect that though the MS. proves this species of Canon to have been well known in the middle of the 15th century, and probably much earlier, the musicians of that period were not sufficiently learned to combine it with good harmony—assertions which lose much of their weight from the self-evident fact that they rest upon information obtained entirely at second-hand, and not even corroborated by examination of the original MS., which it is clear that Forkel never saw.¹

The next German critic to whom it occurred to touch on the subject was Ambros, who, in volume ii. of his great work, follows Forkel's example, by quoting Wanley's description, and, on the authority of Hawkins, referring the MS.—which he himself clearly never saw—to the middle of the 15th century.² It is indeed quite certain that at this period at least Ambros's knowledge of the history of English art was derived entirely from the pages of Hawkins and Burney.

In 1865 the subject was taken up by the Belgian *savant* Coussemaker, who described the MS. as written in the year 1226—or at the latest, 1236—by John of Fornsete, 'a Monk of the Abbey of Reading, in Berkshire.'³ But the statement rests entirely on information derived from Mr. Chappell, Coussemaker himself never having seen the MS. True, in another work,⁴ he speaks more independently; and in his own name asserts the Rota to have been written by 'the Monk of Reading,' before the year 1226. But he nowhere tells us that he examined the MS. for himself.

In 1868 the argument was resumed by Ambros, who, in the fourth volume of his *History*, confessed himself convinced by the arguments of Coussemaker, and undoubtedly refers the Rota to the year 1226. But here again it is clear that the opinion is not his own; and that he himself never saw the original MS.⁵

And now, having compared the views entertained by the best historians of the past with those set forth by the latest and most competent critics of the present day, it remains only that we should place before our readers the results of our own careful and long-continued study of the original MS.⁶

While receiving with due respect the judgment of the writers already quoted, we cannot but feel that in most cases their authority is weakened, almost to worthlessness, by the certainty that it rests on evidence collected entirely at second-hand. Neither Forkel, Coussemaker,

nor Ambros ever saw the original document; their statements, therefore, tend rather to confuse than to enlighten the inquirer. Still, great as are the anomalies with which the subject is surrounded, we do not believe them to be irreconcilable. Some critics have trusted to the peculiar counterpoint of the Rota, as the only safe guide to its probable antiquity. Others have laid greater stress upon the freedom of its melody. We believe that the one quality can only be explained by reference to the other, and that the student who considers them separately, and without special reference to the caligraphy of the MS., stands but a slender chance of arriving at the truth. We propose to call attention to each of these three points, beginning with that which seems to us the most important of all—the character and condition of the MS.

1. The style of the handwriting corresponds so closely with that in common use during the earlier half of the 13th century that no one accustomed to the examination of English MSS. of that period can possibly mistake it. So positive are the indications on this point, that Sir Frederick Madden—one of the most learned paleographers of the 19th century—did not hesitate to express his own conviction, in terms which leave no room for argument. The present librarian, Sir E. Maunde Thompson, unhesitatingly endorses Sir F. Madden's judgment; and the Paleographical Society has also corroborated it, in connection with an autotype facsimile—Part VIII. Plate 125 (London, 1878)—referred to the year 1240.

Fortunately the MS. is in such perfect preservation that the corrections made during its preparation can be distinctly traced. In a few places the ink used for the Antiphon on the preceding page can be seen through the Vellum; but apart from the spots traceable to this cause, there are a considerable number of evident erasures, clearly contemporary with the original handwriting, and corrected by the same hand, and in the same ink. The second note on stave 1 was originally an F. The first and second notes on stave 4 were originally two C's; the fourth note was a D; and the fifth a C. Between the sixth and seventh notes, in the same Stave, there are traces of a D, and also of an F: the D has certainly been erased to make room for the present notes; the appearance of the F is produced by a note showing through from the opposite side. The eighth note on this stave was an E. Over the ligature which immediately follows there are traces of a C; and, towards the end of this stave, a last erasure has been made, for the insertion of the solitary black square note. The marks which show through the vellum are to be found near the beginning of stave 3, and in several other places. Neither these nor the erasures are to be seen in our facsimile, though traces of

both may be found in the autotype of the Palæographical Society.

2. The mixed character of the Part-Writing has puzzled many an able commentator; for, side by side with passages of rudest Discant, it exhibits progressions which might well have passed uncensored in the far later days of Palestrina. The 4th, 6th, 7th, 8th, and 24th bars are in Strict Two-Part Counterpoint of the First and Second Order, of irreproachable purity.¹ But, in passing from the 9th to the 10th, and from the 13th to the 14th bars, a flagrant violation of the first cardinal rule² results in the formation of Consecutive Fifths between the first and third Cantus parts, in the one case, and between the second and fourth Cantus in the other. The same rule is broken, between Cantus II. and Bassus I., in passing from bar 17 to bar 18; and, in bars 37, 38, 39, a similar infraction of the rule produces no less than three Consecutive Fifths between Cantus I. and Bassus II. Between bars 29 and 30, Cantus I. and II. sing Consecutive Unisons; and the error is repeated, between bars 33, 34, by Cantus II. and Cantus III., simultaneously with Consecutive Fifths between both these Parts and Cantus I. Similar faults are repeated, as the Rota proceeds, with persistent regularity.

Now, the smooth progressions shown in the 4th, 8th, and 24th bars are as stringently forbidden in the Diaphonia of the 11th and 12th centuries as the Consecutive Fifths in bars 37, 38, and 39 are in the Counterpoint of the 15th and 16th, or even in that of the 14th century. To which of these epochs, then, are we to refer the Rota? The peculiarity of the Part-writing clearly affords us no means whatever of answering the question, but is calculated rather to mislead than to throw new light upon the point at issue.

3. Turning from the Part-Writing to the melody, we find this pervaded by a freedom of rhythm, a merry graceful swing, immeasurably in advance of any kind of polyphonic music of earlier date than the *Fu-las* peculiar to the later decades of the 16th century—to which decades no critic has ever yet had the hardihood to refer the Rota. But this flowing rhythm is not at all in advance of many a Folk-song of quite unfathomable antiquity. The merry grace of a popular melody is no proof of its late origin. The dates of such melodies are so uncertain, that the element of chronology may almost be said to have been eliminated from the history of the earlier forms of national music. In most cases the original poetry and music owed their origin, in all probability, to the same heart and voice. The melodies were not composed, but inspired. If the verses to which they were indebted for their existence were light and tripping, so were they. If the verses were gloomy, the melodies naturally corresponded with them.

And because their authors, however unskilled they might be in the theory of music, were in the constant habit of hearing church melodies sung in the ecclesiastical modes, they naturally conformed, in most cases, to the tonality of those venerable scales. We believe the melody of the Rota to be an inspiration of this kind—a folk-song, pure and simple, in the transposed Ionian Mode, owing its origin to the author either of the English or the Latin verses to which it is wedded.

Now, some folk-songs of great antiquity possess the rare and very curious peculiarity of falling into Canon of their own accord. An old version of 'Drops of brandy' forms a very fair Canon in the unison for two voices. The melody of the Rota—if we are right in believing it to be a genuine folk-song—possesses this quality in a very remarkable degree. What more probable, then, than that a light-hearted young Postulant should troll it forth, on some bright May-morning, during the hour of recreation? That a second Novice should chime in a little later? That the effect of the Canon should be noticed, admired, and experimented upon, until the brethren found that four of them could sing the tune, one after the other, in very pleasant harmony? There must have been many a learned Discanter at Reading capable of modifying a note or two of the melody, here and there, for the purpose of making its phrases fit the more smoothly together. So learned a musician would have found no difficulty whatever in adding the *pes* as a support to the whole—and the thing was done. The harmony suggested, in the first instance, by a veritable 'Dutch Concert,' became a Round or Canon of the kind proved by Chappell's opportune discovery of the Latin pun [see above], to have been already familiar to English ears; for which very reason it was all the more likely, in a case like the present, to have been indebted for its confection to a happy accident.

The foregoing suggestion is of course purely hypothetical. We do not, however, make it with the intention of evading a grave chronological difficulty by a mere idle guess. The influence exercised by the point we are considering upon the history of mediæval music in general, and that of the Early English school in particular, is of so great importance, that the element of conjecture would be altogether out of place in any chain of reasoning professing to solve the difficulties of an enigma which has puzzled the best musical antiquaries of the age. We venture, therefore, to propose no conjectural theory, but simply to epitomise the results of a long course of study which has rendered the Reading MS. as familiar to us as our own handwriting; submitting it to our readers with all possible deliberation, as a means of accounting for certain peculiarities in the Rota which would otherwise remain inexplicable. It

¹ See STRICT COUNTERPOINT, ante, pp. 722-23.

² Ibid. p. 722.

accounts for a freedom of melody immeasurably in advance of that attained by the best polyphonists of the 15th century, whether in the Flemish or Italian school. It accounts for the transcription, in a handwriting of the 18th century, of progressions which were not sanctioned by scholastic authority until the 15th; and at the same time for the admixture with these of other progressions, which in the 15th century would have been peremptorily forbidden; in other words, it accounts for simultaneous obedience to two distinct codes of law diametrically opposed to each other; two systems of part-writing which never were, and never could, by any possibility, be simultaneously enforced—viz. the law of counterpoint, which, in the 14th and 15th centuries, forbade the approach to a Perfect Concord in similar motion; and that of Diaphonia, which in the 11th and 12th practically enjoined it, by employing no other intervals than doubled Fourths, Fifths, and Octaves. It accounts for the erasures to which we have already called attention; placing them in the light of improvements, rather than that of necessary corrections. Moreover, it accounts, with still greater significance, for the otherwise inexplicable absence of a whole army of familiar progressions, conventional forms of ornamentation, Cadences true, false, plain, diminished, modal, or medial, and of licences innumerable, which, after the substitution of Counterpoint for Discant, never failed to present themselves at every turn in Polyphonic compositions of every kind, produced in every school in Europe. These anomalies have not been accounted for by any critic who has hitherto treated the subject. Yet surely those who doubt the antiquity of the Rota, on the ground of its advanced construction, owe us some explanation as to the presence of this advanced style in certain passages only. We sorely need some information as to how it came to pass that the piece was written in three distinct styles; two, of part-writing, separated by an interval of two or three centuries at least; and one, of melody, which, if not the result of an inspired folk-song, of remotest antiquity, must bring us down to a period subsequent to the invention of Monodia in the 17th century. Our theory, if admissible at all, explains all these things. A learned musician, deliberately intending to write a Canon for six voices would, had he lived in the 12th century, have adopted the style observable in bars 37, 38, and 39, as that of the entire composition. Another, flourishing in the 15th century, would have confined himself to that shown in bars 4, 6, 8, and 24. But, though the later *savant* would never have passed the Fifths and Octaves, the earlier one, had he possessed sufficient natural genius to enable him to rise above the pedantry of the age, would surely have excused a great deal of what he considered and taught to be licence. Finding that a popular melody of the

day fitted together, in certain places, in a—to his ear—delightful succession of similar Perfect Concorde, he would surely have forgiven certain other passages which defied his rules, but, judged by his natural instinct, did not 'sound bad.' Whether John of Fornsete did really construct the Rota on this principle or not we can never know for certain; but, since the accident we have suggested certainly has happened, and been turned to advantage in other cases, there is nothing improbable in the supposition that it may have happened before, in that which we are now considering.

The fact that no other English Rota of equal antiquity with this has as yet been brought to light proves nothing. The wonder is, not that we can find no similar examples, but that even this one should have escaped the wholesale destruction which devastated our Cathedral and Monastic Libraries, first, during the reign of King Henry VIII., and afterwards, during the course of the Civil Wars. Moreover, we must not forget that the Reading MS., though it contains only one Rota, contains no less than three Latin Antiphons, two for three voices, and one for four; and that the Chancer MS.¹ of very little later date, contains several compositions for two voices, all tending to prove the early date at which the art of polyphonic composition was cultivated in England.² W. S. R.

SUNDERLAND, Mrs., [whose maiden name was SUSAN SYKES, was born at Brighouse, Yorkshire, April 30, 1819, and was the daughter of a gardener. Her voice first attracted the attention of Luke Settle, a blacksmith at a village near Brighouse, who, hearing her singing in her father's garden, offered to teach her. She afterwards joined the Halifax Choral Society, under the leadership of Dan Sugden, who gave her her first fee, of five shillings, for singing a solo at the quarterly concert of the Society. Her next important appearance as a solo singer was on Feb. 19, 1838, at a concert given in the Exchange Rooms, Bradford. She next had five months' training in London, and soon became a local celebrity, was styled the 'Yorkshire Queen of Song,' and for more than a quarter of a century was the leading vocalist in the North of England. She was physically robust, and her voice was a high soprano of great force and volume, which she managed with much expression. Her repertory was chiefly composed of the principal songs in the 'Messiah,' 'Judas,' and the 'Creation'; but she had also some secular songs, mostly of a popular kind. Her first appearance in London was in the 'Messiah' at Exeter Hall, Nov. 2, 1849, and she continued to sing first soprano for the

¹ Arundel MS. No. 248. See SCORE, *ante*, p. 388. The Montpelier MS. is certainly no older than this, and probably not so old.

² Fosbroke, in his *British Monachism* (vol. ii. p. 113), tells us that the song of the Anglo-Saxon monks consisted of a method of figurate Discant, in which the various voices, following one another, were perpetually repeating different words at the same time. Surely this savours strongly of the 'form of the Round.'

Sacred Harmonic Society and other bodies in the 'Messiah,' 'Creation,' 'Elijah,' etc., until 1856. The directors of the Antient Concerts esteemed her voice and expression so much that they offered to send her abroad for further tuition. Indeed, had her early training equalled the quality of her voice and her natural feeling, there can be little doubt that she would have risen to very great general eminence. [She frequently sang at Leeds concerts, notably at the opening of the Town Hall by Queen Victoria in 1858, and at the first of the Leeds Festivals in the same year. Her last appearance in public was in the 'Messiah,' at Huddersfield, June 3, 1864. Mrs. Sunderland married at the age of nineteen, her husband being a butcher. Their golden wedding was celebrated by a concert on June 7, 1888, the proceeds of which helped to found the Sunderland Vocal Prize for natives of the West Riding of Yorkshire. She died on May 7, 1906.] G.; additions in square brackets by F. K.

SUPER. I. The Latin preposition, 'above,' is used in organ terminology to denote the octave above, and is sometimes, but of course erroneously, used for 'octave' (see COUPLER).

II. The supernumeraries in a theatre, who appear in crowded scenes, but do not speak, sing, or dance, are technically called 'Supers.'

SUPERTONIC. The second note of the scale upwards, as D in the key of C. It is brought into much prominence in modern music as the dominant note of the dominant key. The strong tendency to find the chief balance and antithesis in that key, and to introduce the second subject of a movement in it, as well as the tendency to make for that point even in the progress of a period, necessarily throws much stress upon the root-note of the harmony which leads most directly to its tonic harmony, and this is the dominant of the new key or supertonic of the original one. It has consequently become so familiar, that its major chord and the chord of the minor seventh built upon it, although chromatic, are freely used as part of the original key, quite irrespective of the inference of modulation which they originally carried. Some theorists recognise these chords as part of the harmonic complement of the key, and consequently derive several of the most characteristic and familiar chromatic combinations from the supertonic root. [For the chord of the sixth on the supertonic see SIXTH, ante, p. 478.] C. H. H. P.

SUPPÉ, VON, known as FRANZ VON SUPPÉ, was of Belgian descent, though his family for two generations had lived at Cremona; he was born at Spalato, or on board ship near it, April 18, 1820, and his full baptismal name was FRANCESCO EZECHIELE ERMEGENILDO CAVALIERE SUPPÉ DEMELLI. His taste for music developed early. At eleven he learned the flute, at thirteen harmony, and at fifteen

produced a mass at the Franciscan church at Zara. [A piece called 'Der Apfel' was produced privately at Zara in 1834.] His father, however, had other views for him, and sent him to the University of Padua. But music asserted itself; he learned from Cigala and Ferrari, and wrote incessantly. At this moment his father died, the mother settled in Vienna, where Francesco joined her; and after a little hesitation between teaching Italian, practising medicine, and following music, he decided on the last, got lessons from Seyfried, and obtained a gratuitous post as Conductor at the Josephstadt theatre. This was followed by better engagements at Pressburg and Baden, and then (about 1862) at the theatres 'an der Wien,' 'Quai, and Leopoldstadt in Vienna, with the last-named of which he was connected from 1865 until his death May 21, 1895. His work at these houses, though for long mere patching and adding, was excellent practice, and he gradually rose to more independent things. In 1844 a 'Sommernachts-traum,' founded on Shakespeare, and composed by him, is mentioned in the *A.M.Z.* 'Der Krämer und sein Commis' followed. In 1847 he was at the Theatre 'an der Wien' and (Aug. 7) brought out a piece, 'Das Mädchen vom Lande' (The country girl), which met with wild success. Ten years later (Jan. 8, 1858) a Singspiel, 'Paraph 3,' spread his fame into North Germany, and from that time a stream of pieces flowed from his pen. His works are said by the careful Wurzbach¹ to reach the astonishing number of 2 grand operas, 165 farces, comediettas, and vaudevilles, etc., as well as a mass ('Missa dalmatica,' Spina, 1877), a Requiem produced at Zara in 1860 under the title of 'L'estremo Giudizio,' etc. etc. A list of 49 of his operatic pieces is given by Wurzbach, but a few only are dated. Another list of 21 is given by Batka in Pougin's supplement to Fétis, but the titles are French, and it is hard to make the dates agree. Some of the pieces are mere parodies, as 'Tannenhäuser,' 'Dimorah, oder die Turnerfahrt nach Hütteldorf.' One, 'Franz Schubert,' is founded on the life of Schubert, and contains five of his songs. In Riemann's *Lexikon* the number of his operettas is given as 31, and 180 'possen' and slighter pieces are mentioned. The only pieces of Suppé's known out of Germany are 'Fatinitzza,' produced at Vienna, Jan. 5, 1876; at the Alhambra, London, June 20, 1878, and at the Nouveautés, Paris, March 1879; and 'Boccaccio' (originally produced in 1879, and brought out in London, at the Comedy Theatre, April 22, 1882). The overture to 'Dichter und Bauer,' the only one of his overtures known in England, must be his most popular work abroad, since it has been arranged for no less than 59 different combinations of instruments, all published by Aibl of Munich. G.

SURIANO. [See SORIANO, *ante*, p. 623.]

SUSANNA. An oratorio in three parts by Handel; the author of the words is not known. The overture was begun on July 11, 1748, a month after the completion of 'Solomon,' and the work was finished on the 24th of the following month. It was produced during the season of 1749. C.

SUSATO, TYLMAN, printer and composer of music, was born at or near Cologne probably towards the end of the 15th century. His name is regularly written by himself in the full form given above, although the spelling of the first part of it is extremely irregular.¹ A document referred to by Fétis² describes Susato as 'son of Tylman.' It is therefore only through an inexplicable forgetfulness of diplomatic usage that Fétis and others³ have taken Tylman for a surname.⁴ These writers have also accepted a conjecture of Dehn⁵ that 'Susato' indicated the place of the composer's birth, namely the town of Soest (*Susatum*); in one of his books, however, he expressly describes himself as 'Agrippinensis,'⁶ which can only refer to Cologne.⁷ Consequently we have to consider 'Susato' (or 'de Susato'—as it once occurs, in a document of 1543⁸) as a family name, 'van (or 'von') Soest,' doubtless originally derived from the Westphalian town. By the year 1529 Tylman is found settled at Antwerp, where he maintained himself by transcribing music for the chapel of the Virgin in the cathedral; in 1531 he is mentioned as taking part, as trumpeter, in the performance of certain masses there. He was also one of the five musicians supported by the city ('stadspiegel-lieden'), and as such possessed, according to a list of 1532, two trumpets, a 'velt-trompet,' and a 'teneur-pipe.' Losing his post on the arrival of Philip II. in 1549, he appears, for some unexplained reason, never to have been again employed by the city. Before this date however, in 1543, he had found another occupation as a printer of music. For a short time⁹ he worked in company with some friends; but from 1543 onwards he published on his own account, bringing out between that year and 1561 more than fifty volumes of music, nearly every one of which contains

some compositions of his own. He died before 1564.¹⁰

Susato's first publication is a first book of four-part 'Chansons' (1543), and his next is entitled 'Premier Livre de Chansons à trois Parties, auquel sont Contenus Trente Et Une Novvelles Chansons conuenables Tant à la Voix comme aux Instrumentz' (1544). Eight of these pieces are by himself. The rest of his publications, so far as they are now extant, include (1) in French, sixteen books of 'Chansons' in 3-8 parts; (2) 'Madrigali e Canzoni francesi a 5 voci' (1558); (3) in Latin three books of 'Carmina,' three of Masses, one of 'Evangelia Dominicarum,' fifteen of 'Ecclesiastical Cantiones' or motets (1553-60), 'Motecta quinis vocibus, auctore Clemente non Papa' (1546), and five books of 'Cantiones sacrae quae vulgo Moteta vocant' [*sic*] (1546). Finally (4) in Dutch there are his three books of songs, etc., (1551), entitled 'Musyck boexken,' and one book (1561), apparently the second of a series of 'Souter-Liedekens' (Psalter-ditties), which are of peculiar interest. The third of the Musyck boexken contains some dances by Susato himself, which are described¹¹ as 'full of character' and excellently written. The souterliedekens, which Ambros further¹² states to be found in four more Musyck-boexken, are pieces from the Psalms according to the rhymed Flemish version, set without change to the popular song-tunes of the day ('gemeyne bekende liedekens'¹³). The charm, however, of these compositions lies less in the airs adapted in them than in the independence and originality of the part-writing, an art in which Susato was so proficient that some of his three-part songs are composed in such a manner as to be suitable, he states, equally for three and for two voices with omission of the bass. Susato appears also to have co-operated with Clemens non Papa in some of his work, and not to have been merely his publisher. Still it is as a publisher¹⁴ that Susato has hitherto been almost exclusively known, the masters whose works he printed being very numerous, and including such names as Créquillon, Gombert, Goudimel, O. de Lassus, P. de Manchicourt, J. Mouton, C. de Rore, A. Willaert, etc. [See also the *Quellen-Lexikon* for other compositions.] R. L. P.

SUSPENSION is the process of arresting the conjoint motion of one or more parts for a time, while the rest of the components of the chord proceed one step onwards, and thereby come to represent a different root. The part which is stayed in this manner commonly produces dissonance, which is relieved by its then passing on

¹ In works with Latin titles Susato writes himself in a great majority of cases *Tilmanus*; *Tilmanus*, *Tilmannus*, *Tylmannus*, and *Tilmannus*, occurring but rarely. In Flemish his favourite form seems to have been *Tielman*. In French *Tylman*, the spelling adopted by Fétis and Mendel is found most frequently; *Tilman*, which is preferred by M. Goovaerts is less usual; while *Tilmann*, the spelling which is adopted by M. Vander Straeten and is now practically the accepted one in the Netherlands, is met with only twice.

¹⁴ His publications are rarely found in England, the British Museum only possessing one volume of masses.

to the position it would have naturally occupied sooner had the motion of the parts been simultaneous. Thus in the progression of the chord of the Dominant seventh to Tonic harmony (*a*), the part which takes the upper note (or seventh) can be delayed and made to follow into its position after the rest of the chord has moved, as in (*b*), thereby producing a fourth in place of a third for a time. Similarly the fifth, or the fifth and third, can be suspended, producing a ninth, or a ninth and seventh, against the tonic note; and the dissonant effect is similarly relieved by their passing on to their normal position in the chord afterwards, as in (*c*). In all such cases the first occurrence of the note in the part whose motion is suspended is called the 'Preparation,' as in the first chord of (*b*)

and of (*c*): the moment of dissonance resulting from the motion of the other parts, is called the 'Percussion' of the discord, and the release of the dissonance, when the part proceeds to its natural place in the harmony, is called the 'Resolution.'

Suspension was among the very first methods discovered by the early harmonists for introducing dissonance into their music. In the earliest times composers depended chiefly upon the different degrees and qualities of consonances—sixths, thirds, fifths and octaves—to obtain the necessary effects of contrast between one musical moment and another. Then, when, in the natural order of things, something stronger was required, it was found in this process of suspension. But for some time it was used very sparingly, and composers required no more than the least dissonant forms to carry out their purposes. For a long while, moreover, all discords appeared to the early writers as no more than artificial manipulations of the motion of the parts of this kind, and it was only by the use of such means that they even learnt to use some discords, which are at the present day looked upon in a totally different light. About the beginning of the 17th century they began to realise that there was a radical difference in the character and constitution of certain groups of discords, and to use at least one freely as an independent or fundamental combination. From that time discords began to be classified, instinctively, into definite groups. Certain of the less dissonant combinations have in course of time been grouped into a special class, which is freed from the obligation of being prepared, and thereby loses one of the most essential characteristics of suspension. These are the Dominant discords of the minor seventh and major and minor ninths; certain corresponding chromatic chords on Tonic and Supertonic roots, which have been naturally affiliated upon the key;

and the chord sometimes known as that of the added sixth. [See SIXTH.] Another class has been created by some theorists, which is much more intimately connected with the class of suspensions; if indeed they are not actually suspensions slightly disguised. These are the discords which are arrived at by the same process of staying or suspending the motion of a part, but which are distinguished by further motion of the other parts simultaneously with the resolution of the discord, thereby condensing two motions into one; as in (*d*) and (*e*). When treated in this manner the chords are described by some theorists as 'Prepared discords.' The province of suspensions appears by this process

to have been reduced, but what was lost by the process of classification has been amply made up by the invention of a great variety of new forms.

About the time that composers first began to realise the character of the dominant seventh, they also began to use a greater variety and a harsher description of suspensions. The earliest experiments of note in both directions are commonly ascribed to the same man, namely Monteverde. Since his time the progress has been tolerably constant in one direction; for the tendency to look for fresh and more vivid points of contrast necessarily leads to the use of suspensions of more complicated and harsher character. At the present time the varieties of possible suspensions are so numerous that it would be almost as absurd to endeavour to make a catalogue of them, as it would be to make a list of possible combinations of sounds. But if the principle be properly understood, it is not necessary to give more than illustrative examples; for the like rules apply to all; and their kinds are only limited by the degree of harshness considered admissible, and by the possibility of adequate and intelligible resolution. Classical authority not only exists for a great variety of chromatic suspensions, often derived from no stronger basis than a combination of chromatic passing or ornamental notes; but also for remarkable degrees of dissonance. Beethoven for instance, in the B \flat Quartet, op. 130, used the suspended fourth together with the third on which it is to resolve, and put the latter at the top, and the former at the bottom (*f*); and Bach supplies many examples of similar character. Certain simple rules are almost invariably observed—such as that the moment of percussion shall fall upon the strong beat of the bar; and that the progression shall not imply a violation

of rules against consecutive perfect concords, which would occur if the artificial suspension of the part were removed, as in (g).

Composers early discovered a means of varying the character of the process by interpolating notes between the sounding of the discord and its resolution, as in (h). Instances are also to

be found in which some such forms were used as sufficient to constitute resolution without arriving at the normal note,—habit and familiarity with a particular form of motion leading to the acceptance of a conventional formula in place of the actual solution. The following examples from Corelli's 1st Sonata of opera 2da and 5th of opera 4ta are clear illustrations.

This particular device is characteristic rather of the early period of harmonic music up to Corelli's time than of a later period. The following passage from Schumann's *andante* and variations for two pianofortes (op. 46) is characteristic of modern uses of combined and chromatic suspension, and also of interpolation of notes

(m) 1st Piano.

2nd Piano.

etc.

between percussion and resolution. Some theorists distinguish the combinations which resolve

upwards from those that resolve downwards, styling the former Retardations. [See RETARDATION ; HARMONY.] C. H. H. P.

SVENDSEN, JOHAN SEVERIN, was born Sept. 30, 1840, at Christiania, where his father was a military bandmaster. At the age of eleven he wrote his first composition for the violin. When fifteen he enlisted in the army, and soon became bandmaster. Even at that age he played, with considerable skill, flute, clarinet, and violin. He soon left the army, and worked during the next few years in the orchestra of the Christiania theatre, and at a dancing academy, for which he arranged some études by Paganini and Kreutzer for dancing. A strong desire to travel drove him, at twenty-one, on a roving tour over a great part of Sweden and North Germany. Two years after, being in Lübeck in extremely reduced circumstances, he fortunately met with the Swedish-Norwegian Consul Herr Leche, whose interest he gained, and who shortly after obtained a stipend for him from Charles XV. to enable him to perfect himself as a violinist; but being soon afterwards attacked with paralysis in the hand, he was compelled to give up the bow for composition. He went to Leipzig in 1863, and his works being already known there, he was placed in the finishing class of the Conservatorium, receiving, however, instruction in elementary theory of music, which he had never been taught. His instructors were Hauptmann, David, Richter, and Reinecke. He wrote a Quartet in A, an Octet and a Quintet, all for strings; Quartets for male voices; and a Symphony in D.

On leaving Leipzig in 1867 he received the great honorary medal of the Academy. After travelling in Denmark, Scotland, and Norway, Svendsen went in 1868 to Paris. The Second Empire was then at its zenith, and his sojourn in the capital of France influenced the composer to a very great extent. Whilst there, he played in Musard's orchestra, and at the Odéon, and became intimately acquainted with Wilhelmine Szarvady, De Bériot, Vieuxtemps, and Léonard. He arranged the incidental music to Coppée's 'Le Passant,' in which both Sarah Bernhardt and Agar performed, but on the whole his Paris productions were few—a Concerto for violin in A, and orchestral arrangements of studies by Liszt and Schubert; he also began 'Sigurd Slembe,' the overture to a Norwegian drama of that name. He left Paris at the beginning of the war in 1870 for Leipzig, where he had been offered the conductorship of the well-known Euterpe concerts, which however were discontinued, owing to the war. At a great musical festival at Weimar, in the same year, he first met Liszt and Tausig, and his octet was played by a party containing David, Hellmesberger, Grützmacher, and Hechmann, with great approbation. Early in the following year his Symphony in D was performed at the Gewandhaus, and his fame as a composer

established. He composed in that year his Concerto for violoncello in D. In the autumn he went to America to be married to an American lady, whom he had met in Paris, and returned the same year to Leipzig, where, after the end of the war, he undertook the leadership of the Euterpe concerts for one year. There he finished the overture to 'Sigurd Slembe,' which was played at the Euterpe then, and in the following year at the musical festival at Cassel, both times with great success. In this year he met Wagner at Bayreuth, and soon became his intimate associate. For the next five years (1872-77) he was conductor of the Christiania Musical Association and teacher of composition, and composed comparatively few works, which may be explained by the unfortunate want of pecuniary independence. The pieces of this period are numbered opp. 10-22 in his list. In 1874 his labours found some appreciation from his countrymen in the shape of an annuity granted by the Storting, and several decorations conferred on him by the king. After five years of hard work, he was enabled once more to proceed abroad. In 1877 he revisited Leipzig, and conducted a new work at the Gewandhaus; went thence to Munich, and eventually to Rome, where he spent the winter. In 1878 he visited London for the first time, and there met Sarasate, who assisted him in the performance of his quartet, quintet, and octet. From London he went to Paris, where he stayed until 1880, during which time his works were several times performed—as also at Angers, where the post of conductor was offered him by the Musical Association. But Svendsen refused this lucrative appointment, and in the autumn of that year we again find him in his old post as conductor of the Musical Association in Christiania. In 1883 he became court conductor at Copenhagen: in 1888 he visited England again, conducting his Symphony in D at the Philharmonic Concert of May 31. In recent years he has produced only some minor compositions, besides arranging for orchestra several studies by foreign composers.

Svendsen's music is all of very high character, remarkable for strong individuality, conciseness, and the absence of anything national or Scandinavian; as well as for an elaborate finish strictly in harmony with the traditions of the great masters. He is one of the most cosmopolitan composers of the age.

His printed works are as follow:—

- | | |
|--|--|
| Op. | Op. |
| 1. String quartet in A minor. | 11. Zorahayde, legend for orch. |
| 2. Songs for men's voices. | 12. Polonaise for orch. |
| 3. Odet for strings in A minor. | 13. Coronation march for Oscar II. |
| 4. Symphony in D. | 14. Marriage Cantata, for chor. and orch. |
| 5. String quintet in C. | 15. Symphony No. 2 in Bb. |
| 6. Concerto for violin and orch. in A. | 16. Carnaval des artistes Norvégiens. |
| 7. Do. for violoncello and orch. in D minor. | 17. Rhapsodie Norvégienne No. 1, for orch. |
| 8. Overture in G to Björnson's drama of 'Sigurd Slembe'. | 18. Overture to Romeo and Juliet. |
| 9. Carnaval à Paris, for orch. | 19. Rhapsodie Norvégienne No. 2. |
| 10. Funeral march for Charles XV. | |

| 23. Five songs, French and German, for voice and FF. | 26. Romance for violin and orch. in G. C. 8 ^a . |

SVENDSEN, OLUF, a distinguished flute-player, born in Christiania, April 19, 1832. He learnt the rudiments of playing from his father, a musician; when twelve years old played the flute in small orchestras; and at fourteen was engaged as first flute in the Christiania theatre. In 1851 he went to Copenhagen, and took lessons from Nils Petersen, then a flute-player there. In 1853 he entered the Conservatoire at Brussels, where he studied for two years, after which he was engaged by Jullien for his Concerts in London. In Sept. 1856, he joined the Band of the Crystal Palace, Sydenham, where he remained till the end of 1858. In 1861 Svendsen was appointed first flute in the Queen's private band, and the same year joined the Philharmonic orchestra. He was ten years in the orchestra at Her Majesty's theatre; and from 1867 was professor of his instrument at the Royal Academy of Music. He was well known as a solo-player throughout Belgium, Norway, Sweden, Denmark, and France. He died in London, May 15, 1888. G.

SWEELINCK, or SWELINCK,¹ JAN PIETERSZON, the greatest of Dutch organists, was born of a Deventer family in the summer of 1562. His father, 'Mr. Pieter,' was organist of the Old Church at Amsterdam, which place disputes with Deventer the honour of having given the son birth.² Of Sweelinck's boyhood we know nothing, except that he was taught by Jacob Buyck (Buchius), the pastor of the Old Church. There is a tradition that he was sent to Venice to study music under Zarlino and Gabrieli; but with this is connected a mistake of old standing, which places his birth in 1540, twenty-two years too early.³ Now, as we know that he was in Holland from 1577, at latest, onwards, it becomes barely credible that the lad of fifteen could have followed the instruction of the Venetian masters to any important extent; and it is likely that the whole story is based upon the close study which his works prove him to have devoted to those of 'the apostle of musical science,'⁴ whose

¹ Of the seven or more ways in which the name is spelled, these two have the musician's own signature. The Germans of the time seem to have naturalised him as Schwelling; in Amsterdam he was known as plain Jan Pietersz.

² Deventer is consistently mentioned by Sweelinck's later biographers; but the Amsterdam claim has the support of the official entry of his marriage there in 1590, in which his birthplace is not stated. The omission was the rule when the person was a native of the city. Else documentary evidence is equally wanting on both sides.

³ The correction of this and the rest of the mistakes which confuse every single date in Sweelinck's life is due to the essay of F. H. J. Tiedeman, *J. P. Sweelinck, een bio-bibliografische Schets*, published by the Vereeniging voor Nederlandsche Muziekgeschiedenis (Amsterdam, 1878), which intersperses a shorter sketch published by the same writer as an introduction to the 'Regina Coeli,' in 1869. Both are based upon a biography (which remains in MS. in the possession of the Vereeniging) by Robert Eitner, who has done good service by rescuing the works of Sweelinck from the obscurity of the Graue Kloster at Berlin.

⁴ So Zarlino is entitled by his modern biographer, F. Caffi, *Della Vita e delle Opere del Frate G. Zarlino* (Venice, 1896). Neither he nor in the chapters on Zarlino and Andrea Gabrieli contained in his *Storia della Musica Sacra*, vol. i. p. 129, etc. (Venice, 1854), does Caffi

'Istitutioni harmoniche' he translated.¹ Some time between 1577 and 1581 Sweelinck was appointed to the organistship previously held by his father (who died in 1573); and this post he filled until his death, Oct. 16, 1621. For a generation he was the glory of Amsterdam. When he played the organ there, says a contemporary, 'there was a wonderful concourse every day; every one was proud to have known, seen, heard the man.'² And when he died it was the greatest of Dutch poets, Vondel, who wrote his epitaph, and surnamed him 'Phoenix of Music.' He must also have been a distinguished figure in the society of Amsterdam, then in its greatest brilliancy, not only for his unmatched powers as an organist, but also for his skill, fancy, and charming versatility on the clavicymbel.³ The town bought him for public service a new 'clavecimpbel' from Antwerp at a cost of 200 gulden; and the instrument seems to have travelled with him all over the country.⁴

What was published, however, by Sweelinck in his lifetime was entirely vocal music, and includes—besides occasional canons, marriage-songs, etc., his 'Ohansons françaises' (three parts, Antwerp, 1592-94), 'Rimes françaises et italiennes' (Leyden, 1612), and the great collections of sacred music on which, with his organ works, his fame chiefly rests. These are the 'Pseumes mis en musique' for 4-8 voices (published in several editions at Leyden, Amsterdam, and Berlin), and the 'Cantiones Sacrae' (Antwerp, 1619). A Regina Coeli from the latter, three Chansons, and eight Psalms in six parts were reprinted, in organ-score, by the Association for the History of Dutch Music (pts. i. v. vi. and vii.; Utrecht and Amsterdam, 1869-77); which has also published for the first time seven of Sweelinck's organ works⁵ (pt. iii.) [VEREENIGING. In 1894-1901 Breitkopf & Härtel published Sweelinck's complete works in twelve volumes, edited by Max Seiffert, who added prefaces, etc., see below. The chanson, 'Tu as tout senti' is in vol. i. of 'Arion,' and two of the Italian madrigals are in 'Ausgewählte Madrigale.' The beautiful 'Hodie Christus natus est' is in the Bach Choir Magazine, etc.]

The psalms make an interesting link between the tranquillity of the old polyphonists and the rhythm of modern music. Formally they stand nearest to the earlier style, but the strictness of

their counterpoint, the abundance of imitation and fugue in them, does not hinder a general freedom of effect, very pure and full of melody, to a greater degree than is common in works of the time. The organ pieces are also historically of signal importance. Though they may not justify the claim made for Sweelinck as 'the founder of instrumental music,'⁶ they at all events present the first known example of an independent use of the pedal (entrusting it with a real part in a fugue), if not with the first example of a completely developed organ-fugue.

It is as an organist and the founder of a school of organists that Sweelinck had most influence, an influence which made itself felt through the whole length of northern Germany.⁷ In the next generation nearly all the leading organists there had been his scholars; his learning and method were carried by them from Hamburg to Danzig. His pupil Scheidemann handed down the tradition to the great Reincke⁸—himself a Dutchman—from whom, if we accept a statement supported alike by unanimous testimony and by exhaustive analysis of their works, it turned to find its consummation in Sebastian Bach.⁹

[The contents of the complete edition are as follows:—

- i. Organ and Clavier works.
- Book I. of Psalms.
- iv. and v. Book II. of Psalms.
- vi. Book III. of Psalms.
- vii. Book IV. of Psalms.
- viii. Cantiones Sacrae.
- ix. Chansons a 5.
- x. Rimes Françaises et Italiennes.
- xi. Miscellaneous and occasional compositions.
- xii. Compositious-Regeln, ed. by Dr. H. Gehrmann.

Two portraits are reproduced, and the prefaces by Dr. Seiffert are given in Dutch and German.] R. L. P.

SWELL (HARPSICHORD). The desire for a power of increase and decrease on keyboard instruments like the harpsichord and organ, so as to emulate the bow instruments, and even the human voice, in that flow and ebb which are at the foundation of form no less than of expression, has led to the contrivance of mechanical swells as the only possible approach to it. A swell was first attempted on the Organ; the harpsichord swell was introduced by Robert Plenius in a sostenente variety of the instrument, named by him 'Lyricbord,' and is described (in 1755) as the raising of a portion of the lid or cover of the instrument by means of a pedal. Kirkman adopted this very simple swell, and we find it also in many small square pianos of the 18th century. About 1765 Shudi introduced the Venetian swell, and patented it in 1769. This beautiful piece of joinery is a framing of louvres which open or close gradually by means of the right pedal and thus cause a swell, which may

take any notice of the Dutch scholar. Nor have I been able to discover any trace of his residence at Venice in the MS. collections of G. Maron.

¹ MS. at Hamburg, formerly belonging to the great organist Reiske.

² Sweertius, in Tiedeman, p. 16. Sweelinck's portrait at Darmstadt gives his strong irregular features a kindly expression, with a touch of easiness in them. It is reproduced in photograph by Mr. Tiedeman.

³ On this he was the master of Christina van Erp, the famous luteist, and wife of the more famous poet, Pieter Corneliszoon Hooft. See the *Bousteenen* of the Vereeniging, vol. i. pp. 12 f.

⁴ See an anecdote in Baudartius, *Nemorgen*, xlii. p. 163; cited by Tiedeman, p. 16.

⁵ The hitherto of Sweelinck is given at length by Tiedeman, pp. 43-75. To this should be added some supplementary particulars communicated by Dr. J. F. Heije in the *Bousteenen*, vol. i. pp. 30-45.

⁶ See Eitner's preface to the edition, and Tiedeman, pp. 54 ff.

⁷ The wide distribution of his works is shown by early transcripts existing in the British Museum, and by copies of the extremely rare printed works preserved in the Bibliothèque Nationale. Curiously enough not a single MS. of Sweelinck remains in Holland.

⁸ Or Reincken.

⁹ Spitta, *J. S. Bach*, i. 96, 192-213.

be as gradual as the performer pleases. Shudi bequeathed this patent to John Broadwood, who inherited it on the death of Shudi in 1773. When the patent expired, Kirkman and others adopted it, and it was fitted to many old harpsichords, and even to pianos, but was soon proved unnecessary in an instrument where power of *nuance* was the very first principle.

The English organ-builders perceived the great advantage of Shudi's Venetian swell over the rude contrivance they had been using [see ORGAN, vol. iii. p. 536b], and it became generally adopted for organs, and has since been constantly retained in them as an important means of effect.

A. J. H.

SWELL-ORGAN. The clavier or manual of an organ which acts upon pipes enclosed in a box, such box having shutters, by the opening of which, by means of a pedal, a crescendo is produced. The shutters are made to fold over each other like the woodwork of a venetian blind, hence the expressions 'Venetian Swell' and 'Venetian Shutters' sometimes found in specifications. To the swell-organ a larger number of reed-stops is assigned than to other manuals.

The first attempt at a 'swelling-organ' was made by Jordan in 1712. The crescendo was obtained by raising one large sliding shutter which formed the front of the box. The early swell-organs were of very limited compass, sometimes only from middle C upwards, but more generally taken a fourth lower, namely, to fiddle G. For many years the compass did not extend below tenor C, and even now attempts are sometimes made to reduce the cost of an organ by limiting the downward compass of some of the stops of the Swell; but in all instruments with any pretension to completeness the stops run throughout the compass to CC, with the possible exceptions of the *Vox Angelica* or the *Voix Céleste*. [See ORGAN, vol. iii. p. 536, etc., and section, p. 545.]

J. S.

SWELL-PEDAL. The pedal in the organ and harpsichord by which the shutters of the swell are opened and closed.

T. E.

SWERT, JULES DE, a representative violoncellist of the Belgian school, was born at Louvain, August 16, 1843. His disposition for music was shown very early. When only eight years of age he began playing in public, though his studies were not completed until 1858, in which year he took first prize in the class of Servais at the Brussels Conservatoire. His subsequent career was that of a travelling virtuoso until 1865, when he became Concertmeister at Düsseldorf. Between 1869 and 1873 he resided at Berlin, where his functions were those of royal Concertmeister and professor at the Hochschule. He also held appointments at Weimar, Wiesbaden, Leipzig, and finally at Ostend. At the latter town he was appointed in 1888 director of the local music school, acting also as professor at the neighbouring Conservatoires of Brugge

and Ghent, until his death, which took place at Ostend, Feb. 24, 1891. As a soloist he visited London first in 1875, and was esteemed as a warm, temperamental player, producing a tone of exceptional volume. As a composer he is less favourably known here. He signed his name to many trashy pieces, probably written to order, for violoncello with pianoforte and with orchestra, but occupied himself also with serious work. Three concertos, one of which was produced with great success at the Berlin Philharmonic in 1886; a Symphony, 'Nordseefahrt'; and two operas, 'Die Albigenser' (Wiesbaden, 1878) and 'Graf Hammerstein,' testify to this; but it is as soloist that he is best remembered.

W. W. C.

SWIETEN, GOTTFRIED, BARON VAN. A musical amateur of great importance, who resided at Vienna at the end of the 18th century and beginning of the 19th century. The family was Flemish, and Gottfried's father, Gerhard,¹ returned from Leyden to Vienna in 1745, and became Maria Theresa's favourite physician. Gottfried was born in 1734, and was brought up to diplomacy, but his studies were much disturbed by his love of music, and in 1769 he committed himself so far as to compose several of the songs in Favart's 'Rosière de Salency' for its public production at Paris. In 1771 he was made ambassador to the Court of Prussia, where the music was entirely under the influence of Frederick the Great, conservative and classical. This suited Van Swieten. Handel, the Bachs, and Haydn were his favourite masters; in 1774 he commissioned C. P. E. Bach to write six symphonies for orchestra. He returned to Vienna in 1778; succeeded his father as Prefect of the Public Library, and in 1781 was appointed President of the Education Commission. He became a kind of musical autocrat in Vienna, and in some respects his influence was very good. He encouraged the music which he approved; had regular Sunday-morning meetings for classical music, as well as performances of the great choral works of Bach, Handel, and Hasse, etc.; employed Mozart to add accompaniments to Handel's 'Acis,' 'Messiah,' 'St. Cecilia,' and 'Alexander's Feast,' and Starzer to do the same for 'Judas'; translated the words of the 'Creation' and the 'Seasons' into German for Haydn; and himself arranged Handel's 'Athaliah' and 'Choice of Hercules.' He supplied Haydn now and then with a few ducats, and gave him a travelling-carriage for his second journey to England.² In his relation to these great artists he seems never to have forgotten the superiority of his rank to theirs; but this was the manner of the time. Van Swieten patronised Beethoven also [see vol. i. p. 232a]; but such condescension would not be at all to Beethoven's taste, and it is not surprising that we hear very little of it.

¹ Evidently not a very wise person. See Carlyle's *Frederick*, Bk. xxi. ch. 5.

² Griesinger, *Biog. Not.* p. 66.

His first Symphony is, however, dedicated to Van Swieten. He was the founder of the 'Musikalische Gesellschaft,' or Musical Society, consisting of twenty-five members of the highest aristocracy, with the avowed object of creating a taste for good music—a forerunner of the 'Gesellschaft der Musikfreunde,' founded in 1808.

Van Swieten died at Vienna, March 29, 1803. His music has not survived him, but it would be interesting to hear one of the six symphonies which, in Haydn's words,¹ were 'as stiff as himself' G.

SWINEY, OWEN, frequently called Mac Swiney, [was born near Enniscorthy, Ireland, in 1680, and was the son of the rector of that place. W. H. G. F.] In a letter,² dated Oct. 5, 1706, and addressed to Colley Cibber, whom he calls in turn 'puppy,' 'his Angel' (twice), 'his Dear,' and finally 'Unbeliever,'—this singular person describes how Rich had sent for him from his 'Quarters in the North,' and how 'he was at a great charge in coming to town, and it cost him a great deal of money last winter,' and 'he served him night and day, nay, all night and all day, for nine months.' He had 'quitted his post in the army' on the faith of promises that, in return for managing 'the playhouse in the Haymarket' under Rich, he was to have '100 Guineas per annum Salary, a place at Court, and the Devil and all.' This was the somewhat inauspicious beginning of Swiney's theatrical career. Having come up to London, as described, in 1705, he soon found that Rich intended nothing seriously for his advantage; and he announces (in the same letter) that, in consequence of the general discontent of the actors with Rich, and although Rich might have had the house for £3 or £3 : 10s. a day, he (Swiney) had taken a lease for seven years at £5 a day, and meant to begin in a few days.

In 1707 we find him in partnership with Wilks, Dogget, and Cibber in the King's Theatre, having taken the lease from Vanbrugh, and very soon quarrelling with them and petitioning the Lord Chamberlain's interference in his favour. He was mixed up in most of the quarrels and intrigues of the time.

In May 1709 Swiney engaged the famous Nicolini for three years, that great singer having recently made a most successful début in London. Before the completion of this term, however, Swiney appears to have 'absented himself from his creditors' and become bankrupt.

After this he lived for some years in Italy; but on his return to England a place in the Custom-house was found for him, and he was appointed Keeper of the King's Mews. While in Italy with Lord Boyne and Walpole, he wrote to Colman (July 12, 1780) from Bologna,

on the subject of engaging singers for the Opera, then in the hands of Handel. Swiney died Oct. 2, 1754, leaving his fortune to Mrs. Woffington. He was the author of several dramatic pieces, viz. 'The Quacks, or Love's the Physician' (1705); 'Camilla' (1706); 'Pyrrhus and Demetrius' (1709); and an altered version of the first piece.

Two years before his death a fine portrait of Swiney, after Van Loo, was scraped in mezzotint by J. Faber, junr. It represents him, in black velvet, holding in his hand a book, of which the title seems to be *Don Quixote*. J. M.

SYLPHIDE, LA. One of the most famous ballets on record; in two acts; libretto by A. Nourrit the singer, music by Schneitzhoffer. Produced at the Grand Opéra, Paris, March 12, 1832. The part of La Sylphide was danced by TAGLIONI, and was one of her greatest parts, both in Paris and in London, where the piece was brought out at Covent Garden Theatre, for her benefit, July 26, 1832. Thackeray has embalmed it in *Pendennis* (chap. xxxviii.) G.

SYLVANA. See SILVANA.

SYLVIA, OU LA NYMPHE DE DIANE. 'Ballet-pantomime' in two acts and three tableaux; libretto by Barbier, music by Léo Delibes. Produced at the Grand Opéra, Paris, June 14, 1876. G.

SYMPATHETIC TONE, RESONANCE, or VIBRATION is the term used to describe one of the commonest and most beautiful of acoustical phenomena. Any sound-producing body, such as a stretched string, or any cavity, has one particular note to which it will respond if the same note be sounded in its neighbourhood. The easiest illustration of the fact is given by raising the dampers from the strings of a piano by pressing the right pedal, and then singing a note over the strings; these will be found to give forth the same notes uttered by the voice, in faint 'sympathy.' The fact has been turned to account in various ways in practical music. The viola d'amore was provided with 'sympathetic' strings below the finger-board, which were usually tuned to the chord of D major, and resounded when notes of that chord were played. The charm of the pianoforte pedal is not so much in prolonging the tone of the notes that are actually struck, as in allowing the sympathetic resonance to be heard from the strings corresponding to the upper partial tones of the lower notes. This power, again, is easy to analyse by placing the fingers successively or simultaneously upon the notes of the chord of C major from middle C upwards (without sounding them), and then striking the bass C firmly; on releasing this latter key, the upper notes, or overtones, of the chord will be distinctly heard, sounded by sympathetic vibration from the upper strings. The effect of all sympathetic vibration is to enrich the quality of the tone produced; and the fact that the harp, with its obvious poverty of tone

¹ Griesinger, *Biog. Not.* p. 67.

² In the writer's possession.

as a solo instrument, is one of the most effective members of the full orchestra, is no doubt partly due to the sympathetic vibration reacting on the large surface of strings that are capable of resonance. M.

SYMPHONIC POEMS (Germ. *Symphonische Dichtungen*; Fr. *Poèmes Symphoniques*), a term first applied by Liszt to his series of twelve orchestral compositions which, freed from the conventions of actual symphonic form, seemed to him to require some new title. It has been since adopted by Saint-Saëns, and many other followers of the new ideals in music; it apparently is always held to imply the presence of a 'programme,' in which the function of the music is to illustrate the poetic material, not to be self-subsistent, as in all classical compositions. At present, too, it would seem that the absence of any recognisable design in the composition is considered essential to success, and Liszt's device of transforming his themes and presenting them in new disguises, rather than developing them according to the older principles, seems also to be a rule of the form. As existing specimens from Liszt to Richard Strauss in Germany, and from Saint-Saëns to Debussy in France, have so very little in common with the design of the true symphony, the term 'Tone-Poem' or 'Tondichtung' is preferred by some composers, who very likely feel relieved of all responsibility by the adoption of the vaguer title. M.

SYMPHONY (SINFONIA, SINFONIE, SYMPHONIE). The terms used in connection with any branch of art are commonly very vague and indefinite in the early stages of its history, and are applied without much discrimination to different things. In course of time men consequently find themselves in difficulties, and try, as far as their opportunities go, to limit the definition of the terms, and to confine them at least to things which are not obviously antagonistic. In the end, however, the process of sifting is rather guided by chance and external circumstances than determined by the meaning which theorists see to be the proper one; and the result is that the final meaning adopted by the world in general is frequently not only distinct from that which the original employers of the word intended, but also in doubtful conformity with its derivation. In the case of the word 'Symphony,' as with 'Sonata,' the meaning now accepted happens to be in very good accordance with its derivation, but it is considerably removed from the meaning which was originally attached to the word. It seems to have been used at first in a very general and comprehensive way, to express any portions of music or passages whatever which were thrown into relief as purely instrumental in works in which the chief interest was centred upon the voice or voices. Thus, in the operas, cantatas, and masses of the early part of the 17th century, the voices

had the most important part of the work to do, and the instruments' chief business was to supply simple forms of harmony as accompaniment. If there were any little portions which the instruments played without the voices, these were indiscriminately called Symphonies; and under the same head were included such more particular forms as Overtures and Ritornelli. The first experimentalists in harmonic music generally dispensed with such independent instrumental passages altogether. For instance, most if not all of the cantatas of Cesti and Rossi¹ are devoid of either instrumental introduction or ritornel; and the same appears to have been the case with many of the operas of that time. There were, however, a few independent little instrumental movements even in the earliest operas. Peri's 'Euridice,' which stands almost at the head of the list (having been performed at Florence in 1600, as part of the festival in connection with the marriage of Henri IV. of France and Marie de' Medici), contains a 'Sinfonia' for three flutes, which has a definite form of its own and is very characteristic of the time. The use of short instrumental passages, such as dances and introductions and ritornels, when once fairly begun, increased rapidly. Monteverde, who followed close upon Peri, made some use of them, and as the century grew older, they became a more and more important element in dramatic works, especially operas. The indiscriminate use of the word 'symphony,' to denote the passages of introduction to airs and recitatives, etc., lasted for a very long while, and got so far stereotyped in common usage that it was even applied to the instrumental portions of airs, etc., when played by a single performer. As an example may be quoted the following passage from a letter of Mozart's—'Sie (meaning Strinasacchi) spielt keine Note ohne Empfindung; sogar bei den Sinfonien spielte sie alles mit Expression,' etc.² [The same use of the name for the ritornelli between the verses of a song was common in England down to the middle of the 19th century.] With regard to this use of the term, it is not necessary to do more than point out the natural course by which the meaning began to be restricted. Lully, Alessandro Scarlatti, and other great composers of operas in the 17th century, extended the appendages of airs to proportions relatively considerable, but there was a limit beyond which such dependent passages could not go. The independent instrumental portions, on the other hand, such as overtures or toccatas, or groups of ballet tunes, were in different circumstances, and could be expanded to a very much greater extent; and as they grew in importance the name 'Symphony' came by degrees to have a more special significance. The small instrumental appendages to the various airs and so

¹ MSS. in the Christ Church Library, Oxford.

² 'She does not play a note without feeling, and even in the symphonies played all with expression.'

forth were still symphonies in a general sense, but the Symphony *par excellence* was the introductory movement; and the more it grew in importance the more distinctive was this application of the term.

The earliest steps in the development of this portion of the opera are chiefly important as attempts to establish some broad principle of form; which for some time amounted to little more than the balance of short divisions, of slow and quick movement alternately. Lully is credited with the invention of one form, which came ultimately to be known as the 'Overture à la manière Française.' The principles of this form, as generally understood, amounted to no more than the succession of a slow solid movement to begin with, followed by a quicker movement in a lighter style, and another slow movement, not so grave in character as the first, to conclude with. Lully himself was not rigidly consistent in the adoption of this form. In some cases, as in 'Persée,' 'Thésée,' and 'Bellérophon,' there are two divisions only—the characteristic grave opening movement, and a short free fugal quick movement. 'Proserpine,' 'Phaëton,' 'Alceste,' and the Ballet piece, 'Le Triomphe de l'amour,' are characteristic examples of the complete model. These have a grave opening, which is repeated, and then the livelier central movement, which is followed by a division marked 'lentement'; and the last two divisions are repeated in full together. A few examples are occasionally to be met with by less famous composers than Lully, which show how far the adoption of this form of overture or symphony became general in a short time. An opera called 'Venus and Adonis,' by Desmarests, of which there is a copy in the Library of the Royal College of Music, has the overture in this form. 'Amadis de Grèce,' by Des Touches, has the same, as far as can be judged from the character of the divisions; 'Albion and Albanus,' by Grabu, which was licensed for publication in England by Roger Lestranger in 1687, has clearly the same, and looks like an imitation direct from Lully; and the 'Venus and Adonis' by Dr. John Blow, yet again the same. So the model must have been extensively appreciated. The most important composer, however, who followed Lully in this matter, was Alessandro Scarlatti, who certainly varied and improved on the model both as regards the style and the form. In his opera of 'Flavio Cunierto,'¹ for instance, the 'Sinfonia avanti l'Opera' begins with a division marked *grave*, which is mainly based on simple canonical imitations, but has also broad expanses of contrasting keys. The style, for the time, is noble and rich, and very superior to Lully's. The second division is a lively allegro, and the last a moderately quick minuet in 6-8 time.

¹ MS. in Christ Church Library.

The 'Sinfonia' to his serenata 'Venere, Adone, Amore,' similarly has a Largo to begin with, a Presto in the middle, and a movement, not defined by a tempo, but clearly of moderate quickness, to end with. This form of 'Sinfonia' survived for a long while, and was expanded at times by a succession of dance movements, for which also Lully supplied examples, and Handel at a later time more familiar types; but for the history of the modern symphony, a form which was distinguished from the other as the 'Italian Overture,' ultimately became of much greater importance.

This form appears in principle to be the exact opposite of the French Overture; it was similarly divided into three movements, but the first and last were quick and the central one slow. Who the originator of this form was it seems now impossible to decide; it certainly came into vogue very soon after the French Overture, and quickly supplanted it to a great extent. Certain details in its structure were better defined than in the earlier form, and the balance and distribution of characteristic features were alike freer and more comprehensive. The first allegro was generally in a square time and of solid character; the central movement aimed at expressiveness, and the last was a quick movement of relatively light character, generally in some combination of three feet. The history of its early development seems to be wrapped in obscurity, but from the moment of its appearance it has the traits of the modern orchestral symphony, and composers very soon obtained a remarkable degree of mastery over the form. It must have first come into definite acceptance about the end of the 17th or the beginning of the 18th century; and by the middle of the latter it had become almost a matter of course. Operas, and similar works, by the most conspicuous composers of this time, in very great numbers, have the same form of overture. For instance, the two distinct versions of 'La Clemenza di Tito' by Hasse, 'Catone in Utica' by Leonardo Vinci (1728), the 'Hypermnestra,' 'Artaserse,' and others of Perez, Piccinni's 'Didone,' Jommelli's 'Betulia liberata,' Sacchini's 'Œdipus,' Galuppi's 'Il mondo alla roversa'—produced the year before Haydn wrote his first symphony—and Adam Hiller's 'Lisuart und Dariolette,' 'Die Liebe auf dem Lande,' 'Der Krieg,' etc. And if a more conclusive proof of the general acceptance of the form were required, it would be found in the fact that Mozart adopted it in his boyish operas, 'La finta semplice' and 'Lucio Silla.' With the general adoption of the form came also a careful development of the internal structure of each separate movement, and also a gradual improvement both in the combination and treatment of the instruments employed. Lully and Alessandro Scarlatti were for the most part satisfied with strings, which the

former used crudely enough, but the latter with a good deal of perception of tone and appropriateness of style; sometimes with the addition of wind instruments. Early in the 18th century several wind instruments, such as oboes, bassoons, horns, trumpets, and flutes were added, though not often all together; and they served, for the most part, chiefly to strengthen the strings and give contrasting degrees of full sound rather than contrasts of colour and tone. Equally important was the rapid improvement which took place simultaneously in internal structure; and in this case the development followed that of certain other departments of musical form. In fact the progress of the 'Sinfonia avanti l' Opera' in this respect was chiefly parallel to the development of the Clavier Sonata, which at this time was beginning to attain to clearness of outline and a certain maturity of style. It will not be necessary here to repeat what has elsewhere been discussed from different points of view in the articles on FORM, SONATA, and SUITE; but it is important to realise that in proceeding of time the form of this 'Sinfonia avanti l' Opera' did not lag behind in definition of outline and mastery of treatment; and it might be difficult to decide in which form (whether orchestral or clavier) the important detail first presents itself of defining the first and second principal sections by subjects decisively distinct. A marked improvement in various respects appears about the time when the symphony first began to be generally played apart from the opera; and the reasons for this are obvious. In the first place, as long as it was merely the appendage to a drama, less stress was laid upon it; and, what is more to the point, it is recorded that audiences were not by any means particularly attentive to the instrumental portion of the work. The description given of the behaviour of the public at some of the most important theatres in Europe in the middle of the 18th century seems to correspond to the descriptions which are given of the audience at the Italian Operas in England in the latter half of the 19th. Burney, in the account of his tour, refers to this more than once. In the first volume he says, 'The music at the theatres in Italy seems but an excuse for people to assemble together, their attention being chiefly placed on play and conversation, even during the performance of a serious opera.' In another place he describes the card-tables, and the way in which the 'people of quality' reserved their attention for a favourite air or two, or the performance of a favourite singer. The rest, including the overture, they did not regard as of much consequence, and hence the composers had but little inducement to put out the best of their powers. It may have been partly on this account that they took very little pains to connect these overtures or symphonies

with the opera, either by character or feature. They allowed it to become almost a settled principle that they should be independent in matter; and consequently there was very little difficulty in accepting them as independent instrumental pieces. It naturally followed as it did later with another form of overture. The 'Symphonies' which had more attractive qualities were played apart from the operas, in concerts; and the precedent being thereby established, the step to writing independent works on similar lines was but short; and it was natural that, as undivided attention would now be given to them, and they were no more in a secondary position in connection with the opera, composers should take more pains both in the structure and in the choice of their musical material. The Symphony had, however, reached a considerable pitch of development before the emancipation took place; and this development was connected with the progress of certain other musical forms besides the Sonata, already referred to.

It will accordingly be convenient, before proceeding farther with the direct history of the Symphony, to consider some of the more important of these early branches of Musical Art. In the early harmonic times the relationships of nearly all the different branches of composition were close. The Symphony was related even to the early Madrigals, through the 'Sonate da Chiesa,' which adopted the Canzona or instrumental version of the Madrigal as a second movement. It was also closely related to the early Fantasias, as the earliest experiments in instrumental music, in which some of the technical necessities of that department were grappled with. It was directly connected with the vocal portions of the early operas, such as airs and recitatives, and derived from them many of the mechanical forms of cadence and harmony which for a long time were a necessary part of its form. The solo Clavier Suite had also something to do with it, but not so much as might be expected. As has been pointed out elsewhere, the suite-form, being very simple in its principle, attained to definition very early, while the sonata-form, which characterised the richest period of harmonic music, was still struggling in elementary stages. The ultimate basis of the suite-form is a contrast of dance-tunes; but in the typical early Symphony the dance-tunes are almost invariably avoided. When the Symphony was expanded by the addition of the Minuet and Trio, a bond of connection seemed to be established; but still this bond was not at all a vital one, for the Minuet is one of the least characteristic elements of the suite-form proper, being clearly of less ancient lineage and type than the Allemande, Courante, Sarabande, or Gigue, or even the Gavotte and Bourrée, which were classed with it, as Intermezzi or Galan-

terien. The form of the Clavier Suite movements was in fact too inelastic to admit of such expansion and development as was required in the orchestral works, and the type did not supply the characteristic technical qualities which would be of service in their development. The position of Bach's Orchestral Suites was somewhat different; and it appears that he himself called them Overtures. Dehn, in his preface to the first edition printed, says that the separate MS. parts in the Bach archives at Hamburg, from which he took that in C, have the distinctive characteristics of the handwriting of John Sebastian, and have for title 'Ouvrerture pour 2 Violons,' etc.; and that another MS., probably copied from these, has the title 'Suite pour Orchestre.' This throws a certain light upon Bach's position. It is obvious that in several departments of instrumental music he took the French for his models rather than the Italians. In the Suite he followed Couperin, and in the Overture he also followed French models. These therefore appear as attempts to develop an independent orchestral work analogous to the Symphony, upon the basis of a form which had the same reason for existence and the same general purpose as the Italian Overture, but a distinctly different general outline. Their chief connection with the actual development of the modern symphony lies in the treatment of the instruments; for all experiments, even on different lines, if they have a common quality or principle, must react upon one another in those respects.

Another branch of art which had close connection with the early symphonies was the Concerto. Works under this name were not by any means invariably meant to be show pieces for solo instruments, as modern concertos are; and sometimes the name was used as almost synonymous with symphony. The earliest concertos seem to have been works in which groups of 'solo' and 'ripieno' instruments were used, chiefly to obtain contrasts of fulness of tone. For instance, a set of six concertos by Alessandro Scarlatti, for two violins and violoncello, 'soli,' and two violins, tenor, and bass, 'ripieni,' present no distinction of style between one group and the other. The accompanying instruments for the most part merely double the solo parts, and leave off either to lessen the sound here and there, or because the passages happen to go a little higher than usual, or to be a little difficult for the average violin-players of that time. When the intention is to vary the quality of sound as well, the element of what is called instrumentation is introduced, and this is one of the earliest phases of that element which can be traced in music. The order of movements and the style of them are generally after the manner of the *Sonata da Chiesa*, and therefore do not present any close analogy with the subject of this

article. But very soon after the time of Corelli and Alessandro Scarlatti the form of the Italian overture was adopted for concertos, and about the same time they began to show traces of becoming show-pieces for great performers. Allusions to the performance of concertos by great violin-players in the churches form a familiar feature in the musical literature of the 18th century, and the three-movement form (to all intents exactly like that of the symphonies) seems to have been adopted early. This evidently points to the fact that this form appealed to the instincts of composers generally, as the most promising for free expression of their musical thoughts. It may seem curious that J. S. Bach, who followed French models in some important departments of instrumental music, should exclusively have followed Italian models in this. But in reality it appears to have been a matter of chance with him; he always followed the best models which came to his hand. In this department the Italians excelled; and Bach therefore followed them, and left the most important early specimens of this kind remaining—almost all in the three-movement form, which was becoming the set order for symphonies. Setting aside those specially imitated from Vivaldi, there are at least twenty concertos by him for all sorts of solo instruments and combinations of solo instruments in this same form. It cannot therefore be doubted that some of the development of the symphony-form took place in this department. But Bach never to any noticeable extent yielded to the tendency to break the movements up into sections with corresponding tunes; and this distinguishes his work in a very marked manner from that of the generation of composers who followed him. His art belongs in reality to a different stratum from that which produced the greater forms of abstract instrumental music. It is probable that his form of art could not, without some modification, have produced the great orchestral symphonies. In order to get to these, composers had to go to a different, and for some time a decidedly lower, level. It was much the same process as had been gone through before. After Palestrina a backward move was necessary to make it possible to arrive at the art of Bach and Handel. After Bach men had to take up a lower line in order to get to Beethoven. In the latter case it was necessary to go through the elementary stages of defining the various contrasting sections of a movement, and finding that form of harmonic treatment which admitted the great effects of colour or varieties of tone in the mass, as well as in the separate lines of the counterpoint. Bach's position was so immensely high that several generations had to pass before men were able to follow on his lines and adopt his principles in harmonic music. The generation that followed him showed scarcely any trace of

his influence. Even before he had passed away the new tendencies of music were strongly apparent, and much of the elementary work of the modern sonata-form of art had been done on different lines from his own.

The 'Sinfonia avanti l'Opera' was clearly by this time sufficiently independent and complete to be appreciated without the opera, and without either name or programme to explain its meaning; and within a very short period the demand for these sinfonias became very great. Burney's tours in search of materials for his *History*, in France, Italy, Holland, and Germany, were made in 1770 and 1772, before Haydn had written any of his greater symphonies, and while Mozart was still a boy. His allusions to independent 'symphonies' are very frequent. Among those whose works he mentions with most favour are Stamitz, Emanuel Bach, Christian Bach, and Abel. Works of the kind by these composers and many others of note are to be seen in great numbers in sets of part-books in the British Museum. These furnish most excellent materials for judging of the status of the Symphony in the early stages of its independent existence. The two most important points which they illustrate are the development of instrumentation and the definition of form. They appear to have been generally written in eight parts. Most of them are scored for two violins, viola, and bass; two hautboys, or two flutes, and two 'cors de chasse.' This is the case in the six symphonies of op. 3 of John Christian Bach; the six of Abel's op. 10, the six of Stamitz's op. 9, op. 13, and op. 16; also in a set of 'Overtures in 8 parts' by Arne, which must have been early in the field, as the licence from George II., printed in full at the beginning of the first violin part, is dated January 17 $\frac{1}{2}$. The same orchestration is found in many symphonies by Galuppi, Ditters, Schwindl, and others. Wagenseil, who must have been the oldest of this group of composers (having been born in the 17th century, within six years after Handel, Scarlatti, and Bach), wrote several quite in the characteristic harmonic style, 'à 4 parties obligées avec Cors de Chasse ad libitum.' The treatment of the instruments in these early examples is rather crude and stiff. The violins are almost always playing, and the hautboys or flutes are only used to reinforce them at times as the 'ripieni' instruments did in the early concertos, while the horns serve to hold on the harmonies. The first stages of improvement are noticeable in such details as the independent treatment of the strings. In the 'symphonies before the opera' the violas were cared for so little that in many cases¹ not more than half-a-dozen bars are written in, all the rest being merely

'col basso.' As examples of this in works of more or less illustrious writers may be mentioned the 'Sinfonias' to Jommelli's 'Passione' and 'Betulia Liberata,' Sacchini's 'Œdipus,' and Sarti's 'Giulio Sabino.' One of the many honours attributed to Stamitz by his admiring contemporaries was that he made the violas independent of the basses. This may seem a trivial detail, but it is only by such details, and the way in which they struck contemporary writers, that the character of the gradual progress in instrumental composition can now be understood.

The general outlines of the form were extremely regular. The three movements as above described were almost invariable, the first being a vigorous broad allegro, the second the sentimental slow movement, and the third the lively vivace. The progress of internal structure is at first chiefly noticeable in the first movement. In the early examples this is always condensed as much as possible, the balance of subject is not very clearly realisable, and there is hardly ever a double bar or repeat of the first half of the movement. The divisions of key, the short 'working-out' portion, and the recapitulation, are generally present, but not pointedly defined. Examples of this condition of things are supplied by some MS. symphonies by Paradisi in the Fitzwilliam Museum at Cambridge, which in other respects possess excellent and characteristically modern traits. The first thing attained seems to have been the relative definition and balance of the two subjects. In Stamitz, Abel, J. C. Bach, and Wagenseil, this is already commonly met with. The following examples from the first movement of the fifth symphony of Stamitz's op. 9 illustrate both the style and the degree of contrast between the two principal subjects.

1st subject.

2nd subject.

¹ It is notorious that Mozart gave fuller parts to the second violin because of the incompetence of the viola-players.

The style is a little heavy, and the motion constrained, but the general character is solid and dignified. The last movements of this period are curiously suggestive of some familiar examples of a maturer time; very gay and obvious, and very definite in outline. The following is very characteristic of Abel:—

It is a noticeable fact in connection with the genealogy of these works, that they are almost as frequently entitled 'Overture' as 'Symphony'; sometimes the same work is called by the one name outside and the other in; and this is the case also with some of the earlier and slighter symphonies of Haydn, which must have made their appearance about this period. One further point which it is of importance to note is that in some of Stamitz's symphonies the complete form of the mature period is found. One in D is most complete in every respect. The first movement is Allegro with double bars and repeats in regular binary form; the second is an Andante in G, the third a Minuet and Trio, and the fourth a Presto. Another in E \flat (which is called No. 7 in the part-books) and another in F (not definable) have also the Minuet and Trio. A few others by Schwindl and Ditters have the same, but it is impossible to get even approximately to the date of their production, and therefore little inference can be framed upon the circumstance, beyond the fact that composers were beginning to recognise the fourth movement as a desirable ingredient.

Another composer who precedes Haydn in time as well as in style is Emanuel Bach. He was his senior in years, and began writing symphonies in 1741, when Haydn was only nine years old. His most important symphonies

were produced in 1776; while Haydn's most important examples were not produced till after 1790. In style Emanuel Bach stands singularly alone, at least in his finest examples. It looks almost as if he purposely avoided the form which by 1776 must have been familiar to the musical world. It has been shown that the binary form was employed by some of his contemporaries in their orchestral works, but he seems determinedly to avoid it in the first movements of the works of that year. His object seems to have been to produce striking and clearly outlined passages, and to balance and contrast them one with another according to his fancy, and with little regard to any systematic distribution of the successions of key. The boldest and most striking subject is the first of the Symphony in D:—

The opening passages of that in E \flat are hardly less emphatic. They have little connection with the tendencies of his contemporaries, but seem in every respect an experiment on independent lines, in which the interest depends upon the vigour of the thoughts and the unexpected turns of the modulations; and the result is certainly rather fragmentary and disconnected. The slow movement is commonly connected with the first and last either by a special transitional passage, or by a turn of modulation and a half-close. It is short and dependent in its character, but graceful and melodious. The last is much more systematic in structure than the first; sometimes in definite binary form, as was the case with the early violin sonatas. In orchestration and general style of expression these works seem immensely superior to the other early symphonies which have been described. They are scored for horns, flutes, oboi, fagotto, strings, with a figured bass for 'cembalo,' which in the symphonies previously noticed does not always appear. There is an abundance of unison

and octave passages for the strings, but there is also good free writing, and contrasts between wind and strings; the wind being occasionally left quite alone. All the instruments come in occasionally for special employment, and considering the proportions of the orchestras of the time Bach's effects must have been generally clear and good. The following is a good specimen of his scoring of an ordinary full passage:—

It has sometimes been said that Haydn was chiefly influenced by Emanuel Bach, and Mozart by John Christian Bach. At the present time, and in relation to symphonies, it is easier to understand the latter case than the former. In both cases the influence is more likely to be traced in clavier works than in those for orchestra. For Haydn's style and treatment of form bear far more resemblance to most of the other com-

posers whose works have been referred to, than to Emanuel Bach. There are certain kinds of forcible expression and ingenious turns of modulation which Haydn may have learnt from him; but their best orchestral works seem to belong to quite distinct families. Haydn's first symphony was written in 1759 for Count Morzin. Like many other of his early works it does not seem discoverable in print in England. But it is said by Pohl,¹ who must have seen it somewhere in Germany, to be 'a small work in three movements for two violins, viola, bass, two oboes, and two horns'; from which particulars it would appear to correspond exactly in externals to the examples above described of Abel's and J. C. Bach's, etc. In the course of the next few years he added many more; most of which appear to have been slight and of no great historical importance, while the few which present peculiarities are so far isolated in those respects that they do not throw much light upon the course of his development, or upon his share in building up the art-form of the Symphony. Of such a kind is the movement (dramatic in character, and including long passages of recitative) in the Symphony in C, which he wrote as early as 1761.² For, though this kind of movement is found in instrumental works of an earlier period, its appearance in such a manner in a

symphony is too rare to have any special historical bearings. The course of his development was gradual and regular. He seems to have been content with steadily improving the edifice of his predecessors, and with few exceptions to have followed their lines. A great deal is frequently attributed to his connection with the complete musical establishment which Prince Esterházy set up at his great palace at Esterházy; where Haydn certainly had opportunities which have been the lot of scarcely any other composer who ever lived. He is described as making experiments in orchestration, and ringing the bell for the band to come and try them; and, though this may not be absolutely true in fact, there can scarcely be a doubt that the very great improvements which he effected in every department of orchestration may to a great extent be attributed to the facilities for testing his works which he enjoyed. At the same time the really important portion of his compositions were not produced till his patron, Prince Nicolaus Esterházy, was dead, and the musical establishment broken up; nor, it must be remembered, till after that strange and important episode in Haydn's life, the rapid flitting of Mozart across the scene. When Haydn wrote his first symphony, Mozart was only three years old; and Mozart died in the very year in which the famous Salomon concerts in London, for which Haydn wrote nearly all his finest symphonies, began.

Mozart's work, therefore, comes between Haydn's lighter period and his greatest achievements; and his symphonies are in some respects prior to Haydn's, and certainly had an effect upon his later works of all kinds.

According to Köchel, Mozart wrote altogether forty-nine symphonies. The first, in E \flat , was written in London in 1764, when he was eight years old, and only five years after Haydn wrote his first. It was on the same pattern as those which have been fully described above, being in three movements and scored for the usual set of instruments—namely, two violins, viola, bass, two oboes, and two horns. Three more followed in close succession, in one of which clarinets are introduced instead of oboes, and a bassoon is added to the usual group of eight instruments. In these works striking originality of purpose or style is hardly to be looked for, and it was not for some time that Mozart's powers in instrumental music reached a pitch of development which is historically important; but it is nevertheless astonishing to see how early he developed a free and even rich style in managing his orchestral resources. With regard to the character of these and all but a few of the rest it is necessary to keep in mind that a symphony at that time was a very much less important matter than it became fifty years later. The manner in which symphonies were poured out, in sets of six and otherwise, by numerous composers during the latter half of the 18th century, puts utterly out of the question the loftiness of aim and purpose which has become a necessity since the early years of the 19th century. They were all rather slight works on familiar lines, with which for the time being composers and public were alike quite content; and neither Haydn nor Mozart in their early specimens seem to have specially exerted themselves. The general survey of Mozart's symphonies presents a certain number of facts which are worth noting for their bearing upon the history of this form of art. The second symphony he wrote had a minuet and trio; but it is hardly possible that he can have regarded this as an important point, since he afterwards wrote seventeen others without them; and these spread over the whole period of his activity, for even in that which he wrote at Prague in 1786, and which is last but three in the whole series, the minuet and trio are absent. Besides this fact, which at once connects them with the examples by other composers previously discussed, there is the yet more noticeable one that more than twenty of the series are written for the same peculiar little group of instruments, viz. the four strings, a pair of oboes or flutes, and a pair of horns. Although he used clarinets so early as his third symphony, he never employed them again till his thirty-ninth, which was written for Paris, and is almost more fully scored than any. In

the whole forty-nine, in fact, he only used clarinets five times, and in one of these cases (viz. the well-known G minor) they were added after he had finished the score. Even bassoons are not common; the most frequent addition to the little nucleus of oboes or flutes and horns being trumpets and drums. The two which are most fully scored are the Parisian, in D, just alluded to, which was written in 1778, and that in E \flat , which was written in Vienna in 1788, and stands first in the famous triad. These facts explain to a certain extent how it was possible to write such an extraordinary number in so short a space of time. Mozart's most continuously prolific period in this branch of art seems to have been when he had returned to Salzburg in 1771; for between July in that year and the beginning of 1773, it appears to be proved that he produced no fewer than fourteen. But this feat is fairly surpassed in another sense by the production of the last three in three successive months, June, July, and August 1788; since the musical calibre of these is so immensely superior to that of the earlier ones.

One detail of comparison between Mozart's ways and Haydn's is curious. Haydn began to use introductory adagios very early, and used them so often that they became quite a characteristic feature in his plan. Mozart, on the other hand, did not use one until his 44th Symphony, written in 1783. What was the origin of Haydn's employment of them is uncertain. The causes that have been suggested are not altogether satisfactory. In the orthodox form of symphony, as written by the numerous composers of his early days, the opening adagio is not found. He may possibly have observed that it was a useful factor in a certain class of overtures, and then have used it as an experiment in symphonies, and finding it answer, may have adopted the expedient generally in succeeding works of the kind. It seems likely that Mozart adopted it from Haydn, as its first appearance (in the symphony which is believed to have been composed at Linz for Count Thun) coincides with the period in which he is considered to have been first strongly influenced by Haydn.

The influence of these two great composers upon one another is extremely interesting and curious, more especially as it did not take effect till comparatively late in their artistic careers. They both began working in the general direction of their time, under the influences which have been already referred to. In the department of symphony each was considerably influenced after a time by a special circumstance of his life; Haydn by the appointment to Esterházy before alluded to, and the opportunities it afforded him of orchestral experiment; and Mozart by his stay at Mannheim in 1777. For it appears most likely that the superior abilities

of the Mannheim orchestra for dealing with purely instrumental music, and the traditions of Stamitz, who had there effected his share in the history of the Symphony, opened Mozart's eyes to the possibilities of orchestral performance, and encouraged him to a freer style of composition and more elaborate treatment of the orchestra than he had up to that time attempted. The Mannheim hand had in fact been long considered the finest in Europe; and in certain things, such as attention to *nuances* (which in early orchestral works had been looked upon as either unnecessary or out of place), they and their conductors had been important pioneers; and thus Mozart must certainly have had his ideas on such heads a good deal expanded. The qualities of the symphony produced in Paris early in the next year were probably the first-fruits of these circumstances; and it happens that while this symphony is the first of his which has maintained a definite position among the important landmarks of art, it is also the first in which he uses orchestral forces approaching to those commonly employed for symphonies since the latter part of the 18th century.

Both Haydn and Mozart, in the course of their respective careers, made decided progress in managing the orchestra, both as regards the treatment of individual instruments, and the distribution of the details of musical interest among them. It has been already pointed out that one of the earliest expedients by which contrast of effect was attempted by writers for combinations of instruments, was the careful distribution of portions for 'solo' and 'ripieno' instruments, as illustrated by Scarlatti's and later concertos. In J. S. Bach's treatment of the orchestra the same characteristic is familiar. The long duets for oboes, flutes, or bassoons, and the solos for horn or violin, or viola da gamba, which continue throughout whole recitatives or arias, all have this same principle at bottom. Composers had still to learn the free and yet well-balanced management of their string forces, and to attain the mean between the use of wind instruments merely to strengthen the strings and their use as solo instruments in long independent passages. In Haydn's early symphonies the old traditions are most apparent. The balance between the different forces of the orchestra is as yet both crude and obvious. In the symphony called 'Le Matin' for instance, which appears to have been among the earliest, the second violins play with the first, and the violas with the basses to a very marked extent—in the first movement almost throughout. This first movement, again, begins with a solo for flute. The slow movement, which is divided into *adagio* and *andante*, has no wind instruments at all, but there is a violin solo throughout the middle portion. In the minuet a contrast is attained by a long passage for wind band alone (as in J. S. Bach's second *Bourrée* to the

'Overture' in C major); and the trio consists of a long and elaborate solo for bassoon. Haydn early began experiments in various uses of his orchestra, and his ways of grouping his solo instruments for effect are often curious and original. C. F. Pohl, in his life of him, prints from the MS. parts a charming slow movement from a B \flat symphony, which was probably written in 1766 or 1767. It illustrates in a singular way how Haydn at first endeavoured to obtain a special effect without ceasing to conform to familiar methods of treating his strings. The movement is scored for first and second violins, violas, *solo violoncello* and bass, all 'con sordini.' The first and second violins play in unison throughout, and the violoncello plays the tune with them an octave lower, while the violas play in octaves with the bass all but two or three bars of cadence; so that in reality there are scarcely ever more than two parts playing at a time. The following example will show the style:—

Violini 1 & 2.

p

Viola.

Violoncello Solo.

Basso.

Towards a really free treatment of his forces he seems, however, to have been led on insensibly and by very slow degrees. For over twenty years of symphony-writing the same limited treatment of strings and the same kind of solo passages are commonly to be met with. But there is a growing tendency to make the wind and the lower and inner strings more and more independent, and to individualise the style of each within proportionate bounds. A fine symphony (in E minor, 'Letter I'), which appears to date from 1772, is a good specimen of Haydn's intermediate stage. The strings play almost incessantly throughout, and the wind either doubles the string parts to enrich and reinforce them, or else has long holding notes while the strings play characteristic figures. The passage from the last movement, given on the next page, will serve to illustrate pretty clearly the stage of orchestral expression to which Haydn had at that time arrived.

In the course of the following ten years the progress was slow but steady. No doubt many other composers were writing symphonies besides Haydn and Mozart, and were, like them, improving that branch of art. Unfortunately the difficulty of fixing the dates of their productions

is almost insuperable; and so their greater representatives come to be regarded, not only as giving an epitome of the history of the epoch, but as comprising it in themselves. Mozart's first specially notable symphony falls in 1778. This was the one which he wrote for Paris after his experiences at Mannheim; and some of his Mannheim friends who happened to be in Paris with him assisted at the performance. It is in almost every respect a very great advance upon Haydn's E minor Symphony, just quoted. The treatment of the instruments is very much freer, and more individually characteristic. It marks an important step in the transition from the kind of symphony in which the music appears to have been conceived almost entirely for violins, with wind subordinate, except in special solo passages, to the kind in which the original conception in respect of subjects, episodes, and development, embraced all the forces, including the wind instruments. The first eight bars of Mozart's symphony are sufficient to illustrate the nature of the artistic tendency. In the firm and dignified beginning of the principal subject, the strings, with flutes and bassoons, are all in unison for three bars, and a good body of wind instruments gives the full chord. Then the upper strings are left alone for a couple of bars in octaves, and are accompanied in their short closing phrase by an independent full chord of wind instruments, *piano*. This chord is repeated in the same form of rhythm as that which marks the first bars of the principal subject, and has therefore at once musical sense and relevance, besides supplying the necessary full harmony. In the subsidiary subject by which the first section is carried on, the quick lively passages of the strings are accompanied by short figures for flute and horns, with their own independent musical significance. In the second subject proper, which is derived from this subsidiary, an excellent balance of colour is obtained by pairs of wind instruments in octaves, answering with an independent and very characteristic phrase

of their own the group of strings which give out the first part of the subject. The same well-balanced method is observed throughout. In the working out of this movement almost all the instruments have something special and relevant of their own to do, so that it is made to seem as if the conception were exactly apportioned to the forces which were meant to utter it. The same criticisms apply to all the rest of the symphony. The slow movement has beautiful independent figures and phrases for the wind instruments, so interwoven with the body of the movement that they supply necessary elements of colour and fullness of harmony, without appearing either as definite solos or as meaningless holding notes. The fresh and merry last movement has much the same characteristics as the first in the matter of instrumental utterance, and in its working-out section all the forces have, if anything, even more independent work of their own to do, while still supplying their appropriate ingredients to the sum total of sound.

The succeeding ten years saw all the rest of the work Mozart was destined to do in the department of symphony; much of it showing in turn an advance on the Paris Symphony, inasmuch as the principles there shown were worked out to greater fullness and perfection, while the musical spirit attained a more definite richness, and escaped farther from the formalism which characterises the previous generation. Among these symphonies the most important are the following: a considerable one (in E \flat) composed at Salzburg in 1780; the 'Haffner' (in D), which was a modification of a serenade, and had originally more than the usual group of movements; the 'Linz' Symphony (in C; 'No. 6'); and the last four, the crown of the whole series. The first of these (in D major) was written for Prague in 1786, and was received there with immense favour in Jan. 1787. It appears to be far in advance of all its predecessors in freedom and clearness of instrumentation, in the breadth and musical significance of the subjects, and in richness and balance of form. It is one of the few of Mozart's which open with an adagio, and that too of unusual proportions; but it has no minuet and trio. This symphony was in its turn eclipsed by the three great ones in E flat, G minor, and C, which were composed at Vienna in June, July, and August 1788. These symphonies are almost the first in which certain qualities of musical expression and a certain method in their treatment stand prominent in the manner which was destined to become characteristic of the great works of the early part of the 19th century. Mozart having mastered the principle upon which the mature art-form of symphony was to be attacked, had greater freedom for the expression of his intrinsically musical ideas, and could emphasise more freely and consistently

the typical characteristics which his inspiration led him to adopt in developing his ideas. It must not, however, be supposed that this principle is to be found for the first time in these works. They find their counterparts in works of Haydn's of a much earlier date; only, inasmuch as the art-form was then less mature, the element of formalism is too strong to admit of the musical or poetical intention being so clearly realised. It is of course impossible to put into words with certainty the inherent characteristics of these or any other later works on the same lines; but that they are felt to have such characteristics is indisputable, and their perfection as works of art, which is so commonly insisted on, could not exist if it were not so. Among the many writers who have tried in some way to describe them, probably the best and most responsible is Otto Jahn. Of the first of the group (that in *E♭*), he says, 'We find the expression of perfect happiness in the charm of euphony' which is one of the marked external characteristics of the whole work. 'The feeling of pride in the consciousness of power shines through the magnificent introduction, while the Allegro expresses the purest pleasure, now in frolicsome joy, now in active excitement, and now in noble and dignified composure. Some shadows appear, it is true, in the Andante, but they only serve to throw into stronger relief the mild serenity of a mind communing with itself and rejoicing in the peace which fills it. This is the true source of the cheerful transport which rules the last movement, rejoicing in its own strength and in the joy of being.' Whether this is all perfectly true or not is of less consequence than the fact that a consistent and uniform style and object can be discerned through the whole work, and that it admits of an approximate description in words, without either straining or violating familiar impressions.

The second of the great symphonic trilogy—that in *G* minor—has a still clearer meaning. The contrast with the *E♭* is strong, for in no symphony of Mozart's is there so much sadness and regretfulness. This element also accounts for the fact that it is the most modern of his symphonies, and shows most human nature. E. T. A. Hoffmann (writing in a spirit very different from that of Jahn) says of it, 'Love and melancholy breathe forth in purest spirit tones; we feel ourselves drawn with inexpressible longing towards the forms which beckon us to join them in their flight through the clouds to another sphere.' Jahn agrees in attributing to it a character of sorrow and complaining; and there can hardly be a doubt that the tonality as well as the style, and such characteristic features as occur incidentally, would all favour the idea that Mozart's inspiration took a sad cast, and maintained it so far throughout; so that, notwithstanding the formal

passages which occasionally make their appearance at the closes, the whole work may without violation of probability receive a consistent psychological explanation. Even the orchestration seems appropriate from this point of view, since the prevailing effect is far less soft and smooth than that of the previous symphony. A detail of historical interest in connection with this work is the fact that Mozart originally wrote it without clarinets, and added them afterwards for a performance at which it may be presumed they happened to be specially available. He did this by taking a separate piece of paper and rearranging the oboe parts, sometimes combining the instruments and sometimes distributing the parts between the two, with due regard to their characteristic styles of utterance.

The last of Mozart's symphonies has so obvious and distinctive a character throughout, that popular estimation has accepted the definite name 'Jupiter' as conveying the prevalent feeling about it. In this there is far less human sentiment than in the *G* minor. In fact, Mozart appears to have aimed at something lofty and self-contained, and therefore precluding the shade of sadness which is an element almost indispensable to strong human sympathy. When he descends from this distant height, he assumes a cheerful and sometimes playful vein, as in the second principal subject of the first movement, and in the subsidiary or cadence subject that follows it. This may not be altogether in accordance with what is popularly meant by the name 'Jupiter,' though that deity appears to have been capable of a good deal of levity in his time; but it has the virtue of supplying admirable contrast to the main subjects of the section; and it is so far in consonance with them that there is no actual reversal of feeling in passing from one to the other. The slow movement has an appropriate dignity which keeps it in character, and reaches, in parts, a considerable degree of passion, which brings it nearer to human sympathy than the other movements. The Minuet and the Trio again show cheerful serenity, and the last movement, with its elaborate fugal treatment, has a vigorous austerity, which is an excellent balance to the character of the first movement. The scoring, especially in the first and last movements, is fuller than is usual with Mozart, and produces effects of strong and clear sound; and it is also admirably in character with the spirit of dignity and loftiness which seems to be aimed at in the greater portion of the musical subjects and figures. In these later symphonies Mozart certainly reached a far higher pitch of art in the department of instrumental music than any hitherto arrived at. The characteristics of his attainments may be described as a freedom of style in the ideas, freedom in the treatment of the various parts of the score, and independence

and appropriateness of expression in the management of the various groups of instruments employed. In comparison with the works of his predecessors, and with his own and Haydn's earlier compositions, there is throughout a most remarkable advance in vitality. The distribution of certain cadences and passages of *tutti* still appear to modern ears formal; but compared with the immature formalism of expression, even in principal ideas, which was prevalent twenty or even ten years earlier, the improvement is immense. In such structural elements as the development of the ideas, the concise and energetic flow of the music, the distribution and contrast of instrumental tone, and the balance and proportion of sound, these works are generally held to reach a pitch almost unsurpassable from the point of view of technical criticism. Mozart's intelligence and taste, dealing with thoughts as yet undisturbed by strong or passionate emotion, attained a degree of perfection in the sense of pure and directly intelligible art which later times can scarcely hope to see approached.

Haydn's symphonies up to this time cannot be said to equal Mozart's in any respect; though they show a considerable improvement on the style of treatment and expression in the 'Trauer' or the 'Farewell' Symphonies. Of those which are better known of about this date are 'La Poule' and 'Letter V,' which were written (both for Paris) in 1786 and 1787. 'Letter Q,' or the 'Oxford' Symphony, which was performed when Haydn received the degree of Doctor of Music from that university, dates from 1788, the same year as Mozart's great triad. 'Letter V' and 'Letter Q' are in his mature style, and thoroughly characteristic in every respect. The orchestration is clear and fresh, though not so sympathetic nor so elastic in its variety as Mozart's; and the ideas, with all their geniality and directness, are not up to his own highest standard. It is the last twelve, which were written for Salomon after 1790, which have really fixed Haydn's high position as a composer of symphonies; these became so popular as practically to supersede the numerous works of all his predecessors and contemporaries except Mozart, to the extent of causing them to be almost completely forgotten. This is owing partly to the high pitch of technical skill which he attained, partly to the freshness and geniality of his ideas, and partly to the vigour and daring of harmonic progression which he manifested. He and Mozart together enriched this branch of art to an extraordinary degree, and towards the end of their lives began to introduce far deeper feeling and earnestness into the style than had been customary in early works of the class. The average orchestra had increased in size, and at the same time had gained a better balance of its component elements. Instead of the customary little group of strings and four wind instruments, it had

come to comprise, besides the strings, two flutes, two oboes, two bassoons, two horns, two trumpets, and drums. To these were occasionally added two clarinets, as in Haydn's last three (the two in D minor and one in E \flat), and in one movement of the Military Symphony. Neither Mozart nor Haydn ever used trombones in symphonies; but uncommon instruments were sometimes employed, as in the 'Military,' in which Haydn used a big drum, a triangle and cymbals. In his latest symphonies Haydn's treatment of his orchestra agrees in general with the description already given of Mozart's. The bass has attained a free motion of its own; the violas rarely cling in a dependent manner to it, but have their own individual work to do, and the same applies to the second violins, which no longer so often appear merely 'col lmo.' The wind instruments fill up and sustain the harmonies as completely as in former days; but they cease merely to hold long notes without characteristic features, or slavishly to follow the string parts whenever something livelier is required. They may still play a great deal that is mere doubling, but there is generally method in it; and the musical ideas they express are in a great measure proportioned to their characters and style of utterance. Haydn was rather fond of long passages for wind alone, as in the slow movement of the Oxford Symphony, the opening passage of the first allegro of the Military Symphony, and the 'working out' of the Symphony in C, No. 1 of the Salomon set. Solos in a tune-form for wind instruments are also rather more common than in Mozart's works, and in many respects the various elements which go to make up the whole are less assimilated than they are by Mozart. The tunes are generally more definite in their outlines, and stand in less close relation with their context. It appears as if Haydn always retained to the last a strong sympathy with simple people's-tunes; the character of his minuets and trios, and especially of his finales, is sometimes strongly defined in this respect; but his way of expressing them within the limits he chose is extraordinarily finished and acute. It is possible that, as before suggested, he got his taste for surprises in harmonic progression from C. P. E. Bach. His instinct for such things, considering the age he lived in, was very remarkable. The passage on the next page, from his Symphony in C, just referred to, illustrates several of the above points at once.

The period of Haydn and Mozart is in every respect the principal crisis in the history of the Symphony. When they came upon the scene, it was not regarded as a very important form of art. In the good musical centres of those times—and there were many—there was a great demand for symphonies; but the bands for which they were written were small, and appear from the most natural inferences not to have

been very efficient or well organised. The standard of performance was evidently rough, and composers could neither expect much attention to *pianos* and *fortes*, nor any ability to grapple with technical difficulties among the players of bass instruments or violas. The audiences were critical in the one sense of requiring good healthy workmanship in the writing of the pieces—in fact much better than they would demand in the present day; but with regard to deep meaning, refinement, poetical

intention, or originality, they appear to have cared very little. They wanted to be healthily pleased and entertained, not stirred with deep emotion; and the purposes of composers in those days were consequently not exalted to any high pitch, but were limited to a simple and unpretentious supply, in accordance with demand and opportunity. Haydn was influenced by these considerations till the last. There is always more fun and gaiety in his music than pensiveness or serious reflection. But in developing

The image displays a musical score for a symphony, likely by Haydn, featuring a woodwind and string ensemble. The score is organized into two systems of staves. The first system includes staves for Flutes, Oboe, Fagotti (Bassoons), Violins 1 & 2, Viola, and Celli e Bassi (Cellos and Double Basses). The second system continues with Flutes, Oboe, Violins 1 & 2, and Celli e Bassi, with a Viola staff also present. The notation includes various musical symbols such as notes, rests, and dynamic markings like *p* (piano), *f* (forte), and *sf* (sforzando). There are also articulation marks like accents and slurs. The bottom of the page is marked with "etc." indicating the score continues.

the technical part of expression, in proportioning the means to the end, and in organising the forces of the orchestra, what he did was of the utmost importance. It is, however, impossible to apportion the value of the work of the two masters. Haydn did a great deal of important and substantial work before Mozart came into prominence in the same field. But after the first great mark had been made by the Paris Symphony, Mozart seemed to rush to his culmination; and in the last four of his works reached a style which appears richer, more sympathetic, and more complete than anything Haydn could attain to. Then, again, when he had passed

away, Haydn produced his greatest works. Each composer had his distinctive characteristics, and each is delightful in his own way; but Haydn would probably not have reached his highest development without the influence of his more richly gifted contemporary; and Mozart for his part was undoubtedly very much under the influence of Haydn at an important part of his career. The best that can be said by way of distinguishing their respective shares in the result is that Mozart's last symphonies introduced an intrinsically musical element which had before been wanting, and showed a supreme perfection of actual art in their structure; while

Haydn in the long series of his works cultivated and refined his own powers to such an extent that when his last symphonies had made their appearance, the status of the symphony was raised beyond the possibility of a return to the old level. In fact he gave this branch of art a stability and breadth which served as the basis upon which the art of succeeding generations appears to rest; and the simplicity and clearness of his style and structural principles supplied an intelligible model for his successors to follow.

One of the most important of the contemporaries of Haydn and Mozart in this department of art was F. J. Gossec. He was born in 1733, one year after Haydn, and lived like him to a good old age. His chief claim to remembrance is the good work which he did in improving the standard of taste for instrumental music in France. According to Fétis such things as instrumental symphonies were absolutely unknown in Paris before 1754, in which year Gossec published his first, five years before Haydn's first attempt. Gossec's work was carried on most effectually by his founding, in 1770, the 'Concert des Amateurs,' for whom he wrote his most important works. He also took the management of the famous Concerts Spirituels, with Gaviniés and Leduc, in 1773, and furthered the cause of good instrumental music there as well. The few symphonies of his to be found in this country are of the same calibre, and for the same groups of instruments, as those of J. C. Bach, Abel, etc., already described; but Fétis attributes importance to him chiefly because of the way in which he extended the dimensions and resources of the orchestra. His Symphony in D, No. 21, written soon after the founding of the Concert des Amateurs, was for a full set of strings, flutes, oboes, clarinets, bassoons, horns, trumpets, and drums; and this was doubtless an astonishing force to the Parisians, accustomed as they had been to regard the compositions of Lully and Rameau as the best specimens of instrumental music. But it is clear from other indications that Gossec had considerable ideas about the ways in which instrumental music might be improved, analogous on a much smaller scale to the aspirations and attempts of Berlioz at a later date. Not only are his works carefully marked with *pianos* and *fortes*, but in some (as the Symphonies of op. xii.) there are elaborate directions as to how the movements are to be played. Some of these are curious. For instance, over the first violin part of the slow movement of the second symphony is printed the following: 'La différence du Fort au Doux dans ce morceau doit être excessive, et le mouvement modéré, à l'aise, qu'il semble se jouer avec la plus grande facilité.' Nearly all the separate movements of this set have some such directions, either longer or shorter; the inference from which is that

Gossec had a strong idea of expression and style in performance, and did not find his bands very easily led in these respects. The movements themselves are on the same small scale as those of J. C. Bach, Abel, and Stamitz; and very rarely have the double bar and repeat in the first movements, though these often make their appearance in the finales. The style is to a certain extent individual; not so robust or so full as that of Bach or Stamitz, but not without attractiveness. As his works are very difficult to get sight of, the following quotation from the last movement of a symphony in B \flat will serve to give some idea of his style and manner of scoring:—

Allegro ballabile.

Oboe.
Horn in E \flat .
Violini 1 & 2.
Viola.
Cello e Basso.

etc.

etc.

Another composer of symphonies, who is often heard of in juxtaposition with Haydn and Mozart, and sometimes as being preferred to them by the audiences of the time, is Gyrowetz. His symphonies appear to be on a larger scale than those of the prior generation of composers of second rank like himself. A few of them are occasionally to be met with in collections of 'Periodical overtures,' 'symphonies,' etc., published in separate orchestral parts. One in C, scored for small orchestra, has an introductory

Adagio, an Allegro of about the dimensions of Haydn's earlier first movements, with double bar in the middle; then an Andante *con sordini* (the latter a favourite device in central slow movements); then a Minuet and Trio, and, to end with, a Rondo in 2-4 time, Allegro non troppo. Others, in E♭ and B♭, have much the same distribution of movements, but without the introductory Adagio. The style of them is rather mild and complacent, and not approaching in any way the interest or breadth of the works of his great contemporaries; but the subjects are clear and vivacious, and the movements seem fairly developed. Other symphony writers, who had vogue and even celebrity about this time and a little later, such as Krommer (beloved by Schubert), the Rombergs, and Eberl (at one time preferred to Beethoven), require no more than passing mention. They certainly furthered the branch of art very little, and were so completely extinguished by the exceptionally great writers who came close upon one another at that time, that it is even difficult to find traces of them.

The greatest of all masters of the Symphony followed so close upon Haydn, that there is less of a gap between the last of Haydn's Symphonies and his first than there was later between some of his own. Haydn's last was probably written in 1795. When Beethoven wrote his first cannot be ascertained; sketches for the Finale are found as early as the year last mentioned; but it was not actually produced in public till April 2, 1800. Like Schumann and Brahms in later days, he did not turn his attention to this branch of composition till comparatively late. The opus-number of his first symphony is 21. It is preceded by eleven pianoforte sonatas, several works for pianoforte combined with other instruments, the well-known Septuor in E♭, and several chamber compositions for strings. So that by the time he came to attacking Symphony he had had considerable practice in dealing with structural matters. The only works in which he had tried his strength with the orchestra were the two piano concertos—the B♭, op. 19, which was written in or about 1795, and the C major, op. 15, which was written about 1796. He showed himself at once a master of the orchestra; but it is evident that at first he stepped cautiously in expressing himself with such resources. The first Symphony is less free and rich in expression, and has more elements of formality, than several works on a smaller scale which preceded it. This is explicable on the general ground that the orchestra, especially in those days, was not a fit exponent of the same kind of things which could be expressed by solo violins, or the pianoforte. The scale must necessarily be larger and broader; the intricate development and delicate or subtle sentiment which is quite appropriate and intelligible in the intimacy of a domestic circle, is

out of place in the more public conditions of orchestral performance. This Beethoven must have instinctively felt, and he appears not to have found the style for full expression of his personality in either of the first symphonies. The second is even more curious in that respect than the first, as it comes after one of the richest and most interesting, and another of the most perfectly charming and original of the works of his early period, namely the Sonatas in D minor and E♭ of op. 31. However, even in these two symphonies there is a massiveness and breadth and seriousness of purpose, which mark them as products of a different and more powerfully constituted nature than anything of the kind produced before. At the time when the first Symphony appeared, the opening with the chord of the minor 7th of C, when the key of the piece was C major, was looked upon as extremely daring; and the narrow-minded pedants of the day felt their sensitive delicacy so outraged that some of them are said never to have forgiven it. The case is very similar to the famous introduction to Mozart's C major String Quartet, about which the pedants were little less than insulting. Beethoven had to fight for his right to express what he felt to be true; and he did it without flinching; sometimes with an apparent relish. But at the same time, in these early orchestral works he seems to have experimented with caution, and was content to follow his predecessors in a great deal that he put down. There are characteristic things in both symphonies; for instance, in the first the transitional passage which begins at the 65th bar of the Allegro, passing from G to G minor and then to B♭ and back again, and the corresponding passage in the second half of the movement. The working out of the Andante cantabile and the persistent drum rhythm are also striking points. In the second Symphony the dimensions of the Introduction are unusual, and the character of all the latter part and the freedom of the transitions in it are decisive marks of his tendencies. The Slow Movement has also a warmth and sense of genuine sympathy which is new; the Scherzo, though as yet short, has a totally new character about it, and the abrupt sforzandos, and short striking figures and still more the coda, of the Finale, are quite his own. In the orchestra it is worth noting that he adopted clarinets from the first, apparently as a matter of course; in the first two symphonies he continued to use only the one pair of horns, as his predecessors had done; in the third he expanded the group to three. In the fourth he went back to two, and did not use four till the ninth. The disposition of his forces even in the first two is more independent and varied than his predecessors. The treatment of the several groups of instruments tends to be more distinct and appropriate, and at the same time more perfectly assimilated in the total effect of

the music. The step to the third Symphony is however immense, and at last shows this branch of composition on a level with his other works of the same period. It is surrounded on both sides by some of his noblest achievements. Op. 47 was the Sonata in A for violin and pianoforte, known as the 'Kreutzer.' Op. 53 is the Sonata in C major, dedicated to Count Waldstein. Op. 54 is the admirable little Sonata in F major. Op. 55 is the Symphony, and Op. 57 the Sonata known as the 'Appassionata.' It appears that Beethoven had the idea of writing this symphony as early as 1798, but the actual work was probably done in the summer and autumn of 1803. There seems to be no doubt that it was written under the influence of his admiration for Napoleon. His own title-page had on it 'Sinfonia grande. Napoleon Bonaparte,' and, as is well known, the name 'Eroica' was not added till Napoleon became Emperor; after which event Beethoven's feelings about him naturally underwent a change. To call a great work by the name of a great man was quite a different thing from calling it by the name of a crowned ruler. However, the point remains the same, that the work was written with a definite purpose and under the inspiration of a special subject, and one upon which Beethoven himself assuredly had a very decided opinion. The result was the richest and noblest and by far the biggest symphony that had ever yet appeared in the world. It is very possible that Beethoven meant it to be so; but the fact does not make the step from the previous symphonies any the less remarkable. The scoring throughout is most freely distributed. In the first movement especially there is hardly any one of the numerous subjects and characteristic figures which has not properties demanding different departments of the orchestra to express them. They are obviously conceived with reference to the whole forces at command, not to a predominant central force and appendages. The strings must necessarily have the greater part of the work to do, but the symphony is not written for them with wind as a species of afterthought. But it is still to be noticed that the balance is obtained chiefly by definite propositions and answers between one group and another, and though the effect is delightful, the principle is rendered a little obvious from the regularity of its occurrence. The second movement is specially noticeable as reaching the strongest pitch of sentiment as yet shown in an orchestral slow movement. In the earliest symphonies these movements were nearly always remarkably short, and scored for fewer instruments than the first and last. Frequently they were little better than 'intermezzi,' attached on both sides to the more important allegros. Even Mozart's and Haydn's latest examples had more grace and sweetness than deep feeling, and frequently showed a tendency to formalism in the expression of the ideas and in the ways in which

the ornamental *flouriture* were introduced. In the Eroica the name 'Marcia funebre' at once defines the object; and though the form of a march is to a certain extent maintained, it is obvious that it is of secondary importance, since the attention is more drawn to the rich and noble expression of the finest feelings of humanity over the poetically imagined death of one of the world's heroes, than to the traditional march form. The music seems in fact to take almost the definiteness of speech of the highest order; or rather, to express the emotions which belong to the imagined situation with more fulness and comprehensiveness, but with scarcely less definiteness, than speech could achieve. In the third movement appears the first of Beethoven's large orchestral scherzos. Any connection between it and the typical Minuet and Trio it is hard to see. The time is quicker and more bustling; and the character utterly distinct from the suave grace and somewhat measured paces of most of the previous third movements. The main points of connection with them are firstly the general outlines of form (that is, the principal portion of the Scherzo corresponding to the Minuet comes first and last, and the Trio in the middle) and secondly the humorous element. In this latter particular there is very great difference between the *naïf* and spontaneous fun of Haydn and the grim humour of Beethoven, sometimes verging upon irony, and sometimes, with evident purpose, upon the grotesque. The scherzo of the Eroica is not alloyed with so much grimness as some later ones, but it has traits of melancholy and seriousness here and there. The effect in its place is chiefly that of portraying the fickle crowd who soon forget their hero, and chatter and bustle cheerfully about their business or pleasure as before; which has its humorous or at least laughter-making ironical side to any one large-minded enough to avoid thinking of all such traits of humanity with reprobation and disgust. The last movement is on a scale more than equal to that of all the others, and, like them, strikes an almost entirely new note in symphonic finales. The light and simple character of Haydn's final rondos is familiar to every one; and he was consistent in aiming at gaiety for conclusion. Mozart in most cases did the same; but in the G minor Symphony there is a touch of rather vehement regretfulness, and in the C major of strength and seriousness. But the Finale of the Eroica first introduces qualities of massiveness and broad earnest dignity to that position in the symphony. The object is evidently to crown the work in a totally different sense from the light cheerful endings of most previous symphonies, and to appeal to fine feelings in the audience instead of aiming at putting them in a cheerful humour. It is all the difference between an audience before the revolutionary epoch and after. The starting-point of the movement is the same theme from the Pro-

metheus music as that of the pianoforte variations in E \flat (op. 35). The basis of the whole movement is mainly the variation-form, interspersed with fugal episodes; and a remarkable feature is the long Andante variation immediately before the finale Presto—a somewhat unusual feature in such a position, though Haydn introduced a long passage of Adagio in the middle of the last movement of a symphony in F written about 1777, but of course in a very different spirit. The Finale of the Eroica as a whole is so unusual in form, that it is not wonderful that opinions have varied much concerning it. As a piece of art it is neither so perfect nor so convincing as the other movements; but it has very noble and wonderful traits, and, as a grand experiment in an almost totally new direction, has a decided historical importance.

It is not necessary to go through the whole series of Beethoven's Symphonies in detail, for one reason because they are so generally familiar to musicians and are likely to become more and more so; and for another because they have been so fully discussed from different points of view in this Dictionary. Some short simple particulars about each may, however, be useful and interesting. The order of composition of the works which succeeded the Eroica Symphony is almost impossible to unravel. By opus-number the 4th Symphony in B \flat , comes very soon, being op. 60; but the sketches for the last movement are in the same sketch-book as parts of 'Fidelio,' which is op. 72, and the Concerto in G, which is op. 58, was begun after 'Fidelio' was finished. It can only be seen clearly that his works were crowded close together in this part of his life, and interest attaches to the fact that they represent the warmest and most popular group of all. Close to the B \flat Symphony come the Overture to 'Coriolan,' the three String Quartets, op. 59, the Violin Concerto, the PF. ditto in G major, the Symphony in C minor, and the 'Sinfonia Pastorale.' The B \flat is on a smaller scale than its predecessor, and of lighter and gayer cast. The opening bars of the Introduction are almost the only part which has a trace of sadness in it; and this is probably meant to throw the brightness of the rest of the work into stronger relief. Even the Slow Movement contains more serenity than deep emotion. The Scherzo is peculiar for having the Trio repeated—altogether a new point in symphony-writing, and one which was not left unrepeatd or unimitated. What the symphony was meant to express cannot be known, but it certainly is as complete and consistent as any.

The C minor which followed has been said to be the first in which Beethoven expressed himself freely and absolutely, and threw away all traces of formalism in expression or development to give vent to the perfect utterance of his musical feeling. It certainly is so far the most forcible, and most remote from conventionalism

of every kind. It was probably written very nearly about the same time as the B \flat . Nottebohm says the first two movements were written in 1805; and, if this is the fact, his work on the B \flat and on the C minor must have overlapped. Nothing, however, could be much stronger than the contrast between the two. The C minor is, in the first and most striking movement, rugged, terrible in force; a sort of struggle with fate, one of the most thoroughly characteristic of Beethoven's productions. The second is a contrast: peaceful, though strong and earnest. The Scherzo again is one of his most original movements; in its musical spirit as utterly unlike anything that had been produced before as possible. Full of fancy, fun, and humour, and, notwithstanding the pauses and changes of time, wonderful in swing; and containing some devices of orchestration quite magical in their clearness, and their fitness to the ideas. The last movement, which follows without break after the Scherzo, is triumphant; seeming to express the mastery in the wrestling and striving of the first movement. It is historically interesting as the first appearance of trombones and contrafagotto in modern symphony; and the most powerful in sound up to that time. The next symphony, which is also the next opus-number, is the popular 'Pastoral,' probably written in 1808, the second of Beethoven's which has a definitely stated idea as the basis of its inspiration, and the first in which a programme is suggested for each individual movement; though Beethoven is careful to explain that it is 'mehr Empfindung als Malerei.' Any account of this happy inspiration is clearly superfluous. The situations and scenes which it brings to the mind are familiar, and not likely to be less beloved as the world grows older. The style is again in great contrast to that of the C minor, being characterised rather by serenity and contentment; which, as Beethoven had not heard of all the troubles of the land question, might naturally be his feelings about country life. He used two trombones in the last two movements, but otherwise contented himself with the same group of instruments as in his earliest symphonies.

After this there was a pause for some years, during which time appeared many noble and delightful works on other lines, including the pianoforte trios in D and E \flat , the Mass in C minor, op. 86, the music to 'Egmont,' op. 84, and several sonatas. Then in one year, 1812, two symphonies appeared. The first of the two, in A major, numbered op. 92, is looked upon by many as the most romantic of all of them; and certainly has qualities which increase in attractiveness the better it is known and understood. Among specially noticeable points are the unusual proportions and great interest of the Introduction (*poco sostenuto*); the singular

and fascinating wilfulness of the first movement, which is enhanced by some very characteristic orchestration; the noble calm of the slow movement; the merry humour of the Scherzo, which has again the same peculiarity as the fourth Symphony, that the trio is repeated (for which the world has every reason to be thankful, as it is one of the most completely enjoyable things in all symphonic literature); and finally the wild headlong abandonment of the last movement, which might be an idealised national or rather barbaric dance-movement, and which sets the crown fitly upon one of the most characteristic of Beethoven's works. The Symphony in F, which follows immediately as op. 93, is again of a totally different character. It is of specially small proportions, and has rather the character of a return to the old conditions of the Symphony, with all the advantages of Beethoven's mature powers both in the development and choice of ideas, and in the treatment of the orchestra. Beethoven himself, in a letter to Salomon, described it as 'eine kleine Symphonie in F,' as distinguished from the previous one, which he called 'Grosse Symphonie in A, eine meiner vorzüglichsten.' It has more fun and light-heartedness in it than any of the others, but no other specially distinctive external characteristics, except the substitution of the graceful and humorous 'Allegretto scherzando' in the place of the slow movement, and a return to the Tempo di Menuetto for the scherzo. After this came again a long pause, as the greatest of all symphonies did not make its appearance till 1824. During that time, however, it is probable that symphonic work was not out of his mind, for it is certain that the preparations for putting this symphony down on paper spread over several years. Of the introduction of voices into this form of composition, which is its strongest external characteristic, Beethoven had made a previous experiment in the Choral Fantasia; and he himself spoke of the symphony as 'in the style of the Choral Fantasia, but on a far larger scale.' The scale is indeed immensely larger, not only in length but in style, and the increase in this respect applies to it equally in comparison with all the symphonies that went before. The first movement is throughout the most concentrated example of the qualities which distinguish Beethoven, and the new phase upon which music entered with him, from all the composers of the previous half-century. The other movements are not less characteristic of him in their particular ways. The second is the largest example of the typical scherzo which first made its appearance for the orchestra in the Eroica; and the supreme slow movement (the Theme with variations) is the finest orchestral example of that special type of slow movement; though in other departments of art he had previously illustrated it in a manner little less noble and

deeply expressive in the slow movements of the B \flat Trio and the B \flat Sonata (op. 106). These movements all have reference, more or less intelligible according to the organisation and sympathies of the hearer, to the Finale of the Symphony, which consists of a setting of Schiller's ode 'An die Freude.' Its development into such enormous proportions is of a piece with the tendency shown in Beethoven's previous symphonies, and in some of his sonatas also, to supplant the conventional type of gay last movement by something which shall be a logical or poetical outcome of the preceding movements, and shall in some way clench them, or crown them with its weight and power. The introduction of words, moreover, gives a new force to the definite interpretation of the whole as a single organism, developed as a poem might be in relation to definite and coherent ideas. The dramatic and human elements which Beethoven introduced into his instrumental music to a degree before undreamed of, find here their fullest expression; and most of the forms of music are called in to convey his ideas. The first movement of the symphony is in binary form; the second in scherzo, or idealised minuet and trio form; the third in the form of theme and variations. Then follows the curious passage of instrumental recitative, of which so many people guessed the meaning even before it was defined by the publication of the extracts from the MS. sketch-books in the Berlin Library; then the entry of the noble tune, the theme of the entire Finale, introduced contrapuntally in a manner which has a clear analogy to fugal treatment; and followed by the choral part, which treats the theme in the form of variations apportioned to the several verses of the poem, and carries the sentiment to the extreme pitch of exultation expressible by the human voice. The instrumental forces employed are the fullest; including, with the usual complement, four horns, three trombones in the scherzo and finale, and contrafagotto, triangle, cymbals, and big drum in the finale. The choral forces include four solo voices and full chorus, and the sentiment expressed is proportionate to the forces employed.

In Beethoven's hands the Symphony has again undergone a change of status. Haydn and Mozart, as above pointed out, ennobled and enriched the form in the structural sense. They took up the work when there was little more expected of the orchestra than would have been expected of a harpsichord, and when the object of the piece was slight and almost momentary entertainment. They left it one of the most important branches of instrumental music, though still to a great extent dependent on formal perfection and somewhat obvious artistic management for its interest. Their office was in fact to perfect the form, and Beethoven's to use it. But the very use of it brought about a new

ratio between its various elements. In his work first clearly appears a proportion between the forces employed and the nobility and depth and general importance of the musical ideas. In his hands the greatest and most pliable means available for the composer could be no longer fit for lightness and triviality, but only for ideal emotions of an adequate standard. It is true that earlier composers saw the advantage of adopting a breadth of style and largeness of sentiment when writing for the orchestra; but this mostly resulted in positive dulness. It seems as if it could only be when the circumstances of history had undergone a violent change that human sentiment could reach that pitch of comprehensiveness which in Beethoven's work raised the Symphony to the highest pitch of earnest poetic feeling: and the history of his development is chiefly the co-ordination of all the component elements; the proportioning of the expression and style to the means; the expansion of the form to the requirements of the expression; the making of the orchestration perfectly free, but perfectly just in every detail of expression, and perfectly balanced in itself; and the eradication of all traces of conventionalism both in the details and in the principal outlines, and also to a great extent in the treatment of the instruments. It is chiefly through Beethoven's work that the symphony now stands at the head of all musical forms whatever; and though other composers may hereafter misuse and degrade it as they have degraded the opera, the cantata, the oratorio, the mass, and such other forms as have equal possibilities with the symphony, his works of this kind stand at such an elevation of human sympathy and emotion, and at such a pitch of individuality and power, in expression and technical mastery, that it is scarcely likely that any branch of musical art will ever show anything to surpass them.

It might seem almost superfluous to trace the history of Symphony further after Beethoven. Nothing since his time has shown, nor in the changing conditions of the history of the race is it likely anything should show, any approach to the vitality and depth of his work. But it is just these changing conditions that leave a little opening for composers to tread the same path with him. In the millions of the human species there are endless varieties of mental and emotional qualities grouped in different individuals, and different bands or sets of men; and the many-sided qualities of artistic work, even far below the highest standard, find their excuse and explanation in the various groups and types of mind whose artistic desires they satisfy. Those who are most highly organised in such respects find their most perfect and most sustained gratification in Beethoven's works; but others who feel less deeply, or are less wide in their sympathies, or have fewer or

different opportunities of cultivating their tastes in such a musical direction, need musical food more in accordance with their mental and emotional organisation. Moreover, there is always room to treat an accepted form in the mode characteristic of the period. Beethoven's period was much more like ours than that of Haydn and Mozart, but yet it is not so like that a work expressed entirely in his manner would not be an anachronism. Each successive generation takes some colour from the combination of work and changes in all previous generations; in unequal quantities proportioned to its amount of sympathy with particular periods. By the side of Beethoven there were other composers, working either on parallel lines or in a different manner on the same lines. The succeeding generations were influenced by them as well as by him; and they have introduced some elements into symphony which are at least not prominent in his. One of the contemporary composers who had most influence on the later generation was Weber; but his influence is derived from other departments, and in that of Symphony his contribution is next to nothing—two only, so slight and unimportant, as probably to have had no influence at all.

Another composer's symphonies did not have much immediate influence, chiefly because they were not performed; what they will have in the future remains to be seen. In delightfulness, Schubert's two best works in this department stand almost alone; and their qualities are unique. In his earlier works of the kind there is an analogy to Beethoven's early works. Writing for the orchestra seemed to paralyse his particular individuality; and for some time after he had written some of his finest and most original songs, he continued to write symphonies which were chiefly a mild reflex of Haydn and Mozart, or at most of the early style of Beethoven. His first attempt was made in 1813, the last page being dated October 28 of that year, when he was yet only sixteen years old—one year after Beethoven's Symphonies in A and F, and more than ten years before the great D minor. In the five following years he wrote five more, the best of which is No. 4, the Tragic, in C minor; the Andante especially being very fine and interesting, and containing many characteristic traits of the master. But none of the early works approach in interest or original beauty to the unfinished one in B minor; and the very long and vigorous one in C major; the first composed in 1822, before Beethoven's No. 9, and the second in 1828, after it. In these two he seems to have struck out a real independent symphony-style for himself, thoroughly individual in every respect, both of idea, form, and orchestration. They show singularly little of the influence of Beethoven, or Mozart, or Haydn, or any of the composers he must have been familiar with in his early

days at the Convict ; but the same spirit as is met with in his songs and pianoforte pieces, and the best specimens of his chamber music. The first movement of the B minor is entirely unlike any other symphonic first movement that ever was composed before. It seems to come direct from the heart, and to have the personality of the composer in it to a most unusual degree. The orchestral forces used are the usual ones, [excepting only that he uses three trombones, an unusual thing in first movements at the date,] but in the management of them there are numbers of effects which are perfectly new in this department of art, indicating the tendency of the time towards direct consideration of what is called 'colour' in orchestral combinations, and its employment with the view of enhancing the degree of actual sensuous enjoyment of a refined kind, to some extent independent of the subjects and figures. Schubert's mature orchestral works are, however, too few to give any strong indication of this in his own person ; and what is commonly felt is the supreme attractiveness of the ideas and general style. As classical models of form none of Schubert's instrumental works take the highest rank ; and it follows that no compositions by any writer which have taken such hold upon the musicians of the present time, depend so much upon their intrinsic musical qualities as his do. They are therefore in a sense the extremest examples that can be given of the degree in which the status of such music altered in about thirty years. In the epoch of Mozart and Haydn, the formal elements absolutely predominated in importance. This was the case in 1795. The balance was so completely altered in the course of Beethoven's lifetime, that by 1824 the phenomenon is presented of works in the highest line of musical composition depending on the predominating element of the actual musical sentiment. It must be confessed that Schubert's position in art is unique ; but at the same time no man of mark can be quite unrepresentative of his time, and Schubert in this way represents the extraordinary degree in which the attention of musical people and the intention of composers in the early years of the 19th century were directed to the actual material of music in its expressive sense as distinguished from the external or structural aspect.

The relation of the dates at which more or less well-known symphonies made their appearance about this time is curious and not uninteresting. Mendelssohn's Reformation Symphony was produced only two years after Schubert's great Symphony in C, namely in 1830. His Italian Symphony followed in the next year ; and Sterndale Bennett's, in G minor, in 1834.

The dates and history of Spohr's productions are even more striking, as he was actually a contemporary of Beethoven's and senior to

Schubert, while in all respects in which his style is characteristic it represents quite a later generation. His first Symphony (in E \flat) was composed in 1811, before Beethoven's 7th, 8th, and 9th, and when he himself was twenty-seven years old. This was followed by several others, which are not without merit, though not of sufficient historical importance to require special consideration. The symphony of his which is best known at the present day is that called the 'Weihe der Töne,' which at one time enjoyed great celebrity. The history of this work is as follows. He intended first to set a poem of the same name by his friend Pfeiffer. He began the setting in 1832, but finding it unsatisfactory he abandoned the idea of using the words except as a programme ; in which form they are appended to the score. The full description and purpose of the work as expressed on the title is 'Charakteristisches Tongemälde in Form einer Sinfonie, nach einem Gedicht von Carl Pfeiffer' ; and a printed notice from the composer is appended to the score directing that the poem is to be either printed or recited aloud whenever the symphony is to be performed. Each movement also has its title, like the Pastoral of Beethoven ; but it differs from that work not only in its less substantial interest, but also in a much more marked departure from the ordinary principles of form, and the style of the successive movements.

The earlier part of the work corresponds fairly well with the usual principles of structure. It opens with a short Largo of vague character, passing into the Allegro, which is a continuous movement of the usual description, in a sweet but rather tame style. The next movement might be taken to stand for the usual slow movement, as it begins Andantino ; but the development is original, as it is broken up by several changes of tempo and time-signatures, and is evidently based upon a programme, for which its title supplies an explanation. The next movement again might be taken as an alternative to the Minuet and Trio, being marked 'Tempo di Marcia,' which would suggest the same general outline of form. But the development is again independent, and must be supposed to follow its title. From this point all connection with the usual outlines ceases. There is an Andante maestoso, based upon the plain-song of the Te Deum, a Larghetto containing a second hymn-tune, and a short Allegretto in simple primary form to conclude with. From this description it will be obvious that the work is an example of thoroughgoing 'programme music.' It is clearly based rather on the musical portrayal of a succession of ideas in themselves independent of music, than upon the treatment of principles of abstract form, and ideas intrinsically musical. It derives from this fact a historical importance which its musical qualities taken alone would not warrant, as it

is one of the very first German examples of its kind possessing any high artistic excellences of treatment, expression, and orchestration. It contains a plentiful supply of Spohr's characteristic faults, and is for the most part superficial, and deficient in warmth of feeling and nobility of thought; but it has also a fair share of his good traits—delicacy and clearness of orchestration, and a certain amount of poetical sentiment. Its success was considerable, and this, rather than any abstract theorising upon the tendencies of modern music, led him to several further experiments in the same line. The symphony (in C minor) which followed the 'Weihe der Töne' was on the old lines, and does not require much notice. It contains experiments in unifying the work by unusual references to subjects, as in the first movement, where conspicuous reference is made in the middle part of the Allegro to the characteristic feature of the slow introduction; and in the last, where the same subject is somewhat transformed, and reappears in a different time as a prominent feature of the second section. In the next symphony, and in the 7th and 9th, Spohr again tried experiments in programme. Two of these are such curiosities as to deserve description. The 6th, op. 116, in G is called 'Historische Symphonie,' and the four movements are supposed to be illustrations of four distinct musical periods. The first is called the Period of Handel and Bach, and dated 1720; the second, the Period of Haydn and Mozart, and dated 1780 (*i.e.* before any of the greatest instrumental works of either Haydn or Mozart were produced); the third is the Period of Beethoven, and dated 1810; and the fourth, 'Allerneueste Periode,' and dated 1840. This title seems to imply that Spohr regarded himself as belonging to a different generation from Beethoven. The first period is represented by an introductory Largo in contrapuntal style, and an Allegro movement, part after the manner of the old Canzonas, and part a Pastorale, introduced for contrast. The style has scarcely the least affinity to Bach, but the Handelian character is extremely easy to imitate, and hence in some respects it justifies its title fairly well. The slow movement which follows has good qualities and graceful points. It has more the flavour of Mozart than Haydn, and this is enhanced by the Mozartian turns and figures which are introduced. One which is very conspicuous is the short figure—

which is found in several places in Mozart's works. The second subject, moreover, is only an ingenious alteration of the second subject in the slow movement of Mozart's Prague Symphony in D:—

Nevertheless, the whole effect of the movement is not what its title implies. The scoring is fuller, and the inner parts richer and freer in their motion than in the prototypes, and the harmonisation is more chromatic, after Spohr's manner. The Scherzo professes to be in Beethoven's style, and some of his characteristic devices of harmony and rhythm and treatment of instruments are fairly well imitated (*e.g.* the drums in G, D, and Eb), though in a manner which shows they were but half understood.

The last movement, representing the then 'latest period,' has of course no names appended. Spohr probably did not intend to imitate any one, but was satisfied to write in his own manner, of which the movement is not a highly satisfactory example. It is perhaps rather to the composer's credit that his own characteristics should peep out at all corners in all the movements, but the result can hardly be called an artistic success. However, the experiment deserves to be recorded and described, as unique among works by composers of such standing and ability as Spohr; and the more so as it is not likely to be often heard in future. His next Symphony (No. 7, in C major, op. 121) is in many respects as great a curiosity of a totally different description. It is called 'Irdisches und Göttliches in Menschenleben,' and is a double symphony in three movements for two orchestras. The first movement is called 'Kinderwelt,' the second 'Zeit der Leiden-schaften,' and the last (Presto) 'Endlicher Sieg des Göttlichen.' In the first two the second orchestra, which is the fuller of the two, is little more than an accompaniment to the first. In the last it has a good deal of work to do, uttering chiefly vehement and bustling passages in contrast with quiet and sober passages by the first orchestra; until near the end, when it appears to be subdued into consonance with the first orchestra. The idea seems to be to depict the divine and the worldly qualities more or less by the two orchestras; the divine being given to the smaller orchestra of solo instruments, and the worldly to the fuller orchestra. The treatment of the instrumental forces is on the whole very simple; and no very extraordinary effects seem to be aimed at.

Spohr wrote yet another programme symphony after this (No. 9, in B, op. 143) called 'Die Jahreszeiten,' in which Winter and Spring are joined to make Part I., and Summer and Autumn to make Part II.

The work approaches more nearly to the ordinary outlines of the Symphony than his previous experiments in programme, and does not seem to demand so much detailed description. In fact, but for his having been so early in the field as a writer of thoroughgoing programme-music, Spohr's position in the history of the Symphony would not be an important one; and it is worthy of remark that his being so at all appears to have been an accident. The 'Weihn der Töne' would not have been a programme symphony but for the fact that Pissifer's poem did not turn out to be very suitable for a musical setting. It is not likely that the work would have attained such popularity as it did but for its programme; but after so good a result in relation to the public, it was natural that Spohr should try further experiments on the same lines; and hence he became one of the earliest representatives of artistic speculation in a direction which has become one of the most conspicuous subjects of discussion among modern musical philosophers. As far as intrinsic qualities are concerned it is remarkable how very little influence he has had upon the subsequent history of the Symphony, considering the reputation he enjoyed in his lifetime. His greatest excellence was his treatment of his orchestra, which was delicate, refined, and extremely clear; but it must be confessed that he erred on the side natural to the virtuoso violinist, and was too fond of bringing his first violins into prominence. His ideas and style generally were not robust or noble enough to stand the test of time. His melodies are not broad or strong; his harmonisation, though very chromatic to look at, is not radically free and vigorous; and his rhythm, though sometimes complicated and ingenious, is neither forcible nor rich in variety. None of his works, however, can be said to be without their good points, and the singularity of his attempts at programme-music give them an interest which the unlikelihood of many performances in the future does not by any means diminish.

An interesting fact in connection with Spohr and the history of the Symphony is that he was the first to conduct an orchestra in England with a baton; the practice having previously been to conduct 'at the pianoforte.' The occasion was one of the Philharmonic Concerts in 1820. [See BATON, CONDUCTING, SPOHR.] The habit of conducting at the pianoforte was evidently a tradition continued from the days when the Symphony was an appendage of the Opera, when the principal authority, often the composer in person, sat at the principal clavier in the middle of the orchestra giving the time at his instrument, and filling in the harmonies under the guidance of a figured bass. Almost all the earlier independent symphonies,

including those of Philip Emanuel Bach of 1776, and some of Haydn's earlier ones, have such a figured bass for the clavier-player, and an extra bass part is commonly found in the sets of parts which may be reasonably surmised to be for his use.¹ The practice was at last abrogated in England by Spohr, possibly because he was not a clavier but a violin player. In Germany it was evidently discontinued some time earlier.

The most distinguished composers of symphonies who wrote at the same time as Spohr, were entirely independent of him. The first of these is Mendelssohn, whose earliest symphonies even overlap Beethoven, and whose better-known works of the kind, as before mentioned, begin about the same time as Spohr's best examples, and extend over nearly the same period as his later ones. The earliest which survives in print is that in C minor dedicated to the London Philharmonic Society. This work was really his thirteenth symphony, and was finished on March 31, 1824, when he was only fifteen years old, in the very year that Beethoven's Choral Symphony was first performed. The work is more historically than musically interesting. It shows, as might be expected, how much stronger the mechanical side of Mendelssohn's artistic nature was, even as a boy, than his poetical side. Technically the work is extraordinarily mature. It evinces not only a perfect and complete facility in laying the outline and carrying out the details of form, but also the acutest sense of the balance and proportion of tons of the orchestra. The limits of the attempt are not extensive, and the absence of strong feeling or aspiration in the boy facilitated the execution. The predominant influence is clearly that of Mozart. Not only the treatment of the lower and subordinate parts of the harmony, but the distribution and management of the different sections and even the ideas are like. There is scarcely a trace of the influence of Beethoven, and not much of the features afterwards characteristic of the composer himself. The most individual movements are the slow movement and the trio. The former is tolerably free from the influence of the artificial and mannered slow movements of the Haydn and Mozart style, and at the same time does not derive its inspiration from Beethoven: it contains some very free experiments in modulation, enharmonic and otherwise, a few characteristic figures similar to some which he made use of later in his career, and passages of melody clearly predicting the composer of the *Lieder ohne Worte* and the short slow movements of the organ sonatas. The Trio is long and very original in intention, the chief feature being ingenious treatment of arpeggios for the strings in many parts. The other movements are for the most part formal.

¹ Mendelssohn's early Symphonies are marked 'Klavier mit dem Basse.' [See vol. III. p. 114a, note 1.]

The Minuet is extraordinarily like that of Mozart's G minor Symphony, not only in accent and style, but in the manner in which the strings and the wind are grouped and balanced, especially in the short passage for wind alone which occurs towards the end of each half of the movement. It was possibly owing to this circumstance that Mendelssohn substituted for it the orchestral arrangement of the Scherzo of his Octet when the work was performed later in his life. In the last movement the most characteristic passage is the second subject, with the short chords of pizzicato strings, and the tune for the clarinet which comes after the completion of the first period by strings alone. He used the same device more than once later, and managed it more satisfactorily. But it is just such suggestions of the working of the musical spirit in the man which make an early work interesting.

His next symphony happened to illustrate the supposed tendency of the age towards programme. It was intended for the tercentenary festival of the Augsburg Protestant Confession in 1830, though owing to political circumstances its performance was deferred till later. He evidently had not made up his mind what to call it till some time after it was finished, as he wrote to his sister and suggested Confession Symphony, or Symphony for a Church Festival, as alternative names. But it is quite evident nevertheless that he must have had some sort of programme in his mind, and a purpose to illustrate the conflict between the old and new forms of the faith, and the circumstances and attributes which belonged to them. The actual form of the work is as nearly as possible what is called perfectly orthodox. The slow introduction, the regular legitimate allegro, the simple pretty scherzo and trio, the short but completely balanced slow movement, and the regular last movement preceded by a second slow introduction, present very little that is out of the way in point of structure; and hence the work is less dependent upon its programme than some of the examples by Spohr above described. But nevertheless the programme can be clearly seen to have suggested much of the detail of treatment and development in a perfectly consistent and natural manner. The external traits which obviously strike attention are two; first, the now well-known passage which is used in the Catholic Church at Dresden for the Amen, and which Wagner has since adopted as one of the most conspicuous religious motives of 'Parsifal'; and secondly, the use of Luther's famous hymn, 'Ein' feste Burg,' in the latter part of the work. The Amen makes its appearance in the latter part of the opening Andante, and is clearly meant to typify the old church; and its recurrence at the end of the working out in the first movement, before the recapitulation, is possibly meant to imply that

the old church still holds its own: while in the latter portion of the work the typical hymn-tune, introduced softly by the flute and by degrees taking possession of the whole orchestra, may be taken to represent the successful spread of the Protestant ideas, just as its final utterance fortissimo at the end of all, does the establishment of men's right to work out their own salvation in their own way. There are various other details which clearly have purpose in relation to the programme, and show clearly that the composer was keeping the possible succession of events and circumstances in his mind throughout. The actual treatment is a very considerable advance upon the Symphony in C minor. The whole work is thoroughly Mendelssohnian. There is no obvious trace either in the ideas themselves, or in the manner of expression of the Mozartian influence which is so noticeable in the symphony of six years earlier. And considering that the composer was still but twenty-one, the maturity of style and judgment is relatively quite as remarkable as the facility and mastery shown in the work of his fifteenth year. The orchestration is quite characteristic and free; and in some cases, as in part of the second movement, singularly happy. The principle of programme here assumed seems to have been maintained by him thenceforward; for his other symphonies, though it is not so stated in the published scores, are known to have been recognised by him as the results of his impressions of Italy and Scotland. The first of them followed very soon after the Reformation Symphony. In the next year after the completion of that work he mentioned the new symphony in a letter to his sister as far advanced; and said it was 'the gayest thing he had ever done.' He was in Rome at the time, and it appears most probable that the first and last movements were written there. Of the slow movement he wrote that he had not found anything exactly right, 'and would put it off till he went to Naples, hoping to find something to inspire him there.' But in the result it is difficult to imagine that Naples can have had much share. Of the third movement there is a tradition that it was imported from an earlier work; and it certainly has a considerable flavour of Mozart, though coupled with traits characteristic of Mendelssohn in perfect maturity, and is at least well worthy of its position; and even if parts of it, as is possible, appeared in an earlier work, the excellences of the Trio, and the admirable effect of the final Coda which is based on it, point to considerable rewriting and reconstruction at a mature period. The actual structure of the movements is based upon familiar principles, though not without certain idiosyncrasies; as for instance the appearance of a new prominent feature in the working-out portion, and the freedom of the recapitulation in the first movement. In the last movement,

called *Saltarello*, he seems to have given a more free rein to his fancy in portraying some scene of unconstrained Italian gaiety of which he was a witness; and though there is an underlying consistency in the usual distribution of keys, the external balance of subjects is not so obvious. The last movement is hence the only one which seems to depend to any extent upon the programme idea; in all other respects the symphony belongs to the 'classical' order. Indeed such a programme as the purpose to reproduce impressions of particular countries is far too vague to lend itself to exact and definite musical portrayal of external ideas, such as might take the place of the usual outlines of structure. In fact it could lead to little more than consistency of style, which would be equally helpful to the composer and the audience; and it may well have served as an excuse for a certain laxity and profusion in the succession of the ideas, instead of that difficult process of concentrating and making relevant the whole of each movement upon the basis of a few definite and typical subjects. The characteristics of the work are for the most part fresh and genial spontaneity. The scoring is of course admirable and clear, without presenting any very marked features; and it is at the same time independent and well proportioned in distribution of the various qualities of sound, and in fitness to the subject-matter.

In orchestral effects the later symphony—the Scotch, in A minor—is more remarkable. The impressions which Mendelssohn received in Scotland may naturally have suggested more striking points of local colour; and the manner in which it is distributed from first page to last serves to very good purpose in unifying the impression of the whole. The effects are almost invariably obtained either by using close harmonies low in the scale of the respective instruments, or by extensively doubling tunes and figures in a similar manner, and in a sombre part of the scale of the instruments; giving an effect of heaviness and darkness which were possibly Mendelssohn's principal feelings about the grandeur and uncertain climate of Scotland. Thus in the opening phrase for wind instruments they are crowded in the harmonies almost as thick as they will endure. In the statement of the first principal subject again the clarinet in its darkest region doubles the tune of the violins an octave lower. The use of the whole mass of the strings in three octaves, with the wind filling the harmonies in rhythmic chords, which has so fine and striking an effect at the beginning of the 'working out' and in the coda, has the same basis; and the same effect is obtained by similar means here and there in the Scherzo; as for instance where the slightly transformed version of the principal subject is introduced by the wind in the Coda. The same qualities

are frequently noticeable in the slow movement and again in the coda of the last movement. As in the previous symphony, the structure is quite in accordance with familiar principles. If anything, the work errs rather on the side of squareness and obviousness in the outlines both of ideas and structure; as may be readily perceived by comparing the construction of the opening tune of the introduction with any of Beethoven's introductions (either that of the D or B \flat or A Symphonies, or his overtures): or even the introduction to Mozart's Prague Symphony. And the impression is not lessened by the obviousness of the manner in which the succeeding recitative passages for violins are introduced; nor by the squareness and tune-like qualities of the first subject of the first movement, nor by the way in which the square tune pattern of the Scherzo is reiterated. In the manipulation of the familiar distribution of periods and phrases, however, he used a certain amount of consideration. For example, the persistence of the rhythmic figure of the first subject of the first allegro, in the inner parts of the second section of that movement, serves very good purpose; and the concluding of the movement with the melancholy tune of the introduction helps both the sentiment and the structural effect. The scherzo is far the best and most characteristic movement of the whole. In no department of his work was Mendelssohn so thoroughly at home; and the obviousness of the formal outlines is less objectionable in a movement where levity and abandonment to gaiety are quite the order of the day. The present Scherzo has also certain very definite individualities of its own. It is a departure from the 'Minuet and Trio' form, as it has no break or strong contrasting portion in the middle, and is continuous bustle and gaiety from beginning to end. In technical details it is also exceptionally admirable. The orchestral means are perfectly suited to the end, and the utterances are as neat and effective as they could well be; while the perfect way in which the movement finishes off is delightful to almost every one who has any sense for art. The slow movement takes up the sentimental side of the matter, and is in its way a good example of his orchestral style in that respect. The last movement, Allegro vivacissimo, is restless and impetuous, and the tempo-mark given for it in the Preface to the work, '*Allegro guerriero*,' affords a clue to its meaning. But it evidently does not vitally depend upon any ideal programme in the least; neither does it directly suggest much, except in the curious independent passage with which it concludes, which has more of the savour of programme about it than any other portion of the work, and is scarcely explicable on any other ground. It is to be noticed that directions are given at the beginning of the work to have the movements played as quickly

as possible after one another, so that it may have more or less the effect of being one piece. Mendelssohn's only other symphonic work was the *Lobgesang*, a sort of ecclesiastical counterpart of Beethoven's ninth Symphony. In this of course the programme element is important, and is illustrated by the calls of the brass instruments and their reiteration with much effect in the choral part of the work. The external form, as in Beethoven's ninth Symphony, is that of the three usual earlier movements (1) Introduction and Allegro, (2) Scherzo, or Minuet and Trio, and (3) Slow Movement (which in the present case have purposely a pietistic flavour), with the Finale or last movement supplanted by the long vocal part.

The consideration of these works shows that though Mendelssohn often adopted the appearance of programme, and gained some advantages by it, he never, in order to express his external ideas with more poetical consistency, relaxed any of the familiar principles of structure which are regarded as orthodox. He was in fact a thoroughgoing classicist. He accepted formulas with perfect equanimity, and aimed at resting the value of his works upon the vivacity of his ideas and the great mastery which he had attained in technical expression, and clearness and certainty of orchestration. It was not in his disposition to strike out a new path for himself. The perfection of his art in many respects necessarily appeals to all who have an appreciation for first-rate craftsmanship; but the standard of his ideas is rather fitted for average musical intelligences, and it seems natural enough that these two circumstances should have combined successfully to obtain for him an extraordinary popularity. He may fairly be said to present that which appeals to high and pure sentiments in men, and calls upon the average of them to feel at their best. But he leads them neither into the depths nor the heights which are beyond them; and is hence more fitted in the end to please than to elevate. His work in the department of Symphony is historically slight. In comparison with his great predecessors he established positively nothing new; and if he had been the only successor to Beethoven and Schubert it would certainly have to be confessed that the department of art represented by the Symphony was at a standstill. The excellence of his orchestration, the clearness of his form, and the accuracy and cleverness with which he balanced and disposed his subjects and his modulations, are all certain and unmistakable; but all these things had been attained by great masters before him, and he himself attained them only by the sacrifice of the genuine vital force and power of harmonic motion and freedom of form in the ideas themselves, of which his predecessors had made a richer manifestation. It is of course obvious that different orders of minds require different kinds of artistic food,

and the world would not be well served without many grades and standards of work. Mendelssohn did good service in supplying a form of symphony of such a degree of freshness and lightness as to appeal at once to a class of people for whom the sternness and power of Beethoven in the same branch of art would often be too severe a test. He spoke also in the spirit of his time, and in harmony with it; and as illustrations of the work of the period in one aspect his symphonies will be among the safest to refer to.

Among his contemporaries the one most natural to bracket with him is Sterndale Bennett, whose views of art were extraordinarily similar, and who was actuated in many respects by similar impulses. His published contribution to the department we are considering is extremely slight. The symphony which he produced in 1834 was practically withdrawn by him, and the only other work of the kind which he allowed to be published was the one which was written for the Philharmonic Society, and first played in 1864. The work is slight, and it is recorded that he did not at first put it forward as a symphony. It had originally but three movements, one of which, the charming minuet and trio, was imported from the Cambridge Installation Ode of 1862. A slow movement called *Romanze* was added afterwards. Sterndale Bennett was a severe classicist in his views about form in music, and the present symphony does not show anything sufficiently marked to call for record in that respect. It is singularly quiet and unpretentious, and characteristic of the composer, showing his taste and delicacy of sentiment together with his admirable sense of symmetry and his feeling for tone and refined orchestral effect.

The contemporary of Mendelssohn and Sterndale Bennett who shows in most marked contrast with them is Robert Schumann. He seems to represent the opposite pole of music; for as they depended upon art and made clear technical workmanship their highest aim, Schumann was in many respects positively dependent upon his emotion. Not only was his natural disposition utterly different from theirs, but so was his education. Mendelssohn and Sterndale Bennett went through severe technical drilling in their early days. Schumann seems to have developed his technique by the force of his feelings, and was always more dependent upon them in the making of his works than upon general principles and external stock rules, such as his two contemporaries were satisfied with. The case affords an excellent musical parallel to the common circumstances of life: Mendelssohn and Sterndale Bennett were satisfied to accept certain rules because they knew that they were generally accepted; whereas Schumann was of the nature that had to prove all things, and find for himself that which was good. The result was, as often happens, that Schumann affords examples

of technical deficiencies, and not a few things which his contemporaries had reason to compare unfavourably with the works of Mendelssohn and Sterndale Bennett; but in the end his best work is far more interesting, far more deeply felt, and far more really earnest through and through than theirs. It is worth observing also that his feelings towards them were disinterested admiration and enthusiasm, while they thought very slightly of him. They were also the successful composers of their time, and at the head of their profession, while he was looked upon as a sort of half amateur, part mystic and part incompetent. Such circumstances as these have no little effect upon a man's artistic development, and drive him in upon his own resources. Up to a certain point the result for the world in this instance was advantageous. Schumann developed altogether his own method of education. He began with songs and more or less small pianoforte pieces. By working hard in these departments he developed his own emotional language, and in course of time, but relatively late in life as compared with most other composers, he seemed to arrive at the point when experiment on the scale of the Symphony was possible. In a letter to a friend he expressed his feeling that the pianoforte was becoming too narrow for his thoughts, and that he must try orchestral composition. The fruit of this resolve was the B \flat Symphony (op. 38), which was produced at Leipzig in 1841, and was probably his first important orchestral work. It is quite extraordinary how successfully he grappled with the difficulties of the greatest style of composition at the first attempt. The manner is thoroughly symphonic, impressive and broad, and the ideas are more genuinely instrumental both in form and expression than Mendelssohn's, and far more incisive in detail, which in instrumental music is a most vital matter. Mendelssohn had great readiness for making a tune, and it is as clear as possible that when he went about to make a large instrumental work his first thought was to find a good tune to begin upon. Schumann seems to have aimed rather at a definite and strongly marked idea, and to have allowed it to govern the form of period or phrase in which it was presented. In this he was radically in accord with both Mozart and Beethoven. The former in his instrumental works very commonly made what is called the principal subject out of two distinct items, which seem contrasted externally in certain characteristics and yet are inevitable to one another. Beethoven frequently satisfied himself with one principal one, as in the first movements of the *Eroica* and the C minor; and even where there are two more or less distinct figures, they are joined very closely into one phrase, as in the *Pastoral*, the No. 8, and the first movement of the *Choral*. The first movement of Schumann's B \flat Symphony shows the same characteristic. The movement seems

almost to depend upon the simple but very definite first figure quoted on p. 375*a* which is given out in slow time in the Introduction, and worked up as by a mind pondering over its possibilities, finally breaking away with vigorous freshness and confidence in the 'Allegro molto Vivace.' The whole first section depends upon the development of this figure; and even the horns, which have the last utterances before the second subject appears, continue to repeat its rhythm with diminishing force. The second subject necessarily presents a different aspect altogether, and is in marked contrast to the first, but it similarly depends upon the clear character of the short figures of which it is composed, and its gradual work up from the quiet beginning to the loud climax, ends in the reappearance of the rhythmic form belonging to the principal figure of the movement. The whole of the working-out portion depends upon the same figure, which is presented in various aspects and with the addition of new features and ends in a climax which introduces the same figure in a slow form, very emphatically, corresponding to the statement in the Introduction. To this climax the recapitulation is duly welded on. The coda again makes the most of the same figure, in yet fresh aspects. The latter part is to all intents independent, apparently a sort of reflection on what has gone before, and is so far in definite contrast as to explain itself. The whole movement is direct and simple in style, and, for Schumann, singularly bright and cheerful. The principles upon which he constructed and used his principal subjects in this movement are followed in the first movements of the other symphonies; most of all in the D minor; clearly in the C major; and least in the E \flat , which belongs to the later period of his life. But even in this last he aims at gaining the same result, though by different means; and the subject is as free as any from the tune-qualities which destroy the complete individuality of an instrumental subject in its most perfect and positive sense. In the first movement of the D minor he even went so far as to make some important departures from the usual outlines of form, which are rendered possible chiefly by the manner in which he used the characteristic figure of his principal subject. It is first introduced softly in the latter part of the Introduction, and gains force quickly, so that in a few bars it breaks away in the vigorous and passionate allegro in the following form—

which varies in the course of the movement to

In one or other of these forms it continues almost ceaselessly throughout the whole movement, either as actual subject or accompaniment; in the second section it serves in the latter capacity. In the latter part of the working-out section a fresh subject of gentler character is introduced, seeming to stem and mitigate the vehemence expressed by the principal figures of the first subject; from the time this new subject makes its appearance there continues a sort of conflict between the two; the vehement subject constantly breaking in with apparently undiminished fire, and seeming at times to have the upper hand, till just at the end the major of the original key (D minor) is taken, and the more genial subject appears in a firm and more determined form, as if asserting its rights over the wild first subject; and thereupon, when the latter reappears, it is in a much more genial character, and its reiteration at the end of the movement gives the impression of the triumph of hope and trust in good, over the seeds of passion and despair. The result of the method upon which the movement is developed is to give the impression of both external and spiritual form. The requirements of key, modulation, and subject are fulfilled, though, from the point of view of classical orthodoxy, with unusual freedom. The spiritual form,—the expression in musical terms of a type of mental conflict, so depicted that thinking beings can perceive the sequence to be true of themselves—is also very prominent, and is the most important element in the work, as is the case in all Schumann's best works; moreover in this movement everything is strongly individual, and warm with real musical life in his own style; which was not altogether the case with the first movement of the B \flat . In the C major Symphony (op. 61) the first allegro is ushered in by a slow introduction of important and striking character, containing, like those of the two just mentioned, anticipations of its principal figures. In the allegro the two principal subjects are extremely strong in character, and the consistent way in which the whole movement is developed upon the basis of their constituent figures, with allusions to those of the introduction, is most remarkable. Here again there is a sort of conflict between the principal ideas. The first subject is just stated twice (the second time with certain appropriate changes), and then a start is instantly made in the Dominant key, with new figures characteristic of the second section; transition is made to flat keys and back, and an allusion to the first subject ends the first half; but all is closely consistent, vigorous, and concise. The development portion is also most closely worked upon the principal subjects, which are treated, as it seems, exhaustively, presenting especially the figures of the second subject in all sorts of lights, and with freshness and warmth of

imagination, and variety of tone and character. The recapitulation is preceded by allusions to the characteristic features of the introduction, considerably transformed, but still sufficiently recognisable to tell their tale. The coda is made by fresh treatment of the figures of the principal subjects in vigorous and brilliant development.

The Symphony in E \flat has no introduction, and Schumann seems to have aimed at getting his strong effects of subject in this case by means other than the vigorous and clear rhythmic forms which characterise the first movements of the earlier symphonies. The effect is obtained by syncopations and cross rhythms, which alternately obscure and strengthen the principal beats of the bar, and produce an effect of wild and passionate effort, which is certainly striking, though not so immediately intelligible as the rhythmic forms of the previous symphonies. The second subject is in strong contrast, having a more gentle and appealing character; but it is almost overwhelmed by the recurrence of the syncopations of the principal subject, which make their appearance with persistency in the second as in the first section, having in that respect a very clear poetical or spiritual meaning. The whole development of the movement is again consistent and impressive, though not so fresh as in the other symphonies. As a point characteristic of Schumann, the extreme conciseness of the first section of the first movement in the B \flat , D minor, and C major Symphonies is to be noticed, as it bears strongly upon the cultivated judgment and intelligence which mark his treatment of this great instrumental form. The first half is treated almost as pure exposition; the working-out having logically the greater part of interesting development of the ideas. The recapitulation is generally free, and in the D minor Symphony is practically supplanted by novel methods of balancing the structure of the movement. The coda either presents new features, or takes fresh aspects of the principal ones, enhanced by new turns of modulation, and ending with the insistence on the primary harmonies of the principal key, which is necessary to the stability of the movement. In all these respects Schumann is a most worthy successor to Beethoven. He represents his intellectual side in the consistency with which he develops the whole movement from a few principal features, and the freshness and individuality with which he treats the form; and he shows plenty of the emotional and spiritual side in the passionate or tender qualities of his subjects, and the way in which they are distributed relatively to one another. Schumann's symphonic slow movements have also a distinctive character of their own. Though extremely concise, they are all at the same time rich and full of feeling. They are somewhat in the fashion of a 'Romanze,' that in the D minor

Symphony being definitely so called ; and their development depends rather upon an emotional than an intellectual basis ; as it seems most just that a slow movement should. His object appears to have been to find some noble and aspiring strain of melody, and to contrast it with episodes of similar character, which carry on and bear upon the principal idea without diverting the chain of thought into a different channel. Hence the basis of the movements is radically lyrical ; and this affords an important element of contrast to the first movement, in which there is always an antithetical element in the contrast of the two principal subjects. The romance of the D minor is constructed on a different principle ; the sections and musical material being strongly contrasted ; this may be partly owing to the closeness of its connection with other parts of the symphony, as will be noticed farther on. The scherzos, including that in the 'Overture, Scherzo, and Finale' (op. 52), have a family likeness to one another, though their outlines are different ; they all illustrate a phase of musical and poetical development in their earnest character and the vein of sadness which pervades them. The light and graceful gaiety of most of the minuets of Haydn and Mozart is scarcely to be traced in them ; but its place is taken by a certain wild rush of animal spirits, mixed up in a strange and picturesque way with expressions of tenderness and regret. These scherzos are in a sense unique ; for though following in the same direction as Beethoven's in some respects, they have but little of his sense of fun and grotesque, while the vein of genuine melancholy which pervades them certainly finds no counterpart either in Spohr or Mendelssohn ; and, if it may be traced in Schubert, it is still in comparison far less prominent. In fact Schumann's scherzos are specially curious and interesting, even apart from the ordinary standpoint of a musician, as illustrating a phase of the intellectual progress of the race. Schumann belonged to the order of men with large and at the same time delicate sympathies, whose disposition becomes so deeply impressed with the misfortunes and unsolvable difficulties which beset his own lot and that of his fellow-men, that pure unmixed lightheartedness becomes almost impossible. The poetical and thoughtful side of his disposition, which supplied most vital ingredients to his music, was deeply tinged with sadness ; and from this he was hardly ever entirely free. He could wear an aspect of cheerfulness, but the sadness was sure to peep out, and in this, among thoughtful and poetically disposed beings, he cannot be looked upon as singular. Hence the position of the scherzo in modern instrumental music presents certain inevitable difficulties. The lively, almost childlike, merriment of early examples cannot be attained without jarring upon the feelings of earnest men ; at least in

works on such a scale as the symphony, where the dignity and importance of the form inevitably produce a certain sense of responsibility to loftiness of purpose in the carrying out of the ideas. A movement corresponding to the old scherzo in its relation to the other movements had to be formed upon far more complicated conditions. The essential point in which Schumann followed his predecessors was the definition of the balancing and contrasting sections. The outlines of certain groups of bars are nearly always very strongly marked, and the movement as a whole is based rather upon effects attainable by the juxtaposition of such contrasting sections than upon the continuous logical or emotional development which is found in the other movements. The structural outline of the old dance-forms is still recognisable in this respect, but the style and rhythm bear little trace of the dance origin ; or at least the dance quality has been so far idealised as to apply rather to thought and feeling than to expressive rhythmic play of limbs. In Schumann's first Symphony the scherzo has some qualities of style which connect it with the minuets of earlier times, even of Mozart ; but with these there are genuine characteristic traits of expression. In the later scherzos the poetical meaning seems more apparent. In fact the scherzo and the slow movement are linked together as the two sections of the work most closely representative of human emotion and circumstance ; the first and last movements having more evident dependence upon what are called abstract qualities of form. In its structural outlines Schumann's scherzo presents certain features. In the Symphonies in B \flat and C he adopts the device of two trios. Beethoven had repeated the trio in two symphonies (4th and 7th), and Schumann advanced in the same direction by writing a second trio instead of repeating the first, and by making the two trios contrast not only with the scherzo, but also with each other ; and as a further result the trios stand centrally in relation to the first and last statement of the scherzo, while it in its turn stands centrally between them, and thus the whole structure of the movement gains in interest. It is worthy of note that the codas to all Schumann's scherzos are specially interesting and full ; and some of them are singular in the fact that they form an independent little section conveying its own ideas apart from those of the principal subjects. His finales are less remarkable on general grounds, and on the whole less interesting than his other movements. The difficulty of conforming to the old type of light movements was even more severe for him than it was for Beethoven, and hence he was the more constrained to follow the example set by Beethoven of concluding with something weighty and forcible, which should make a fitting crown

to the work in those respects, rather than on the principle of sending the audience away in a good humour. In the B♭ Symphony only does the last movement aim at gaiety and lightness; in the other three symphonies and the Overture, Scherzo, and Finale the finales are all of the same type, with broad and simple subjects and strongly emphasised rhythms. The rondo form is only obscurely hinted at in one; in the others the development is very free, but based on binary form; and the style of expression and development is purposely devoid of elaboration.

Besides the points which have been already mentioned in the development of the individual movements, Schumann's work is conspicuous for his attempts to bind the whole together in various ways. Not only did he make the movements run into each other, but in several places he connects them by reproducing the ideas of one movement in others, and even by using the same important features in different guises as the essential basis of different movements. In the Symphony in C there are some interesting examples of this; but the Symphony in D minor is the most remarkable experiment of the kind yet produced, and may be taken as a fit type of the highest order. In the first place all the movements run into each other except the first and second; and even there the first movement is purposely so ended as to give a sense of incompleteness unless the next movement is proceeded with at once. The first subject of the first movement and the first of the last are connected by a strong characteristic figure, which is common to both of them. The persistent way in which this figure is used in the first movement has already been described. It is not maintained to the same extent in the last movement; but it makes a strong impression in its place there, partly by its appearing conspicuously in the accompaniment, and partly by the way it is led up to in the sort of intermezzo which connects the scherzo and the last movement, where it seems to be introduced at first as a sort of reminder of the beginning of the work, and as if suggesting the clue to its meaning and purpose; and is made to increase in force with each repetition till the start is made with the finale. In the same manner the introduction is connected with the slow movement or *romanze*, by the use of its musical material for the second division of that movement; and the figure which is most conspicuous in the middle of the *romanze* runs all through the trio of the succeeding movement. So that the series of movements are as it were interlaced by their subject-matter; and the result is that the whole gives the impression of a single and consistent musical poem. The way in which the subjects recur may suggest different explanations to different people, and hence it is dangerous to try and fix one in definite terms

describing particular circumstances. But the important fact is that the work can be felt to represent in its entirety the history of a series of mental or emotional conditions such as may be grouped round one centre; in other words, the group of impressions which go to make the innermost core of a given story seems to be faithfully expressed in musical terms and in accordance with the laws which are indispensable to a work of art. The conflict of impulses and desires, the different phases of thought and emotion, and the triumph or failure of the different forces which seem to be represented, all give the impression of belonging to one personality, and of being perfectly consistent in their relation to one another; and by this means a very high example of all that most rightly belongs to programme music is presented. Schumann, however, wisely gave no definite clue to fix the story in terms. The original autograph has the title 'Symphonische Fantaisie für grosses Orchester, skizzirt im Jahre 1841; neu instrumentirt 1851.' In the published score it is called 'Symphony,' and numbered as the fourth, though it really came second. Schumann left several similar examples in other departments of instrumental music, but none so fully and carefully carried out. In the department of Symphony he never again made so elaborate an experiment. In his last, however, that in E♭, he avowedly worked on impressions which supplied him with something of a poetical basis, though he does not make use of characteristic figures and subjects to connect the movements with one another. The impressive fourth movement is one of the most singular in the range of symphonic music, and is meant to express the feelings produced in him by the ceremonial at the enthronement of a Cardinal in Cologne Cathedral. The last movement has been said to embody 'the bustle and flow of Rhenish holiday life, on coming out into the town after the conclusion of the ceremony in the Cathedral.'¹ Of the intention of the scherzo nothing special is recorded, but the principal subject has much of the 'local colour' of the German national dances.

As a whole, Schumann's contributions to the department of Symphony are by far the most important since Beethoven. As a master of orchestration he is less certain than his fellows of equal standing. There are passages which rise to the highest points of beauty and effectiveness, as in the slow movement of the C major Symphony; and his aim to balance his end and his means was of the highest, and the way in which he works it out is original; but both the bent of his mind and his education inclined him to be occasionally less pellucid than his predecessors, and to give his instruments things to do which are not perfectly adapted to their

¹ For Schumann's intention see Wasielewski, 3rd ed., pp. 269, 272.

idiosyncrasies. On the other hand, in vigour, richness, poetry, and earnestness, as well as in the balance which he was able to maintain between originality and justness of art, his works stand at the highest point among the moderns whose work is done; and have had great and lasting effect upon his successors.

The advanced point to which the history of the Symphony has arrived is shown by the way in which composers have become divided into two camps, whose characteristics are most easily understood in their extremest representatives. The growing tendency to attach positive meaning to music, as music, has in course of time brought about a new position of affairs in the instrumental branch of art. We have already pointed out how the strict outlines of form in instrumental works came to be modified by the growing individuality of the subject. As long as subjects were produced upon very simple lines, which in most cases resembled one another in all but very trifling external particulars, there was no reason why the structure of the whole movement should grow either complex or individual. But as the subject (which stands in many cases as a sort of text) came to expand its harmonic outlines and to gain force and meaning, it reacted more and more upon the form of the whole movement; and at the same time the musical spirit of the whole, as distinguished from the technical aspects of structure, was concentrated and unified, and became more prominent as an important constituent of the artistic *ensemble*. In many cases, such as small movements of a lyrical character for single instruments, the so-called classical principles of form were almost lost sight of, and the movement was left to depend altogether upon the consistency of the musical expression throughout. Sometimes these movements had names suggesting more or less of a programme; but this was not by any means invariable or necessary. For in such cases as Chopin's Preludes, and some of Schumann's little movements, there is no programme given, and none required by the listener. The movement depends successfully upon the meaning which the music has sufficient character of its own to convey. In such cases the art form is still thoroughly pure, and depends upon the development of music as music. But in process of time a new position beyond this has been assumed. Supposing the subjects and figures of music to be capable of expressing something which is definite enough to be put into words, it is argued that the classical principles of structure may be altogether abandoned, even in their broadest outlines, and a new starting-point for instrumental music attained, on the principle of following the circumstances of a story, or the succession of emotions connected with a given idea, or the flow of thought suggested by the memory of a place or person or event of history, or some such means; and that this would serve as a basis of consistency and a means of unify-

ing the whole, without the common resources of tonal or harmonic distribution. The story or event must be supposed to have impressed the composer deeply, and the reaction to be an outflow of music expressing the poetical imaginings of the author better than words would do. In some senses this may still be pure art; where the musical idea has really sufficient vigour and vitality in itself to be appreciated without the help of the external excitement of the imagination which is attained by giving it a local habitation and a name. For then the musical idea may still have its full share in the development of the work, and may pervade it intrinsically as music, and not solely as representing a story or series of emotions which are, primarily, external to the music. But when the element of realism creeps in, or the ideas depend for their interest upon their connection with a given programme, the case is different. The test seems to lie in the attitude of mind of the composer. If the story or programme of any sort is merely a secondary matter which exerts a general influence upon the music, while the attention is concentrated upon the musical material itself and its legitimate artistic development, the advantages gained can hardly be questioned. The principle not only conforms to what is known of the practice of the greatest masters, but is on abstract grounds perfectly unassailable; on the other hand, if the programme is the primary element, upon which the mind of the composer is principally fixed, and by means of which the work attains a specious excuse for abnormal development, independent of the actual musical sequence of ideas, then the principle is open to question, and may lead to most unsatisfactory results. The greatest of modern programme composers came to a certain extent into this position. The development of pure abstract instrumental music seems to have been almost the monopoly of the German race; French and Italians have had a readier disposition for theatrical and at best dramatic music. Berlioz had an extraordinary perception of the possibilities of instrumental music, and appreciated the greatest works of the kind by other composers as fully as the best of his contemporaries; but it was not his own natural way of expressing himself. His natural bent was always towards the dramatic elements of effect and dramatic principles of treatment. It seems to have been necessary to him to find some moving circumstance to guide and intensify his inspiration. When his mind was excited in such a manner he produced the most extraordinary and original effects; and the fluency and clearness with which he expressed himself was of the highest order. His genius for orchestration, his vigorous rhythms, and the enormous volumes of sound of which he was as much master as of the most delicate subtleties of small combinations of instruments, have the most powerful effect

upon the hearer ; while his vivid dramatic perception goes very far to supply the place of the intrinsically musical development which characterises the works of the greatest masters of abstract music. But on the other hand, as is inevitable from the position he adopted, he was forced at times to assume a theatrical manner, and a style which savours rather of the stage than of the true dramatic essence of the situations he deals with. In the 'Symphonie Fantastique,' for instance, which he also called 'Episode de la Vie d'un Artiste,' his management of the programme principle is thorough and well-devised. The notion of the ideal object of the artist's affections being represented by a definite musical figure, called the 'idée fixe,' unifying the work throughout by its constant reappearance in various aspects and surroundings, is very happy ; and the way in which he treats it in several parts of the first movement has some of the characteristic qualities of the best kind of development of ideas and figures, in the purely musical sense ; while at the same time he has obtained most successfully the expression of the implied sequence of emotions, and the absorption consequent upon the contemplation of the beloved object. In the general laying out of the work he maintains certain vague resemblances to the usual symphonic type. The slow introduction, and the succeeding Allegro agitato—representing his passion, and therefore based to a very great extent on the 'idée fixe'—are equivalent to the familiar opening movements of the classical symphonies ; and moreover there is even a vague resemblance in the inner structure of the Allegro to the binary form. The second movement, called 'Un bal,' corresponds in position to the time-honoured minuet and trio ; and though the broad outlines are very free there is a certain suggestion of the old inner form in the relative disposition of the valse section and that devoted to the 'idée fixe.' In the same way the 'Scène aux Champs' corresponds to the usual slow movement. In the remaining movements the programme element is more conspicuous. A 'Marche au supplice' and a 'Songe d'une nuit de Sabbat' are both of them as fit as possible to excite the composer's love of picturesque and terrible effects, and to lead him to attempt realistic presentation, or even a sort of musical scene-painting, in which some of the characteristics of instrumental music are present, though they are submerged in the general impression by characteristics of the opera. The effect produced is of much the same nature as of that of passages selected from operas played without action in the concert-room. In fact, in his little preface, Berlioz seems to imply that this would be a just way to consider the work, and the condensed statement of his view of programme music there given is worth quoting :

'Le compositeur a eu pour but de développer, dans ce qu'elles ont de musical, différentes situations de la vie d'un artiste. Le plan du drame instrumental, privé du secours de la parole, a besoin d'être exposé d'avance. Le programme (qui est indispensable à l'intelligence complète du plan dramatique de l'ouvrage) doit donc être considéré comme le texte parlé d'un Opéra, servant à amener des morceaux de musique, dont il motive le caractère et l'expression.'¹ This is a very important and clear statement of the position, and marks sufficiently the essential difference between the principles of the most advanced writers of programme music and those adopted by Beethoven. The results are in fact different forms of art. An instrumental drama is a fascinating idea, and might be carried out perfectly within the limits used even by Mozart and Haydn ; but if the programme is indispensable to its comprehension those limits have been passed. This does not necessarily make the form of art an illegitimate one ; but it is most important to realise that it is on quite a different basis from the type of the instrumental symphony ; and this will be better understood by comparing Berlioz's statement with those Symphonies of Beethoven and Mendelssohn, or even of Raff and Rubinstein, where the adoption of a general and vague title gives the semblance of a similar use of programme. Beethoven liked to have a picture or scene or circumstance in his mind ;² but it makes all the difference to the form of art whether the picture or story is the guiding principle in the development of the piece, or whether the development follows the natural implication of the positively musical idea. The mere occurrence, in one of these forms, of a feature which is characteristic of the other, is not sufficient to bridge over the distance between them ; and hence the 'instrumental drama' or poem, of which Berlioz has given the world its finest examples, must be regarded as distinct from the regular type of the pure instrumental symphony. It might perhaps be fairly regarded as the Celtic counterpart of the essentially Teutonic form of art, and as an expression of the Italo-Gallic ideas of instrumental music on lines parallel to the German symphony ; but in reality it is scarcely even an offshoot of the old symphonic stem ; and it will be far better for the understanding of the subject if the two forms of art are kept as distinct in name as they are in principle.

The earliest and most eminent follower of Berlioz, working on similar lines to his in modern

¹ 'The composer has aimed at developing various situations in the life of an artist, so far as seemed musically possible. The plan of an instrumental drama, being without words, requires to be explained beforehand. The programme (which is indispensable to the perfect comprehension of the dramatic plan of the work) ought therefore to be considered in the light of the spoken text of an Opera, serving to lead up to the pieces of music, and indicate the character and expression.'

² 'This important admission was made by Beethoven to Neate: 'I have always a picture in my thoughts when I am composing, and work to it.' (Thayer, iii. 343.)

times, is Liszt; and his adoption of the name 'Symphonic poem' for such compositions sufficiently defines their nature without bringing them exactly under the head of symphonies. Of these there are many, constructed on absolutely independent lines, so as to appear as musical poems or counterparts of actual existing poems, on such subjects as Mazeppa, Prometheus, Orpheus, the battle of the Huns, the 'Préludes' of Lamartine, Hamlet, and so forth. A work which, in name at least, trenches upon the old lines is the 'Faust Symphony,' in which the connection with the programme-principle of Berlioz is emphasised by the dedication of the piece to him. In this work the connection with the old form of symphony is perhaps even less than in the examples of Berlioz. Subjects and figures are used not for the purposes of defining the artistic form, but to describe individuals, ideas, or circumstances. The main divisions of the work are ostensibly three, which are called 'character-pictures' of Faust, Margaret, and Mephistopheles severally; and the whole concludes with a setting of the 'Chorus mysticus.' Figures are used after the manner of Wagner's 'Leit-motiven' to portray graphically such things as bewildered inquiry, anxious agitation, love, and mockery, besides the special figure or melody given for each individual as a whole. These are so interwoven and developed by modifications and transformation suited to express the circumstances, as to present the speculations of the composer on the character and the philosophy of the poem in various interesting lights; and his great mastery of orchestral expression and fluency of style contribute to its artistic importance on its own basis; while in general the treatment of the subject is more psychological and less pictorially realistic than the prominent portions of Berlioz's work, and therefore slightly nearer in spirit to the classical models. But with all its striking characteristics and successful points the music does not approach Berlioz in vitality or breadth of musical idea.

The few remaining modern composers of symphonies belong essentially to the German school, even when adopting the general advantage of a vague title. Prominent among these are Raff and Rubinstein, whose methods of dealing with instrumental music are at bottom closely related. Raff almost invariably adopted a title for his instrumental works; but those which he selected admit of the same kind of general interpretation as those of Mendelssohn, and serve rather as a means of unifying the general tone and style of the work than of pointing out the lines of actual development. The several Seasons, for instance, serve as the general idea for a symphony each. Another is called 'Im Walde.' In another several conditions in the progress of the life of a man serve as a vague basis for giving a certain consistency of character to the style of expression, in a way quite consonant with the pure type. In

one case Raff comes nearer to the Berlioz ideal, namely in the Lenore Symphony, in some parts of which he clearly attempts to depict a succession of events. But even when this is most pronounced, as in the latter part of the work, there is very little that is not perfectly intelligible and appreciable as music without reference to the poem. As a matter of fact Raff is always rather free and relaxed in his form; but that is not owing to his adoption of programme, since the same characteristic is observable in works that have no name as in those that have. The ease and speed with which he wrote, and the readiness with which he could call up a certain kind of genial, and often very attractive ideas, both interfered with the concentration necessary for developing a closely-knit and compact work of art. His ideas are clearly defined and very intelligible, and have much poetical sentiment; and these facts, together with a very notable mastery of orchestral resource and feeling for colour, have ensured his works great success; but there is too little self-restraint and concentration both in the general outline and in the statement of details, and too little self-criticism in the choice of subject-matter, to admit the works to the highest rank among symphonies. In the broadest outlines he generally conformed to the principles of the earlier masters, distributing his allegros, slow movements, scherzos, and finales, according to precedent. And, allowing for the laxity above referred to, the models which he followed in the internal structure of the movements are the familiar types of Haydn, Mozart, and Beethoven. His finales are usually the most irregular, at times amounting almost to fantasias; but even this, as already described, is in conformity with tendencies which are noticeable even in the golden age of symphonic art. Taken as a whole, Raff's work in the department of symphony is the best representative of a characteristic class of composition of modern times—the class in which the actual ideas and general colour and sentiment are nearly everything, while their development and the value of the artistic side of structure are reduced to a minimum.

Rubinstein's works are conspicuous examples of the same class; but the absence of concentration, self-criticism in the choice of subjects, and care in statement of details, is even more conspicuous in him than in Raff. His most important symphonic work is called 'The Ocean'—the general title serving, as in Raff's symphonies, to give unity to the sentiment and tone of the whole, rather than as a definite programme to work to. In this, as in Raff, there is much spontaneity in the invention of subjects, and in some cases a higher point of real beauty and force is reached than in that composer's works; and there is also a good deal of striking interest in the details. The most noticeable external feature is the fact that the symphony is in six

movements. There was originally the familiar group of four, and to these were added, some years later, an additional slow movement, which stands second, and a further genuine scherzo, which stands fifth, both movements being devised in contrast to the previously written *adagio* and *scherzo*. Another symphony of Rubinstein's, showing much vigour and originality, and some careful and intelligent treatment of subject, is the 'Dramatic.' This is in the usual four movements, with well-devised introductions to the first and last. The work as a whole is hampered by excessive and unnecessary length, which is not the result of the possibilities of the subjects or the necessities of their development; and might be reduced with nothing but absolute advantage.

The greatest representative of the highest art in the department of Symphony is Johannes Brahms. His four examples¹ have that mark of intensity, loftiness of purpose, and artistic mastery which sets them above all other contemporary work of the kind. Like Beethoven and Schumann he did not produce a symphony till a late period in his career, when his judgment was matured by much practice in other kindred forms of instrumental composition, such as pianoforte quartets, string sextets and quartets, sonatas, and such forms of orchestral composition as variations and two serenades. He seems to have set himself to prove that the old principles of form are still capable of serving as the basis of works which should be thoroughly original both in general character and in detail and development, without either falling back on the device of programme, or abrogating or making any positive change in the principles, or abandoning the loftiness of style which befits the highest form of art; but by legitimate expansion, and application of careful thought and musical contrivance to the development. In all these respects he is a thorough descendant of Beethoven, and illustrates the highest and best way in which the tendencies of the age in instrumental music may yet be expressed. He differs most markedly from the class of composers represented by Raff, in the fact that his treatment of form is an essential and important element in the artistic effect. The care with which he develops it is not more remarkable than the insight shown in all the possible ways of enriching it without weakening its consistency. In appearance it is extremely free, and at available points all possible use is made of novel effects of transition and ingenious harmonic subtleties; but these are used in such a way as not to disturb the balance of the whole, or to lead either to discursiveness or tautology. In the laying out of the principal sections as much freedom is used as is consistent with the possibility of being readily followed and understood. Thus in the recapitulatory portion of a movement

the subjects which characterise the sections are not only subjected to considerable and interesting variation, but are often much condensed and transformed. In the first movement of the second symphony, for instance, the recapitulation of the first part of the movement is so welded on to the working-out portion that the hearer is only happily conscious that this point has been arrived at without the usual insistence to call his attention to it. Again, the subjects are so ingeniously varied and transformed in restatement that they seem almost new, though the broad melodic outlines give sufficient assurance of their representing the recapitulation. The same effect is obtained in 'parts of the *allegrettos* which occupy the place of scherzos in both symphonies. The old type of minuet and trio form is felt to underlie the well-woven texture of the whole, but the way in which the joints and seams are made often escapes observation. Thus in the final return to the principal section in the *Allegretto* of the second Symphony, which is in G major, the subject seems to make its appearance in F# major, which serves as dominant to B minor, and going that way round the subject glides into the principal key almost insensibly.² In the *Allegretto* of the Symphony in C minor the outline of a characteristic feature is all that is retained in the final return of the principal subject near the end, and new effect is gained by giving a fresh turn to the harmony. Similar closeness of texture is found in the slow movement of the same symphony, at the point where the principal subject returns, and the richness of the variation to which it is subjected enhances the musical impression. The effect of these devices is to give additional unity and consistency to the movements. Enough is given to enable the intelligent hearer to understand the form without its appearing in aspects with which he is already too familiar. Similar thoroughness is to be found on the other sides of the matter. In the development of the sections, for instance, all signs of 'padding' are done away with as much as possible, and the interest is sustained by developing at once such figures of the principal subjects as will serve most suitably. Even such points as necessary equivalents to cadences, or pauses on the dominant, are by this means infused with positive musical interest in just proportion to their subordinate relations to the actual subjects. Similarly, in the treatment of the orchestra, such a thing as filling up is avoided to the utmost possible; and in order to escape the over-complexity of detail so unsuitable to the symphonic form of art, the forces of the orchestra are grouped in masses in the principal characteristic figures, in such a way that the whole texture is endowed with vitality. The impression so conveyed to some is that the orchestration is not at such a high level of

² For a counterpart to this see the first movement of Beethoven's pianoforte Sonata in F, op. 10, No. 2.

¹ [See below as to the third and fourth.]

perfection as the other elements of art; and certainly the composer does not aim at subtle combinations of tone and captivating effects of a sensual kind so much as many other great composers of modern times; and if too much attention is concentrated upon the special element of his orchestration it may doubtless seem at times rough and coarse. But this element must only be considered in its relation to all the others, since the composer may reasonably dispense with some orchestral fascinations in order to get broad masses of harmony and strong outlines; and if he seeks to express his musical ideas by means of sound, rather than to disguise the absence of them by seductive misuse of it, the world is a gainer. In the putting forward and management of actual subjects, he is guided by what appears to be inherent fitness to the occasion. In the first movement of the Symphony in C minor, attention is mainly concentrated upon one strong subject figure, which appears in both the principal sections and acts as a centre upon which the rest of the musical materials are grouped; and the result is to unify the impression of the whole movement, and to give it a special sentiment in an unusual degree. In the first movement of the Symphony in D there are even several subjects in each section, but they are so interwoven with one another, and seem so to fit and illustrate one another, that for the most part there appears to be but little loss of direct continuity. In several cases we meet with the devices of transforming and transfiguring an idea. The most obvious instance is in the Allegretto of the symphony in D, in which the first Trio in 2-4 time (a) is radically the same subject as that of the principal section in 3-4 time (b), but very differently stated. Then a very important item in the second Trio is a version in 3-8 time (c) of a figure of the first Trio in 2-4 time (d).

Of similar nature, in the Symphony in C minor, are the suggestions of important features of subjects and figures of the first Allegro in the opening introduction, and the connection of the last movement with its own introduction by the same means. In all these respects Brahms

illustrates the highest manifestations of actual art as art; attaining his end by extraordinary mastery of both development and expression. And it is most notable that the great impression which his larger works produce is gained more by the effect of the entire movements than by the attractiveness of the subjects. He does not seem to aim at making his subjects the test of success. They are hardly seen to have their full meaning till they are developed and expatiated upon in the course of the movement, and the musical impression does not depend upon them to anything like the proportionate degree that it did in the works of the earlier masters. This is in conformity with the principles of progress which have been indicated above. The various elements of which the art-form consists seem to have been brought more and more to a fair balance of functions, and this has necessitated a certain amount of 'give and take' between them. If too much stress is laid upon one element at the expense of others, the perfection of the art-form as a whole is diminished thereby. If the effects of orchestration are emphasised at the expense of the ideas and vitality of the figures, the work may gain in immediate attractiveness, but must lose in substantial worth. The same may be said of over-predominance of subject-matter. The subjects need to be noble and well marked, but if the movement is to be perfectly complete, and to express something in its entirety and not as a string of tunes, it will be a drawback if the mere faculty for inventing a striking figure or passage of melody preponderates excessively over the power of development; and the proportion in which they are both carried upwards together to the highest limit of musical effect is a great test of the artistic perfection of the work. In these respects Brahms's Symphonies are extraordinarily successful. They represent the austere and noblest form of art in the strongest and healthiest way; and his manner and methods have already had some influence upon the younger and more serious composers of the day. [The third and fourth symphonies of Brahms more than fulfil the expectations raised by the first two, here reviewed. The third, in F, op. 90, is given remarkable unity by the use, before the first subject of the opening movement, of a kind of motto-theme which reappears in the finale unaltered, and plays no insignificant part in the slow movement. The first subject of the opening section, too, recurs at the very end in the form of a subtle allusion in the violins as their *tremolando* passages descend to the last chords. The *poco allegretto* of this symphony is one of Brahms's most individual inspirations, one which for plaintive grace and delicate expression has not its fellow in music. The fourth symphony in E minor, op. 98, is a masterpiece of thematic development, and is remarkable for the adoption of the *Paseacaglia* form for the finale.]

It would be invidious, however, to endeavour to point out as yet those in whose works his influence is most strongly shown. It must suffice to record that there are still many younger composers who are able to pass the symphonic ordeal with some success. Among the most successful are the Bohemian composer Dvořák, and the Italians Sgambati and Martucci; and among English works may be mentioned with much satisfaction the Scandinavian Symphony of Cowen, which was original and picturesque in thought and treatment; the Elegiac Symphony of Stanford, in which excellent workmanship, vivacity of ideas, and fluency of development combine to establish it as an admirable example of its class; and an early symphony by Sullivan, which had such marks of excellence as to show how much art might have gained if circumstances had not drawn him to more lucrative branches of composition. It is obvious that composers have not given up hopes of developing something individual and complete in this form of art. It is not likely that many will be able to follow Brahms in his severe and uncompromising methods; but he himself has shown more than any one how elastic the old principles may yet be made without departing from the genuine type of abstract instrumental music; and that when there is room for individual expression there is still good work to be done, though we can hardly hope that even the greatest composers of the future will surpass the symphonic triumphs of the past, whatever they may do in other fields of composition. [Among modern writers there are very few whose fame rests mainly on their symphonies, apart from the composers of 'symphonic poems.' Anton Bruckner's eight complete symphonies, Gustav Mahler's six, and Weingartner's two, have achieved great success in Germany at different dates; but among those that have attained universal acceptance all over the cultivated world, none are more remarkable than the three later works of Tchaikovsky, and the seven of Glazounov. The last composition of the former reached an astounding degree of popularity in London owing to the circumstances of the composer's death just at the time of its introduction into England; in the matter of form it differs from his other symphonies, which are on strict classical lines, in certain particulars, such as ending with the slow movement, and giving to the second subject of the first movement a rate of speed as well as a character in sharp contrast with those of the first subject.]

C. H. H. P.

SYMPHONY CONCERTS. Under this title are grouped the descriptions of some of the most famous organisations in Great Britain and America, at which the performance of symphonic works is the main object in view. The occasional performance of a symphony at a miscellaneous or choral concert is not enough to justify the title of 'Symphony Concert,' and

the attempt here made must be understood to deal only with more or less permanent institutions. There is little hope that it can be complete, even for the countries already named; in Germany, where every small town has its orchestral concerts as a matter of course, and in France, where there is much less centralisation than among ourselves, the task of cataloguing even the names of the various bodies which are founded for the performance of symphonic works would be impracticable.

LONDON

The first English organisation of the kind is the **PHILHARMONIC SOCIETY**, founded 1813, for which see vol. iii. pp. 698-703. The **NEW PHILHARMONIC SOCIETY** (see vol. iii. p. 366) was the next, founded in 1852. In 1855 the famous Crystal Palace Saturday Concerts began their long and useful career, which was carried on until 1901, being for all that time under the able direction of August Manns. (See vol. iii. p. 42, for their early history.) The concerts began with the first Saturday in October, and lasted, with an interval at Christmas, till the end of April. The orchestra consisted of 16 first and 14 second violins, 11 violas, 10 violoncellos, and 10 double basses, with single wind, etc. The programmes usually contained two overtures, a symphony, a concerto, or some minor piece of orchestral music, and four songs. The distinguishing feature of the concerts was their choice and performance of orchestral music. Not to mention the great works of Haydn, Mozart, Beethoven, Mendelssohn, Spohr, Weber, and other time-honoured classics, the audience were familiar with Schumann's symphonies and overtures, and with Schubert's symphonies and 'Rosamunde' music, at a time when those works were all but unknown in the concert-rooms of the metropolis. Mendelssohn's Reformation Symphony was first played here; so was his overture to 'Camacho'; Brahms's Symphonies, Pianoforte Concertos, Variations on a theme of Haydn and 'Song of Destiny'; Raff's various Symphonies; Liszt's 'Ideale'; Rubinstein's Symphonies; Goetz's Symphony, Concerto, and Overtures; Smetana's 'Vltava'; Schubert's Symphonies in chronological order; Wagner's 'Faust' Overture; Sullivan's 'Tempest' Music and Symphony in E; Benedict's Symphony in G minor, and many other works were obtained (often in MS.) and performed before they were heard in any other place in the metropolis. Bennett's 'Parisina' was first played there after an interval of a quarter of a century. A very great influence was exercised in the renaissance of English music by the frequent performance of new works of importance by Mackenzie, Parry, Stanford, Cowen, and others.

A disposition was apparent in the managers of the concerts to present the audience with

pieces of special interest; such as the MS. works of Schubert, and of Mendelssohn; Beethoven's arrangement of his Violin Concerto for the piano, and his Overture, 'Leonora No. 2'; an alternative Andante written by Mozart for his Parisian Symphony; the first version of Mendelssohn's 'Hebrides' Overture, and other rare treasures of the same nature.

The performances were of that exceptional quality which might be inferred from the ability, energy, and devotion of the conductor, and from the fact that owing to the wind and a portion of the strings of the orchestra being the permanent band of the Crystal Palace, Manns had opportunities for rehearsal which were at that time enjoyed by no other conductor in London. G.

The establishment of the RICHTER CONCERTS in 1879 was the next event in the history of symphony concerts in London. For these see *ante*, pp. 93-94.

The history of the first series called LONDON SYMPHONY CONCERTS has been related under the heading HENSCHEL, vol. ii. p. 381. The concerts were founded in 1886, and brought to an end with a notable performance of the 'Matthew-Passion' on April 1, 1897.

The opening of the Queen's Hall in 1893 was followed by the formation of the Queen's Hall Choral Society, and in 1895 the experiment was tried of reviving public interest in Promenade Concerts, which had for some seasons languished in London. Mr. Henry J. Wood tried the bold experiment of giving the public at large an opportunity of hearing the great masterpieces of music, and the result showed that the attempt was surprisingly successful. Although symphonies were given regularly at these concerts, not at first on every occasion, the regular series of SATURDAY SYMPHONY CONCERTS began on Jan. 30, 1897, and have been carried on ever since. They were at first given weekly (subsequently fortnightly) up to the end of May, and their influence was less important on British music than on that of the contemporary Russian school, the chief representatives of which obtained frequent hearings for their works. The 'Pathetic' symphony of Tchaikovsky, though introduced at a Philharmonic Concert, acquired its great popularity under Mr. Wood, and for some years its continual performances stood in the way of more interesting work being done; but in due time the views of the authorities have become broader, and the programmes have shown a more catholic taste, as well as giving opportunities, more or less frequent, to the younger English composers. It must not be forgotten that the question of Sunday concerts was importantly affected by the series of Sunday Afternoon Orchestral Concerts founded in Oct. 1895, with Mr. Randegger as conductor. Mr. Wood became the

regular conductor in the third season, 1897-98; in Nov. 1898 a dispute as to the legality of Sunday concerts, and licensing questions, made it imperative to close the hall on Sunday, Nov. 27, 1898, and led to the formation of a Sunday Concert Society, by means of which it was found possible to continue the concerts without transgressing the existing laws. The Sunday, as well as the Promenade Concerts, and the Saturday Afternoon Symphony Concerts, are still flourishing.

In 1902 a large number of the orchestra, who had acquired under Mr. Wood a very remarkable degree of excellence, particularly in accompaniment, refused to re-engage themselves to the Queen's Hall managers, owing to differences of opinion as to the right to employ deputies, and other points into which it is not necessary to enter. In course of time a new body of players was formed by Mr. Wood, and the malcontents organised themselves into the LONDON SYMPHONY ORCHESTRA, an institution whose internal economy differs from that of other English bodies of the kind. It is run at the joint risk of the members, who share in the profits and have a voice in the direction of the affairs. No permanent conductor is engaged, but various distinguished English conductors have appeared from time to time, and certain illustrious foreign conductors have also directed them. The Richter Concerts have been virtually transferred to this orchestra, a great part of whose concerts are now directed by that great conductor. Excellent work has been done in regard to performances and programmes by this body, so that the breach with the older institution has brought about nothing but artistic good.

Of Mr. Thomas Beecham's NEW SYMPHONY ORCHESTRA it is perhaps rather early to speak, as its organisation is scarcely as yet finally settled. In several seasons very interesting programmes have been given, the conductor being a man of wide musical reading, who has adopted the wise plan of reviving the older works written for a small orchestra under the original conditions. For the Symphony Concerts given in London by the various amateur bodies of players' societies, see ROYAL AMATEUR ORCHESTRAL SOCIETY (*ante*, p. 172); STOCK EXCHANGE ORCHESTRAL AND CHORAL SOCIETY (*ante*, p. 698); and STROLLING PLAYERS' ORCHESTRAL SOCIETY (*ante*, p. 728). M.

BOURNEMOUTH.

In 1893 Mr. Dan Godfrey was engaged to provide a military band of thirty performers for the summer season; gradually, as in the case of the Crystal Palace Concerts, the authorities ventured upon classical concerts, and in 1895 a series of Symphony Concerts was organised and given in the Winter Gardens with full orchestra. These were so successful

that the Municipality decided to make the undertaking a permanent one, and the annual series of concerts have attained great importance, being given on Monday and Thursday afternoons during the season. Many centenaries and other anniversaries in musical history have been observed more carefully than has usually been the case in London, and very frequently composers have conducted their own works at the concerts, Mr. Godfrey filling the post of regular conductor with great distinction. M.

BRADFORD.

The Bradford Permanent Orchestra was founded in 1892, and is partly professional, partly amateur. The band is about eighty strong, and the post of conductor has been held successively by Mr. W. B. Sewell, Mr. A. E. Bartle, Dr. Cowen, and Mr. Allen Gill, the last of whom has been in office five years. The season 1907-8 included five concerts, at which works by most of the classical composers, and of modern musicians like Sibelius, Humperdinck, German, and York Bowen, were performed. The orchestra is a private and self-supporting institution. It is now usually engaged for the concerts of the Bradford Festival Choral Society. Among the conductors who have directed their own works have been Sir Arthur Sullivan, Sir Hubert Parry, Sir C. V. Stanford, Sir Edward Elgar, and Mr. E. German. H. T.

HARROGATE.

Here also a permanent Municipal Orchestra has lately been formed and is now under the direction of Mr. Julian Clifford. On Wednesday afternoons, during a great part of the year, symphony concerts are given, and 'composers' afternoons' take place frequently. M.

HULL.

The Hull Symphony Orchestra consists of local players who are engaged at theatres and music-halls, so that the concerts are given always in the afternoon. They were established in 1906, and under the conductorship of Arthur Wallerstein have done good work.

LEEDS.

The Leeds Municipal Orchestra was organised in the autumn of 1903 by Mr. A. H. Fricker, organist of the Town Hall; the first concert was given on Oct. 17 of that year. The orchestra at first consisted of fifty of the best professional musicians in the immediate neighbourhood, and the number has since been increased to over sixty. It has no direct subsidy from public money, but as the conductor receives no further remuneration than his stipend as organist, and as the concerts take the place of the customary Saturday evening organ recitals, there is no expense for hall, lighting, etc., and

the small charges made for admission (2d., 6d., and 1s.) have hitherto just sufficed to maintain the institution. The scheme for the season of 1907-8 consisted of ten concerts, at which symphonies by Haydn, Beethoven, Schubert, Tchaikovsky, and Dvořák, together with orchestral pieces by Mozart, Weber, Mendelssohn, Liszt, Saint-Saëns, Brahms, Svendsen, Smetana, Sibelius, Debussy, Elgar, German, were given. Among the composers who have conducted their own works are Sir C. V. Stanford, Mr. E. German, Dr. Vaughan Williams, Mr. York Bowen, Mr. J. W. Nicholl, Mr. F. Cliffe, Mr. Havergal Brian, Dr. Bairstow, Mr. William Wallace, Mr. Joseph Holbrooke, Mr. Percy Godfrey, and Mr. F. K. Hattersley. H. T.

SCOTLAND.

See SCOTTISH ORCHESTRA, *ante*, p. 402.

SYMPHONY CONCERTS IN THE UNITED STATES.

Throughout the 18th century the concert life of America, so far as it existed in the principal cities of the Atlantic coast (such as New York, Philadelphia, Boston, Baltimore, and Charleston), was in every particular a reflex of the concert life of London. Practically all the influences were English, and English they remained for a full century; the colonists, as soon as they were in a position to enjoy the embellishments of civilisation, sought them in their English manifestations. As an illustration it may be pointed out that 'Ranelagh Gardens' were opened in 1765, at which 'a complete band of music' was engaged, and 'Vaux Hall Gardens' in Charleston in 1767, and New York in 1769. As to the vigour with which instrumental music, still subordinate to vocal the world over, was cultivated in America under the auspices of organisations of amateurs and professionals corresponding to the *Collegia musica* of Germany, it may suffice here to say that concerts in which solos on the harpsichord, violin, oboe, bassoon, flute, and horn were played date back to the fourth decade of the 18th century; and that the symphonies of Haydn, Pleyel, Stamitz, Gyrowetz, and their fellows, the overtures of Handel, Gretry, Gossec, and others, as well as the *concerti grossi* of Corelli, figured largely on the programmes of the concerts given in New York and Philadelphia in

the latter half of the same century. Charleston, S. C., still maintains a Caecilia Society, organised in 1762, which gave fortnightly concerts from the beginning of its career with a band of amateurs, helped out by professionals, and in 1771 advertised in the newspapers of New York, Philadelphia, and Boston for a first and second violin, 2 hautboys, and a bassoon with whom the Society was willing to enter into a contract for one, two, or three years. There is little evidence to be found concerning the size and constitution of the bands of this period, though the intimations of the programmes are suggestive. In 1786, at a 'Grand Concert of Sacred Music' in Philadelphia, which had been inspired by the Handel Commemoration in Westminster Abbey, the chorus numbered 230 and the band 50. It is worthy of note in this connection that a number of musicians who sat in the band at the Commemoration were large factors in the development of instrumental music in America afterwards; among them were Gillingham, Reinagle, Gehot, Pick, Phillips, Mallet, and R. Shaw. (Readers desirous of pursuing this branch of the subject further are recommended to read Mr. O. G. Sonneck's *Early Concert-Life in America (1731-1800)*, published by Breitkopf & Härtel, 1907.)

German influences began to make themselves felt in the second quarter of the 19th century, and to them is largely due the present status of symphonic culture in the United States, with one phase of which this article is particularly concerned. The intermediate stage between the instrumental elements of the concerts of the 18th century and the symphony concerts maintained in the musical centres of the country is still disclosed in a large number of cities where the theatre has a sufficient patronage to justify the employment of a considerable number of orchestral musicians. In these cities—Cleveland, Detroit, Indianapolis, St. Louis, Denver, New Orleans, New Haven, St. Paul, Minneapolis, and San Francisco may be taken as examples—the local orchestral musicians are brought together a few times in each season, and concerts given at the instance of either an enthusiastic or ambitious local leader or of a body of citizens who are prompted to make the inevitable financial sacrifice by a mixture of musical love and civic pride. Each of the larger and more firmly grounded institutions, whose stories are to be told presently, moreover carries on a propagandism within a large radius of its home; and there is, therefore, wide familiarity with orchestral music of the highest class, at least in the larger towns and cities of the northern tier of states. It is the custom to speak of all the orchestras (except one) which come in for discussion below as 'permanent.' The purpose of this is to distinguish them as organisations whose members play only at symphony concerts during the regular season and under a single conductor,

from the bands which are assembled for occasions, and whose members otherwise play as they list. It may be well to remember that the term is loosely applied; for no orchestra in the country is so firmly grounded as the Philharmonic Society of New York which, through sixty-five years of good and evil fortune, has never failed to give a series of symphony concerts every season, and has maintained the loftiest standard in programme and performance; yet its members are variously employed in theatre and other concert bands, when not called on for duty by their own corporation. Permanency would seem to call for an endowment in perpetuity, since no orchestra in the country has yet succeeded in making receipts and expenses cover each other except the New York Philharmonic, which lives on the co-operative plan. The Chicago Orchestra has an endowment in its hall built by popular subscription; the Boston Orchestra is the philanthropic enterprise of an individual; the others depend, year after year, on the generosity and public spirit of their guarantors, and may, therefore, be said to be just as permanent or impermanent as the moods and motives of the patrons.

H. E. K.

BOSTON.

THE BOSTON SYMPHONY ORCHESTRA owes its existence and its large perpetual endowment to the generosity and taste of Mr. Henry Lee Higginson, a well-known citizen of Boston, and affords a good instance of the munificent way in which the Americans apply their great riches for the public benefit in the service of education and art. Mr. Higginson had for long cherished the idea of having 'an orchestra which should play the best music in the best way, and give concerts to all who could pay a small price.' At length, on March 30, 1881, he made his intention public in the Boston newspapers as follows:—The orchestra to number sixty, and their remuneration to include the concerts and 'careful training.' Concerts to be twenty in number, on Saturday evenings, in the Music Hall, from middle of October to middle of March. Single tickets from 75 to 25 cents (3s. to 1s.); season tickets (concerts only) 10 to 5 dollars; one public rehearsal, 1s. entrance.

Mr. Georg Henschel was appointed conductor, and Mr. B. Listemann leader and solo violin. A full musical library was purchased, and the first concert took place on Oct. 22, 1881. There were twenty concerts in all, and the last ended with the Choral Symphony.

G.

Mr. Henschel remained as conductor of the orchestra for three years. He was succeeded at the beginning of the season of 1884-85 by Wilhelm Gericke of Vienna. Mr. Gericke's advent led to important improvements in the orchestra, many changes in the *personnel* by the importation of young and ambitious musicians from Europe, especially from Vienna, and the

establishment of a higher standard of efficiency in performance. One of his most important steps was the engagement, as leader, of Franz Kneisel, beginning with the season of 1885-86, who occupied that highly important post until the end of the season 1902-3. After five years, during which Mr. Gericke had raised the standard of the orchestra to a plane approximating the founder's ideal, he was succeeded by Arthur Nikisch, who remained conductor for four years. After him came Emil Paur for five years, when, in the autumn of 1898, Gericke was recalled. He continued as conductor until the end of the season of 1905-6, when Dr. Karl Muck, of Berlin, was engaged for two years.

The orchestra has been considerably enlarged since its establishment. It now (1908) numbers an effective force of about ninety-seven men. The support given to the orchestra in Boston is loyal and enthusiastic; the concerts are crowded, and a system of premiums for choice of seats at the regular subscription sale each season greatly increases the normal receipts. Only in one season, however, have the receipts equalled the expenditures. In the other seasons the deficits met by Mr. Higginson have ranged from \$2000 to \$40,000. The annual series of concerts now numbers twenty-four, given on Saturday evenings, with public rehearsals (which are to all intents and purposes the same as the concerts) on the preceding Friday afternoons. For twenty years the concerts were given in the old Symphony Hall. In the autumn of 1901, however, the orchestra took possession of a fine new Symphony Hall, built especially for its accommodation. A series of nightly popular concerts, extending over a period of two months, is given every summer.

An important element of its work which has reached a firmly established basis in recent years is that accomplished outside of Boston. Besides appearing frequently in New England cities near Boston the orchestra makes five trips a year, in season, to Baltimore, Philadelphia, and New York, giving one concert on each visit to the first two cities and three in New York (two in the Borough of Manhattan and one in the Borough of Brooklyn). The concerts in New York have been given uninterruptedly since 1887. In 1903 the orchestra took an important step in establishing a pension fund, formed by the self-assessment of the members, the proceeds of two special concerts given annually, and contributions of friends of the organisation. R. A.

BROOKLYN.

THE PHILHARMONIC SOCIETY, incorporated 1857, has for its declared object 'the advancement of music in the city of Brooklyn, by procuring the public performance of the best works in this department of art.' Its affairs are controlled by a directorate of twenty-five

members, chosen annually from which a government is appointed. Membership is secured by payment of the subscription annually designated by the directors, who also precribe the number of these subscriptions, limited, for several years, to 1200. Beginning in the autumn of 1857, five or more concerts have been given in each season, that at the close of the twenty-first season, May 10, 1879, being the 108th—each preceded by three public rehearsals. During the first five seasons the concerts were given at the Brooklyn Athenæum. Since 1862 the Brooklyn Academy of Music, a large theatre holding nearly 3000 people, has been made use of. The orchestral conductors have been—Theodore Eisfeld, 1857-62; Theodore Thomas, part of 1862; Mr. Eisfeld again, until the election of Carl Bergmann, Sept. 5, 1865; Mr. Thomas, re-elected Sept. 4, 1866; Mr. Bergmann again, 1870-73; succeeded May 26, 1873, by Mr. Thomas, who retained the position until his departure for Chicago (see below), assisted by William G. Dietrich, who had charge of the orchestra at the first two rehearsals of each concert. The concerts have always been of a high order; the orchestra large and composed of the best musicians procurable; the programmes of a catholic nature, no especial school of music having undue prominence. Important works have been produced for the first time in America, including several by native composers. Large choral works have occasionally figured on the Society's programmes, as well as solos and instrumental concertos. The Society's Library contains the scores and parts of over 100 orchestral works.

F. H. J.

What was formerly the city of Brooklyn, N.Y., is now a borough of the American metropolis. Nevertheless the Philharmonic Society retains the corporate name by which it has been known since 1857. Theodore Thomas, with his orchestra, gave its concerts from 1873 till 1891. On his departure for Chicago an arrangement was made by which the concerts (five annually, by the Boston Symphony Orchestra) were continued under the joint auspices of the Philharmonic Society and the Institute of Arts and Sciences. After the destruction of the Academy of Music, Nov. 29, 1903, the concerts were transferred to the Baptist Temple.

H. E. K.

CHICAGO.

THE THEODORE THOMAS ORCHESTRA of Chicago is in several things unique amongst the concert institutions of the United States, but in none so much as its history, which illustrates achievement through the persistence of a man of dominant ambition and iron will, the courage and steadfastness of a coterie of friends and music-lovers, and the public spirit of a young city of amazing resource and indomitable energy. The orchestra is the only

one in the United States which bears officially the name of its creator; it is also the only one of its kind which occupies its own hall. This hall is its endowment, an endowment which may fairly be said to be more enduring than that of any other concert institution in the country, inasmuch as it does not depend upon the wealth and inclination of an individual, a body of guarantors or the interests of the players themselves as is the case of one or the other of the Societies discussed in this article. The management of the Theodore Thomas Orchestra is in the hands of the Orchestral Association of Chicago, and for fifteen years it was known as the Chicago Orchestra, though popularly spoken of by the name by which it is now officially known. It had its origin primarily in the admiration excited by Mr. Thomas (*q.v.*) in the metropolis of the Middle West in the course of a long series of concerts given by him when he was still the leader of an itinerant orchestra which went out from New York, and a series which he gave every summer for a number of years in a building erected for exposition purposes on the Lake Front. The first Thomas concert was given in Chicago in 1869, when the city was only thirty-four years old as a municipal corporation, and when it was surpassed in population by Cincinnati and St. Louis. But the love of good music which Mr. Thomas implanted in the city would not have yielded its present fruit had it not been for the disasters which overwhelmed Mr. Thomas's private enterprises during the last few years of his sojourn in New York City. The chief causes, which operated against his efforts to maintain his own orchestra in the American metropolis may be looked for in the variety and number of interests developed by the growth of musical culture in New York. In 1890, when he ended his labours in the city which had been his home since childhood, orchestral concerts were regularly given by the Philharmonic and Symphony Societies, the Boston Symphony Orchestra, and the band conducted by Anton Seidl. Mr. Thomas had himself helped to raise the Philharmonic Society to a proud position, and many circumstances conspired to prevent him from commanding the large allegiance which his ambition and ideals exacted. Moreover, Grand Opera, which hitherto had been an exotic, had taken firm root in the Metropolitan Opera-House (see *OPERA IN THE UNITED STATES*, vol. iii. pp. 466-472) and gathered unto itself a munificent public patronage. In a sense, Mr. Thomas's missionary labours were done in New York, and it was for the good of music that he transferred his work to Chicago.

It was in the summer of 1890, when Mr. Thomas had abandoned all of his individual enterprises in New York, that he was met by C. Norman Fay, his brother-in-law, of Chicago, and from him received the suggestion that he

come to that city and organise an orchestra there. He agreed, provided that a guarantee fund of \$50,000 a year for three years should be raised. Fifty-two citizens of Chicago were found who subscribed \$1000 a year for three years, an official invitation was extended and accepted, and Mr. Thomas took a habitation in the city in 1891, spending the intermediate time in organising his new band. Meanwhile the Orchestral Association, which was conceived as a self-perpetuating body, was organised by N. K. Fairbank, C. Norman Fay, E. B. McCagg, A. C. Bartlett, and C. D. Hamill. This association entered into an agreement with Mr. Thomas and the guarantors to give two concerts a week, on Friday afternoons and Saturday evenings, for twenty weeks each season for three years. The musicians were engaged for twenty-eight weeks, eight of which were devoted to concerts outside Chicago. The Chicago concerts were given in the Auditorium, a new theatre with a seating capacity of between 4000 and 5000. At the end of the contract period the losses entailed by the concerts amounted to \$153,000, which fact, together with certain unpleasant experiences in which Mr. Thomas had become involved as Musical Director of the World's Fair held in 1893, had a discouraging effect upon the guarantors. Originally there were fifty-two; two of them failed to pay their assessments, and twenty declined to renew their subscriptions. The Orchestral Association was now reorganised, and new subscriptions were asked on a basis of a unit of \$50, each unit to entitle the subscriber to a vote for the trustees who were to take over the financial administration. An effort to create another three years' term failed, and the guarantee fund for the fourth season amounted to only \$30,000, which proved to be \$4000 less than the cost of the concerts. The fifth, sixth, and seventh seasons created deficits of \$27,000 and \$39,000 respectively, the last largely due to injudicious travelling. The guarantee for these seasons being only \$22,000 for each year a debt of \$30,000 accumulated, for which a special subscription was raised. This was done, the debts paid, and a contingent fund of \$30,000 was created, which soon disappeared under the flood of losses. On guarantees raised from year to year the orchestra continued the concerts until the final phase of the enterprise was reached. On Feb. 13, 1903, the patrons of the concerts were asked by the trustees of the Association to subscribe to a fund for the purpose of building a hall which should be a permanent home of the organisation, the theory of the trustees being that a hall with a seating capacity of 2500 would secure better support than one with so many seats that there was little if any inducement to subscribe for the season. It was argued, besides, that the saving in rentals and an income from the same source would put the orchestra on a self-supporting

basis. A system was adopted which appealed for subscriptions to all classes of the population, and 8000 subscriptions were secured, ranging in amount from 10 cents to \$25,000, and amounting to \$650,000. Building operations were begun in May 1904, and the hall which cost \$750,000 was dedicated on Dec. 14 of the same year. Up to this time the losses on each season had been as follows; 1st season \$53,000; 2nd, \$51,000; 3rd, \$49,000; 4th, \$34,000; 5th, \$27,000; 6th, \$27,000; 7th, \$39,000; 8th, \$16,000; 9th, \$16,000; 10th, \$26,000; 11th, \$30,000; 12th, \$20,000; 13th, \$21,000; 14th, \$19,000; 15th, \$15,000. In March 1907 the treasurer, Frederick J. Wessels, wrote touching the result of the new policy of the Orchestral Association: 'The theory of the Trustees has proved correct. The ticket sales have increased every year, the demand for seats being sufficient to induce the Trustees to lengthen the season of 24 weeks (48 concerts) to 28 weeks (56 concerts). The present patronage, together with the building rentals and hiring of the hall for outside attractions is sufficient to keep the orchestra on a no-loss basis, notwithstanding the large interest and tax expenditures to be met.' Mr. Thomas lived to conduct only five concerts in the new hall, the last on Dec. 24, 1904. He died on Jan. 4, 1905, and was succeeded by Frederick A. Stock (*q.v.*), who had been his assistant. H. E. K.

CINCINNATI.

THE CINCINNATI SYMPHONY ORCHESTRA. Concerts of symphonic music were given by this organisation from Jan. 1895 to April 1907, under the auspices of the Cincinnati Orchestra Association, whose affairs are administered by a Board of Directors composed of women, and supported financially by bodies of shareholders, stockholders, and subscribers to a guarantee fund. The Association was organised in 1895 for the purpose of promoting the culture of high-class orchestral music, which for fifteen years had been dependent upon the somewhat desultory and sporadic efforts of the College of Music of Cincinnati. The concerts of the first season, given between January and April of 1895, were divided into three series of three concerts each, preceded by afternoon public rehearsals, and were conducted by Frank Van der Stucken, Anton Seidl, and Henry Schradieck. Mr. Van der Stucken was then engaged as sole conductor, and remained such for twelve years, during which period ten afternoon and ten evening concerts were given annually. At the close of the thirteenth season (1906-7), the Orchestra Association, rather than submit to the dictation of the American Federation of Musicians, disbanded the orchestra and resolved to invite the orchestras of the eastern cities and Chicago to give concerts under its auspices. H. E. K.

NEW YORK.

THE PHILHARMONIC SOCIETY OF NEW YORK is the oldest orchestral body in continuous service in the United States devoted to the performance of instrumental music. Incidentally it also extends help to its superannuated members, and to that end maintains a pension fund created by gifts from its friends, one half of the initiation fees paid by new members on their election, fines assessed against members and a share of the earnings of the concerts. It is a communistic body of professional musicians, with three classes of members, viz. Actual, Honorary, and Honorary Associate. In the first class there are none but professional players upon orchestral instruments. The title of Honorary Member is bestowed by vote of the Society upon musicians whose eminence entitles them to that distinction in the eyes of the members; that of Honorary Associate upon laymen for the same reason. Election to membership in the three classes requires a unanimous vote. Active devotion to the Society's interests is enforced on the part of the Actual Members by a system of fines. At the concerts of the Society, which take place only in the regular musical season the actual members constitute a little less than two-thirds of the performers, generally numbering from 90 to 110. The additional players are engaged by the Directors in the ordinary way, and paid the ruling rate of wage. At the end of each season the money in the hands of the Treasurer, save a small sum withheld for contingent expenses, is divided equally among the members who have participated in the concerts. All the officers of the Society are musicians except the President, who as a rule, is a citizen of New York distinguished by love of music and devotion to its interests. The conductor need not be a member of the Society, but must be elected like the other officers. His salary is fixed by agreement between him and the Board of Directors. The regular subscription concerts of the Philharmonic Society now (in 1908) number sixteen in each season, and are given in pairs on Friday afternoons and Saturday evenings from November to April, the programmes of each pair of concerts being identical. Until 1906 it was a rule of the Society that its name should not be used for any concerts except those given under its own auspices; but the advent of 'star conductors' led to a modification of the rule in the hope that the Society might participate in other concerts than its own, thus adding to its income and recouping it for the large salaries demanded by the 'stars.' The results of the first season did not justify the change. Among the Honorary Members of the Society since its foundation have been Vieuxtemps (the first one, elected in 1843), Spohr, Mendelssohn, Jenny Lind, Sontag,

Alboni, William Vincent Wallace, Thalberg, Mme. Parepa-Rosa, Franz Liszt, Richard Wagner, Joachim Raff, Anton Rubinstein, and Dvořák.

The history of the Philharmonic Society of New York had its beginning at a meeting of professional musicians called by Ureli Corelli Hill (an American musician, violinist, and conductor, pupil of Spohr in Cassel) held on April 2, 1842. The impulse to organise such a Society seems to have come from the artistic success achieved at a 'Musical Solemnity' given in June 1839, in honour of the memory of Daniel Schlesinger, one of the first thoroughly trained musicians to make his home in New York. The most prominent musicians in the city were present at this meeting and the meetings which followed, at which the organisation of the Society was perfected. Among them were Mr. Hill; A. P. Heinrich, an eccentric Bohemian composer who presided at the first meeting, but took no further interest in the affair; Charles E. Horn (*q.v.*); William Vincent Wallace, who was a member during the first two years; Alfred Boucher, a connection of Alexandre Jean Boucher (*q.v.*); Dr. Edward Hodges, an English Cathedral musician, afterwards organist of Trinity Church; H. C. Timm and William Scharfenberg, pianists of German birth and training; George Loder, a member of the English family of musicians of that name; and D. G. Etienne, a French pianist who could play the horn when required. To Loder, who was connected with the Society throughout the first decade, fell the honour of conducting the first performance in the United States of Beethoven's Choral Symphony at a concert of the Society on May 20, 1846. Three concerts were given in the first season (1842-43), and the first programme is such excellent testimony to the seriousness of the founders' aims that it deserves publication here.

First Concert, Dec. 7, 1842—Symphony No. 5, in C minor, Beethoven (conducted by U. C. Hill); Sonata from 'Oberon', Weber (Madame Otto); Quintet in D minor, for pianoforte, violin, viola, violoncello, and double-bass, Hummel (Messrs. Scharfenberg, Hill, Derwort, Boucher, and Rosier); Overture 'Oberon', Weber (conducted by Mr. Etienne); Duet from 'Armida', Rossini (Madame Otto and Mr. C. E. Horn); Scene from 'Fidello', Beethoven (Mr. C. E. Horn); Aria Brava, from 'The Seraglio', Mozart (Madame Otto); New Overture in D, Kalliwoda, (conducted by Mr. Timm). The orchestra during the vocal music was directed by H. C. Timm.

For the next sixteen years four regular concerts were given each season, then for ten years five. In the twenty-seventh season the number was increased to six, and this remained the rule until the fifty-sixth season, when the number was increased to eight. Out of a custom of admitting amateurs to the rehearsals of the Society which was inaugurated in the second season there grew the so-called public rehearsals, which for several decades differed in nothing but name and the time of performance from the regular concerts. In 1906 the title 'public rehearsals' was abandoned for 'Afternoon Concerts.' This explains the statement,

heretofore made, that now the Society gives sixteen subscription concerts annually. It was the custom during the early years of the Society, when the president was a professional musician and necessarily a member of the Society, to leave the conducting of the concerts in his hands, though for a number of years that official found it expedient to share the duty with the leading members of the Society, especially such as were at the head of singing and other musical societies. Thus in the first season, though only three concerts were given, five members officiated at the conductor's desk, viz: U. C. Hill, H. C. Timm, W. Alpera, Alfred Boucher, and George Loder. D. G. Etienne aided Hill, Loder, and Alpera in the second season. Two new men, one of whom was destined to play an important rôle in the history of the Society, appeared in the seventh season. They were Theodore Eisfeld, who came from Europe with experience gained in conducting concerts in Paris and elsewhere; and Max Martezek, whose real activities belonged in the field of opera. In Eisfeld's second season the directors changed their policy and elected Eisfeld sole director for the season. In 1854 Carl BERGMANN was associated with him and H. C. Timm, who was then president, and thereafter for ten years, gave the fifteenth and sixteenth seasons conducted solely by Eisfeld and the fourteenth and seventeenth conducted by Bergmann, these two men conducted alternately. Bergmann was sole conductor from 1865 to 1876. Then came an interregnum of three years with Dr. Leopold DAMROSCH, Theodore THOMAS, and Adolph Neuendorff as conductors. Mr. Thomas was conductor for the next twelve years, Anton SEIDL for the next seven (holding the position at the time of his death on March 28, 1898); and Emil PAUR for four. Under the artistic administration of Messrs. Thomas and Seidl, the Society grew steadily in prosperity and reached its zenith. A falling off in popular interest during the Paur regime and the one season, the sixty-first, in which Walter DAMROSCH was conductor, led to the adoption of the custom, which had gained a foothold in some of the European capitals, of engaging a different conductor for each concert, instead of one for the entire season. These 'guests' in the sixty-second season were Edouard Colonne of Paris, Gustav F. Kogel of Frankfurt, Henry J. Wood of London, Victor Herbert of Pittsburgh, Felix Weingartner of Munich, and Richard Strauss of Berlin. In the sixty-third season the conductors were Gustav F. Kogel, Edouard Colonne, Wassili Safonoff of Moscow, Felix Weingartner, and Karl Panzner of Bremen; Theodore Thomas, who had also accepted the invitation of the directors, died before the concert which he was to conduct, and Herr Kogel was called back from Frankfurt to take his place. In the sixty-fourth season the

Society's invitation was accepted by Willem Mengelberg of Amsterdam, Victor Herbert, Max Fiedler of Hamburg, M. Safonoff, Dr. Ernst Kunwald of Frankfurt, and Fritz Steinbach of Cologne. At the end of this season an engagement was made with M. Safonoff as sole conductor for three years. To carry out these new policies a number of public-spirited citizens placed a considerable fund at the service of the Society.

(For a history of the Society see *The Philharmonic Society of New York*, a memorial by Henry Edward Krehbiel published on the occasion of the Fiftieth Anniversary of the founding of the Society, April 1892, London, Novello, Ewer & Co.) H. E. K.

THE NEW YORK SYMPHONY SOCIETY. This organisation is a successor, *de jure* if not *de facto*, of a Society of like name, which was founded in 1878 by Dr. Leopold DAMROSCH. During the early years of its existence the New York Symphony Society maintained an exceedingly active competition with the orchestra of Theodore THOMAS, and the rivalry of the organisations had much to do with familiarising the New York public with the works of the German, French, and Russian composers as fast as they were published, and even before, since Dr. Damrosch and Mr. Thomas were both in the habit of securing manuscript copies of their compositions from the leading authors of Europe. After the death of Dr. Damrosch in 1885 his son Walter succeeded to the conductorship of the Society, and has remained its administrative as well as artistic head ever since. The Society has passed through many vicissitudes, and has several times appeared to be moribund, only to be awakened to renewed life by its energetic and indefatigable conductor. The concerts were permitted to lapse in 1899, when Mr. Damrosch devoted a year to composition; again when he travelled with his own opera company, and still again when he became conductor for a season (1902-3) of the Philharmonic Society of New York (*q.v.*). Retiring from that post Mr. Damrosch organised what for four years was called the New York Symphony Orchestra, on a co-operative basis, profit and loss being shared by the members of the organisation and a committee of guarantors. The plan proved to be unsatisfactory, and in the spring of 1907 the guarantors called the old Symphony Society back to life, and resolved to proceed under the old style and in the old manner, paying the players weekly wages throughout the season, and assuming all financial responsibilities. At the same time it was determined to increase the number of concerts in New York City to twenty-eight, half of them to be given on Sunday afternoons. In the season 1905-6 Felix Weingartner alternated with Mr. Damrosch in conducting concerts in New York and other cities; for, unlike the Philharmonic Society, this band makes tours

to many cities and towns in the United States. It also remains intact during the summer months, and provides music for large and fashionable resorts near Philadelphia and Chicago. H. E. K.

PEOPLE'S SYMPHONY CONCERTS OF NEW YORK. Under this title a series of concerts are annually given in the chief American city by an orchestra of excellent proportions and artistic character, and with programmes of a high class, for which there is little more than a nominal charge for admission, the prices varying from ten cents to fifty. The concerts are also given in pairs, first in the large hall of Cooper Union, situated in the densely populated district known as the East Side; then in Carnegie Hall, the home of all the fashionable concerts, the purpose being to reach all classes of the people whose tastes the concerts are designed to educate. Under the title 'The People's Symphony Concerts' auxiliary chamber concerts are also given by local combinations of players. All the concerts, which were called into being by Franz Xavier Arens in 1902 and have been directed by him ever since, are given under the auspices of an organisation incorporated under the laws of the State of New York, and are maintained largely by the contributions of philanthropic persons interested in musical culture. These contributions range from \$2500, which sum entitles the donor to be a founder, to a dollar a year. Receipts and expenses are about \$12,000 a year, and at the end of 1905 the organisation had a permanently invested fund of the same amount. H. E. K.

YOUNG PEOPLE'S SYMPHONY CONCERTS OF NEW YORK. For the purpose of giving children and young people an opportunity not only to hear standard symphonic works but also to become familiar with their structure and contents Frank DAMROSCH organised an annual series of concerts under the above title in 1898. Appreciation of the compositions is helped by explanatory remarks made by the conductor, in which the forms are briefly analysed and the poetic contents suggested, themes and phrases being played in illustration by the orchestra. The concerts are given at popular prices, and teachers and pupils of the public schools of the city receive tickets at half price. Inasmuch as the orchestral has full symphonic dimensions, that of the New York Symphony Society being employed and solo artists are frequently engaged, the expenses are not always covered, though for years all the seats in Carnegie Hall have been subscribed for, and the resulting deficit is usually met by private subscription of public-spirited music-lovers. The management of the concerts is in the hands of a small committee of ladies; there is no official organisation. H. E. K.

PHILADELPHIA.

THE PHILADELPHIA ORCHESTRA, whose affairs are administered by the Philadelphia Orchestra

Association, aided by committees of ladies from towns and cities contiguous to Philadelphia, was organised in 1900. The Orchestra Association is composed of about 300 men and women, prominent in social and artistic affairs, who annually guarantee the cost of the enterprise. Until now (1908) the yearly losses have ranged from \$50,000 to \$70,000, but Philadelphia has repeated the story of Chicago in its self-sacrificing devotion to the ideal which it has set for itself in respect of orchestral music. The history of the Philadelphia Orchestra does not differ essentially from that of a number of the other institutions discussed in this article; though the desire of the city's society element to have adequate performances of opera as a feature of the social season was largely instrumental in its formation. Readers of the article in this Dictionary on OPERA IN THE U.S. (vol. iii. pp. 466-472) will have observed that for a long time in the latter part of the 18th and the first decades of the 19th centuries Philadelphia was a vigorous rival of New York in operatic activity, but that in the course of time supremacy went to the latter city. So long as Theodore Thomas was a factor in the orchestral music of the eastern cities, his orchestra gave concerts with greater or less regularity in Philadelphia; but the abandonment of his individual enterprises in 1891 left the music-lovers of the old Federal capital without regular concerts of high-class orchestral music. The Boston Orchestra, on its travels, supplied the want for several years, but could not satisfy the ambitions of a city properly proud of the part which it had played in the political, commercial, social, and artistic history of the country. In the season of 1894-95 there was something like an awakening of the dormant musical interests of the city. In 1895-96 a committee was formed to promote an opera season, and a season of opera in English of forty performances was given under a guarantee with Mr. Gustav Hinrichs as director. In the next season Mr. Walter Damrosch supplied local operatic needs; in 1897-98 Messrs. Damrosch and Ellis, and in 1898-99 Mr. Charles Ellis alone with Mr. Damrosch as conductor and director. Thereafter, the local committee of opera guarantors made annual arrangements for opera from year to year with Maurice Grau and Heinrich Conried.

During this period of operatic interest orchestral matters were also in a ferment. While Mr. Hinrichs was director of the opera he gave orchestral concerts, and tried to develop a symphonic band out of the material which he found at hand. In the same season the Musical Fund Society, an old foundation, created conditions which made it possible for a local concert orchestra, the Germania, to increase the number of its members and to give a series of Friday afternoon concerts under the direction of William

Stoll, Jr., a well-known violinist. The concerts of the Germania continued for two years, whereupon Henry Gordon Thunder, director of the Philadelphia Choral Society, took up the work and out of the same material organised a Philadelphia Orchestra; his concerts, like those of Mr. Stoll, however, were tentative in character, and served chiefly to disclose the inadequacy of the players. After five years of these praiseworthy but futile efforts a number of the most prominent men and women in social and musical circles formed the Orchestral Association. Some of the foremost workers in the new enterprise were the cultivated amateurs who had formed a 'Symphony Society of Philadelphia' in 1893, with Dr. W. W. Gilchrist as conductor; this Society gave concerts from time to time until the new orchestra, a brief forerunner of the present organisation, appeared on the field. This new orchestra gave two concerts in the spring of 1900 with Fritz Scheel as conductor. Mr. Scheel had been an assistant to Dr. von Bülow in Hamburg, and was a man of fine musical parts and splendid energy. The success of the two concerts was such as to induce the Association to send him abroad to recruit the orchestra, and make of it a first-class symphonic organisation. The first regular season of the newly recruited orchestra was given in 1900-1, and from that time till his death in February 1907, Mr. Scheel remained conductor of the band; he was succeeded in the season of 1907-8 by Karl Pohlig. The Philadelphia Orchestra does not confine its ministrations to Philadelphia, but besides twenty afternoon and twenty evening concerts there, gives concerts each year in other neighbouring towns and cities, such as Wilmington, Del., Harrisburg, Pa., Trenton, N.J., Easton, Pa., Reading, Pa., Baltimore and Washington.

H. E. K.

PITTSBURGH.

PITTSBURGH SYMPHONY ORCHESTRA. The incentive to organise a permanent concert orchestra in Pittsburgh, Pennsylvania, came with Andrew Carnegie's gift to the city of a building that should contain a library, art gallery, museum, and music hall. The building was dedicated in 1895, and the Art Society undertook to raise funds to support an orchestra for three years. The first season of the Orchestra was begun on Feb. 27, 1896. Frederic ARCHER was conductor. Twenty concerts were given that year in Pittsburgh, and in the two years following, twenty in Pittsburgh and in other towns, seven in the season 1896-97, and five in 1897-98. Mr. Archer was chiefly known as an organist, but he had had some experience in the English provinces as a conductor. He was succeeded as conductor by Victor HERBERT in 1898. In the season of 1898-99 the concerts given numbered twenty in Pittsburgh and nine in other places. The next season the number

in the regular series was increased to thirty-six, and so it remained for the next five years. At the same time the Orchestra entered upon a much greater activity in giving concerts outside of Pittsburgh. Tours were undertaken, and the concerts varied in number from twenty-seven to forty-five. In 1904 Mr. Herbert was succeeded by Emil PAUR, who for five years, from 1893 to 1898, had been conductor of the Boston Symphony Orchestra. The number of concerts in the Pittsburgh season was reduced to thirty; but in that season forty-three concerts were given in other cities and towns and eighty-five in the season of 1905-6.

From the beginning the Art Society of Pittsburgh has been responsible for the Orchestra; but it has asked of the public guarantees of a fixed sum in periods of three years, each representing the term for which the conductor is engaged. The first year the total guarantee was \$25,000. Each year the sum has been increased, until for the three-year term beginning with the season of 1904-5 the amount was \$40,000 a year. At no time in the history of the organisation has it been necessary to ask the guarantors to pay the maximum of their subscriptions, but the deficit in the first eleven years was over \$250,000. It is not expected that the Orchestra shall pay expenses; in fact, the Committee of the Art Society has declared that its maintenance ought to be regarded as an obligation upon the public-spirited and well-to-do citizens of Pittsburgh. The out-of-town concerts have formed an increasingly important part of the activities of the Orchestra, and through them its influence has been great in Cleveland, Buffalo, Toledo, and Detroit, and particularly in Toronto and other Canadian cities and towns. As at present (1908) constituted, the Orchestra numbers sixty-five players.

R. A.

SYMPSON, CHRISTOPHER. See SIMPSON, *ante*, pp. 455-456.

SYNCOPIATION. [An alteration of regular rhythm, produced by placing the strongest emphasis on part of the bar not usually accented. In a bar of common time, the simplest form of syncopation is produced by giving three notes of the value of a crotchet, a minim, and a crotchet respectively. This last crotchet is often tied on to the first crotchet of the next bar, so that for several bars the displaced accentuation obtains the mastery. The fourth species of STRICT COUNTERPOINT (see *ante*, p. 724) is in syncopation.] In the Coda of the great Overture 'Leonora No. 3' Beethoven has a passage given out syncopated on the wind and naturally on the strings, then *vice versa*. It was not, however, always sufficient for Beethoven's requirements, as may be seen from a well-known place in the Scherzo of the Eroica, where he first gives a passage in syncopation—

and then repeats it in common time, which in this instance may be taken as an extreme form of syncopation.

Schumann was fonder of syncopation than any other composer. His works supply many instances of whole short movements so syncopated throughout that the ear loses its reckoning, and the impression of *contra-tempo* is lost: e.g. *Kinder-scenen*, No. 10; *Faschingsschwank*, No. 1, and, most noticeable of all, the opening bar of the 'Manfred' Overture.

Wagner has one or two examples of exceedingly complex syncopation: an accompaniment figure in Act 2 of 'Tristan und Isolde,' which runs thus throughout

and a somewhat similar figure in Act 1 of 'Götterdämmerung' (the scene known as 'Hagen's watch'), where the quavers of a 12-8 bar are so tied as to convey the impression of 6-4. The prelude to Act 2 of the same work presents a still more curious specimen, no two bars having at all the same accent.

[The figure at the beginning of Tchaikovsky's string quartet in D, op. 11, is an interesting instance of syncopation carried over for many bars at a time.

Brahms's favourite device of crossing rhythms in triple time is not usually called syncopation, though it belongs to the same class of devices.]

F. C.

SYNTAGMA MUSICUM. See PRAETORIUS, vol. iii. pp. 805-808.

SYREN. [See SIREN, *ante*, p. 471.]

SYRINX. [See PANDEAN PIPE, vol. iii. pp. 611, 612.]

SYSTEM. The collection of staves necessary for the complete score of a piece—in a string quartet, or an ordinary vocal score, four ; a PF. trio, four ; a PF. quartet, five ; and so on. Two or more of these will go on a page, and then we speak of the upper or lower system, etc. G.

SZARVADY, MADAME. See CLAUSS-SZARVADY, vol. i. p. 548, and add date of death, in Paris, Sept. 1, 1907.

SZYMANOWSKA, MARIE, a distinguished pianist of her day, who would, however, hardly have been remembered but for Goethe's infatuation for her. She was born about 1790, of Polish parents named Wolowski, and was a pupil of John Field's at Moscow. She travelled much in Germany, France, and England, and died at St. Petersburg of cholera in August 1831. One of her daughters married the famous Polish poet Mickiewicz, whom she had introduced to Goethe in July 1829. Goethe knew her as

early as 1821, and even then overpraised her, setting her above Hummel ; 'but those who do so,' says Felix Mendelssohn, who was then at Weimar,¹ 'think more of her pretty face than her not pretty playing.' Goethe renewed the acquaintance in August 1823, at Eger, where she and Anna Milder were both staying, calls her 'an incredible player,' and expresses his excitement at hearing music after an interval of over two years in a remarkable letter to Zelter of August 24, 1823, again comparing her with Hummel, to the latter's disadvantage. Mme. Szymanowska appears to have helped to inspire the 'Trilogie der Leidenschaft,' and the third of its three poems, called 'Aussöhnung,' is a direct allusion to her. In 1824 she was in Berlin. 'She is furiously in love (rasend verliebt) with you,' says Zelter to the poet, 'and has given me a hundred kisses on my mouth for you.'

Her compositions were chiefly for the PF., with a few songs. G.

¹ Goethe and Mendelssohn, p. 25.

ADDENDA ET CORRIGENDA FOR VOL. III

P. 6, art. MACDOWELL, add that he died at New York, Jan. 24, 1907.

P. 9, art. MACKENZIE, second column, line 31, for 'F. N. Jewson' read 'F. B. Jewson.'

P. 12, art. MACPHERSON, for 'Charles Stewart' read 'Stewart.'

P. 16, art. MADRIGAL, line 7 from end of first column, for 'merchant' read 'choirman of St. Paul's.'

P. 17, same article, lines 2-3 of first column, for 'Sacred Harmonic Society' read 'Royal College of Music.'

P. 18, art. MADRIGAL SOCIETY, line 5, for 'Europe' read 'London. The Hibernian Catch Club is said to be the oldest society in Europe.'

P. 19, same article, line 8 from end of second column, for 'Mr.' read 'Dr.'

P. 35, art. MALIBRAN, lines 3-4 of first column, for 'The Morley Arms, Matlock,' read 'The Mosley Hotel, Manchester.'

P. 38, art. MANCINELLI, last line but one, for 'oratorio' read 'cantata,' and add that his opera, 'Paolo e Francesca,' was produced at Bologna, Nov. 11, 1907.

P. 43, art. MANNS, line 25 of first column, for '1847' read '1857.' At end add date of death, March 1, 1907.

P. 53, art. MARCHESI, add at end that he died in Paris, Feb. 20, 1908.

P. 58, art. MARIO, as to the date of birth, the register of his baptism in the cathedral of Santa Cecilia at Cagliari, Oct. 18, 1810, supports the date given by Baker.

P. 59, same article, line 4 from end, add that his farewell appearance took place at Covent Garden in 1871, in 'La Favorita.'

P. 62, art. MARSCHNER, line 35 of first column, add that 'Hans Heiling' was produced at Berlin, not Hanover,

P. 65, art. MARTIN, Sir G. C., line 19, delete the first words 'and Evening.'

P. 102, art. MEIBOM, last line but two, for 'Jais' read 'Jan.'

P. 152, art. MENDELSSOHN, line 16 of first column, for '146b' read '146a.'

P. 181, art. MERSENNUS, line 16, add that his most important work is *Harmonie Universelle* (1636), as mentioned at the end of the article. Line 6 from end, delete 'Traicté de l'orgue (1635),' as that is part of the *Harmonie Universelle*.

P. 200, art. MIDAS, line 9, add that it was played privately at Lurgan in 1760, and brought out at the Crow Street Theatre, Dublin, Jan. 22, 1762. W. H. G. F.

P. 201, art. MIDSUMMER NIGHT'S DREAM, last line but two, for 'Sunday' read 'Saturday.'

P. 243, art. MONK, E. G., line 15, for 'Collins' read 'Calkin.'

P. 258, art. MOOREHEAD, line 16, for '1880' read '1800.'

P. 262, art. MORITZ, Landgraf of Hesse-Cassel, for an account of Dowland's visit, see vol. i. p. 725a, and Peacham's *Compleat Gentleman* (1634), p. 99, for a tribute to the Landgraf's skill.

P. 278, art. MOUNTAIN, add that in 1751 he was one of the Rotunda Band in Dublin, and in 1765-85 was leader of the Dublin City Music. He was appointed to Covent Garden in 1794 in succession to Baumgarten. W. H. G. F.

P. 315, art. MÜHLFELD, add date of death, June 1, 1907.

P. 318, art. MUFFAT, the date of 'Componimenti musicali' is shown by Mr. P. Robinson, of Rusholme, Manchester, to be a good deal later than 1727. The Grand Duke of Tuscany referred to in the title did not become Grand Duke till July 1737, and was not even selected (provisionally) till Oct. 1735. As the Emperor died in 1740, we get 1735 and 1740 as the extreme limits.

P. 325, art. MUSIC-PRINTING, line 19 from end of first column, for 'changed his name to' read 'was followed by.'

P. 327, same article, lines 4-8 from end of second column, the sentence in square brackets refers to the first use of lithography in English music-printing; Alois Senefelder, the inventor of lithography, printed music from the first, i.e. about 1796; he was connected with the firm

of André at Offenbach. See the notice of Sensfelder in the *Allgem. Deutsche Biographie*.

P. 337, art. MUSICAL INSTRUMENTS, COLLECTIONS OF, in the list in second column, Leyden, now in section 6, under Germany, should be placed in section 7, under Holland.

P. 347, art. NÄGELI, in the second line of the musical illustration in first column, add a bass clef before the last chord.

P. 349, art. NANINI, G. M., add that a bibliography of his works, is in the *Kirchen-musikalisches Jahrbuch* for 1891; see the same publication for 1898, p. 29.

P. 352, art. NAPRAVNIK, line 2, for '12/26' read '12/24.'

P. 363, art. NERUDA, line 11 of second column, add that Ludwig Norman died in 1885.

P. 387, art. NOËL, line 13 from end of article, for 'J. L. Hotten' read 'J. C. Hotton.'

P. 392, art. NORWICH FESTIVAL, add that a reference to *Annals of the Norfolk and Norwich Triennial Musical Festivals* by R. H. Legge and W. E. Hansell, 1896.

P. 412, art. NOVELLO, add that Clara Novello (Countess Gigliucci) died at Rome, March 12, 1908.

P. 416, art. OAKELEY, add that he died at Eastbourne.

P. 421, art. OBOE D'AMORE, add that it is used in the score of Strauss's 'Heldenleben.'

P. 443, art. OPERA, line 26 of second column, *dele* the words 'though he was by birth an Italian.'

P. 483, art. ORATORIO, line 29 from end of second column, for 'Friedmann' read 'Friedemann.'

P. 572, art. O'SULLIVAN, add that he died at Columbus, Ohio, Feb. 1, 1908.

P. 577, art. OUSELEY, first line of second column, for 'Church' read 'College.'

P. 595, art. PAGANINI, line 5 from end of second column, for 'T. B. Cramer' read 'J. B. Cramer.'

P. 620, art. PARISIAN SYMPHONY, line 9 from end of second column, for '1788' read '1778.'

P. 625, art. PARRY, line 4 from end of second column, for '1866' read '1886.' Add that Parry was compelled, through ill-health, to resign the Oxford Professorship in 1908.

P. 630, art. PART-BOOKS, line 27 of second column, for '1560' read '1567,' and three lines below, for '1606' read '1614.'

P. 643, art. PASSACAGLIA, add that Rheinberger wrote an example in which the theme appears on successive degrees of the scale, and Arensky devised one of six crotchets in 5-4 time, so that each note in turn receives the accent.

P. 654, art. PATRICK, RICHARD, the service referred to in lines 3-5 is by Nathaniel

Patrick, organist of Worcester Cathedral in 1597.

P. 663, art. PEDAL, line 11, for '1785' read '1772.'

P. 677, art. PERGOLESI, in list of works, Section III., add another 'Laudate pueri' for canto solo, vocal quartet, strings and wind, the MS. of which is in the Santini Library.

P. 679, art. PERI, line 22 from end of article, add that Peri died in 1633. Two lines below, add that some numbers of 'Dafne' were discovered at Brussels.

P. 680, art. PERIODICALS, MUSICAL, line 4 of article, *dele* 'small.' Line 18 of second column, for 'March 10' read 'March 18.'

P. 681, same article, line 5 of first column, for '1847' read '1852.' Line 30 of second column, for '8vo' read 'quarto.'

P. 683, same article, line 7 of second column, for 'monthly' read 'weekly.'

P. 684, same article, line 7 of first column, add that the *Irish Musical Monthly* existed from March 1902 to Feb. 1903.

P. 696, art. PFEIFFER, G. J., add that he died in Paris, Feb. 14, 1908.

P. 707, art. PHILIPS, line 22 from end of second column, add that another arrangement of the same pavan, entitled 'Wy Engelen gret,' is in W. Swart's 'Den Lust-Hof der nieuwe Musycke' (Amsterdam, 1603), p. 38.

P. 709, at end of same article, add that a volume of masses was published posthumously, (see the *Kirchenmusikalisches Jahrbuch*, 1899, p. 89). This is identical with a book entered in a list of the musical Library of John IV., King of Portugal (1649), as No. 599:—'Missas y Salmos . . . a 8 & 9 . . . Obras postumas.' After this comes a volume of 'Mottetes . . . a 8, 2 partes,' also described as posthumous works, though it seems doubtful whether an eight-part 'Cantiones sacrae' of 1613 be not intended. Of the Masses and Psalms no copy is at present known to exist.

P. 723, art. PIANOFORTE, line 21 of second column, add that J. C. Bach published a Sonata for the Battle of Rosbach, 'pour le Clavecin ou Forte-Piano,' about 1757-58, not later than the latter year.

P. 732, same article, lines 16-17 of second column, for the title of C. P. E. Bach's treatise, read '*Versuch über die wahre Art das Clavier zu spielen*.'

P. 796, art. PORTMAN, RICHARD, add that he taught the virginals in 1651, and that in 1656 he is mentioned as having recently died. (*Quellen-Lexikon*.)

P. 816, art. PROFESSOR, line 3 from end of first column, for '1847' read '1845.' Line 13-19 of second column, this sentence refers to the condition of the professorship in former times, the present Professor not being expected to live in Dublin, or to conduct the Choral Society.

P. 827, art. PROSKE, add a reference to the bibliography in *Kirchenmusikalisches Jahrbuch* for 1894, with a diary kept by Proske while in Italy.

P. 832, art. PSALTER, line 26 from end of first column, *for* 'psalms' *read* 'compositions.'

P. 833, line 6 of second column, add that between 1550 and 1553 six editions of Sternhold were printed.

P. 833, footnote 3, *for* 'The unique copy' *read* 'The copy consulted.'

P. 834, line 9 from end of second column, *for* 'two interesting attempts' *read* 'a most interesting attempt.' Line 6 from end, *for* 'One' *read* 'It.' Line 5 from end, *dele* 'the other to the 68th.' *For* 'In both' *read* 'Here.'

P. 835, col. 1, after the title of the 1560 edition add the reference to footnote 1, and add 'The same title, practically word for word, appears in the English edition of 1561, the only known copy of which is in the library of the Society of Antiquaries,' etc. Line 5 from end of column remove the footnote reference after the word 'afterwards.' Line 4 from end, *for* 'this work' *read* 'the edition of 1560.'

P. 835, second column, lines 3-4, *for* 'forty-four, of which twenty-three' *read* 'forty-two, of which twenty-four.' Line 7, *for* 'five' *read* 'six.' Line 10, after '130th' add '50th, 127th, 129th, and "Commandaments."' Omit lines 13-19 of same paragraph. Line 8 before the musical example, *for* 'sixty-three' *read* 'sixty-two.' Same line, *for* 'twenty-two' *read* 'twenty-four.' The harmonised version of Ps. 100 in the same column is from Claudin le Jeune's collection, Leyden, 1633.

P. 836, column 1, lines 3-4, omit the sentence beginning 'The 145th,' and add the footnote reference at the end of the paragraph.

P. 837, line 13 of first column, *for* 'the unique copy is in the John Ryland' *read* 'a copy is in the John Rylands.' Line 2 below the title of 1562 edition, after 'sixty-five' add 'including a few duplicates.' Same line, *for* '14' *read* '10,' and in the next line, *for* 'Seven' *read* 'Nine.' Lines 6-12, below the same title, omit the sentences from 'Nothing more has been taken' down to 'set to similar words.'

P. 837, second column, line 18, after '1561' add '1562.' Line 24, after 'and' add 'those of 1570, 1573, 1583, 1584, 1588, 1590.'

P. 839, second column, in the title of Daman's 1579 psalter, *for* 'Damon' *read* 'Daman' and *for* 'unseemly' *read* 'unseemely.'

P. 840, first column, line 23, omit 'four.' Omit also note 1 on same page.

P. 840, second column, in the title of Daman's second book, *for* 'differing from the former in respect that' *read* 'in which Sett.' After the title, line 7, *for* 'Twelve' *read* 'Fourteen,' line 8, *for* 'one' *read* 'five,' and *for* 'in single common measure' *read* 'among them the tune,' etc. Line 10 from end of same column, *for* 'twenty-nine' *read* 'thirty-one.' Line 9 from end, *for* 'twenty-seven' *read* 'twenty-six.' Line 3 from end, *for* 'Five' *read* 'Four.'

P. 841, lines 2 and 3 of first column, omit the words 'two' and 'London and.' Same column, line 16, *for* 'two' *read* 'three.'

P. 842, second column, line 25, *for* 'five' *read* 'four.' Line 26, *for* 'three' *read* 'two.'

P. 843, line 5 after title in first column, omit 'forty.' Line 15 from end of same column, *for* '100' *read* '105,' and *for* '38' *read* '28.' Line 12 from end, *for* '31' *read* 'a large proportion.' Line 11 from end, *for* 'Douland and Hooper have each' *read* 'Douland has.' Second column after musical example, line 7, *for* 'Cranford, 2,' *read* 'Cranford, 1,' and a line below, *for* 'Ravenscroft, 48,' *read* 'Martin Pierson, 1, and Ravenscroft, 51.'

P. 844, line 10 of second column, *for* '1636' *read* '1638,' and for the first words of the title, *read* 'A paraphrase upon the Divine Poems,' etc.

P. 845, after title of Playford's psalms, in first column, line 2, *for* 'thirty-five' *read* 'thirty-four.' Line 5 after title, after 'Church tunes' add 'one from Wither.' Line 27 after title, *for* 'one other, not a Church tune,' *read* 'Southwell, and the Lamentations.' For the first line after the title in the second column, *read* 'Apart from the reasons given by Playford for setting the tunes.'
